Habtemichael Kidane

Mary in Ethiopian art

Pictures of M. appear in devotional images, i.e. icons, and within narrative paintings which illustrate events in the life of Christ and in apocryphal tales of her life. Among the oldest extant paintings in Ethiopia is a painting of Gabriel's Annunciation to M. (Lk 1:26–35) on the vaulted ceiling of the church of Betä Maryam at ↗Lalibäla, dating to the late 12th or early 13th cent. The symbolism of the placement of this painting, which depicts the moment of Christ's Incarnation, above the entrance to the sanctuary (↗*Mäqdäs*) was carefully calculated, because the sanctuary is where the Eucharistic bread is transformed into the body of Christ during the celebration of the liturgy. Iconic portraits of M. enthroned holding the Christ Child in her lap and flanked by Archangels Gabriel and Michael are among the mural paintings that decorate the rock-hewn monastery church of ↗Qorqor Maryam in central Təgray (↗Gärʿalta) and the church of St. Michael at ↗Waša Mikaʾel, Angot. These mural portraits, which date to the late 13th cent., are similar in iconography but differ in style (Mercier 2004:38f., 52f.). However, aside from representations of M. in scenes of the life of Christ, her image does not play a major role in Ethiopian painting until the 15th cent.

During the 1440s, *aṣe* ↗Zär'a Yaʿəqob introduced to the Ethiopian Orthodox Täwaḥədo Church a cult of M. as Intercessor, which included a mandatory ritual of the veneration of her icon, i.e. a portrait painted on a portable wooden panel, during the celebration of the liturgy (Heldman 1994:165–68). Zär'a Yaʿəqob's devotion to M. was undoubtedly inspired by that of his father *aṣe* ↗Dawit II, during whose reign a collection of pious tales known as the ↗*Täʾammərä Maryam* was translated from Arabic into Gəʿəz (Getatchew Haile 1983b; Heldman 2005:137). Within a manuscript of the *Täʾammərä Maryam* copied and illuminated before 1400 for Dawit II at his palace scriptorium (currently at Amba Gəšän) are full-page miniatures painted with portraits of the Virgin and the Christ Child enthroned before whom Dawit prays (Mercier 2004:36f.; Heldman 2007). The iconographic model of this representation of the Virgin and Child is a Late Byzantine icon in the type of the *Hodegetria* (Heldman 1994:117, fig. 69).

Zär'a Yaʿəqob's introduction of a mandatory ritual of the veneration of a portrait of M. in the form of a portable panel-painting created an immediate demand for the production of icons of the Virgin and Child, because most churches did not own a portable panel painting of the Virgin. Prior to this time the religious art of the Ethiopian Church took the form of murals on the walls of churches and painted miniatures within ↗manuscripts.

In order to support the production of Marian icons, *aṣe* Zär'a Yaʿəqob brought a gifted monastic painter named ↗Fəre Ṣəyon to the court and encouraged the development of iconographic schemes that served as visual interpretations of the Emperor's Mariological homilies (Getatchew Haile 1992). The iconography of portraits of the Virgin and Child underwent important changes at this time; models derived from Byzantine art were replaced by models from 15th-cent. Italian painting (Heldman 1994:115–38). Icons of the Virgin and Child produced by Fəre Ṣəyon and his circle are generally diptychs or triptychs, the multiple panels of which provide an expanded area upon which to paint iconographic schemes developed in collaboration with theologians at the royal court (Heldman 1994:198; Getatchew Haile 1983a:311f.). In these icons, a portrait of the Virgin and Child is juxtaposed with portraits of the twelve ↗Apostles or with the twelve Apostles and O.T. ↗prophets, to which may be added several popular equestrian saints, such as George, Theodore, Mercurius, Claudius, and/or Victor (↗Equestrian saints), as well as a few Ethiopian monastic ↗saints. Within the context of Zär'a Yaʿəqob's theology, the scheme of M. and the Christ Child with the Twelve Apostles

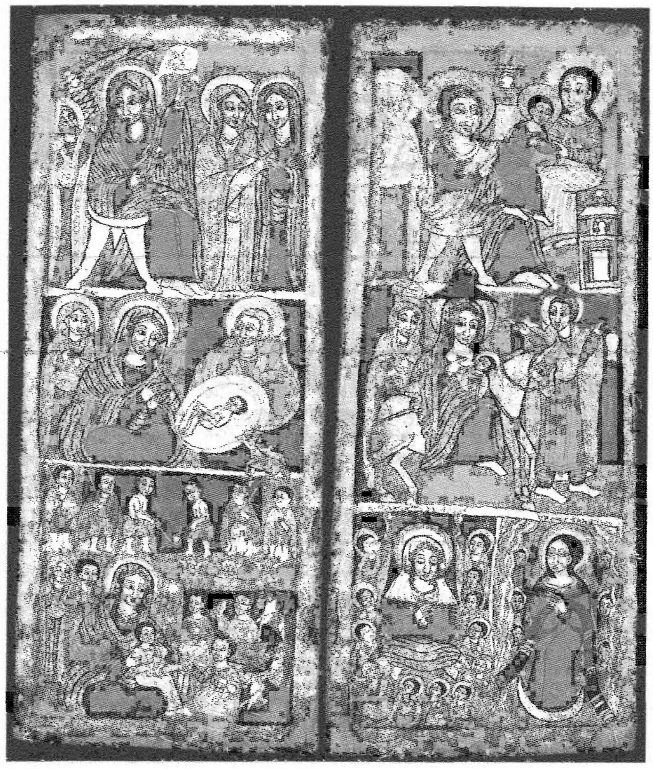

Fig. 1: Wings of a triptych ca. 1630–1700; photo by Franko Khoury; photo courtesy of the National Museum of African Art, the Smithsonian Institution (no. 98–3–3)

not only glorifies the Virgin M., but also symbolizes the Orthodox Church, free of improper teaching and practice (Heldman 1994:172–75).

Icons of the Virgin and Child not only took the form of painted rectangular wooden panels, which are understandably most common, but also assumed more unusual forms. Metal processional ↗crosses and wooden benedictional crosses were created with a broad cruciform central panel in order to accommodate an incised portrait of the Virgin and Child flanked by Archangels and accompanying saints (AfrZion nos. 78, 79, 86, 114; Mercier 2000:73, 76; Horowitz 2001:84, 86). More unusual are Marian icons in the form of enlarged liturgical fans (AfrZion no. 7; Horowitz 2001:114; Mercier 2004:82f., 120f.), which seem to have lost favour after the end of the 15th cent.

The introduction of secondary scenes of the Crucifixion (*səqlät*) and Resurrection (*tənśaʾe*) with the raising of Adam and Eve is typical of iconographic schemes of Marian icons produced later in the 15th cent. This change is probably due to the influence of the introduction of the monthly commemoration of the Crucifixion (*Täzkarä Mädḫən*, or *Mädḫane ʿAläm*, on the 27th day of each month) at the instigation of the mid-15th-cent. monk ↗Mäbaʾa Ṣəyon (AfrZion no. 85, p. 187). From this time onward, icons that feature a portrait of the Virgin and Child in the central panel usually include representations of Christ's Crucifixion and the Resurrection in subsidiary positions. An early 16th-cent. triptych exemplifies this development (s. fig. 1). The central panel, divided into two registers, shows a half-length figure of the Virgin and Child above saints and/or Apostles and two unnamed equestrian saints. On the two wings, in addition to the Raising of Adam and Eve and the Crucifixion, saints, and St. George and another holy rider.

During the early 16th cent. several Ethiopian clerics, acting as agents for *aṣe* ↗Ləbnä Dəngəl, returned from a period of study abroad with Italo–Cretan icons of the Virgin and Child. With the reception of these icons at the royal court, a new way of thinking about icons of the Virgin M. developed. Several of these Italo–Cretan icons were perceived to be miracle-working icons painted by St. Luke and thus they acquired an inherent, awe-inspiring sanctity. This new sensibility toward certain icons of the Virgin was inspired in part by the tale of the miraculous icon of the Virgin painted by St. Luke at Saydanya near Damascus, a tale translated from Arabic into Gəʿəz in the early 16th cent. (Heldman 2005).

Developments in style and iconography of images of the Virgin produced later in the 16th cent. are difficult to follow, because works of art produced during this period are difficult to identify or date. A period of destruction, disruption, and threat to the patrimony and artistic traditions of the Ethiopian Orthodox Church began in 1527 and did not abate until 1632. The causes were the Muslim wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī, an influx of migrating ↗Oromo peoples, and the arrival in the late 16th cent. of Portuguese Jesuit missionaries whose attempts to replace the Ethiopian Orthodox Christianity with Roman ↗Catholicism almost precipitated a civil war. The century of chaotic disruption and change came to an end in 1635 with the expulsion of the ↗Jesuits and the establishment of a new capital at ↗Gondär, which became a permanent capital and artistic centre of the Empire, thanks to the dedicated patronage of the court. Iconographic schemes of the Marian icon developed in the 15th cent. were not lost, and, as the production of religious art revived at Gondär, these iconographic programs reappear in painted diptychs and triptychs (Chojnacki 2000, nos. 135, 184).

During the course of the 17th–18th cent. Ethiopian painters, supported by ruling elite class at Gondär, developed new styles of painting, and,

inspired by European prints introduced by the Jesuits, created schemes of narrative painting for illuminated manuscripts. Narrative imagery was also introduced to devotional images and even to programs of monumental painting.

One of the most interesting developments in narrative painting was the invention of a cycle of narrative images for manuscripts of the *Tä'ammərä Maryam* produced at Gondär during the second half of the 17th cent. for the private devotions of courtly patrons. The number of pious tales in such manuscripts was usually limited to 32. Each miracle is followed by a full-page (sometimes two-page) illustration of the story, composed of successive events of the narrative. The various episodes depicted in the composition are usually accompanied by identifying inscriptions. Thus, after reading a miraculous tale, the reader is able to meditate upon the lesson of the story while studying the miniature (AfrZion no. 12). E.g., the miniature that follows the miracle of "how Our Lady M. gave a thirsty dog a drink of water from her shoe" in a late 17th-cent. manuscript in the collection of the Chicago Art Institute presents a unified design (s. fig. 2), composed of three elements that represent three different events of the story. A large figure of Our Lady M. giving the dog a drink of water dominates the composition, below and to the right are four young women with their water jugs who have denied the dog a drink (Budge 1923:112). At the bottom of the illustration is the thirsty dog at the edge of the well. In this miniature, the sequence of events is to be read from the bottom to the top of the picture.

Following the development of narrative illustrations in illuminated manuscripts, narrative imagery was introduced to the devotional image, creating a "narrative icon," which removes the painted panel from its original function as a painted portrait that receives the prayer and veneration of the faithful. Marian narrative icons with scenes of the Infancy of Christ and episodes of the life of the Virgin achieved a degree of popularity during the 17th cent. Each of the two panels of a late-17th-cent. diptych in the collection of the Smithsonian Institution's National Museum of African Art is divided into three registers, in which are depicted major events in the life of Our Lady M. commemorated in her annual liturgical feasts. On the left panel are the Annunciation, the Visitation, the Nativity, and the Adoration of the ↗Magi; on the right panel are the Presentation of Christ in the Temple, the Flight of the Holy Family to ↗Egypt, M.'s Dormition (↗*ʿƎräfta*),

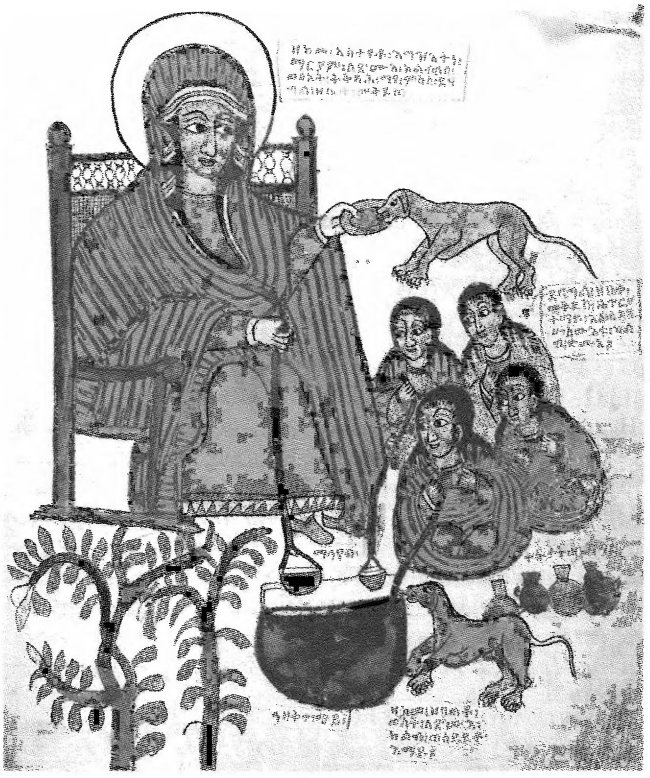

Fig. 2: Illumination showing Mary (Miracle 32: The story of the thirsty dog), from the *Tä'ammərä Maryam*, fol. 139r, Gondär, late 17th cent.; Ada Turnbull Hertle and Marian and Samuel Klasstorner Endowments (2002.4), photo courtesy of The Art Institute of Chicago

and her Assumption (↗*Fəlsäta*; VelMe II, 23–26). The narrative icon, like the miniatures in manuscripts of the *Tä'ammərä Maryam*, invites private contemplation of events in the life of Our Lady Mary as a form of religious devotion. Illustrated manuscripts of the *Tä'ammərä Maryam* often include a full-page miniature of Our Lady M. and Jesus Christ standing with joined hands, a symbolic composition known as the ↗*Kidanä məḥrät* (Berzock 2002, pl. 4). From illuminated manuscripts, this composition was introduced to icons (AfrZion no. 11; Chojnacki 2000, nos. 218, 234) and to iconographic schemes of mural decoration (Di Salvo 1999, pls. 148f.; Bosc-Tiessé – Wion 2005:70, 89). From the 15th cent. onward, the figure of M. occupied an ever more important position in Ethiopian art.

Marilyn Heldman

Mary, Apocalypse of

In Ethiopic tradition, the M.a. (Gəʿəz ራእየ፡ [እግዝእትነ፡]ማርያም, *Raʾəyä [əgzəʾətənä] Maryam*, 'The Vison of [our Lady] Mary') is a composition different from the texts by the same title in Greek, Armenian, Georgian, Syriac or Arabic (s. CANT no. 330). It is presented as a Discourse (↗*Dərsan*) of John son of Zebedee, the contents of which he received from St. ↗Mary. Raised by a cloud to the "third heaven" and guided by Jesus, she saw the vicissitudes of the just and wicked souls, their judgements, and their respective rewards and punishments. On Mary's request, Jesus granted the damned a relief from their tortures from Friday evening until Monday morning (Chaîne 1909:80).

The main source of the M.a. was the Greek Apocalypse of ↗Paul (late 4th cent.; CANT no. 325), in which early Christian imagery of the other world was collected. This was translated into Arabic, and from this version into Ethiopic. Renamed as M.a. and adequately edited (references to Paul were replaced by those to Mary) it was developed with numerous biblical quotations. New visions were added, e.g., that of the Muslims being punished for not believing in Jesus or the Trinity (Chaîne 1909:78). The two day weekly respite for sinners and the insistence of Jesus on equality of the First Sabbath to Sunday (Chaîne 1909:79) suggest the 14th–15th cent. as the date of redaction of the M.a., as the issue was the object of controversies (with the ↗Ewosṭateans) at the time (Piovanelli 1993:37). The M.a. was the main source of the Apocalypse of ↗Baruch, traces of the M.a. are also found in the ↗*Ləfafä ṣədq* (similar texts are also in the ↗*Dərsanä Mikaʾel*, cp. Bausi 1999:153f.).

The text is widely diffused; the known copies do not predate the early 18th cent. (e.g., BritLib orient. 605, 648). By the mid-19th cent., M.a. had been translated into Amharic (published by Täsfa Gäbrä Śəllase in 1967/68). The Amharic version has been copied more frequently than the original beginning with the late 19th cent. (Orient. oct. 1004, 1288; EMML 256, 1346 etc.). The M.a. is usually bound in one manuscript with other homiletic or liturgical texts, often equally devoted to the Virgin. It is included, together with the *Nägärä Maryam* and other Marian hymns, in the homiliary known as the ↗*Dərsanä Maryam* (e.g., EMML 4279, 4355). Separate visions (referred to as *Raʾəyä täʾammər*) are frequently incorporated into ↗*Täʾammərä Maryam* manuscripts (EMML 2524, 2563, 2573, 2710, 2740, 2758, 2774 etc.).

The text included in the 19th-cent. homiletic ms. Martini etiop. 2 [Lusini no. 5] (fols. 111r–162r) is illustrated by 25 miniatures. The first illumination (fol. 117r) shows ↗*Maiestas Domini* above angels carrying the souls of the just to ↗Paradise (publ. in Sàntoli 1932:41). The rest represents scenes from

Apocalypse of Mary, ms. Biblioteca Forteguerriana di Pistoia Martini etiop. 2 [Lusini 5], 19th cent., fol. 161v: Mary watching the damned; Jesus grants the damned two-day relief on her request; photo by Alessandro Gori, 2007, courtesy of the Biblioteca Forteguerriana di Pistoia

the afterworld seen by Mary alternating with images of the ↗*Kidanä Məḥrät* iconographic type. The final illumination (fol. 163r) has, beside St. Mary and Jesus, the figure of the donor, possibly ↗Mənilək II's mother ʾIğğəgayyähu, for whom the manuscript was copied.

Witold Witakowski – Evgenia Sokolinskaia

Mary Magdalene

According to the N.T. account, M.M. (Eth. ማርያም፡ መግደላዊት, Maryam Mägdälawit) was a woman possessed by the demons and healed by Jesus (Mk 16:9, Lk 8:2). She became his follower and disciple, witnessed his death (Mt 27:56, Mk 15:40, Jn 19:25) and was present at his burial (Mt 27:61, Mk 15:47). M.M. returned to the sepulchre together with other women carrying the spices (Mt 28:1, Mk 16:1, Lk 24:10, Jn 20:1) and was the first person to which Christ appeared after the resurrection (Mk 16:9, Jn 20:11–18).

M.M. has been venerated as saint by the ↗Ethiopian Orthodox (Täwaḥədo) Church and commemorated in the ↗*Sənkəssar* on 6 *Näḥase* (BudSaint 1195f.) or 28 *Ḥamle* (ColSyn VII, 494–97), though the commemoration is omitted in the contemporary church standard edition. The text of the commemoration note (the same text for both days) follows the Gospels but adds an account on M.M.'s mission after the Resurrection and describes her role as a deaconess and teacher, in accordance with a tradition reflected in some apocrypha and texts of the early Church Fathers. Her presence at the Crucifixion confirmed by the Evangelists inspired the Gəᶜəz work entitled *The Story of the Passion Revealed to Three Women Sarah, Salome and Mary Magdalene* (ms. Paris, BN Éth. 591, fol. 20v). It was treated as a magic text certainly in connection to Mk 16:19 and Lk 8:2 who mention seven devils expelled from her by Jesus.

It seems that M.M. cult was particularly spread in Təgray province where a group of churches were dedicated to her, e.g., in Amba Dära, Aṣbidära, in Mänguda, ↗Gärᶜalta, both rock-cut, and in ↗ʾƎnda Maryam Mägdälawit near Aksum.

The earliest pictorial reference to M.M. in Ethiopia is the scene *Noli me tangere* on the wall-painting dated to the end of the 12th cent. in the ↗Yəmrəḥannä Krəstos church. The same scene appears a century later in the church of ↗Gännätä Maryam. As one of the myrrophores M.M. is depicted in the 14th and 15th cent. illuminated Gospel books, for instance in the ms. Paris, BN Éth. 32, fol. 8r. A variant of the scene shows her together with two Apostles (e.g., Gospels from Maryam Mägdälawit in Amba Dära, fol. 18r, ↗Kəbran ʾƎsṭifanos, fol. 19v, ↗Däq, Arsima, fol. 7v) which reflects the account of Jn 20:17–18, telling that it was M.M. who announced the news about the Resurrection to the Apostles (which gained her the epithet of *apostola apostolorum*).

From the end of the 15th cent., M.M. appears frequently in the ↗Crucifixions, the earliest examples being the miniatures originating from the ↗Gundä Gunde scriptorium (e.g. mss. C3–IV–6, fol. 17v–18r; C3–IV–7, fol. 96r; a fragment of a Gospel Book, Munich, Staatliches Museum für Völkerkunde, no. 86–307 644), but also in the large assemblies of the saints willingly painted by the ↗Stephanite artists (e.g. fragment of the ↗*Gädlä sämaᶜətat*, presently in the Museum of *aṣe* ↗Yoḥannəs IV in ↗Mäqälä). The Crucifixions based in the European models which from the beginning of the 16th cent., appear on the painting on wood, often show M.M. either standing behind St. ↗Mary or kneeling at the foot of the cross (IES nos. 3992, 4126, 4325). She is also included in the multi-figural scenes of the Passion (Crucifixion, Deposition from the Cross, Lamentation and *Noli me tangere*) illustrating the manuscripts with long Christological cycles produced in the style of the so-called First Gondär school of ↗painting, for instance ms. BritLib Orient. 641 (fols. 237r, 240r, 252r, 257r). Based on the European models they also

Apostle John(?), Mary Magdalene, Mary of Perfumes, Yoḥanna and Salome, detail of the Crucfixion, fol. 17r, Gospel Book, early 16th cent., church of Täklä Haymanot at Guya, Tämben; photo 2002, courtesy of Michael Gervers

included the scene with M.M. kneeling in front of Jesus, i.e. portraying her according to the tradition of the Western Church, in which she is conflated with Mary of Bethany (Lk 10:39–42, Jn 11:1–5, 17–32, 12:3) and with the sinful woman "who loved greatly and was forgiven much" (Lk 7:37–50). The latter figure is commemorated in the *Sənkəssar* on 6 *Yäkkatit* as a repentant harlot who washed Jesus feet with her tears and dried them with her hair. The ↗*Tä'ammərä Iyäsus* contains the longer version of this story and develops the topic on the heavenly origin of perfumed oils, which the woman used to anoint Jesus (cp. Grébaut 1918–19; mss. EMML 2710, fol. 126r; 3420, fol. 125r; CerLett 226f.). Ethiopian art, particularly prior to the 16th cent., distinguishes her clearly from M.M. labelling her figure with the inscription *Maryam əntä ᶜəfrät*, 'Mary of the perfume' (e.g., Gospels in the Church of Täklä Haymanot, Guya, Tämben, fol. 17r). From the late 19th cent., the scene is also included in the Christological cycle in the churches with ↗*mäqdäs* extensively decorated with the wall-paintings (e.g., ↗Č̣äläqot Śəllase).

M.M. is seldom portrayed outside the context of biblical narrative scenes. An example could be found in triptych IES 6618 where she is presented with her head bowed against her hand, again a reminiscence of the European iconography which pictured M.M. as the symbol of penitence.

Marya

The M. (ማርያ) is a ↗Təgre-speaking ethnic group inhabiting north-western ↗Sänḥit in the ᶜAnsäba valley, Eritrea. In 1952 their number was estimated at 25,000 (TrIslam 167).

Several traditions on the origins of the M. have been recorded. M.'s descent is usually traced to a certain Zed, of the Banū Hāšim clan of Qurayš of ↗Mecca (to which belonged the Prophet Muḥammad), who crossed the Red Sea from Arabia and landed in the Buri peninsula. Zed begot Mayray or Maryay (the founder of M.), as well as Mänsäᶜay, Ḥazotay and Torᶜay. Thus, Zed is regarded as the common ancestor of M. and of other groups in Eritrea such as the Təgre-speaking ↗Mänsaᶜ and the Säho-speaking ↗Ḥazo and Torᶜa (Conti Rossini 1901:7, 31f.; PollEr 169). Another version ties the founder of the M. group to the other Qurayš clan of Banū ᶜUmayya, who reached the African shores of the Red Sea after the fall of the ᶜUmayyad caliphate in the mid-8th cent. A.D. (MuhTarih 281f.).

According to traditions, two of the four brothers, Mänsäᶜay and Mayray, migrated inland together, in search of grazing land, but at some

point parted company when Mayray settled on the Ǝrota plateau in east-central ↗Barka. The kinship groups who migrated to the area were able to subjugate local communities, including groups originating on the highland plateau, and incorporate them into a socially stratified group.

At some point the M. – whose "land" (*ḥagär*) was crossed by ↗Ewosṭatewos in ca. 1338 (Turaiev 1905:73, 77) – split into two sub-groups which came to live in well-defined areas on separate *rora* plateaus: the more numerous and wealthy "Black M." (*M. ṣällam*) in east-central Barka, the "Red M." (*M. qäyaḥ*) to the east. The splitting must have occured at an early date, since "the two M." are mentioned in an edict by *aṣe* ↗Zär'a Ya'əqob (ca. 1456; s. Conti Rossini 1923:453f.; cf. TrIslam 167). Both groups practice agro-pastoralism. The territories inhabited by the Black M. are lower in altitude, rather hot, with abundant water, enabling them to keep camels and many goats. The Red M. live in a region more elevated, colder and with little water, which enables them to have sheep and goats. Both groups balance pastoralism with small scale land cultivation. In the 1930s, it was estimated that there were 16,650 Black M. and 8,440 Red M. (PollEr 179). There is a slight dialectal difference between the Black and Red M. The former's Təgre is closer to that spoken by the Beni ʿAmər and the Ḥabab, while the Təgre spoken by the Red M. seems closer to Mänsa' dialect.

The social structure of the M. is characterized by a division between ↗*təgre* (serfs, vassals) and ↗*šəmagälle* ("aristocratic" class), thus resembling the social organization of Mänsa' and ↗Bilin. Each sub-group is independent, with its own hereditary chief, called ↗*šum*, and is further divided into kinship groups under hereditary heads. Those who trace direct descent to the founding ancestor constitute the *šəmagälle* class, who own the land and provide chiefs and headmen. The *təgre*, whose duty is to care for the animals and cultivate the land, are the descendants of aboriginal inhabitants who, at some point, came under the patronage of the M. In the past, the obligations of the *təgre* serfs towards the aristocratic class were strictly regulated, and included all sorts of offerings (butter, milk, animals), both periodically and on specific occasions (PollEr 182f.). Under the Italian colonial rule and later on, the rigid distinction between the classes was transformed and made more flexible, up to the abolition and reduction of some duties of offerings (ibid. 185). According to oral data collected in 2007, the Black and Red M. share the same institutions, coming under one *šum*, who is a Black M. and who now resides in Kärän.

Local M. traditions claim that the group had been Muslim from the beginning. Yet, evidence such as the ruins of churches scattered about M.-inhabited areas, suggests that the M. had been Christians who converted to Islam in the first half of the 19th cent. It seems that the ↗ʿAd Šek (with the ↗Ḥərgigo-based ↗Nā'ibs) were instrumental in converting the *təgre* class while the *Ḫatmīya* ↗Islamic brotherhood led the *šəmagälle* class to adopt Islam. This influenced and transformed social practices especially in the realm of family. Women were also granted more rights, deriving from their newly defined juridical status as Muslims (Guérinot 1917–18:55f.; PollEr 185f.).

In the early part of the Eritrean nationalist struggle, the M. were associated with the ↗Eritrean Liberation Front (E.L.F.), but their leaders, notably Muḥammad ʿUmar ʿAbdallāh (Abū Ṭayāra) and ʿUmar Damir, challenged Beni ʿAmər dominance, and eventually joined the E.L.F.-P.L.F. (People's Liberation Front) under the leadership of ↗ʿUṯmān Ṣāliḥ Sabī. Ethiopian reprisals and heavy fighting since the late 1960s led many M. to flee as refugees to Sudan.

In the period of the struggle for independence, the front line between E.P.L.F. (↗Eritrean People's Liberation Front) and Ethiopian-controlled areas passed between the Black and Red M. areas influencing the development of those communities in several arenas. The former came under the liberation movement, strongly mobilized in the Eritrean struggle, and found itself somewhat geographically isolated (cut from communications with Kärän, Aqordät or Asmära), while the latter lived under the Ethiopian administration, even if with very limited military presence. In the last decade of the struggle (1981-91), the Black M. benefited greatly from E.P.L.F. infrastructure in education (ca. ten schools opened in Black M. region), as well as various social and health services. The Eritrean struggle for independence thus temporarily separated the Black and Red M. both physically but also politically and socially. Since Eritrea's independence, many M. have returned to the country, some settling in different regions such as Gaš, Kärän or Asmära (KilHDic 301; Pool 2001:65f.; oral data).

Maryam Dəngəlat

The site of M.D. (ማርያም፡ ድንግላት), Ḥaramat, Təgray, includes four churches, two dedicated to St. Mary and two to St. George (for location s. Mädäbay). St. Mary gives her name to an abandoned rock-cut structure dating probably from the late 14th or early 15th-cent. and to the relatively modern, square, active church built directly below it. The dedication to St. George is borne by a late 15th-cent. built church and by a newly constructed round building.

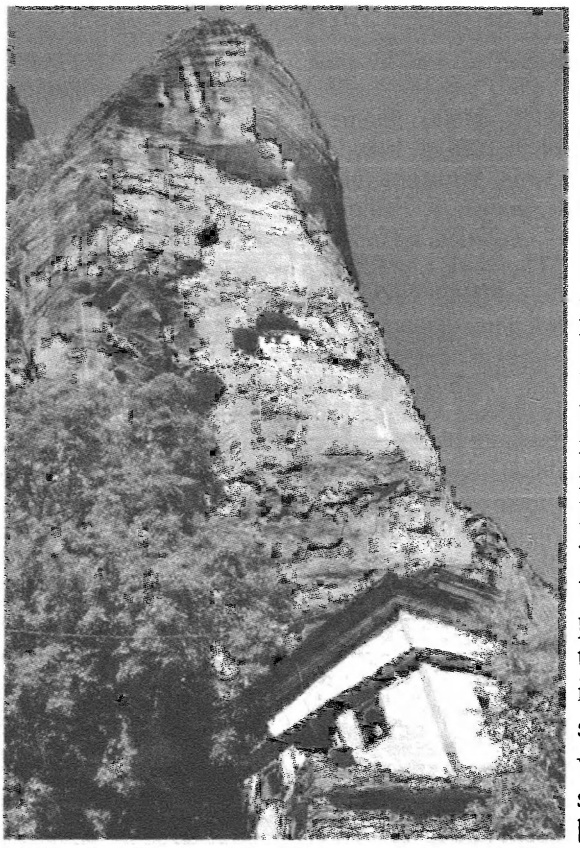
The rock-cut M.D. is excavated in the southern exposure of a 100 m-high sheer escarpment about 35 m above the ground. It is small (8.7 x 5.2 m, including the 1.8 x 2.4 m sanctuary), and oriented. Originally, it would appear to have been constructed as a basilica, but successive rockslides demolished first the south aisle (the outline of which is visible from the exterior), and then the means of access. Today, the church consists of a nave separated from a north aisle by a single, triple-armed pillar which "supports" lintels rather than arches. The ceilings are flat, relatively low and undecorated. Entry may once have been through the fissure on the west side by a combination of steps and passages. After the first rock-slide, the exposed south side was closed off by a crudely constructed rubble wall, through which entry is provided by a wood-framed portal at the west end. The round-headed projecting transversals at each corner of this frame bear a central incised boss and closely resemble those supporting the sanctuary doors of the monastery of ↗Gundä Gunde. This association points to a date in the second half of the 15th cent. for the construction of the surrounding wall. Light enters through a little quatre-lobed, cruciform window in the eastern wall of the sanctuary (also found at Gundä Gunde), and through three windows with wooden frames and shutters in the constructed south wall. A significant wooden scaffold was apparently once attached to the cliff face. When another rock-slide destroyed this scaffolding, the church was abandoned, according to oral tradition perhaps during the reign of *ras* ↗Wäldä Śəllase, or around the last quarter of the 19th cent.

M.D. may have been one of the churches mentioned in passing by ↗Alvares in the early 1520s (BeckHuntAlvar 167–71), after which time there is no evidence of foreign visitors until 1970–74. In December 2002 the author entered the church, by means of a rope, and was able to confirm that it contained no moveable objects of value. He found, however, that the interior walls had once been extensively covered with paintings on cloth displaying a rich iconographical programme in the style of the First Gondär school of ↗painting. Everything from the north and west walls had been previously removed, leaving only the raised front foot of a white horse, which once would have borne an equestrian saint, at the east end of the north wall, and the spotted head and paws of a leopard from a representation of ↗Gäbrä Mänfäs Qəddus on an engaged pillar in the west wall. Also removed were a painting of God in Majesty from the sanctuary and a large rectangular piece bearing, in two registers, the images of ten saints (seven of whom can be identified as ↗Mädḫaninä Ǝgziᵓ of Däbrä Bänkʷäl, ↗Samuᵓel of Waldəbba, ↗Yoḥannəs of Gʷənanqe [?], ↗Tadewos of Tämben [i.e. of Täᵓamina], Sinoda of Däbrä Səmmuna, ↗Samuᵓel of Däbrä Halleluya, ↗Yafqərännä Ǝgziᵓ [?] and ↗Anbäs [?]); both of these paintings had been seen in "the priest's house" in the early 1970s (Juel-Jensen – Rowell 85, pl. 87–91). By 2004, they had either disappeared, or been entirely obliterated. Still distinguishable on two other cloths produced from the *ᶜəqa bet*, however, were the figure of Gäbrä Mänfäs Qəddus from the west wall of the church, and two of the 24 Heavenly Priests, probably from the east wall of the sanctuary.

What remains on the south and east walls, in the sanctuary and on the sole surviving pillar, is preserved in an entirely pristine state, including, on the south wall, the Annunciation; Mary and Child between the archangels Michael and Gabriel; St. George the dragon killer with Pasiqrates and Birutawit; saints Julitta and Qirqos; on the north wall of the sanctuary, Joachim and Anna carrying the child Mary to the Temple; around the sanctuary,

17 of the 24 Priests; on the exterior walls of the sanctuary, St. Victor on horseback and St. Raphael; on the eastern engaged pillar, ↗ᶜAbiyä Ǝgziᵓ; on the free-standing pillar, ↗Ǝsṭifanos, ↗Abäkäräzun, *abba* ↗Sälama Käśate Bərhan, ↗Libanos, Mercury and ↗Minas on horseback, ↗Täklä Haymanot and ↗Ewosṭatewos.

Local tradition attributes the foundation of the church to the 4th-cent. *abba* ↗Sälama (Frumentius), but a monolithic altar in the centre of the sanctuary and the absence of *pastophoria*, or service rooms, point to fashions current in Ethiopian architecture during the 14th–15th cent. Reference is made, in a ↗*Sənkəssar* copy kept at the church, to a donation of land by ↗Zärᵓa Yaᶜəqob which may have been a foundation gift.



The two St. Mary churches of Dəngəlat, the upper (old) rock cut and the lower built; photo 2002, courtesy of the author

Work on M.D. probably began sometime in the late 14th or first half of the 15th cent. The initial rock-slide which carried away the south side may have occurred while work was in progress, or shortly after it was completed, whereupon the south, rubble wall, penetrated by a portal whose framework matches that of Gundä Gunde, was soon built to render the structure useable.

An engraving with eight apostles and the monograms *IHS* and *MAR*, dated "Roma 1589", is stuck to the west side of the pillar below the figure of Ewosṭatewos; and another by Alittenio Gatti, "Roma 1590" to the east side of the window frame in the south wall. Both are examples of Jesuit art and probably reached Ethiopia in the early 17th cent.

The church of St. George stands at the foot of the cliff into which M.D. is excavated, immediately south of the modern round building. It is a roughly constructed square, divided into a vestibule (5.5 x 2.6 m) and sanctuary (5.7 x 2.5 m) in the style of what is now the sanctuary at Gundä Gunde. The unstuccoed walls are made of a double thickness of irregularly "squared" flat split stones inter-layered in debased "Axumite" style with two to three levels of horizontal wooden courses and round ended transversals. 30–60 cm below the flat roof, a string course of slate deflects rain water from the walls below. The west entrance is a double portal, also reminiscent of Gundä Gunde, with round-headed projecting wooden transversals at top left, centre and right only. Similar transversals are used in the north doorway, but not in its southern counterpart. Light enters the church through windows on either side of the western portal, and the sanctuary through a central window in the east wall. North and south windows in the east wall and another in the sanctuary's south wall have been blocked. All windows, doors and frames are wooden. A wall serving to enclose a narrow "atrium" was added to the western end at a later date.

The interior was built as a single open space divided east/west into nave and bays by two sets of uprights supporting the wooden cross-beamed ceiling. Probably during the Gondärine period a thin stuccoed wall was built across the entire width of the church in order to enclose the sanctuary, which is now accessed through a single, central doorway. The result is two poorly proportioned units, narrow on the east/west axis and wide on the north/south axis. The altar consists of an earth-stuccoed base with a small, square storage opening on the east side, topped by an open wooden frame. Undoubtedly a construction of the second half of the 15th cent., the church was possibly built hurriedly when the rock slide demolished the south side of M.D.

The *ᶜəqa bet* beside the active church contains a number of ecclesiastical objects, apparently brought down from the upper church at some undetermined time. These include a silver "Lalibäla"-type cross bearing the engraved figure of Christ, a 16th-cent. triptych in Limoges enamel (23 x 34 cm) with Gəᶜəz inscriptions, a mid-19th-cent. elaborately decorated Greek *epitaphion* (75 x 120 cm), and, among other mss., a handsomely tooled red leather-covered Synaxary in

two volumes studded with up to twelve silver rosettes on both front and back.

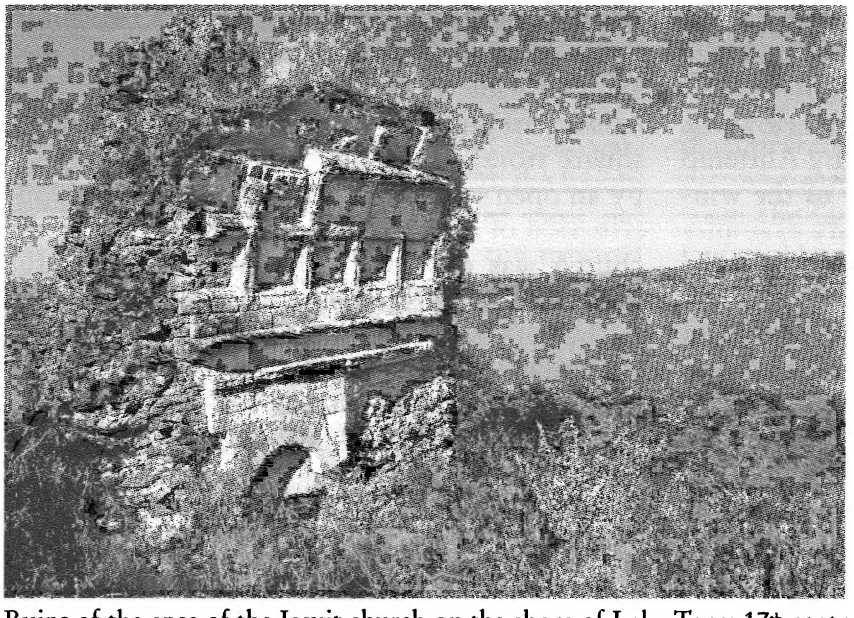
Michael Gervers

Maryam Gəmb

M.G. (**ማርያም፡ ግምብ**, 'Mary's castle') was a Jesuit church. It was built at the residence of "New ↗Gorgora" on the north shore of Lake ↗Ṭana (for location s. Mändabba) by Brother João Martins (also Martínez). Dedicated to the Virgin Mary and consecrated on 25 November 1627, it was apparently modelled on the sanctuary that Pedro ↗Paez had built in 1618–21 at nearby "Old Gorgora". Paez's church included a bell tower and a roof with a parapet, features Martins may have incorporated into his church but for which little evidence exists today.

The church was constructed of brown basalt and lime mortar covered inside and out with small blocks of white stone, which may have come from a nearby quarry used earlier by Paez (BecRASO XI, 414). It was of Portuguese design modified by Indian influence, and consisted of a single-storey nave without aisles or bays but with a rectangular apse at its south-eastern end, both covered by coffered vaulting. Upper nave walls featured large blind windows framed by heavy scroll molding separated from each other by plain pilasters; lower walls contained a series of niches, one or more of them doorways, crowned by inverted scallop-shell lintels. The altar and its frontal arch were decorated with rosette and foliate plaques; the coffers of the vaults contained stylized crosses and sunbursts. A narrow staircase in the south-west nave wall led to the roof, which afforded magnificent views of Lake Ṭana and its shores.

Attached to the church on the southwest was a walled courtyard. Several external rooms extended from its southwest wall between corner bastions. Unlike the church, courtyard walls were left in the rough, although doors and windows were decorated with white stone arches. The courtyard may have served as a seminary for training young Ethiopians; the church, however, was certainly intended to impress Ethiopians and to encourage conversions from Orthodoxy to ↗Catholicism.



Ruins of the apse of the Jesuit church on the shore of Lake Ṭana; 17th cent.; photo 2006, courtesy of Michael Gervers

After expulsion of the Jesuits in the early 1630s, the courtyard was used for Orthodox worship until the era of *aṣe* ↗Mənilək II. The Orthodox church, also dedicated to the Virgin, further ensured that the site would henceforth be known as M.G. Today, the Jesuit church is a near total ruin. The most recent collapse occurred in 1995, leaving only the walls of the courtyard intact.

Maryam Nazre(t) ↗Nazret

Maryam səbbəḥt

M.s. (**ማርያም፡ ስብሕት**, 'Glorious [is] Mary') is a ↗hymn in Gəᶜəz praizing St. ↗Mary. It is attested in several manuscripts (e.g., ms. EMML 2810, fol. 40a and 58a; 2901, fol. 63b; Vat. aeth. 18), but there is no critical edition so far. It is assumed that the M.s. (like such other Marian hymns as ↗*Bəṣəᶜət anti*) belongs to the ↗*Səbḥatä fəqur*, which is part of the *Mäṣḥafä* ↗*Säᶜatat*.

The style of the M.s is similar to the other hymns to Mary. It is composed of rhyming stanzas (s. GrohHymn 28), which implies a special reciting mode. The priest chants the hymn, and the choir answers by **ሰላም፡ ለኪ** (*sälam läki*, 'Greeting to you [Mary]'; s. GrohHymn 32, 40), an exclamation often inserted in readings of Marian texts and symbolizing Mary's presence during the celebration.

The author of the M.s. is unknown, but eventually there could be a connection to the ↗ᶜƎnzira səbḥat, whose authorship is ascribed to *abba* ↗Giyorgis of Sägla / Gasəčča (s. Getatchew Haile 1982:68 and 1983:55). The hymn could thus be dated into the 15th cent.

Maryam Śəna

Ǝtege M.Ś. (**ማርያም፡ ሥና**, lit. 'St. Mary is her adornment'; d. 16/17 April 1607) was the wife of *aṣe* ↗Śärṣä Dəngəl (CRHist 126) and was probably crowned as queen with the regnal name Mäläk Mogäsa (derived from her husband's throne name Mäläk Sägäd). She came from an important family from Šire (Paez in BecRASO II, 164).

M.Ś. did not bear sons to Śärṣä Dəngəl, and his successor *aṣe* ↗Yaᶜəqob was his son by Ḥarägo (BegChron 41; Perruchon 1896:361), his mistress of allegedly ↗Betä Ǝsraʾel descent (Almeida in BecRASO VI, 41, 395). The royal couple did, however, have daughters: *wäyzäro* Amätä Maryam (or Amätä Mikaʾel, the mother of a Čəhra prince), *wäyzäro* Krəstosawit (the mother of the "Wägdo princes"), *wäyzäro* Wälättä Giyorgis, and *wäyzäro* Ḥamälmal (BegCron 40; FotiCr 109). Through the marriages of M.Ś.'s daughters, numerous alliances were made with powerful people in the kingdom. Wälättä Giyorgis, e.g., married *ras* ↗Atnatewos (Almeida in BecRASO VI, 395) or *ras* Zäśəllase (BegCron 40). However, another version of the "short chronicle" claims that it was Ḥamälmal who married Zäśəllase (Foti 1941:109). ↗Kəflä Waḥid, too, was M.Ś.'s son-in-law (Paez in BecRASO III, 209).

After Śärṣä Dəngəl's death, M.Ś. continued to rule in co-regency with *ras* Atnatewos. According to the missionaries' reports, the co-regency lasted seven years (BecRASO II, 133, 176, 415; III, 209; VI, 43, 395, and a hint in the "short chronicles", s. FotiCr 109; Perruchon 1896:361). The power had to be also shared with Kəflä Waḥid and Zäśəllase.

While Śärṣä Dəngəl was alive, M.Ś. had a residence of her own in Wäqen, Wägära (CRHist 126). Upon his death, she moved the royal residence from ↗Gubaʾe to Qoga, and stayed there until her death (Paez in BecRASO III, 209, 266). M.Ś. was buried, by order of *aṣe* ↗Susənyos, in the church of ↗Maḫdärä Maryam of Gərarya, Bägemdər (BegCron 40; CrumLand 58f.) that she had commissioned (PerChron 77). One ver-

sion of the "short chronicles" mentions that her daughters were later buried at the same place (FotiCr 109).

Maryam Ṣəyon ↗Aksum Ṣəyon

Mäšäša Säyfu

M.S. (መሸሻ ሰይፉ; b. ca. 1847, d. 16 December 1887, Finfinnee) was son of ↗Säyfu Śahlä Śəllase and thus a cousin of ↗Mənilək II who was the son of Säyfu's younger brother ↗Ḫaylä Mälakot of Šäwa. M.S. was considered by many to have a better claim to the throne than Mənilək, mainly because Säyfu had continued fighting the appointees of *aṣe* ↗Tewodros II, while Mənilək was in prison and therefore hindered from doing so, and probably because his mother was of nobler blood. His descent made M.S. instrumental in several conspiracies.

In the early 1870s, M.S. was the governor of ↗Märḥabete with the title of *däğğazmač*, leading frequent fights on behalf or on the side of his cousin. Thus, in 1875 he led an expedition against the Muslims of ↗Dära, and in early 1877, together with ↗Gobäna Dači, he led a military expedition against *ras* Adal (↗Täklä Haymanot) of Goğğam. Later the same year Mənilək's consort ↗Bafäna, who wanted to see one of her sons on the Šäwan and imperial throne, decided to use M.S., whom she had married to one of her daughters, in her dynastic plans. She had him forcibly divorced, robbing him of his lands and made Mənilək imprison him at Aṭronsä Maryam and then Fəqre Gəmb based on her accusation of treason.

Whilst Mənilək was fighting the army of *aṣe* ↗Yoḥannəs IV, his uncle ↗Ḫaylä Mika'el Śahlä Śəllase set himself up as the ruler of Šäwa, and Bafäna made her husband send her as his representative to his army at ↗Ləčče. Using Mənilək's seal, she took over control over his troops, had all the royal valuables and arms brought to the *amba* of Tammo and had M.S. brought to her. She promised him his lands and her daughter back for his help but as soon as they safely reached Tammo she put him back in chains. The soldiers, who were in favour of M.S., set him free and arrested Bafäna instead.

When Mənilək returned to Šäwa in June he attempted an attack on Tammo. Six months later, with the mediation of M.S.'s friend and teacher ↗Massaja, an agreement was reached. In December 1877 M.S. left the fortress; his soldiers were amnestied and his lands and title of *däğğazmač* returned to him.

Bafäna's lands were confiscated and, for a short time, she was banished from the court. However, she was back at court taking care of her daughter ↗Zäwditu by the time Yoḥannəs entered Šäwa in January 1878.

When the ↗Gullallee revolt broke out in 1878, it was M.S. who led Mənilək's army to suppress it. Two years later, however, Mənilək, afraid of his cousin's popularity, re-imprisoned M.S., who was first taken to ↗Tädbabä Maryam in Sayənt and then to the royal prison at ↗Ənnäwari. After Mənilək started war against *nəguś* Täklä Haymanot in 1882, Yoḥannəs liberated M.S.

In 1886 Yoḥannəs forced a reconciliation between Mənilək and M.S. who once again was reinstalled as the governor of Märḥabete. He also had the area of Ənṭoṭṭo in his charge, i.e. of the future Addis Abäba. He died of smallpox the following year and was buried at ↗Ənṭoṭṭo Maryam.

Mäšäša Tädla

Däğğazmač M.T. (መሸሻ ተድላ) was the uncle of *wag šum* Gobäze (later *aṣe* ↗Täklä Giyorgis II, r. 1868–72). He was his nephew's representative in his dealings with the British expeditionary force (↗Napier expedition) that came to Ethiopia in 1868 to gain the release of the British captives imprisoned by *aṣe* ↗Tewodros II. M.T. was del-

egated to assist the British in ↗Lasta and ↗Wag on their way to ↗Mäqdäla. At the conclusion of the battle of Mäqdäla, the British invited M.T. to take control of the fortress, but he refused because it would have required too large an army from the emerging emperor. Sources are not clear concerning M.T.'s later fate.

Mäšäša Tewodros

Ras M.T. (መሸሻ፡ ቴዎድሮስ; b. ca. 1845, d. 1910) was a son of *aṣe* ↗Tewodros II. He grew up at ↗Mäqdäla, together with the future *aṣe* ↗Mənilək II who had been confined at Tewodros's fortress since 1855. As a youth, he was appointed governor of ↗Dämbəya with the title of *däğğazmač*. He was nominally in charge from 1861 till the fall of his father in 1868.

After the British invasion M.T. had to flee, finding refuge in Amara Sayənt. He lived there in disgrace until *aṣe* ↗Yoḥannəs IV gave him back the governorship of ↗Qʷara. In 1889 newly crowned Mənilək II re-appointed M.T. governor of Dämbəya and granted him the title of ↗*ras* – a sign of gratitude for the latter's childhood friendship and possible help during Mənilək's escape from Mäqdäla back in 1865. The position, however, was once again nominal, as, reportedly, M.T. was little more than a prisoner of the court in 1897.

In 1910 M.T. brought his young son Kasa (b. ca. 1898) to the court of *ras* ↗Wäldä Giyorgis Abboye in Bägemdər. Upon M.T.'s death his son succeeded him as the governor of ↗Ənfraz. In 1913 Wäldä Giyorgis promoted Kasa to the rank of ↗*fitawrari* and let him accompany him on his campaign in Təgray in 1914.

Evgenia Sokolinskaia

Mäšäša Wärqe

M.W. (መሸሻ፡ ወርቁ; b. ca. 1849, d. ca. 1917) was an important political figure. Born to *afä nəguś* Wärqe, he began his career at the court of *aṣe* ↗Tewodros II at ↗Mäqdäla. There he met British prisoners from whom he learnt their language as well as notions of writing. M.W. was among those who helped future *aṣe* ↗Mənilək II to escape from captivity at Mäqdäla, on which occasion Mənilək allegedly swore that he would make him *ras*, if he himself ascends the throne. M.W. also managed to flee from Mäqdäla and join Mənilək in Šäwa, together with *bäğərond* Kənfu, his colleague at the court of Tewodros. Kənfu's wife tried to follow him with their eleven-months old son, but being found on their way, they were imprisoned and executed. M.W. first found refuge with the governor of ↗Wärrä Himäno, Muḥammad Hamza, in whose house Tewodros's soldiers found him and killed the governor. M.W. managed to escape with his soldiers, but many of these perished when they had to descend a steep slope (MonVidTheo 66).

Later M.W. served at *aṣe* ↗Yoḥannəs IV's court. Described by Paul Mérab as a great favourite of the Emperor, he was in charge of ceremonies and received important personalities on visit at the court. One of them was ↗Massaja, who describes M.W. as a "mysterious plotter", a strong supporter of the ↗*Karra* doctrine and one who tried to boycott his meeting with the Emperor (MasMis² vol. 6, 29ff.). He also participated in the battle of ↗Mätämma in 1889, where Yoḥannəs lost his life.

In early March 1890, Mənilək II nominated M.W. governor of the regions of ᶜAdwa and Aksum up to the Eritrean border. On 16 May 1890, *ras* ↗Mängäša Yoḥannəs, M.W., Counts Augusto Antonelli and Augusto ↗Salimbeni met in ᶜAdwa. Mängäša accepted the installation of M.W. in ᶜAdwa, and both parties agreed to execute article XIII of the ↗Italo-Ethiopian Treaty of Friendship and Commerce (Wəċale), which laid down the reciprocal surrender of rebels who might cross the border.

M.W. and *ras* Mängäša remained faithful to the Emperor. However, *ras* ↗Alula Əngəda met Mercatelli in the spring of 1891 and told him that

Mäšäša Wärqe during his 1907 diplomatic mission to Germany; photo from von der Ropp 1961, frontispiece

Mənilək had placed M.W. as an instigator between him and the Italians. Due to the break of relations between Italy and Mənilək and of Däbbäb Arᵓaya's mutiny against Mängäša, the latter could not visit Mənilək in Šäwa. In late April, M.W., in his turn, left Mäqdäla for Šäwa with Mängäša's permission. At the battle of ↗ᶜAdwa, in 1896, M.W. fought on the side of Mənilək.

In spite of M.W.'s faithfulness, he was not made a *ras* and instead saw several younger people and rivals being honoured with higher titles, while he himself remained a *däğğazmač*. As a consequence, he joined a conspiracy lead by *fitawrari* Gʷəlləlat and *aläqa* Admasu against Mənilək, planning either to throw him down a precipice or else to stab him in the warm baths of ↗Finfinnee. The plan was, however, discovered and the responsibles were condemned to death, However, after demands by *ras* ↗Darge Śahlä Śəllase and others, Mənilək graciated them. M.W. was confided to *ras* ↗Wäldä Giyorgis and after some time became again a devoted and influent general of him. Henceforth, he was entrusted several times with the leadership of delegations to foreign states.

In 1905, together with *ato* ↗Ḫaylä Maryam Śärabyon, he was part of a delegation to ↗Jerusalem to prove Ethiopian ownership of the monastery ↗Dayr as-Sulṭān. The two separated at Port Said, M.W. going to Jerusalem and Ḫaylä Maryam, who spoke French, continuing on his way to Constantinople under whose authority Jerusalem had been since 1516. Ethiopian efforts went on until 1908 but the project was thwarted by Mənilək's death. M.W. was also sent as leader of the first Ethiopian delegation to ↗Germany in 1907 and ↗Austria.

Mäsfən ↗Aristocracy

Mäsfən

Ras M. (መስፍን) was a powerful late 19th/early 20th-cent. lord of ↗Damot.

M. was a son-in-law of *nəguś* ↗Täklä Haymanot of Goğğam. He married *wäyzäro* Nəgəśt, Täklä Haymanot's daughter by his legal wife *wäyzäro* Laqäčč, ca. 1900, and had three children by her (he divorced her later; s. Girma Getahun 1991:505; Prouty 1986:235). Laqäčč hoped that with *ras* M. on her side she could compete in the military struggle for political succession to her husband. She even wrote to *aṣe* ↗Mənilək II claiming the *nəguś* had wished her to rule with his children after his death (Bairu Tafla 1973:44). Her claims, however, were not taken seriously.

Two of Täklä Haymanot's rebellious sons, ↗Bäzzabbəh and Bäläw, were in Addis Abäba when the news of their father's death arrived. Mənilək postponed the problem of succession in Goğğam, meanwhile lopping off portions in the south and north-west to reward appointees who could keep an eye on the province. He then named the third son of Täklä Haymanot, Śəyyum (later ↗Ḫaylu Täklä Haymanot), to central Goğğam. Śəyyum was summoned to Addis

Abäba on the anniversary of Täklä Haymanot's death in January 1902 and was required to bring with him some cohorts of his father in chains – M. was among these.

Śəyyum told the Emperor that he had letters written by M. and others proving that they contemplated treason. Mənilək, however, found the letters to have been forged by Śəyyum himself and consigned him to *däğğazmač* ↗Täsämma in Illubabor whilst appointing his half-brother, Bäzzabbəh, to govern central Goğğam with the title of *ras* (Prouty 1986:223). *Ras* M. seems to have quarrelled again with *däğğazmač* Śəyyum after the latter had been reinstated by Mənilək in his power.

Tsega Endalew

Mäsfən Səläši

M.S. (**መስፍን፡ ስለሺ**; b. ca. 1902, Addisge, d. 1974, Addis Abäba) was a Šäwan nobleman from the Addisge family, related to the ruling house of Šäwa. He rose to prominence during the ↗Italian war of 1935–36 and the subsequent occupation.

After receiving church education, M.S. started his career as a soldier, joining the first modern ↗imperial bodyguard battalion in 1934. Soon he became second in-command with the rank of ↗*šaläqa*. In that capacity he fought at the battle of ↗May Čäw (31 March 1936). After defeat, M.S. returned to Addis Abäba, guarding *aṣe* ↗Ḫaylä Śəllase I.

Soon he left for Ğərru in northern Šäwa, where he formed a rebel formation. Joining forces with his cousin, *däğğazmač* ↗Abärra Kaśa, M.S. participated in the July 1936 failed attempt to liberate Addis Abäba. With other Šäwan patriots, M.S. tried, unsuccessfully, to create a co-ordinating body of the ↗resistance struggle. As a patriot leader, M.S. operated in Sälale, Märḥabete, Tägulät, Wälläga and Goğğam. In March 1938 he participated at the heavily-fought battle of Fageta in which Goğğam patriots scored a remarkable victory. The first chapter of his career of liberation fighter ended in June 1938 when he crossed the border to the Sudan, together with Abärra Kaśa's widow ↗Käbbädäčč Śəyyum and several other patriots.

In exile, M.S. actively promoted the Ethiopian struggle for liberation. He established connection with Ḫaylä Śəllase in Great Britain, shuttled between Cairo and Khartoum and helped strengthen the patriot-exile alliance by entering Goğğam with a radio and arms as imperial messenger along with such foreign anti-fascist agents as Paul Langrois. Here and elsewhere he encouraged the patriots promising the entry of Ḫaylä Śəllase and the Liberation of Ethiopia soon.

In 1940, when General Platt asked patriot leaders in the north-west to ally with Britain against Italy, and invited the patriots to find means of taking arms from the Sudan frontier to the interior, M.S. escorted a mule caravan of *däğğazmač* ↗Mängäša Ğämbäre and *däğğazmač* ↗Nägaš Bäzzabbəh to ↗Qadarif to fetch arms and ammunition. He re-entered Ethiopia accompanying the Emperor in 1941 and played an active role in the war of liberation.

Subsequently, M.S. played leadership role in a series of raids in which he captured Gore and liberated south-western Ethiopia from enemy occupation.

In the post-liberation period, M.S. worked in various capacities: governor of ↗Illubabor (1942–46), and of ↗Käfa (1946–55), Minister of Interior (1955–57) and governor of Šäwa (1957–74).

M.S. was a strong defender of the imperial regime and a trustee of Ḫaylä Śəllase I who awarded him several medals and promoted him from *fitawrari* to *däğğazmač* and then to *ras*, and also gave him the rank of a nominal lieutenant general.

Following the outbreak of the ↗Revolution in 1974, M.S. was put in custody and then killed in the *Därg*'s summary execution of government officials in November 1974.

Seltene Seyoum

Mäṣḥaf bet

The M.b. (**መጽሐፍ፡ ቤት**, Amh. lit. 'house of the book') is the last degree of the traditional church ↗education in the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC). The previous stages are the ↗*nəbab bet*, the ↗*qəddase bet*, the ↗*zema bet* and the ↗*qəne bet*. In the M.b. the students focus on ↗theology and, particularly, ↗exegesis.

According to the Ethiopian belief, the traditional exegesis (↗*Andəmta*) was brought together with the Bible by the companions of ↗Mənilək I. It was considerably reformed during the Gondärine period by a blind teacher by name of ʿƎzra. Since then, there exist two types of M.b., or the schools of exegesis: **ላይ፡ ቤት** (*lay bet*, 'upper house'), with a very long way of interpreting; and **ታች፡ ቤት** (*tačč bet*, 'lower house'), the shorter way interpretation, introduced by ʿƎzra. The latter is by far the wider spread type nowadays.

The curriculum is known as *arat(u) gubaʾeyat* (lit. 'four collections') since it is organized around four main disciplines (*gubaʾe*), everything being transmitted from the master to the pupils orally (*bäqal*). One *gubaʾe* usually takes four years of arduous work, meaning 16 years are necessary for the whole course.

The four *gubaʾe* are:
(1) interpretation of *Bəluy kidan* (↗Old Testament); the teacher of this discipline is called *mäggabe bəluy*;
(2) interpretation of *Ḥaddis kidan* (↗New Testament); the teacher is *mäggabe ḥaddis*;
(3) interpretation of the *Liqawənt* (Church Fathers, i.e. Patristics), namely such books as ↗*Qerəllos*, treatises of ↗John Chrysostom (*Dərsan* and *Tägśaṣ*), ↗Basil of Caesarea, ↗Gregory of Naziance, ↗Gregory of Nyssa, the ↗*Haymanotä abäw*, as well as texts regarding the ecclesiastical legislation and Christian life, including Church ritual, ecclesiastical ↗law (the ↗*Senodos*, the ↗*Didəsqəlya*, the ↗*Fäws mänfäsawi*, etc.);
(4) interpretation of the three *Mäṣaḥəftä mänäkosat* (cp. ↗Monastic literature).

Sometimes calendric calculations (↗computus, and primarily ↗*Baḥrä ḥassab*, ↗*Märḥa ʿəwwur*, ↗*Abušakər*) are also included in the curriculum, in which case (1) and (2) are counted together as one field.

The honorary epithet for a person who has mastered all the *gubaʾe* and is able to teach them is **አራት፡ ዐይና** (*arat ʿayna*, lit. 'four-eyed'). The one who teaches only one *gubaʾe* is called *and ʿayna* ('one-eyed'). The first known *arat ʿayna* was the blind ʿƎzra of Gondär. Other famous teachers (↗*Mämhər*) were *arat ʿayna* Goššu of Goğğam (cp. ↗Moṭa Giyorgis), *arat ʿayna* Kəfle and *arat ʿayna* Mutare Gäbrä Maryam. In 1975, *arat ʿayna aläqa* Ayyälä ʿAlämu of Gondär, was awarded a *Honoris Causa* doctorate from the Ḫaylä Śəllase I University of Addis Abäba. The advanced teachers can be also referred to as *fəṣṣum liq* (the perfect or the most knowledgeable scholar) or as *mäṣḥaf bet* (in this case, 'library') since they are seen as the Library for the depth and width of their knowledge.

Mäsinqo

The M. (**መሲንቆ**, also **መስንቆ**, *mäsənqo*, **ማሲንቆ**, *masinqo*, **ማስንቆ**, *masənqo*, Ǝnzata jargon: *tinkab*)

is a single stringed, bowed, spike fiddle (lute) with a square or diamond shaped sound box (s. Fig. 2). The actual origin of M. is unknown (for various hypotheses cf. Ashenafi Kebede 1971:148f.). Plucked and bowed lutes are found in the Middle East (e.g., Persian spiked fiddle *rubāb*, Arabian bowed fiddle *rabāb*), as well as in Islamized regions of Africa. Except for possessing two strings, the *rabāb* of North Africa is almost identical in construction and function with the M. (for types of African lutes similar to M. cf., e.g. Malm 1967:40; Ismail 1970).

M. are found mainly in southern Eritrea and northern and central Ethiopia. The principal practitioners are the ↗Amhara, ↗Oromo, and ↗Təgrəññа ethnic groups. The M. is almost entirely a secular instrument, very popular and relatively easy to find in performance. A professional M. player is called ↗*azmari* (↗Ǝnzata). Primarily a solo tradition, the music is most commonly performed by a male *azmari* as an accompaniment for his singing. M. can be usually heard in ↗*täğğ bet* or *azmari bet*, but also at private parties, such as holiday, wedding, or organizational celebrations.

Fig. 1. A *mäsinqo* player at a wedding in Gondär; photo 1982, courtesy of Michael Gervers

The instrument is usually made to order and not mass produced. Goatskin parchment is used to cover the sound box frame and laced with prepared gut string. The bow and spike strings are made of horsehair. The spike, divided into four parts – head, collar, peg area, and spike proper – and the rest of the instrument are made of wood. Wood selection is dependent upon function, structural stability, aesthetic value, etc. *Wanza* (*Cordia Africana*) is preferred for the spike, although *koso* (*Hagenia Abyssinica*) can also be used. *Wäyra* (olive wood, *Olea Africana*) is the most desirable choice for the peg and bridge, but *ṭəd* (↗juniper, *Juniperus Procera*), *koso*, and *ṭəqur ənčät* (*Pygeum Africannum*) are also used. When *baḥr zaf* (↗*Eucalyptus Globulus*) was plentiful, it was used for tourist quality M., but not desired by *azmari*.

The greatest physical distinction found among M. is sound box size, and the shape and decoration of the spike head. The Təgrəññа prefer the largest, the Amhara the medium size, and Oromo the smallest sound box. The spike head decorative motif can help identify individual makers.

The player uses two positions in performance. In the standing position the M. is carried by a leather strap while in the second sitting position the M. rests with the sound box clamped firmly between the knees. In each case the peg is placed under the left armpit and the heel of the left hand is placed against the spike while the fingers are put to the strings in the order necessary to obtain the desired pitch. The M. bow string makes contact with the spike string five to six centimeters above the bridge area. Pitch range of the M. can be expanded through the use of harmonic overtones which are produced when the fingers touch lightly on the string.

The M. bridge approximates an upside-down "V" shape, cut from a small fork of an olive tree and trimmed. The bridge can be found in two positions. One is the upright position, with one leg on the membrane and the other resting on the sound box frame with the legs facing toward the player. The bridge acts as a lever for the string and transmits the vibration to the resonating membrane at a single point where the sound box frame acts as the fulcrum. The second position finds the bridge almost lying down with both legs placed on the membrane. Sound is transmitted to the membrane at two points, hence cutting the total vibration distance into half that obtained in position one. Position one results in a clear, full tone while position two results in a muted sound.

The bow and spike strings may wear out within two weeks if the M. is played daily, or after three months if the M. is played infrequently. The M. sound is affected by the string length, number of

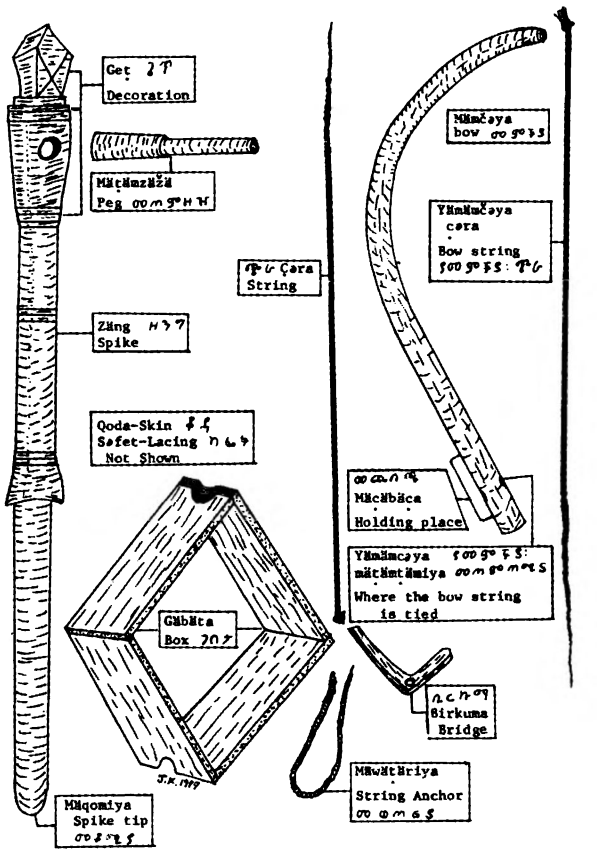

Fig. 2. Schematic drawing of a *mäsinqo*; by Jerome Kimberlin, courtesy of the author

horsehairs and their quality. White hair is finer, produces a more delicate tone, and is preferred by the better players. Black hair is coarser, produces a more strident tone, lasts longer, and is more commonly used. A new bow contains about 125 to 135 black hairs and more for white hair. Hairs of both colours can be mixed in the bow and/or spike string, or a black bow string may be paired with a white spike string. Rosin from the tree sap called *muṭṭa* is used on the bow hair to give it better traction.

M. text and melodies are passed on orally. Sometimes an *azmari* would compose new music and text, but mostly he learns songs heard from other *azmaris*, or on radio, television etc., occasionally composing new text for an existing melody.

The term M. is mentioned already by Alvares (BeckHuntAlvar 517) as "instruments with chord, square like harps", called "*David moçanquo*, which means the harp of David". It is not clear which string instrument he referred to. Interestingly, the Gəᶜəz word M. is mostly used in the Ethiopian Bible as a term for lyre (Hebrew *kinnōr*, Gr. κιθάρα, κινύρα; cp. ↗*Kərar*), but also for harp (Hebrew *nebel*, Gr. ὄργανον). Likewise, the ↗Beğa term *masinkoob* (variant *basinkoob*), etymologically related to M., denotes an instrument similar to the *kərar* (Wedekind 2005:151, 130f.).

Maškov, Viktor

Viktor Fedorovič M. (Mashkov) was an officer of the Imperial Russian Guards who played an important role in establishing Russian–Ethiopian relationships at the end of 19th cent.

It is unclear how M. developed interest in Ethiopia. In any case, by 1887 he was rallying support for his project of establishing ↗Russia's political and spiritual influence in Ethiopia and of forming a kind of alliance between the two countries, in both official and broad public (Pan-Slav) circles (cp. ↗Uspenskij). M. considered the time, even though critical for Ethiopian inde-

pendence, propitious for such a move, which he thought would greatly strengthen the position of Russia on the international scene, in particular in its competition with Great Britain.

By December 1888 M. succeeded. His first reconnoitring journey to Ethiopia was considered private, but promoted and financed by the Ministry of War, and approved by Tsar Alexander III. Apparently, M. was not linked to the undertaking of ↗Ashinov (cp. Caulk 2002:183f.) from whom he explicitly took distance (though in his initial plans he indended to join Ashinov).

In February 1889 M. landed in ↗Obock, in French Somaliland. Ashinov's colony "New Moscow" had been removed shortly before, yet the French governor ↗Lagarde assisted M. and helped to organize a caravan, probably trying to improve the French image after Ashinov's incident. Together with his companion, Sladko Zlatychanin from Montenegro, M. reached ↗Harär, where he stayed till May, waiting in vain for additional money and credentials he had requested from the Russian government. With the money borrowed from the local Orthodox Greeks, M. gathered a small caravan and headed to ↗Ǝnṭoṭṭo, but was detained in ↗Ankobär by the authorities of *nəguś* ↗Mənilək [II] since he had neither credentials, nor a permission to enter the country. However, Mənilək, who proclaimed himself *nəguśä nägäśt* in May 1889, invited M. to come to Ǝnṭoṭṭo in August. He received M. very warmly, granted him several personal audiences and presented him with rich gifts and a letter addressed to Alexander III (Hrenkov 1988:136f.). M. returned to St. Petersburg in December 1889, and his report on the results of the mission was, on the whole, favourably accepted by the government and the press (ibid. 137–43), even if some officials of the Ministry of War judged that he went beyond the non-official frames of the mission. The government decided in favour of another expedition. Planned as a non-official enterprise yet again sponsored by the Russian Ministries of War and of Foreign Affairs as well as by the Holy Synod and the Russian Geographical Society, it considerably superseded the first one by the scale, budget and importance of the tasks (political, scientific and religious). M. was appointed its head and entrusted with delivering the official response to Mənilək. Two ecclesiastics, priest Tikhon and deacon Grigorij, were attached to the mission to investigate the prospects of the "religious alliance" between the Russian and Ethiopian Churches.

On 12 June 1891 M. reached Obock. While two caravans were formed, Grigorij got ill; Tikhon, fearing for his colleague's and for his own health, decided to return back. On 27 June the expedition started and on 28 July reached Harär where M. was welcomed by the governor *ras* ↗Mäkʷännən Wäldä Mikaʾel. After ca. 1.5 months in Harär (being one of a few Europeans who witnessed the horror of ↗*Kəfu qän*), M. went via ↗Čärčär to Ǝnṭoṭṭo. He arrived on 18 October and was cordially received by Mənilək, whom, in his turn, M. impressed by sumptuous gifts.

In November 1891 M. fell gravely ill, and he was transferred to Ankobär, for better climate. He spent there two months exploring the region, visited the monastery of ↗Däbrä Libanos and became a close friend of *abunä* ↗Ṗeṭros. M. was also collecting information on the activities of other Europeans in Ethiopia, above all the Italians and the English (who sceptically watched the Russian involvement, discerning the true character of the mission).

On 18 March 1892, M. returned to Ǝnṭoṭṭo to have his last audience with the Emperor. Mənilək handed him a new letter to Alexander III, in which he asked the Russian Tsar for help in solving the conflict with ↗Italy and for military assistance. In Harär, M. received a letter and presents for Crown Prince Nikolaj from *ras* Mäkʷännən. He was also asked to take two Ethiopian boys, sons of Mäkʷännən's courtier, to Russia for education.

M. arrived at St. Petersburg on 7 August 1892. In the Ministry of War, he was blamed for overexpenditure and disregarding the instructions, and scrupulously questioned on the purported "cruelty" and some other episodes of the expedition. However, M.'s report was highly evaluated in the Ministry of Foreign Affairs. The mission was considered successful, even though not all its tasks were fulfilled, and the virtual gains were less considerable as expected. The mission was not immediately followed by more serious moves of the Russian government, which was waiting for the outcome of the Italo–Ethiopian crisis. However, official contacts organized by M. paved the way for further steps, including the establishment of the diplomatic relations in 1898.

M.'s application for a third expedition to Ethiopia was declined, and he was soon overshadowed by more successful personalities (like ↗Leontiev). Consequently, M. retired from the military service, entered the Ministry of Foreign

Affairs, and in October 1894 was appointed a secretary of the Russian Consulate in Baghdad.

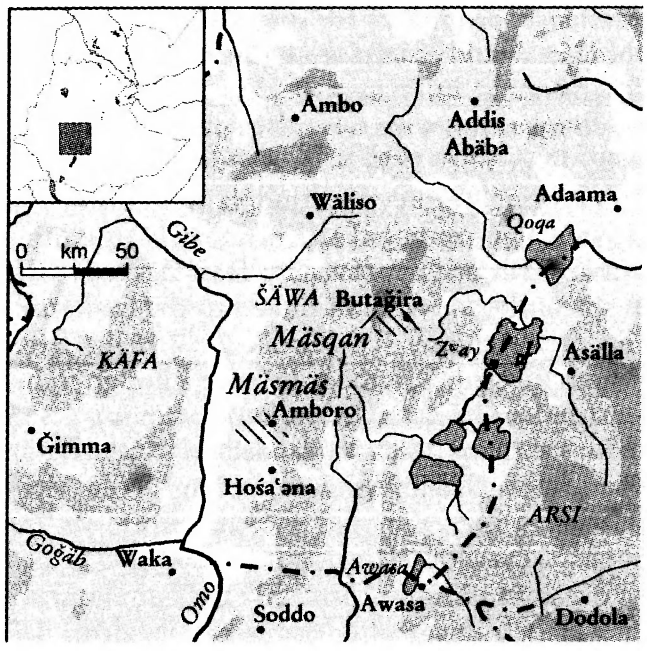
Mäsmäs

M. (መስመስ, Mäsmäsa, Masmas) is a small group formerly speaking a West-↗Gurage dialect. Today they are linguistically and, for the most part, culturally assimilated to the surrounding ↗Hadiyya groups of Leemo and Baadoogo. The main settlement area of the M. is situated around Boošoana, i.e. west of Wačč̣aamo (↗Hossäyna) in the Kontäb (today Miišaa) *wäräda* of ↗Kämbata *awraǧǧa* (today Hadiyya zone). Presently it comprises about five to seven *qäbäles*, Amboro-Goynana, Ollawaam-Goonamo and Aṣṭee-Qarqar being the historically most prominent. Small groups of M. are spread over the whole Hadiyya area and ↗Ǝndägañ.

Traditionally the M. cultivate a mix of various crops (including *ənsät*) and breed cattle. The slopes of the Gibe valley are used as seasonal grazing grounds. The walled M. settlement of ↗Amboro formerly played an important role as a market-place, especially known for its trade with iron and iron implements.

The M. claim to be one of seven groups (M., Ǝndägañ, ↗Ǝnär, ↗Dubamo, ↗Yäm and



↗Donga) which migrated to the south with seven *tabotat* from "the North" or "Gondär" respectively. The early ancestors of the ↗Kambaata and M. are referred to as brothers (Braukämper 1983:32). A clan "Mäsmäsa" still exists among the Kambaata. The *tabot* of Mika'el (Gibe Mika'el) is said to have been brought to the region by the ancestors Ǝndaale and Danbe. It was kept first in Ana and later, on the Seečč Duuna hill of Wačč̣aamo. Today the *tabot* is in the M. village of Lenčičč̣o.

M. elders speak of "nine houses" of M. linking by this genealogical concept different clans in Hadiyya, ↗Allaaba, Ǝndägañ, ↗Ǝnnämor, ↗Wälaytta, ↗Ǧimma and Yäm (↗Interethnic clan-relations).

The immigration of the Hadiyya, first of the Sooro and, since the mid-19th cent., of the Leemo, separated the M. territory from that of the Gurage groups of Ǝndägañ and Ǝnär with which they had close cultural and linguistic links. For the M. the Leemo became strong allies against the Sooro, who had imposed tributes on the M. At the beginning of the 19th cent. the Leemo pushed the Sooro to the south of the Gibe tributary Gombora. The alliance of M. and Leemo developed into strong ties of intermarriage (s. BrHad 55, 202f., 213).

Besides the ancient Orthodox Christian faith of the M., a nowadays nearly vanished, syncretistic folk-religion (like in Ǝndägañ, sometimes referred to as *anṭoqoṭora*; cp. Bustorf 2005:14ff.) developed. It contains elements resembling *zar* and patterns of a Christianity-influenced Gurage religion. The spirit mediums of *Kidanmančč̣o* and *Sa'amär dam* had a central role.

Masnoy

The M. (Amh. መስኖይ, Arab. مسنوى) is a poem in Old ↗Harari that is preserved in at least four *ʿağamī* manuscripts (i.e. in Arabic script) from the 18th and 19th cent. Two of them are now in the Bibliothèque Nationale de France (together under the signature Ms. Harari 1; cf. Cohen 1931:249, 328ff.), the other two in the Biblioteca Nazionale dei Lincei in Rome (together under the signature 129 Fondo Conti Rossini, s. StrANL 322). One of the two manuscripts in Rome bears the date 1294 H. [1877 A.D.] in its colophon. By collating the four witnesses, it appears that the Old Harari M. contained ca. 300 lines. Shorter versions of the Old Harari M. have been published by ʿAbdulmuhaymin ʿAbdunnasir (1988 A.M., containing 167 lines) and Maḥammad Ibrāhim Suleymān (1997, containing 169 lines) in Ethiopic script.

Paulitschke (1888b:517), who was given in ↗Harär two of the above *ʿağamī* manuscripts of the M., claimed it to be "a collection of poetic compositions, folk songs, praise songs, poems to be sung on special events [...] like weddings, circumcisions etc.". Cohen (1931:328–54) followed him in considering the M. a collection of texts – portions of which he translated under the title *Chants de noce*, i.e., "Wedding songs". One of his informants stated that "at the time of the wedding these poems are sung in honour of the bride by elders gathering to this purpose" (ibid. 332). Yet all the written versions of the M. bear no division into different sections, and are clearly a continuous text. Also the Harari who are acquainted with the Old Harari M. regard it as a single poem. Paulitschke and Cohen were probably misled by the fact that individual portions of it were performed during different events.

No complete philological edition of the Old Harari M. has been published yet, but on the basis of its known witnesses and of its two shorter published versions it appears that this poem opens and closes with sequences of mainly religious verses, and is addressed to a young Harari bride, depicting her relationships with her family, her friends, and the saints of Harär, and praising her skill in house and handicrafts, as well as her moral and physical qualities. Also the glory of Harär and the beauty of its region are exalted with lofty words. The loveliness, rectitude and honesty of the bride are thus a metaphor of the values of the city of Harär. Indeed, the name of the M. itself derives from Harari *masnu*, 'watered field or garden', a metaphor of beauty and excellence.

At the end of the 19th and during the 20th cent., manuscripts of the M. became increasingly scarce, and elders had to perform it relying only on their memories. It thus happened that only portions of the Old Harari M. survived in the oral repertoires of Harär, but even these were extensively changed by oral transmission, with several lines added from other sources, possibly other oral wedding songs and even the later *Kitāb al-faqar* ('The Book of Songs') by *kabīr* ʿUmar ʿAbdōš (↗Harari literature).

Interestingly, the M. came to be sung mainly by women, not by male elders, and eventually gave its name to a genre of wedding songs (*masnoy faqar*) now performed by female singers during wedding ceremonies (s. Sartori in preparation). The main themes of the contemporary wedding songs are still quite similar to the Old Harari M.

The ↗Ethiopian Orthodox (Täwaḥədo) Church recognizes two observances of M. (መስቀል), or the Feast of the ↗Cross, both of which are celebrated in commemoration of the discovery of the True Cross by Empress Helena, mother of Emperor Constantine. The better known of these observances is the "(Exaltation of the) Cross", falling on 17 *Mäskäräm* [27 September]), an old Christian feast the meaning of which is said to have changed during the reign of *aṣe* ↗Dawit II, who received a fragment of the True Cross from the Coptic Patriarch (↗Relics: Relics of the True Cross in Ethiopia). The eight-day festivities of M., 10 to 17 *Mäskäräm*, commemorate the coming to Ethiopia of that fragment of the Cross, which is said to have entered the Ethiopian territory on 10 *Mäskäräm* (Caquot 1955:91, 94; Raineri 1999:363f., 384f.). The arrival of the Cross at ↗Amba Gəšän is celebrated on 21 *Mäskäräm*, on which day the big feast takes place there (Heyer 1971:169); the office is then drawn from the 17 *Mäskäräm* services, with a few other specific hymns (*nägś*, *mälkəʾ*), the *qəne* always being an immediate creation.

The other feast, the "(Finding of the True) Cross", falls on 10 *Mäggabit* [16 March] but is of little consequence in the liturgical ↗calendar. This date has become *Yaṣe mäsqäl*, a civil feast also called *Aṣege*, in which *-ge* stands for ↗Gäbrä Mäsqäl as typifying all kings. On this occasion, until 1974, the monarch was offered flowers while being told: *täqäṣṣäl ṣəge ḫaṣe ge*, 'be crowned with flowers, Emperor..!' (the priests going to the royal reception used to sing: "Crowned with flowers [*täqäṣṣälä ṣəge*], o Emperor..!"). Such celebration was revived by Patriarch *abunä* ↗Tewoflos and was meant to honour both emperor and patriarch. Abandoned during the regime of Mängəśtu Ḫaylä Maryam, it was taken up again by Patriarch *abunä* Ṗawlos to honour the head of the Church. Before or after Mass (according to the day of the week), flowers are offered by saying: *täqäṣṣäl ṣəge, o Patrəyark* ('Be crowned with flowers, o Patriarch..!'); *qəne* are executed, etc. This feast, known as *Täqäṣṣäl ṣəge*, may also be called *Gubaʾe Qana*, i.e. 'Meeting of Cana'.

Both M. are considered "minor" feasts (Fritsch 2001:61). Yet, the *Mäskäräm* M. is admittedly one of the most popular celebrations of the Ethiopian Church, being equated to the major feasts of the Lord, and celebrated everywhere in similar conditions – in part, at least, on account of its manifold meanings (Pollera 1926:295, 308–14). Beyond its stated commemorative role, it is also linked to the agricultural cycle, social divisions, military prowess, and political power.

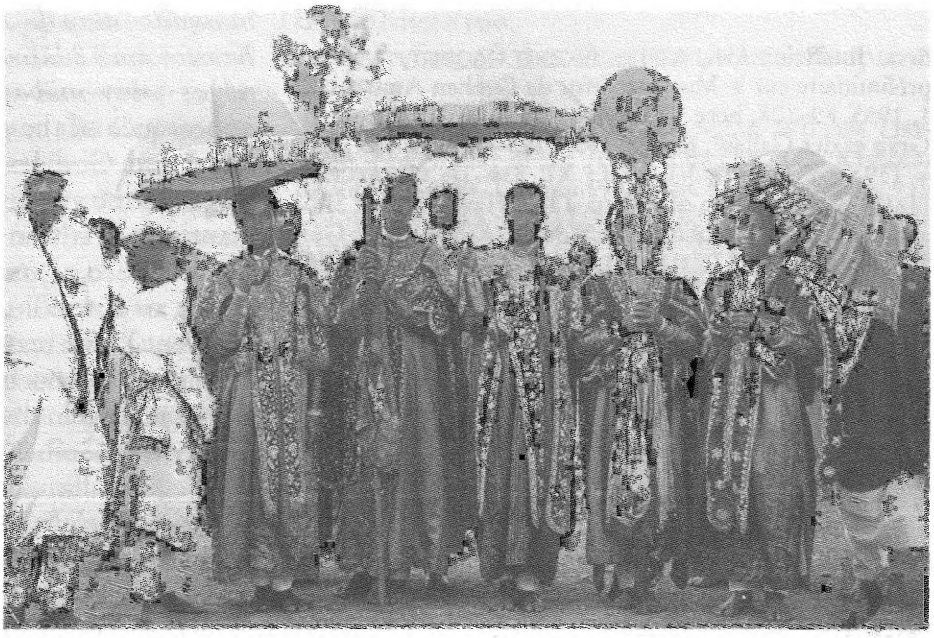
This M. falls in fact close to the end of the rainy season, and is locally (e.g., by the ↗Gamo) often understood as marking the end of *kərämt* and agricultural work and the beginning of the year's cycle. Although not formally the beginning of the ↗New Year, it is often treated as such.

In some local milieux, M. is preceded by many days of mock warfare between young people of both sexes, the girls armed with gourds full of filthy liquids and the boys with thorns and thistles. When opposing parties encounter each other, they ritualistically exchange insults, often using obscene language. The boys prick the girls with their thorns and the girls respond by throwing the liquid.

On the eve of M., people bring torches of twigs to make a bonfire (↗*Dämära*). According to traditions, this commemorates an act of Helena herself by which she either found the Cross or announced her success. In reality, there might be rather a pre-Christian Ethiopian element in this practice. Ullendorff (UllBibl 114) suggests early Judaic influences. An interesting background, in this connection, is transparent in the Jewish "Festival of Bringing of Wood", known from both the 2nd-cent. B.C. Qumranic *Temple Scroll* (XXIII, 3) and Flavius Josephus (*Bell.* II, 425): a late summer or early autumn feast whose symbolism was based on the yearly collection of the wooden fire for burning the sacrifices in the Temple.

During M., however, men carrying torches run into houses poking into all the corners, crying "all bad things, go out, and good ones, come in!" According to other traditions, they say, "turn out the spinach [or cabbage: *gomän*] and bring the porridge".

Large processions from different parishes come and join together to set the bonfire ablaze. There are also ritual fights between the different parishes (Parkyns 1854:285). Yellow wild flowers (M. flowers) are cut and fastened to M. poles that are



Clerics with processional crosses and umbrellas during the *Mäsqäl* feast, Addis Abäba; photo ca. 1930, from the collection of Johannes Bohnenberger

brought by each family to a central clearing where a huge bonfire is built. Priests chant. Oxen or sheep are led three times around a bonfire in honour of the Trinity and are then slaughtered. Each status group circles the poles three times in honour of the Trinity: local lords, clergy, lesser nobility, peasantry, women and finally children. In pre-revolutionary times, the emperor used to participate accompanied by leading ecclesiastics and nobles. Some people take a smouldering stick from the fire and light their hearths with it, bringing home the blessing of the cross. Others take torches and proceed to the closest stream or river, where they bathe.

People use ashes and charcoal from the bonfire, make a paste with butter, and smear it on their foreheads in the shape of a cross.

M. was often the time for a display of soldiers, who came to town for the feast (GuiIohan 223). Since the 19th cent., the outset of the M. was marked by the discharge of firearms. Harris reports in some detail the "Annual Review" he witnessed, and notes: "From eight to ten thousand cavalry were present in the field, and the spectacle, which lasted from nine in the morning until five in the afternoon, was exceedingly wide and impressive" (HarAeth vol. 2, 85). M. was also an occasion for noble men to announce their "Horse ↗names", and host large feasts, cheered by ↗*azmari* who sing in their praise. Young men recite war chants (↗*Fukkära*). Even small boys may try to prove their bravery by burning scars on their arms with torches.

Not all ecclesiastical officials were pleased with these displays. According to a number of sources, in the time of *aṣe* ↗Zärʾa Yaʿəqob, *abunä* ↗Täklä Ḥawaryat saw M. being celebrated "at the court of the king, the soldiers playing (mounted) on horses (and) fighting (each other) with rocks, bones and stick(s), and many souls dying". The saint condemned this as a pagan behaviour (Getatchew Haile in EtRicci 97f.; cf. Caquot 1957:130).

M. appears to have had a peculiar significance for Church-State relations. In the royal chronicles, special note is often taken of the emperor's location and actions on M. (PerZarY 114; GuiIohan 89, 194, 223). Traditionally, with the succession of the reigns, regional rulers were expected to come to pay homage to the emperor. Those who did not could be viewed as being in rebellion (Garretson 2000:180). In 1908, the ailing *aṣe* ↗Mənilək II chose M. to make one of his increasingly rare public appearances in an attempt to reassure the attendance (ibid. 21). In 1916, M. saw the crisis over *ləǧ* ↗Iyasu's succession to Mənilək, when the former was accused of having converted to ↗Islam. In 1935, M. was one of the last public events before the Italian invasion of the country. Even during the subsequent colonial occupation, M. was often the occasion of political promotions, traditional honours and banquets (↗*Gəbər*) for Ethiopian religious and civil leaders.

In southern Ethiopia, festivities are celebrated around the time of M., which, while not clearly Christian, contain elements of the M. holiday. Among the Gurage, an obviously related holiday called *Mäsgär* marks the end of the rainy season (ShGurage 174). The Gonga observe *Maśqarro* at this time (Lange 1982:46). Research is needed to determine whether these are Christianized versions of pre-existent feasts or local versions of the Christian celebration.

In the first decade of the 21st cent., M. continues to be observed throughout Ethiopia, Eritrea and the Ethiopian diaspora, with large public gatherings in Washington, Seattle, Los Angeles, Boston and Toronto, to name just a few.

Mäsqäl: Legend of the Finding of the Holy Cross

The *Legend of the Finding of the Cross* (L.F.C.) developed in ↗Jerusalem in the middle of the 4th cent. in connection with the pilgrim traffic that was then gathering momentum. The legend is widely spread across the whole Christian world, but enjoyed special popularity in the Orient, where it occurs in a variety of languages: Greek, Syriac, Arabic, Gəʿəz, Armenian, Georgian and even Hebrew.

The standard version attributes the finding of the cross to the mother of Emperor Constantine (306–37), Helena, who travelled to Jerusalem where she learned from a Jew (usually called Judas) that it was buried under a heap of earth. She had it removed, but found three crosses. In a miraculous way, it was eventually revealed which of them was Jesus's: namely, the one that, in contact with a dead person, brought him or her back to life. Judas, who converted to Christianity changing his name into Cyriac (Gr. Κυριακός, 'The Lord's one'), eventually became bishop of Jerusalem.

There exist several Gəʿəz versions of the L.F.C. One of them is entitled *Nägärä astärʾayot mäsqälu ʿabiy läʾəgziʾənä wäʾamlakənä Iyäsus Krəstos amä 8 läḫədar bämäwaʿəlä Qʷästanṭinos nəguś ʿabiy mähaymən ḫer* ('The Story of the appearance of the great, life-giving Cross of our Lord and God Jesus Christ on 8 *Ḫədar* in the epoch of the great, believing and good king Constantin'). It is transmitted either in the ↗*Gädlä sämaʿətat*, e.g., ms. BritLib Orient. 691 (15th cent.), or autonomously, e.g., BN Abb. 92 (15th–16th cent.). The text in the homiliary EMML 1766 (14th cent.) seems to belong to a different redaction than that in the two previous mss. (published Guerrier – Grébaut 1925-26).

The *Story* has a composite structure. It features Empress Helena (Eth. *Ǝleni*) finding the Cross with the help of Judas, later called Cyriacus (Eth. *Yəhuda Kirakos*). Another narration of the same legend follows, an abbreviation of the Protonike Legend (known from the Syriac ↗Abgar-Addai Legend), in which it is again Helena who takes the place of the legendary wife of Emperor Claudius. This is followed by a treatise on the Cross (containing inter alia the vision of Constantine before the battle with Maxentius at the Milvian Bridge), divided in two parts by the insertion of an abbreviated version of the L.F.C.

The *Story* has a sequel in the "Acts and Martyrdom of Bishop Cyriacus" (*Gädl wäsəmʿ zäkirakos ṗappas*), which is also transmitted in the *Gädlä sämaʿətat*. Judas, who helped Helena find the Cross, became a Christian, but died as martyr, together with his mother, during the reign of Julian the Apostate (361–63).

8 *Ḫədar* [14 November] is the day on which, according to the ↗*Sənkəssar*, "the Cross appeared to Constantine" (ColSyn VIII, 272–73; BudSaint 222). Thus, the "Story of the appearance of the Cross" was read in commemoration of that event, which also shows why it was given the present title.

Still another version, a shorter one, can be found in the ↗*Täʾammərä Maryam*. It tells the Story of Theodoxia (Eth. *Täwdoksəya*) or, according to other manuscripts, Theodosia (Eth. *Täwdosəya*), the daughter of Empress Helena, who prayed to the Holy Virgin that she might see the grave of Jesus in Jerusalem, and the Holy Cross. Eventually, Jesus appeared to her and told her to go to the Holy City together with her brother, Emperor Constantine, in order to find the Cross. Once she had found the Cross, her name would be changed into that of her mother. In this way, the person who finds the Cross is

still a Helena. Such legend is apparently derived from the 7th-cent. Coptic legend on Eudoxia and her finding of Jesus' sepulchre. Since no translation of that into Gəʿəz is known, the Coptic tradition probably reached Ethiopia in oral form. The earliest Gəʿəz manuscripts containing it are from the 16th cent., whereas the *Täʾammärä Maryam* were translated already in the 15th cent. – the redaction of the Story of Theodoxia therefore dates to ca. 1500 A.D.

The finding of the Cross is also mentioned several times in the ↗*Sənkəssar*: for instance in the reading for 16 *Mäskäräm* [23 September], on which the construction of the Church of the Holy Sepulchre is commemorated. In this passage it is bishop Macarius, and not Judas, who helps Helena to find the Cross (ColSyn VI, 418–21; BudSaint 55ff.) on 17 *Mäskäräm* [24 September], i.e. the ↗*Mäsqäl* Festival (ColSyn VI, 426f. and BudSaint 59f., resp.). Here Helena is told to have forced the Jews to remove the heap of rubbish amassed over the period of 200 years that buried the Cross. This story is repeated in the reading for 10 *Mäggabit* [16 March] (ColSyn XI, 334–37; BudSaint 684ff.).

The ↗Heraclius legend is also tracable in the reading for 9 *Gənbot* [14 May] commemorating Helena, who is said to be a native of Edessa. She discovers the Cross with the help of bishop Macarius (ColSyn XII, 228–31). Though the Cross has the titulus, the queen wishes to see a miracle, which takes place when a dead man is touched with the Cross.

There are also other, shorter mentions of the finding of the Cross in the *Sənkəssar*: on the day of the commemoration of Helena, 18 *Mäskäräm* [25 September] (ColSyn VI, 436); on the feast of St. Cyriacus, who informed Helena as to where the Cross was to be found, 5 *Ṭəqəmt* [12 October] (ColSyn VII, 18–21), on the day of the commemoration of Constantine, who is said to have sent his mother to search for the Cross, 28 *Mäggabit* [3 April] (ColSyn VI, 432f.).

There is one more text that includes the L.F.C., unpublished and known only from a description of the unique manuscript in which it is preserved (BritLib Orient. 698, s. WrBritMus 181). Here the L.F.C. is embedded in a totally fictitious history of the Roman empire, the rulers of which are called by such names as Inʾidän, Alʾadäd, Agdər and Yayas. In due course, Helena becomes the empress, whereas Constantine appears as her successor, being the eldest of her 29 sons. Helena goes in search of the Cross, and Cyriacus plays his role here too.

Mäsqäl: Legend of the wood of the Cross

The story about the origin of the wood of the Holy Cross, as also known in Ethiopia, draws on Oriental legends that can be recognized in the literature on Adam, Seth, Saul, ↗Alexander the Great, Solomon and Sheba (↗Makədda), the tales on the latter three being particularly interwoven. It appears in several variants, but the basic story of the Ethiopian version recounts that, on the occasion of Alexander's aerial journey to Paradise, a branch or trunk of the Tree of Life, often identified with the fig tree, was torn out by his fabulous mount (half-horse half-eagle) and dropped over ↗Jerusalem. After a failed attempt to use it for Solomon's Temple, the piece of wood was long forgotten, but revealed its supernatural power by healing the deformed leg of the Queen of Sheba when she arrived to visit the king. It was later put into water (the Jordan river or a pool), where it performed miracles. It was adorned with silver coins by Solomon and the Queen of Sheba, a custom that was kept by 28 further rulers. At the time of the Passion of Christ, the beam was used for his cross, and the coins to pay Judas's betrayal.

The different elements of this legend were present in Ethiopian literature from at least the 15th cent. onward (*Mäṣḥafä ↗məṣtirä sämay wämədr*, *Gädlä ↗Addam, Zena Ǝskəndər*, s. ↗Alexander). The legend, initially not included

in the ↗*Kəbrä nägäśt*, was, however, inserted into the 19th-cent. folkloric version of the latter's story (Jankowsky 1987). In most cases, it is written in Amharic, but there are also Gəᶜəz versions, usually ascribed to ↗Severos of Ašmunayn (e.g., EMML 2063, fol. 80v). The story circulated either as a separate text or inserted into collections of popular historical works (e.g., ms. in the collection of H. Krenz, Berlin).

Mäsqäl Bezanä ↗Däbrä Täᵓamina

Mäsqäl Kəbra

M.K. (መስቀል፡ ክብራ, lit. 'The Cross is her glory', fl. late 12th-early 13th cent.) was the wife of king ↗Lalibäla. According to the land donations of this king, preserved in the "Golden Gospel" of ↗Däbrä Libanos of Šəmäzana, she bore the title of *bäᶜaltä biḥat* ('Lady of Biḥat'; CRDLib 187, 190f.). The same title is documented for a queen of *aṣe* ↗ᶜAmdä Ṣəyon I – Bəlen Säba – in a land donation registered in the same Gospel book (ibid. 203). In the contracted form of ↗*bäᶜalteḥat*, this title later became a honorific designation for imperial spouses generally (Kropp 2005:132f.). It seems that M.K. was the only queen linked to the reign of Lalibäla, unlike the so-called Solomonic kings who had sometimes three queens.

M.K. is commemorated as a saint in the Ethiopian Orthodox Täwaḥədo Church (on 5 and on 27 or 28 *Ḥamle*, GuiSyn II, 255, 240; BudSaint 1075, 1167; Kur 1972:403). Her Vita is only known through a single manuscript (VatLib Cerulli Et. 178) partly translated by Kur (1972). It is a late compilation (not dated), containing fragments of the hagiographies of Lalibäla and his nephew and successor, ↗Näᵓakkʷəto Läᵓab. Two miracles of M.K. seem to have been composed by a priest of Wärwär named Täklä Maryam, probably the compiler of the hagiographic work. In a donation for the ↗*täzkar* of M.K. and ↗Naᶜod Mogäsa preserved in a Gospel book from Betä Mädḫane ᶜAläm (ms. EMML 6907 fol. 112v), a ↗*liqä kahənat* of Wärwär named Täklä Maryam is mentioned. This indicates that the Vita of M.K. was probably compiled after the mid-16th cent.

The Vita provides little information on M.K. The text contains no mention of her regional or family origins, nor of the end of her life or her death. The compilation only begins with M.K.'s marriage to Lalibäla during his exile. During her husband's stay in ↗Jerusalem, she remained in the desert seeing what Lalibäla saw (a local tradition of Maryam ↗Nazret claims that M.K. was waiting for Lalibäla there; according to the 19th-cent. *Zena Lalibäla* she was waiting in the ↗Mädäbay area). The narrative becomes more fragmented after Lalibäla's accession to the throne; for this period, the compiler uses extracts from the Acts of Näᵓakkʷəto Läᵓab. The queen is said to have first influenced her husband to abdicate in favour of his nephew, but then, 18 months later, when Näᵓakkʷəto Läᵓab's soldiers took a peasant's only cow, to have requested Lalibäla to remove his nephew from the throne.

Other sources support the assumption that M.K. played a major role during the reign of her husband. According to the *History of the Patriarchs of Alexandria*, she was responsible for the fall of metropolitan ↗Mikaᵓel II, who had to return to Egypt after four years in Ethiopia. According to Mikaᵓel, M.K. forced him to consecrate her own brother Ḫayrūn bishop "of the city of the king" (SawHist² vol. 3, part 2, 186f. [tr.]). The latter behaved like a metropolitan and tried to kill Mikaᵓel, who fled to Egypt. Ques-

tioned by the Alexandrian patriarch, Lalibäla gave another version of the facts: Mikaʾel killed a priest from his close circle, accusing him of stealing the palace's treasure, and therefore had to be removed (ibid. 188). Whatever the truth, M.K. had her brother consecrated.

M.K. gave birth to two sons, ↗Yətbaräk and Atyab or Anab, both mentioned in the *History of the Patriarchs* (SawHist² vol. 3, part 2, 193 [tr.], Atyab/Anab possibly identifiable with Näʾakkʷəto Läʾab, s. Tedeschi 1990:338).

The queen is also credited with the building of some churches at ↗Lalibäla, and her great devotion to her royal husband is evidenced by the engraved *mänabərtä* ↗*tabot* discovered in these churches. Notes of donation for her *täzkar* in manuscripts preserved there demonstrate that her cult was celebrated at Lalibäla (EMML 6907, fol. 112v, 158r; EMML 6948 fol. 1v).

Mäsqan

Mäsqan language

M. (common self- and external designation; also written as Masqan, Maskan, Meskan, Mascan, Məsqan, rarely referred to as Gogot or Urib) is spoken by approximately 25,000 people (Gordon 2005:117) in a small area in the former M.–Maräqo district near Butağira (for location s. Mäsmäs). The term M. reputedly derives from Amh. *mäsqäl*, 'cross'. Most of the M. speakers are bi- or multilingual (cf. Getu Shikur 1989; interview with Hassän Dälkero 2001). Easily available written texts in M. are two folktales published by Hetzron (1977:184–96); there is no comprehensive grammar of M. (a study on the verb in M. was published by Leslau 2004).

Hetzron (1968:156, 1972:119) considers M. as a genetic sub-branch on its own within the West ↗Gurage group of South ↗Ethio-Semitic, while Leslau (1969) classifies M. together with Gogot and Muḫər as a sub-branch of West Gurage. M. together with Muḫər, Soddo, Gogot and the West Gurage languages form a typological unit known as Gunnän-Gurage (cf. Hetzron 1977:3f.).

The consonantal system of M. is as follows (Leslau 1979, vol. 1, xxiii): labials *b*, *bʷ*, *f*, *fʷ*, *m*, *mʷ*, *w*; alveolars *t*, *d*, *ṭ*, *n*, *s*, *z*, *l*, *r*; alveopalatals *š*, *ž*, *č*, *ǧ*, *ç̌*, *ñ*, *y*; velars *k*, *kʷ*, *kʸ*, *g*, *gʷ*, *gʸ*, *x*, *xʷ*, *xʸ*, *q*, *qʷ*, *qʸ*; glottal *h*. The phonemic status of the alveolar ejective *ṣ* and the glottal stop *ʾ* is unclear. M. has seven vowels: *ä*, *a*, *e*, *i*, *o*, *u* and *ə*, whereby *ə* also serves as epenthetic vowel (Leslau 1979, vol. 3, xvi; Hetzron 1977:34). The gemination of consonants is phonemic (ibid. 39). The liquids *l*, *r* and *n* in M., as in many other Gunnän-Gurage languages, may merge into a single archiphoneme (cf. Leslau 1979, vol. 3, xlvii ff.; 2004:135; Hetzron 1977:40). There are root-consonant alternations in verbal paradigms (cf. Hetzron 1977:49f.) that do not regularly apply to all verbs. The geminated liquids *nn* and *ññ* may become *r* or *y* respectively in a non-geminated position: *qäññä* (remain:PV-3ms), 'he remained' vs. *yəqäy* (remain:IV-3ms) 'he remains'. Root initial palatals are depalatalized in the jussive or the negative perfective, like *ç̌* ~ *ṭ* in *ç̌äññä-čč* (give birth:PV-3fs), 'she gave birth' vs. *an-ṭäññä-čč* (Neg-give birth:PV-3fs), 'she did not give birth'. In verbs with root final palatals, the palatalization is lost in the perfective 3rd pers. pl. and in the imperfective 2nd pers. pl. and 3rd pers. pl.: *fäǧǧä* (accomplish:PV-3ms), 'he accomplished' vs. *fäddo* (accomplish:PV-3mp), 'they accomplished' (s. Leslau 2004:133; Voigt 2006).

There is no morphological plural marking on nouns, plural is expressed by agreement on verbs (Hetzron 1972:59). Only a few kinship terms form their plural by reduplication ('brother' *gobbe* [sg.] vs. *gobbabit* [pl.]; 'sister' *ʾättämm* [sg.]

vs. *ʾättämmamʷit* [pl.]), by ablaut ('female child' *gäräd* [sg.] vs. *gəred* [pl.]) or by supplementary lexical items ('woman' *məšt* [sg.] vs. *ənšətta* [pl.]). Adjectives are usually not distinguished morphologically from nouns. Some adjectives may form their plural by reduplication of a syllable ('tall' *gälläf* [sg.] vs. *gälalläf* [pl.]) or of the whole word ('good' *fäyya* [sg.] vs. *fäyya-fäyya* [pl.]).

The definite article is the suffix *-i* (Hetzron 1977:56). Subject and direct object seem to be distinguished only by word order: *käbbädä mammo qäṭṭärä*, 'Käbbädä killed Mammo', or *mammo käbbädä qäṭṭärä*, 'Mammo killed Käbbädä'. Genitive and dative are expressed by the prefix *yä-* (*yä-bet wäsäkkət*, 'house-building'; *yä-mädhanitənnät*, 'for medicine'), the locative, ablative and instrumental by the prefix *bä-* (*bä-bet-ota*, 'in/from his house'; *bä-qälläṭ*, 'with a spear'). The prefix *tä-* expresses comitative (cf. ibid. 54) or the allative (*tä-bet-otani*, 'towards his house'). Positional relations can be further modified by postponed elements: *bä-nəq-i bet ʾiftlift*, 'in front of the small house'; *bä-bet-ota wusəṭṭ*, 'in his house'. The similative is expressed by the suffix *-häma*.

Leslau (2004:2) divides triradical simplex verbs into four types: A (*säbbärä* 'to break'), B (*bettänä* 'to disperse'), C (*qattärä* 'to attach'), D (*qoffärä* 'to dig'). Derivation includes reduplication of the second radical in combination with the insertion of the vowel *a* between the reduplicated radical (iterative, frequentative: *kəfaffätä* 'open repeatedly' < *käffätä* 'open'), and the prefixation of *tä-*, *a-* or *at-* to simplex or reduplicated stems which may also involve ablaut phenomena, like *tä-* (passive: *täkeffätä* 'to be opened' < *käffätä* 'to open'; medial: *täsäbbärä* 'break (intr.)' < *säbbärä* 'break (tr.)' or reciprocal: *tänkakkäsä* 'bite each other' < *näkkäsä* 'bite'), *a-* (direct causative: *aqämmäsä* 'make to taste' < *qämmäsä* 'taste'), *at-* (indirect causative, factitive: *atkeffälä* 'order/make someone to pay' < *käffälä* 'pay'; Getu Shikur 1989:34ff.).

The verb occurs in three basic paradigms: perfective, imperfective and jussive/imperative. The imperfective in M. may refer to a present or future action/event (Hetzron 1972:60f.). Unlike in most other South Ethio-Semitic languages, the bare main clause verb represents a finite verb form: *məšt-i ləbas tə-sef* (woman-the clothes 3fs-sew: IPV), 'The woman sews/will sew clothes'. Leslau (1982, 2004:10) distinguishes between three base forms for the jussive of triradical verbs belonging to type A: *yäqtän* ('let him be thin'), *yäṭbəṭ* ('let him seize') and *yäwəqṭ* ('let him crush'), whereby the position of *ə* in the latter two can be considered phonologically conditioned.

M. distinguishes female and male gender in the 2nd and 3rd pers. by agreement markers on the verb (Hetzron 1977:77ff.) only with nouns denoting humans; all other nouns are referred to by the 3rd masc. sg.: *ʾäram-i ʾäga yə-säč* (cow-the water 3ms-drink:IPV), 'The cow is drinking water'. Direct objects are referred to by two different suffix sets on the verb (light and heavy; ibid. 68f.). M. marks converbs by the morpheme *-m* suffixed to verbs in perfective, imperfective, or jussive paradigm. A special form of the verb, the impersonal, is used when the subject is unspecific (ibid. 81ff.).

The negative marker for the 3rd pers. masc. sg. and 3rd pers. pl. in the imperfective and jussive is *ʾe-*: *ʾe-säbər*, 'he will not break'; *ʾe-sbər*, 'he should not break' (Leslau 2004:8, 12). All other persons use the negative marker *ʾa(n)-*, assimilating to the subject agreement prefix: *ʾattəsäbər* (< **ʾan-tə-säbər*), 'she/you (2nd pers. masc. sg.) will not break'. In the perfective aspect the negative marker is *ʾan-*: *an-säbär-hä*, 'you (2nd pers. masc. sg.) did not break'. While affirmative type A verbs in the perfective aspect geminate the second radical, negative type A verbs do not (*qäṭṭärä*, 'he killed' vs. *an-qäṭärä*, 'he did not kill').

The personal pronouns are: *əyya* 'I', *ahä* 'you (masc. sg.)', *äši* 'you (fem. sg.)', *huti* 'he', *hiti* 'she', *inna* 'we', *ahu* 'you (masc. pl.)', *ahma* 'you (fem. pl.)', *hənno* 'they (masc.)', *hənnäma* 'they (fem.)' (Hetzron 1977:58).

Demonstrative pronouns do not distinguish gender. The pronoun *zi* refers to near, and *za* to far entities: *zi säb*, 'this man', *za məšt*, 'that woman'. An optional prefix *nä-* may indicate plural on the demonstrative pronoun: *näzi məštənäma*, 'These are women'.

The present tense copula – except for the 3rd pers. sg. – is *-n*, followed by subject agreement markers (Hetzron 1977:106). For the 3rd pers. masc. sg. the copula is *-w*, but for the 3rd pers. fem. sg. *-(y)a*: *huti näggade-w* (he trader-COP:3ms), 'He is a trader'. The negative copula is expressed by the negated verb *hänä*, 'to be', in the perfective: *hiti näggade ʾan-hän-äčč* (she trader NEG-be:PV-she), 'She is not a trader'.

Question words are either basic pronouns (*mʷa* 'who', *mäčča* 'when') or compound forms (*mə-qar* 'what', *yä-mʷa* 'whose', *yä-nqar* 'why', *bə-mən* 'how', *b-ettey* 'where').

The basic word order is Subject–Object–Verb. Genitives, relative clauses and adjectives precede the head noun.

The ten-word list is as follows: *ʾatt* or *quna* 'one', *hoyt* 'two', *sost* 'three', *ʾäga* 'water', *ʾəsat* 'fire', *ċet* 'sun', *ṭännaqa* 'moon', *däm* 'blood', *ʾallämät* 'tongue', *sən* 'tooth'.

Ronny Meyer

Mäsqan ethnography

The ↗Gurage group of M. inhabits an area bordered by the ↗Libido in the east, ↗Səlṭi and Wuriro in the south, the ↗Əža and ↗Muḫər in the west and the ↗Dobbi in the north. M. country formed part of the ↗Ḥayqočč-Butağira *awraǧǧa* of Čäbo-Gurage and today is administered by the M. *wäräda* (formerly Mäsqan and Maräqo *wäräda*) of Gurage zone. The administrative centre is ↗Butağira which is also inhabited by Səlṭi. Some M. live in Kämbata, Allaaba, Sidamo and Dämbäl Mäqi as well as in Addis Abäba. The name M. is derived according to oral tradition from Mäsqälä Iyäsus, the church of the old M. settlement of Bidära.

The M. practice a mixed farming system and breed cattle. The country of the M. is fertile and the climate is convenient for a high variety of crops; grain and ↗*ənsät* are cultivated as well as tropical fruits and ↗*čat* for the markets in Addis Abäba and elsewhere. Many M. migrated to the capital for seasonal or permanent labour.

The M. are organized into eight territorial subunits: Ənnat Mäsqan, Aborat, Wərib, Gide(yi), Mikaʾelo, Yäṭäqär, Yäṭäbon and Goyiban, which form the *Səmmut sänga Mäsqan* (lit., 'eight oxen of M.', i.e. the 'eight districts of M.'). Dənbäru Alämu et al. (1994/95.:32f.) lists also Amobor, Dirama, Färägäzañ, but these are clans, not *sänga*. Genealogical narratives trace the M. back to basically four ancestral sources: (1) northerners led by *azmač* Səbḥat, who are said to have migrated into the Gurage region in the 14th cent., (2) *aṣe* ↗Zärʾa Yaᶜəqob, claimed as an ancestor of the early inhabitants of the region (cp. Bustorf 2006:31f.) and (3) different leaders of the *ǧihād* of ↗Aḥmad b. Ibrāhīm al-Ġāzī, some of which are also referred to as ancestors by some Səlṭi, ↗Wäläne and ↗Soddo subgroups. Since the Oromo migration of the 16th cent. also (4) Oromo intermingled with the people of M.

The core groups of M. originally inhabited the edge of the Gurage highland neighbouring the Muḫər by whom they were dominated. Till the second half of the 19th cent., these M. were mainly Christians, but a great part of them was converted to Islam during the *ǧihād* of ↗Ḥasän Ənǧamo and the following years. Their church of Umburr Mikaʾel was destroyed by the Muslim troops.

About 1880 an alliance of Muslim M. led by *azmač* Lante was formed in order to fight against the Libido who controlled the main part of the lowland (around later Butağira) which today is M. territory. The Libido, who also had to deal with the strong impact of Dobbi, Səlṭi and Azärnät-Bärbäre into their sphere, lost ground and the M. expanded from the highly populated highlands.

The integration of the M. territory into the Ethiopian empire took place shortly after the defeat of Ḥasän Ənǧamo in 1888. Led by Fəśśəḫa Ulgiičču and allied in a *gogot* ('military alliance') with Libido, Dobbi and Səlṭi, the M. tried to prevent *ras* ↗Gobäna Dači from conquering the area, but were defeated. In the following period M. country had a strategic role for Šäwa because important trade routes from the newly occupied provinces of Arsi, Sidamo and the Kämbata *awraǧǧa* crossed the region. The market of Mäsqan Oddo was one of the most important slave markets for the area.

Two important religious figures contributed considerably to the deepening of Islam among

the M. as well as to their formation as a genuine and unified ethnic entity: the 19th-cent. Islamic preacher "*šayḫ* Wälle" (named after his land of origin, Wällo) and the famous *šayḫ* ᶜIsa of ↗Qatbäre in the 20th cent. They both stayed among the M. for many years, founded centres of Islamic devotion and for the Muslim majority became focuses of identification until today.

Dirk Bustorf

Mass ↗Qəddase

Massaja, Guglielmo

M. (also Massaia, birth name Lorenzo Antonio; b. 9 or 8? June 1809, Piovà d'Asti [since 1940 Piovà Massaia], Piedmont, d. 6 August 1889, San Giorgio a Cremano, Naples), a Catholic bishop and cardinal, was a ↗Capuchin missionary active in Ethiopia during the second half of the 19th cent.

M. joined the Capuchin order in 1826, and was ordained priest in 1832. Appointed lector in theology shortly afterwards, his skills and fame brought him to be the confessor of Prince Vittorio Emanuele, later king of ↗Italy. In 1846, he was consecrated bishop, and sent to Ethiopia as the head of the Apostolic Vicariate of the Galla (↗Oromo), newly established by the ↗Sacra Congregatio de Propaganda Fide. During his first, unsuccessful attempt to reach his destination from ↗Massawa, he consecrated Giustino De ↗Jacobis (7 January 1849), but was expelled from Təgray shortly after. He moved then to Aden, founding there a Capuchin Mission, to become later the Apostolic Vicariate of Arabia. A second attempt at reaching the "country of the Galla", made after an exploration of the Red Sea coast and the Arabian Gulf, met a similar fate.

It was only in 1852, after a brief European interlude, that M. eventually set foot in Oromo land. The following eleven years saw him promoting a nucleus of native clergy and the establishing missionary centres in Asändabo-Guduru (Wälläga), ↗Lagamara-Ǧimma, ↗Limmu-Ǝnnarya, Čala and Anfillo-↗Geeraa, as well as in several other places of ↗Käfa. This period of M.'s mission is characterized by an extensive geographical, ethnographic and linguistic exploration of the territory. His commitment to people's development included education, medicine (M. would be locally known as *Padre del Fantatà*, 'Father of smallpox') and liberation of the slaves. In 1863, on his way to Europe, he was arrested by ↗Tewodros II, but released shortly thereafter.

Among his major accomplishments during his three years in Europe were the compilation of a catechism in Oromiffa, the publication of an Amharic and Oromo grammar (1867) and the establishment of the ↗Collège des Gallas in Marseille. Back in Ethiopia in 1868, on his way to the Oromo via ↗Šäwa and southern Danakil, M. was asked by the then king of Šäwa ↗Mənilək to remain with him as his own adviser and mentor. His Šäwan period was marked by the foundation of the missions of Fəqre Gəmb and ↗Finfinnee (future Addis Abäba), the support to a Šäwan Embassy to Vittorio Emanuele II (1872) in Naples (s. ↗Italy; cp. ↗Lèon des Avanchers), and a contribution to the success of the Italian Geographic Expedition, received by Mənilək in Ləčče in 1876 (↗Ləṭ Maräfiya). After sign-

Cardinal Guglielmo Massaja; from de Salviac 1900:48-49

ing the Treaty of friendship and commerce with and Šäwa, the Italian government appointed him "plenipotentiary minister" there. In 1879, upon request of ↗Yoḥannəs IV, "*abunä* Messias" – as M. was known in Ethiopia – was expelled from the country by Mənilək. He had then to commit himself to to Yoḥannəs, who forced him to undertake a troublesome journey through Sinnār.

Eventually back to Italy, M. was created cardinal of the title of San Vitale by Leo XIII on 10 November 1884, and spent his final years in Frascati writing his memories. This work (MasMis), published in 1885–95 (new ed. 1984), won rapid popularity. To date, it still remains a vivid and clever description of one of the longest missionary experiences ever, having inspired generations of Catholic missionaries, as well as having become an invaluable historical and ethnographical source for 19th-cent. Ethiopia. His rich collection of handwork and ethnographical objects were made into a museum in 1909, in the Capuchin convent of Frascati (Museo Etiopico "G. Massaia"). In 1914 a process for his beatification was initiated. His work in Ethiopia was later taken over by the ↗Missionari della Consolata.

Italian literature in the Fascist period has portrayed M. as a forerunner of colonial expansion (a propagandistic film, *Abuna Messias*, was produced in 1939), but a closer study of both primary sources and contemporary Italian history disproves such an allegation (Tedeschi 1990).

Tewelde Beyene

Massawa

M. (Tgn., Tgr. ምጽዋዕ, Məṣəwwaᶜ, Amh. ምፅዋ Məṣəwwa; 15° 36' 33 N, 39° 27' 52 E) is the most important port of ↗Eritrea and the largest deep-water port of the ↗Red Sea. It is the administrative centre of the *zoba* Səmenawi Qäyyəḥ Baḥri ('Northern Red Sea Province'), formerly of ↗Sämhar *awraǧǧa* (for location s. Mändäfära).

Folk etymology explains the name M. through Tgn. *məṣəwwaᶜ* ('call, shout over a longer distance'), the island Baṣəᶜ (ባጽዕ, the historical centre) being in shouting distance from the coast. The European name forms (M., Ital. Massaua, etc.) derive from the Arabic name (Maṣawwaᶜ/ Muṣuwwaᶜ; cp. Turk. Massava).

Eritreans mostly refer to the entire town as Baṣəᶜ (Tgn., Tgr. of M. and Mänsaᶜ; cp. Beni ᶜAmər Tgr.: Baṭəᶜ, Beğa: Báḍəᶜ; cp. ↗Bāḍiᶜ of medieval Arabic sources), the island then called *wəšṭi Baṣəᶜ* ('inner M.'). The first mention of the port in medieval European sources might be Marino Sanuto's 1321 map after Pietro Vesconte (1311), with a Red Sea port "Nece" (or "Neze", respectively; probably known through Arab. sources, *b* being easily confused for *n*).

The historical M. lies on the islands Baṣəᶜ (with the historical centre) and Ṭəwalät (Arab. Ṭawālūt, Ital. Tawlud), connected with each other and with the coast by dams. The small presently uninhabited nearby island Šayḫ Saᶜīd Ǧazīra (Ital. Isola Verde) was once allegedly a trading place or depot. The mainland satellites ↗Ǝmkullu, ↗Ḥəṭumlo and ↗Ǝmbärämi are now administratively included into the city, so are the more recent mainland city quarters ᶜƎdaga Bəᶜray, Ḵutmiyya and Amatäre, and the two adjacent peninsulas Gärar and ᶜAbdälqadər (named so after the famous Sufi *šayḫ* ᶜAbdalqādir al-Gīlānī) to the north. ↗Ḥərgigo, a south-western suburb which houses the electric plant of M., is still independent.

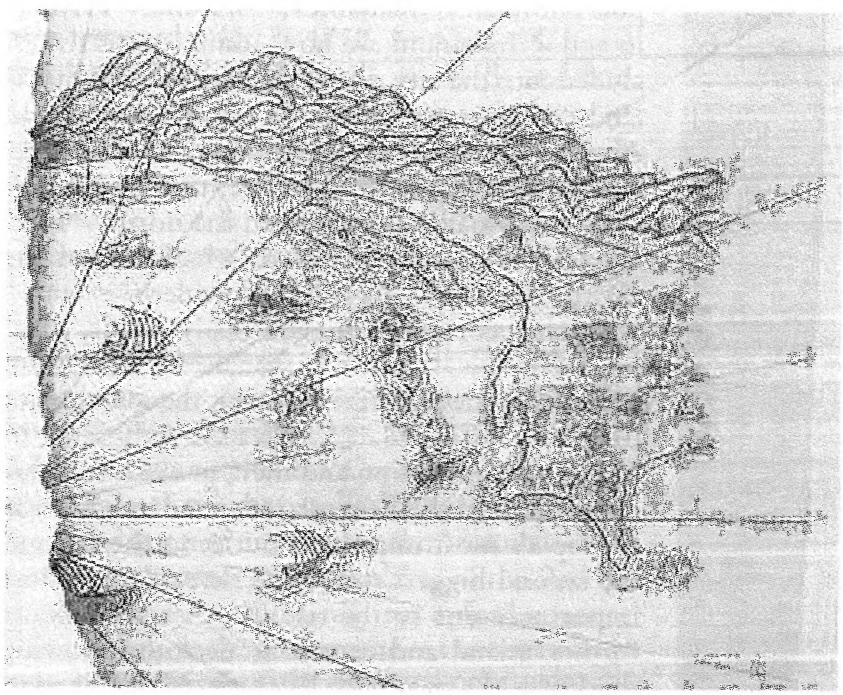
M. and its region changed many hands, passing from the ↗Dahlak sultanate to Ethiopian, then Portuguese influence, from the ↗Ottoman empire to ↗Egypt (↗Massawa Governorate), to Italian administration and then, in 1962, to Ethiopia. Up until the Eritrean independence M. was Ethiopia's most important outlet to the sea and the second biggest town of Eritrea. It later lost importance due to the rise of other settlements further inland and economic decline following the 1998–2000 war with Ethiopia. M. is linked to Asmära by a 115 km mountain road, constructed during the Italian period.

History

M. seems to have emerged as a port after the decline of ↗Adulis, some time between the 8th and the 10th cent. There is a possibility that it was already used as a port earlier, if the 7th cent. place name Baṣaᶜ in an Arabic source refers to M.; it may have been under Muslim domination already then (CRStor 212). It is sure, however, that in the 8th cent. the nearby Dahlak peninsula was dominated by Arabs (ibid. 213). The coast of M. was then controlled by ↗Beğa (or the legendary "Rom", s. CRStor 276). With the rise of the Dahlak sultanate in the 11th cent., M. became the main link between the Muslim-dominated Red Sea coast and the Christian highlands. Local tradition reports about the *šum baḥri* (*śəyyumä baḥər*), an independent ruler of Dahlak and the coastlands, who controlled trade routes between M. and the Christian highlands. He may have originally been a prefect appointed by the Aksumites. When Dahlak became independent, its *sulṭān* was continued to be called *śəyyumä baḥər* by Abyssinians (CRStor 300).

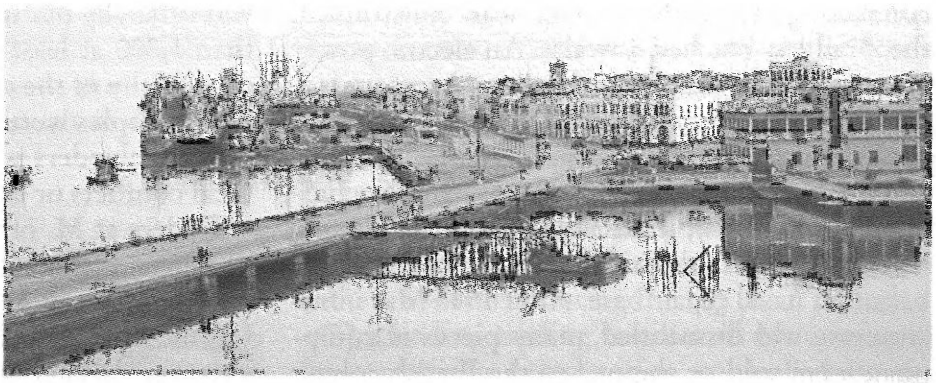
From the 14th cent. onward, M. attracted increased interest of highland rulers. In times of consolidation of power, Ethiopian rulers expanded their sphere of influence up to M., in competition with the ruler of Dahlak. War songs of *aṣe* Yəsḥaq mention campaigns to M. (TadTChurch 261), where he submitted the deputy of Dahlak at M. (van Donzel in EI², 642). *Aṣe* Zärᵓa Yaᶜəqob, after having established his control over the nearby highlands, seems to have reached M. in the mid-15th cent. and fortified Gärar opposite of it, according to a chronicle of ᶜAddi Nəᵓammən (TadTChurch 261; KolTrad III, A25, A32). It is also reported that both M. and Dahlak were pillaged in 1464/65, and "the *qāḍī*" died (very probably the powerful chief-justice of M.; ibid.). M. only irregularly paid tribute to rulers of the adjacent highlands, such as the ↗*baḥər nägaš* or the governor of Təgray, but also remained linked with the ruler of Dahlak, who himself was a vassal of the *sulṭān* in Aden (van Donzel in EI², 642 [Lit.]).

In the early 16th cent., the Portuguese started to control trade in the Indian Ocean, taking over Dahlak in 1520 and briefly occupying M. (the report, however, that M. was formally given by the Ethiopian ruler to the Portuguese in that year, is not confirmed by sources; cp. van Donzel in EI², 642; BeckHuntAlvar II, 479ff.; CrawItin 90, 159). They started to use M. as a port and transformed a mosque into a church (BeckHuntAlvar I, 58); following this episode the Dahlak ruler *sulṭān* Aḥmad b. Ismāᶜīl (d. 1540) joined the war of ↗Aḥmad b. Ibrāhīm al-Ġāzī and re-established his control over the coast. His successor resided at M. It was there that the Portuguese troops who came to help Gälawdewos in the war against Aḥmad b. Ibrāhīm al-Ġāzī landed (cp. Christovão da ↗Gama) in 1541. In 1557, in the course of the Ottoman competition with Portugal for the Red Sea, Sultan Süleyman the Great's commander ↗Özdemir *pasha* occupied M., which was fortified. The Ottomans moved the seat of the new Ottoman province, ↗Ḥabeš *eyaleti*, from Sawākin to M. ↗Mosques were built in M. and surroundings. A few decades later the Ottoman expansion came to a halt, and M. was put under a governor residing in ↗Arabia (at Jeddah), with only a deputy surveying taxation at M. In the city administration, the *qāḍī* of the *šarīᶜa* court occupied a central position, as documented starting from the 16th cent.; in the 19th cent. his jurisdiction extended even over wide areas from the ↗Ḥabab in the north to the northern ᶜAfar coast (Miran 2004:253ff.). The coast was put under local families,



Massawa on an early Portuguese Portolan map, the "Tavoa do Porto de Maçva"; from de Albuquerque 1991:107

the ↗Bäläw of ↗Ḥərgigo becoming the autonomous rulers of the Sämhar, the coastal strip, under Ottoman suzerainty, assuming the Ottoman title of ↗*nāʾib*. Ḥərgigo rulers controlled the only water supply for M. until the 1870s, they were therefore often involved in M.'s administration and received Ottoman rents.



Massawa port and the old city on Baṣəʿ island; photo early 1960s, courtesy of Mike Metras

Ottoman interest in M. revived in the early 19th cent., when in 1809 a Turkish governor was appointed, and in 1813–23 an Egyptian one. From then on Ottoman governors were appointed regularly, and the *nāʾibs* lost a part of their influence. In 1846 M. was leased to the Egyptian ruler Muḥammad ʿAlī, followed by a rebellion of the *nāʾib*, who was submitted by force in 1847; M. was under Egyptian control until 1848. In 1865/66 the Ottoman Porte ceded Ḥabeš (with the ports of ↗Sawākin and M.) to Egypt, who quickly built up a dynamic and military aggressive Massawa Governorate (later the core of the Governorate-General of the Eastern Sudan and the Red Sea Coasts).

Starting from the 1840s, European powers, seeking protection of their economic (and political) interests, established vice-consulates at M.: ↗France in 1841, then the ↗United Kingdom, later, albeit briefly, ↗Austria. The French and British vice-consuls actively intervened in local trade and politics, e.g., by fighting against slave trade (↗Slavery), or by engaging themselves in protection of border peoples (e.g., the ↗Bilin). Missions (↗Lazarists, ↗Swedish Protestant Mission) established themselves in M. They could not convert anyone in the city but used it as their base. Their schools were visited by a few local children and, particularly, freed slaves, many of them Oromo (e.g., ↗Onesimos Näsib).

During the Egyptian Governorate, the first buildings were erected on Ṭəwalät island, which became the administrative centre. A water pipeline was constructed, as well as dams to connect the islands and the coast, a telegraph line and ↗postal service were established, even banking became possible. ↗Ḥanafism was revived at that time, and the 16th-cent. (or earlier) *Ḥanafī* mosque renovated.

The revival of international engagement in the region coincided with that of the Christian Ethiopian state. While *aṣe* ↗Tewodros II did not actively claim M., it became an important issue of *aṣe* ↗Yoḥannəs IV's foreign policy. In his negotiations with ↗Gordon, he claimed M. (or, alternatively, another port south of M.) as Ethiopian property "stolen by the Muslims". After the ↗Egyptian–Ethiopian war of 1875–76, Yoḥannəs put M. under a virtual siege, forbidding any trade with the "Turks". At the same time, Ethiopian outlaws such as ↗Däbbäb Arʾaya, present in the Egyptian territory around M. in the 1880s, endangered Ethiopian caravans heading to M. This and the problems with the ↗Mahdists motivated Great Britain to offer free access to M. "under British protection" in the 1884 ↗Hewett Treaty. M. was then, however, taken over by Italy with British consent. Italian troops, commanded by the naval officer Caimmi, occupied the port in February 1885. After first armed clashes in the coastal plains near the highlands (↗Dogʿali) in 1887, Yoḥannəs IV camped near M. with a huge army. He had to leave, however, without taking an action due to the lack of provision, and Italy continued its expansion.

M. was the capital of the Colonia ↗Eritrea from the colony's proclamation in 1890 until 1897 when Asmära took over. M. was the centre of the Zona di Massaua, then of the Commissariato Regionale di Massaua. The port's development accelerated. Commercial and administrative buildings and docks were erected, forts were built in the suburbs. By 1893 M. had 16,400 inhabitants (including 2,200 Italians).

Large parts of the city were completely reshaped after the 1921 earthquake. The Italians also had a Catholic St. Mary church constructed at that time.

The period of the ↗Africa Orientale Italiana brought further changes. The 115-km road to Asmära was improved, and an aerial cableway

connecting M. with Asmära was constructed; the ↗railway reached Ṭəwalät. An electric power plant was built, so were fuel depots, a cement factory, new living quarters, a base for the ↗navy at the ᶜAbdälqadər Peninsula, and a military airport. In 1938 M. had 15,000 civilian inhabitants (including 4,000 Italians), thousands of soldiers passing through. After the British victory of 1941, M. became a naval repair base. After 1945 M.'s infrastructure was dismantled, many pieces of equipment were sold or shipped to the British colony of ↗India (KilHDic 304; Pankhurst 1952).

Under the ↗Ethiopian-Eritrean Federation (1952–62), M. again developed as a naval base, with American help. Qəddəsti Maryam Orthodox church and a mosque were built. A part of M.'s population, unlike in other Muslim areas of Eritrea, supported Eritrea's union with Ethiopia in the light of trade possibilities (and historical experience). However, Ethiopian interference in local administration as well as the rising dominance of Christians led to different manifestations of protest, including docker strikes in 1954. M. was under ↗Eritrean Liberation Front's siege in 1977/78, whereupon it became a major Ethiopian garrison.

After the battle of ↗Afᶜabät the ↗Eritrean People's Liberation Front (E.P.L.F.) had most of Eritrea in control, and in February 1990 it occupied M. in a surprise attack (*sərrəḥit fänqəl*, 'Operation Fänqəl', s. KaneTDic 669). The *Därg* forces had to give M. up, their bombing having destroyed more than 80 % of the town. It was the last important battle before the Ethiopian troops surrendered to the E.P.L.F. at Asmära in May 1991. In 1994, the Port's Administration was moved to M. from Asmära, the fuel depot and cement factory were repaired and new projects in the fishing industry (mainly for export) developed.

Trade

Until the mid-19th cent. M. was among the most important markets for slaves at the southern Red Sea coast, along with Sawākin, ↗Tağūra and ↗Zaylaᶜ (s. Austen in PICES 5b, 446f.). Slave traders, mostly from the Sudanese border regions (e.g., ↗Funǧ until the 18th cent., the ↗Rašāʾida in the Barka lowlands in the mid-19th cent.) or northern Sudan, transported their captives to M. for the great demand from the Arabian peninsula, Egypt, and India. One caravan could comprise 500 or more slaves (as reported in 1873, s. ibid.); the annual mean number of slaves traded in M. was officially 600 in 1839–40, but probably more than 1,000 at least from the 18th to the mid-19th cent. Many of the captives were Oromo, but also other peoples were represented, including Ethiopian highlanders who had been captured during local conflicts or cross-border raids.

Traders at M. offered both local and imported products, including such ancient goods as ↗ivory, ↗gold, ↗salt and ↗incense, and also victuals for the Red Sea ports. Export products of M. mentioned in the earliest sources, and still in the 1950s, were fish (including shark fins for export to ↗China), mother of pearl, tortoise shell, sea cucumber (purchased by Japanese companies for export to China; Leuenberger 1955:186). Pearl was fished near the M. coast, especially in the Dahlak archipelago – probably an ancient practice; the knowledge of specific places in the sea was transmitted as a secret through generations (ibid. 185). Goods reached M. from the most remote regions, for which a 11th- to 12th-cent. Buddha-like statuette of the Far East found at Ṭəwalät is an example (Conti Rossini 1928, fig. 67, n. 222).

M.'s foreign trade was largely operated by merchants with Ottoman background, mainly Arabs, but also Greeks, Armenians etc. Their trading networks, dominated by merchants from Cairo, Jeddah, Mecca and Aden, linked M. with the Mediterranean and the Indian Ocean (Tuchscherer 2002). Already in the early 16th cent. ships from India (Gujarat) are mentioned, but the presence of Indians was reduced in the 18th cent. (van Donzel in EI², 642). But again the 19th cent. many international traders resident in M. were Indians (↗Banyan), mainly Hindu and Jain, who transported everything available on the Indian market to M., often acquiring considerable wealth during the years. Products offered by them were especially textiles, spices, but also metal work and imported items like German Solingen knives, Italian glass, weapons etc. The Indians normally stayed for half a year and then went back to India with the monsoon, to return again in the following year. The Indian merchants of the city were mainly originating from Gujarat, but also Kerala. Their influence in the mid-19th cent. on the administration of M. was considerable; the "harbourmaster", responsible for the administration of the harbour, including taxation, was an Indian (in the 1860s Mohamed Hindi; s. Munzinger 1869:188). The Indian traders, however, were deprived from their access to the markets starting from the late 19th cent. by the competing Italians.

During the Italian period an important salt industry was developed at M.'s coast, which still flourishes today. Great salines at the Gärar peninsula, at the M. bay, deliver salt to the world market.

Population

The dominating group are Muslim ↗Təgre (the Məṣəwwaᶜin [Arab. Maṣawwiᶜīn, *šaᶜab* Maṣawwaᶜ]) of mixed Arabic and Təgre origins (but also Sāho and ᶜAfar), with a strong urban and cosmopolitan identity. They are marked by strong Arabic influences (Miran 2004:281). The urban inhabitants of M. and its suburbs Ǝmkullu, Ḥəṭumlo and Ḥərgigo were called *Säb mədun* (Tgr. 'people of the cities'), in differentiation from other Təgre subgroups (LitPEA vol. 1, 283 = vol. 2, 340). In addition to the city population, there were also always *Säb bar* ('People of the countryside') migrating to M. Agro-pastoralists and pastoralists from the Təgre Ḥabab, ↗Mänsaᶜ, Mäsḥalit, ↗ᶜAd Šek etc., the Arab Rašāʾida, and the Sāho ↗Asaorta used to migrate to the M. area during the dry season; starting from the Italian period many of them settled permanently. The temporary population used to include traders, mostly highlanders but also Indians, some of whom also remained in M. Today the city has a large share of Christian ↗Təgrəñña-speaking population.

M. is an important local centre for Islam (s. ↗Islam: History of Islam in Eritrea). The important ↗mosques include the early Ottoman Ḥanafī *masǧid*, the allegedly 13th-cent. Šāfiᶜī *masǧid*, and the Šayḫ Ḥammālī mosque. Famous Islamic teachers and local chiefs were buried in shrines at M. and its suburbs, esp. Ǝmbärämi and Ḥəṭumlo. The 16th-cent. grave of *šayḫ* ad-Darbuš in the old city is an important, but now endangered monument. ↗Islamic brotherhoods present in M. include the *Ḫatmīya*, *Šāḏilīya* and *Qādirīya* (Miran 2005).

The names for M. and its parts are used in personal onomastics (↗Names). Male names include Bāṣəᶜāy (lit. 'one from Baṣəᶜ', meaning 'rich like someone from M.'), Baynani (lit. '↗Banyan', i.e. Indian [from M.]), Tərki, Tərkay ('Turk [from M.]'); female names Ṭəwalät (one of the M. islands), and Madayin ('region of M.'; [the region around M. was also called Mudun, Arab. 'cities']; s. LitPEA II 165, 185f.).

19th-cent. travellers report on the great number of languages spoken at M., Arabic being a *lingua franca*, but also ↗Amharic serving as such (cp. Afevork 1908). Təgre was and still is the dominating language, and Təgrəñña is very present. In the 19th cent. traders spoke Arabic, Hindi, Urdu, all the languages of the highlands, and even ↗Hausa. There were Oromo and ᶜAfar and other minor migrant groups; government officials mainly used Arabic, Turkish, French, English and even German during the Egyptian period.

The leading trading families of M. originated from virtually every region controlled by the Ottomans (Yemen, Saudi Arabia, Kurdistan), and even farther regions (India, Pakistan, Afghanistan), but also from adjacent areas (from the ↗*käbäsa* highlands or diverse Təgre groups). Also Bäläw families from Ḥərgigo, were they controlled the water supply for M., belong to the old inhabitants of M. Until the 19th cent. Ḥərgigo received a rent from the M. authorities for the protection of M. This gave them a position through which they could exercise some influence on M.

Local tradition reports that a part of the population of Ḥərgigo (e.g., the Tgr. group ᶜAd Bušnaq) descends from a 16th/17th-cent. Albanese and Bosniak contingent of the Ottoman army (Leuenberger 1955:188; Schimper 1852:238), stationed here for the protection of the Ottoman province (*eyalet*) of Ḥabeš.

Several important families of M., virtually "patricians", controlled administrative posts and trade during generations. M. is the only city in Eritrea, where family names are regularly used; old families often adopted names which were pointing to their origins (e.g., Kurdī, Turkī, Maġribī, Hindī, Qašmīrī, Bāḥubayš from the Yemen; from the environs: ᶜAdūlāy, Dankalī, Karanī, Sūmālī) or important titles inherited within the family (e.g., Afandī from Turkish *efendi*, Kantibay from the Ḥabab *käntebay*, Kakiya from the Turkish administrative title *kahya*, similar to the ↗Nāʾib family in Ḥərgigo; s. Miran 2004:308–14).

The population of M. increased greatly during the Ethiopian federation period, from 21,300 inhabitants in 1962 to ca. 60,000 in the mid-1980s (including refugees from the highlands and food aid migrants). In 2004 M. was the fifth in size, with 36,400 inhabitants.

Wolbert Smidt

Architecture in Massawa

M.'s ↗architecture is complex. Chronologically, it can be roughly subdivided into four periods: pre-1885 (Ottoman and Egyptian); 1885–1935 (Colonia Eritrea); 1935–41 (Africa Coloniale Italiana) and post-1941.

M.'s oldest buildings are situated on Baṣəᶜ island. Their distinct features are owed to Ottoman influence and reflect Arabian architecture in and around the Red Sea region. They are built in coral block, a material that does not corrode in the highly salty environment and thus requires relatively little maintenance. Ottomans used lumps of unworked coral block bound with lime mortar. Egyptians cut regular blocks from larger pieces of coral using them as bricks. Supporting wooden beams were laid horizontally at regular intervals.

Few buildings from the Ottoman period still exist, e.g., the allegedly 15th-cent. Šayḫ Ḥanafī mosque. Most of the predominantly single-storey constructions date from the Egyptian period. The most eminent building from this time is the former Governor's Palace, built by the order of ↗Munzinger in 1872–74. The two-storey palace is square in plan and topped with a large dome, whose axis provided the central co-ordinate of the first maps of Eritrea – drawn to a scale of 1:50,000. It later was used as seat of the Italian administration, called "Palazzo del Governo", and afterwards as ↗Ḫaylä Śəllase's residence; it is now still known as the ↗*Gəbbi*.

After the destructive series of earthquakes in August 1921, many buildings were designed and built by the Italians. Although most old buildings had to be rebuilt (or repaired), the Italians made a conscious effort to retain their scale and physical characteristics, as with the old Grand Mosque, ↗Ğāmiᶜ al-Ḫulafāᵓ ar-Rāšidīn. They also kept the layout of the city's streets. The irregular pattern of narrow, dense alleyways is as much a part of M.'s character today as the buildings are. New post-1921 buildings were constructed in reinforced concrete, and often faced with coral block or cement plaster. They usually have more than one storey. On Baṣəᶜ, buildings appeared mostly in the districts facing the port, to stylistically complement and respect the existing ones. On Ṭəwalät, another style was adopted, the character being more European.

Between the mid-1930s and early 1940s, Italians built larger structures, often of three and four storeys, in a modern style similar to that of contemporary ↗Asmära architecture, but with more

respect for traditional forms, reflected in such details as arches, colonnades and verandas. Reinforced concrete was the most common material. Unsuited to the climatic conditions in M., it has suffered severe damage from salt. Most buildings from this period are located on Baṣəᶜ's south side.

A few buildings were constructed after the Italian period, most of them on Ṭəwalät. Some attempts to reconstruct war-damaged old buildings on Baṣəᶜ have resulted in their replacement. Thus, a passenger terminal and port administration building took place of buildings from the Turkish period.

The old city on Baṣəᶜ is today considered national heritage. Restauration programmes in the 1990s, co-funded by the World Bank, have helped to partially rebuild the city.

Massawa Governorate

The M.G. (Arab. *mudīrīyat* al-Muṣuwwaᶜ, also *muḥāfaẓat* al-Musuwwaᶜ; Turk. Massava *muḥāfızlığı*) formally succeeded the Ottoman ↗Ḥabeš *eyaleti* in 1869, as a new administrative unit annexed to the Egyptian Sudan, with ↗Massawa as its capital. Before, the *muḥāfızlıq* Massava was an administrative unit within Ḥabeš. The M.G. was shaped within the framework of imperialist Egyptian expansion. Later, it became the strategic and legal basis for the foundation of the Italian Colonia ↗Eritrea in 1890.

The Governorate 1865–69

Ḥabeš was transferred to the Egyptian dynasty of ↗Ismāᶜīl *bāšā* in 1865 (and then to ↗Egypt itself in 1866), Egypt taking possession of it on 30 May 1866. During the first years, M.G., as an administrative unit within Ḥabeš, comprised only the port of Massawa with Ḥərgigo (Däḫono), Ǝmkullu and Ḥəṭəmlo, with the coastal strip up to Ḥaffalé (↗Amfilla) in the south, together with the ↗Dahlak archipelago, and in the north extending up to Tokar (Talhami 1979:76); vassals or dependencies of M.G. were then the ↗Mänsaᶜ, the ↗Ḥabab, the Buri Peninsula (with the Dankál) and, in theory, the ↗Ṣänᶜadäglä of the northern edge of ↗Akkälä Guzay (who in fact remained fully autonomous).

Ottoman claims had often included the whole ᶜAfar coast up to the ↗Bāb al-Mandab, but without involving any concrete action (except in 1860, when the governor of Massawa, Purto *efendi*, on the order of the Ottoman Porte took control of the coast: instead of demanding tribute, his deputy Aḥmad Arᵓay of Ḥərgigo gave gifts to the ᶜAfar chiefs, who then agreed to plant the Ottoman flag up to the salt plain in the ᶜAfar Depression and along the coast, excluding ↗Baylūl which belonged to the ↗Awsa sultanate; s. Munzinger 1869:214).

The Egyptian government ensured that the old theoretical claims were further put into effect. The port of ᶜIddi (↗ᶜƎdd), claimed by the French due to an old contract, was purchased by Ismāᶜīl *bāšā* and formally included into M.G. (ibid.). In 1866 the Ḥərgigo chief Aḥmad Arᵓay of the ↗Nāᵓib family was declared Egyptian chief of the whole ᶜAfar coast under the governor at Massawa (however, he died in the same year of cholera; s. ibid.:215). Small Egyptian garrisons were established along the coast, e.g., at ↗Iṯāfálo near the salt plain of the Buri peninsula (ibid. 215, 229), collecting taxes on ↗salt production. Also litigations concerning ᶜAfar were decided within M.G. territory, e.g., at the "Turkish" court of Ḥaffalé (ibid. 213f).

In 1867 the British-Indian army (↗Napier expedition) established their first headquarters within the M.G. at ↗Zula Bay, with the permission of the Egyptian government; when leaving in 1868, their small railway and other installations went into the possession of the M.G.

The Sudano-Egyptian Governorate 1869–75

In 1869 M.G. was formed as a unit within the newly founded general-governorate of the "Eastern Sudan". It thus formally became part of the Egyptian Sudan, in contravention of Ottoman rules, which perceived Ḥabeš as separate from the Sudan. After another re-shaping of administrative borders in 1871, the Eastern Sudan was split again into separate provinces.

The M.G. slowly took more and more direct control of its territories. Tensions and conflicts between the *nāʾib* and the Egyptians mounted as they attempted to modify their control of the coasts and hinterlands from a form of indirect rule to a more direct and centralized method of governing, e.g. by taking over tribute collection from the *nāʾib*. This process led to the diminishing of the political power of the *nāʾibs*, who had until then been the traditional power brokers in the area.

The first serious expansion of M.G. took place in 1872, when the energetic governor of M.G., Werner ↗Munzinger *bey*, after secret negotiations with local *šayḫs*, annexed the adjacent Bogos highlands (↗Bilin history). Until this time, these had been only theoretically claimed by the Egyptian ↗Taka province in the Sudan, but had in fact a loose tribute-relationship with the Ethiopian-appointed governor of Ḥamasen. In 1873 the ᶜAfar of the coast (Dankáli) declared their vassalship, so that, at least theoretically, the whole coastal strip up to the still independent sultanate of ↗Raḥayta in the south were included in the province. This was followed by the annexation of the ↗salt plains of the ᶜAfar Depression (Tgn. Ṭənṭal), together with the lakes Afḍera and ᶜAssal (in today's Eritrean–Ethiopian border region). However, when the governor ↗Arakel *bey* Dabroyan made a reconnoitring expedition into these plains in 1874 (↗Expeditions), from where the Ethiopian salt caravans regularly started, he did not establish a permanent post. From Bogos, the Governorate included adjacent ↗Təgre areas up to the Kunama (including ↗Kufit). Historical tradition of the ↗ᶜAd Šek confirms that in the period of Munzinger this Təgre group also accepted the jurisdiction of M.G. (Höfner 1961:196f.); also the chiefs (*käntebay*) of the Ḥabab received their investiture from Munzinger *bāšā* (d'Avray 1996:96, 98). The setting up of M.G.'s borders was often done quite arbitrarily (e.g., by the intelligence officer ↗Haggenmacher). Starting from 1872 the M.G. was governed together with the ↗Sawākin Governorate (Talhami 1979:76, 263), from 1873 under the new Egyptian Governorate-General of the Red Sea Coasts and the Eastern Sudan (s. ↗Ottoman Empire).

The ↗Egyptian–Ethiopian war of 1875–76 was practically prepared in the M.G.; in October 1875 both Ḥamasen and Säraye were occupied, and the appointment of an Egyptian interim-governor prepared. The Egyptian troops, however, had to retreat in mid-November after the defeat of ↗Gundät. Afterwards, a local chief in Akkälä Guzay declared his alliance with Egypt (↗*Baḫər nägaś*), and Egypt established a fort in ↗Guraᶜ; but this led to another dramatic defeat. De facto, most of M.G.'s new dependencies on the highlands were then lost.

The Governorate until 1885

The expansion of M.G. thus came to a halt in 1876, even if, until the late 1870s neighbouring Ḥamasen had an Egyptian counter-governor: *däggiyat* ↗Wäldä Mikaʾel Sälomon declared himself and his province subject to Egypt in early 1876; this rebellion against *aṣe* ↗Yoḥannəs IV was followed by his replacement by a rival, while Egypt raised him in rank, making him a *ras*. For several years, he continued to claim the government of Ḥamasen, almost every year taking it by force and retreating again to his main power base, Bogos and Ḥalḥal, which had been allocated to him by Egypt. In the same year 1876 Egypt re-appointed *nāʾib* ↗Muḥammad ᶜAbdarraḥīm governor of Ḥərgigo, in recognition of his services to the M.G.

M.G. served as a retreat area for rebels from the Ethiopian state, such as the claimant to the throne ↗Däbbäb Arʾaya. They were the principal actors of the "cold war" with Ethiopia, raiding especially Ethiopian caravans. The economic boom, evident since the 1860s, came to a halt; a number of cotton plantation projects and other manufacture enterprises (such as ↗euphorbia manufacture) in the M.G. were abandoned. M.G. thus could not generate any durable income for Egypt. In the years 1881–83 the expenditure exceeded the revenue. After Great Britain took control of the Egyptian government in 1882, discussions started within the British government if M.G. should be returned to the Porte (ZewYohan 160f.). M.G. was soon cut off from Egypt. This was due to the rise of the Mahdīya state (↗Mahdists) in the centre of the (former) Egyptian Sudan, after the fall of al-Ubayyiḍ of January 1883. The Anglophone governor of M.G. was then involved in a new peace initiative with Ethiopia, leading to the ↗Hewett treaty (1884); he signed it in the name of Egypt, assuring Ethiopia free access to the port "under British protection". British analysts, however, predicted that any further involvement in M.G. would finally lead renewed conflict with expanding Ethiopia, which was reclaiming its lost territories. Consequently Italy, already es-

tablished in another territory claimed by Egypt (↗Colonia di Assab), was allowed to declare the M.G. their protectorate in 1885, in place of the British.

M.G. was first administered by a joint Egyptian-Italian administration, but at the end of the year, was replaced by an Italian one, while keeping the Egyptian name of the governorate (↗Eritrea: administrative division). Unofficially, the area was now also called "Abissinia Eritrea" ('Erythraean Abyssinia', i.e. the Red Sea regions of Abyssinia, s. Smidt 2006). Despite Egyptian protests, this protectorate became a colonial administration in 1890, when the "Colonia Eritrea" was proclaimed. Nevertheless in 1893, however, the "Massava *muḥāfiẓlığı*" is listed – wrongly – as an Ottoman province, one of two *muḥāfiẓlıq* of the Egyptian Sudan, the other one being Sevvakin (Cevad 1895/96:760; ↗Sawākin).

The Italians took over a number of Egyptian institutions established in the M.G., among them the native court, acting on the basis of local laws, especially the *Ḥanafī* legal code introduced by the Egyptians (the court's President becoming a former Egyptian official, ↗ᶜAbdallāh *bey* al-Ġūl).

Administration and governors of M.G.

Information on the administrative structure of M.G. can only rarely be found in European literature (as travellers generally ignored administrative divisions), and not at all in Ethiopian texts, which did not recognize this administrative unit; the only source is the Egyptian archives (cp. DouinIsm III).

The chief of civil and military administration was the governor (*wālī*), assisted at times by a chief officer (*muḥāfiẓ*). Notable governors were:

ᶜAbdallāh Ḫalīl *efendi* (from Kurdistan, February–October 1865); Ḥasan *bey* Rifᶜat (1866–67); ᶜAbdalqādir (1867); ᶜAllāʾaddīn *bāšā* Ṣiddīq (1871); Werner Munzinger *bāšā* (1871–73, after that governor-general of the new Governorate-General of the Red Sea Littoral and the Eastern Sudan, s. ↗Ottoman Empire); Arakel *bey* Dabroyan (also Abroyan, b. Triest, Austrian Empire, from Armenian-Austrian parents, 1873–75); Muḥammad Rātib *bāšā* (1875–77); Uṯmān Rifki *bāšā* (1877); ᶜAlāʾaddīn bey (1877) Ḫuršīd *bey* Pertev (1882); ↗Muḥammad Muḫtār *bāšā* (1883–84); Col. Alexander Macomb Mason *bey* (an American, Egyptian officer, 1884); Admiral William Hewett (the only British administrator appointed by the Anglo–Egyptian government, in interim, 1884); ᶜIzzet *bey* (1884–85, with the deputy governor Marcopoli *bey*, an Italophone Maltese); Saletta Tancredi (February–November 1885, April–November 1887); Carlo Gené (December 1885–April 1887).

Mästägabəʾ

M. (**መስተጋብእ**, lit. 'collection, compilation', from Gəᶜəz *astägabʾa*, 'collect, gather') is a type of ↗hymn built on the basis of the ↗Psalter, common in the hymnody of the ↗Ethiopian Orthodox Täwaḥədo Church. It is also used as one of the "school hymns", i.e. a hymn for the study of the hymnody. The authorship of M. is traditionally ascribed to St. ↗Yared.

The M. hymns are actually versicles from the Psalter, apart from the very last entry, which, in the Divine office of ↗*Məᶜəraf*, ends in the lines *Adḫanä ḫəzbo bäḫaylä mäsqälu/əsmä bərhan śäräqä* ('He saved his people by the power of his cross/because light has come out') (VelMe I, 46; HabTent 58).

Every day of the week two sets of M. are employed, the first sung in ↗*gəᶜəz* and the second in ↗*ᶜəzəl* mode (a few are sung in *araray* mode); thus, there are twelve sets of the M.-hymns (VelMe II, 219f.). Selections from M. are sung every morning from Monday to Saturday during ↗Lent (cp. ↗*Ṣomä dəggʷa*).

There are offices which provide a place for the insertion of specific selections from M., such as the ↗*Səbḥatä nägh* (VelMe II, 138, 399), for Wednesday and Thursday for the period of fasting in the *Məʿəraf*. However, most categories of devotional and liturgical compositions make abundant use of the Psalter without borrowing specific selections from M.

Mästawät

Wäyzäro M. (መስፍንት, or Mästayät; b. ca. 1830, d. ca. 1885) is usually referred to as the "queen" of ↗Wällo in the 1860s, a status which does not reflect the reality of her power at that time. The background to her ascendancy is, as yet, not well known. After her husband, *imām* Libän Amäde (II) of ↗Wärrä Himäno, died in 1857 in the course of a revolt against ↗Tewodros II, she acted as a regent for her son Amäde Libän (later known as Abba Waṭäw), who was then five years old. M. continued the rebellion. After controlling much of Wärrä Himäno, she captured the stronghold of ↗Mäqdäla and sided with the ↗Napier expedition against Tewodros in 1868. At the same time, M. also fought against (and sometimes allied herself with) *wag šum* Gobäze Gäbrä Mädḫən of Lasta (the later *aṣe* ↗Täklä Giyorgis II) who had been claiming Mäqdäla as well as the adjoining territories. This rivalry continued after Tewodros's death, when Gobäze attempted to take over the imperial crown.

M. was described as a fierce warrior and a charismatic leader. The fact that a woman could accomplish such martial achievements was quite exceptional at that time in this region, but not unique. Indeed, the same historical conditions produced another female member of the ↗Mammädočč dynasty of Wärrä Himäno in the person of ↗Wärqitu, the widow of Ali Abba Bulla, who was the rival uncle of M.'s husband. M. and Wärqitu became rivals who each strove to unify the armies of Wällo. M. was dominant until the death of Tewodros, but in the following years Wärqitu was favoured by ↗Mənilək of Šäwa for having helped him to escape from Mäqdäla.

The "queen" Mästawät with her eldest son Ali (later *imām*) and an attendant; photo 1868, courtesy of the Wallraf-Richartz-Museum, Köln

When ↗Yoḥannəs IV and Mənilək divided up Wällo in 1878, M. and Abba Waṭäw were put at a disadvantage. They lost their authority over Wärrä Himäno and, under the authority of Mənilək received governorship over the territories of ↗Boräna and ↗Wärrä Illu, that yielded lesser amounts of tribute. M. did not convert to Christianity (unlike her son who was obliged to do so at Boru Meda, receiving the name Ḫaylä Maryam), but she did remain loyal to Mənilək, even after her son's death in 1880. She contributed troops to the king of Šäwa in the campaign of ↗Əmbabo in 1882.

Matäb

The M. (ማተብ, from Gəᶜəz *maᶜətäb*, 'seal, sign of the cross', *ᶜatäbä* 'to seal'), an emblem of Christianity in Ethiopia, is a blue (sometimes black) silk cord tied around the neck of a child during the ↗baptism ceremony. The cord may also be red, blue and white, the three colours sometimes interpreted in popular belief as symbolizing the trinity. This cord may be replaced later by a thick blue silk or cotton cord. Ethiopian legend tells that ↗Jacob of Serug had introduced the cord when he baptized a great number of children (Heyer 1971:59).

Every Orthodox Christian is expected to wear M. In the Christian highlands, a person without a M. may even be regarded with suspicion and believed to be a Muslim or another non-believer. During the ↗Napier expedition of 1867/68 several British officers wore a M. in order to facilitate negotiations with Ethiopian notables, demonstrating that they were Christians like them.

Women may later append various elements on the M., though a simple cord is already considered a fully valuable M. The possible pendants include a cross (የልብ፡ መስቀል, *yäləbb mäsqäl;* ↗Crosses), an earpick (ኩክ፡ ማውጫ, *kuk mawčča*), and a ring (ቀለበት, *qäläbät*). They can be freely combined, none of them being essential. The number of the units and the nature of their material (brass, silver, gold, wood) depends on the wealth of the wearer.

As a simple Greek pattern or a true masterpiece of smithery, the cross appears in numerous variations. There are even examples of crosses with a lower stem shaped into a spoon. The rupture of the suspension loop involves the casting and the shaping of a new jewel by a silversmith, often identical to the original one. Most crosses are recent, but there also are ancient excavated specimen.

The second element, the earpick with a carefully decorated handle, also has a symbolic meaning. By purifying the ear, it makes it possible to hear better and to understand the word of God. The discovery of an earpick at ↗Näfas Mäwčča in Aksum on the same level as 35 Aksumite coins of the 6th–7th cent. Christian kings shows that it was already in use at that time.

The third element, the *qäläbät*, during adulthood replaces the glass blue beads which protect the child from the evil eye (↗*Buda*). The ring and the anklet of silver beads (አልቦ, *albo*) appear among presents received by the bride, which denotes her new status of becoming a woman. In Təgray, a fine silver chain may be rolled around the M., whereas in Wällo and Gondär, one prefers to place some tubular silver beads on the cord.

Mätähara

M. (መተሀራ, Orom. Mata Haaraa; 948 m A.S.L.) was, originally, a station on the Addis Abäba–Djibouti Railway near lake Beseka at the foot of the ↗Fäntale volcano (for location s. Mäqi). In 1965 the Dutch firm Handelsvereniging Amsterdam which has, since 1951, run the "Wonji Sugar Estate" (↗Wänği) and factory; this was established on 11,000 ha of irrigable land between the railway

and the course of the Awaš river in order to set up the "Methara Sugar Estate" and factory.

The Karrayyuu (↗Baarentuu) pastoralists, who had been expelled from the Awaš National Park, were forced by the military to leave. A small town started to grow between the Addis Abäba–Harär road and the railway station to house the workers of the plantation. M. is a main stopping place on the Addis Abäba–Djibouti asphalted road. Hotels for lorry drivers, and garages, shops and public services are now to be found there, as well as a Catholic Mission.

According to the 1984 census this small town of the Yärär and Käräyu *awraǧǧa* in the Šäwa region only had 2,226 inhabitants. The population grew to 11,934 inhabitants in 1998 and reached 20,366 in 2004. Today, it is the administrative centre of the Fäntale *wäräda* in the Məsraq Šäwa zone of the Oromiyaa *kəllәl*.

This town is now endangered by the rise of the level of the Beseka lake. This lake is fed by deep thermal springs which show increased activity since the eruption of the Fäntale volcano in 2005.

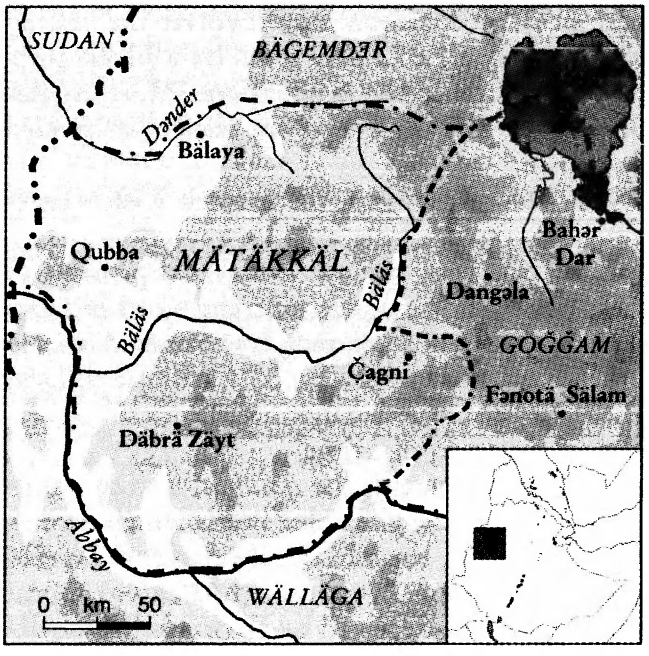
Mätäkkäl

M. (መተከል, also መተኸል, Mätäkkəl, መቸከል, Mäčäkkäl) is a region between the plateau of ↗Goǧǧam and present-day Sudan. A giant basin with mountainous scarps on the north and east, its boundaries are the Dənder river in the north and the ↗Abbay in the south and west. The ↗Bälәs River divides M. in half. Rivers and "island" plateaus, such as Bälya in the centre, help define M.'s six regions (later *wärädas* within M. *awraǧǧa*): Gubba (north-west; s. ↗Qubba), Dangura (north), Mandura (centre), Di Baṭi (or Dəbaṭi) and Gʷangʷa (south-east), and Wänbära (or Wämbära, south-west).

The most ancient and widespread of M.'s inhabitants are the ↗Gumuz (also Gumis, Ganza, etc.), who call themselves Begga ('black') but who are known to the Agäw and Amhara as ↗*Šanqəlla*. Before the 14th cent. they lived as far east as the central Goǧǧam plateau, but the Gumuz have retreated under pressure from the Agäw (cp. ↗Agäw Mədər) and today are most numerous in south-east M. west of the Dura river, where they practise their traditional culture and religion. Those living in Gubba are Muslims and, until the late 19th cent., they lived in a chiefdom loosely tied by commercial and dynastic ties to the ↗Funǧ of Sudan. After 1880, Gubba, under its chief Abū Šōk, fell increasingly under Ethiopian influence as the highlanders extended their control westward toward Sudan. The ↗Šinašša (↗Gonga) live in Di Baṭi, Wänbära, and Dangura. A little known people, they were producers of ↗ziveth, and later became clients of the Oromo. Beginning in the 18th cent., the Oromo crossed the Abbay and settled in the Wänbära highlands, driving the Šinašša and Gumuz into lower elevations. Their attempts to advance farther north were rebuffed by the Agäw. Two small groups, the ↗Kunfäl and ↗Kəmant, live in north-east Dangura.

Hot and forested, M. was long famed for cotton, ivory, slaves, and alluvial, ↗gold mined from tributaries of the lower Abbay. As a consequence, the Gumuz have long traded — and quarrelled — with their neighbours, especially the Agäw. The ancient Aksumites may have ob-



tained their gold from this region. From the reign of *aṣe* ↗Särṣä Dəngəl onward, successive Ethiopian rulers raided the Gumuz of M. in search of cattle, gold, and slaves, and they hunted in M. *Aṣe* ↗Iyasu I entrusted Gumuz affairs, including tribute collection, to the Čəḥway family of the M. Agäw clan, whose name at some point came to designate the western lowlands. The name M. is said to refer to the eponymous founder of one of the seven Agäw clans.

In 1898 *nəguś* ↗Täklä Haymanot of Goǧǧam annexed M., including the Gubba chiefdom, and introduced Christianity to the Oromo but not to the Gumuz. Until at least the 1930s, the Gumuz continued to pay tribute in gold and slaves to Ethiopia through the Čəḥway governors at Bälya who, nonetheless, organized hunting and slaving expeditions in Gumuz lands for the benefit of highlanders. Slaving, some of it carried out by the Gubba chief, Ḥamdän, son of Abū Šōk, in response to demands for tribute, decimated the Gumuz. Some fled north-west into Sudan or south across the Abbay; others resisted the hunters, slavers and, as late as the 1960s, the tribute-collectors. In 1985 highland peasants were resettled in the upper Bäläs basin, mostly on Gumuz land. Today, M. and its capital, ↗Čagni, are part of the Beni Šangul/Gumuz National Regional State.

LaVerle Berry

Mätäkko

M. (ሙትኮ, d. ca. 1836/37, Angoläla) was an officer of *nəguś* ↗Śahlä Śəllase of ↗Šäwa appointed by the latter *abägaz* of the Oromo (AWTarik 106). A son of a certain Borǧa (ibid. 197), he achieved a high-ranking position through his outstanding military talent and valour (HarAeth vol. 2, 101, 105; cp. Darkwah 1975:30). M. won several skirmishes at the southern borders of Šäwa, and was merciless towards his Oromo opponents. However, he was a hot-tempered and easily made enemies, who resented his success (AWTarik 107).

M. lost Śahlä Śəllase's favour when he asked the king for his daughter Bälläṭəšaččäw's hand for his son Ǧarato. This was a double affront, since, according to tradition, only those belonging to the ruling dynasty's lineage were allowed to propose such a request directly to the king; the worthy people, yet of lower extraction, could ask for this only indirectly, through elders (AWTarik 107). First Śahlä Śəllase agreed, and even accepted the bride gifts from M., but later, against his feelings but following the will of his wife Bäzzabbəš (who found a pretext in the "impure" descent of M.), he refused. Finally, he had to imprison M. (AWTarik 108f.; with the help of the ↗*wälasma*, HarAeth vol. 2, 113).

With the help of one of his female slaves M. escaped and sought asylum in the church of a certain *aläqa* Aśrat, whom M. also asked to reconcile him with Śahlä Śəllase. The Emperor forgave M., and he spent several untroubled months at the court (HarAeth vol. 2, 141; AWTarik 109f.). However, M. was planning a rebellion. As he failed to find allies, he intended to kill Śahlä Śəllase. M. and his son arrived at ↗Angoläla, the capital of Šäwa. But Ǧarato got afraid and betrayed his father, revealing to Śahlä Śəllase the planned murder. M. was lured into a trap; he killed Śahlä Śəllase's servant *šaläqa* Gəfawässän but was wounded by *ato* Ṭanqäññä. When M. collapsed in front of the palace, an angry mob beat him to death (AWTarik 110, 112; HarAeth vol. 2, 143f.; BTafA 541).

European travellers (such as ↗Harris) present M.'s story in a different way. After M.'s escape from prison he is said to have fled, with several matchlock men, to an Oromo king Wädaǧǧe Girma (who was killed, according to AWTarik

1113f., by M.'s brother Ḫaylu), and was able to raise an Oromo army (HarAeth vol. 2, 114f.; Darkwah 1975:30; LevWax 36). They headed to Čerqos (the church where *aläqa* Aśrat served) and in a fierce battle it was destroyed (HarAeth vol. 2, 101, 128ff., 132), M. losing his life. Some traditions also report of the destruction of Angoläla (Darkwah 1975:30).

An independent evidence of M.'s position and rank at the Šawän court is his unique image in the prayer book of Śahlä Śəllase (EMML 2097, fol. 105v; CrumLand 130).

Mätämma

M. (መተማ, also Mätämma Yoḥannəs, Arab.: al-Matamma, 12° 58' N, 36° 12' E, 685 m A.S.L.) is an Ethiopian city, directly situated at the border with the ↗Sudan, in the Səmen Gondär Zone, Amhara Regional State. The more important city on the other side of the border is called al-Qallābāt, administratively part of the province of Kassala; they are separated by a dry riverbed, the Ḫur Abnakbāra. Historically both were one settlement, originally situated in the semi-independent ↗Qallābāt sultanate. In local language usage both cities are often still regarded as one, whilst Ethiopians tend to call the whole city on both sides of the border M., and Sudanese call it Qallābāt. This article focuses on the historical city of M., extending over today's state boundary.

The political history of M. is marked by the competing claims of both the ↗Egyptians and Ethiopian monarchs. This trading post was originally founded by Arabophone Ǧaᶜalīyīn traders and called al-Matamma after the homonymous city near Šandī (Robinson 1926–27:47). The new M. lay on a trade route connecting ↗Gondär with the Northern Sudan. During the reign of *aṣe* Iyasu II, before the mid-18th cent., M. became a quickly growing trading centre, attracting traders from different areas, including highland Ethiopians, Oromo, Sudanese (Furi from Darfur; ↗Tukrīr) and even West Africans. Traders paid taxes to both the Funǧ sultanate and to the rulers in Ethiopia.

Traders and envoys from the Sudan and Egypt passed through M., as did foreign travellers, if they did not choose the Red Sea route via ↗Massawa. The historical route from M. to Gondär (corresponding to today's vehicle-access road) passed through ↗Wähni, known in the 19th-cent. travel reports as the first "Abyssinian" settlement on the highlands, and ↗Azäzo. All possible goods exchanged between Northern Africa and Ethiopia were traded in M., such as ↗ivory, ↗gold, ↗zibeth, ↗mules, ↗horses, ↗incense and slaves (↗Slavery); these were exchanged by the Ethiopians against cotton, gun powder, weaponry (sword blades, guns), bottles and glass, metal products etc. (Robinson 1926–27:47).

In the early 19th cent. M. was controlled by *däğğazmač* ↗Maru, who regularly raided M. and its surroundings. In the 1830s, the *šayḫ* of the Furi ("Tukrīr") of M., Merri, was killed by *däğğazmač* ↗Kənfu Ḫaylu, as he had not accepted Kənfu's overlordship (Parkyns 1853:356f.). In 1848 Kənfu's younger half-brother *däğğazmač* Kaśa of Qʷara (↗Tewodros II) attacked the Egyptian garrison at M. and looted the rich market, and from here went on to attack ↗Sinnār. Later in the year, however, the Egyptians repelled another attack by him at M. (Marcus 1994:61). In the early 1860s *šayḫ* Ǧoma of the Tukrīr accepted to pay tributes to both Egypt and Ethiopia.

In that period *aṣe* Tewodros II established a customs post there (Schweinfurth 1873), but in 1873 expansionist Egypt occupied the entire M. After the ↗Egyptian-Ethiopian war of 1875–76, however, *aṣe* ↗Yoḥannəs IV re-established control of the Ethiopian side of M., which was again lost in March 1885 to the Mahdīya state (↗Mahdists; cp. Holt 1958). In a battle near M. in January 1887 *nəguś* ↗Täklä Haymanot of Goğğam with his ca. 30,000 soldiers defeated the approximately 6,000 *anṣār* (followers of the Mahdī) led by *amīr* Aḥmad Wad Arbab at M., who was killed there. This defeat, however, was answered by a massive counterattack by about 60,000 *anṣār* in the spring of 1887 (including the garrison of M.), under the new commander-in-chief ↗Abū ᶜAnǧa Ḥamdān, who retook M. and then further invaded Ethiopia, including Gondär. In the final months of 1887 M. was fortified by Abū ᶜAnǧa (Churchill 1899; TrIslam 124).

After the defeat of *nəguś* Täklä Haymanot in January 1888 about 8,000 Ethiopians were enslaved and brought to M., including the *nəguś*'s daughter Məntəwwab (Marcus 1995:101). In reply, *aṣe* Yoḥannəs IV, leaving the "Eritrean" front in the north, marched to M. with an army

of over 100,000 in February 1889. He attacked the Mahdist forces, of about 60,000 to 70,000, led by Zakī Tummāl (Abū ᶜAnǧa's lieutenant, Abū ᶜAnǧa having died of a disease at M.), in the battle of M. on 9 March. At the end of the battle, during which the *zaribā* of the Mahdists was destroyed and great parts of their army annihilated, *aṣe* Yoḥannəs was mortally wounded. The dying ruler declared his son *ras* ↗Mängäša his successor, and Mängäša was crowned with his father's crown, still on the battlefield (Marcus 1995:111f.). The corpse of Yoḥannəs was captured from the retreating troops, his head severed and sent to Umm Durmān, the Mahdists' capital, as a sign of the Mahdists' triumph.

Subsequent Ethiopian rulers managed to keep control of the Ethiopian side of M. The Sudanese part of M. was taken in 1898 from the Mahdīya state by Anglo-British forces and integrated into the Anglo-Egyptian Sudan. The customs post at M. remained an important source of revenue for Ethiopian leaders until the 1930s (BZHist 99).

M. was the major slave market at the Ethio–Sudanese border until the late 19th cent. According to some estimates about 10,000 to 20,000 slaves were traded through M. every year in the course of the 19th cent. (Pankhurst 1968:84; Schweinfurth 1873 reports that the Ethiopian customs officer at M. spoke of 18,000 slaves per year, while earlier sources speak of 2,000–3,000). Slaves were brought there both by highland Ethiopians and northern Sudanese. From M., slaves were normally brought to the Sudan, Egypt and other countries; some of them were resold, e.g., on the slave market of ↗Khartoum.

As a reaction to the slave trade, the Protestant ↗St. Chrischona-Pilgermission established a missionary station at M., called St. Paul, being the last station of the "Apostles' Street" linking Egypt with Ethiopia. Missionaries established a school, teaching freed slave children (mainly Oromo) there, but were completely unsuccessful in their efforts to create converts among the adult population. The station was given up in the 1870s following the breakdown of the Protestant mission in Ethiopia. The slave market was officially closed by *aṣe* Yoḥannəs IV in about 1881, but it continued in secret.

M. hosts people of different ethnic backgrounds. Around M. there are important ↗Gumuz settlements, with a Gumuz village belonging to M. itself; they cultivate durrah and cotton. The Gumuz in this region speak a dialect called M. ("Metemma"). Until the 19th cent. M. was dominated by Furi from Darfur, who had their own *šayḫ*; the Furi dominated the Sudanese part of M. into the 1930s (Guida 363). Arabs and highland Ethiopians also settled there mainly as traders and formed their own communities. M. suffered greatly in the great famine of 1888/89 (↗*Kəfu qän*), which struck the Sudan and Ethiopia; its population was reduced by nine-tenths and M. became a hamlet. Starting in the late 19th cent. Ethiopian M. attracted more and more highlanders; today they dominate the city.

During the Italian occupation (↗Africa Orientale Italiana) M. was made a *residenza* (administrative centre). The number of inhabitants of Ethiopian M. was estimated at ca. 3,000 in 1938, with 12,000 inhabitants in Qallābāt on the Sudanese side (Guida 363). During the resettlement programme under the *Därg* regime, over 6,000 peasants were resettled from the Gondär highlands to M.; this programme, however, failed. In 2005 there were over 5,000 inhabitants in M. on the Ethiopian side. M. has an airport and is connected by a modern road to ↗Qadarif and Port Sudan.

Mäṭära

M. (መጠራ, locally also known as Bäläw Qäläw) is an important archaeological site in Eritrea, ca. 136 km south-east of Asmära, 1 km south of ↗Sänᶜafe. It is surrounded to the east and south by mountains rising to 3,000 m A.S.L. and by the Sänᶜafe escarpment rocks to the north. As archaeological research has shown, the ancient town was already inhabited during the ↗pre-Aksumite period and flourished, with interruptions, till the end of the ↗Aksumite period. ↗Hagiography and local tradition have M. as one end of a secret passage from ↗Aksum taken by King ↗Kaleb and his army while campaigning against ↗Bur.

Until recently, apart from some slightly rising hillocks covered in broken stones, strewn with potsherds, occasionally stirred by a farmer's plough, the only monument likely to attract a traveller's attention was a ↗stela lying on the ground and broken into two (DAE measured its total height at 5.68 m); in the 1920s road-menders removed it and re-erected it at the edge of the road crossing the site. At its top, a ↗moon crescent is found under a disc (ø 12 cm). This emblem perhaps symbolizes the deity ↗ᶜAstär. The four-line Gəᶜəz ↗inscription (RIÉ 223), carved in the trachytic stone at eye-level, has been dated palaeographically to the 3rd cent. A.D. A subject of many studies (e.g., DAE IV, no. 34; Conti Rossini 1896; Drewes 1962:67; Ullendorff 1951; recently Kropp 2005), the inscription indicates that the stela is a memorial, testifying to the presence of a Semitic-speaking population in the area, probably the ↗Agᶜazi.

Mäṭära during the excavations of Francis Anfray; photo 1960s, courtesy of Mike Metras

During the 1960s, excavations of the Ethiopian Archaeological Institute revealed the substructures of several buildings that could be identified as élite residences and churches, surrounded on all sides by ordinary houses, and constructed in stone with loam mortar.

The main houses (four have been unearthed) present an architectural plan typical of the Aksumite period: a central quadrangular building accessed by massive stairs and surrounded by dependencies. The main building stands high on a tiered substructure, whose sides, like the external walls of the complex, present an alternation of protruding and receding parts. Timber was integrated into the construction, namely for beams and opening frames. In the foundations, stone piles supported wooden poles upon which the ground floor was laid.

The ordinary houses are characterized by a rudimentary structure. Some 30 of them stand side-to-side on both sides of a lane in the north-western sector of the site.

A type of dwelling of intermediary character – between the élite residences and the commoners' houses – is also found. These three architectural forms reflect the different social strata.

The churches (two in the urban areas) are identical in style to the other buildings. The basilica plan was adopted for the central part (↗Church buildings). The first church, measuring 15 x 10 m, was built on a burial vault (↗Graves). The second, measuring 23.4 x 13.5 m, sheltered a baptistery in the axis of the central nave, to the east.

The ensemble of the unearthed ruins in part of the site provides an actual outline of a town layout of ca. 6th–7th cent. A.D. that was not surrounded by defensive walls, since no trace of the latter has been found.

Under the ruins dating to the last occupation of the site, levels of earlier cultures – Aksumite and pre-Aksumite – have been revealed. Some of the deeper levels (reaching at least in one place to a depth of 5 m) have yielded ↗pottery evidence allowing one to date their age bacb to ca. 10th–8th

cent. B.C. (on the basis of stratigraphic observations and comparative studies). In the Gʷal (also Amba, ʒmba) Saʾim hill, immediately to the south of the M. site, ten pre-Aksumite rock-cut graves have been discovered.

Various objects were collected during the excavations in several areas: numerous pottery items of different shapes and functions, decorated with engravings, sometimes painted or modelled, vases decorated with painted or stamped Christian crosses, amphorae of Mediterranean provenance and blue-glazed vases imported from or via the Indian Ocean, glass phials, grinding stones, and 161 coins (↗Coinage) with the effigies of eight Aksumite emperors, from ↗Afilas to ↗Armaḥ (many with ↗Ioel).

The gold objects, including 14 Roman coins from the time of the Antonines, each provided with a loop to be suspended to a necklace, deserve special mention; so does the 41 cm-high bronze lamp in Hellenistic style, with a stand in the shape of a palm tree surmounted by a leaping ibex chased by a dog.

Numerous inscriptions dating to various epochs, in stone or in potsherds, contribute to the bulk of epigraphic, philological, historical and religious information yielded by the site (RIÉ I, nos. 224–27, 315–84). Two small schist plaques (RIÉ I, nos. 181–82) found in the grass nearby are of particular value since they document an archaic form of Gəᶜəz (2nd cent. A.D.; s. Ricci in KayeLes).

In the 1st cent. A.D. the Red Sea ↗trade intensified, and the economic exchanges between the Mediterranean and the African coasts rose considerably. ↗Adulis was then at the crossroads of land and sea traffic that supported the development of markets between that place and Aksum. These market towns thrived on the edge of the highlands, profiting from their geographical situation. Written in the 1st cent., the ↗*Periplus of the Erythraean Sea* echoes this situation when it mentions trading centres in the hinterland. It points out in particular a "city of the interior" which was "the first trading post for ↗ivory". The Greek text gives the name ↗Coloë to the town. Whilst some have thought that it corresponds to the archaeological site of ↗Qoḥayto, M. is also be a possible candidate for the identification of this place (cp. Kobishchanov 1979) – in any case, it was a similar trading centre.

The settlement at M. declined and disappeared in the course of the 7th cent.; it was never re-occupied.

Francis Anfray

Maṭarīya

M. (مطرية, Gəᶜəz: መጣርያ, Mäṭarəya) is a place of pilgrimage in ↗Egypt ca. 10 km to the northeast of Cairo where the Holy Family is said to have halted during their flight from Herod's persecution. Pilgrims, Christian and Muslim alike, venerate a sycamore tree under which the Holy Family is said to have rested, and a well and a balsam plantation, both miraculously produced by Jesus. According to the apocryphal Arabic Gospel of the Infancy of our Saviour (ed. Schneider 1995), probably from the 12th cent. (when M. was a recently emerged settlement), St. ↗Mary washed her son's shirt in the well created by Jesus and the sweat of the child coming into the water led to the growth of the balsam.

Another version is found in a homily ascribed to a Bishop Zacharias from Saḫā: Jesus had broken Joseph's staff in small pieces, planted the pieces in the desert and watered them from his well. The latter version was adopted by the ↗*Sənkəssar* (24 *Gənbot*).

One more, very brief, version of the story made its way into the Ethiopic ↗*Tä'ammərä Maryam* (CerMaria 27, 32; Budge 1923:145f.).

Abū l-Makārim (↗Abū Ṣāliḥ) reported that Greek, Frank, Ethiopian and Nubian envoys used to go to M. after having visited the Egyptian capital (s. Zanetti 1993:36). There, after taking a bath in the holy well, they would celebrate the Eucharist.

On 1 June 2000 Pope Shenouda III of Alexandria, the Rector of the Azhar University and the Prime Minister Atef Ebeid met in M. to celebrate the 2000th anniversary of the Holy Family's stay in M. A new garden was planted and an artifical well was created in the location of Jesus's wonders. A splendid mosque was erected in honour of the Holy Family outside the garden.

Mateus

M. (d. 23 May 1520, "Jangargara", Däbrä Bizän) was an agent of *ətege* ↗Əleni. His origins are subject to speculation. In some sources he appears as a wise man knowing several languages and with a respectable position within Əleni's court, in others he is an ↗Armenian merchant whose real name was Abraham, or even a Muslim born in Cairo (Góis 1540:12, 16, 23; BeckHuntAlvar 2f.; Barreto 1988:46). M. himself referred to his being related to the then *abun* (↗Marqos; Sousa 1790:91).

M. was appointed envoy by Əleni to be sent to ↗Portugal to propose a military alliance with Ethiopia, in order to check the progress of the Muslim armies (Barreto 1988:45f.). To achieve this purpose he went, together with a young Ethiopian nobleman called Ya^{c}əqob (Jacome in the sources), to Goa on a Muslim ship, but in 1512 was arrested at Chaul by the local Muslim authorities. These, however, fearing the wrath of Alfonso de ↗Albuquerque, handed him over to the governor, who welcomed M. and accepted him as an ambassador of the "Queen of Ethiopia". Thence, Albuquerque dispatched him to Portugal, where in February 1514 he was received with honour by King Dom ↗Manoel I. In Lisbon M. handed a letter from Əleni to the king and a fragment of the holy cross – later brought to Pope Clement VIII by Dom ↗João III. M. answered a number of questions about his country, including those by Manoel's chronicler, Damião de ↗Góis, who later wrote a brief account of his journey (Góis 1532) and frequently met Duarte Galvão.

On April 1515, he left Lisbon with the embassy of Duarte Galvão, former ambassador to France and Germany and designated ambassador to Ethiopia. In 1517, they headed for Ethiopia with a fleet lead by governor Lopo Soares de Albergaria. Near Caraman island there ensued severe disagreements between Lopo Soares, Galvão and M. The first invited M. to debark in the ↗Dahlak islands, which he refused considering the hostility of the local Muslim population. In a letter to Manoel I, the Armenian also accused the governor of having tried to kill him (Sousa 1790:94). Galvão having died on the Kamaran island, the embassy was postponed for a few years. It was Lopo Soares's successor, Diogo Lopes de Sequeira, who took M. home, together with the new Portuguese embassy headed by Dom Rodrigo de ↗Lima. On 13 February 1520, they sailed from Goa and on 9 April reached ↗Massawa, where M. was treated by the locals with great respect.

M. led the Portuguese inland and instead of following the usual itinerary to ↗Dəbarwa made them divert to ↗Däbrä Bizän, where he alleged to have properties. During a halt at the monastery of "St. Michael at Dise", he wrote letters to Əleni and to the "Patriarch" (i.e. *abunä* ↗Marqos) to inform them of the Portuguese arrival. Soon afterward, M. fell ill and died at "Jangargara", a village belonging to Däbrä Bizän. He was buried in the later monastery and, as he had ordered, his possessions were given to Əleni.

Matewos

Abunä M. (ማቴዎስ; b. ca. 1843, Banī Ḫālid, Asyūṭ, Egypt, d. December 1926) was Bishop of Šäwa between 1881–89 and Metropolitan between 1889–1926. M. went to Ethiopia from the monastery of St. Pachomius in 1881, being one of the four bishops requested by *aṣe* ↗Yoḥannəs IV. He was accompanied by *abunä* ↗Peṭros IV, who was bishop of Təgre and the metropolitan, ↗Luqas, designated bishop of Goğğam and Marqos, who was to become the bishop of Bägemdər and Səmen but died soon after his arrival.

M. was appointed bishop of Šäwa, where he developed close ties with *nəguś* Mənilək (later *aṣe* ↗Mənilək II). In April 1883, he officiated over Mənilək's communion marriage to Ṭaytu at Ankobär. When Mənilək became emperor, in a highly unusual move, he received permission from the Coptic Patriarch Cyril to replace Peṭros IV as Metropolitan (↗*Paṗpas*) with his ally M. He also repartitioned the ecclesiastical lands adding further parts of Šäwa as well as other lands to M.'s holdings. M. crowned Mənilək as emperor on November 3, 1889 in a ceremony at ↗Ənṭoṭṭo. Two days later, he also crowned Ṭaytu as empress (↗*ətege*).

M.'s permanent residence was in the capital of Addis Abäba. He accompanied the imperial troops on the ↗ᶜAdwa campaign in 1895–96, carrying with him a *tabot* dedicated to Mary.

In 1902, M. journeyed to Cairo, ↗Jerusalem, Constantinople, and St. Petersburg. This made him the first sitting Metropolitan to leave Ethiopia. Although some sources claim his trip was to visit relatives, others believe it was an apparent attempt to resolve the problem of ↗Dayr as-Sulṭān. (He was later accused of having sided with the Copts in the dispute and having sold property in Jerusalem for the benefit of the Coptic Church.)

In 1906 when Mənilək introduced public schools in Ethiopia, M. sought to retain church control for ↗education. To this end, he recruited a number of Egyptian Copts as teachers, preferring them to Catholic or Protestant educated Ethiopians.

M.'s influence became even greater after Mənilək's stroke in 1909. In May of that year M., in accordance with Mənilək's wishes, supported *ləğ* ↗Iyasu's succession to the throne and threatened to excommunicate anyone who challenged his legitimacy. However, because of *ləğ* Iyasu's perceived pro-Muslim position, M. was later compelled to withdraw his support. Initially M. resisted the pressure from various sources to excommunicate *ləğ* Iyasu, and tried to mediate the political tensions. Finally, however, on the day of *Mäsqäl* 1916, following the public intervention of *əčč̌äge* ↗Wäldä Giyorgis, *ləğ* ↗Iyasus's reign came to an end. M. officially crowned ↗Zäwditu empress in February 1917.

In 1923 he left Ethiopia yet again, travelling to Egypt, apparently for health reasons. He returned after a few months. In 1923–24, he stood at the head of a Church council that excommunicated *aläqa* ↗Wäldä Maryam, one of the foremost representatives of the ↗*Säggа* theological position. In 1926, M.'s power was limited: on the constitution approved for the Church (16 August), the *əčč̌äge* received more power and a Holy Synod was established, attached to the court of *ras* Täfäri (↗Ḫaylä Śəllase I), which had committees designed to "assist" M.

He died of pneumonia. Despite attempts on the Coptic Patriarch to appoint an Ethiopian as Metropolitan, he was succeeded in 1929 by *abunä* ↗Qərəllos, an Egyptian.

Abunä Matewos; photo early 20th cent., courtesy of Peter the Great Museum of Anthropology and Ethnography of the Russian Academy of Sciences, St. Petersburg (no. 2097–233)

M. spent an unusually long time in Ethiopia, learned both Amharic and Gəᶜəz and was deeply involved in the politics of his time. His activities, longevity and accumulation of wealth all made him one of the most influential figures to ever hold the position of the Metropolitan. He played a significant role in nearly all the major events of his long period in office, including the conquest of southern Ethiopia and the Christianization of its elites, the establishment of Addis Abäba and the victory over the Italians at ᶜAdwa. After Mənilək II's death, M. was involved in the succession struggles of the time.

However, his prominence also highlighted the need for the Ethiopian Orthodox Täwaḥədo Church to be led by a local cleric. Several of the issues which arose during his reign made him vulnerable to the charge that his primary loyalty was to his Egyptian roots than to his Ethiopian subjects.

Steven Kaplan

Mathew, David

M. (b. 1902, Lyme Regis, Dorset, d. 1975) was a Roman Catholic bishop and author. His father was Francis Mathew, a barrister and novelist. Following his service in the Royal Navy during World War I, M. attended Balliol College, Oxford, to study history, and subsequently to Besa College in Rome to be ordained. After serving as a parish priest and writing two books on European and British history, in 1938 he was ordained Titular Bishop of Aeliae (ᶜAdal) and in 1945 was chosen by the ↗Vatican as Apostolic Visitor to Ethiopia. This was facilitated by his cousin, Charles Mathew, a legal advisor to *aṣe* ↗Ḫaylä Śəllase I.

In 1947 M. published his very personal account of this story, where he referred to *aṣe* ↗Tewodros as "a great ruler"; likened the *Jeunesse d'Ethiopie intelligentsia* of the ↗Mənilək II and Ḫaylä Śəllase period to the young Turks, and argued that their objective was to graft the ideas of the French Revolution of 1789 onto the Solomonic Throne. He also declared that a visit to post-World War I ↗Addis Abäba had left a "quite ineradicable impression" on him.

M. subsequently travelled to several British African colonies in the East and West. These visits inspired him to write the novel *The Mango on the Mango Tree* (1950), which features an imaginary 20th-cent. Ethiopian character called *ras* Mäkʷännən. He returned to Britain in 1955 as Vicar Apostolic, after which he was appointed to a Vatican committee on missions. Later he wrote several biographies of British monarchs and their courtiers.

Richard Pankhurst

Mäṭqəᶜ

The M. (መጥቅዕ, from Gəᶜəz *bäᶜalä mäṭqəᶜ*, 'Feast of Trumpets', referring to the Jewish ↗New Year) gives the Ethiopian civil calendar date for the Jewish New Year's Day.

The knowledge of the Jewish feasts is essential for the calculation of Ethiopian ↗calendar dates. The calendar can only be determined when the dates for the Jewish New Year's Day and *Ṣomä Nänäwe* (the Christian holy day commemorating Jonah's prediction of Nineveh's destruction) are known.

The importance of the M. and the lunar epact (↗*Abäqte*) lies in the fact that they enable to determine all dates in the Jewish lunar calendar. The beginning of the Jewish year is fixed at the date of the new moon's appearance nearest the autumnal equinox (25 *Mäskäräm*). The M. dates are bounded to fall between 15 *Mäskäräm* and 13 *Ṭəqəmt*.

Since the Jewish lunar year of twelve lunar months (354 days) is eleven days shorter than the Ethiopic solar year, the sequence of the civil dates of the lunar New Years' days differs from year to year by subtracting 11 (days) – or adding 19 (= 30 days – 11 days) – in order to stay within the permitted period. Instead of this step-by-step operation one can also calculate using the *abäqte* number [lunar epact = 30 – date of M.],

which would thus alternatively increase by 11 or decrease by 19.

In order to provide the dates for a sequence of new moons, the numbers for M. and the lunar epact had to be repeated with a period of 19 years. Astronomically, the 11-day increment is based on a mean synodic month of exactly 29½ days, whereas the 235 months in 19 years require a slightly longer mean synodic month. Therefore, one had to introduce into every 19-year cycle a correction in which the lunar epact increases once by 12 instead of 11: the so-called *saltus lunae*, placed between the last and the first year of consecutive cycles.

In order to calculate the M. (or the lunar epact) it is sufficient to know the cycle number (c) of the year in the 19-year-cycle [M. ≡ (c–1) x 19 mod 30]. E.g., for the year of grace 470 the cycle number is 14. M. would thus equal 7: from 13 x 19 = 247 ≡ 7 (mod 30); the corresponding lunar epact number would be 30 – 7 = 23. The Jewish New Year in 470 A.M. falls on 7 *Ṭəqəmt*.

An example of the use of M. for the calculation of a moveable feast can be given by the ↗*Fasika*. The date of Jewish Passover can be easily found from M. according to the formula M + 190. Thus, *Fasika*, falling on the first Sunday after the Passover, should fall into the period between 25 *Mäggabit* and 23 *Miyazya*. From the ↗*ṭəntyon* number which designates the weekday for the Ethiopic New Year one can find out the weekday of M., and thus the weekday of Passover. For the same 470 year of grace, *ṭəntyon* equals 5 (i.e. Sunday). If 1 *Mäskäräm* is a Sunday, 7 *Ṭəqəmt* (36 days later) must be a Monday. Passover (M. + 190) falls on 17 *Miyazya* which is, accordingly, a Tuesday. The next Sunday (+ 5 days) should thus be 22 *Miyazya*.

All these elements can be found in calendric tables (532-year tables, or 19-year tables; see ↗computus), which facilitate the calculation of weekdays and moveable ↗feasts. Many such tables providing a list of interrelated calendric parameters for 532 years exist.

Ute Pietruschka

Matrimony

Whilst civil ↗marriage (ዓለማዊ, *ʿälämawi*, lit. 'secular') is possible in Ethiopia and Eritrea, religious (መንፈሳዊ, *mänfäsawi*, lit. 'spiritual') marriage is the only one which the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC) acknowledges. This article is devoted to the sacrament of M. as administered by the Church (Gəʿəz ተክሊል, *täklil*, 'coronation' [cp. *aklil*, ↗Crowns] or [በ]ቍርባን, [*bä*]*qʷərban*, '[by] ↗Eucharist', since the crowning cannot be performed without the latter). For other rituals connected to the performance of marriage s. also ↗wedding.

The traditional marriage is widespread amongst Orthodox Christians. It is regarded as civil marriage. Many people believe that a person married according to the Church ↗law (ባለ፡ሕግ, *balä ḥəgg*, lit. 'master of the law') may never re-marry, but must embrace monastic life after the untimely death of his/her spouse. It is also believed that a married person may not receive Holy Communion unless his or her spouse also receives. Many people hold that to receive Holy Communion is unattainable since such an awesome sacrament deserves the utmost preparation and, in fact, is tantamount to dying. Because of such beliefs as well the fear that people have to be tempted beyond their strength, most people do not presume to marry according to Church law and prefer traditional civil marriage. Those who wish M. are mainly ↗deacons who want to be ordained priests, certain highly respected members of the community as well as a few fervent believers. However, there are many Christians married according to custom who have been living together, and they often desire to regularize their situation at a later stage of their life and rejoin the sacramental life of the Church. Guided by their spiritual father (↗*Näfs abbat*), they prepare this reintegration through confession and absolution. Then the rite for a Second Marriage is performed (s. below).

Foundations of marriage

Based on Mt 5:31–32, 19:3–9 and parallels; Eph 5:21–33, 1 Cor 7:1–40, Heb 13:4; Gen 1:27–28, 2:18–24 etc., the sacramental and disciplinary teaching of the Church is articulated by the

↗*Fəṭḥa nägäśt* and the order proposed by the ritual. Accordingly, M. is one of the seven sacraments (ምሥጢራት, *məśṭirat*, 'mysteries') of the Church. Its aims are procreation, coping with "the desires of the flesh", and mutual support, the specific sacramental dimension being brought about by the Eucharistic communion in conformity with the general trend of the ancient Churches' tradition. It is worth of noting, however, that what concerns M. is contained in ch. 24 of the *Fəṭḥa nägäśt*, i.e. in its secular part (ፍትሐ፡ ሥጋዊ, *fəṭḥa śägawi*, lit. 'Carnal Law', chs. 23–51) because M. has a most important relevance for the civil society, even if considered in a Christian perspective.

Main impediments to matrimony

a) Consanguinity (ዝምድና, *zəmdənna*) up to the 7th degree of relationship (M. is permitted from the 8th degree), the count being (cp. *Fəṭḥa nägäśt* 1965/66:304c–06c):

7) the initial ancestor (*gənd*);
6) the next ancestor (*mənʾawqälləh*);
5) the following ancestor (*məzlat*, *mənžälat*);
4) the great grand-parents (*qəmat*, *qədmä ayyat*);
3) the grand-parents (*ayyat*);
2) the parents (*abbat*, *ənnat*);
1) the persons involved.

These names are given by the *liqawənt* (scholars) of the ↗*mäṣḥaf bet* who allow M. between persons of the 7th degree of relationship (*Mäṣḥafä täklil* 1964:15; *Fəṭḥa nägäśt* 1965/66:306a, l. 18), although custom (*ləmmad*) allows it from the 8th degree only. While this agrees with the custom of several Ethiopian ethnic groups, it contrasts with the *Fəṭḥa nägäśt*, which says that, though the 4th degree is acceptable to the Copts and some others, the Melkites are in great trouble because they do not allow marriage even within the 7th degree (*Fəṭḥa nägäśt* 1969/70:213, § 844; Paulos Tzadua 1968:134f.). Thus, the Ethiopians quote the *Fəṭḥa nägäśt*, but do the same as the Melkites (*Mäṣḥafä täklil* 1964:15; Mälʾaku Asmamaw 2002:49, n. 50), possibly because of older customs. Nevertheless, the council on 8 September, 1668 A.D. supported the prohibition of marrying brother or sister-in-law (GuiIohan 9) and in around 1544 *aṣe* ↗Gälawdewos prescribed not to marry a kin before the 6th generation (CRAxum 72).

b) Affinity by spiritual relationship including being godfather or godmother of the partner (Paulos Tzadua 1968:135f.; cp. also GuiIohan 9) or participation in same confraternity (↗*Maḫbär*).

c) Lack of freedom or knowledge (Paulos Tzadua 1968:138, 142).

d) Being underage: the marital age of 20 years for a man and 12 for a woman (Paulos Tzadua 1968:140) has been changed by the Holy Synod to 18 years for a man and 15 years for a woman in 1943 (cp. *Mäṣḥafä täklil* 1964:15; Paulos Tzadua 1973:136f.).

e) Being not a (non-Chalcedonian) Orthodox Christian (Paulos Tzadua 1968:144, 1973:136).

Ritual

The ritual of M. is contained in the *Mäṣḥafä* ↗*täklil*. Only preceded by Chaîne's 1913 edition, today's standard ritual was first published in 1964, followed by a shorter text prepared with a pastoral mind by *liqä śəlṭanat* Häbtä Maryam Wärqənäh in the same year and reproduced later as ጸሎተ፡ ተክሊል (*Ṣälotä täklil*, 'Prayer of the Crowning'). The ritual of 1964, including 1) the Betrothal, 2) the M., 3) the Second Marriage, has been confirmed as standard by its re-appearance in the ritual published by the Patriarchate in 2001/02.

Although the Ethiopian ritual in its present form was translated in the 17th cent. (Beylot 1993:251f.), it largely corresponds to the ceremony described by the 15th-cent. Patriarch Gabriel V of Alexandria (Abdallah 1962:333f.) and even in our days by Burmester (1967:132) (for Alvares's description of how the metropolitan officiated at a marriage at the time of *aṣe* ↗Ləbnä Dəngəl s. BeckHuntAlvar 106f.). The rites are far older than the prayers, which go back to the late medieval period only. However, the order of certain prayers has been changed and passed over from the Betrothal to the Crowning, even within the Gəᶜəz documentation itself (e.g. Chaîne 1913 and Raes 1958 present texts that are closer to each other than Chaîne 1913 and *Mäṣḥafä täklil* 1964).

The ritual shows such elements not always very explicit or well preserved in the Coptic Church as, e.g., the 'Word of the covenant' (ቃል፡ ኪዳን, *Qal kidan*, or ቃለ፡መሐላ, *Qalä mäḫala*, 'Word of oath') at the beginning of the Betrothal, a feature which, in fact, may be relatively recent since the rings are not mentioned in the manuscripts (Raineri 1986:311; cf. Abdallah 1962, fol. 16v [tr.: 335]; an open matter in Burmester 1967:133). As in other Christian cultures, arranged marriages with the rings given to 5–6 year old children, some promised even before their birth, are documented even in recent times; the anointing of the groom and bride (Burmester 1967:138, n. 1); and

above all the reception of the Eucharist (Abdallah 1962, fol. 24v [tr. 340]), which implied that the M. ceremonies took place at an early hour in 15th-cent. Egypt, before the Eucharistic liturgy (Abdallah 1962, fol. 13v [tr. 333]; cf. Raes 1958:26), as in today's Ethiopia. M. is sealed with the Eucharist (*Fəṭḥa nägäśt* ch. 24, section 5; cf. Paulos Tzadua 1968:142) as required for the validity of the matrimonial bound, indissoluble in principle because the Eucharist causes the couple to participate in the union of Jesus Christ and the Church (hence the second name of M., *bäqʷərban*, and the sacramental status of M.). Today, the Ethiopian tradition alone strictly retains this position.

Service

The service of M. as fixed by the *Mäṣḥafä täklil* includes the following parts: 1) the Betrothal (**ሥርዓተ፡ ፍጎረት**, *Śərᶜatä fəḫrät*, lit. 'Rite of Betrothal' [this title is not found in the book]; *Mäṣḥafä täklil* 1964:28–55); 2) the M. (**ሥርዓተ፡ ምሥጢረ፡ ተክሊል**, *Śərᶜatä məśṭirä täklil*, lit. 'Rite of the Mystery [i.e. 'Sacrament'] of Crowning'; ibid. 56–133).

The two parts comprise the service of M. proper. They used to be completely distinct and may take place at different times and places. The Betrothal includes the free consent, the vows – a necessary condition for M. – and the exchange of the rings. The Rite of the Crowning is the solemn part of M., performed at church early before Sunday or another day's Mass, never on a fasting day. The latter includes: a) The anointing of the groom and bride in a rite particular to the tradition of Alexandria. Pre-Christian in origin, it includes a powerful reference to the protection, strength and sanctification of those who are associated with the sacerdotal, prophetic and kingly people of God through Baptism. b) The investing with priestly attire and above all the Crowning, performed for virgins only, refer to the dignity of the human being restored by Christ. c) The Eucharistic communion (the bride and groom's shoulders being wrapped with the one and same large garment, **መጐናጸፊያ**, *mäggʷänaṣäfiya*), immediately after the newly baptized of the day). d) A triple procession around the church, an exhortation and the final blessing of Mass conclude the celebration. In agreement with the other Eastern Churches, the minister of the sacrament is the bishop or the priest.

Outline of the Ethiopian Liturgy of M.:

I. The Service of Betrothal ("The Rite of the Rings")

The Vows:

1) Verification of the bridegroom and bride's consent; 2) The oath of the bridegroom; 3) The oath of the bride.

The Rings:

4) Preliminaries and Our Father.

As at Mass (*Qəddase*)

5) The Prayer of Thanksgiving and of Incense; 6) Readings (1 Cor 1:1–10; 1 Jn 4:18–21; Acts 21:12–14); 7) Trisagion and *Kidan*; 8) Prayer of the Gospel; 9) *Məsbak*: Ps 84(85):9b–10; 10) Gospel: Jn 1:1–17.

The Blessing of the Rings:

11) Prayer of the rings; 12) Blessing of the rings; 13) The Exchange of the Rings (the bridegroom to the bride and the bride to the bridegroom); 14) Prayer; 15) Exhortation; 16) Dismissal.

II. The Service of M. ("the Rite of the Crowning")

17) The sign of the cross; 18) Creed and *Aśärqot*; 19) Declaration of purpose; 20) Psalms, etc.; 21) The Absolution of the Son and Ps 50(51); 22) Invocation with people kneeling; 23) "Our Father"; 24) The incensing and the Prayer of Thanksgiving of St. Basil.

The Readings:

25) Eph 5:22–33; Pet 3:1–8; Acts 15:22–30; 26) *Məsbak*: Ps 18(19):7–8a; 27) Mt 19:1–10; 28) The Universal Prayers (as at Mass)

The Garments:

29) Two Prayers over the garments; 30) As they put on the garments.

The Anointing:

31) Blessing of the oil; 32) Anointing of the bridegroom and bride; 33) Prayer after the priest has anointed the bridegroom and bride.

The Crowns:

34) Two prayers over the crowns; 35) The priest sets the crowns upon the head of the bridegroom and the bride; 36) Conclusion.

Supplications:

37) Prayer of supplication; 38) Prayer upon the bridegroom, the bride and all the people; 39) "Prayer of Blessing" (as at Mass).

III. Mass is now celebrated in full, from the beginning

40) Together partaking in the Holy Communion; 41) Procession around the church and blessing for the bridal couple before the final blessing of Mass; 42) Exhortation, blessing and dismissal.

Remarriage

In addition to the service described above and in agreement with the other Oriental Churches, the Ethiopian tradition admits a second rite performed for the "widow[er]s" or "divorced" (Gəᶜəz: **መዓስባን**, *mäᶜassəban*, sg. *maᶜəssab*) called "Prayer of the Second Matrimony which is for the Penitent who have had their Marriage Dissolved" (included in *Mäṣḥafä täklil* 1964:134–79, **ጸሎተ፡ ሰብሳብ፡ ካልእ** ..., *Ṣälotä säbsab kalə* ...; cp. "The Service of Digamy" in Burmester 1967:143f.). The *Fəṭḥa nägäśt* (ch. 24, sections 5, 6; cf. Paulos Tzadua 1968:142–45, 148–54) per-

mits a second marriage (a third union is hardly possible) after the death of one's spouse or a divorce on grounds of adultery (Mt 5:31–32, 19:9) which automatically destroys the matrimonial bond. The innocent party is free to remarry with another person. The guilty spouse may come back to Church life through penance, specifically the penitential baptism of the *Mäṣḥafä ↗qedər* like the apostates, and then marry another person. If the innocent spouse and the guilty one wish to resume common life, they may do so on condition that both undergo the *Qedər*, for the innocent spouse, by wishing to continue to live with the guilty one, is considered as involved in his/her sin. Apostasy (including the case of one's spouse joining another Church) or the confirmed disappearance of one's spouse also allow for a second marriage. Although the *Fəṭḥa nägäśt* does, the Ethiopian Church does not accept a spouse's folly or leprosy as reasons to divorce. Included in the ritual published by the Roman Congregation for the Eastern Churches (1973/74:111–61), this ritual is, however, similar to the first marriage, minus the Crowning.

The Service for a Second Marriage is performed also for the people who, after many years of living together, want to seal their union. For this, husband and wife go together to the church. Close to the sanctuary (in the *qəddəst*), they attend the Eucharistic liturgy and receive the Eucharist and the *Täklil*. Thus they are sacramentally wed. From then on, they will receive communion on the major occasions of the liturgical year, observing the Eucharistic fast.

Outline of the Service for a Second Marriage:

1) Verification of the bridegroom and bride's consent and of the objections; 2) Absolution of the Father; 3) Ps 32(31), 51(50), 128(127), 25(24), 133(132); 4) "Our Father".

As at Mass (*Qəddase*):

5) Incensing; 6) Prayer of Thanksgiving.

The Readings:

7) 1 Tim 1:12–18; 1 Jn 1:4–10; Acts 17:23–31; 10) Trisagion and *Kidan*; 11) Prayer of the Gospel; 12) *Məsbak*: Ps 78(79):8; 13) Gospel reading: Lk 15:11–23; 14) The Universal Prayers (as at Mass); 15) Prayer upon the bridegroom and the bride; 16) Our Father; 17) Absolution of the Son; 18) Mass in full. Partaking in the Holy Communion.

This service is regarded as a concession to human weakness and is therefore penitential in character. The concept of sacramental M. applies in a unique way to the first union; however, the Church interprets the law in favour of those concerned out of compassion for her weaker members.

Matrimony of Clerics

The one who receives the deaconate (receiving also all minor orders at the same time) is free to choose between celibacy and marriage, therefore may marry after the ↗ordination. Deacons who wish to be ordained priests must first choose between becoming monks or getting married. Deacons and priests never marry again after the death of the spouse, and do not divorce. If their wives happen to divorce or die, priests become monks in order to continue to preach and celebrate the sacraments. A deacon whose wife died is also supposed to become a monk, especially if he wishes to be ordained priest. If a priest or a deacon decides to marry again, he is barred from ministering the sacraments and receiving holy communion; he may not teach or preach any more, although it happens that they continue to do so when there is a lack of capable clerics in a given area.

Emmanuel Fritsch

Matte, Lucien

M. (b. 11 February 1907, Quebec, d. 25 September 1973, Quebec) joined the ↗Jesuits in 1930 and was ordained a priest in 1938. Besides his priestly studies, he held a M.A. in Bio-Chemistry and a Ph.D. in Education. M. served as Director of the Täfäri Mäkʷännən School in Addis Abäba from 1945 to 1950. Later, he served as the first President of the University College of Addis Abäba (↗Addis Ababa University), which he himself started and developed, until 1960. M. also created evening extension courses (Bərhane zare näw Institute) to cater to the needs of civil servants. In 1961, he became the first President of the Ḫaylä Śəllase I University. In the following year, he returned to Canada, where he served as rector of the University of Subdury until 1966. M. was an exceptional leader and administrator and a man with a dynamic, convincing personality.

Miguel Angel García

Matteucci, Pellegrino

M. (b. 10 [or 13] October 1850, Ravenna, d. 8 August 1881, London) was an Italian explorer.

After completing the secondary education in Bologna and Rome (1868), M. entered the medical faculty of Bologna University. Though he never completed his studies, his contemporaries believed that he was a doctor of medicine. Early in life he got interested in travels, following closely African reports of the Società Geografica Italiana. He received a diploma in Natural Sciences (1870) and learnt Arabic. In 1872 he started collaborating with the Società della Gioventù Cattolica and the journal *Ancora*. In 1873 he filed an application to the ↗Società Geografica Italiana asking to consider him for any of their next expeditions to Africa, but was declined.

Portrait of Pellegrino Matteucci; lithographic print from Bianchi 1884:26

In 1877 M. hoped that the explorer Sebastiano Martini Bernardi from the mission headed by Orazio ↗Antinori would take him along to Ethiopia, but Martini Bernardi took Antonio Cecchi instead. The same year, in Rome, M. met Romolo Gessi, explorer and close associate of Charles ↗Gordon, and on 1 October 1877 they started on the expedition to the "unknown" countries of the Oromo. They reached Khartoum and the Blue ↗Nile but local clashes prevented them from continuing further than Fadasi in Eastern Sudan.

In 1878 M. was appointed by the Società di Esplorazione Commerciale e Scientifica Africana in Milan to organize an expedition to Šäwa. In late 1879 M., with Gustavo ↗Bianchi and Pippo ↗Vigoni, arrived at Massawa, following an advice of Giacomo ↗Naretti. On 14 December they continued to ↗Däbrä Tabor where they were received by *aṣe* ↗Yoḥannəs IV who gave his consent for the exploratory mission. At Däbrä Tabor, M. also befriended *ras* ↗Alula Ǝngəda. He failed, however, to establish good relationships with ↗Mənilək of Šäwa. M. and companions travelled to ↗Moṭa on the ↗Abbay,

to ↗Däbrä Marqos and ↗Basso. In 1880 M. and Vigoni returned to Italy.

Back home, M. prepared a more ambitious expedition: to cross the African continent, from sea to sea. He had two travel companions: prince Giovanni Borghese who had sponsored the enterprise, and Alfonso Massari. The three left Italy on 5 February 1880, and arrived in Khartoum via Sawākin on 27 March. They continued to Kordofan, Darfur (from where Borghese had to return to Italy), the Wadai sultanate, Borno and Nupe. M. and Massari then sailed along the Niger reaching the Atlantic ocean on 3 July 1881, thus completing the first Italian cross-African expedition.

M. died one day after their arrival in London.

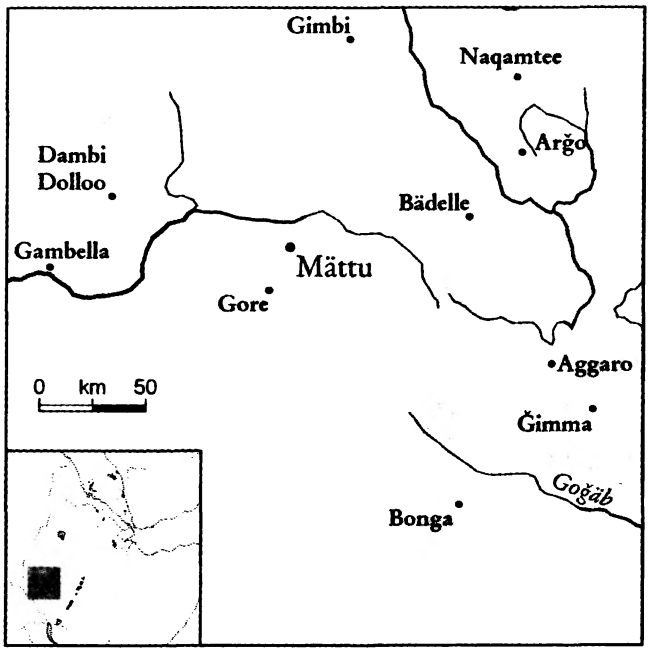
Mättu

M. (መቱ, Orom. Mattuu) is a town in ↗Illubabor. Its development probably started as a small market town near a bridge crossing the River Sori, constructed in stone in the 1920s by the order of *ras* ↗Nadäw Abba Wällo (CerEt 59f.). In 1938 M. had 2,000 inhabitants. Until 1970 M. was only a secondary market where a few Greek merchants bought ↗coffee to sell it at the main market of ↗Gore (25,000 inhabitants in 1938) in order to be exported through ↗Gambella. When the road from ↗Buno Bädelle was completed,



coffee bags were transported to Addis Abäba either through ↗Naqamtee or through ↗Ğimma.

In the 1970s M. replaced Gore as a regional capital, although having a comparatively small population. From 1987 to 1991 it lost its administrative rank and Ğimma became the capital of the new Illubabor and Ğimma Region, M. becoming the capital of the Sor and Gäba *awraǧǧa* in ↗Illubabor administrative region. Since 1991 M. has been the capital of the M. *wäräda*, a subdivision of the Illubabor zone of the Oromiyaa.

The population of M. has increased quickly until the 1980s (12,491 inhabitants, 1984 census) but it slowed down until 1994 (19,298 inhabitants, 1994 census). Coffee production, trade and administration has given an impulse to its population growth. According to the estimations of the CSA the town had 25,967 inhabitants in 1999 and 32,958 inhabitants in 2004. The Sor waterfalls, one of the most dramatic falls in Ethiopia, can be visited in the vicinity of M.

Alain Gascon

Matyas

The monk M. (ማትያስ, baptismal name Ṭəritä Ǝgzi᾽; 14th–15th cent.) is considered by several hagiographic sources to have been the founder of a monastic community at the Eritrean village of [ᶜ]Addəqe (or ᶜAd ᶜƎqe), ca. 16 km south-west of Asmära, in the Lamza district of the ↗Ḥamasen province, Eritrea.

M.'s place and date of birth are unknown. According to his Acts, after 1390/91 he entered,

following one of his elder brothers, the Eritrean monastery of ↗Däbrä Maryam of Qʷäḥayn (founded by ↗Absadi in 1374), then headed by the abbot Täwäldä Mädḫən. The latter, as well as his successor Fiqṭor, are said to have been very fond of M., who later established a daughter community in Lamza, building a church near ᶜAddəqe. M. spent his whole life there, dying probably on 13 *Säne* (the other date given at the beginning of the Vita, 21 *Gənbot*, is probably a contamination with another event) and was then buried in his church, which thereupon received the name of Däbrä Matyas.

M. (or Matyan) of ᶜAddəqe also appears in monastic ↗genealogies as a disciple of ↗Ewosṭatewos of Däbrä Ṣärabi.

M.'s hagiography mentions a land grant given by *aṣe* ↗Zärᵓa Yaᶜəqob to the sanctuary of ᶜAddəqe (fol. 29r–v), including the territories of Šəbər Šəge and Dəgśana "in the land of Wäqrä".

M. of ᶜAddəqe can probably be identified with M. of Šəmagəlle, featuring in two episodes of the *Life* of ↗Filəppos of Däbrä Bizän as the latter's prosecutor. The conflict occurred between 1400, when a council was summoned by *aṣe* ↗Dawit II to settle the Ewosṭatean controversy, and 1406, the year of Filəppos's death. ᶜAddi Šəmagəlle is a village north-west of Asmära, not far from Säᶜda Zäga, Ḥamasen.

The *Gädlä Matyas* was probably composed between the end of the 16th and the beginning of the 17th cent. Only one manuscript is kept in Europe, ANLin (Fondo Conti Rossini) no. 84. The 20th-cent. notebook copy contains the complete hagiographic dossier of the saint: the actual Vita (↗*Gädl*, fols. 21r–29v) is followed by the Miracles (↗*Täᵓammər*, fols. 29v–33v, with numerous historical references to the events of the 16th-cent. wars of ↗Aḥmad b. Ibrāhīm al-Ġāzī [Grañ]) and a ↗*mälkəᵓ* devoted to the saint (fols. 33v–35v).

The colophon (fol. 35v; a short colophon is also found at the end of the Vita on fol. 29v) states that the copy was made in 1914 in ᶜAddi Lamza, by a *qäsis* named Fəśśəha Ṣəyon (probably on the request of the same Carlo Conti Rossini). The *incipit* (fol. 20r) additionally informs us that the scribe (probably the same Fəśśəha Ṣəyon) copied the text from a manuscript kept in the church of Šəmagəlle in Ḥamasen. This element supports the identification of M. with M. of Šəmagəlle, ᶜAddi Šəmagəlle being probably the birthplace of the monk, or the original village of his family, and ᶜAddəqe the place where he spent most of his monastic life and died.

The hagiographic dossier was published by Paolo Marrassini in 1983 with a translation and commentary. At least two more manuscripts of the *Gädlä Matyas* are believed to exist, one in the monastery of Däbrä Maryam.

Gianfrancesco Lusini

Mauro da Leonessa

M. (b. as Vincenzo Nardi, 10 May 1883, Leonessa, Rieti, d. 1 January 1946, L'Aquila) was an Italian missionary and scholar. He joined the ↗Capuchins with the monastic name of Mauro da Leonessa, was ordained priest in 1905, and earned doctorates in philosophy and theology from the Gregorian University in Rome.

As an expert in Ethiopian issues, in 1913 he was sent to Eritrea and became superior of the missionary houses in ↗ᶜAsäb, ↗Massawa and ↗Mändäfära (ᶜAddi Wəgri), as well as general vicar of his order for Arabia and Eritrea (1913–21). In 1924, he was appointed vice rector of the Pontifical Ethiopian College in the Vatican City (↗Santo Stefano dei Mori), where he served for seven years, following, among other things, the construction of the new seat of the College in the Vatican Gardens (1929–30). He later moved to the monastery of San Lorenzo al Verano in Rome. From 1934 to 1942 he taught Ethiopian languages at the then Regio Istituto Orientale (↗Istituto Universitario Orientale) in Naples. At that time he, in line with the colonial policy of the ↗Africa Orientale Italiana, supported antislavery ideas. He spent the last year of his life at the Capuchin convent in L'Aquila.

M. published several works on Eritrean and Ethiopian history, canon ↗law (1932, 1937), ↗chronography (e.g., 1918, 1934, 1943) and ↗Təgrəñña grammar (1928). He also published a collection of letters of ↗Täklä Haymanot Täklä Ǝgziᵓ (tr. by abba Tämälso Bäᶜal Ḥalay, 1939).

For his study on *Santo Stefano Maggiore degli Abissini* (1929), he received both an award from the Accademia d'Italia and the "Star of Ethiopia" order from *aṣe* ↗Ḫaylä Śəllase I (other important works in Src.).

Osvaldo Raineri

Mäwäddəs

M. (**መወድስ**, Amh. lit. 'praise', from Amh./Gəᶜəz *wäddäsä*, 'to praise') is a long office performed every Sunday, except when such ↗feasts as the Nativity (↗*Lədät*), Epiphany (↗*Ṭəmqät*), Transfiguration or *Qana Zägälila* fall on Sunday. The M. is the longest office in the ↗Ethiopian Orthodox Täwaḥədo Church (other long services are ↗*Kəśtätä aryam* and ↗*Məhəlla*). It is followed by the Sunday ↗*Səbḥatä nägh* and the Mass (cp. ↗*Qəddase*).

According to the traditional Ethiopian scholars, the M. is conducted on Sundays in imitation of the ↗angels who praise God because they were created on that day, and was introduced by St. ↗Yared who is believed to have learnt the M. directly from the angels when in a state of ecstasy he was taken to heaven. What he brought back was considered to be suitable for the office of Sunday, the day specifically dedicated to the divine praise.

The Sunday office is a complicated rite, consisting of psalms (↗Psalter), mostly grouped in blocks of three, alternating with thanksgiving ↗prayers, ↗litanies, invocations, *kidan* prayers, ↗*qəne*, ↗*Dəggʷa* hymns and other liturgical elements (↗*Məsbak*, ↗*Arbaᶜət*, etc.). Some of the psalms are performed completely, some only partially. Those used in their integrity can be interrupted by an antiphon and followed by a *qəne*. The psalmic ternaries are sung by alternating choirs (except for the *məsbak*, interpreted by soloists).

Mäwäddəs

The term M. (**መወድስ**, 'praise') designates a type of ↗*qəne*-hymns that is employed during the celebration of the Sunday office. It is called M. because it celebrates the praise of God and of the saints, and not because the Sunday office is also called ↗*Mäwäddəs*.

M.-*qəne* consists of two strophes: the first is called *mäwäddəs*, the second is called *läᶜaläm* (lit. 'for the eternity'), and is sung in ↗*araray* mode.

The M. is a long composition, and it can be of two types. The first type has eight verses (*bet*, pl. *abyat*; here symbolizing eight books of the ↗Octateuch – [*Bəḥerä*] *Orit*); it is called *fətaḥ litä*, after the beginning of the first verse of Ps 42/43, with which this *qəne* is sung in *araray* mode. The second type is ↗*kʷəlləkəmu*, a longer composition of nine verses that receives its name from the beginning of the psalm it accompanies, Ps 46/47. Usually, the composition of the M. is given to experienced masters of *qəne*.

The M. can be composed on various occasions, and performed not only to praise God and saints, but also to rebuke, ridicule, or insult civil or religious authorities.

Mäwaśəʾət

M. (መዋሥእት, pl. of *mośaʾ*, 'antiphon', from the verb *wäśəʾa*, 'respond', cp. Gr. ἀντιφωνή, *antiphonē*, from ἀντιφωνέω, *antiphōnéō*, 'respond'), is the ancient antiphonary, i.e. the book containing choral portions (antiphons) of the prescribed form of the Liturgy. In the ↗Ethiopian Orthodox Täwaḥədo Church the M. is used on specific occasions only. Like many other liturgical books, it is attributed to St. ↗Yared, and it bears remarkable, though scarce, traces of the "classical antiquity" of Ethiopian liturgy (HabUff 110; ↗*Qəddase*).

What makes the M. book peculiar is that rather short non biblical texts, the antiphons, are here inserted between psalms and canticle verses; and every antiphonal portion of it has two segments, called *ənnat* (lit. 'mother') and ↗*məlṭan*, i.e. the main and ending parts, meant to symbolize Mary and her Son respectively.

The M. is sung by alternating choirs. From the point of view of liturgical practice, it is a vestige of the ancient "antiphonal Psalms", implying the entire performance of the biblical texts. Yet, over the centuries, the biblical texts intercalated in the M. have been reduced to a minimum. The structure of a M. is:

1) opening verse of a psalm or canticle with which the M. is associated (ውጣኔ፡ ዳዊት, *wəṭṭane Dawit*),
2) antiphon (M.),
3) final verse of the psalm (ፍጻሜ፡ ዳዊት, *fəṣṣame Dawit*),
4) antiphony (M.),
5) ስብሐት (*Səbḥat*, doxology, *Gloria Patris*),
6) ምልጣን (*Məlṭan*, M.'s final part).

There are M. for some 70 ↗feasts, when they are employed as part of the ↗*Səbḥatä nägh* and ↗*Kəśtätä aryam*. M. may be used also during the ↗funeral services (HabUff 108ff.). In this case, the M. is called ሰዋስወ፡ ነፍስ (*Säwasəwä näfs*, 'Ladder of the Soul') or መርሕ፡ ለመንግሥተ፡ ሰማያት (*Märḥ lämängəśtä sämayat*, 'Guide to the Kingdom of Heavens') because it is considered a prayer that accompanies or leads to God the soul of the deceased. During the seven stations from the latter's house to the cemetery, the cantors (*mäzämməran*) sing appropriate portions of the M. accompanied by the rhythms of sistrum (↗*Ṣänaṣəl*) and drum (↗*Käbäro*). The M. is sung especially when the dead persons are monks, nuns, priests and also lay men and women who led a spiritual life and regularly received the Eucharistic communion (called, therefore, *qʷärabyan*) and, especially, were united in ↗marriage until the end of their lives. In every celebration and at every station of funeral services, twelve portions of the M. are recommended in principle. There is no obligation to sing the whole M. The decision is left to the discretion of the *mäzämməran*, whether to perform it entirely or only in part – that is a ninth, a seventh or a fifth of it, as fitting for the different occasions. However, like in the case of funeral services, five parts at least are sung. According to the traditional scholars (*liqawənt*), the numbers twelve, nine, seven and five symbolize the twelve tribes of ↗Israel, the ↗Nine Saints, the week in which God, after having worked for six days, rested on the Seventh Day, and the stigmata of Christ, respectively. The *däbtära* traditionally specialize in M. skills in ↗Zuramba (Gayənt, Gondär), also because it is the place where St. ↗Yared is supposed to have taught and composed this book.

Mss. containing the M. are numerous. Among the most remarkable are, e.g., Paris, BN, Éthiopien 369 and, among the last catalogued, VatLib, Comboni B 11, 14, 17 (s. GrébGriaule III, 31–49; Raineri 2000:43f., 46f., 49f., resp.). Ms. Vat. Aeth. 4, of the 14th cent., fols. 11v–121r (GréTisVat I, 16) is probably the oldest one (Grébaut 1931). Equally old, or even older, is ms. Florence, Biblioteca Medicea Laurenziana, Pal. Or. 148 (= Aeth. 16), from ↗Jerusalem, with the unique *Mäwaśəʾət zaʾarsima*, 'Antiphons of Arsima' (i.e. the Armenian martyr Rhipsima or Hṙipʿsimē), on fol. 4r (Marrassini 1987:91, no. III; Cerulli 1964:36–39), copied immediately after a document of 1340/41 A.D. regarding the Ethiopian

community in the Holy Land (CerPal vol. 2, 380ff.; Lusini 1994:118f., arguing for a Jerusalemite origin of the text; but for the date of the ms. cp. Fiaccadori 1984–85:227f., 238).

Mawlid

M. (مولد; sometimes also *mawlūd*, pl. *mawālid*, here 'birthday') is the name by which the celebration of the birth of the Prophet ↗Muḥammad (on 12 *Rabīᶜ al-awwal*) is commonly known in the Islamic world. The term M. is also used to refer to the corresponding ↗feast, and to the texts (usually poetic) written in praise the Prophet and recited at pious gatherings organized for this and other important religious feasts and solemn occasions.

Mawlid celebrations

The earliest mention of a M. observance, in the form of a ↗pilgrimage to Muḥammad's house of birth in Mecca (*Mawlid an-Nabī*) dates back to the late 12th cent. In ↗Fāṭimid Cairo the M. of the Prophet as well as the birthdays of saints (*awliyāʾ*, sg. ↗*Walī*) and the reigning ↗*ḫalīfa* were celebrated by the court. According to the most diffused tradition in Sunnī ↗Islam, the first official public celebration of M. took place in Irbīl (Iraq) probably in 1207/08 by the will of the ruler of Northern Iraq, Ṣalāḥaddīn's brother-in-law al-Malik Muẓaffar[addīn] Gökbüri, who was inspired by *šayḫ* ᶜUmar b. Muḥammad al-Mullā.

The celebration of M. spread to and in Ethiopia as well as elsewhere in the Muslim world with the diffusion of the Ṣūfī ↗Islamic brotherhoods, which considered the festival an important tool of strengthening the devotion and spiritual awareness of the faithful in general, and of brotherhood members in particular.

M. was declared a public holiday by the *Därg* (↗Provisional Military Administrative Council) following a proclamation dated 12 September 1974 on the observance of national and religious holidays that institutionalized for the first time in the history of the country the celebration of the principal Islamic feasts. M. feasts are also held at other times both privately and by the community at large. This suggests that the term M. has come to acquire a wider, looser and more popular meaning in the Muslim parts of the country, as in the rest of the Muslim world.

There has been opposition in Islamic countries to the celebration of the M. but its supporters have succeeded in legitimating it as a *bidᶜa ḥasana* (good innovation), stressing some of its merits such as the feeding of the poor, the reading of the ↗Qurʾān and the recital of the M., and the festive mood that it engenders among the faithful. In the 1990s a minority of Ethiopian Muslim elites debated the permissibility of the M. but it has not affected the prevailing consensus that it is a legitimate and an important religious and social event in the Islamic calendar.

The celebration of the M. festival starts on the eve of the actual birthday (as in Islam the day starts at the sunset of the previous day) and is always connected with the pilgrimage to the shrines of local Muslim Ṣūfī saints.

Mawlid texts

Common features of the texts recited on the occasion of M. are the reference to the exceptional circumstances of the Prophet's birth, to his miracles (esp. *isrāʾ* and *miᶜrāǧ*) and to the mercy which the world obtained thanks to his mission. Refined mystical theology of prophetical eternal light (*nūr Muḥammad*) is also found in many of these texts. Besides the texts written particularly for the occasion and classified as M. proper, *madḥ*-texts are

frequently recited. On the other hand, M. texts can be also recited on other occasions.

Works of famous classical Arabic authors are very diffused in Ethiopia, e.g. *al-Kawākib ad-durrīya fi madḥ ḫayr al-barrīya* (also known as the *Burda*) and *al-Qaṣīda al-hamzīya fī l-madāʾiḥ an-nabawīya* (also called *Umm al-qurā fi madḥ ḫayr al-warā*) by Šarafaddīn Muḥammad b. Saʿīd b. Ḥammād b. Muḥsin al-Būṣīrī (1213–96/97), the *Mawlid ʿiqd al-ǧawāhir* by Ǧaʿfar b. Ḥasan b. ʿAbdalkarīm al-Ḥādim b. Zayn al-ʿĀbidīn al-Barzanǧī al-Madanī (1690–1765, popularly known as Barzanǧī), as well as works by ʿAbdarraḥīm Aḥmad al-Burāʿī (d. 1400) and Zaynaddīn Muḥammad ʿAbdarraʾūf al-Munāwī (1545–1622).

Local Muslim scholars have also composed a large number of poems, both in Arabic and in Amharic and other languages of Ethiopia (written down in Arabic script), in praise of M. Two examples are *šayḫ* Sayyid Ibrāhīm of Čale's (d. 1956) *Mawlūd ar-rāʾiq fī mawlid sayyid al-ḫalāʾiq* and *al-ḫāǧǧī* ↗Bušrā āy Muḥammad's *al-Lumʿa al-bahīya fī mawlid ḫayr al-barrīya* (cp. also ↗*Manẓūma*). Compositions of *taḫmīs* type are also very wide spread, when a new poem is created by adding four verses to a line taken from an original Arabic text.

Mawlid in Harär

In ↗Harär, apart from the feast of *Nabi Mawlūd* (s. ↗*Mawlid*), the term M. (here: *mawlūd*) is also used, as elsewhere in the Muslim world, for texts speaking about the birth of the Prophet and various liturgical pieces used to commemorate this event. Locally, the same term also denotes the most diffused collection of sacred texts performed to celebrate *Nabi Mawlūd* as well as other Islamic ↗feasts and ↗weddings; every ritual based on the recital of this collection is also addressed as M.

↗Manuscripts containing different M. texts have been widespread in Harär since long; Drewes (1983) listed at least twelve manuscripts with M.-related texts (a ms. called *ʿUnwān aš-šaraf* containing the *Burda* and the *ʿUnwān aš-šarīf* among other M. texts, eight more texts devoted to the Prophet and frequently used in celebrations, and three unidentified M. mss.) in the 19th-cent. library of ↗Muḥammad b. ʿAlī b. ʿAbdaššakūr in Harär. The standard Harari M. collection (s. also ↗Harari literature) has also been printed several times. Most households own at least one copy; shrines and ↗*afōča* keep several printed or manuscript ones to be distributed to the participants during the ceremonies.

The M. collections include many texts of different types. The books reproducing the manuscripts of 1991 and 2000 both bear the title of the central liturgical text, *ʿUnwān aš-šarīf*, while there are other editions entitled (*Kitāb*) *Mawlid šaraf al-ʿālamīn*. Most of them display a similar liturgical sequence. While the Dərre Dawa edition (n.d.) contains only the main bulk of Arabic texts, without any interpolated Harari pieces, the more complete editions begin with two short poems, the opening invocation *Asīr an-nafs* and *Yā rabbi hayyiʾ lanā*. These are followed by several prayers, often including the *Muṣṭafā* by the Harari author *šayḫ* ↗Hāšim b. ʿAbdalʿazīz. The central M. texts, the *taḫmīs* of *Burda* and the *ʿUnwān* by *šayḫ* Abū l-Ḥasan Nūraddīn ʿAlī, as well as other Arabic and Harari texts varying from one collection to another, alternate with *zikri* hymns (↗*Ḏikr*) and formulas.

The specific performance depends on the occasion. The recitals for wedding ceremonies are performed on Sunday morning and usually last 3–4 hours, the rituals performed in shrines can last from ca. two hours to a full day or more. Not all the elements are used for shorter and less important ceremonies, whilst for bigger feasts M. can be recited in full, with additional liturgical components eventually incorporated.

Even if the principal locations for rituals involving the M. are the Muslim shrines and the congregational houses (Har. *Nabi gār*, 'House of the Prophet'), anyone can arrange a recital to celebrate a special event or a fulfilled vow, or when seeking protection; therefore, any house or compound can become the ritual space in which to hold a celebration.

In current practice, M. rituals are conducted by a *ḫaṭīb*, who reads his part and coordinates the collective recitation of the participants. There are different performance styles, depending on the *ḫaṭīb*'s individual approach as well as the customary options for each section. First, the Qurʾānic suras (e.g., the 36th and the 67th, *Yā-Sīn* and *Tabārak* or

al-Mulk) are recited in a strictly syllabic manner, with the voices realizing a simple melodic profile, usually based on two or three pitches, often generating significant forms of heterophony. Alternatively, the poems inserted in the liturgy, usually written in couplets, are performed in an antiphonal way: the participants spontaneously split in two groups that alternate in the chanting at the end of each line. Harari commonly refer to this way of performance as *burda*, probably because the homonymous poem by al-Būṣīrī is the most common (but not the only) text performed in this style. Sometimes the *burda* recitals are accompanied by percussion instruments (↗*käräbu* and ↗*käbäl*) in the style similar to that of *zikri* performances, only that in this case the participants do not dance; instead, they may stand and raise their hands in supplication, respecting the nature of the main passages of the ritual. Furthermore, the main text of the M. book is performed in a responsorial form between the soloist voice of the *ḫaṭīb* and the choral response of all the participants. The alternation of the soloist and choral parts is regulated by the written text, according to conventional signs (usually spots, or circles), which mark the end of each portion of text pertaining to the *ḫaṭīb* and, respectively, to the other participants. Finally, in correspondence with the Harari M. collection, a varying number of *zikri* hymns, different prayers and formulas are inserted throughout M. recitals. The *zikri* hymns are performed in a responsorial form by a soloist (the *ḫaṭīb* or any of the participants who may stand up and start singing) and the assembly, accompanied by *käräbu* and *käbäl*. The ritual is usually concluded with the sharing of a blessed meal. Other elements essential to the ceremonies involving M., as well as to most other Islamic feasts, are the consumption of large quantities of ↗*čāt*, ↗coffee and tea, as well as the burning of ↗incense.

May

M. is the name of one of the largest groups of ↗Somali dialects. In the past it has also been referred to as "Jabárti", ↗Raḥanween, ↗Digil, and Central Somali. "Jabárti" (cp. ↗Ğäbärti) was a misnomer, as shown by Cerulli (1925:614ff.). Raḥanween and Digil are the names of the major M.-speaking tribal confederations. Central Somali was introduced by Saeed (1982) in an attempt to avoid tribal names in linguistics. The term M. became of general use with the dialectological studies of Lamberti (1985, 1986). In Somali M. is now commonly referred to as *Af-Maay* ('M. language') or *Af-Maymay* ('Maymay language'). The word *maay* is the M. interrogative 'what?', used as a shibboleth in order to distinguish the "language of those who say *maay* ('what?')" from the "language of those who say *maḥaa tiri* ('what did you say?')", i.e., the other two major groups of Somali dialects – Northern Somali and Benaadir – perceived as a single language.

M. is a continuum of several varieties spoken as their native language by over 500,000 pastoralists and agriculturalists in the interriverine area of Somalia from Wanle Weyn to the right bank of the Juba River (↗Ganaalee; s. the map for the main M.-speaking areas in Somalia). M. is also used as a language of wider communication by speakers of less widespread dialects of the region such as Garre, Ğiiddu, Dabarre, and Tunni. Lamberti (1986) distinguished five varieties of M. spoken within the boundaries of Somalia. M. is known to be spoken also in southern and eastern Ethiopia, but its real extension there is still unknown (a dialectological survey of the Somali and Somali-related dialects has not been carried out yet). Pockets of M. speakers exist in north-eastern Kenya too. M. was the most widely spoken language in the interriverine area of Somalia until the mid-20th cent., and was adopted by incoming communities as their new language. It deeply influenced the phonologies and lexicons of the less widespread dialects of the region. Common Somali has become however increasingly important during the last decades as the language of the administration, the media, and the school system. Even though M. is not easily understood by other Somalis, songs in M.

by popular singers have been circulating widely also in regions where M. is not spoken. M. was not used for literacy until the very end of the 20th cent; one of the earliest written texts is a collection of poems by *šeeḫ* Abdulle Isaaq, a famous religious poet (Eedan Mad Isaaq 1987).

Most varieties of M. have both a low-toned *ə* and a high-toned *ə́*, a palatal implosive *ƒ*, and an uvular implosive *ɠ*, as in *osbə́de* 'the salt', *anʃúuf* 'spittle', *ɠób* 'keep it!'. The retroflex plosive *ɖ* is frequently realized also as an implosive. The lack of the pharyngeals *ḥ* and ᶜ is also typical of M., e.g., *madə́* 'head', *magə́* 'name', *galáŋ* 'hand, forearm' vs. Northern Somali *madáḥ* (sp. *madax*), *mágaᶜ* (*magac*), *gaᶜán* (*gacan*), resp. The clusters *h+t* and *l+t* are simplified to *tt* and *ll*, as in *bátti*, 'she went out' (from *bah-*, 'go out') and *wéelli*, 'she did it' (from *weel-*). Final *-n* is always realized as a velar *-ŋ*, as in *šéeŋ* 'bring it!'.

Nominative and genitive cases are never marked by segmental morphemes, differently from Northern Somali. With vowel-final masculine nouns the 3rd pers. possessives are *-šéy* 'his', *-šé* 'her' and *-šóo* 'their', e.g., *gurbə́*, 'male adult camel' – *gurbə́šéy*, 'his male adult camel'. With consonant-final feminine nouns they are instead *-tíis* 'his', *-tíye* 'her' and *-tíyo* 'their', e.g., *sár* 'house' – *sártíis* 'his house'. The dative/benefactive preverbal particle is *iŋ*, as in *iŋ šéeg*, 'tell him!'. Some varieties of M. still have a prefix-conjugated past tense *yarré*, 'he said', *tarré*, 'you/she said', etc. The typically M. present progressive has the endings 1st pers. sg. *-é*, 2nd pers. sg. *-áasə*, 3rd pers. sg. masc. *-é*, etc., as in *aamé*, 'I eat / he eats'; its negative counterpart is *mə aamáw*, 'I do not eat / he does not eat', *mə aamáasə* 'you do not eat'. The jussive has *-oy* in the sg. and 1st pers. pl., but *-êeŋ* in the 2nd and 3rd pers. pl., e.g., *ha šéenoy* 'he should bring it', *iŋ šéentêeŋ* (negative 2nd pers. pl.) 'you should not bring it', 'do not bring it!'. High-toned *-óy* is the ending of the 2nd pers. sg. imperative of the middle verbs, like *goróy* 'know it!' (from *gorod-*).

M. shares with several other dialects of the interriverine area a cleft construction with an interrogative and a lengthened verbal form, e.g., *igáarkuŋ máy aaméy sóᵓ* 'this boy ate meat (lit. what this boy ate is meat)', with the lengthened form *aaméy* instead of *áami* 'he ate'.

The basic ten word list in the M. of Baidoa (from Saeed 1982) is: *ków* 'one', *lamə́* 'two', *siddə́* 'three', *dáb* 'fire', *biyə́* 'water', *ᵓirə́* 'sun', *bíl* 'moon', *ɖíig* 'blood', *anráb* 'tongue', *ilíg* 'tooth'.

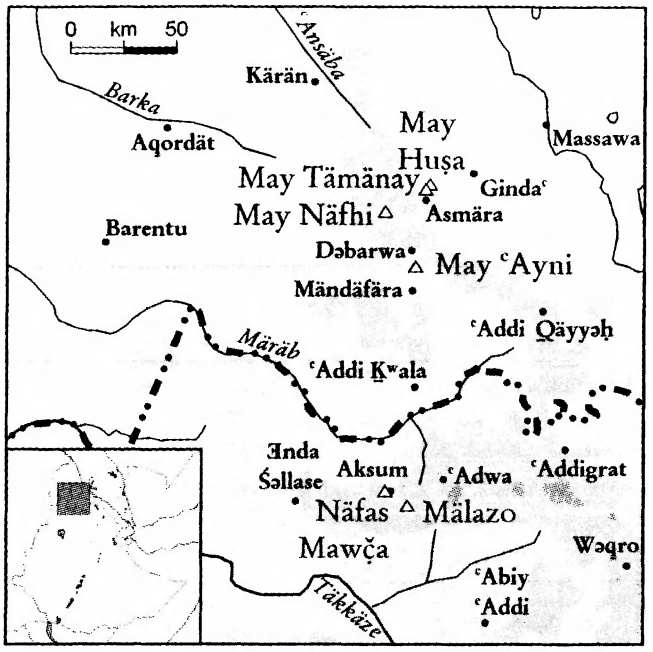
May ᶜAyni

M.ᶜA. (ማይ፡ ዓይኒ; 15° 1' N, 38° 53' 60" E, ca. 1,530 m A.S.L.) is a small town at the northern end of the Ḥazamo plain around the junction of the ᶜAddi Qäyyəḥ–Däqqämḥare roads in the ↗Akkälä Guzay *awrağğa* (Däbub zone in modern Eritrea).

A number of important ↗rock art (paintings and engravings) archaeological sites and various lithic tool surface scatter site areas are located along the ↗Märäb River within 15 km of M.ᶜA. The M.ᶜA. area, with its wide range of naturalistic and schematic depictions of livestock, human, and occasional wild animal figures, represents one of



the most dense and diverse concentrations of rock art in the Horn of Africa. The M.ᶜA. rock art sites include the Ṣəllum Bäᶜatti, Bäᶜatti Abba Qäysi, the Zäban ᶜOna Libanos shelter sites, the ᶜAddi Qänsa, Məsbar Gəbbi, Dəgum, ᶜAf Dəgum, ᶜAddi Anzäräfo, Bäᶜatti Məšul, Qar Sägla, May Qärni, Bäᶜatti Məbqʷal, Soqla, Qor Sähune, Mənṭoṭṭo, Ǝnda Abba Täkle, Lählay Fəččoqʷa, Amba Barya, Gäma, Ništo Qoḥo and Gobo ᶜAddi Ambar sites.

M.ᶜA. town was also the location of an important battle between the fighters of the ↗Eritrean People's Liberation Front and the *Därg* military forces during July of 1978. It was damaged during the 1998–2000 war between Eritrea and Ethiopia.

Matthew C. Curtis

May Čʼäw

M.Č. (ማይ፡ ጨው, also Mayčʼäw), a town in southern Təgray, in imperial Ethiopia was the centre of Ǝnda Mäḫoni *wäräda*, Azäbo and Rayya *awrağğa* (today the capital of South Təgray Zone; for location s. Mäqälä). Near the town, there is a small river called by the same name (lit. 'the salt water'); the springs were known for their curing waters.

Historically, M.Č. was situated on the edge of the area populated by Təgrəññña speakers (↗Wäğğärat), surrounded on three sides by the ↗Azaboo-Oromo, who migrated there in 16th–17th cent. The name M.Č. first appears in the land charter issued by *aṣe* Täklä Giyorgis in ca. 1794–95 for the church of ↗Ǝnda Mikaʾel of ᶜAdwa, built by *däğğazmač* Wäldä Gäbrəʾel (HuntGeogr no. 69). In the 1860s, a church of *abunä* ↗Täklä Haymanot was built at M.Č. and was richly endowed and granted the right of ↗asylum by *aṣe* ↗Mənilək II while returning south after the battle of ᶜAdwa (GueCopMen 453). Thereafter, over a long period, the place remained inconspicuous, despite its being located on the strategic "royal road". A small urban centre was developing. In the 1910s–30s, the region was one of the restive areas. The governors of M.Č. tried to control the local Təgrəññña, Azaabo and Rayyaa, raided over the borders of Eritrea, and struggled among themselves for power in southern Təgray, particularly in the late 1920s (*däğğač* Abärra Tädla and his son *fitawrari* Yəgzaw; *däğğač* Abbäbä Damṭäw, *ras* ↗Gugsa Arʾaya and his brother *däğğač* Käbbädä).

The battle of May Čʼäw (March – April 1936)

M.Č. gained historical prominence due to the battle commonly known as the battle of M.Č., or of Lake ↗Ḥašəngä, one of the most decisive and dramatic events of the ↗Italian war 1935–36.

By March of 1936 the Ethiopian army was in a very difficult situation. As the result of repeated defeats in Tämben, Ǝndärta and Šire, the Imperial army suffered heavy losses and abandoned a large chunk of territory to the Italians. The political regime of *aṣe* ↗Ḫaylä Śəllase I was increasingly unstable due to the unrest breaking out in different parts of the Empire. Ḫaylä Śəllase was in urgent need of a decisive action under his own leadership, to stabilize the government and change the progress of the war.

The rests of the Ethiopian forces in the North (of *ras* Śəyyum Mängäša, Kaśa Ḫaylu, Ǝmməru Ḫaylä Śəllase, Mulugeta Yəggäzu) were retreating to the south. On 17 March the vanguard of the Italians passed M.Č. and stopped some

25 km to the south of ↗Ambalage which had been deserted by the Ethiopians on 28 February. Marshal ↗Badoglio was in no hurry to carry out further assaults, intending rather to re-supply and re-organize the troops after the offensive operations in Təgray (the construction of a track road being one of the urgent tasks). Offensive operations were planned for April.

Ḫaylä Śəllase reached Koräm by 1 March. He was joined by his court, *abunä* ↗Peṭros and *əčč-čäge* Gäbrä Giyorgis Wäldä Ṣadəq, a number of notables and loyal troops, including his most effective troops, the ↗Imperial Bodyguard Corps. Other troops were also gathering at Koräm; Śəyyum Mängäša and Kaśa Ḫaylu reached there on 19 March. Despite the difficult situation, the Emperor and many of his supreme commanders cherished the idea of one more decisive battle and preventing the Italians from reaching Däse. On 20 March, the Emperor moved his headquarters to Aya (Hayo), into a cave on a mountain slope overlooking Lake Ašange. The Ethiopians numbered up to 40,000, with a few mortars and artillery pieces, but many machine guns and plenty of ammunition. The morale of the soldiers was boosted, since the Emperor, who took over the supreme military command, was going to lead them into battle.

The aim of fighting a decisive battle developed into a plan to carry out a surprise offensive operation. However, the right moment was missed; the Emperor did not follow the advice of Colonel Konovaloff, who, during his reconnoitring mission on 21 March, realized that the Italians had not yet fortified their positions. On 24 March, after the banquet and military council in the Emperor's headquarters, the attack was planned for 28–30 March, but later re-postponed by one day. Despite their defeats in the north, the Emperor appointed *ras* Kaśa Ḫaylu and *ras* Śəyyum Mängäša to play the leading role in the coming battle, overlooking some other outstanding commanders. In the meantime, the Azaabo and Rayyaa men arrived to pay homage to the Emperor; however, the Emperor's hope that they would rebel against the Italians was not realized.

From intercepted telegrams and other sources, the Italians learnt both the time and possible directions of the Ethiopian offensive. By 30 March, the 2nd Eritrean Division of General Dalmazzo occupied the centre, in front of M.Č.; the 1st Eritrean Division (General Pesenti) was in the east, extending its lines to Korabätta. On the other

The view of the town of May Čäw, along the Asmära–Addis Abäba road; photo 1998, courtesy of Heinz F. Berger

side, "Pusteria" Division of the *Alpini* (General Negri) held the front around Amba Bohora, with the Mäkan pass on its left flank. "Sabauda", "Assietta" and "3 Gennaio", divisions, and the 6th Group of Eritrean Battalions were in the rear, ready to support the units at the front.

The Italian troops left the pass of Mäkan free, and their position on the eastern side of Mäkan was a weak point: the 7th Eritrean Group of Battalions was in the second line while the 3rd Group (the 2nd Division) manned the first line, but the flanks were weak. Although there were only some 40,000 troops in the front lines, the Italian defence was deeply staggered, the entire force amounting to 125,000 troops with some 270 light tanks and tankettes and 210 artillery pieces. Dozens of war planes were to support the group from Mäqälä and other airfields.

The battle began on 31 March. The Ethiopians were divided into four groups: *ras* Kaśa Ḫaylu was in the centre, *ras* Śəyyum Mängäša on the right flank, *ras* Getaččäw Abatä on the left flank; the fourth group, in the second line, was led by the Emperor. At 5:45 the first shots fell, and some 25,000 Ethiopians (including the Imperial Body-

guards) headed towards the Italian lines. Effectively supported by artillery, some 15,000 struck the position of the 7th *Alpini* Regiment of "Pusteria" on the west side of Mäkan, and the Italians soon found themselves in a difficult situation.

At ca. 6:30 the Ethiopians attacked the right flank of the 3rd Group of Eritrean Battalions, held by the 10th Battalion. Despite the bravery and skills of the Ethiopians, and of the Imperial Bodyguards in particular, the attack collapsed under the deadly machine-gun fire. The Ethiopians resumed attacks between 7 and 8 (with heavy losses inflicted by the Italian airforce) and at 9 a.m. The 10th Battalion was in a desperate situation; the Imperial Bodyguards seized some trenches, but could move no further.

The Ethiopians attacked the positions of "Pusteria" around Amba Bohora again at ca. 10:00, but did not succeed. At 11, another attack made the situation of the 3rd Group critical, and General Dalmazzo had to send virtually all the troops at his disposal into the counter-attack. However, the Italian positions remained firm. By noon, the exhausted Ethiopians were retreating from the plain which was now littered with dead bodies. At ca. 4:30 p.m. one more desperate assault followed, at the junction between the 2nd and 1st Eritrean Corps. It was beaten back after an hour of fierce fighting (the Azaabo and Rayyaa attacked the Ethiopian flanks). At ca. 6:00 p.m., frustrated and giving up any hope for victory, Ḫaylä Śəllase ordered a full retreat. The battle of M.Č̣. was over. During one day, the Ethiopians lost ca. 5,000 (according to the Italian calculation, ca. 8,000) soldiers and a number of commanders.

On 1 April, tired and short of ammunition, the Italians were awaiting renewed full-scale assaults, of which, however, almost nothing came. On the next day, the Italians started a gradual advance, and Ḫaylä Śəllase was forced to order a retreat. It turned into a disaster: the services of the Red Cross were unavailable, the rest of the army, some 20,000 troops, marched with almost no supplies but burdened with the wounded, under attacks of the Azaabo and Rayya and the Italian airstrikes, gunning down the fugitives and spraying them with mustard gas in what was later called "the massacre of Lake Ašange".

After the battle of M.Č̣., the Imperial army crumbled and practically ceased to exist. On 8 April, Ḫaylä Śəllase issued a desperate "Order of Mobilisation"; but on 14 April the Prince ↗Asfa Wässän Ḫaylä Śəllase abandoned Däse, where Ḫaylä Śəllase had hoped to find additional troops. Now, he had to turn to Fəčče to escape the pursuit. From there, he drove to the capital with a few dignitaries and arrived at Addis Abäba on 29 April, a few days before he departed for Djibouti.

Even though the battle of M.Č̣. did not signify the end of the war for the Italians, it practically concluded the chain of dramatic developments and virtually sealed the fate of the Empire.

After the Liberation, the battle was commemorated in the name of a square in Addis Abäba, later renamed as Mexico Square.

Denis Nosnitsin

May Ǝslamay, battle of

M.Ǝ. (ማይ፡ እስላማይ) is a locality in westernmost ↗Təgray, on the banks of the ↗Täkkäze river (for location s. Märäb). It was also the site of one of the most decisive battles of the ↗*Zämänä mäsafənt*, which took place on 14 February 1831.

Having assumed power over Təgray in 1822, *däğğazmač* ↗Säbagadis Wäldu sought to end the political supremacy of the ↗Yäğğu lords. However, his efforts to forge a coalition remained unsuccessful, since, by 1830, he had lost his main ally, *däğğazmač* ↗Wəbe Ḫaylä Maryam of ↗Səmen, who sided with his principal enemy *ras* ↗Marəyye Gugsa of Bägemdər. Säbagadis replaced Wəbe with the his half-brother, *däğğazmač* ↗Märso Ḫaylä Maryam (CRNuov 36f.; AbbSéjour vol. 1, 187). Subsequently, *ras* Marəyye, in collaboration with Wəbe, launched a campaign in Təgray. Three Təgrayan vassals

of Säbagadis – his own sons-in-law *däğğazmač* Śahlu of Ḥaramat, Gäbrä Mikaʾel of Dära and Wädağ of Šire – are also said to have defected and conspired secretly with Marəyye and Wəbe against Säbagadis. The latter was advised to wait for the enemy to penetrate Təgray as far as ↗ᶜAddigrat, where his defending army would have had plenty of advantages, but apparently he did not take the advice, and the two rival forces clashed on the western edge of Təgray, near the site of M.Ǝ.

Säbagadis's forces under the command of his sons, Ḥagos, Wäldä Mikaʾel and Kaḥsay, awaited their adversaries at two different positions (Parkyns 1853, vol. 2, 115f.). Finally, Säbagadis faced the huge united Amhara–Oromo force under Marəyye, Wəbe and ↗Goššu Zäwde of Goğğam, with only half of his army, led by himself and Ḥagos. On 14 February 1831, the battle of M.Ǝ., also known as the battle of Däbrä Abbay or Daga Šeh, began. As Säbagadis had feared, the Təgrayan superiority in ↗fire-arms could not match the mastery of Oromo ↗cavalry, even though he had requested cavalry instructors from far-off Britain to train his horsemen. Despite the personal valour of Ḥagos and the death of *ras* Marəyye, the Təgrayans were overwhelmed, and most of them slaughtered.

During the battle, Säbagadis displayed unusually weak intelligence, poor generalship and an inferior grasp of the realities. The battle ended up with his capture and subsequent execution at the hands of the Oromo who thus revenged the death of their leader Marəyye. He was succeeded by his brother, ↗Dori Gugsa, who appointed Wəbe over Təgray as a reward for his loyalty, but perhaps also because of an earlier promise by Marəyye.

The demise of the two antagonists, Marəyye of the Yäğğu dynasty and Säbagadis upset the political equilibrium of the *Zämänä mäsafənt* in northern Ethiopia. Even after Wəbe gained Təgray from the Yäğğu lords, local power struggle scontinued in the aftermath of M.Ǝ.; Wəbe's uncertain hold over Təgray manifested itself alongside intermittent armed encounters with the Yäğğu overlords.

Tsegay Berhe G. Libanos

May Gʷaggʷa ↗Fəremona

May Ḥuṣa

The M.Ḥ. (ማይ፡ ሐጹ) is a stream in Eritrea that gave name to an important archaeological area ca. 1.5 km north of ᶜAddi Abeto in the greater ↗Asmära area (*zoba* Maʾkäl) with at least 15 sites representative of the ancient ↗ᶜOna culture (for location s. May ᶜAyni).

The largest site, MH07, lies ca. 400 m east of the Asmära–Kärän road along the slope and top of an adjacent schist rock ridge. First documented by the National Museum of Eritrea in 1997, it was investigated in 1999–2000 by the Greater Asmara Regional Archaeological Survey Project (GARASP). As of 2000, the MH07 site had been shown to extend over 15 ha in area and to contain a large mound measuring more than 1 ha in area and nearly 4 m in height, with visible architectural features on the surface, including at least 16 exposed stone walls, a probable stone cistern, terraced platforms ascending a steep ridge, and numerous ᶜOna-type sherds and lithic artefact scatters.

During the test excavation by GARASP, one 2 x 3 m excavation unit excavated the deposit to sterile soil at a depth of 2.35 m. The test extended into what was apparently a room with adjoining 1.7 m high walls. Radiocarbon dating of charcoal from stratified contexts suggested occupation between the 9th and 4th cent. B.C. Several hearths, one possible food processing area, and a clay floor associated with multiple ceramic vessels were documented. Excavated ceramic and chipped stone artefacts include the full range of known types for the first-millennium-B.C. ᶜOna culture. Grinding stones, stone figurines including bulls' heads, stone beads, and a ceramic lip or ear plug were also recovered. The excavation produced abun-

dant faunal (cattle, goat/sheep) and carbonized archaeobotanical (barley, lentil, linseed) material.

Recently the area, inhabited by the ↗Ǝggäla Ḥämäs farmers, has been subject to gradual urbanization. During 2001 much of the site was destroyed by mechanized agricultural activity.

May Kerwah

M.K. (**ማይ፡ ኬርዋህ**, also May Kärwah, May Kirwah) is a water course at ↗Aksum associated with St. ↗Yared, the founder of Ethiopian church music. According to the *Gädlä Yared* (Conti Rossini 1904:29) and the *Mäṣḥafä ↗Aksum* (CRAxum 5), the Virgin Mary commanded a certain *abba* Ḥəryaqos (Cyriacus of Behnesa), and the Syrian *abba* Labḥawi, to meet with Yared at the place called M.K., Aksum, to instruct him in the arts of liturgical music (the Syrians were conveyed there by means of a shining cloud). After doing this, they were returned to their homelands in the same manner. The exact location of this area is open to debate. The *Gädlä Yared* states that the stream was located to the east of the cathedral towards the house (tomb?) of ↗Gäbrä Mäsqäl. On the same issue, Alvares merely repeats the story of Yared's meeting, without providing a firm topographical identification (BeckHuntAlvar 523), whilst Monneret de Villard (1938:9) states that the stream fed into the May Šum reservoir. The name is not shown on the maps of the Deutsche Aksum-Expedition (DAE I, 33) but is identified as being in the vicinity of the pillar of Yared. This small structure, 30 cm in height, is to be found in a walled enclosure 100 m west of the gate of the old cathedral of ↗Aksum Ṣəyon near to Daᶜro ᶜEla (lit. 'place of the sycamore tree'). Referred to as the *məwradä qal* (lit. 'the place of descent of the voice'), the pillar allegedly commemorates the location of Yared's fateful meeting and is still used in ecclesiastical processions today (s. DAE II, 64f.). To the north of Aksum, on the way to ᶜAddi Ṣäḥafi, a small enclosed well is also said to commemorate the place of Yared's meeting.

May Näfḥi

M.N. (**ማይ፡ ነፍሐ.**) is a river in Eritrea that has given its name to a natural water reservoir, ca. 20 km south-west of Asmära, which is the main source of water for the capital, providing the city and its environs with 45,000 m³ water daily (for location s. May ᶜAyni).

Recently, a college settlement has been developed around the reservoir, with the Natural Sciences faculty of ↗Asmära University, the M.N. Teachers Training College and the Eritrean Institute of Technology.

A nearby rock shelter, with a west-facing opening ca. 12 m above the water level, is an archaeological site important for its ↗rock art. Around the cave, as well as at the nearby site of ᶜAddi Gäbray, chert and quartz microliths, chiselling stone points, grindstones (30 x 15 x 7 cm) and iron slag as well as potsherds of thick red and brown ware have been found. Inside the cave, 15 engraved schematized human figures can be seen: three small ones on the left side of the

Anthropomorph rock engraving from May Näfḥi; photo courtesy of the author

semi-circular south-eastern wall, two groups of four figures each in the centre, and an incomplete group of four on the right. The varying size (e.g., 18 to 28 cm in the first group) possibly implies age differences while the variations in head design (flat or round shape) may indicate sex; thus, the groups possibly represent families. Fattovich (in PICES 8) pointed some similarities between petroglyphs found at similar sites around Asmära and Arabian rock art from between the third and first millennium B.C. If M.N. can be compared to the findings at ↗ʿAddi Ḳayyəḥ (slightly older), ↗May Tämänay and ↗Sämbäl, this site could also date to the ↗pre-Aksumite culture period.

M.T. (ማይ፡ ተመናይ) is an archaeological site in the northern part of the Greater ↗Asmära area, uncovered during the rescue excavations in the late 1990s prior to infrastructural development in the conurbation (for location s. May ʿAyni). Investigated by Yosef Ləbsäqal, M.T. was earmarked for residential use. The material yielded from excavation appears to date to the 5th cent. B.C. and indicates an elite structure, perhaps a high-status grave. This material includes bronze metalwork (knives and jewellery) and high-quality ceramics. The site thus belongs chronologically to the very loosely defined ↗ʿOna culture of central Eritrea, a culture which appears to have a very distinctive local identity and which appears to be markedly different to the contemporary ↗pre-Aksumite sensu lato culture of eastern Təgray.

M.W. (ማይ፡ ወይኒ, Tgn. lit. 'water of grapes') is a small village of sedentary agriculturalists, located in Däqqi Dəgna *wäräda* in highland Eritrea, Sägänäyti district, ↗Akkälä Guzay. M.W. is known in literature for the studies carried out there on its ↗land tenure and ↗kinship systems, which are typical of the socio-political organization of ↗Təgrəñña speakers.

The village, which in the early 1970s changed its name from May Ḥamaq (lit. 'bad water'), numbers ca. 300–400 inhabitants. They are organized into five agnatic lineages (*gäzawətti* 'houses', or ↗*ənda*), thus another name of the village, Arbəʿattä Wäddin Samuʾelən ('Four sons and Samuʾel'). The lineages play a role in the administration of village land and of other traditional institutions. By agnatic descent, the village is connected to the other villages in Däqqi Dəgna *wäräda* and the main village of ↗Dəgsa. The villagers trace their myth of origin back to Dəgna (the founding father of the Däqqi Dəgna) and further to Akkälä (the founding father of the province-level descent group). The church in the village is dedicated to St. Mary.

The predominant mode of production in the village is subsistence agriculture. Land rights are administered by the village, through the rules of *šəḥena* communal land tenure system (also called ↗*desa*). The *šəḥena* system grants usufruct rights in land through residence in the village. Each male adult with habitation rights (*tiša*), traced through agnatic descent, who established a separate household in the village will be entitled to an ideal share of the land (*gəbri*). No person can hold more than one *gəbri*, or belong to more than one community, or *šəḥena* unit. A *gəbri* is not indefinitely owned by a household. The household only holds the right of usufruct in the village land, represented by the *gəbri* which is a representative share of land given temporarily for a specific period of time, usually seven years. Thereafter the land is transferred back to the village for redistribution, and a new share of land will be allotted to the household.

Maya

The M. were a group of cattle-keeping pastoralists historically associated with the region of ↗Wäğ, to the south and west of the right bank of the upper ↗Awaš (for location s. Mäqi).

An ancient Cushitic-speaking "pagan" group, the M. inhabited the area on the eastern edge of the kingdom of ↗Damot, which was an old place of contention between the local non-Christian

rulers and the Christian monarchy of the ↗Zagʷe, possibly under the control of the Christian state by the late Aksumite period. In the 10th cent., the queen of the Banū l-Ham(u)wīya (↗Ǝsato) led a revolt against Christian control. Though several hypotheses have existed concerning the identity of her kingdom, the generally accepted view is that it was Damot. According to the 10th-cent. Arab writer ↗Ibn Ḥawqal, the revolt brought complete independence to her country. In any case, there can be hardly a connection with queen ↗Badīt bint Māyā ('Badīt daughter of Māyā') of an Arabic document from ↗Šäwa mostly relevant to the second half of the 13th cent. (Cerulli 1941:7, cp. 21f. [= CerIslam 298, cp. 243]): she died in 1063, and may rather identified with Tadīt b. Māyālāmā, a female ruler mentioned in two lists of Harärі *amīrs* that seem to provide her full patronymic (Wagner 1976:197).

It has been speculated that some of the stone monuments in the current ↗Soddo region of ↗Gurage may recall the ancient presence of the M., or their predecessors, in the area. Some of the monuments are inscribed with swords, but others have bows and arrows (Anfray in PICES 11, 5f.; Tournemire 2003:19, 93; cp. also ↗Ṭəya).

Although, according to the 10th-cent. Arab writer al-Masᶜūdī, Muslim residents in the "pagan" kingdoms were subject to control by the indigenous population, during the subsequent few centuries ↗Islam spread to Damot, Wäğ and M., along the trade routes leading from southern Ethiopia to the north and east.

In the early 14th cent., *aṣe* ↗ᶜAmdä Ṣəyon I pushed himself south of the Awaš in an effort to resubmit this area to the Christian kingdom. Among the Islamic rulers he confronted, his chronicle lists those of Zälän, Wärğəḥ and Gäbäl. Though the M. were not mentioned, they have sometimes been equated with one of those three – all traditional names of pastoralists in the region (TadTChurch 42f.; TrIslam 72).

During the 14th and 15th cent., as a part of Wäğ, the M. region was still predominately "pagan", under its own rulers, but was subject to the Christian monarchy that regularly drafted them into regiments to fight for the Ethiopian kingdom. The M. lived near the church founded on Mount ↗Zəqʷala, possibly in the 13th cent., by *abba* ↗Gäbrä Mänfäs Qəddus, but were still "polytheists" at the time of ↗Aḥmad b. Ibrāhīm al-Ġāzī's 16th-cent. campaigns (BassHist 212f.).

According to the 15th-cent. itineraries collected by ↗Zorzi, Wäğ remained an area "in which the inhabitants would have none but a queen to govern them", and M. was known as a part of that region, being listed on a map of 1454 as inhabited by "strong men" (CrawItin 14, 78, 161). In 1448/49, *aṣe* ↗Zärᵓa Yaᶜəqob resettled some of the M. as a military colony (↗*Čäwa*) in Eritrea (TadTChurch 260; Conti Rossini 1903:182f., 244). For the next two centuries the M. were referred to mainly as a strong fighting force, poison arrows being among their main weapons. Besides their partial resettlement by Zärᵓa Yaᶜəqob, scattered references to M. place names near Harär, in the ᶜAfar area, at Ǝbbənat in Bägemdər and Ačäfär near Lake Ṭana suggest they were employed by several kings as soldiers and established in military colonies. Usually they had good relations with the monarchy, but were apparently responsible for the death of *aṣe* ↗Ǝskəndər in 1494 (PerrEsk 358f.; BassÉt 96; Merid Wolde Aregay 1971:32, 83, 96).

The most detailed information on the M. is found in Šihābaddīn Aḥmad b. ᶜAbdalqādir's ↗*Futūḥ al-Ḥabaša* (s. also EAE I, 156, map). Although Aḥmad b. Ibrāhīm instructed his troops not to provoke the M. by taking their cattle, his armies had already fought with a corps of 3,000 M. in the first years of the conflict. Šihābaddīn labels the M. as "infidels" and "polytheists", and describes their use of poisoned arrows. The M. were eventually defeated by a certain Farašaḥamdīn; their leader and a large part of the population was converted to ↗Islam (BassHist 361ff.). Farašaḥamdīn was appointed governor of their region, and from then on the M. fought on the Muslim side.

Notwithstanding the conquest and conversion, later on the M. sided again with the Christian kings, protecting the Wäğ region from Oromo incursions, as in a battle in 1573 (CRHist 52) – until ↗Śärṣä Dəngəl withdrew his troops from the south to Təgray in 1578. In his ↗*Zenahu lägalla* Baḥrəy describes how the *Birmağii luba* (↗*Gadaa*) of the Oromo created a new larger shield to protect themselves from M. arrows and were thus able to defeat them (BeckHuntAlm 120; MHasOr 35).

During the reign of ↗Susənyos, the M. served him as warriors. Susənyos brought the M. together from where they had been scattered over the previous decades, and granted them land for their cattle in the Ačäfär area of Goğğam, south-west of Lake Ṭana (PerChron vol. 1, 146f.). They con-

tinued to serve him throughout his reign, as they did later with Yoḥannəs I and Iyasu I (GuiIohan 40, 54, 61). Here the connection between the M. and the already mentioned Zälän, then also living in Lake Ṭana area, might be confirmed, although the chronicle of Susənyos refers to each of them as separate groups (PerChron vol. 1, 210). There is no specific information on the M. after the late 1600s.

James Quirin

Mayer, Adolf Jakob

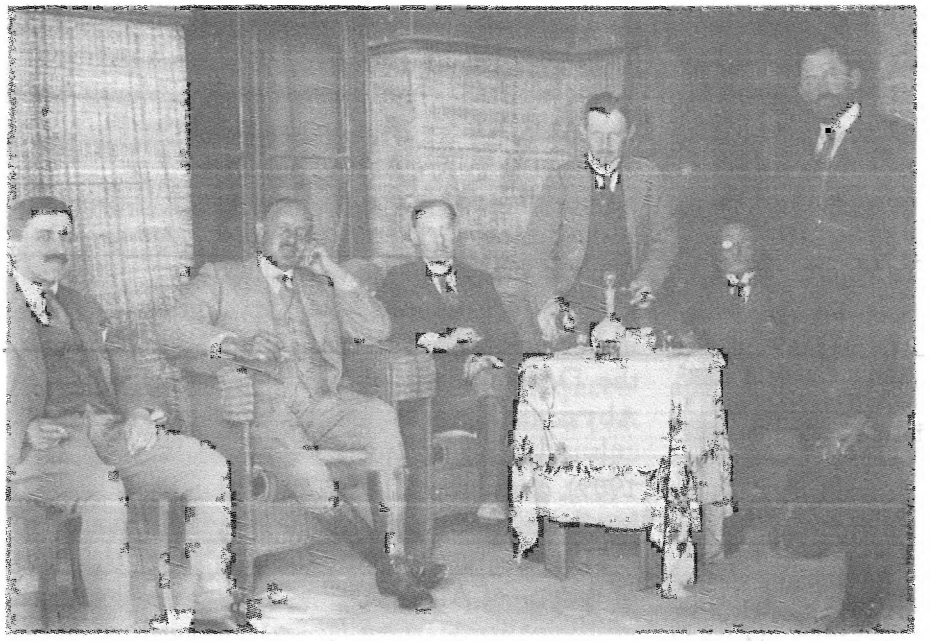
M. (b. 18 December 1881, Balli, Šäwa, d. 19 September 1952, Paris; Ethiopian name *ləǧ* Yaʿəqob Mar ያዕቆብ ማር, after name change in 1924 Jacob Adol Mar) was a confident of *ləǧ* ↗Iyasu, Ethiopian privy counsellor, diplomat and writer, of mixed Ethio-German descent.

He was the last of ten children of the missionary Johannes ↗Mayer and Sara Nəguśe from a family of local Oromo dignitaries of ↗Mäqdäla in Wällo. When the Oromo mission in Balli, led by his father, was closed down by order of *aṣe* Yoḥannəs IV in 1886, M. entered a school in Wilhelmsdorf, then known as Kirchheim-Teck, Germany. After four years work in Frankfurt am Main he departed for the Near East. In 1903 he decided to return to Ethiopia. He took several administrative posts under *aṣe* Mənilək II. Among others, he became the financial controller of the Emperor's treasury and participated in the unsuccessful creation of the "Bank for the Development of Trade and Agriculture in Abyssinia". He owned the largest German agricultural concession before World War I (Clarke 1999), consisting of 51,000 acres in the Awaš valley (later confiscated by *aṣe* Ḫaylä Śəllase I).

M. contributed to the foundation of the office of mayor of Addis Abäba, as a counsellor to the municipality starting from 1914, and to the organization of the postal and telegraph services. During World War I, he was close to the German Legation at Addis Abäba and seems, according to British and French reports, to have supported German activities to gain influence over *ləǧ* Iyasu after the death of *aṣe* Mənilək II. According to French diplomatic reports, his reform of the municipality failed in 1916, but he stayed on as a counsellor to the government. Later, after the enthronement of Empress Zäwditu, M. organized the imperial monopoly on alcohol production and prepared a reform of the constitution. Together with a Cypriote, Baldasare, he then also developed a plan to reform the Foreign Ministry, to the displeasure of foreign legations, who feared for their influence.

In 1923 he resigned from his functions due to conflicts with the regent *ras* Täfäri – the conflicts seemingly had their ground in M.'s relationship with *ləǧ* Iyasu – and departed for Brussels, Belgium. There he acted as Ethiopian consul until 1932. M. married a Belgian cinema actress in 1923, Hélène Smet, with whom he had two daughters, Desta [Dästa] and Menen [Mänän].

The last time M. stayed in Ethiopia was from 1933 to 1934. The German envoy had given him the task of elaborating a settlement scheme in which 20,000 Germans would migrate to Ethiopia as part of a coffee plantation project; the seal he used at that time showed the name *ləǧ* Ǝngəda Wärq zä Wällo (perhaps inherited from an ancestor?). In 1934 M., who was connected to the Ethiopian "Japanizers", promoted the establishment of a Japanese Legation at Addis Abäba (Clarke 1999). At the beginning of the Italian



Adolf Mayer (second from left), in the house of Lorenz Jensen, Addis Abäba; photo 25 December 1920, Nachlass Lorenz Jensen, Research Unit Ethiopian Studies, Asien-Afrika-Institut, Universität Hamburg

invasion of 1935 M. possessed the largest agricultural concession. He had 420,000 ha in the Awsa plains, to the west of the ↗Awaš river, between Gargori lake, the marshes of Gullibla and the plains below mount Gablaytu and Asboru. The Italian government conceded this territory to Maresciallo Enrico Caviglia, a former minister, who formed a society of exploitation with its seat in Rome together with M., the territory's owner. The society was called Società Agricola Industriale del Sangharra (S.A.I.S.), of which "Leg Jakub Adol Mar" (its vice-president and member of the administrative committee) held 59 %, Caviglia 8 %, and several other Italian share holders 7,5 % each.

At the end of the 1930s M. moved to Paris, where his daughters were educated in classical dancing. Inspired by their artistic career, which included the International Ballet London, M. wrote an exotic novel edited by Gabriel d'Aubarède: *Makéda, reine vierge*, which he published under the name "Prince Jacoub". In the preamble, M. introduces himself as an exiled prince charged by Empress Zäwditu to collect and re-edit the uncountable legends of the Queen of Sheba (↗Makəddа).

During the war, he helped to set up the German television in Paris under the direction of Kurt Hinzmann. Due to his collaboration with the Germans, he was imprisoned after 1944 for a number of years, during which period he wrote several manuscripts not yet published, e.g., *La danseuse d'or de Babylone et la croisière noire*. In 1997 his novel *Makéda ou la fabuleuse histoire de la reine de Saba* was published in France and then translated into several languages.

Makeda Ketcham – Wolbert Smidt

Mayer, Johannes

M. (b. 30 September 1831, Lobenroth, Schanbach, Württemberg, d. 6 April 1893, Brumana, Syria) was a German Protestant missionary who founded the first ↗Oromo mission in Šäwa.

On completing his education at the ↗St. Chrischona Pilgermission near Basle, M. was sent in 1854 to ↗Jerusalem, and in May 1856, together with ↗Flad, ↗Bender and ↗Kienzlen, to Ethiopia as a craftsman and lay missionary in the services of the Pilgermission and of the Anglican bishop Samuel ↗Gobat.

On 4 August 1859, while in service at ↗Mäqdäla, M. married Sara (known previously as Wärqənäš), a daughter of the peasant and church attendant *č̣əqa šum* Nəguśe Yəmär Kätäma, of Tänta, Wärrä Himäno, nephew of a

local Muslim Oromo *šayḫ* and distantly related to the Wällo governor *imām* Muḥammad ᶜAlī (*nəguś* ↗Mikaʾel ᶜAli) from Tänta. Besides Amharic, M. learnt ↗Oromiffa and started working on an Oromo dictionary. From the beginning he tried repeatedly to establish an Oromo mission. *Aṣe* ↗Tewodros II, however, only allowed him to teach young freed Oromo slaves at his school. M. also worked on translations of German religious texts into Amharic, e.g., a theological book for children (1866) and "short stories", again for children (1883).

M. was among those imprisoned by Tewodros at Mäqdäla and, in 1868, following the military intervention led by ↗Napier, he was expelled by the British from Ethiopia with all the other missionaries. He then settled in Jerusalem, but as early as 1869 he returned to Ethiopia, together with Bender, both in the service of the Pilgermission. First he worked in ᶜAdwa, Təgray, building up a school there with Bender and leading a circle of bible readers. During this time, the Təgrayan ruler Kaśa (later *aṣe* ↗Yoḥannəs IV) also used his services to establish diplomatic contacts with the new German Reich through letters (RubInd 283). In 1871 M. accepted the invitation of *nəguś* Mənilək of Šäwa to settle in his kingdom; on his way M. was captured by *ras* Ali III Bərru of Yäğğu, who asked him to enter into his services. M. was only freed due to Mənilək's intervention. Near ↗Ankobär, M. founded schools with the assistance of the missionaries Johann Jakob Greiner (who became M.'s son-in-law in 1879) and Jacob Mayer. Here, M. wrote a short dictionary of Amharic, Oromo and "Gurage" (identified by Hetzron as ↗Soddo), containing also short grammatical explanations and the translation of a short extract of the Bible (Mt 2) into Soddo, then still unknown and unstudied. It was published in 1878 by ↗Krapf, and was the material used by ↗Praetorius in 1879 for a first analysis of Soddo.

In 1880 the *nəguś* gave M. the ↗*gʷəlt* of the Oromo border district Balli south-east of the Catholic missionary station ↗Finfinnee, near the Awaš, about one and a half day's journey away. There he founded a new school and missionary station, employing Greiner, *aläqa* Gobbaw (↗Gäbrä Ǝgziʾabəher Dästa) and the Oromo Gäbrä Mikaʾel (a former assistant of Krapf, for an Oromo ↗Bible translation) as teachers. M. served the king in translating a part of his diplomatic correspondence in the 1870s (RubActa III, 111ff., 310; RubInd 303). Following an order of *aṣe* Yoḥannəs IV, Mənilək II, however, had to close the missionary station in early 1886. M.'s diary, kept from 1869 to 1883, is a rich source for that period. M. then went back to Jerusalem, and in 1888 moved to Brumana near Beirut in Syria, residing at the missionary station headed by ↗Waldmeier. Here he worked on the correction of the Amharic Bible in the services of the London Bible Society.

M. had three daughters and seven sons (among them Adolf ↗Mayer), two of whom died as children. Two sons were educated at Schneller's school at Jerusalem, the three youngest sons continued their education at the St. Chrischona Pilgermission starting from 1893. The daughter Lydia (b. 1865) married the missionary Greiner on 7 January 1879 at Ankobär, and Hanna (b. 1862) became deaconess in Alexandria.

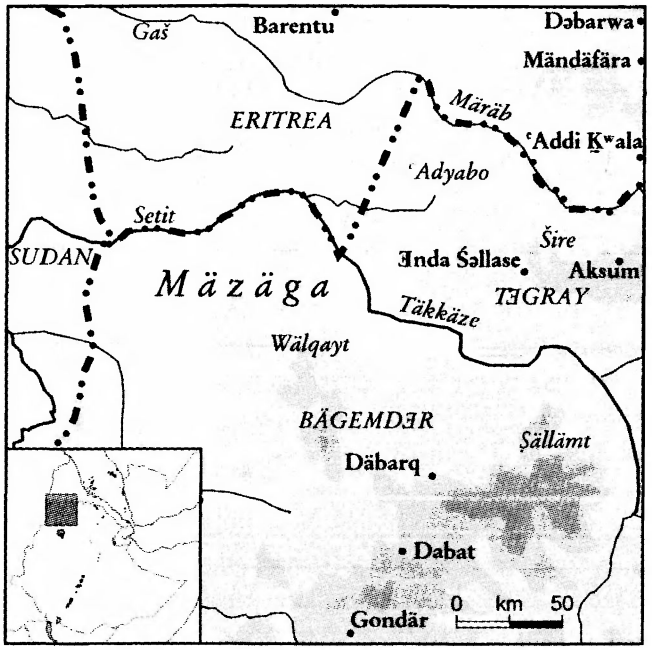
Wolbert Smidt

Mäzäga

M. (**መዘጋ**) in Amharic is the term designating the clayey and cracked black soil found at elevations of 500–800 m A.S.L. over a stratum of hard and impermeable rock, which helps to conserve the rain waters and makes the land fertile and suitable for cotton-growing, especially in the regions north of Lake Ṭana along the Ethio-Sudanese border. In Təgrəñña, M. is a toponym used to denote the historical district within the ↗Wälqayt region encompassed by the ↗Täkkäze-Setit, a wedge of land between Eritrea to the north and Sudan to the west. In its widest extended meaning, the term M. is used to refer to all lowlands between the highlands and the Täkkäze-Setit,



also in the regions of ↗Ṣällämt, ↗Adyabo and ↗Šire. A string of place-names from the Täkkäze to Qallābāt contains M. as element (s. BeckHuntAlm 239f.).

The first dwellers of M. in Wälqayt (Arab. Rās al-Fīl) were a branch of the ↗Balaw, a community of ↗Beğa origin and language, yet strongly Arabicized in its culture. What remains of them in M. are Islamic cemeteries and place-names such as Bälamba and ʿAddi Bäläw. According to oral traditions, the Christianization of the Wälqayt highlands began in the 15th cent. with *aṣe* ↗Bäʾədä Maryam, but in the lowlands of M. an Islamic Beğa sultanate resisted up to the second half of the 16th cent. The inhabitants of M. supported the forces of ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") who spent the month of *Ramaḍān* of 941 H. [1535 A.D.] in M. João de ↗Barros mentions the region ("Magáza", ed. 1777:372) as the land of Queen ↗Gaʿəwa, which was famous for its rich gold ores. The full annexation of M. into the Christian state can be dated to 1557, when Gaʿəwa, sister of Makattar, the last *sulṭān*, was defeated by *baḥər nägaš* ↗Yəsḥaq. The region reappears in historical records in the 18th cent., when James ↗Bruce was apparently made governor of Rās al-Fīl (i.e. M.; s. BruNile).

Traditionally, the settlements of the Christian ↗Təgrəñña-speakers in M. Wälqayt had a seasonal character, according to the agricultural cycle. The land was shared as common property among the villagers (↗*Desa*), who were entitled to use it for a term of one year. Most of the manpower was supplied by peoples deported from the Eritrean lowlands (↗Gaš-Setit), and in some cases by the ↗Tukrīr, coming from Central Africa and occasionally settling in M. and Eritrea on the way to ↗Mecca during the *ḥağğ*.

Gianfrancesco Lusini

Mäzgäbä haymanot

M.h. (መዝገበ፡ ሃይማኖት, 'Treasure of Faith') is a Gəʿəz treatise on the Christian faith of the ↗Ethiopian Orthodox Täwaḥədo Church. The Gəʿəz term *mäzgäb*, 'treasure', when used to refer to texts as is in the present case, can mean 'document', 'irrefutable evidence'; thus, 'Document on Faith' can be suggested as an alternative translation of the title.

Several manuscripts of the M.h. are known; Cerulli used five of them for his edition, the oldest one being the 16th-cent. London, BritLib Orient. 565 (s. Cerulli 1960:VIII).

The work consists of an introduction and eight chapters (*anqäṣ*; five of them numbered). The author defines the aim of his writing as explaining "the unity of one divinity with the counting of three persons (and) the unity of humanity and divinity" (Cerulli 1960:3); he follows the style of the treatise on the Councils by ↗Severos of Ašmunayn (cp., e.g. ms. EMML 1399, fol. 2r–18v [EMML IV, 467]). The introduction reviews the first three ecumenical councils accepted by the non-Chalcedonian Churches, including the Ethiopian Orthodox Church, and the rejected fourth Council of ↗Chalcedon. In the Introduction, the author clearly states that he and his community believe in "three persons and one divinity", the Father being the begetter of the Son and the cause of the proceeding of the Holy Spirit. The Son is begotten and the Holy Spirit is proceeded (i.e. in conformity with the Nicene creed without the *filioque* clause). They are three in person, name and hypostases, but unified in authority, nature, divinity and dominion ("as man is three with his word and breath"; Cerulli 1960:3f.).

The chapters refute different heresies and discuss the nature of Jesus and Mary. Chapters one and two refute the heresy of ↗Nestorius. Chapter three refutes the position according to which it is God's likeness, not God himself, that appears to people (as during his appearing to Abraham as a man with two angels, at the River Jordan as a dove, and his descent upon the Apostles as fire). Chapter four denies that the Roman Church is greater than other Churches. Chapter five refutes the heresy according to which the children receive their souls from the souls of their parents, arguing instead that God sends the soul to the child on the 40th day after conception. The first unnumbered chapter lists the heresies with their refutations. The next one briefly provides the dates of events in the history of the Church. The last chapter deals with the human nature of Christ and Mary, maintaining that they do not suffer under their own nature. Offended, and in defence of Chalcedon, the Jesuits responded with a book entitled ↗*Mäqśäftä ḥassätat.*

Ms. EMML 1202 is the sole copy preserving a colophon (fol. 56v–57r), which recounts that the M.h. was composed by a certain Gäbrä Iyäsus in the third year of *aṣe* Gälawdewos's reign (i.e. 1542; other datings suggest that the text was composed between 1555 and 1559; s. Cerulli 1960:III). In the colophon, the author makes explicit reference to the biblical texts of the Old and New Testament and to such Ethiopic theological works as the ↗*Haymanotä abäw*, the *Mäṣḥafä* ↗*məśṭir* and the *Täwaśəʾo zänəguś Gälawdewos* (lit. 'Argument of the King ↗Gälawdewos', possibly the *Confessio Claudii*), which he uses to prove the orthodoxy of the ↗*Täwaḥədo* faith of the Ethiopian Church. The fact that the colophon comes after the first five chapters suggests that it marks the end of the original treatise, the unnumbered ones being later additions.

The author's statement in the introduction that God, or every member of the Trinity, has an image that "cannot be likened to a creature" – a position differing from what *aṣe* ↗Zärʾa Yaʿəqob maintained – led Cerulli to conclude that the M.h. is a document related to ↗Zämikaʾelites. The obvious veneration of St. Mary (called in the last unnumbered chapter *säʿaritä märgäm*, 'the abolisher of curse', i.e. of the original sin) seems to disprove this conclusion – not, however, if one agrees that the unnumbered chapters are later additions by another author.

Getatchew Haile

Mäzgäbä Śəllase

Abunä M.Ś. (መዝገበ፡ ሥላሴ) was a holy man and the head of ↗Gundä Gunde, one of the most important monasteries of northern Ethiopia, during the second half of the 17th–beginning of the 18th cent. According to the list of the "pastors of Gundä Gunde", M.Ś. (I) was a spiritual son of his predecessor *abunä* Samuʾel. M.Ś. died, possibly in 1703, after holding office for 53 years, and was followed by *abunä* ↗Habtä Śəllase II. That list also includes a late 18th-cent abbot of Gundä Gunde by the same name (M.Ś. II), whose personality remains obscure (Mordini 1953:56ff., cp. 59).

Despite his long tenure, which fell within the reigns of *aṣe* ↗Fasilädäs and ↗Iyasu I, only a few records concerning M.Ś. (I) are available. The main piece of evidence is his still unpublished Vita, the best-known testimony of which being an 18th-cent. manuscript kept at Gundä Gunde (Mordini 1953:50f. [and n. 14], no. 116). It was photographed by Father Emilio Ceccarini, the photos being kept in the Vatican Library (Ms. fotogr. 326–28, s. Raineri 2004:646) and in the House of the Comboni Mission in Addis Abäba (s. Raineri 1990:369, no. 16). The lavish illuminations of the same manuscript were photographed by Ewa Balicka-Witakowska for the "Mäzgäbä Səʾəlat: Treasury of Ethiopian Images" Internet database project.

The texts contained in the manuscript remain unexplored, but the miniatures most probably depict miraculous episodes of M.Ś.'s Vita. E.g., on fol. 8v, he is shown with *abunä* Samuʾel (the miniature was commissioned by a certain Wäldä Iyäsus, fol. 9r). On fol. 11r, accompanied by Habtä Śəllase II, M.Ś. meets the Angel of Death who came "in the month of *Säne*"; however, M.Ś. says that his death will not happen in the rainy season and requests the Angel to go and come back in *Ḫədar*. On fol. 12r, through his prayer M.Ś. makes a tree that was an obstacle for the construction of a church "prostrate" in front of him. On fol. 12v, M.Ś. parts a river's current, providing a safe way for Habtä Maryam and other disciples. On fol. 13r, M.Ś. is depicted with a supplicant named Wälättä Ṣəyon

Mäzgäbä Śəllase parting the river, fol. 12v; Mäzgäbä Śəllase and the donor Wälättä Ṣəyon, fol. 13r; ms. *Gädlä Mäzgäbä Śəllase*, 18th cent., Gundä Gunde; photo 2002, courtesy of Michael Gervers

(the ↗donor of the manuscript?). Finally, on fol. 13v, he is shown receiving his ↗*kidan* from Jesus Christ. On fol. 14v, two similar miniatures show M.Ś. saving a child from the fire.

The first series of these illuminations is a provincial product painted in the wake of the so-called first Gondärine style of the 1670–80s (cp. Leroy 1964:47). The last five miniatures, by a different artist, merge into the so-called second Gondärine style, and can be dated to the first half of the 18th cent., when the manuscript was possibly completed.

A few more manuscripts of the Vita have been reported as being kept elsewhere (s. KinBibl no. 114). At least one more image of "*abba* M.Ś." is included in the gallery of Gundä Gunde abbots, represented on a painted parchment dating from the 17th cent. (Yoḥannəs IV Museum, Mäqälä, s. Mercier 2001:146f.).

Denis Nosnitsin

Maẓhar, Aḥmed

M. *bey* (b. ca. 1870/75?, d. 13 January 1920, Djibouti) entered service in the *Terceme Odası* ('Translation Office') in Istanbul in June 1908 and rose to the position of the *Mühimme Müdiri* ('Director of the Department for State-Affairs'). In April 1912 a *Baş Şehbenderlik* ('Consulate-General') had been established at Harär, the leading Muslim city in Ethiopia, as the first Ottoman permanent diplomatic agency in this country (↗Ottoman Empire, relations with). After the death of the first Consul-General, Necib Hac *efendi*, M. was to follow him in April 1913. One of his activities there was to register all Ottoman citizens – a great part of whom were fugitives from Yemen – since it was the policy of the Ottoman Foreign Ministry to recognize the inhabitants of the *Ceziret ül-arab* ('Arab peninsula') as Ottoman citizens (they had previously been German protegés, cp. Lorenz ↗Jensen). This won him the opposition of both the local Ethiopian authorities and the British who claimed to be the protectors of the Muslims from Aden and ↗Ḥaḍramawt.

In November 1913 M. wrote a report on "Abyssinia and Ottoman Politics" (*Habeşistan ve Siyaset-i Osmaniyye*). He proposed organizing the Muslim community in Ethiopia, consolidating the rights of the Muslims and establishing their official co-operation with the *makām-ı hilāfet* (Department of the *şeyhülislam* or Chi-

ef Mufti), i.e. the Ottoman state agency which regulated the religious affairs of the Muslims by appointing religious personnel, supervizing the religious education and issuing juridical verdicts in the form of a *fatwā*. As practical measures he proposed sending teachers, preachers, muftis and even special functionaries – eventually in disguise as tradesmen. M. built up connections with esteemed Muslims. He also tried to win the good-will of the Ethiopian government by offering concessions on the question of the monastery of ↗Dayr as-Sulṭān. Already in March 1914 it had been decided to transfer the Consulate-General to Addis Abäba in order to extend the *hakk-ı kaza* (right of jurisdiction) to whole of Ethiopia, and M. moved to Addis Abäba in March 1915 (ErlEth 86).

After the outbreak of ↗World War I Ethiopia, though not directly involved, became a playground for Allied and Axis interests. M. had difficulties communicating with the Ottoman capital, as post-offices and telegraph lines were in the hand of the Allies, for which reason he became isolated. But things changed when he came into closer contact with the young ruler *ləǧ* ↗Iyasu. In March 1915 Iyasu travelled to Harär, where he was welcomed by M. and a group of Ottoman citizens. Iyasu accepted, according to Orhonlu (1974:172; s. also Holcomb – Ibassa 1990:158), a flag from them showing the formula *lā ilāha illallāh* in Arabic script against a green background, in the place of the cross-bearing lion of Ethiopia. He gave the Muslim community many gifts and visited the Great Mosque, thus winning their sympathy. M. was granted a personal audience by Iyasu, where they talked secretly about the Djibouti question. Concerning ↗Somalia M. proposed supporting *mullah sayyid* ↗Muḥammad ʿAbdallāh Ḥasan, and granting him the Ottoman title of *şeyh ül-meşāyih* ('*šayḫ* of the *šayḫ*s', i.e. head of *šayḫ*s).

Furthermore, after negotiations with the German ambassador in Istanbul, the Ottoman government consented to handing over territories along the Red Sea and Somali coasts to Ethiopia, this renewing old claims of sovereignty upon this region. Enver *paşa*, the Ottoman vice-commander in chief, agreed to these plans and gave M. authority to act accordingly. Later M. succeeded in inviting Iyasu to visit the Consulate-General and also got the opportunity to meet some ministers, thus propagating the Ottoman point of view and diminishing the Anglo-French influence. Politically, Iyasu began to incline to the Germans and to seek allegiance to the Ottomans. M. helped to intensify the connection between Iyasu and the *mullah* in Somalia, his intention being an autonomy for the Somalis within a victorious – as he then was convinced by the rare reports from Istanbul – Ottoman Empire, whereas Iyasu wanted the same, but within a renewed Ethiopia (ErlEth 88).

Aḥmed Maẓhar *bey* celebrating the birthday of Kaiser Wilhelm II at the German Legation; photo 1914, Nachlass Lorenz Jensen, Research Unit Ethiopian Studies, Asien-Afrika-Institut, Universität Hamburg

In May 1915, to show his goodwill, Iyasu promised to hand over a large parcel of land in Addis Abäba near the foreign legations to the Ottoman government. In 1916 he declared that the religious affairs of the Muslims in Ethiopia should be delegated to the Ottoman authority (a then popular misinterpretation of this, speaking about placing Ethiopia in religious dependence upon Turkey, is also reflected in the historiography, e.g. TrIslam 130f., cp. Greenfield 1965:138). He also sent M. an Ethiopian flag embroidered with a crescent and the Islamic formula of faith – one of twelve flags Iyasu presented to his confederate Muslim leaders (Orhonlu 1974:172, no. 41; TrIslam 131; Holcomb – Ibassa 1990:165). But finally, Iyasu's behaviour, his open sympathy towards Turkey and Islam, his close relations with M. (which depended not only on the young Em-

peror's affection towards Islam, but also on M.'s friendly and amiable character – quite in contrast to the harsh attitude of the British and French envoys), all this, together with the fear among the Allies and many Christians that he could inspire a *ǧihād* among the Muslims in Ethiopia and Somalia, united the opposition, and Iyasu was overthrown in September 1916 (↗Coup d'état 1916 in EAE vol. 2, 1081). This happened so suddenly that M. was not able to report directly to the Ottoman capital. This incident meant the end of Ottoman politics in Ethiopia. Early in 1917 the Consulate-General was deprived of any means of communication. M.'s further activities in the region are not documented. It has only been reported that he died in Djibouti (GueCopMen 627f.; Tepedelen 2007:765, 768). Researches by the Turkish embassy to find his grave, however, led to no results (Dikbaş 2007).

Detlev Finke

Mäzmur Zädawit

Äläqa M.Z. (መዝሙር፡ ዘዳዊት, also known as Mäzmur Dawit; b. 1899 or 1904, Lemän Śəllase, Sälale *awräğğa*, Šäwa, d. 1983, Addis Abäba) was an Ethiopian painter. Among his works are the wall-paintings of Lemän Śəllase, Männagäša Maryam, and Meta Abbo churches in Šäwa. Further paintings are in the Maḫbärä Ḥawaryat Śəllase church (Asmära), in the church of *abunä* Samuᵓel in ↗Däbrä Abbay (Təgray), in the Qəddus Maryam church (Arsi), in the Gəšän Maryam (↗Amba Gəšän) and Däbrä Betel Śəllase churches (Wällo), and in the Hagärä Sälam Mädḫane ᶜAläm church (Sidamo). His paintings are also in different churches in Addis Abäba: in the Qäḳäne Mädḫane ᶜAläm, Lədätä Maryam, Yäkka Mikaᵓel, Yäkka Abbo, Golla Mikaᵓel, and in the ↗Qəddəst Śəllase Cathedral. M.Z. painted the portraits of Mənilək II, Ṭaytu and Zäwditu in the mausoleum of Mənilək in Addis Abäba, and the coronation scene of Ḫaylä Śəllase and Mänän in the former Parliament building in Addis Abäba. M. also drew several medals, court decorations, and assisted in designing Ethiopian bank notes in the second part of the reign of Ḫaylä Śəllase.

In 1964 M.Z. took part in a group exhibition in Yugoslavia. In 1975, M.Z. was invited by *abuna* Maṭewos to decorate the new Täklä Haymanot church in the monastary of Məskabä Qəddusan in Bethany near Jerusalem. He also stayed at the Ethiopian convent in Jericho and created a large painting of the Queen of Sheba (↗Makədda) visiting King Solomon, which now can be seen in the Chapel of the Four Living Creatures at ↗Dayr as-Sulṭān in Jerusalem, together with two other paintings by M.Z. (a Holy Trinity and a Theotokos).

Elisabeth Biasio

Mäzmurä Dawit ↗Psalter

Mäzmurä dəngəl

The M.d. (መዝሙረ፡ ድንግል, 'Psalter of the Virgin') is one of the longest Ethiopic hymnological compositions dedicated to St. ↗Mary. It consists of an opening prayer of 15 lines describing the Virgin's beauty, 150 short (mostly five-line) psalms corresponding to the Psalms of David (↗Psalter), 15 prayers corresponding to the 15 canticles of the ↗Prophets and five prayers inspired by the Song of Songs (↗Wisdom books). The opening psalm begins as follows: ነዓ፡ ኀቤየ፡ ዳዊት፡ ንጉሠ፡ እስራኤል / በዓለ፡ መዝሙር፡ ሠናይ፡ ወጥዑመ፡ ቃል (*Näᶜa ḫabeyä Dawit nəguśä Ǝsraᵓel / bäᶜalä mäzmur śännay wä-ṭəᶜumä qal* ..., 'Come to me, David, King of Israel, lord of the beautiful Psalter, and pleasant voice ...').

The M.d. psalms are always combined with those of the Psalter, each Marian strophe following the corresponding Psalm of David (cp. the ↗*Mäzmurä Krəstos*, with a similar pattern); sometimes M.d. psalms are inserted into

the Psalter manuscripts by a later hand (cp. ms. Ṭānāsee 56 = Kebrān 56). Other prayers of the collection are inserted after the canticles and the five sections of the Song of Songs, these biblical texts being routinely combined with the Psalter in Ethiopian manuscript tradition. The integrated M.d. Psalter is often divided according to the days of the week. In the manuscripts, the M.d. is usually followed by the ↗*Wəddase Maryam* and the ↗*Anqäṣä bərhan*.

Though the M.d. does not belong to the liturgy (↗*Qəddase*) in a strict sense, it was probably sung during the services because its manuscripts are occasionally provided with musical notations (↗*Məlәkkәt*). The frequent use of this text during church services is equally attested by added Amharic glosses.

The M.d. is an extraordinarily popular composition, as witnessed by numerous manuscripts. It is still not known exactly when the M.d. was written, but it should be probably dated to no earlier than the 14th cent.; the oldest extant Ethiopian mss. containing the psalms stem from the 16th–17th cent. (e.g., BritLib orient. 112, 113 [with a later Amharic version], 114; EMML 4608, 4625, 4759; BN d'Abb. 244 [CRAbb 105]; Berlin ms. orient. quart. 995). The efflorescence of poetry dedicated to Mary in Coptic literature, especially from the 13th cent. onward, may have sparked in Ethiopia a new wave of compositions in her honour.

Tradition ascribes the composition of the M.d. to a 15th-cent. disciple of Giyorgis of Sägla, ↗Mäzmurä Dəngəl, after whom that collection is believed to have been named (cp. Getatchew Haile in PICES 10, 369 and n. 7).

While a complete translation of the M.d. was published by Raineri (2005:133–87), a critical edition remains a desideratum.

Ute Pietruschka – Evgenia Sokolinskaia

Mäzmurä Dəngəl

M.D. (መዝሙረ: ድንግል) was a 15th-cent. monk in central Ethiopia. He is believed to have been a disciple of ↗Giyorgis of Sägla. It has been reported that his biography, the *Zena Mäzmurä Dəngəl*, is included in the manuscript of the Acts of Giyorgis of Sägla kept in the monastery of Däbrä Baḥrəy, Sayənt, Wällo (KinBibl 85, no. 115). He is sometimes credited with the authorship of a collection of hymns devoted to St. ↗Mary, ↗*Mäzmurä dəngəl*, possibly named after him (Getatchew Haile in PICES 10, 369 and n. 7).

Another monk by the same name lived, according to ms. EMML 2602, in Däbrä Libanos during the second half of the 17th cent., and died in 1699 A.M. [1706/7 A.D.].

Mäzmurä fəśśuḥan ↗Ǝgziʾabəḥer nägśä

Mäzmurä Krəstos

Three compositions bearing the title M.K. (መዝሙረ: ክርስቶስ, 'Psalms of Christ') are known. One (M.K.[1]) is a lengthy compilation of ↗hymns traditionally believed to be written by a 15th-cent. monk Mäzmurä Krəstos (cp., probably, KinBibl 85, no. 116); the second (M.K.[2]) is a 16th-cent. work by *abba* ↗Baḥrəy; the third (M.K.[3]) was composed by *aläqa* ↗Tayyä Gäbrä Maryam in the 20th cent.

The M.K.[1] is the best known of the three compositions as it is often copied together with the *Mäzmurä Dawit* (lit. 'Psalms of David', i.e. ↗Psalter), being thus widely disseminated (and recently printed, s. *Mäzmurä Dawit* 1959/60; for Italian tr. s. Raineri 2005:16–74). Information on its author is scarce. In one of the psalms, he implies that he was 25 when he composed it (cp. ms. London, BritLib Orient. 534, fol. 149v). Tradition confirms that his name was Mäzmurä Krəstos (this may have inspired him to compose the work), that he flourished during the time of *aṣe* ↗Zärʾa Yaᶜəqob and was possibly related to ↗Giyorgis of Gasəčča (*Mäzmurä Dawit* 1959/60:VIII).

The M.K.[1] consists of 151 hymns that correspond to the 151 psalms of David, plus two additional hymns, one as an introduction and one as a conclusion. The hymns of the M.K.[1] are rarely found as a separate collection (a rare example is ms. BritLib Orient. 534, fols. 138r–49v). They were most probably meant to be combined with the Psalms of David from the very beginning: each M.K.[1] psalm being a commentary to a Psalter text they were also placed accordingly in the manuscript layout, M.K.[1] stanzas each following the corresponding Ps piece.

In his writing style, the author follows the ↗*ᶜarke* system, each hymn rhyming in five lines. Following the tradition established by ↗Athanasius of Alexandria of dividing the Psalter, he divided his psalms into five parts corresponding to the five senses: sight, hearing, smell, taste, and touch.

The M.K.[2] is an entirely different composition from the M.K.[1] At least four mss. are known to exist, London, BritLib Orient. 534 (WrBriMus 84); Berlin, Orient. Quart. 996 (HamSixTana 220ff.); EMML 3473 (EMML VIII, 286–89); and in New York, Library of Congress "Fanta 1", not yet catalogued. One may also add the fragment in EMML 2335, fols. 162v–63v (s. EMML VI, 384). The author has been recently identified as the same *abba* Baḥrəy as the one who authored the ↗*Zenahu lägalla* (s. Getaččäw Ḫayle 2002:36–47). Baḥrəy's name is explicitly stated in psalm 34 (s. EMML VIII, 288), further biographical details are provided in psalm 151, functioning as a colophon. The stated time of composition is that of *aṣe* ↗Śärṣä Dəngəl's killing of the *sulṭān* of ↗ᶜAdal, i.e. 1576/77 (cp. Cerulli 1931:60, n. 8f.).

The style of the M.K.[2] is unique, as stated in the introduction (BritLib Orient. 534, fol. 7r) and in the colophon (*ibid.* fol. 137r). The number of psalms, lines in psalms, number of words and letters in each line correspond to the number of psalms, lines, words and letters of the Psalter of David – so that the M.K.[2] could serve as a yardstick for the integrity of the Psalter copies. Unlike in the Ethiopic Psalter, however, the hymns in the M.K.[2] rhyme.

In his introduction, Baḥrəy lists his sources – 91 canonical and non-canonical books, including *Raʾəyä Elyas*, 'Vision of Elijah' and *Kalila wa-Dimna*, otherwise unknown in the ↗Gəᶜəz literature as we know it today. Cerulli (in PICES 2) suggested that the Indian fable about Kalilah and Dimnah was never translated into Gəᶜəz, and that the text Baḥrəy consulted must have been the Gəᶜəz version of ↗*Bärälam wäyəwasəf* that contains the same story; this opinion is not supported by Getatchew Haile (in PICES 5b).

The M.K.[3] was written by *aläqa* ↗Tayyä Gäbrä Maryam. The author's being heavily influenced by Protestantism may have been among the reasons why the work never circulated in the churches and monasteries. No manuscript copies are known apart from the original used for the printed book (Tayyä Gäbrä Maryam 1913; for the Italian tr. s. Raineri 2005:75–132).

In style, 150 hymns, meant, once again, to correspond to the Psalms of David, follow the *ᶜarke* tradition of five lines. The 151st psalm is not actually numbered and consists of four parts. The first two parts, of five and six lines, respectively, speak about David, and not about the author of the M.K.[3] The next two parts, of ten and twelve lines, respectively, have David's refrain እስመ፡ ለዓለም፡ ምሕረቱ ('For His mercy is forever') after each line (cf. Ps 135/36). The M.K.[3] also has 15 hymns that correspond to each of the 15 biblical canticles of the Ethiopic Psalter and 5 hymns corresponding to the five parts of the Song of Songs, arranged as in the Ethiopic Psalter. The M.K.[3] is concluded with 29 hymns, 26 of them of five lines (nos. 27 and 28 have ten lines and no. 29 twelve lines, including their refrain).

Mazoya

M. ('guarding a house at night by going around it', in Čaha and Ǝža; in Ǝndägañ: *mazōyä*, Ǝnnämor: *mazōya* [Leslau 1979:82, 215, 343, 472]; or *qärat*, 'night watch', in Čaha and Ǝža [Leslau 1979:94, 483; cp. also Amh. *qərat*, 'guarding the cattle at night' and *qärrat*, 'kind of platform on poles on which a guard sits to shoo birds away from the crops' [KaneDic 734]; Harari *qēraḥa*, 'to guard, tend, watch, protect' [Leslau 1963:129]) is a traditional ↗Gurage institution concerned with ensuring security among community members. It is a system which involves each household taking turns to patrol, mainly at night, to assure security of neighbourhoods and properties. According to oral informants, before the incorporation of the Gurageland into the Ethiopian empire in the late 19th cent., M. was part of the traditional system of governance. It was essential to avert theft, to ensure social order and to protect people and farms from wild animals. Even after the government police system was introduced into the Gurage area, the *qärat* system continues operating to compensate for the inefficiency of the modern police. Moreover, its own virtues make it preferred to the modern system.

In the Gurage area police forces operate mainly in the few urban centres, while rural areas are served mainly by a group of men selected from among community members to guard their community with little or no special police or military training. In 1998, for instance, there were only two police stations (one in the *wäräda* town Ǝndəbər and the other in the small town of Gubre) and 28 policemen in the ↗Čaha *wäräda*. Even today, the police service is severely constrained by resource limitations. One problem is the lack of material resources for carrying out police activities. Because of lack of trained manpower and equipment at the *wäräda* level, complicated cases are handled with the help of the police force at the zonal level; they are sometimes left without being adequately investigated. Also due to limited financial resources at the *wäräda* level, the available police personnel cannot move to different places as frequently as necessary. At times people got services in the rural areas by paying for transportation and by providing per diem to members of the police assigned to handle their cases. The majority of people in the rural areas, however, cannot afford to pay for such services and thus remain out of the reach of the police service.

According to informants in different peasant associations in the Čaha *wäräda*, neighbours took their own initiatives to ensure security during the night, especially to protect high value crops such as ↗*ənsät* and ↗*č̣at*. It seems to be a norm of the Gurage to – collectively or individually – remain very alert to uncommon behaviour and unexpected situations in their *ğäfʷärä* ('village, settlement').

Mäzraʾətä Krəstos

M.K. (መዝራእተ፡ ክርስቶስ, called Korno; fl. 17th cent.) was a Təgrayan monk credited with the foundation of the monastery bearing his name in the Ahsäʾa district of the ᶜAdwa *awraǧǧa*. Eleven mss. of his ↗*Gädl*, still unpublished, are reported to be kept in his monastery.

According to his hagiography, M.K. was a son of Läbase Krəstos, a commander of the militia of *aṣe* ↗Fasilädäs, and of *wäyzäro* Milaña, a relative of the holy nun ↗Wälättä Ṗeṭros. After having her son baptized by Sənä Krəstos, the abbot of Wärq Lädḥo, Milaña withdrew into a convent. In his youth M.K. was frequently at the court, where he was noticed by the king who offered him his daughter as a wife, but M.K. chose to take the monastic habit from Sənä Krəstos. Much to the dislike of his relatives he then settled in Däbrä Mäǧina, ↗Waldəbba, from where he made pilgrimages to various sanctuaries, among them those of Yared and the "Ṣadəqan" near ↗Aksum. He then lived on the Märäb, in Šəfaᶜ Säᶜat; twelve of the monks who accompanied him died of malaria. He is reported to have converted pagans at lake Abba Nazä.

With one of his disciples, he settled at May Qəṣabä. There he founded a monastic community, with a church dedicated to Kidanä Məḥrät. Later, he founded another community at Mayṣu and, finally, at Ahsäʾa which was richly endowed with land by Fasilädäs (cp. CRAxum [II] no. 62).

Fasilädäs's successor, ↗Yoḥannəs I sent a letter to M.K. asking him to bless the kingdom and granted him lands in Šire. According to the royal chronicles, in May 1679 M.K. (here: Mäzrate, nicknamed Kʷärne) reconciled the revolting *ras* ↗Fares and Zämaryam with the Emperor (DombrChr 211; GuiIohan 30f.), and the donation may have been a sign of gratitude. *Aṣe* ↗Iyasu I, before becoming a monk on the island of Məṣraḥa, donated M.K. the lands of Ambay Däqa.

Before his death M.K. appointed Askalä Maryam as his successor. He gave his last instructions to his disciples, had them bring an image of St.↗Mary and the Acts of St. ↗Kiros, and died at the age of 93 on Friday 29 *Gənbot*, i.e., most probably 5 June 1706, which would place the saint's birth date in 1613.

Giustino De ↗Jacobis, who visited an homonymous hermit on 30 November 1843, noted in his diary the names of the parents of the saint whose name the hermit bore as well as the favours the first M.K. enjoyed during Fasilädäs's reign (s. De Jacobis 2000:547). De Jacobis also mentions the monastery of "Abuna Metserata" four hours north-east of ᶜAdwa (ibid. 37) and lists the church of "Abun Mazratè" among the churches of ᶜAdwa and surroundings (ibid. 66).

Measurement s. vol. 5

Mecca

The town of M. (Arab. مكة, Makka, called *al-mukarrama*, 'the blessed', or *al-mušarrafa*, 'the illustrious'; 21° 27' N, 39° 49' E, ca. 270 m A.S.L.), lying about 72 km inland from the Red Sea port of Jeddah (Ǧidda) in present-day Saudi Arabia, is the holiest place in ↗Islam. It is one of the stopovers on the annual ↗pilgrimage (*ḥaǧǧ*) that every Muslim should perform at least once in his lifetime, if he has the economic and physical capability to do so. It is also the destination of the pious visit (ᶜ*umra*) that the faithful carry out whenever they can, especially during the month of ↗*Ramaḍān*. It is in M. that the sacred enclosure (Ḥaram; Masǧid al-Ḥaram) is located, which comprises the Kaᶜba, the holiest structure in Islam that defines the *qibla*, or the direction of the prayer, the Maqām Ibrāhīm, and the well of Zamzam. Ṣafā and Marwa, the two low mounds between which the *saᶜy* (holy run) takes place, are also among the holiest Islamic places in M.

The city of M. is today the capital of the Saudi Arabian province of the same name. Its population varies between 200,000 and 300,000 which increases by 1.5–2 million at the time of the principal *ḥaǧǧ*.

The history of the relations between M. and Ethiopia goes back well into the pre-Islamic period; it forms part of the history of the long-standing ties between the two shores of the Red Sea. Many traders from M. had connections with the African shore. Hāšim b. ᶜAbd Manāf, ↗Muḥammad's great-grandfather and the eponymous founder of the Banū Hāšim lineage, is said to have been the first to organize two seasonal trade caravans for the Qurayš tribe: the one which took place in winter was directed to al-Ḥabaša, where Hāšim paid homage to the ↗*naǧāšī* and offered him presents (Ibn Saᶜd n.d., vol. 1, 75).

Whether the so-called Aḥābīš – a group of probably scattered clans of apparently different origins, which at some point in pre-Islamic times allied itself with the Qurayš in M. and became the basis of their military force – was made up of people of Abyssinian origin has been a subject of debate. In support of this hypothesis, Lammens (1916, 1918:229, 1924:118f., 133, 329) affirmed that the Aḥābīš included a mix of Arabs and Abyssinians (or generally Blacks) and served as mercenaries of the Qurayš of M. However, research on Arabic sources (Watt 1953:154–57; Hamidullah 1956:434–47) has demonstrated the Arab descent of the Aḥābīš: the name should thus be interpreted as the plural of Uḥbūš or Uḥbūša meaning "companies or bodies of men, not all of one tribe" (Lane 1865:501; but s. Smith 1954:455 n. 6 and Beeston 1987).

In the year that, according to tradition, saw the birth of the Prophet Muḥammad, an Abyssinian expedition from Arabia was launched against the town. Its leader, ↗Abraha, whose campaign took actually place in 547 or 552, wanted to destroy the Kaᶜba and divert the flow of pilgrims to his newly built church in Ṣanᶜāʾ (s. Fiaccadori 2006a:67f. and nn. 118–23, with lit.). Muḥammad's grandfather ᶜAbdalmuṭṭalib attempted to negotiate but to no avail, and the Abyssinian

army marched to the town. Divine intervention saved the holy place and the invaders were compelled to flee (Ibn Saʿd n.d., vol. 1, 90ff.; Ibn Hišām 1987:64–69 and tr. Guillaume 1955:21–28; CRStor 189–92).

In 608 a carpenter by the name of Bāqūm participated in the restoration of the Kaʿba; according to some scholars, the name could be a distortion of the Ethiopian form ʿƎnbaqom. A later Islamic tradition additionally claims that Abyssinian timber was used in the works (s. bibliography in Fiaccadori 2006b:129f.).

Many Abyssinian slaves lived in M. Among them were the famous ↗Bilāl, who was freed by Abū Bakr and became the first *muʾaḏḏin* in the history of Islam, and Waḥšī b. Ḥarb who, whilst a pagan in the Qurayš army, fought in the battle of Uḥud (625) killing Ḥamza b. ʿAbdalmuṭṭalib, Muḥammad's uncle. After converting to Islam, he took part in the battle of ʿAqrabāʾ (634) and killed Musaylima al-Kaḏḏāb, "the enemy of Islam", – with the same spear he had used against Ḥamza (Sayyid b. Muḥammad Ṣādiq 2001:251–57; 266ff.).

Abyssinian concubines and wives were always highly appreciated in M. as in the whole Arabian Peninsula since pre-Islamic times. Many inhabitants of the town had Ethiopian mothers, and their yellowish complexion was noticed as one of their distinctive physical characteristics by the 19th-cent. Swiss traveller Burckhardt (1829:182–87; s. Lewis 1990:90f.).

At least two Abyssinian freedmen (Anasa and Ṣāliḥ Šuqrān) took part in the battle against the Qurayš at Badr in 624 (Watt 1956:344); according to a tradition preserved by aṭ-Ṭabarānī in the *Muʿǧam aṣ-ṣaǧīr* and quoted by as-Suyūṭī in his *Asbāb an-nuzūl* (n.d. 291), 40 Abyssinians fought on the Muslim side in the battle of Uḥud the following year.

In July (or, according to other sources, May) 630, some Abyssinians threatened the Meccan port of Šuʿayba from the sea. The Prophet sent an expedition against them: 300 men under the command of ʿAlqama b. Muǧazziz al-Mudliǧī caught up with the intruders, wading through the sea until they reached an island. At that point, the Abyssinians fled (al-Wāqidī 1966:983; Ibn Saʿd n.d., vol. 2, 163; al-Fāsī 1998:409f.; s. also Sprenger 1861:430).

In 702 Abyssinian pirates allegedly sacked Ǧidda, which had replaced Šuʿayba as the port of M., once again. As a reaction, the Muslims extended their control to the African coast of the Red Sea, sacking and destroying the Aksumite port ↗Adulis (Wüstenfeld 1859:44; s. also TrIslam 46f. n. 6; Cuoq 1981:36 n. 48).

With the expansion of Islam beyond the Arabian Peninsula, M. remained the most powerful point of attraction in the entire Islamic world. Flocks of pilgrims never ceased to come to the town, not only during the *ḥaǧǧ* but all year round. Many settled more or less permanently in M. to benefit from the knowledge of the learned men living in the town. A person staying in M., at least for a short time (*nazīl Makka*), has always been considered as honourable, and pilgrims from Ethiopia/Eritrea were no exception.

Little information is available on Ethiopian pilgrims to M.; only for the modern period do we have some data. Some time before 1934, during his stay in M., *al-ḥāǧǧ* Yūsif of ↗Ǧimma was initiated into the Tiǧānīya *ṭarīqa* (↗Islamic brotherhoods) by the famous West African *ḫalīfa* Alfa Hāšim, and brought Tiǧānī mysticism back to Ǧimma (TrIslam 246).

Most recently, in September 2005, *šayḫ al-ḥāǧǧ* ↗Muḥammad Walī of Wällo died in M. where he had been teaching at Umm al-Qurā University; he was buried at the cemetery of Muʿallā next to the tomb of Ḫadīǧa, Muḥammad's wife.

We know that pilgrims from West Africa passed through Ethiopia and Sudan on their way to or back from M., some of them settling on the borders with Sudan and in Eritrea (↗Fellata; ↗Tukrīr).

Learned and ↗holy men from M. visited Ethiopia on various occasions. Some of them are said to have settled there founding new lineages (s., e.g., TrIslam 170).

Among itinerant traders, we may mention ʿAbdallāh b. Ibrāhīm b. Muḥammad al-Ḥimyarī al-Yamanī (d. 807 H. [1404/5 A.D.]). A *nazīl Makka* and a merchant of Yemeni origin, he stayed for seven years in Ethiopia (al-Fāsī 1998:318f.).

In July 1621, during the reign of *amīr* Ṣabraddīn b. Adam, two *šarīfs*, *sayyid* Aḥmad b. al-Hādī and *sayyid* Ṣāliḥ, came from M. to ↗Harär. They were following an order received from the Prophet in a dream to restore the tombs of *šayḫ* Saʿd and *šayḫ* Ṣāliḥ, because the town's inhabitants, unaware of the holiness of the site, were accustomed to throwing rubbish there. The two *šayḫ*s accomplished their task within seven months and returned (Cerulli 1931:92–95).

Medicine

Traditional medicine

The World Health Organization defines traditional M. as "the sum total of the knowledge, skills and practices based on the theories, beliefs and experiences indigenous to different cultures, whether explicable or not, used in the maintenance of health as well as in the prevention, diagnosis, improvement or treatment of physical and mental illnesses". Traditional M. involves not only the treatment of ↗diseases, but also and perhaps even primarily, indigenous understandings of their etiologies. Long before the introduction of modern bio-M. into Ethiopia there existed a wide array of traditional M. based on the writing, reading and wearing of texts, contact with ↗spirits, M. made of herbs, animal parts and ↗minerals, and traditional procedures that used a wide variety of techniques including bleeding, cupping, and surgery such as uvulectomies and tooth extractions. Writing in the early 16th cent., Alvarez mentions cupping, bleeding, and herbal purges as part of the repetoire of traditional M. in Ethiopia (BeckHuntAlvar 509).

Throughout Ethiopian history various plants were used in an attempt to heal the sick. There are about 600 species of medicinal plants distributed all over the country. Virtually all parts of the plants are used including the leaves, stems, roots, seeds and fruits to produce traditional M. These are widely used by the rural population, and an increasing number of the poor in urban centres employ parts of plants as well as products from wild animals and minerals. *Hagenia abyssinica* (↗*Kosso*) is perhaps the best known and is commonly used against tapeworm. ↗Henna (*Lawsonia inermis*), in addition to its cosmetic uses, also has medicinal purposes. Henna leaves when heated and placed on the body are believed to relieve rheumatism; while their smoke fumigates the entire body. Powdered henna mixed with butter is believed to heal wounds. ↗*Hidii* (*Solanum campylacanthum*, etc.) is used to make an infusion which is used against coughing and diarrhoea in children. Leaves of the *sänsäl* (*Adathoda schimperiana*) are crushed and boiled in water and ingested to cure ↗malaria. Even such common products as ↗*ṭef* and ↗*č̣at* are on occasion used for medicinal purposes.

Among animal products butter (↗Milk and milk products) and ↗honey were among the most commonly applied as traditional M. Some forms of heart trouble are treated by a drink made of wild bee honey. Honey is also prescribed as a cure for a cough and as a an ingredient in a poultice for a wound sometimes in combination with ↗salt, onion, or even peas. (In fact,

modern research indicates that honey indeed has some antibiotic properties.) Victims of smallpox were expected to consume melted butter every day for eight days. Among the ↗Šinašša, warthog (*Phacochoerus africanus*) meat is used to heal measles, ostrich feathers (*Struthio camelus*) are used to treat asthma, and the fat and skin of the rock python (*Python sebae*) are believed to be effective in treating chest pains. Animal bones and fat are also used as traditional M.

Traditionally both Christianity and Islam were deeply involved in healing. Prayers, religious objects such as the ↗cross, the ↗Eucharist, holy water (*mayä ṣälot*, cp. also ↗*ṣäbäl*) and even the monastic garb were employed to cure disease. The fact that such services were, moreover, usually provided gratis or in expectation of a voluntary gift, must have made them all the more attractive. The belief in the healing power of sacred texts is shared by both religions. In both faiths, visits to tombs of ↗holy men and women or even obtaining dust from the grave of a saint was believed to be an effective cure. Perhaps the most peculiar manifestation of the Islamic traditional M. is the so-called "M. of the Prophet" (*aṭ-ṭibb an-nabawī*). This can be distinguished from both a Galenic medical system of Greek origin (*aṭ-ṭibb al-yūnānī*), well spread in the Islamic world since the early 9th cent., and a purely magical or spiritual healing practice (*aṭ-ṭibb ar-rūḥānī*). Basis of the "M. of the Prophet" is a number of prophetic sayings kept in the *Ṣaḥīḥ al-Buḫārī*, the most authoritative collection of *hadit* (79th chapter, *Bāb aṭ-ṭibb*) and some few passages from the Qurʾān (e.g. 16:69). The *ṭibb an-nabawī* is essentially a collection of empirical medical receipts and practices reflecting folk medicine of the Arabian Peninsula, which in the entire Islamic world has acquired an aura of Prophetical value. It is characterized by the wide use of natural remedies such as seeds and plants (especially black cumin, onion, and garlic), water, honey, milk, camel milk and urine and by the recourse to cupping, cauterization and venesection. In Ethiopia, Muslims have become acquainted with at least part of this tradition (Slikkerveer 1990:180-95; and s. also the publication in Addis Abäba of the book by Abū al-Fidāʾ Muḥammad 2003/04). Moreover, the use of plants and seeds in medical practice - even without an explicit reference to the *ṭibb an-nabawī* - is testified in written receipts for remedies preserved in Ethiopic Islamic manuscripts (s., e.g., Slikkerveer 1990:186f and figure 5,2; Dobronravin 2006:571).

A widespread procedure in traditional medicine, applying a small cut in the temple, Ḥamasen, Eritrea; photo 1914–15, courtesy of Frobenius-Institut, Frankfurt am Main (no. 07–8203)

A wide range of surgical techniques are practiced in Ethiopian traditional M. The uvula is believed to put infants at risk for suffocation and accordingly is excised in many infants. In other cases, it may be removed as a cure for tonsillitis. Eye problems may be treated with incisions of the eyelids or eyebrows. Diarrhoea in infants may be treated by extracting the milk teeth. *Moññ bagäññ* or "get a fool" is a disease according to traditional conceptualization with symptoms of syncope, fever, headache, abdominal cramps, or stiff neck. The disease is treated by bloodletting (brachial vein). Wind (cold) may cause pleuritic chest pain or *wəgat*, which is treated by cupping.

Since the discovery of the cause of a particular condition is usually intrinsic to the selection of the right treatment or cure, various forms of divination (↗Oracles and divination) formed a crucial part of much traditional M. Thus among some ↗Aari groups a diviner would interpret stones he had thrown in order to reveal the etiology of his patients' disease.

↗Magic-medical literature is an important part of traditional M. in Ethiopia. Collections of prescriptions against demons which are believed to be responsible for various illnesses exist in both Amharic and Gəᶜəz. Some of them are associated with the ↗Psalter, e.g., the *Məśṭirä Dawit* ('Mystery of the Psalter'), known in both Gəᶜəz and Amharic versions. Amulets (Amh. *kətab*) prepared by

↗*däbtära* or Muslim scribes are worn by some, usually under their clothing for protection.

Spirit ↗possession cults figure prominently in the repertoire of traditional M. Although officially in contradiction to strict monotheism, evil spirits are often blamed for mental illness and deviant behaviour by Muslims, Christians and Betä Ǝsraʾel. Moreover, spirits are held accountable for many somatic symptoms. ↗*Zar* possession is more common among women in Ethiopia/Eritrea and among men in refugee camps and immigrants living in the Western world. Harm can be inflicted on others by persons with ↗*buda* or the power of evil eye, which can be counteracted by various means. Spirit possession is treated with prayer and herbal preparations or holy water depending on whether the patient is Muslim or Christian. However, people may look outside the strict borders of their religious and ethnic community if medical help which is viewed as efficacious is available. The reputation of the healer or of a technique is of greater importance than narrow religious loyalties.

Visits to living holy men or healers are popular, however, in many cases it is not the person but the geographical place that is considered to be endowed with healing properties (↗pilgrimage). Thus healing water is not merely limited to that blessed by the Church, but can also include that flowing from a holy spring such as Mədrä Käbd, or ↗Faraqasa. Holy ash (*əmnät*) may be mixed with water. At ↗Zəqʷala grasses and moss from the site are sold as traditional M.

Since 1993 traditional M. is an integral part of national health policy. The Drug Administration and Control Authority (DACA) was given responsibility for the identification of traditional M., assuring their safety and submitting them to laboratory analysis and clinical trials. However, as of early 2006 it had yet to carry out trials or to license medicines.

Although usually perceived as a rural-based phenomenon, traditional M. thrives in urban settings where access to modern bio-medicine is limited by expense and the lack of personnel. It also continues to be widely practised not only in Ethiopia and Eritrea, but in the Ethiopian diaspora.

Steven Kaplan

Modern medicine

Ethiopia's health care system is based on a long tradition of exchange with the Arab and European world. Autochthonous, Arabic and Amharic medical practices coexist with biomedicine. Depending on accessibility, people make simultaneous use of different facilities.

Most Ethiopian rulers were eager to make use of foreign medical skills. However, it took until the early 1840s to bring modern M. to a sizable section of the population (Pankhurst 1990). Modern M. came to Ethiopia along with scientific, political and religious ↗missions. Whereas in most African countries church-based missions pioneered Western M. long before it was provided by colonial governments (Good 1991), in

Ethiopia it was mainly introduced by the request of its rulers. However, all major steps in establishing organized medical care have taken place within the three post-occupation decades from 1941–50, 1951–60 and 1961–70 (Conacher 1976). In 1948 the government established its Ministry of Public Health. By the end of the 20th cent. Ethiopia's health care system is still among the least developed in Sub-Saharan Africa. Even the best ↗hospitals suffer from antiquated equipment and lack of supplies. Formal health services reach only a small part of the population. Biomedical services are offered to the public with the assistance of WHO (World Health Organization) and donor organizations, as the expenditure of the national budget on public health usually is one of the lowest in the world (in 1995/96 it was approximately 4 %). Addis Ababa University manages two medical schools and one school of pharmacy, whereas the government runs three nursing schools and a few schools for health assistance (Ofcansky – Berry 1993).

In 2002 the Ethiopian health care system consisted of 1,311 health posts, 2,452 health stations, 412 health centres (97 % Ministry of Health [MoH]), and 115 hospitals (95 governmental), with 1 hospital bed per 5,740 people. Between 1998 and 2002, 19 hospitals and 130 health centres were opened. Medicines are supplied by 311 pharmacies (ca. 74 % private), 309 drug shops, and 1,876 rural drug vendors (all private). The MoH estimates that in 2002, 51.8 % of the population had access to modern medical care (in 1998 it was 50.7 %). This figure rises to 61 % if those with access to health posts are included.

From 1998–2002, an average of 142 physicians graduated each year from Ethiopia's three medical schools – Addis Abäba, Ǧimma and Gondär. During that same period, a total of 7,068 nurses graduated.

In 2002 there were 1,888 physicians and 12,838 nurses in government service (in 1998 there were 1,415 physicians and 1,483 nurses). In addition to these, there are probably several hundred additional physicians outside of the government system. Overall, there is one government physician per 35,603 people. This distribution, however, is unequal, ranging from 1/4,526 in Harär to 1/10,934 in Addis Abäba to 1/61,888 in Amhara and 1/66,068 in the Somali region.

In 2002, 7.0 % of the overall government budget was devoted to health (an increase of 6 % from 1997). In 2001, the government spent an average

An operation at the Ḫaylä Śəllase I Hospital, Addis Abäba, attended by *aṣe* Ḫaylä Śəllase; scene from a 1956 film on contemporary Ethiopia co-directed by *däggazmač* Mäkʷännən Dästa; screenshot, Asien-Afrika-Institut, Universität Hamburg

of 11.5 *bərr* per person (ca. US-$ 1.35). Spending varied from 22 *bərr* per person in Addis Abäba, 18.5 *bərr* in Dərre Dawa, 13.8 *bərr* in Təgray and 4.9 *bərr* in Amhara.

Health problems result from malnutrition and lack of sanitation as well as to shortage of trained personnel and health facilities especially in rural areas. Major causes of death are infectious and parasitic ↗diseases, respiratory diseases and diseases of the digestive system (Getachew Hailemariam et al. 2004; Kloos 1998; Kloos – Zein Ahmed Zein 1991, 1996).

The leading causes of outpatient visits in 2001 were ↗malaria (10.4 %), helminthiasis (worms, 6.7 %), upper respiratory infection (6.5 %), pneumonia (5.5 %) and skin infections (4.6 %). The main reasons for hospital admissions were malaria (14.8 %), pneumonia (8.9 %), tuberculosis (7.8 %), accidents (6.2 %) and abortion (3.9 %). The main causes of death were tuberculosis (10.3 %), pneumonia (7.3 %), malaria (4.6 %), bacillary dysentery (2.2 %) and accidents (1.6 %).

In 2002 Ethiopia is ranked number five in the world for ↗HIV-positive people (after South Africa with five million and India, Nigeria, and Kenya each with 2.5 million). About 5 % of the world's HIV-infected population is Ethiopian.

With respect to pregnancy and childbirth (↗Birth), 6.3 % of married women surveyed used modern contraception in 2000. 27 % of Ethiopian women received antenatal care (ANC) from a health professional. 17 % of pregnant women received more than one dose of tetanus toxoid. 5 % of women delivered in a health facility (rang-

ing from 66.9 % in Addis Abäba to 2.8 % in Amhara). Only 5.6 % of babies are delivered by a health professional (ranging from 69.1 % in Addis Abäba to 3.1 % in Amhara), and another 4.1 % by trained traditional birth attendants (TBA); 94.7 % received no post-natal care. 52 % of mothers initiated breastfeeding within one hour of giving birth, and 75 % within one day. The mean duration of exclusive breastfeeding was 4.2 months, and of any breastfeeding was 25 months.

The Demographic Health Survey (DHS) of 2,143 children aged 12–23 months found 14.3 % fully immunized; 46 % had received BCG vaccination; 21 % had received three DPT; 35 % had received three OPV; 27 % had had measles, while 16.6 % had received no immunizations. Though nearly 74 % of Addis Abäba children were fully immunized, rates were below 15 % in Amhara, Oromiyaa, Beni Šangul/Gumuz, Southern Nations, Nationalities and People's Region, and Gambella. 45 % of children whose mothers had secondary education were immunized, compared with 10 % of children with uneducated mothers.

The DHS reported that 79.9 % of Ethiopian women surveyed were circumcised, ranging from 79.8 % in Addis Abäba, 79.7 % in Amhara, and 35.7 % in Təgray. They further estimated that 59.7 % of women supported this practice, ranging from 16.2 % in Addis Abäba to 76.5 % in ᶜAfar.

The ten-year period from 1990–2000 had an infant (one-year) mortality rate of 113/1000, though from 1996–2000 it was 97/1000; in the same decade, under five mortality was 188/1000, which improved to 166 from 1996–2000.

Stunting is quite high, with 51.5 % of under-five year olds below two Standard Deviations (SD) height-for-age, wasting rates of 10.5 % (below 2SD weight to height), and underweight rate of 47 % (below 2SD weight to age). The overall average life expectancy was 44 years in 2001.

The government has a 20-year health development strategy through 4 five-year investment programs that began in 1997. The government advocates decentralized, democratized health services, preventive health care, an increase in health service capacity and increased access to health services. By 2010 they aim for an IMR of 50, life expectancy of 64, contraceptive coverage of 40 %, a 100 % health service coverage and a population growth rate of 2 %.

Mədr

M. is a pre-Christian Aksumite deity, mentioned in two royal inscriptions, RIÉ 185 II/21: *lᶜstr/wlmdr/wlmḥrm* (of king ↗ᶜEzana), and RIÉ 188/25–26: *läᶜastär/wäläbəḥer/wäläməḍr*. Remarkably, in RIÉ 185 II the name M. is used to replace *bḥr(m)* (↗Bəḥer) of RIÉ 185 I, the parallel version in South Arabian script: RIÉ 185 I/20–21: *lᶜstrm/[w]lbḥrm/w[lmḥrmm]*, whereas the duplicate inscription RIÉ 185bis has *bḥr(m)* in both the Gəᶜəz and the "pseudo-Sabaic" version, resp.: RIÉ 185bis I/22–23: *lᶜttrm/wl[b]ḥrm/wlmḥrm*; RIÉ 185bis II/C 35–36: *lᶜstr/wbḥr/wlmḥrm*. In its turn, *[b]ḥrm* of RIÉ 185bis is rendered as ἡ γῆ in its Greek parallel RIÉ 270bis/30: τῷ οὐρανῷ καὶ τῇ γῇ καὶ τῷ ... Ἀρέει.

M. is also mentioned in a short inscription on a stone basin found in the church of Arbaᶜəttu ∃nsəsa ('the Four Beasts') in Aksum, RIÉ 198 I/1–3 ([ʾ]*mḥśn zgl bᶜstr wmdr*).

M. and Bəḥer seem to be one and the same deity or at least two functionally similar – and therefore interchangeable – chthonic deities (the meaning of the both names is 'land, earth'). They are mentioned between ↗ᶜAstär (= ὁ οὐρανός) and ↗Mäḥrəm (= Ἄρης; perhaps M. in RIÉ 188/25–

26, M. is just a *lapsus calami* for Mäḥrəm?). In inscription RIÉ 270bis, the function of ὁ γῆ (= Mədr/Bəḥer) as well as that of ὁ οὐρανός (= ʿAstär) is obviously overtaken by "the god of heaven and earth" (apparently, Ares), invocated in the curse-formula, s. RIÉ 270bis/32–33: ὁ θϵ[ὸς] τοῦ οὐρανοῦ καὶ τῆς γῆς (with no parallel in RIÉ 185/RIÉ 270 and RIÉ 185bis). This subordination of other deities is interpreted as a tendency towards monotheism (s. BrakKirche 37–41).

After ʿEzana had converted to ↗Christianity he retained the reference to *mədr* ('earth') in the designation of the Christian god: *[bä]ḫaylä ʾəgziʾa sämay* [*zäbä*] *sämay wämədr mäwaʾi* ..., 'By the might of the Lord of heaven, who is victorious in heaven and earth ...' (RIÉ 189/1). Besides, the traces of the veneration of M. may be seen in another formula of the same inscription (RIÉ 189/48–49): *wäʾamaḫṣänk*[*u*] *zämänbärä zätäkälku läʾəgziʾa sämay zäʾangäśänä wälämədr zäyəṣäwwəro* ..., '... and I entrusted this throne which I have established to the Lord of the heaven who made us king, and to the earth that carries it [i.e. ʿEzana's throne] ...'.

Meeḍiča

M. (Orom. *meedicha*) are strips of skin cut from a freshly sacrificed animal before it is skinned and butchered: a slit is usually made in each M. so that it can be worn as a wristlet. M. are "distributed ... to the major participants in the ceremony"; sometimes even to cows or camels if they, e.g., have "provided milk for the libation" (Tablino 1999:316).

M. may be worn by men, boys (after the name-giving ceremony) and married women but not by girls; they are integral to the rituals of ↗sacrifice and signify the incorporation of their receivers. Among ↗Arsi, ↗Boorana and ↗Gabra, eight M. are cut from each sacrificed animal, two from each lower leg, in such a way that part of the dew-claw provides a light bob for each. An elder preserves his M. from the wear and tear of daily life by transferring them to his ritual staff where they serve as enduring indicators of his participation in rituals. At some ceremonies additional strips of skin may be cut and distributed. For example, at a naming ceremony the strip from the umbilicus *hanḍuura* (Orom. sp. *handhuura*) is given to the central participant in the ceremony.

At the sacrifices required for the adoption and incorporation of individuals and groups M. provides graphic and enduring symbols of the newly created relationships. M. were tied around the wrists of participants as part of the process of political adoption and assimilation of non-Oromo to the ↗Mäčča Oromo (↗*Guddifačaa*; Triulzi 1996:253).

The word M. is sometimes extended to include other wristlets which are associated with sacrifices (Borello 1995:300).

Me'en

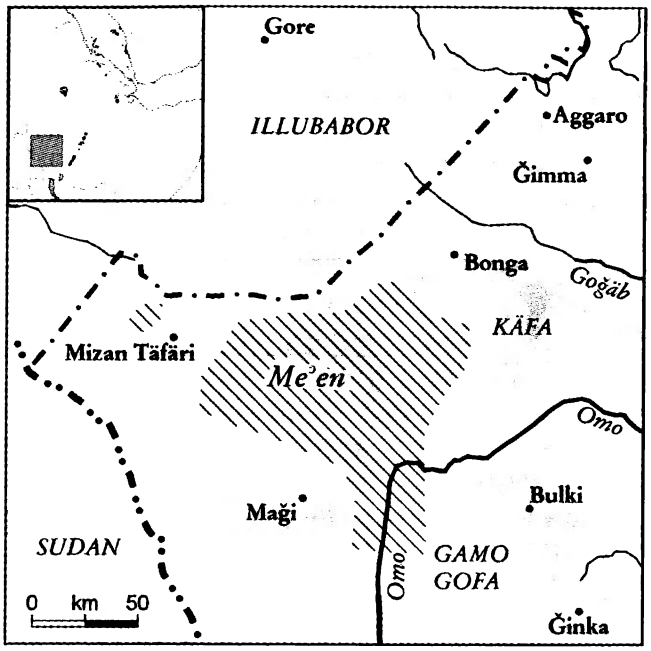
Me'en language

The M. language (also known as Mekan, Meken etc.) belongs to the south-eastern ↗Surmic sub-family of the Eastern Sudanic branch of the ↗Nilo-Saharan language phylum.

M. speakers generally live south of the ↗Benč and between the ↗Surma and ↗Dizi to the south-west and the ↗Mursi to the east. The majority are found in what was traditionally ↗Käfa province, an area now in the Southern Nations, Nationalities and Peoples' Region. The 1998 census gave the number of M. speakers as 56,585 (Gordon 2005:117).

The main differences between the two major dialects, Tišana and Bodi, are the numeral system (Tišana operates with units of ten, whereas Bodi utilizes units of twenty) and phonetic and lexical changes. Bodi seems to be the more conservative dialect diachronically. The Bodi live east of the ↗Omo river, the Tišana to the west and north of the Omo bend.

The M. consonantal system consists of 26 phonemes: voiceless *p, t, s, š, č, k, h* (*h* occuring only in root-initial position); voiced *b, d, z, ǧ,*



g; ejective *ṭ*, *ṣ*, *č̣*, *q* (the existence of ejectives being unusual for Surmic); implosive *ɓ*, *ɗ*; nasals *m*, *n*, *ñ*, *ŋ*; liquids *l*, *r*; and glides *y*, *w*. The glottal stop ˀ is an allophone of *q*, appearing in intervocalic position. M. has a seven-vowel system: *i*, *e*, *ɛ*, *a*, *u*, *o*, *ɔ*. M. utilizes three levels of tone on the word-level, both lexically and grammatically: low (ˋ), high (¯), and superhigh (ˊ), of which the superhigh level is best described as phonological stress rather than tone (s. Diehl 2007). Within one segmental mora there are a few cases of high-low tone combination, as in *bɔ̄ɔ̀r* 'honey'. There are no syllable-initial consonant clusters.

There are two major word classes in M., nouns and verbs. Qualifiers expressing adjectival concepts are often derived from verbs by adding a suffix *-i*, cf. *čaraš* 'to be clever', *čaraš-i* 'clever'. M. has no grammatical gender. Nouns distinguish between absolutive (ABS, unmarked), genitive (suffix *-uñ/-i*), directive (suffix *-ak/-ok*, except for singular nouns ending in a vowel, which are marked by *-y*), and ablative case (ABL, comprising the categories of location, origin and instrument). The ablative is marked by suffixes sg.: *-ge/-ɔ* (after vowels/consonants) and pl.: *-i*. Tone is not used to mark case. With regard to number, the nominal system includes singulative and plural marking, utilizing multiple suffixes and sometimes tone changes, cf. pl. *sīsò*, sg. *sīsòč* 'bee' (singulative marking); sg. *wārà*, pl. *wàrāā* 'knife' (plural marking); sg. *mèlqùt*, pl. *mèlqùò* 'snail' (both forms marked).

The head of the noun phrase precedes its modifiers, which, except for numerals, all require a relational marker (REL) following the noun (sg. *-de*, pl. *-ge*). Modifiers can be a demonstrative (immediately following the head), a possessor, one or more relative clauses, or a numeral, cf. *tēnà* 'goats', *tēnā-gìà* 'these goats', *tēnà-gēgē* 'their goats', *tēnā-gè čārāš šéššék-ɔ́* (goats-REL are.clever very-SUB') 'the goats that are very clever', *tēnā-gìà čārāš šéššék-ɔ́ kórí īpāgí-ɔ́* (goats-these [that] are.clever very-SUB [that] I.saw yesterday-SUB) 'these very clever goats that I saw yesterday', *tēnà rāmāŋ* 'two goats'. A nominal possessor is marked by genitive case, as in *tēnā-gè mɔkāğūñ* 'the woman's goats'. Subordination (SUB) of phrases and clauses is marked by a clitic *-ɔ* (s. the above examples).

Verbs utilize two tense-mood-aspect forms, A and B (the latter being subdivided into B1 and B2), depending on whether the respective event is marked for completeness or not. A is the unmarked form and is employed when the feature of completeness is not in special focus. This includes the negated category of imperative/jussive/subjunctive. B is employed to stress completeness, corresponding to past events (B1 to affirmative, B2 to negated ones). In addition, B2 is used to express the affirmative imperative/jussive/subjunctive. B1 and B2 differ in the realis factor in that the event marked by B1 has been realized, whereas the event marked by B2 has not (yet) been realized. Below the forms A and B of the verb *am/us* 'to eat' in 3rd pers. sg. are given. Form A: *ām* 'he/she eats/ate', *ám-óŋ* 'he/she does not/did not eat', *kē ām-ī* 'he/she should not/may not eat'. Form B: *ūs-āā-bóy* 'he/she ate/has eaten' (B1), *k-ús-óŋ* 'he/she did not eat/has not eaten' (B2), *k-ūs* 'he/she may eat' (B2).

There are several verbal derivational categories, which are expressed by affixes. Object suffixes exist for 1st and 2nd pers. and are *-añ* '1st sg.', *-eñ* '2nd sg.', *-eč* '1st pl.', *-oŋ* '2nd pl.'. Benefactive (BEN) is expressed for 1st and 2nd pers. by an infix *-ag-*, followed by the respective object suffix, as in *kē-dēšī-āg-ēñ* (3sg.-work:B2-BEN-2sg.) 'he/she may serve you (sg.)', *dēšī-àg-ēč* 'serve (sg.) us!'. For 3rd pers., it is marked by a suffix *-ɛsɛ*, as in *gè-dèšī-èsē* 'let us (incl.) serve him/her/them'. To signal purpose, *-ga* is suffixed to the verb form corresponding to the respective subjunctive category (form A for negative, B2 for affirmative), as in *kē-dēšī-èsé-gá* 'that I may serve him/her/them'. Suffix *-ɛ* expresses associative, i.e. the agent is accompanied by someone or something, as in *méé kōy-ē báyít* (man:ABS goes: A-with monkey:ABS) 'The man takes the mon-

key', and in *méɛ́ nīs-ē báyít bèr* (man:ABS kills: A-with monkey:ABS spear:ABS) 'The man kills the monkey with his spear'.

Personal pronouns are *āñì* 'I', *īñù* 'you (sg.)', *nɛ̄̀n* 'he/she', *èdē* 'we (incl.)', *èdáá* 'we (excl.)', *èdū* 'you (pl.)', *ēdɛ̀* 'they'. Functioning as demonstratives is a set of toneless clitics; the forms for the singular are *-dia* 'this' (closer to speaker), *-dɔŋɔ* 'that' (closer to addressee), *-dua* 'that' (far from both speaker and addressee, but still visible), *-diča* 'that' (far away and not visible). In plural, *-d-* is substituted by *-g-*.

M. has basic S[ubject]–V[erb]–O[bject] order (both subject and object taking absolutive case), as in *mɔ̄kāč ām mùlàč* (woman:ABS eats:A egg: ABS) 'The woman eats the egg'. The S–V order in M. is a tight unit and may not be reversed. Therefore, neither V–S–O, nor O–V–S are permitted. Also, S–V may not be broken up by an object. This does not apply if the verb is negated (the order then being S–O–V), as in *mɔ̄kāč mùlàč ám-óŋ* (woman:ABS egg:ABS eats:A–NEG) 'The woman does not eat the egg'. M. has postpositions, as in *kēs-ɔ̄ tēēk* (house-ABL inside) 'inside the house'; *kēs-ɔ̄ tùnt-ɔ̄* (house-ABL on.top.of) 'on top of the house'.

The ten-word list is as follows: 'one' *kɔ́náŋ*, 'two' *rāmāŋ*, 'three' *sīzzī*, 'fire' *gōò*, 'water' *māà*, 'sun' *súsá*, 'moon' *tāʾīs*, 'blood' *ñēbā*, 'tongue' *kāàt*, 'tooth' *ñīʾīdāč*.

Me'en ethnography

M. (formerly also known as Šuro, Mekan or Goldiya) is the name of the largest ↗Surmic-speaking group in Ethiopia. *Me'en* means 'people' or 'humans', in their language. They have various sub-groups and live in relatively low densities in south-western Ethiopia, north and north-east of ↗Mağı town. They number ca. 80,000 people (in 2006). There is significant variety among the subgroups in dialect, economic strategies and socio-political organization. The territorial subgroups (not clans) of the M. are Mela and Čirim (together called Bodi by their Sudan neighbours). They are of diverse ethnic origin and include assimilated ↗Benç, K^{w}egu (↗K^{w}egu-Muguği) and ↗Dizi people. While expanding into the highlands, they fought frequently with the Benç and also emerged as fierce opponents of the northern conquerors and soldiers in the early decades of the 20th cent., after Ethiopian troops led by *ras* ↗Wäldä Giyorgis Aboyye had incorporated their area into the Ethiopian empire. Imperial troops or local soldier-settlers, trying to capture cattle or slaves and to force M. as serfs into the ↗*näfṭäññä-*↗*gäbbar* system, were often ambushed, and occasionally highland *kätämas* (Ğemu, Šaša and Gačit) were attacked or razed to the ground, most recently in 1976 (Geša, Barda and Čäbära villages) after the ↗Revolution. Among their sedentary neighbours in the highlands, such as Konta and Dawro, the M. kept a reputation as feared raiders. Also after the regime change in 1991 there was an upsurge of raids by lowland M. on highland neighbours. State policy towards the M. has been one of neglect and duplicity, with often violent and unjust punitive actions, fuelling M. distrust toward state interference.

In the 1980s and 1990s, their sedentarization and market integration proceeded, partly due to state pressure and more administrative control. Today, M. in the Mağı area have a reputation of being honest and hardworking cultivators. They supply the staple food crops for most of the local population, especially that of the highland villages. They are dominant in the local markets, selling products like *ṭef*, sorghum, maize, cabbage, sugar cane, lentils, beans, and peppers, as well as butter, coffee, and honey. They also trade small stock and occasionally cattle, when cash is needed to pay debts or taxes.

The relations of highland M. with neighbouring groups like Dizi, Benç and ↗Käfa is good, but with the Suri (↗Čai) there are problems due to repeated attacks on market travellers and occasional cattle raids, which have continued over the past 20 years. In the absence of fair and efficient

government protection or justice, the M., tired of the dozens of incidents of Suri robbery and ambushes, made a big retaliatory raid on them in 2000, whereby they captured several thousands of cattle. Some Suri and M. were killed in the fight, provoking more violence in return. The government later forced the M. to return most of the cattle and to hand in their arms, although no corresponding action to disarm the Suri was taken. Relations thus remain tense and are marked by distrust. In the mid-1990s the M., as one of the officially recognized "nationalities" or ethnic groups received their own M. *wäräda*, and during the last decade had a ruling party-associated representative in the Ethiopian parliament.

Mə^{c}əraf

The M. (ምዕራፍ) is a one of the five books in the collection *Amməstu ṣäwatəwä zemawoccˇ* (1972/73) which form the Divine office, together with the ↗*Ṣomä dəgg^{w}a*, ↗*Ziq*, ↗*Zəmmare* and ↗*Mäwaśə'ət* (the ↗*Dəgg^{w}a* being kept apart, although it can not be performed without the ordinance provided by the M.). The M. contains the structure of the Divine office in its diverse forms of performance, as well as the texts that are part of the services. The M. is therefore indispensable to the performance of the office; it is the Common as opposed to the Proper (i.e. the movable hymns which vary according to the circumstances and are contained in other books).

The name M. is derived from a word that signifies 'rest' or 'halt' (e.g., after a walking distance), or the space between the end of one part of the book and the beginning of the next, i.e. 'chapter' (LesCDic 69, 327). In this particular antiphonary, the letter ም marks a psalm versicle selected from a psalm of the ↗Psalter and sung by one singer in response to the choir when the choir has finished singing its line(s) in unison (marked ዘ, i.e. *zäḫəbrät*, lit. 'of the union'). The use of the Psalter as arranged in the M. and sung in this manner has its roots in the historical fact that when the first Christian communities came together to worship as a church or ἐκκλησία, they sang the Psalms of David (cf. Eph 5:19–20; Col 3:16). This practice of the early Church may also explain why the basic ↗education in the ↗Ethiopian Orthodox (Täwaḥədo) Church focuses on the Psalter.

The M. includes all the psalms of the Ethiopic Psalter as well as texts traditionally attached to it. To these are added the daily office prayers, which are recited in the morning and evening and also before the celebration of Mass (↗*Qəddase*). The M. is thus an intricate voluminous hymnody.

Since the actors of the office are expected to know it by heart, one finds copies of the M. mainly with music teachers and in the libraries of major churches and monasteries. For his edition of the M., Velat used 11 manuscripts (the oldest dating into the 18th cent.): nine from the European libraries (VatLib, BritLib, BN) and two in his possession, acquired in Addis Abäba (VelMe I, VII–XI).

The chanting of the psalms and accompanying hymns is arranged according to the ↗Calendar of the Church and types of service envisaged (e.g., a vigil or night to morning service, on a solemnity or a ferial day). The texts are marked with one, or some combination, of the three types of melodies: ↗*gə^{c}əz* (ግ), ↗*^{c}əzəl* (ል), ↗*araray* (ራ). The major parts of the M. are as follows:

1. The daily office prayers: the *Kidan*-prayers (↗*Testamentum Domini*) of the different hours of the day and night (e.g., *Ṣälotä kidan*, 'Prayer of the Covenant'), followed by the ↗litanies of the days of the week, the supplications (*Mästäbq^{w}ə^{c}at*), including the *Zäyənäggäś* of St. ↗Yared, and the *Mystagogia* (↗*Təmhərtä ḫəbu'at*).
2. The "school chants": ↗*Mästägabə'* for chanting psalm versicles on the various days of the week; ↗*Arba^{c}ət* for chanting selected psalms; ↗*Aryam*, which is hallelujah-chants (cp. ↗*Ḫaletat*); *Śäläst*; and the two Praises of Mary:

↗*Anqäṣä bərhan* for Sunday and ↗*Wəddase Maryam* for the days of the week, neither of which has psalms. The students of the church music begin with the "school chants" because they contain all of the nuances and signs of the melodies of church chants.

3. The chants of selected psalms or psalm versicles for different feasts, accompanied by the preceding daily office prayers. These are, if the collection is complete, the "M. of the Vigil" (*Məʿəraf zäwazema*), for the days of the week and for selected holy days; "M. of the Morning Praise" (*Məʿəraf zäsəbḥatä nägh*), for weekdays, for the major holy days, for the season of the flower, and for ↗Lent; ↗*Mäwäddəs*, for the entire year, divided according to church seasons; "M. of Rogation" (*Məʿəraf zäʾarʾəstä məhəlla*); and ↗*Kəśtätä aryam* (VelMe I, 190, 194). Between the chants one has the possibility to perform new and appropriate ↗*qəne*-poems composed by the ↗*däbtära*.

If several M. are equally available for a given occasion, the choir leader, the *märaḥi* (cp. ↗*märigeta*), decides which part is to be chanted. This is the reason why many M. manuscripts in the collection of the ↗Ethiopian Manuscript Microfilm Library do not have all the parts that a complete manuscript would have. Also the arrangement of the parts varies slightly (VelMe I, XI).

Tradition maintains that the M. is part of the *Dəggʷa* composed by Yared in Aksumite times (s. *Mäṣḥafä dəggʷa* 1966/67). The hymns themselves could, indeed, be old, as few, if any, post-↗Zagʷe saints are celebrated in M. The contents of M. are diverse and it contains elements of both Ethiopian and foreign origin. However, since we have no M. copies older than the 19th cent., M. collections must have been compiled during the Gondärine time, by the Gondärine musicians.

Getatchew Haile

Mega

M. is a town in the Dəre *wäräda*, Boorana zone (formerly ↗Boräna *awraǧǧa*) of Oromiyaa *kəllәl*, owing its name to a mountain nearby (for location s. Kəbrä mängəśt).

The settlement was founded as a fort by the forces of *aṣe* ↗Mənilək II in 1897, a year after he had sent an expedition to ↗Boorana as part of his plan to incorporate the south. In 1899 M. became a town (↗*kätäma*) after *fitawrari* ↗Habtä Giyorgis's forces completed the incorporation of the area. Many settlers from the highland area in the north began to move to M. and started building houses, cultivating grain and establishing trade.

M. became an important trade centre because of its location on the well-watered slopes of Mt. M. and the presence of ↗salt from nearby crater lakes. One larger salt mine was next to the town, and another to the south-west at a place called Mogado (Guida 562). In 1920 a British consulate was transferred to M. from ↗Gardula. Hodson (1927) noticed the growth of the town and the importance of its salt market. A crater on the Mars was named after this city in 1976.

M. had 6,024 inhabitants in 2000 and 8,940 in 2004.

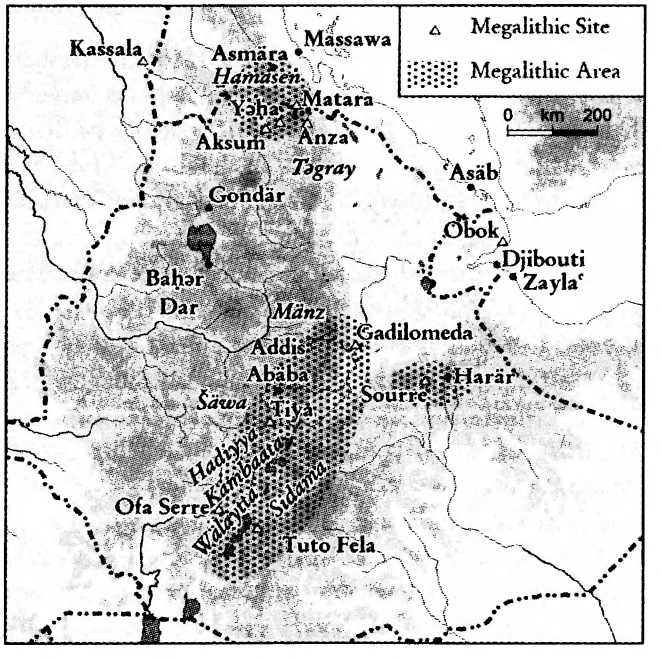
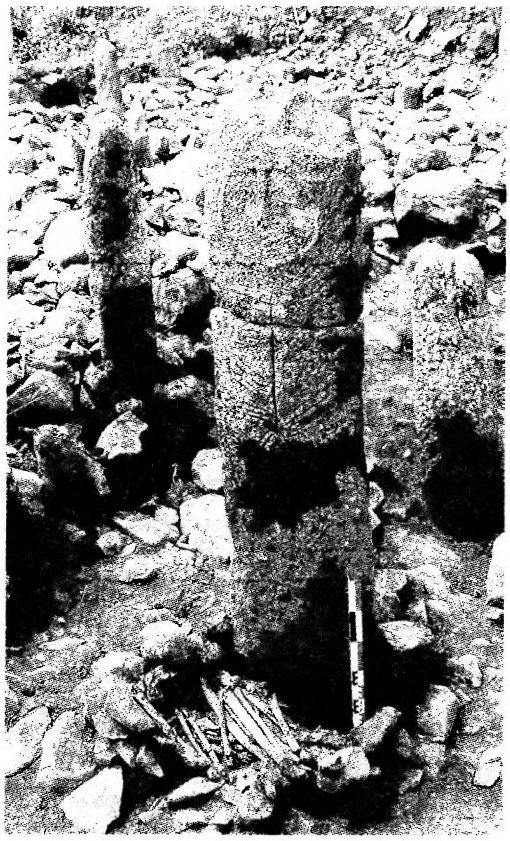
Megalithic cultures

Megaliths are large stones used to form structures either alone or with other stones, that had a variety of purposes: as sepulchres, boundary





Megaliths in Tuto Fela, here a tomb at the foot of a stele; photo 1995, courtesy of the author

markers, reminders of past events or as astronomical devices.

Africa hosts one of the oldest megalithic sites in the world, at Nabta Playa, in the Nubian Desert (↗Nubia). In Ethiopia, besides the area in which the Aksumite civilization (↗Aksum) developed, regions south of ↗Djibouti, down to Lake ↗Turkana and the ↗Rift Valley, are also rich in megalithic monuments. These could be divided into three different types: dolmens, tumuli and standing stones.

1). Dolmens are found scattered in the mountains of ↗Harär. They number up to several hundreds, and are grouped in necropolises. Built on slopes, they are made of a stone slab not longer than 3 m, kept horizontal above ground by standing stones enclosing a space where the corpse was placed leaning to one side, arms and legs folded, hands towards his face. In some cases, the tomb also contained potsherds and obsidian items. Such monuments were erected during the 2nd millenium B.C., no evidence having been found, yet, as to the settlements of their builders.

2). In the Harär area, large stone tumuli contain a circular room, limited by upright stone slabs or dry stone walls, onto which a small side cell is grafted. The funerary room is divided into several compartments to contain skeletons, as well as pottery, daggers, iron arrowheads and pearls made of limestone, cornaline, glass, copper, bronze, silver and even gold. Known datings point to a use of these collective funerary rooms, some with access passages, between the 8th and the 12th cents. A.D. Most of these monuments are associated with fortified sites on hills, and surrounded by thick walls.

Tumuli sometimes exceeding 5 m in height and ca. 20 m in diametre are equally found in ↗Mänz. They are most similar to those in Harär, with a circular room and an access passage; and contain a great number of offerings (pottery, various pearls, metal bracelets, weapons etc.) placed next to the deceased, whose bones have now practically disappeared. Standing stones, ranging in lines, are sometimes paired with these tumuli.

3). Standing stones are widespread in Ethiopia. In the north, the most important area is Aksum; in the centre there are sites in Harär, ↗Soddo, ↗Kämbata and ↗Sidamo, and in the south at ↗Tuto Fela. The main variants and shapes are: anthropomorphical; of phallic inspiration; with sword forms; with preaching figures. For more information s. ↗Stelae.

Məhəlla

M. (ምህላ, also ምሕላ, *məḥəlla*, originally *məhələla* 'supplication; rogation', from *tämahlälä*, 'supplicate') is, like the ↗*Mäwäddəs* and ↗*Kəśtätä*

aryam, one of the longest services of the ↗Ethiopian Orthodox (Täwaḥədo) Church.

In the liturgical year, M. is prescribed on ten days called **ዕለተ፡ ምህላ** (*ʿəlätä məhəlla*, 'supplication day; rogation day'). A supplication day may fall on a Wednesday or Friday; the office is performed during the established times of the day.

The M. may be celebrated in two forms: long and complete (on three of the ten M. celebrations, called *śälästu məluʾat*) or abbreviated (for the remaining seven: *säbʿatu nətugat*). They are distinguished according to whether the psalms are recited entirely or partially. The two forms also differ in their melody (the long M. is sung in the ↗*ʿəzəl* mode, the short M. in the ↗*gəʿəz* mode).

The complete M. are:

1. the M. of ↗John the Baptist (*Məhəlla zäyoḥannəs*, or *Səbkät* according to Gondärine tradition, performed on a varying date between 28 *Näḥase* and 1 *Ṗagʷəmen*);
2. the M. of Niqodimos (*Məhəlla Niqodimos*, or *Məhəlla zähośʿəna*, 'M. of the Palm Sunday', performed on the last Friday of ↗Lent);
3. M. of the Paraclete (*Məhəlla zäpäraqliṭos*, performed on the Wednesday before Pentecost).

The abridged M. are:

a. M. of the "season of the Flowers" (*Məhəlla zäṣəgeyat*, performed on a Wednesday between 30 *Ṭəqəmt* and 4 *Ḫədar*, depending on which day *Ḫədar* begins);
b. M. of the Preaching (*Məhəlla zäsəbkät*, performed on the Friday nearest to the Advent Sunday);
c. M. of the Beginning of the Rainy Season (*Məhəlla zäbäʾatä kərämt*, performed on a Friday at the beginning of the *kərämt*, the day depending on which day the feast of St. Michael falls);
d. M. of the Cross (*Məhəlla zämäsqäl*, performed on a Friday between 18–24 *Mäskäräm*);
e. M. of the Eve of Lent (*Məhəlla zädərarä ṣom*, also called *Məhəlla zäqäbbäla ṣom*, 'M. of the encounter with Lent', performed on Wednesday before the beginning of Lent);
f. M. of the Temple (*Məhəlla zämək*ʷ*ərab*, or *Məhəlla zäśaləs*, 'M. of the third' [Sunday of Lent], performed on Friday of the same week);
g. M. of the Good Servant (*Məhəlla zägäbr ḫer* or *Məhəlla zäsadəś* [6th Sunday of Lent], performed on Wednesday of the same week).

The M. service comprises three main hours of the third, sixth and ninth hours, and is characterized by sobriety and simplicity. The major bulk of M. is composed of psalms (sung entirely or partially; ↗Psalter). The other elements include canticles, ↗*Dəggʷa* hymns, antiphons such as ↗*Səbḥatä nägh*, *Əsmä läʿaläm*, *Abun*, *Mästäbqʷəʿ*, prayers, thanksgivings (*burake*) attributed to St. ↗Yared, readings from the Old and the New Testaments (the ↗*Məʿəraf* gives their beginning and ending), ↗*Sənkəssar*, ↗*Wəddase Maryam*, ↗*Anqäṣä bərhan*, etc. M. ↗hymns and antiphons use typical words like **ተማህለሉ** (*tämahalälu* 'supplicate', 'beseech'), **ጸልዩ** (*säl-ləyu*, 'pray'), **ሰኣሉ** (*säʾalu*, 'ask') etc.

The ancient elements present in M. suggest that it may derive from a stational liturgy (a solemn procession, where at every *məʿəraf*, or 'station', psalms would be chanted or recited), and was originally celebrated in fixed places, shrines or churches, with the participation of both clergy and congregation.

The term M. is also used for popular prayers performed by the people without the institutional Church (e.g., by inhabitants of several villages that have become a victim of calamities, epidemics, wars, drought, famine, etc. who gather to supplicate God).

Habtemichael Kidane

Məhərkä Dəngəl

Abba M.D. (**ምህርከ፡ ድንግል**, in Jesuit sources Marcâ, b. ca. 1540, d. after 1633) was a court priest and chronicler. As a child, he was educated at ↗Däbrä Libanos (BecRASO II, 607). Later, he served in several important positions at the royal court. *Liq* M.D. was the confessor of Mäläk Mogäsa, wife of ↗Śärṣä Dəngəl (Paez in BecRASO III, 288). He was also a teacher of *aṣe* ↗Susənyos (PerChron 55ff.; BecRASO VI, 277, 279; VII, 445; XI, 146) who appointed M.D. *qes ḫaṣe*, i.e. the Emperor's confessor (cp. ↗*näfs abbat*; BecRASO II, 129).

M.D.'s most important contribution was his composition of the first part of the chronicle of Susənyos's reign (s. PerChron); he wrote the first 22 chapters covering the Emperor's early years until his coronation. By 1612 another chronicler, Ṭinno (or ↗Täklä Śəllase), seems to have succeeded M.D. in the task. Viewed by the ↗Jesuits as one of the most learned persons in the empire (s. letter by Azevedo, BecRASO XI, 146, cp. Almeida in BecRASO VII, 445), M.D.

was a follower of the ↗*Hulätt ləḏät* doctrine (BecRASO III, 288), and an early supporter of the missionaries. He defended them during their early years of mission and participated in the religious controversies of 1613–14 (BecRASO II, 363, 376f.). He was also among the informants used by Pedro ↗Paez to compile the *História da Etiópia* (BecRASO II, XXXV).

When the Orthodox faith was restored under *aṣe* ↗Fasilädäs, ca. 1633, M.D. seems to have been sent into exile to the borders of the empire, "close to the Kaffirs" i.e. "pagans" (BecRASO VII, 445).

Src.: BecRASO II, XXXV, 129, 363, 376f., 607; III, 288; VI, 277, 279; VII, 65, 445; XI, 146; PerChron 55ff. [tr.].

Dimitri Toubkis

Məlat Habte

Aläqa M.H. (ምላት፡ ሀብቴ, b. Zena Marqos ↗Däbrä Bəsrat, ↗Morät, fl. second half of 19th cent.) was a church scholar and mediator. According to a tradition, seven cows, seven sheep and seven goats were born on the night preceding the day of his birth, hence the name (*məlat*, 'fullness, abundance'). Educated at ↗Ankobär under *aläqa* Wäldä Ḫanna, he became a teacher of ↗*qəne*, O.T., N.T. and ↗*Fəṭḥa nägäśt*. When *nəguś* ↗Śahlä Śəllase expelled those embracing the ↗*Hulätt ləḏät* theological doctrine from his realm, M.H., one of its proponents, returned to Zena Marqos. However, Śahlä Śəllase regretted his decree and granted M.H. a ↗*madäriya* at Ǝndode (Admasu Gämbäre 1963:213). During the reign of *aṣe* ↗Mənilək II, M.H. was appointed to the church of Qəddus Mikaʾel in Ankobär and stayed there for the rest of his life (AmhChurchD vol. 1, 512). His church flourished there for over 40 years.

Mənilək II's mother, Ǝgǧəgayyähu, was once a maidservant of M.H. Reportedly, in a dream, she saw the sun coming out of her womb. She related it to M.H., a great believer in the message of dreams, who saw in it a sign that she had to abandon her life as a servant. Thereafter, the maid would have ascended to the court of Śahlä Śəllase at Ankobär (Mängəśtu Lämma 1959:23). Her union with one of his sons, ↗Ḫaylä Mäläkot, led to the birth of Mənilək.

In 1878, M.H. led a delegation of clergy and nobility, at the request of Mənilək, to a temporary court of *aṣe* ↗Yoḥannəs IV at Wädära, north-west of ↗Däbrä Sina, Šäwa, and, in a joint effort with representatives of Yoḥannəs, worked out terms of reconciliation. The contending parties met and were reconciled at ↗Ǧiǧiga on 26 March 1878 (Ṗawlos Ñoño 1991/92:57; cp., however, ZewYohan 93).

Ezra Gebremedhin

Melchizedek

M. (Gəʿəz: መልከ፡ ጼዴቅ, Mälkä Ṣedeq) is a biblical character who appears in both the O.T. and N.T. The short episode of M. (Gen 14:18-20), "king of Salem" (later interpreted as "king of peace" or as "king of Jerusalem") and "priest of God Most High", who offers wine and bread to Abraham on his way back from a victorious campaign, and receives a tithe of all produce, seems destined to assert the primacy of priesthood over secular authorities (a centuries-long process culminating in Hellenistic age with the supremacy of the priests), by affirming that the priest-kings of God had existed in Jerusalem before Abraham's arrival. In Ps 110:4 (probably an exhaltation of Simon Maccabaeus, mid-2nd cent. B.C.), M. loses any historical relevance and becomes the model of the ideal priest-king of Jerusalem (cp. Astour 1992). Also a character in Hebrew Qumranic writings (cp. Haelewyck 1998, no. 94: *Apocryphon Melchisedech* [11Q13]), M. plays a central role in the N.T. Epistle to the Hebrews, where the author intends to overcome the idea of an exclusively levitical priesthood in a Christian perspective, by developing a special exegesis of the O.T. passages on M. (Heb 4:14–5:10; 6:20–7:25). M. "the eternal priest" (Ps 110:4), with no father, mother, genealogy, is superior to the levitical priests: Abraham paid a tithe to M. and was blessed by him (Gen 14:18–20), and therefore Abraham and his

descendants, Levites included, are inferior to him. The Epistle to the Hebrews therefore assimilates M. to the Son of God, who although not of levitical descent, is the new heavenly priest of God: the exemplary character of M. demonstrates that the new law is going to be established.

The notion of M. as eternal priest, strictly assimilated to the Son of God, is at the root of various opinions and discussions concerning this enigmatic figure in the Early Church, and also in Gnostic circles, as attested by the Coptic treatise on M. in the Nag Hammadi Codex IX, 1 (cp. Haelewyck 1998, no. 96). A Greek *Story of Melchizedek* (*CPG* no. 2252, spuriously attributed to Athanasius in a minority of Greek and Arabic mss.), is attested in a Gəᶜəz version (probably from Arabic, cp. Cowley 1988:25), as well as in Coptic, Syriac, Arabic, Armenian and Georgian (cp. Haelewyck 1998, no. 95: *Historia de Melchisedech*). The story is probably a Christian rearrangement of two Jewish apocryphal writings of different ages: a midrashic legend dating to the 2nd/3rd cent., and an episode reinterpreted to combat the claims of the heterodox "Melchizedekians", dating to 4th/5th cent. (cp. Robinson 1987). It tells how M., one of the two sons of Melchi, acknowledged the existence of the "god of gods", refused to sacrifice to the idols and took refuge on Mount Tabor leaving the city of Salem, that was swallowed up by the earth. M. remained there seven years, living like a nazirite, or a wild man ("naked as from his mother's womb, and his fingernails became overgrown, and the hair on his head hung down to his loins, and his back became like the shell of a tortoise"), as he is sometimes represented in art. The second part is centred on Abraham: by divine command, the patriarch ascends Mount Tabor and meets M., calling him "Man of God", shaves him, trims his nails and receives his blessing. From then onwards, M. remains a priest continually: he is "without father, without mother, without genealogy" because "no one of the family of M. is left on the earth". Giving Abraham and 318 men with him a cup of wine and some bread, "he was made like the son of God, but not in grace". Reports of Palestinian pilgrims on churches and shrines of M., as well as the weighty transmission of the *Story of Melchizedek* itself, provide testimony that the tradition was not forgotten as late as the 12th cent. (ibid. 38). The Ethiopic version (unpublished: critical edition announced by Piovanelli 1993:214; Haelewyck 1998, no. 95) is transmitted in three mss.: BN d'Abbadie 156, 18th cent., fols. 131r–132r; d'Abbadie 94, 15th cent. (according to CRAbb, no. 170) or 16th cent. (ChAbb), fols. 34r–41v; Staatsbibliothek zu Berlin, Preußischer Kulturbesitz, Peterm. II Nachtr. 40, fols. 79r–85v, 18th cent. As atteted by Coptic liturgical texts, the treatise has also been used, although to a quite different extent, in some manuscripts of the Ethiopic anaphora of Gregory of Nyssa (first recension, cp. Euringer 1943a; Cowley 1988:25; ↗Anaphoras).

Two homilies attributed to ↗Cyril of Alexandria and one short treatise are preserved in the theological collection ↗*Qerəllos*. They were certainly translations from the Greek: the original is lost and the Ethiopic version is the only existing one. These three texts have been published and translated from *Qerəllos* manuscripts: the first and second homilies of Cyril by DillmChrAeth 88–93, 93–98 (ed.), Euringer (1943b:114–22, 122–27, tr.) and Weischer (1980:82–97, 98–117 [critical ed., tr.]); the short treatise on M. by Weischer (1969:142f., 152f. [critical ed., tr.]; ancient fragments from ms. Erevan, Matenadaran 947, of the second homily of Cyril have also been published and translated, ibid. 130–37).

Ms. BN d'Abbadie 94, a miscellaneous codex, contains a special "M.-dossier", respectively: (1) fols. 34ra–41rb, the *Story of Melchizedek*; (2) fols. 41va–47rb, and (3) fols. 47rb–53rb, first and second homilies by Cyril from the *Qerəllos*; (4) fols. 53rb–55rb, a homily attributed in the ms. to ↗Rətuᶜa Haymanot, 'the Orthodox', but really, again, the short treatise on M. from the *Qerəllos*. A detailed codicological analysis (cp. Fiaccadori 1997:45f.; note that the lines of fols. 2–32, 34–55 vary from 19 to 24) has suggested the 14th cent. as the date for the quires of fols. 56–63, containing the homily on the archangel Afnin (*Dərsanä Afnin*) and thus irrelevant for M.-related texts. A more recent date has been proposed for the quires of fols. 2–32, 34–55: fols. 2ra–20vb contain the Vita of Abunafər (*Gädlä Abunafər*) and fols. 22ra–32rb, the Vita of ↗Kiros (*Gädlä Kiros*). Moreover, the hagiographical texts were most probably written by a hand different from that of the M.-dossier, which is, in turn, a homogeneous and originally autonomous group of quires reserved for texts on M. If this is true, three different groups of quires (hagiographical texts, M.-dossier, homily on the archangel Afnin) were each copied in different times by different hands and later bound together in ms. BN d'Abbadie 94.

Apart from the references in liturgical and prayer collections, the destiny of M. in Ethio-

pian Christian tradition may be appreciated by its prominence in the *andəmta*-corpus (cp. the exhaustive examination by Cowley 1988:25–30). Here, two sources are most influential: "Mark" (not identified by Cowley, but certainly Mark the Hermit [d. 430], author of a Greek treatise against the "Melchizedekians", cp. Bardy 1927:35ff.), and the *Story of M.* Also a model of priesthood in pseudo-apostolical literature (for the *Sinodos*, cp. BauSen 64, 106, § 61 [text], 31, 47 [tr.]), M. is celebrated in the *Sənkəssar* on 3 *Ṗägʷəmen* (GuiSyn III, 451; BudSaint 1277f.; also 6 *Miyazya*, ibid. 791): son of Qaynan and Sem, besides the biblical episode of Gen 14:18–20, he is especially credited with having laid, together with Sem, the body of Adam in the middle of the Earth, at the place called Qəranyo, 'Calvary', where the Savior of the world would be sacrificed, thus redeeming Adam with his blood (a topic consecrated in the "Legend of the True Cross" [↗ *Mäsqäl: Legend of the Wood of the Cross*]). This tale is derived both from the *Gädlä Addam wäḤewa* ('Vita of Adam and Eve', cp. Trumpp 1880:126f.), and from other sources, esp. the ↗ *Qälemənṭos* (in turn incorporating the Syriac *Cave of Treasures*, cp. Ri 2000:263-89), in which M. "son of Faleq" takes care of the corpse of Adam, while the former's priesthood is strictly linked with this charge (cp. Grébaut 1912:23ff.); in another passage (ibid. 135f.), his mortal nature is strongly emphasized against those who denied it, on the basis of Ps 110:4 ("The Lord hath sworn, and will not repent: Thou art a priest for ever after the order of M."). Also ↗ *Abušakər*, the "Chronography" of ↗ Giyorgis Wäldä ᶜAmid and the "Chronicle" of ↗ John of Nikiou (to be compared with similar Byzantine sources, cp. Bardy 1927:43) mention traditions about M. (cp. Cowley 1988:27ff.).

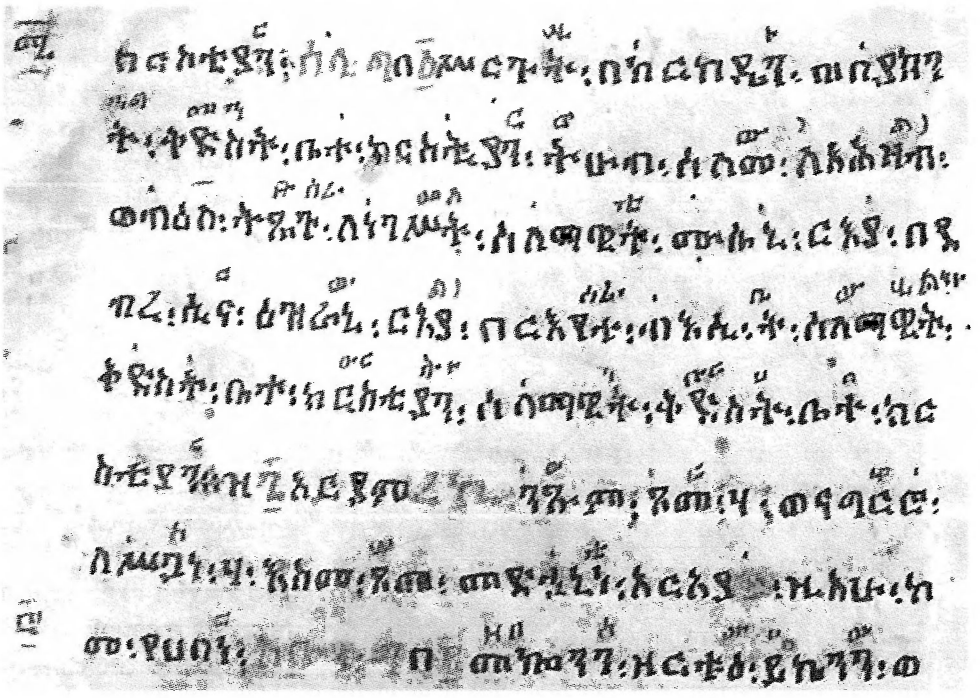
Məlәkkət

M. (ምልክት, 'sign') is used in a general sense to refer to the system of writing music employed by musicians of the Ethiopian Orthodox (Täwaḥədo) Church (↗ *Däbtära*), which is the only indigenous system of musical notation in Africa. More specifically, M. refers to the largest category of four types of signs used within the Ethiopian Christian notational system. This system is categorized as an interlinear system because it is inscribed between the lines of Gəᶜəz liturgical texts in manuscripts. The signs do not depict the melodies in any visual way; rather, they provide a mnemonic device for recalling all the chants of the ↗ *Dəggʷa*, i.e. the non-monastic or "cathedral office" of the annual church cycle. Each of the more than 650 M. comprises one or more characters of the Ethiopian syllabary.

The other three types of signs include (a) what is called "shape(s) of the *fidäl*" (የፊደል፡ ቅርጽ, *yäfidäl qərṣ*): a dozen conventional signs not derived from the syllabary that help the singer apply the M. to the liturgical texts; (b) the "house(s)" (ቤት, *bet*): more than 100 marginal signs that classify close-

ly related groupings or "houses" of melodies; and (c) the halleluya-numbers, which dictate the number of repetitions of the word "halleluya" (cp. ↗*Ḫaletat*) at the beginning of certain antiphons.

Each M. represents a short segment of liturgical melody and is constructed from an abbreviated form of a word or phrase (called ሰረዪ, *sәräy*) drawn from the text of a well-known Gəᶜəz portion with which the melody is sung and with which it has become primarily associated. To read the notation, therefore, the singer must retain in his memory knowledge of all the notational signs as well as the melodies of the liturgical portions from which they derive.



Text with musical notations in a ms. of *wazema*, ca. late 18th cent., from Däbrä Mänkʷal, Šire, Təgray; from the collection of W. K. Smidt senior

The M. are further subdivided into three categories, each corresponding to and representing melodies from one of the three Church modes, ↗*gəᶜəz*, ↗*araray*, or ↗*ᶜəzəl*, respectively. M. for the *gəᶜəz* mode are the most numerous, totalling approximately 287, while those of the *ᶜəzəl* mode number well under 150 signs, with *araray* signs making up the balance.

Although St. ↗Yared is, in both written and oral traditions, credited with having invented the M. (DillmChr 34ff.; Shelemay – Jeffery 1993:4, 13), other sources mention two 16th-cent. Church cantors (*azzaž* Gera and *azzaž* Raguᵓel) who are said to have codified the notational system in the period following the Muslim invasion between 1529 and 1541 (BassÉt I, 336; EMML VI, 42 [no. 2045]; Conti Rossini 1925:515f.). The study of dated chant manuscripts establishes that the M. begins to appear in early 16th-cent. manuscripts (EMML X, 248ff. [no. 4667], cited in Shelemay – Jeffery 1993:4).

A *däbtära* in training begins to learn the notational system when he enters the special school for liturgical music (termed ↗*zema bet*; cp. ↗*Zema*). He acquires the liturgy as an oral tradition at night, singing entire liturgical portions segmented into a series of short melodies, and he subsequently acquires their notational equivalents in written studies during daytime hours.

Each modern *däbtära* is still required during his apprenticeship to copy his own notated liturgical manuscripts. Notated manuscripts are primarily used as a memory aide during study and are almost never consulted during liturgical performances. There are historical, regional and individual differences in the transmission and performance of both the written M. and the oral performance of the melodies that the signs represent (Shelemay – Jeffery 1994:3–9). During the last decades of the 20th cent., teachers of chant at urban institutions such as the ↗Theological College in Addis Abäba, began to draw up written lists of all M. for their students.

Məlṭan

The Gəᶜəz term M. (ምልጣን) designates the way of executing the *angärgari*, an antiphon taken from the ↗*Dəggʷa* or from the ↗*Məᶜəraf*. The term derives from the verb **läṭṭänä* (ለጠነ, 'to glorify, recite, sing'; having its origin in Greek λιτανεία) and was originally used to designate the alternating singing of the choir leader, *märi*, and the people, *tämari*, as they were directed during the lesson or during the prayer at the church. It now has the meaning "praying insistently" (KWKDic 565a; LesCDic 346b).

M. also indicates the last part of a ↗hymn or antiphon that must be repeated alternatively between two choirs in a way and with a melody different from its *ənnat* (lit. 'mother'), i.e. the whole hymn or antiphon.

The M. can be compared with the Greek terms ἀκροτελεύτιον ('final') or τροπάριον ('refrain'). Some *Dəggʷa* elements, which could be either intercalated with a psalm or/and canticle or sung at the end of each biblical composition, use M. These elements are: *Mäzmur*, ↗*Əgziᵓabəḥer nägśä*, *Yətbaräk*, *Sälam*, *Əsmä läᶜaläm*, *Zäᵓamlakəyä*, ↗*Arbaᶜət*, ↗*Maḫlet*, ↗*Səbḥatä nägh*, ↗*Aryam* (cp. ms. EMML 2936, fols. 3r–96). A few of them are employed separately as a liturgical chant.

The M. or the last part of a *Dəggʷa* antiphon becomes *həyyäntä qəne* (lit. 'instead of ↗*qəne*') in the liturgy for the feasts that do not prescribe the composition of a *qəne*.

Habtemichael Kidane

Menas

M. (Eth. ሚናስ, Minas) was a saint and martyr venerated in Byzantium and all over the Christian Orient, especially in ↗Egypt. He was supposedly martyred during Diocletian's persecution of the Christians in Kotyaion in Phrygia. Around his shrine, built at Karm Abū Mīnā (43 km south-west of Alexandria) in the vicinity of a well famous for miraculous healings, a large pilgrimage complex arrose. M.'s Vita is preserved in Greek, Latin and in several languages of the Christian Orient: Syriac, Armenian, Coptic, Gəᶜəz and Old Nubian.

A short account of M.'s life is found in the Ethiopic ↗*Sənkəssar*; the Vita is included in the ↗*Gädlä sämaᶜətat* collection (cp. Bausi 2002:9 n. 29). According to his hagiography, M.'s parents originated from the Egyptian district of Qeṭwa (ancient Kotyaion, the capital of Phrygia mistakenly transformed into an Egyptian city), but his father was appointed governor in Abraqya (= Phrygia) or Afrakya (= Africa). The nobleman's barren wife gave birth to a son through the intercession of St. Mary and called him M., allegedly because, when praying to Mary, she heard her uttering the word "Amen". M.'s parents died when he was still a teenager, whereupon, at the age of 15, he became a soldier. When an imperial decree to pay homage to the gods was proclaimed, M. left the service and stayed in the desert where he had a vision of martyrs receiving the crown of ↗martyrdom. He returned to the city, avowed his Christianity and refused to venerate the pagan idols. He was seized, tortured in many ways and eventually decapitated on 15 *Ḫədar* [= 11 November], which is also the day of his commemoration. His body was thrown into fire but was saved by his Christian military companions. While being transported to Egypt, M.'s body saved the ship from sea monsters. In Egypt, the presence of the body helped to defeat the enemies in a battle in the vicinity of Lake Mareotis. It was also the place where the relics were eventually buried according to the saint's wish, revealed by a miracle: when the soldiers were ready for the departure to Phrygia, the camels carrying the body of M. refused to move. A church was built there in the name of the saint, and later a city, founded by the emperor Zeno.

To some Ethiopian manuscripts of the Vita a series of posthumous miracles is appended (e.g., mss. Paris BN d'Abbadie 92, 15th or 16th cent., Éth 57 [ZotBNat 135], 17th cent., London, BritLib Orient. 691, 15th cent.). The Ethiopian set of miracles, most of which were translated into Gəᶜəz from Greek via Arabic, is the most complete collection of the miracles of the saint (19, as compared to 17 in Coptic, and 11 Greek, s. Devos in PICES 1).

In Ethiopic there is also a *Homily* (↗*Dərsan*) *for the commemoration of the Egyptian martyr Menas*, composed by a certain *liqä papṗasat* Dəratəyos (ድራትዮስ = Dorotheos?), extant in ms. EMML 1763 (fols. 57v–60r) which was written in 1336/37 or 1339/40.

M. seems to have been a popular saint in Ethiopia, to which both his frequent representations

in art as well as the name of the 16th-cent. emperor (↗Minas), named after him, testify.

Witold Witakowski

Menas in art

M. appears relatively often in the repertory of Ethiopian art, particularly after 1800. However, the iconography of the saint never follows the Coptic formula – widely spread in the Christian world through the production of holy water flasks for the pilgrims at his shrine at Abū Mīnā – that, in connection with one of M.'s miracles, represents him as an orant flanked by two kneeling camels. Ethiopian artists followed a different tradition which portrayed M. as a young man armed with a lance and riding a horse. Unlike other Ethiopian ↗equestrian saints, M. is rarely involved in a struggle with a figure incorporating an evil force. If such a figure appears at the foot of his horse, it is called *arämi*, the 'pagan'. All these iconographical elements refer to M.'s noble origin, his profession as a soldier and his denial of pagan cults.

St. Menas; wall-painting, 17th cent., old church of Maryam Dəngəlat, Ḥaramat, Təgray; photo 2004, courtesy of Michael Gervers

M. is probably one of the four horsemen depicted on the 12th cent. murals in the ↗Yəmrəḥannä Krəstos church, strongly influenced by contemporary Coptic paintings. Like his companions, M. receives the martyr's crown from the hand of God but is distinguished by two resting camels visible between the legs of his light brown horse. This early picture seems to be an isolated case, because it is only in the 17th cent. that more depictions of the saint appear in the works of the so-called First Gondär school of ↗painting. For instance in the ↗*sənsul* IES no. 3554 the saint armed with a lance is represented on a blue-grey staggering horse, along with eleven other equestrian saints. In the murals of the abandoned church ↗Maryam Dəngəlat he is depicted side by side with Märqorewos. M. is very often included in the large suite of the holy riders belonging to the extensive iconographical cycle designed in the 18th cent. for the walls of the ↗*mäqdäs*. Since this type of church decoration was largely employed during the 19th and 20th cent., his mounted figure can be seen in many recently painted murals.

Ewa Balicka-Witakowska

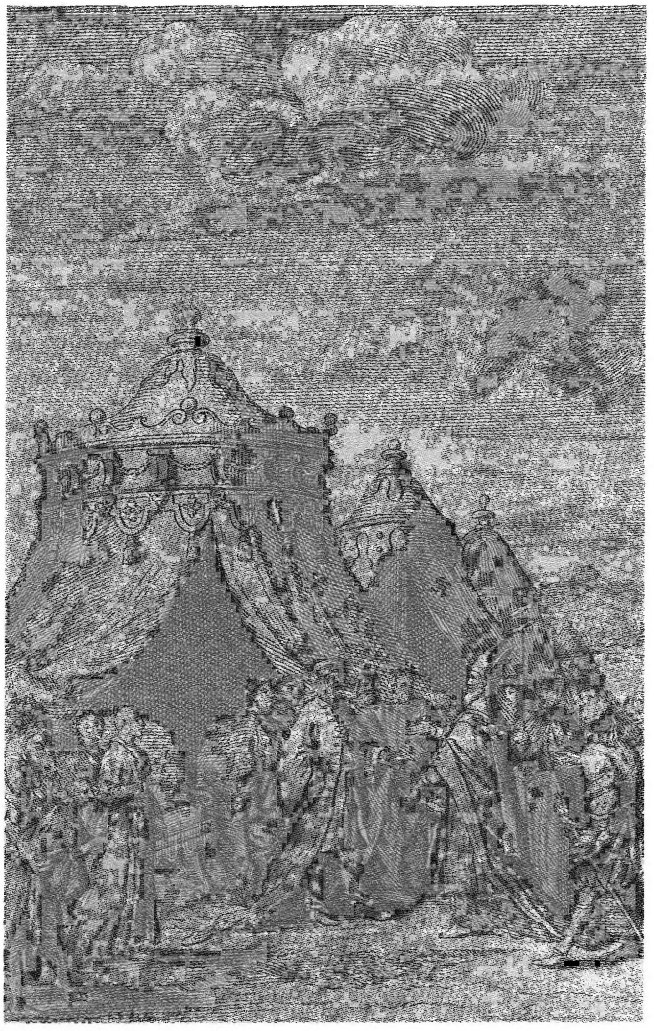
Mendes, Afonso

M. (b. 20 August 1579, Santo Aleixo, Portugal, d. 29 June 1656, Goa) was a Jesuit who became Patriarch of Ethiopia. He joined the ↗Jesuits in 1593, studied philosophy and theology at the University of Coimbra, and became Professor of Holy Scripture. In 1618, he obtained a doctorate in theology from the University of Évora, where he also taught. In 1622, M. was appointed third Catholic Patriarch of Ethiopia, after João Nunes ↗Barreto and Andrés de ↗Oviedo. He sailed from Lisbon at the end of March 1623 and reached ↗Goa on 28 May 1624. The trip to Ethiopia was organized in secret to evade the Ottoman control. Due to problems with the ordinary route that connected ↗Diu with ↗Massawa, M. and his large retinue (six missionaries and 13 servants) left Diu for ↗Baylūl. On 24 June 1625, the train arrived in ↗Fəremona, and in February 1626, in ↗Dänqäz, where he was received with great honors by ↗Susənyos.

The patriarchal residence was established at Däbsan (↗Däbrä San). The site enjoyed a stunning location over Lake Ṭana, and was close to the main Jesuit residence of ↗Gorgora and to the court at Dänqäz. During his patriarchate, M. attempted to strengthen and centralize ↗Catholicism in Ethiopia. The reforms he enforced were: no clergy were to celebrate Mass or perform any ecclesiastical function until they receive permission from him; churches were reconsecrated; liturgy was reformed; fasts and festivals were arranged according to the Tridentine calendar; disputes between husband and wife were transferred from civil to ecclesiastical courts; ↗circumcision was prohibited and the faithful were rebaptized *sub conditione*. He also actively promoted the mission among the ↗Agäw.

When Susənyos realized that his kingdom was lost owing to the strong opposition to Catholicism all over the country, M. decided to grant religious freedom. He suggested a compromise: that it be only granted to those who had not been received into the Catholic faith, but not to those who had already converted and communed as Catholics and would thus not be able to change their decision. When Susənyos refused and abdicated in favour of his son ↗Fasilädäs, M. left for India together with nine other missionaries. After a year of captivity in ↗Sawākin (1635), he arrived at Goa.

M. spent the rest of his life in Goa. There, he was consecrated archbishop just shortly before his death. His two important works are the *Light of Faith* (1692), divided into twelve books recounting and refuting the "errors" of the Ori-



Historical reconstruction of the meeting between Susənyos and Mendes in Dänqäz on 7 February 1626; drawing by Louis de Boullongne, engraving by Koenraadt de Putter, ca. 1720, from Lobo 1728, frontispiece

ental Churches, and the *Expeditio Aethiopica* (BecRASO VIII–IX), which deals with the history and geography of Ethiopia and the events of the Jesuit mission. In contrast to other Jesuits such as Manoel de ↗Almeida, Pedro ↗Paez or Emmanuel ↗Barradas, M. wrote all his compositions in Latin.

Modern historiography considers M. a controversial figure. It sees him as a great preacher and a man of high erudition, but his toughness and rigidity are stressed in contrast to the flexibility of the Jesuit Paez. It has been argued that M.'s personality was one of the main factors of the Catholic mission's failure. In fact, due to his intolerant attitudes towards local rites and customs, and his inability to adapt Catholicism to local circumstances, the Catholic mission could not strike roots in Ethiopia.

Leonardo Cohen

Mənilək I

According to tradition, M. (ምኒልክ, also Mənəlik, Mənyələk and vars.), is the legendary first emperor of ↗Ethiopia (fl. 10th cent. B.C.?), the son of the Queen of Sheba (↗Makədda) and King ↗Solomon of Israel, and the founder of the ↗Solomonic dynasty. The most authoritative source here is the early 14th-cent. ↗*Kəbrä nägäśt*, where he appears as Bäynä Ləḥkəm, with manuscript vars.: Bäynä/ʿIbnä ∃lḥakəm, Bin Alḥakəm, Bin Ḥakəm, ʿIbn ∃lḥakim, Bin Alḥəkəm (chs. 32 and 35), which are renderings of the Arabic *Ibn al-Ḥakīm*, 'Son of the Wise Man', i.e. of Solomon. M. and similar forms, derived from previous one(s) via **Binəl*(*ḥ*)*k*(*əm*) and the *b*/*m* variation commonly observed in northern Ethiopian languages, are found in later traditions such as those (Təgre) collected by Enno Littmann (1904 and 1947: *Məlilik*/*-ləlik*), or are found to be merged with ∃bnä Ḥakim and vars. including the popular ምን፡ ይልኽ, *Mən Yələk*, into the "king lists" (s. CRList 277: list B, no. 1, 287, list C, no. 7; 296: list D, no. 1; 299, list E, no. 4; 300, list F, no. 1). In the mid-18th cent. "legend book" of *əṣṣäge* Filəppos (Conti Rossini 1917:703), where the name is *Mən Yələk* (understood as Amharic: 'What does he look like?', but actually 'What does bring [you here]?'), and is explained as Solomon's exclamation at the sight of his son (cp., however, the form reconstructed in GuiS-Lett 47: ምን፡ ይልህቅ, *Mən Yələhəq*, 'How great/What a prince is he!').

The *Kəbrä nägäśt* (ch. 39) has it that, when he grew up, M. went to visit his father, who received him most honourably in ↗Jerusalem, and eventually appointed him king of Ethiopia with the name Dawit (II) – which might add to the difficulty of counting the Ethiopian emperors by that name (↗Dawit II, ↗Dawit III). M. returned then to his mother's kingdom. Solomon ordered the high priest and other notables of Israel to send their eldest sons with M., so as to establish an Israelite colony there, and the first Ethiopian kingdom ruled by a man. Meanwhile, the companions of the unwitting M. secretly removed the ↗Ark of the Covenant from the Temple (ch. 48), and, fleeing over night from Jerusalem took it to Ethiopia. King Dawit, i.e. M., brought the Ark to his mother's capital, Däbrä Makədda ('Mount[ain]/Fortress of Makədda'), i.e. Aksum, to be kept there under guard, the place becoming thereby a "Second ↗Zion", the heir of Jerusalem and of ancient Israel (chs. 84–85).

On account of that, at least in northern Ethiopia, M.'s companions were later regarded as the ancestors of several ethnic groups (including one of ↗Betä ∃sraʾel), and even founders of the Jewish tribes (s., e.g., Conti Rossini 1900:166; CRStor 256). Likewise, M. is credited with introducing several important innovations into Ethiopia, from ↗Law and Judiciary to court rules (↗*Śərʿatä mängəśt*); he was later identified as the mystical King ↗Tewodros in the eschatological legend, according to which, at the end of time, he shall reappear in the world for Ethiopia's restoration (↗*Fəkkare Iyäsus*).

Ruins of a stone funeral complex said to be M.'s tomb are still visible ca. 5 km west of Aksum, near the area called Ṣəʿuqdur (DAE I, 32; II, 134ff., and 204, 207ff. for pottery sherds). Known to foreign travellers since the 19th cent., as well as to contemporary local tradition (Littmann 1947:43: M. was buried with his mother in the land of Mäläkəya Aksum), they are referred to as

"the lonely place [*gädam*] where Ǝbnä Lälḥakim was buried, full inside of gold, silver and garment treasures" – a description found in the 15th-cent. Acts of Yared; referring back to the first half of the 6th cent. (ed. Conti Rossini 1904:8).

These ruins belong to a simple small four-room building, or rather the podium for a building, with a few later structures superimposed to the east. They were contained in a circular mound opened in 1904/05, at the request of *aṣe* ↗Mənilək II, by the then governor of Təgray ↗Gäbrä Śəllase Barya Gabər: the bones reportedly found inside – the poorly conducted excavations preventing further inquiries by the ↗Deutsche Aksum Expedition that arrived soon afterwards – were immediately recognized as those of M., and translated with solemn ceremony to the cathedral of ↗Aksum Ṣəyon (Monneret de Villard 1938:43; Munro-Hay 2002:291), thus promoting one of the founding myths – the Israelite origins – of Ethiopian civilization.

Gianfranco Fiaccadori

Mənilək II

Early career

M. (ምኒልክ; b. 19 August 1844, Ankobär, d. 1913, Addis Abäba) may justifiably be regarded as the founder of the modern Ethiopian state. He was born at the palace of his grandfather ↗Śahlä Śəllase and received the baptismal name of Śahlä Maryam. His father was *nəguś* ↗Ḫaylä Mäläkot and his mother Ǝgǧigayyähu, reportedly a serving girl at the palace, possibly of Gurage origin, and his parents were not married until after their son's birth. The name Mənilək, bestowed on him by Śahlä Śəllase, referred to ↗Mənilək I, the legendary son of Solomon and the Queen of Sheba (↗Makədda), and forecast a distinguished imperial future for him. This was the name he always used.

Ḫaylä Mäläkot died in December 1855, in the course of the newly proclaimed *aṣe* ↗Tewodros II's invasion of Šäwa. M., then aged 11, was taken into captivity together with his mother and a group of Šäwan nobles, and brought up in the imperial court, at ↗Mäqdäla. Here he was treated with much respect, and married to Tewodros II's daughter ↗Alṭaš Tewodros. In 1865, as the Emperor's power waned, M. escaped from Mäqdäla and was received with joy in Šäwa as its rightful king, displacing *ato* Bäzzabbəh who had declared himself its independent ruler. Though Bäzzabbəh initially submitted to M., he was soon afterwards convicted of plotting against him, and executed.

Self-proclaimed *nəguśä nägäśt* (e.g. RubActa III, 55, 60) of Šäwa, M. showed signs of imperial ambitions even before the death of Tewodros, but stood aside during the British invasion that led to that event. After it, he lacked the military strength to challenge the two northern rivals for the throne, *wagšum* Gobäze Gäbrä Mädḫən (*aṣe* ↗Täklä Giyorgis II) and *däǧǧazmač* Kaśa Mərčа, who eventually triumphed and became ↗Yoḥannəs IV. Although M. colleded with the Egyptian invasions of 1875 and 1876, hoping to crush Yoḥannəs between his own forces and those of the Egyptians, Yoḥannəs's crushing victories over the Egyptians at ↗Gundät and ↗Gura^{c} greatly increased his strength and left M. isolated. When Yoḥannəs eventually advanced on Šäwa, M. was obliged to submit in March 1878, receiving in return the formal title of *nəguś* and acknowledgement of his control over Šäwa and much of Wällo.

Ruler of Šäwa

During the period from 1878 until 1889, when M. was in effect the quasi-independent ruler of Šäwa, he laid the foundations of his subsequent rule as emperor. These rested on the combination of three elements: first, the establishment of independent connections with the outside world and especially Europe, gaining through it modern technology (especially ↗weapons), expertise, and diplomatic support; second, the conquest of neighbouring peoples to the south-east, south and south-west, in order to obtain access to the sea, as well as the exploitation of the considerable wealth that these regions offered; and, third, the

maintenance of his autonomy from the historic centres of national power to the north, until he was in a position to challenge them.

Deeply aware of the importance of external resources for establishing his power in Ethiopia, M. sought to develop his own access to the outside world through ports in the southern ↗Red Sea and Gulf of ↗Tağūra, by-passing the long-established links through ↗Massawa which were firmly under Yoḥannəs's control. The principal port was at Obok, on the northern shore of the Gulf of Tağūra, where the French established a trading station in 1881. He also sought links with the Italians (↗Italy) through their station at ↗ʿAsäb, but communications with the interior through ↗ʿAfar territory were hazardous, and in May 1880, an Italian expedition was entirely destroyed by the ʿAfar. In May 1883, nonetheless, M. signed a treaty of friendship and commerce with Italy, which established his status as an autonomous diplomatic actor. Trade between both countries was concerned especially with the purchase of weapons and other military necessities. M. also sought the services of qualified Europeans, the most important of whom, the Swiss engineer Alfred ↗Ilg, arrived in Šäwa in 1879 and remained for 29 years. By far the most influential European ever to work in the Ethiopian government service, Ilg rapidly became a trusted counsellor concerned not only with technical matters, but with critical issues in M.'s relations with European powers. He eventually received the title of ↗*bitwäddäd*, the only foreigner ever to do so.

Closer relations with Europe both required, and made possible, Šäwan conquest of regions which had long been outside Ethiopian control. Regions inhabited by the ↗Oromo and other peoples could be exploited to produce a surplus for the export of goods, which could not be extracted from the regime's heartland in northern Šäwa. This trade was initially largely in animal products, notably ↗ivory and musk (↗zibeth) but also skins and ostrich feathers, as well as ↗gold, but these were increasingly displaced by ↗coffee. M. was also the beneficiary of a substantial trade in ↗slaves, which was conducted by Muslim entrepreneurs but taxed by the Šäwan state. The arms received in exchange enabled the Šäwans to pursue their conquests further each year. The territory south to the river ↗Awaš was largely conquered by 1875, much of it by M.'s leading Oromo general, *ras* ↗Gobäna Daṭi. Thereafter, the campaign of conquest continued south into

The young *nəguś* Mənilək of Šäwa in the 1870s, collection of the Protestant missionaries at Šäwa; drawing, courtesy of Mission21, Basle

↗Arsi and the ↗Gibe river area (s. also ↗Hasän Ǝnǧamo). Fortified settlements or ↗*kätäma* were established to provide the basis for permanent occupation, and land was expropriated from indigenous peoples, in the form either of large estates for Šäwan noblemen, or in smaller plots for military settlers – a formula for intense exploitation and deep political resentments (↗*Gäbbar*, ↗*Näftäñña*). In areas such as the sultanate of ↗Ğimma, where indigenous rulers recognized the inevitability of Šäwan conquest and submitted to M., he allowed them to remain in office; where such rulers resisted as in ↗Käfa, the scale of destruction was brutal.

A conquest of particular importance was the emirate of ↗Harär, both because of its own riches but notably because of its strategic situation astride the range of mountains leading east towards the Gulf of Tağūra. Left largely unprotected after the withdrawal of its ↗Egyptian occupiers in 1885, it was conquered by M. in January 1887. Entrusted to his cousin and loyal supporter *ras* ↗Mäkʷännən Wäldä Mikaʾel, it rapidly became both the leading entrepot for Šäwa's external trade, and a centre from which to control the surrounding territories and the route to the sea.

M.'s primary goal in his relations with Yoḥannəs and the historic centres of state power in northern Ethiopia at this period was to preserve his own autonomy and the freedom to expand to the south, without either challenging the imperial regime, or diverting his own resources to supporting Yoḥannəs in his struggles against invading external powers, whether Egyptian, Italian or

↗Mahdist. On those rare occasions, in 1878 and 1882, when the Emperor could spare the time to move south, M. submitted, acceding in 1882 to the loss of control over much of ↗Wällo. At other times, he went his own way, engaging in diplomatic manoeuvres which, without formally abandoning his allegiance, could readily have been interpreted as treasonable. It was critical, however, to preserve his dominions to the south, an objective achieved at the battle of ↗Ǝmbabo in north-east ↗Wälläga in June 1882, when a Goǧǧame army under *nəguś* ↗Täklä Haymanot, the only other provincial lord with potential access to the south, was decisively defeated. This incident prompted Yoḥannəs's move southwards to assert his sovereignty, an occasion that also resulted in a marriage of M.'s daughter ↗Zäwditu to Yoḥannəs's son, ↗Arʾaya.

Accession and foreign policy

Following Yoḥannəs's death in March 1889, M. immediately declared himself emperor, and received the allegiance of the great majority of the principal regional lords as he moved north. Only Yoḥannəs's surviving son and declared successor, *ras* ↗Mängäša Yoḥannəs, and his most faithful lieutenant, *ras* ↗Alula Ǝngəda, failed to support him. Much of northern Ethiopia was in any event devastated by famine (↗*Kəfu qän*) as well as by warfare, and there was no effective resistance. M. was crowned emperor by *abunä* ↗Matewos at ↗Ǝnṭoṭṭo on 3 November 1889.

His domestic standing was assured, however, his international position was extremely precarious. On 2 May 1889, between his accession and his coronation, M. had signed a treaty with the Italians at ↗Wəčale (↗Italo–Ethiopian Treaty of Friendship and Commerce), the Italian text of which acknowledged M.'s willingness to use the Italians as a conduit through whom to conduct all his relations with foreign powers, thus in effect agreeing to the establishment of an Italian protectorate over Ethiopia. The Amharic text of the critical Article XVII made no such commitment, merely enabling M. to make use of Italy if he so wished. There can be no doubt that this discrepancy was the result of deliberate deceit on the part of the Italian emissary, ↗Antonelli, and was designed to establish Italian primacy in the eyes of rival would-be colonial powers, pending the moment when this could be enforced on the ground. The Italian claim was immediately circulated to other European states. On 1 January 1890, the Italians formally established the colony of ↗Eritrea, providing them with a springboard in the highlands from which they could subsequently occupy the rest of Ethiopia.

In July 1890, M. learned from replies to his letters to European sovereigns that Italy had asserted a protectorate over Ethiopia, in terms justified by the Italian text of Article XVII. By February 1891, diplomatic attempts to resolve the issue had broken down, and Ethiopia was set on a collision course with Italy. In the resulting contest for support, M. operated with great skill, even obtaining the delivery from Italy of two million rifle cartridges that he had already paid for, and securing support (albeit ambivalent) especially from ↗France, ↗Russia and Turkey. At this juncture, with northern Ethiopia severely impoverished by famine and the rinderpest ↗epidemic, the resources extracted from the newly conquered southern provinces were critically important in paying for the weapons needed to secure Ethiopia's independence. Equally important was M.'s ability to secure the allegiance of a virtually united Ethiopia, notably including Yoḥannəs's son Mängäša Yoḥannəs and his leading general Alula Ǝngəda, who had maintained an autonomous position in ↗Təgray before surrendering finally to the Emperor in June 1894. As a result, M. was able to put a well-equipped army of probably over 100,000 men into the field. Italian hopes of securing Ethiopia through a strategy of divide and rule were thwarted.

The crushing Ethiopian victory at the battle of ↗ʿAdwa on 1 March 1896 secured Ethiopian independence. Much comment, however, has been attracted by his subsequent decision to accept the Italian colony of Eritrea within its existing frontiers, rather than seek to push the Italians into the sea and establish Ethiopian rule down to the Red Sea coast. Plausible reasons can be given for this decision, including his own army's exhaustion, the possibility of losing the impact of the ʿAdwa victory if the campaign was unsuccessful, and the danger that it might provoke retaliation from Italy or elsewhere. Some have also detected a desire to weaken the Təgrayans, by dividing them between Eritrea and a truncated Təgray region.

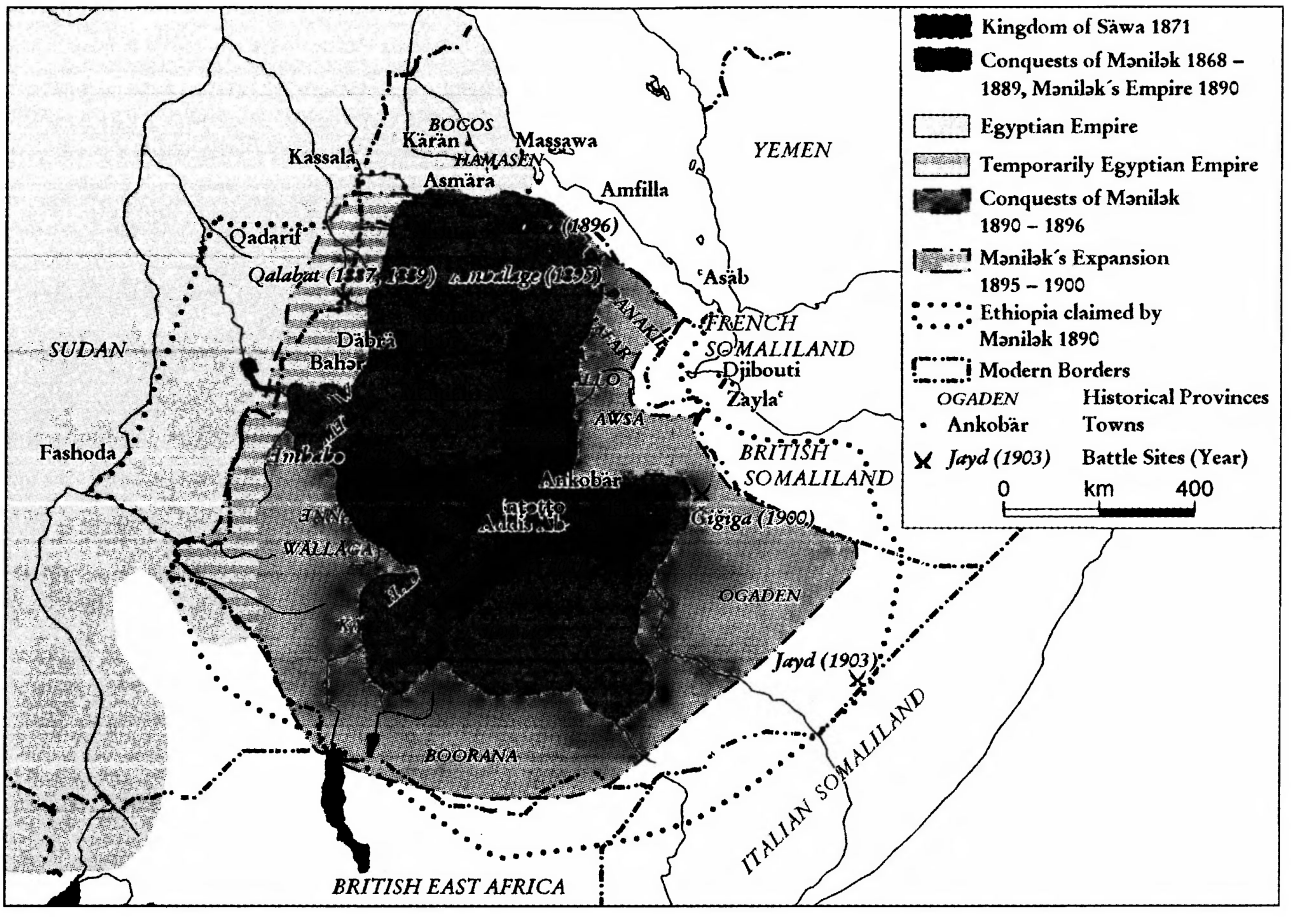
In the aftermath of victory, however, M. secured full European recognition of Ethiopia as a sovereign independent state – the only African state in the entire continent to achieve this vital status. The expansion of Ethiopian territory continued, notably into areas adjacent to British

colonies. In the process, the country's territory was established within the bounds that it retained a century later (↗Boundaries). As with the carve-up of the rest of Africa at that time, this involved the imposition of artificial frontiers on unmapped territory, in terms that were often only vaguely defined. These left Ethiopia with long frontiers with Italian Eritrea and ↗Somalia, and with ↗British Somaliland, ↗Sudan and ↗Kenya, and with a short one with the French Somali Coast (↗Djibouti). This was however particularly important, as Ethiopia's main access to the sea, and in March 1894 a convention was signed for building the ↗railway from Djibouti to ↗Addis Abäba. The frontier with British Somaliland was established in 1897, by an agreement between *ras* Mäkʷännən and the British; that with Sudan was settled in 1902 following the defeat of the Mahdist state, while the border with Kenya was agreed only in 1906. As M.'s health declined, the colonial powers (France, Italy and the ↗United Kingdom) sought to define their interests in Ethiopia in the event of the country's collapse, notably through the ↗Tripartite Treaty of 1906. Not until the 1930s, however, was the country's independence again threatened.

Aṣe Mənilək II; photo ca. 1907/08, by Arnold Holtz, from Holtz 1908

Domestic governance

M.'s primary preoccupations in domestic government were to extend the territory under Ethiopian sovereignty, to increase his own control over potentially autonomous provincial rulers, and to extract the economic resources required to maintain his power. Many sources testify to M.'s enquiring mind, and to his interest in external innovations of all kinds. In establishing the country's capital in the newly created city of ↗Addis Abäba, he laid the foundation for a permanent administrative centre, displacing the system under which, since the collapse of the Gondärine empire (↗Gondär), the administration had moved with the ruler. The new city was endowed with an infrastructure of roads and buildings, and large compounds were allocated to the principal foreign missions. The main provincial rulers likewise established their own residences in places immediately adjacent to the city, thus creating Addis Abäba's distinctive physical and social geography. In many respects, this process called for "modernizing" measures, which included building the country's first motorable road (from Addis Abäba to ↗Addis ᶜAläm), establishing its first European-style school (↗Mənilək II Secondary School), and creating formal government ministries to supplement the apparatus of the imperial court. A national ↗currency, a state bank (↗Banking system) and a ↗postal service were likewise introduced. There is no indication, however, that he conceived of government in anything but conventional Ethiopian terms, as the expression of his personal power. For so long as his mental faculties remained alert, he dealt in time-honoured fashion with the smallest minutiae of government, and his ↗*gəbbi* was the centre for a vast throng of courtiers. On major feast days, as many as 15,000 retainers might be fed at the *gəbbi* held in the huge *addaraš* or banqueting hall attached to the palace.



Expansion during the reign of *aṣe* Mənilək II, 1871–1903

The key area of government was the regional administration, through which – so long as he retained his own faculties – M. was able to impose a level of imperial control unknown since the mid-18th cent. or earlier. His general authority was established beyond question by the victory at ʿAdwa, but he was pragmatic in his selection of regional governors. In the historic heartland of the country, and in southern regions where local rulers had acquiesced in Ethiopian conquest, he was prepared to retain indigenous governors. Elsewhere, and especially in regions that had resisted conquest, the new system of government was often brutal and rapacious. Many of the southern regions were entrusted to Šäwan generals, even though these – like *däğğazmač* ↗Balča Śafo in Sidamo – were not necessarily Amhara. Harär, which was particularly important for both economic and security reasons, was entrusted to M.'s cousin and close confidant *ras* Mäkʷännən.

Decline and death

M.'s long and tragic decline can be dated from mid-1906, when he appears to have sustained a mild apoplectic attack. He was seriously ill in January 1907, and, in October 1907 he formed a council of ministers, though these had as yet no ministries to direct, and, since delegated power was so foreign to Ethiopian concepts of governance, they had little power. Further strokes followed in May 1908 and in early 1909, leaving him partly paralysed. A massive stroke in October 1909 brought him close to death, and *ras bitwäddäd* ↗Täsämma Nadäw was publicly appointed regent, though he had to compete with the influence of M.'s second wife *ətege* ↗Ṭaytu Bəṭul, who was eventually removed from power in March 1910. In the climate of uncertainty that resulted from his own incapacity, M. was successful in achieving the transfer of imperial authority to his grandson *ləğ* ↗Iyasu, whose deficiencies in character and ability he evidently did not appreciate. Although Ethiopian dignitaries were occasionally taken to see him in his last years of life, and unavailing efforts were made to quieten public concern, M. was in no condition to exercise any power, remaining suspended between life and death until his eventual demise on 12/13 December 1913.

Significance and legacy

M. must rank among the greatest of not only Ethiopian but also of African leaders. Alone

among his continental contemporaries at the time of the European scramble for Africa, he possessed the vision, the political skills and the state capacity needed to protect his country and people against advancing colonialism, and in the process to carve out for his own state a massively increased territory and a place in world affairs. Though he certainly owed much to his predecessors Tewodros and Yoḥannəs for starting to re-establish the Ethiopian state, and though its apogee was not to be reached until the reign of his eventual successor ↗Ḫaylä Śəllase I, that state was his creation more than that of anyone else. That it proved in some respects to be deeply flawed may equally be laid at his door, though he did no more than other empire-builders of his era. Very dark in complexion, he looked the antithesis of the stereotypical highlander, and several of his leading generals were Oromo or Gurage. His eldest daughter, Šewaraga, was married to a Muslim Oromo, Mäḥammad ᶜAlī (↗Mikaʾel ᶜAli of Wällo). His younger daughter ↗Zäwditu became empress in 1916. In provinces such as Ǧimma and ↗Beni Šangul, established Muslim rulers were allowed to remain in power. The ruthless exploitation of the southern provinces could be justified as essential to provide the economic base for an independent state, which the impoverished northern highlands could not supply. In the longer run, however, land alienation in the south, and the discriminatory social relations that inevitably went with it, were to prove the greatest weakness of the state that he had founded, while his recognition of the Italian colony of Eritrea was likewise fraught with lasting consequences.

Mənilək Iyasu

Ləǧ M.I. (ምኒልክ፡ ኢያሱ, by some called "Mənilək III", ᶜAfar: Minilik; b. March/April 1917, Dīdalé, Godá mountains, Côte française des Somalis, d. 14 August 1991, Dərre Dawa) was one of the youngest legitimate children of *ləᶜul ləǧ* ↗Iyasu. He was the first son of Fāṭuma Ôbakar Maḥammad (b. 1900), a granddaughter of *näggadras* ↗Maḥammad Ôbakar, a Muslim collaborator of *aṣe* ↗Mənilək II, from the influential ᶜAfar Ôbakartó lineage of ↗Zaylaᶜ (cp. ↗Abū Bakr Ibrāhīm Šahīm). The fact that Iyasu had married a "daughter of *näggadras* Maḥammad" was used against him when the leaders of the ↗coup d'état of 1916 (s. EAE vol. 2) looked for arguments that Iyasu had converted to Islam (s. the proclamation of Šäwan leaders and the declaration of *abunä* Matewos of 1916, *L'Afrique Française* 1917:9, 11; GebMolIyas 359). Greenfield reports that this "Danakil princess" was then his favourite wife, and "some say that she was successful in making Eyasu's political leanings to Islam, religious also" (Greenfield 1965:137).

Immediately after the coup d'état, acknowledging her prominent Muslim background, the pregnant Fātuma decided to flee from Addis Abäba via Wällo, helped by her father-in-law *nəguś* Mikaʾel (Greenfield 1965:143), to her ᶜAfar Ḥasoba relatives in the Côte française des Somalis (↗Djibouti), where M.I. was born. M.I. went to school in Djibouti and at an early stage already, the French seem to be attracted to the idea that M.I. could be used as a claimant to the throne in case of political turmoil in Ethiopia. In the 1930s his "followers are said to have acknowledged him as Emperor Menelik III as he spoke condemning Hailé Sellassié not only as a usurper but also as a dangerous progressive" (Greenfield 1965:182).

M.I.'s elder brothers (cp. ↗Mälakä Ṣäḥay Iyasu) organized part of the Ethiopian resistance against Italian occupation (↗Africa Orientale Italiana); in 1941, on request of his brother *däğğazmač* Yoḥannəs, M.I. decided to join his brothers. When he arrived, Ethiopia had been retaken by *aṣe* Ḫaylä Śəllase I and the British forces; M.I. was brought from Däse, together with the ᶜAfar *fitawrari* Yāyyó Ḥammadu of Awsa, to the Gännätä Ləᶜul Palace at Addis Abäba and immediately put under house arrest. Later, on condition that he should not involve himself in any political activities, he was given a small house below the palace compound in Afənčo Bär, where he lived in permanent custody, perfectly isolated from Ethiopian public life (Greenfield 1965:183). But he was visited by great numbers of ᶜAfar, a few of whom started to live there with him. He also spent part of the time in his house in Dərre Dawa in a Somali quarter (Ṭəlahun Bərhanä Śəllase 2003/04:111), also in custody.

The large empty slope lying below the central Addis Abäba ↗Gännätä Ṣəge Giyorgis church (in

Mənilək Iyasu, photo courtesy of Maryan ᶜAbdal Raḥman Ǧibril

the quarter known as *piyasa*, 'piazza'), was a heritage of his aunt *wäyzäro* Səḥin Mikaʾel. Here he built a small house for rent, from which he could make some earnings, his only income; however, *aṣe* Ḫaylä Śəllase had it demolished. Since then this deserted area in the middle of Addis Abäba stayed purposely unused, to avoid any income for M.I. or other relatives; later it was nationalized by the *Därg* (only in 2006 *šayḫ* Muḥammad Ḥusayn al-ᶜAmūdī got permission to erect high buildings there).

Following a demand of the *Därg*, M.I. undertook a political mission to Djibouti, before its independence in 1977. He successfully established relations between the Ethiopian government and the head of government of the Territoire français des Afars et des Issas, M.I.'s cousin ᶜAlī ᶜAref of the Ôbakartó family (Ṭəlahun Bərhanä Śəllase 2003/04:111).

M.I. was Muslim, "like his father", as he claimed (seemingly wrongly, as his mother was even baptized for the marriage in 1916, s. de Juniac 1979:63), and was mainly integrated into the ethnic network of the ᶜAfar. Besides Amharic, he also spoke ᶜAfar and French. As an alleged *šarīf* (i.e. descendant of Prophet Muḥammad, s. ↗Mammädočč dynasty) and son of the deposed ruler *ləǧ* Iyasu, the only ruler who had directly linked himself with the ᶜAfar, he enjoyed a high reputation among Ethiopian ᶜAfar, as well as Somali. His first wife was Amina Abubakr ᶜAli from the Ôbakartó lineage; from her he had a son in the 1930s, but both, son and mother, died. Later he had three wives (two Ḥasoba, married in Djibouti, one Argobba), with no children. His last wife Maryan ᶜAbdal Raḥman Ǧibril was a Gadabuursi Somali from Dərre Dawa. The widespread rumour that M.I. had been "castrated" by *aṣe* Ḫaylä Śəllase (MorDicAfar 29) might not be true, as also his last wife got pregnant (but she lost the baby, reportedly by poison "given to her husband"). At the end of his life, M.I. was paralysed.

Wolbert Smidt

Mənilək II Secondary School

M.S.S. was Ethiopia's first modern school. It was founded in 1908 by *aṣe* ↗Mənilək II and was originally given the French name École Impériale Ménélik II. To allay fears that its teaching would endanger the Ethiopian Orthodox faith by introducing Catholicism or Protestantism (Teshome Wagaw 1979:31), it was entrusted to Coptic Egyptian teachers, headed by one of their number, Prof. Hanna Saleeb Bey (d. 1925). The school started with ca. 100 boys (later increased to 150), who originated from royal or noble families, and by 1924 some 3,000 alumni had graduated. Among these graduates were *ləǧ* ↗Iyasu and ↗Ǝmməru Ḫaylä Śəllase (Bahru Zewde 2002:24), as well as many Government officials, teachers and accountants (Jones 1922:327). The language of instruction was ↗French, but other languages were offered, i.e. English, Italian and Amharic. Courses were offered in geography, history, mathematics, and science. Attention was also paid to music, drawing, and acting – at that time the school had one of the capital's few theatres. Physical education and sports also had their place in the timetable (Farago 1935:170). Board and tuition were entirely free, with meals occasionally provided by the imperial palace.

M.S.S. opened on the estate of *ras* ↗Mikaʾel ᶜAli of Wällo, in the capital's Səddəst Kilo area, and then moved to Alfred Ilg's former residence near

Mənilək's palace before settling in its present site at Arat kilo. The first prize-giving ceremony took place on 16 July 1911 when the first award, of 100 Maria Theresa thalers, was given to Abbäbä, the son of *fitawrari* Ibsaa (Mérab 1922:127).

The school, which was frequently visited by ↗Ḫaylä Śəllase I, was re-opened after Ethiopia's liberation in 1941, and by the 1950s had an attendance of ca. 500 students in the primary school, as well as 100 secondary school students. Though mainly a day school, it had some 250 boarders. From time to time it published a magazine entitled *The Menelik Mercury*.

Menstruation

The various ways by which different groups relate to M. and menstrual ↗blood occupy a central place within ethnographical research. In many cultures, this physiological phase becomes a site for symbolic elaborations and a main channel for various social and cosmological understandings. The symbolic potency which in many cases is attributed to menstrual blood, with its variety of rules for conduct during M. are often perceived as being connected to the study of ↗taboo and perceptions of purity and impurity, pollution and danger.

Ethiopians of diverse traditions exhibit complex and sometimes contrasting attitudes towards this specifically female bleeding. Thus, for example, the traditional ↗Gurage consider the woman to be inherently immoral, and a constant source of contamination for men unless she performs cleansing rituals after childbirth (↗Birth), M., and sexual intercourse. ↗Käfa males regard women as highly dangerous both because of their avid sexual desires which rob men of their strength and the fear that they may infect men during their menstrual periods (Levine 1974:54). Throughout the ↗Murle, a woman who gives birth remains confined to her hut for three days if she bears a male child and four if a female. No one may eat food cooked by a woman who has just given birth until she undergoes a purification ceremony (CerPeople 73f.), and among the ↗Oyda potters (Oto Mana), special rituals are performed during menstrual and childbirth seclusion periods. M. is perceived as dangerous. A mother announces the first M. of her daughter as if she were dangerous (Oyda: *seray*). Until her period stops she is put in a *fulle*, a seclusion house, and is taken care by other Oto Mana women. The bleeding woman, both during M. and after birth is considered impure, *tuna*, fatal for men (Freeman – Pankhurst 2003:156f.). The use of seclusion houses, which in many cases are also used for childbirth, is likewise documented, for example, among the Baka (↗Aari), ↗Ubamär, ↗Basketo, ↗Dime, ↗Maale, ↗Šeko and ↗Yäm (VSAe I, s. index; VSAe III, 25, 67, 363).

Nevertheless, the ethnographic knowledge on the subject is still very much in its infancy. One such ethnographical research relates to the study of menstrual blood among the ↗Betä Ǝsraʾel in Ethiopia, and as a central topic in everyday exchanges between the Betä Ǝsraʾel and their Christian neighbours. The Betä Ǝsraʾel can thus serve as an exemplary case for other groups who treat menstrual blood as impure (such as the ↗Kəmant, now officially Christians) and where the treatment of this feminine phase determines the purity of the entire group. For the Betä Ǝsraʾel and Christians the authority was the verse from the ↗Octateuch (*Orit*) and the O.T. respectively, "And if a woman has an issue, and her issue in her flesh be blood, she shall be seven days in her menstrual separation: and whoever touches her shall be unclean until evening" (Lev 15:19). This verse was quoted when discussing the separation of Betä Ǝsraʾel women during their "unclean" period. In accordance with the *Orit* (Lev 12:2–6), Betä Ǝsraʾel also considered the period after giving birth as impure (40 days for a boy, 80 for a girl). During both these and menstrual periods, Betä Ǝsraʾel women were confined to a separate hut (**የደም፡ ቤት**, *yädäm bet*, 'blood house' or **የራስ፡ ቤት**, *yäras bet*), situated at the periphery of the Betä Ǝsraʾel dwellings. A low circle of stones set the area off from the rest of the village, with several women sometimes occupying the hut together. Each month, a woman would

retire for seven days to the blood house, and on the evening of the seventh day she would go to purify herself in the river and return home. During this time, while they sometimes cooked for themselves in the house of blood, they generally received food from outside, served to them over the stone wall. The existence of blood houses and the customary separation were so conspicuous that at times it was described as the central sign of the existence of Betä Ǝsraʾel in a village.

Unlike comparable customs among most Judaist religious communities, Betä Ǝsraʾel laws applied not only to married women but also to unmarried girls, divorcees, or widows. This seems to indicate the group's concern with a stricter definition of purity than one limited to the marital realm: her menstrual blood is perceived as polluting the entire space.

Unlike the Betä Ǝsraʾel, Ethiopian Christian women do not maintain any special form of separation during their period. Although in a few communities Christian women were not allowed to enter certain places while menstruating, the woman is not considered impure at that time, she remains at home, cooks and maintains contact with other people. However, sexual intercourse is not allowed for her. Like any other person who bleeds, a menstruating woman is forbidden to enter a church building, which is reserved only for the "blood" of Christ celebrated in the Holy Communion (↗Eucharist). Likewise she is may not attend the mass.

The privacy which characterized the Christian treatment of menstrual blood, as opposed to the public character of Betä Ǝsraʾel's treatment, was the subject of much debate between neighbours. There were Christians who argued that, while their wives remained at home during their monthly period, they refrained from sexual relations. Betä Ǝsraʾel claimed that by making the woman's M. publicly known, the Betä Ǝsraʾel control the time of conception and thus ensure the purity of the next generation. The Betä Ǝsraʾel claimed that the Christians could never trace the identity of the real father of a woman's children. The attempt to control the purity of the next generation by following the monthly cycle is central to the way the group perceives itself.

This sort of symbolic community between two competing religious groups is far from self-evident. Analysis of the data indicates that for the Betä Ǝsraʾel the two definitions of purity and impurity belong to the same symbolic and conceptual system. Although the Betä Ǝsraʾel and the Christians have separate customs of purity and impurity, both groups are concerned with the purity and impurity of the "other woman". These categories serve as a basis for disputations, comparisons and evaluations, as the different menstrual customs reinforce boundaries between them.

Hagar Salamon

Mənṭaf

The use of carpets in Ethiopian culture was, until modern times, primarily confined to royal courts, churches, and society's elite. The Amharic term M. (ምንጣፍ) generally refers to textiles of various kinds used as floor coverings, or as seating in homes or when travelling, or for protecting precious objects from the ground, such as crowns or holy relics when on display. Historical references do not distinguish between knotted pile carpets, braided or twined mats, or tapestry or plain woven fabrics. For the most part, these were imported products carried by traders throughout the country. In cooler regions, however, where sheep can be raised, coarsely woven natural wool mats, called *səs mənṭaf*, are used even today as a protective layer on earthen floors. These are made at home using a very ancient technique similar to ↗basket weaving, called "weft-twining" (Balpinar 2001:147ff.).

Carpets imported from different countries were integrated into Ethiopian traditions by the elite. Influenced by the example of royal and religious figures of the Near East and Mediterranean, the Ethiopian ruling class and clergy embellished important occasions with costly imported textiles made available to them by the regional trade patterns which flourished from the 14th cent. onward (TadTChurch 85). As early as the 16th cent., foreign visitors wrote vivid accounts of their reception in the royal courts of Ethiopia and expressed their amazement at the richness of the furnishings and the apparel of the aristocrats in attendance (BeckHuntAlm 92ff.).

Oriental carpets came to be used in several ways. As palace furnishings, they proclaimed the

Fragmentary section of a a 16th–17th cent. wool pile Turkish carpet, at the monastery of Däbrä Wärq in Goğğam, donated by *aṣe* Yoḥannəs I in 1670; photo 2001, courtesy of Paul Henze

superior wealth and importance of the ruler. As honorific gifts to chosen subjects they helped seal a bond of loyalty to the central power. Expensive carpets made a family's wedding dowries more impressive. At times carpets were accepted in payment of taxes or other debts. Donated to a favourite monastery or church, a valuable carpet was a worthy symbol of the donor's piety (CRAxum no. 65; Pearce 1980:106ff.).

Although travellers did not describe the "rich carpets" they saw as made of knotted wool they sometimes called them Turkish or Persian (HarAeth vol. 1, 410). Records of the early import of carpets exist from at least the mid-16th, if not the late 15th cent. (s. Gervers in PICEA 5). It was undoubtedly during the period when the ↗Ottoman empire controlled the Red Sea that so many carpets reached Ethiopia. Material evidence in Ethiopia substantiates the recorded displays of carpets during the late medieval period of Ethiopian history. In recent years, private research has brought to light several readily identifiable fragments of Turkish pile carpets of a type exported in large numbers from the 15th to the 19th cent. (Raby 1986:177–87). Several customs lists of the late 19th century identify carpets among goods imported from India (Pankhurst 1964:49–159).

The only example that can be documented belongs to the monastery of ↗Däbrä Wärq in Goğğam where it was recorded as the gift of the Gondär *aṣe* ↗Yoḥannəs (BudHist vol. 1, 406f.). The years of his reign (1667-82) lend credibility to the date of 1670 listed in the church treasury inventory. Four others of this type, the so-called "medallion Ushak design", were found in the monastery of Qʷäyäṣa, west of Aksum, Təgray, in 2001. These appear to have been woven somewhat later than the example at Däbrä Wärq, possibly in the mid-18th cent. Found in greater numbers are tapestry-woven *kilims* firmly identified as typical of those woven in Central Anatolia prior to 1800 or in the early decades of the 19th cent. (Henze 1997:11–19, 2001:141–46). After that date, most pile carpets and *kilims* found in Ethiopian churches probably originated in Persia and India, the country's most important trading partners at that time. While all the carpets used in the Ethiopian churches were made in Islamic countries, they were imported purely as luxury items as they were in Christian countries of Europe during the same period.

The tradition of pious donation of carpets to the Ethiopian Church is still alive. Knotted pile carpets started to be produced in Ethiopia in the 1960s when several projects were initiated using native wool. These natural wool carpets and flat-woven mats are widely used today to replace the costly imported carpets that are wearing out and being discarded.

Probably half of the Ethiopian population professes ↗Islam and the old city of Harär is a famous pilgrimage centre. ↗Mosques and shrines are most commonly furnished with mats woven of reeds or plastic which provide the "clean place" required for Muslim prayers. Modern versions of carpets of oriental design are widely used today on floors of Harär houses and as covers for the seating and sleeping ledges that are the main features of their rooms. There is no material evidence that a carpet-weaving industry once existed in the town but they could easily have been sup-

plied by traders in earlier times as they are now.

Məntəwwab ↗Bərhan Mogäsa

Mérab, Pierre Etienne

M. (b. 22 September 1877, Oudé, Georgia, d. 13 November 1930, La Motte, France) was a physician and writer. Born into a Catholic family, he took his baccalaureate in Constantinople, after which he travelled to France, acquired French nationality, studied medicine in Montpellier and Paris, and graduated as a doctor in 1906. Returning to Constantinople he was called in 1908 to treat members of a visiting Ethiopian delegation led by *däğğazmač* ↗Mäšäša Wärqe. This contact led M. to sign a 3-year contract to serve as ↗Mənilək II's personal physician, for a fee of 2,500 Maria Theresa thalers per annum. He remained in Addis Abäba until 1914, when he returned to France to serve in World War I. In 1922, he went to Egypt with the intention of doing a comparative study between that land and Ethiopia. Shortly after, he went to Ethiopia, where he opened a pharmacy, La Géorgie, the first in the country. He ran it until the death of his wife Jeanne le Mière in 1927 (her grave is in Addis Abäba's Gullale cemetery), and returned to France in 1929 (Triulzi in PICES 4).

M. was a man of scholarly disposition, keenly interested in Ethiopian society and medicine and published four volumes on these topics. His *Médecins et Médecine en Ethiopie* (1912) considers the country's principal diseases and traditional treatment. This was followed by his *Impressions d'Ethiopie* (*L'Abyssinie sous Ménélik II*), which he published under the first name of his father, Paul. The work ran to three volumes, and contains many reflections and numerous photographs. Volume I (1921) describes his journey from Constatinople via Harär to Addis Abäba, and includes surveys of Ethiopian history, geography, ethnography, linguistics, wildlife, etc. Volume II (1922) surveys Addis Abäba, its buildings and population, and the country's then "contemporary" history from Mənilək's death to the rise of *ləğ* ↗Iyasu. Volume III (1929) discusses Ethiopian material and moral life. Two further volumes, on Ethiopian religious and political institutions, remain unpublished. They are preserved, together with his writings on his wartime experiences, in the Bibliothèque Nationale, Paris. A projected Amharic grammar has not, however, been traced.

Mərçа Wäldä Kidan

Šum tämben M. (ምርጫ፡ ወልደ፡ ኪዳን, variants: Mərrəčа, Mərrač, b. ca. 1820s, d. 1864/65) was the ruler of ↗Tämben, a province in Təgray, and father of Kaśa Mərčа (later *aṣe* ↗Yoḥannəs IV). M. had his seat at ↗Mälfa in the mountainous Dägg$^{w^{c}}$a Tämben. Due to his connections to the old leading families of Təgray, he was regarded as one of the first nobles of the region. He himself, however, never acquired a central position within the Ethiopian power structure, but transmitted his own claims for rulership to his descendants.

M.'s mother, Wärqwəha, was married to *šum tämben* Wäldä Kidan Wäldä Mika$^{\circ}$el and traced her descent to *ras* ↗Mika$^{\circ}$el Səḥul, a great Təgrayan ruler. M.'s wife *wäyzäro* Śəllas Dəmṣu, was a daughter of Dəmṣu Däbbäb, the governor of Ǝndärta and a grand-nephew of the famous Təgrayan ruler *ras* ↗Wäldä Śəllase. Hence, *wäyzäro* Śəllas was connected to the main house

of Ǝndärta. Through her mother, *wäyzäro* Tabotu Wäldu, a sister of *däğğazmač* ↗Säbagadis, last of the Təgrayan rulers of the *Zämänä mäsafən* she was also connected to the house of ᶜAgamä. In local tradition *wäyzäro* Śəllas appears as a courageous women, who died at the end of Tewodros's reign at the hands of his soldiers.

Both M. and Śəllas supposedly had connections to the ↗Solomonic dynasty. M.'s mother, *wäyzäro* Wärqwəha, was allegedly linked to this line through Mikaᵓel Səḥul, while M.'s wife traced her descent to *aṣe* ↗Zärᵓa Yaᶜəqob and other rulers. These connections were utilized by M.'s son Kaśa, who claimed the imperial throne on the basis of his connections to three Solomonic kings. This provided the legal basis that he could be crowned as king of kings of Ethiopia.

M. and Śəllas also had a daughter, Dənqənäš, and three other sons, Gugsa, Maru and Ḥagos. When M. died, his sons joined the court of *aṣe* Tewodros II. This was a common practice, its purpose being for the prospective young leaders to learn the art of war and government, but above all to receive an appointment and return home with a title and an office. Gugsa, the elder son, already had experience of governorship having governed Ǝndärta in 1861 after the death of his uncle, *däğğazmač* Ḫaylä Maryam Dəmṣu. This was probably the reason why Tewodros gave him the title of *däğğazmač*. Maru was placed a step lower as *fitawrari*. At the time Kaśa was placed the lowest, with the title of *balambaras*. Maru is said to have died at a young age. *Ǝtege* Dənqənäš achieved a considerable political position through her marriages. She was first married to Gäbrä Kidan, a close follower of her brother Kaśa in the early stages of his career. She then married *wag šum* Gobäze (later *aṣe* ↗Täklä Giyorgis II) and had a son by him named Śəyyum.

Izabela Orlowska

Mərčа Wärqe

M.W. (ምርጫ፡ ወርቁ, Tgn. Mərrəčа, spelling himself in Engl. "M. Warkee", also called *liqä mäkʷas* Wärqe; b. ca. 1825, d. after 1896, ᶜAdwa) was one of the first foreign-educated Ethiopians who acted as a diplomat, secretary and interpreter for several Ethiopian rulers. His grandfather, an Armenian named Garabed (Käräbet), settled in Ethiopia as a merchant in the 18th cent. His father *aytä* Wärqe Käräbet was a wealthy goldsmith at May Gʷaggʷa near ᶜAdwa (cp. ↗Fəremona), and once an envoy of ↗Säbagadis Wäldu to Egypt (1822/23), with some contacts to the British; Wärqe's sister had married the British migrant William ↗Coffin after 1810.

In April 1837 Wärqe sent his two sons, M.W. and Gäbru (in English documents also known as "Bru"), to Bombay, in order to receive education at the British missionary school of John Wilson. Wärqe had already been in close contact with the Protestant missionaries ↗Krapf and ↗Isenberg, whom he served as a guide on their journey to Šäwa. The brothers stayed at Wilson's school until January 1843 and then went back to Ethiopia. In 1845 both returned to Bombay via Aden, Kattiarwar (a missionary station) and Gogo, from where they tried to raise interest for a Protestant mission to Ethiopia. In 1849 they left India for good and founded a school in ᶜAdwa, together with a priest from Waldəbba. This was the first school inspired by a Protestant mission in Ethiopia (two decades later it was again at ᶜAdwa that a Protestant school was founded, by Friedrich ↗Bender and his wife). After many students and their co-teacher died, they had to stop teaching. When Krapf returned to Ethiopia in 1855, with ↗Maḫdärä Qal and Martin ↗Flad, to prepare the re-opening of a Protestant mission (↗St. Chrischona-Pilgermission), M.W. was their first local contact. M.W. then became, together with the missionaries, a follower of *aṣe* ↗Tewodros II and served as a middleman between him and the foreigners; as such he witnessed the death of consul ↗Plowden during a battle with the rebel ↗Garäd Kənfu. *Ləğ* M.W. – being one of only two Ethiopians to know English well – assumed a crucial political role in 1867/68, when the British-Indian intervention army, led by ↗Napier, came to Ethiopia to free the captives of Tewodros II. M.W. established the contact between Napier and the young Təgrayan ruler *däğğazmač* Kaśa Mərčа (later *aṣe* ↗Yoḥannəs IV), and thus helped in securing him Napier's support after Tewodros's

Mərčа Wärqe (centre) as the Təgrayan envoy to the Napier expedition in 1867 with his attendants behind him, on his right Brigadier-General William Lockyer Merewether, Werner Munzinger, *liqä mäkʷas* Aläma (Kaśa's cousin), Charles Speedy, on his left the priest Gäränkaʾel; drawing after a photo, from the collection of Alex Capus

downfall. *Ləğ* M.W. was then perceived as Kaśa's "chief minister" (Waldmeier n.d.:42) and his main foreign advisor. In 1870 Kaśa nominated M.W. envoy to Great Britain, together with *aläqa* ↗Bərru Wäldä Giyorgis, with the task of taking letters and gifts and asking for craftsmen. But they only reached Cairo, waiting there for about ten months, as London did not wish to receive an Ethiopian mission. In late 1875, following the ↗Egyptian–Ethiopian war, he served as Yoḥannəs's envoy in Cairo, where he had to carry out the peace negotiations after the battle of ↗Gundät. He – from then on mostly called "*liqä mäkʷas* Wärqe" – stayed involved in negotiations with the Egyptians during the ongoing conflict. He was the most active go-between after the battle of ↗Guraᶜ, once (in April 1876) he was even virtually kept as a hostage by the commander-in-chief ↗Muḥammad Rātib *bāšā*. In 1884 M.W., together with his nephew *ləğ* Yoḥannəs Mäšäša Wärqe, were acting as Yoḥannəs's secretaries during the drafting of the ᶜAdwa peace treaty (↗Hewett Treaty) and then sent as envoys to London, to bring the ratified treaty back to Ethiopia (RubActa II, 347). In 1896 M.W. was still the interpreter of Yoḥannəs's son *ras* ↗Mängäša.

M.W. also played a certain role in the creation of a written ↗Təgrəññа literature, as he was involved in a project of a Təgrəññа ↗Bible translation in 1867/68 (Smidt 2003:51). However, this project never went far, probably due to a lack of funds, and manuscripts are not preserved.

Wolbert Smidt

Merchants ↗Trade

Meritorious complex

A syndrome of cultural features labelled the M.c. ("Verdienst-Komplex") has been a focus of culture-oriented research carried out particularly by German-speaking scholars since the 1930s. Its geographical concentrations were parts of southern and south-eastern Asia, Melanesia and predominantly north-eastern Africa, where it was documented among ethnic groups of southern Ethiopia such as ↗ᶜAfar, ↗Somali, ↗Oromo, ↗Sidaama, ↗Hadiyya, ↗Wälaytta, ↗Dorze, ↗Konso and many others. Certain relics could also be found among the Amhara and other peoples of northern Ethiopia (cp. ↗Gaz).

The M.c. consists of three major domains: 1. the killing system, i.e. a detailed scale of honorary rewards for the killing of male human adversaries and/or dangerous animals, 2. "feasts of merit", i.e. festivities on the occasion of possession of a certain number of cattle (in other parts of the world water buffaloes or pigs), and 3. conspicuous ↗funeral ceremonies associated with

memorial monuments erected for the glory of "heroes" who were able to achieve these goals.

These elements are a primarily male-oriented matter; females usually do not have more than a passive role in them. The ethos of the courageous, enterprising, wise and rich man was idealized to such an extent that it became a core element of culture in the societies of the M.c. For the ordinary man the most common possibility to gain "merit" was by killing human enemies or species of big-game such as ↗elephants, rhinoceroses, ↗lions, ↗leopards and buffaloes. In order to prove the deed, the genital organs of slain men and particular parts of the bodies of animals, such as tails, skins or tusks, were taken as trophies (cp. ↗Hunting). According to widespread norms only a man who had destroyed life was able to procreate new valuable life. The sophisticated scales of "killing units" varied among the different groups. The killers were honoured by opulent feasts, they received insignia such as earrings, arm-rings and phallic symbols, titles, privileges and became members of a "meritocracy". On the other hand, they were also submitted to certain rules of behaviour and a set of special avoidances (Haberland 1957; Braukämper in PICES 14).

Killer's sign (erected stick) near Wonago, Alabdu-Guggi; photo 1954/55, by Elisabeth Pauli, courtesy of the Frobenius-Institut, Frankfurt am Main (no. 27–Pa037–39)

Unlike the "killer system" which had to be abandoned following modern changes in the second half of the 20th cent., feasts of 100 and rarely of even 1,000 cattle are still performed in some parts of southern Ethiopia according to the traditional patterns. In the cases of some peasant peoples with few livestock "feasts of merit" can be based on material resources of a more general character, such as wealth in land, agricultural yield, modern means of transport and money. This is documented, e.g., on the Dorze who developed a complicated system of acquiring the rank of a *halaka* (VSAe III, 186ff., 194f.; Freeman 2002:83ff.).

Another major component of the M.c. is the prominence of funeral customs. The wooden ↗stelae on the ↗graves of the Konso, Gato and other groups and the decorated tombstones of the Arsi, memorializing the merit positions of the persons buried there, are the most spectacular examples.

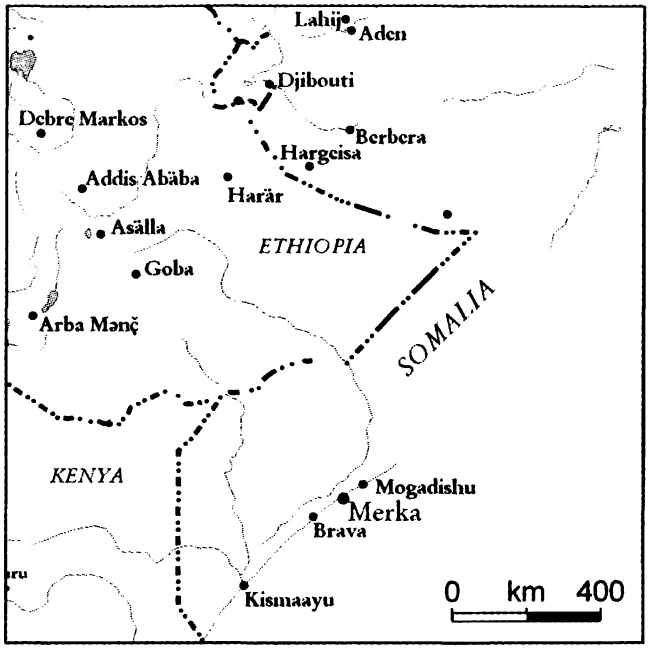
Ulrich Braukämper

Merka

M. (Somali also Marka; Ital. Merca; 1° 43' 11" N; 44° 45' 35" E) is the major town and administrative centre of the Lower Shabelle region (Somali Shabeellaha hoose; population ca. 40,000), lying ca. 70 km south of ↗Mogadishu and 15 km away from the fertile valley of the Lower Shabelle.

According to an oral tradition, M. was founded by Syrian and Persian immigrants as part of a series of towns on the East African coast commissioned by ᶜAbdalmālik b. Marwān (r. 685–705 A.D.), fifth Caliph of the Umayyads. In written sources, the town is first mentioned by al-↗Idrīsī in the 12th cent.; it also appears in the books by Yāqūt al-Ḥamawī and ↗Ibn Saᶜīd al-Maġribī in the 13th cent. (cp. Gori 2006:35f.). The origin and meaning of the name of the town are unknown.

M. has served at least since the 16th cent. as a commercial emporium on the Somali coast east



of the ↗Wabi Šäbälle (Shabelle). Exports included slaves, ivory, spice, aromatic gums, cattle and hides. In return textiles, metal, carved daggers, pepper, tobacco and a variety of manufacture goods, including fire-arms were imported.

However, the importance of M. as a trading seaport is severely limited by the coral reefs that face its harbour making its expansion and modernization practically impossible. During the colonial interlude, the Italians tried to re-condition the port facilities in order to allow them to handle the huge volume of bananas and citrus fruits coming from the nearby Italian-originated Shabelle-valley plantations. Still, to the present, it is necessary to carry these goods by lighter vessels to ocean-going merchant ships.

By the 13th cent., Somali immigrants from the northern interior, like the ↗Digil of the ↗Raḥanween clan confederacies and the Ǧiddu, seem to have repeatedly overrun the coast changing the character of M. from Arab/Persian to Cushitic/Somali. Since the 16th cent., the Biyamaal (or Bimaal) have risen to be the dominant ethnic group around M., later contested by the Habar Gidir Hawiye. Today the ᶜAyr sublineage of the Habar Gidir controls M. and indeed much of southern Somalia.

From a religious point of view, the town has been directly and tightly linked to the famous Islamic pilgrimage centre of ↗Šayḫ Ḥusayn in Bale. A genealogical document about this saint makes ↗Ḥusayn a forefather of *aw* ᶜUsmaan (Cusmaan), the "patron saint" of M., whose tomb (dated to 1560 A.D. or earlier; cp. Freeman-Grenville in EI², 1023) is an important Somali pilgrimage site. Moreover, the same text says that a descendant of ᶜUsmaan went to settle in Bale.

At the end of the 19th cent., the *Aḥmadīya* ↗Islamic brotherhood, which spread in M. thanks to the activity of *šayḫ* ᶜAli Maye (Cali Maye; d. 1916; cp. his hagiography in Gori 2003:195–394), gave new strength to the connection of the town's mystical milieu to the sanctuary of *šayḫ* Ḥusayn in Bale (ibid. 245–48).

A folk poem describes M. as:

Merka cadey,
Minan aw Cusmaan,
Martidi mooda,
Munaafaq waaye.

'White M., Home of beloved Saint Cusmaan, The stranger who fails to intercede at [Cusmaan's] shrine, Is of evil heart.'

The adjective "white", a frequent epithet of M. sometimes felt as an integral part of the name of the city, most probably refers to the town's limestone buildings. It may also refer to the fair-skinned inhabitants of Arab/Persian descent, as opposed to the darker-coloured Somalis of the hinterlands.

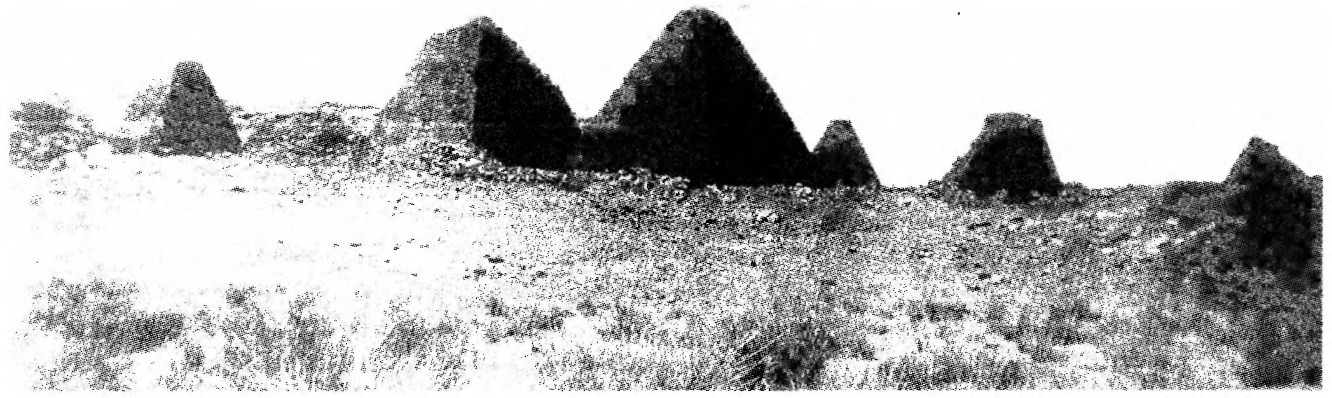
Said Samatar

Meroë

History of Meroë

M. is an ancient Sudanese city. Its ruins are located ca. 180 km north of present-day Khartoum.



The pyramids of Meroë; photo 1878, from Buchta 1881

It succeeded ↗Napata shortly after 300 B.C. as the capital of the Kushite empire (↗Kush), expanding along the Middle Nile and the Butana steppelands.

The southward orientation toward the zone of rainy seasons offered new economic possibilities by allowing extensive agriculture, cattle-breeding and the exploitation of the local ferruginous resources. Under these conditions, a number of settlements arose in that area, becoming important in royal ideology. In general, the Meroitic period shows remarkable changes in the kingdom's intellectual foundations through a weakening of Egypt's cultural impact, as indicated by the incorporation of autochthonous deities into the local pantheon, by new patterns in religious architecture and royal iconography, as well as by the emphasis on the matrilineal concept of legitimation. However, the most important feature was the creation of a specific script to represent the indigenous language (s. below).

On the other hand, contacts with the Mediterranean world are attested by influences in architecture, iconography, sculpture, pottery, a great number of imported luxury goods and a few texts mentioning "envoys to Rome". This openness may also be reflected by the appearance of ruling queens since the late 2nd cent. B.C., obviously triggered by the political situation in contemporary Ptolemaic Egypt.

Only a few decades later, another political innovation seems to have taken place, as demonstrated by the growing significance of the supreme military commanders. From the 1st cent. A.D. onwards, an interior separation within the kingdom is traceable. While the south fell into a state of stagnation, the north, prospering by its strong trade with Roman Egypt, became *de facto* semi-independent under a line of hereditary vice-kings.

Contacts with the ↗pre-Aksumite and ↗Aksumite cultures seem to have existed primarily on commercial level, and are testified to by only a few artefacts of Napatan/Meroitic origin found in Ethiopia and Eritrea. The objects – a Cippus of Horus and a Meroitic archer's loose (from Aksum), four decorated bronze bowls (ʿAddi Gälämo), two faience amulets (Ḥawəlti), an alabastron and some campaniform cups (Yəḥa), as well as an amulet of Harpocrates, a Pataikos and a statue of the god Nefertem (Mäṭära) – give little indication of the intensity of relations. Peaceful relationship obviously changed as a result of ↗Aksum's westward expansion and may have resulted in a series of border conflicts. A Meroitic victory in one of them seems to be celebrated in a rock-depiction at Ǧabal Qaylī in ↗Kassala province dating to the mid-1st cent. A.D., and showing king Amanisalaḫe (Sorakarora) smiting foreign enemies. However, this interpretation is far from clear and the slain foreigners may also represent a local group.

By mid-4th cent. A.D. the Meroitic empire collapsed as a result of three major factors: the displacement of Roman trade to the rising Aksumite kingdom; an ecological catastrophe caused by extensive deforestation followed by the abandonment of settlements; and the increasing immigration of Nubians from the west, creating independent chiefdoms in the Middle Nile Valley (↗Nubia). At least two Aksumite campaigns affecting Sudan are attested for that period, the second being conducted by ↗ʿEzana, recording the shift of political power leading to the establishment of three – later Christianized – Nubian kingdoms.

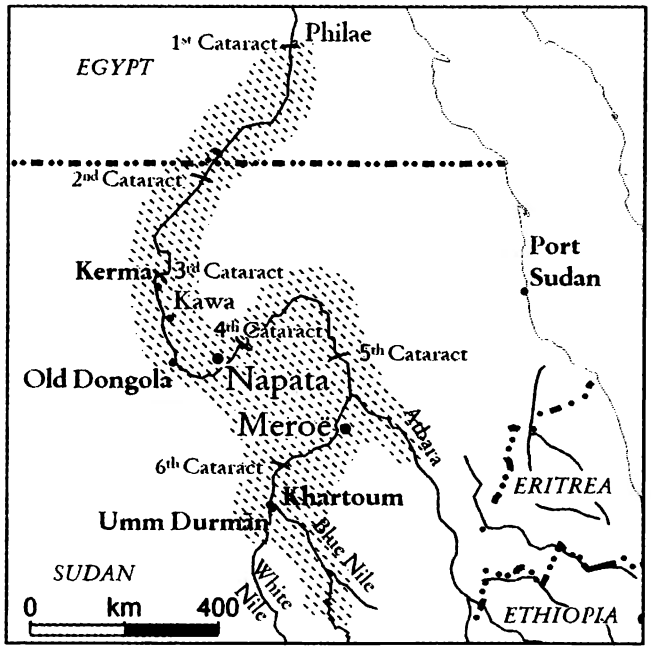
Meroitic language

Meroitic is the extinct official language of the kingdom of M. It replaced Egyptian in text records from the late 2nd cent. B.C. onwards and used an independent script in hieroglyphic and cursive forms. Both consist of 23 graphemes (plus a so-called "word divider"), derived from Egyptian Hieroglyphic and Demotic. The language survived the end of M., as the latest inscription was drafted for the Blemmyan (↗Beğa) king Kharamadoye in Kalabša at the turn to the 5th cent. A.D. The corpus of texts as so far recorded in the REM comprises 1379 documents (with 357 numbers left vacant): monumental royal stelae inscriptions, mortuary inscriptions, ostraca and graffiti. The phonetic values of the signs were determined by Griffith in 1911. Nevertheless, only limited progress has since been made in disclosing the grammatical structure of Meroitic. The lexicon is also largely unrevealed except for a few native terms and Egyptian loanwords.



Griffith's assumption that Meroitic represents an early form of Nubian was soon abandoned on account of the fundamental difference between the two languages. Basing on Meinhof's alternative investigation, Zyhlarz (e.g. 1930) hypothesized that it is a Cushitic or at least "Hamitic" language, therefore related to Tu Bedawie (i.e. ↗Beğa). Hintze's fundamental studies demonstrated convincingly that it does not belong to ↗Afro-Asiatic, but forms an early branch of the ↗Nilo-Saharan group. This view is supported by recent research and is generally accepted in Meroitic studies today. Leaving these efforts unconsidered, Böhm (1988) renewed the "Hamitic" hypothesis, relying on Zyhlarz's obsolete arguments.

Finally, it must be admitted that, in absence of longer bilingual inscriptions (the only one known hitherto is much too fragmentary to be reliable) and thus reliable evidence for linguistic comparison, our grammatical and esp. lexical knowledge of Meroitic remains insufficient.

Aksumite inscriptions and relics in Meroë

Despite the direct neighbourship of M. and Ak-

sum, the earliest relics of Aksumite origin on Meroitic territory, amounting to two fragmentary royal ↗inscriptions in ↗Greek, two graffiti in ↗Gəᶜəz and a coin, do not date before the late 3rd/beginning of the 4th cent. A.D.

The first Greek inscription, FHN 285 (= RIÉ 286), from M., represents a part of a throne-like triumphal monument: according to a recent suggestion (Hahn 1983), it might be attributed to ↗Ousanas (?), and indicate that, a few decades before its end, the kingdom became an Aksumite vassal. Inscription FHN 286 (= RIÉ 286A), unearthed at the same site, is neither palaeographicaly nor linguistically telling, and leaves undisclosed its patron king, though it may fall within the 3rd cent. A.D.

Both documents obviously predate the well-known military campaign led by ᶜEzana, after his conversion to Christianity, against the Nubians, successors of the Meroites as a political power along the Middle Nile. According to the relevant epigraphic record (DAE 11 = RIÉ 189), only two cities, including the former capital, remained in the possession of the Nubians, and a throne was erected at the confluence of ↗Nile and ↗Atbara, for which archaeological evidence is hitherto lacking; but there is no hint at the existence of a royal dynasty. The proposal according to which FHN 285 would be a fragment of that monument seems highly unreasonable, given both the geographic distance and the coeval political conditions.

Two graffiti in Gəᶜəz, carved into the murals of the royal pyramid chapel Beg N 2 at M. and, resp., of Temple T at ↗Kawa, in Lower Nubia, obviously reflect the presence of Aksumite travellers taking the "Nile route" to Egypt. Their dating into the 4th cent. A.D. seems to be sound. Probably, the Aksumite coin unearthed in M. may be put in the same context, belonging to the so-called first anonymous minting series, attributed either to the late 4th or better early 5th cent. A.D.

In general, FHN 285 and 286, as well as DAE 11, are deemed to prove the Aksumite expansion into the Nile valley south of the Atbara for at least the greatest part of the 3rd/4th cent. A.D., as also reflected in the royal title "king of (the) ↗Kasu", i.e. "of (the) Kush(ites)", borne by Ousanas (?), ↗ᶜEzana, ↗Kaleb and ↗WᶜZB. The end of this domination or suzerainty over the area of M., engulfed a few decades after the collapse of its dynasty, remains uncertain, but may well coincide with Aksum's supposed withdrawal, in the second half of the 6th cent., from the Nubian kingdom of ᶜAlwa (Alodia).

Məsbak

M. (ምስባክ, from ሰበከ, *säbäkä*, 'to preach/to proclaim') indicates the proclamation or singing of a psalm versicle during the Eucharistic liturgy (↗*Qəddase*) or the Liturgy of the Hours (solemn Vespers; ↗*Wazema*). By extension, it means an elevated place (e.g., a step of the *qəddəst*) from where one of the ministers, usually the deacon, proclaims the psalm versicle before the reading of the Gospel. The M. is always executed alternately by the deacon and the assembly.

Since the M. is sung immediately before Gospel readings, it is known as the *qədmä wängel* (ቅድመ፡ ወንጌል, lit. 'before the Gospel'). The choice of a given verse for the M. rests on some allusions fitting the celebration; one single word of the verse may be enough for that. M. has been compared to *prokeimena* (Gr.), i.e. responsorial psalm sung before the epistle in the Byzantine Eucharistic Liturgy.

We can distinguish several groups of M. Depending on the type of service, one chooses between the *Qəddase* M. and the *Wazema* M. The first is sung only during the *Qəddase*, and the second is sung only during the *Wazema*, both before the reading the Gospel, with the difference that the *Wazema* M. ends with small doxology (*səbḥat*). Moreover, there is the *Mäwäd-*

dəs M. that is sung during the Sunday office (↗*Mäwäddəs*).

The *Mäwäddəs* M. has no connection to any Gospel reading and consists of verses from the ↗Psalter, from Ps 89 [90], 71 [72], 117 [118], 106 [107], 135 [136] (the last three being considered as one unit because in the Gəʿəz version they have the same opening). One can distinguish between two *Mäwäddəs* M. groups: the Sanctoral and the Temporal.

The *Wazema* M. chooses psalms verses in a similar way to the *Mäwäddəs* M. They also have a similar outline. The *Wazema* M. chooses 2–3 versicles of a psalm with the sense suitable for the specific liturgical period or the celebrated feast, followed by the last verse of the same psalm, and concluded by the unusual doxology: "Glory to the Father, the Almighty; glory to the Son the Creator of all things; glory to the Holy Spirit, to this name, for ever and ever". The *Mäwäddəs* M. combines three parts of a psalm – *wəṭṭane dawit*, 'beginning of the psalm', *kärśä dawit*, lit. 'belly of the psalm', i.e. its liturgical (thematic) part; *fəṣṣame dawit*, 'end of the psalm', which is concluded by the small doxology.

The elements of psalms that constitute the *Wazema* M. and *Mäwäddəs* M. may indicate that the present use of the M. is a reduction of a former antiphonal psalm arrangement which used to be sung entirely. The same reduction has occurred to the psalms used in the *Dəggʷa* service of the *Mäwaśəʾət* (HabUff 106f.), *Sälam* (ibid. 190), and *Śäläst* (ibid. 195ff.).

Məṣəwwaᶜ, Məṣwaᶜ ↗Massawa

Məsläne

M. (**ምስለኔ**, lit. 'deputy', 'representative', 'administrator') was a representative of a king or governor acting as an administrator. The term is sometimes interpreted as Amh. *məssəl* [*lä/*]*yäne*, (lit. 'image of me', or 'like me'). The term is of unclear origin, with the earliest evidence appearing from the 18th-cent. Šäwa. The deputy of the Šäwan king (↗*Nəguś*) was called M., in keeping with the term's literary meaning (cp. ↗*Ǝndärase*), but had the title of ↗*liqä mäkʷas*, constantly residing in Ankobär and acting in place of the king when the latter was out of the capital (EgeClass 109). Later M. appears in the system of administration as deputy of a senior administrator, with somewhat vague functions chiefly defined by the nature of the responsibility of the latter. M. were governors of the *mad bet* i.e. crown property lands with the obligations to provide fuel, food and other materials for the court. On the other lands which did not belong to the crown, M. were deputy governors responsible specifically for taxes to the king himself. There were also M. of the markets (EgeClass 154ff.). The system of M. was retained by *nəguś* Mənilək. M. who administered *mad bet* (or *ḫudad*) lands received ↗*madärya* as a reward (MahZekr 117). In other cases M. were rewarded with a part of the products of the region.

The system was extended to other provinces. In 1897 Mənilək appointed a M. of Goğğam seeking to control it without "taking the province away" from the children of *nəguś* ↗Täklä Haymanot (GueCopMen 511). Later, under *nəguś* ↗Ḫaylu Täklä Haymanot, Goğğam was devided into 14 districts, each having a governor and his deputy, a M. (PerGov 288). In the system of the modern Imperial administration under *aṣe* ↗Ḫaylä Śəllase I, M. were retained as administrators of *məkəttəl wärädas* (ibid. 347f.).

Hanna Rubinkowska

Messmer, Pierre Auguste Joseph

M. (b. 20 March 1916, Vincennes, Val-de-Marne, d. 29 August 2007, Paris) was a French politician, who had been active in ↗World War II as a leader of the forces of France Libre in the Horn of Africa.

M. was a son of an Alsatian industrialist. He studied at the École nationale de la France d'outre-mer and at the École des langues orientales (↗Institut national des langues et civilizations orientales), during the 1930s, receiving his doctorate in the field of colonial administrative law in 1939. Drafted in 1937, he joined the Free French Forces under General Charles de Gaulle in London in July 1940 after the French defeat against Nazi Germany and served as lieutenant, from 1941 onwards as commander of the 3rd company in the French Foreign Legion's 13th Half-Brigade (Bergot 1975:104–10).

To support General William Platt's campaign against the ↗Africa Orientale Italiana, leading to the siege and battle of ↗Kärän from 1 February to 27 March 1941, the Free French Legionnaires, sailing from Cameroon via Freetown round the Cape of Good Hope, debarked in Port Sudan on 14 February, entered northern Eritrea and joined the siege of Kärän on 13 March. M. and the Free French Legionnaires were among the troops to enter and finally seize the city.

After Platt's troops occupied ↗Asmära on 1 April, M.'s 13th Half-Brigade managed to capture the city and port of ↗Massawa after half a day of fighting, as well as Admiral Bonetti's Fort Vittorio Emanuele in a sudden assault on 8 April 1941, thus ending continual Italian rule since 1885. M. and his 3rd company captured three officers and 70 marines whilst attacking Italian fortifications with submachine guns and grenades. Altogether two generals, more than 100 officers and 14,000 soldiers were taken prisoner; and the small Italian Navy squadron in the ↗Red Sea ceased to exist.

British and Indian troops hastily deployed guards to save local shops from being looted by the rollicking Legionnaires (Bergot 1975:113–16). For his merits in Eritrea, M. was decorated with the Croix de la Libération by General De Gaulle who shortly thereafter ordered his Legionnaires into Vichy-controlled Syria (O'Ballance 1961:164). M. later also engaged in the battles of Bi᾽r Ḥakīm and Al-ᶜAlamayn, in the liberation of Paris and in the French Indochina war. He became a high official of the French colonial government in Indochina during the late 1940s and governor of several French colonies in Africa in the 1950s, before joining Charles de Gaulle's government as Minister of Defence and as Minister of Overseas Departments and Territories after 1960. Between 1972 and 1974 M. was appointed Prime Minister under the presidency of Georges Pompidou. Since 1999 he has been chancellor of the Institut de France and member of the Académie française as the successor of Maurice Schumann.

Magnus Treiber

Məṣṭir: Mäṣḥafä məṣṭir

The M.m. (መጽሐፈ፡ ምሥጢር, 'Book of Mystery') is a large anti-heretical work by *abba* ↗Giyorgis of Sägla, now generally assumed to be the same as Giyorgis of Gasəčča. The scholars who still believe that they are different personalities from different ages (cp., e.g., Yaqob Beyene 1989:37 n. 8, 39 n. 15) unanimously attribute the M.m. to Giyorgis of Sägla.

According to its colophon, the M.m. was completed on the 27 *Säne* 6916 A.M. [21 June 1424 A.D.], in the tenth year of *aṣe* Yəsḥaq's reign (s. YaqMist II, 312 [text] = 174 [tr.], where the reading "6917 A.M." is accepted; for a detailed discussion of the colophon and the dating to 6916 A.M. s. Getatchew Haile 1981a:112 and n. 44), probably one year before Giyorgis's death at the age of 60, around 1425/26 A.D., in the twelfth year of *aṣe* Yəsḥaq's reign, as attested in the saint's Vita (Colin 1987:53 [text] = 39 [tr.]). The "short chronicle" (BassÉt I, 326 [text] = II, 96 [tr.]; BegCron 12; DombrChr 36 [text] = 155 [tr.]) states that the M.m. was composed during Zär᾽a Yaᶜəqob's reign as a consequence of the discussions between Giyorgis and a foreigner (*afrənǧ*), formerly identified with Francesco Brancaleone. Conti Rossini (1948:15) dismissed the claim, both in regard to the dating to Zär᾽a Yaᶜəqob's time, i.e. after Giyorgis's alleged death in 1425, and to the identification of the foreigner with Brancaleone. Conti Rossini proposed instead the identification of the *afrənǧ* with a Venetian "Messer Zan", who is believed to have put at Giyorgis's disposal the *Vorlage* of the *Athanasian Creed* (↗Athanasius), also translated into Gəᶜəz by the Ethiopian writer, as stated in the colophon of the *Creed* (§ 17), ms. BritLib Orient. 793, fol. 110rb, ዘንተ፡

ሃይማኖተ፡ ጸሐፈ፡ አትናትዮስ፡ ዘሀገረ፡ ባባ፡ እንተ፡ ይእቲ፡ መንበረ፡ ጴጥሮስ፡ ወጳውሎስ፡ ወአምጽአ፡ ምስር፡ ዛን፡ ዘብሔረ፡ አፍራቅያ፡ እስከ፡ ብሔረ፡ ኢትዮጵያ፤ ወአዕለውክዎ፡ አነ፡ ጊዮርጊስ፡ ሰግላዊ፡ ..., 'Athanasius of the city of *baba* [i.e., 'of the Pope', according to Conti Rossini 1948:15], which is the see of Peter and Paul, wrote this Faith, and *Məssər Zan* [i.e., a Venetian 'Messer Zan(e)', that is 'Sir/Mr. John'] of the land of Africa [i.e., 'of *Afrəngi*', according to the correction by CerLett 144, n. 1] brought it to the land of Ethiopia. And I, Giyorgis of Sägla, translated it ...' (Grébaut 1915–17:73 [text] = 76 [tr.]; cp. Marrassini 1981: XXXIX; Getatchew Haile 1981b:239; Yaqob Beyene 1989:40). The erroneous dating of the *Arganonä Wəddase* (↗*Arganonä Maryam*) to Zär'a Ya'əqob's time as well as its false attribution to an unknown "Giyorgis the Armenian" (cp., e.g., GuiSLett 65f.; CerLett 114; RicLett 828) have been conclusively refuted by Getatchew Haile (1982:66f.; cp. also Yaqob Beyene 1989:39 n. 14, 43).

The M.m. is organized into 30 chapters in the form of homiletic treatises, to be read on the occasion of the major feasts of the liturgical year. Each of the treatises first exposes a heretical doctrine, and then proceeds to its refutation. Most of the heretical doctrines are attributed to heresiarchs of the patristic age: ch. 1, Sabellius; chs. 2 and 16, *Aburyos*, i.e., Apollinarius; ch. 3, ↗Arius; ch. 4, ↗Nestorius; ch. 5, Photinus; chs. 6 and 24, ↗Origen; chs. 14 and 17, Eutyches (also *Aftikis*); ch. 15, ↗Severos bishop of the Indies and ↗Theodosios of Alexandria; ch. 18, Manichaeans; ch. 19, *Arsis*, i.e., the 'heretics'; ch. 20, Leo; ch. 28, Flavian; ch. 29, Macedonius. Other doctrines are not listed according to an individual heresiarch: ch. 11, against the Antidicomarianites (cp. ↗Mary); ch. 21, against the Council of ↗Chalcedon; ch. 22, against the Phantasiasts; ch. 26, against the abrogation of the observance of ↗Sabbath; ch. 27, against those who deny the immortality of the soul; ch. 30, against those who deny the resurrection of the dead; chs. 7, 8, 23, 25 on other topics. Only one treatise is explicitly directed against a contemporary Ethiopian theologian accused of heresy: ch. 10, against the doctrine of Bitu (or Betu), who maintained that on the Last Judgement only Christ would come, not the Father and the Holy Spirit. Other treatises exalt the figures of the Virgin (ch. 9), Christ (ch. 11), and the holy orders (ch. 13). The treatises vary in length, probably according to the importance and urgency of each subject; e.g., ch. 26, on the observance of the Sabbath (cp. also Beylot 1994:170ff. [tr.]) is particularly long. This had been a considerable field of controversy for over a century, probably even earlier, reaching its climax in the first half of the 15th cent. In spite of the scarcity of references to contemporary issues (only the heretic Bitu is explicitly mentioned, also recorded in Giyorgis's *Gädl* as his personal enemy, cp. Colin 1987:27–30 [text] = 20ff. [tr.]), it is clear that the main target of the M.m. was the theological position of dissidents and/or opponents to royal authority, who may have in turn fostered their ideologies by means of patristic writings and even ancient sources (cp. Conti Rossini 1948:14; Piovanelli 1994:196). It was no coincidence that the author, the most prominent intellectual of the royal court, was canonized soon after his death (Derat 1998). Getatchew Haile has indicated both the anonymous author of homilies ↗*Rətu'a Haymanot* and the theological positions originating in much debated 14th-cent. writings, such as the ↗*Qälemənṭos* , as among the polemic targets of the M.m. (cp. Getatchew Haile 1981a:103ff.).

The question of the sources of the M.m. still needs careful investigation. In fact, besides the acquaintance with obvious writings (the Bible and various well-known patristic collections such as the ↗*Qərəllos*, as well as later texts translated from Arabic, the collaboration of Egyptian scholars too having been proposed by Yaqob Beyene 1989:43), the recent emergence of new texts definitely prove that Giyorgis of Sägla had access to ancient sources, also dating to the Aksumite age and only partially known to us: this can be demonstrated in particular for the so-called *Aksumite collection* of canonico-liturgical texts (cp. Bausi in PICES 15; Id. 2006). In a polemical passage of the M.m., Giyorgis lists seven sections forming the "Sinodos of the apostles" (YaqMist II, 305f. [text] = 169f. [tr.]; for the polemic target of the passage cp. Getatchew Haile 1981a:103ff.), which can now be partly identified as belonging to the ↗*Senodos* (*Synodus Alexandrina*, *Canons of Simon the Canaanite*, a recension of the *Apostolic Canons*, *Canons after the Ascension of Our Lord*, *Letter of Peter to Clement*) and partly as belonging to the *Aksumite collection* (*Baptismal Order*, *On the Sole Judge* or *On the Unity*). It can not be ascertained if such a collection ever existed (cp., e.g., YaqMist II, 170, n. 30 [tr.], for this hypothesis), or if it is an abstraction made by Giyorgis, but the passage certainly attests that the author of the M.m. still had a certain knowledge of these sections in the first half

of the 15th cent. Giyorgis's familiarity with ancient texts may also be reflected in the ms. tradition of the M.m.: some mss. of the work (BN Éth. 113, EMML 1831, 2426, 2429, 6837) contain a *Sylloge* of writings by Timotheus Ailouros, which is also part of the *Aksumite collection*; moreover, the mss. EMML 1831 and 6837 have inserted the *Refutation of Chalcedon*, part of the *Sylloge*, inside the M.m., and in ms. EMML 1831 the *Refutation* takes the place of the usual anti-Chalcedonian treatise (ch. 21) (cp. Bausi 2002:481ff.). It is more than likely that Giyorgis became familiar with ancient sources through deep intimacy with the rich library of the monastery of ↗Däbrä Ḥayq Ǝsṭifanos (cp. Colin 1987:5 [text] = 4 [tr.]), a *scriptorium* where mss. still witnessing traces of the *Aksumite collection* were written (e.g., mss. EMML 1763, an archaic homiliary dating to 1336/37 or 1339/40, and EMML 1843, a special *Senodos* dating to the 14th/15th cent., with some fragments of the controversial *Qälemənṭos* included [cp. Bausi 1992:15]), within the framework of the complex dynamics between ancient heritage and its revivals (cp. Id. in PICES 15, 536f.; 2006:50f.). One cannot exclude that even for other passages a relationship with ancient sources may be demonstrated, as has been suggested for the millenarian doctrine (cp. Beylot 1974:34ff.), the chapter on Arius (cp. Fiaccadori 1992:10 n. 19), and those on Origen (cp. Lusini 2003).

The M.m. is by far the most important of the works by Giyorgis. Moreover, the scholars who have dealt with it (starting from von Ewald 1844:195; DillmLex ix etc.) have agreed that it ranges among the absolute masterpieces of Ethiopian literature in Gəᶜəz, both for its arduous theological contents and for its complex style, characterized by anaphorical repetitions, similes, metaphors, and rare terms, which demonstrate the profound acquaintance of Giyorgis with all branches of Ethiopian literature in Gəᶜəz, as well as his special taste for rhetorical artifices. Giyorgis himself summarized the essential contents of his major work in the short ↗*Fəkkare haymanot* (cp. Getatchew Haile 1981b).

Probably also the most important Ethiopian original theological work, the M.m. can be in some ways considered a *Summa* of Ethiopian Christian theological thought, and its impact has been lasting and profound on Ethiopian culture and literature. This appears from the frequent reminiscences of passages of the M.m., starting from such works composed during Zärᵓa Yaᶜəqob's period as the *Mäṣḥafä ↗bərhan* (cp. Beylot 1994; Derat 1998:54) and other writings of the 15th cent. (cp. Conti Rossini 1948:14; Yaqob Beyene 1989:41, n. 22), until the period of the harsh controversies of the 17th cent., when the M.m. was also frequently quoted (e.g., in the ↗*Mäzgäbä haymanot*, cp. ibid. 47; Fiaccadori 1992:10 n. 19). The M.m. may still be considered an exhaustive exposition of the official theological positions of the ↗Ethiopian Orthodox Täwaḥədo Church (cp. Yaqob Beyene 1989:48ff.).

A considerable number of mss. transmit the M.m.: besides the earliest ms. known in Europe, first belonging to the Tübingen collection donated by Krapf (no. 9) and later sent to the 'Missionshaus' in Basel (cp. von Ewald 1844:194, n. 1), where it was thoroughly used by Dillmann (cp. DillmLex ix) before being seemingly lost (cp. ZanBibl 120f. [no. 209]; YaqMist I, v, n. 1 [text]), twelve more mss. are known at present: BN d'Abbadie 49 and Éth. 113; EMML 13, 406, 714, 1191, 1831, 2426, 2429, 6456, 6837; Ṭānāsee 18 = Kebrān 18. The edition YaqMist considered all except for the Tübingen ms., plus one ms. (in Mäqälä) out of the four listed by Cowley (1971:24) in Təgray churches and monasteries. The quick circulation of the work is also attested by the age of the mss., seven of which date to the 15th cent. (BN d'Abbadie 49 and Éth. 113, EMML 1831, 6456, 6837, Mäqälä ms., Ṭānāsee 18 = Kebrān 18). According to the editor of the M.m., the manuscripts may be classified as follows (YaqMist I, vff. [text]): (1) BN d'Abbadie 49; and a series of subarchetypes grouping the following mss.: (2) EMML 6837 and 1831; (3) Ṭānāsee 18 = Kebrān 18, Mäqälä and EMML 6456; (4) EMML 2426, probably a copy of EMML 2429, both 19th cent.; (5) EMML 13, 406, 714 and 1191, 20th cent.; (6) the ms. BN Éth. 113 seems to transmit a corrected and contaminated text. It must be observed that this classification has been proposed on the basis of common variants, not on that of shared innovations, which is the only firm ground for reliable genealogical hypotheses. The printed text has been constituted according to the "base manuscript" method, with ms. BN d'Abbadie 49, which the editor believes to be the "best manuscript" and the most faithful witness of the original recension, serving as the basis.

Alessandro Bausi

Məśṭirä aʿəban

The M.a. (ምሥጢረ፡ አዕባን, 'the Mystery of Stones') is an anonymous Amharic treatise (with a few words in Gəʿəz) on the different qualities of stones.

Stones in Ethiopia were used for such practical purposes as constructing churches and making altar tablets (s. ↗*tabot*; cp. *ṣəllat zäʾəbn*, Ex 32:15). Unlike, e.g., the Arabs, the Ethiopians did not speculate much on religious and magic aspects of plain and precious stones, apart from understanding them as part of the Creation. Most of their knowledge on precious stones (rare in Ethiopia) was from the Bible and translated literature: cp., e.g., the explanations concerning precious stones in the *Mäṣḥafä* ↗*məśṭirä sämay wämədr* (Perruchon 1903:66), or the references to the "stones of ↗India" (YaqMist I, 124, cp. related passage in the Vita of ↗Giyorgis of Sägla, Colin 1987:4).

Composed probably in the 1970s and attested in only two recent mss., the M.a. (s. Kane in PICES 6; Id. in EtRicci) seems to reflect the scanty influence of the large corpus of Arabic literature on stones (cp. cp. Getatchew Haile 1981a:103ff.; cp. Steinschneider 1895). A few linguistic features of the work might indicate a translation from, or adaptation of, an Arabic *Vorlage* – even though the bulk of the material included seems to be indigenous (cp., e.g., the author's mention of ↗Ḥawzen, Kane in PICES 6, 320f., no. 1).

The M.a. contains a register of 51 "magic stones" describing their features (s. Kane in PICES 6) and thus giving guidelines for identifying them. The names of the stones may refer to the similarity of the stones to natural phenomena (no. 17 "moon glow", no. 22 "elephant's sandal", no. 27 "head of a fish"), or link them to religious matters and symbols (no. 10 "the sole of the Lord"). Some are of Arabic origin (e.g., no. 5 from Arab. *ḥāris*, 'guard'). Most stones are described according to their shape, size and colour, or to the places they are supposed to be found at (some of them in ↗Egypt or even in biblical Israel). Specific magic powers of the stones are apparently defined by such features (cp. no. 27).

The magic powers of the stones include healing (even though the use of stones in traditional ↗medicine appears to have been limited), attracting or "binding" people or animals, bringing luck, preserving one's property as well as destroying or keeping away one's enemy etc. Some stones are described as so powerful that even angels, saints or biblical personages used them for special purposes (e.g., no. 2 is said to have been used by King ↗Solomon for the construction of the Temple).

↗Magic

Məśṭirä sämay wämədr: Mäṣḥafä məśṭirä sämay wämədr

The M.m. (**መጽሐፈ: ምሥጢረ: ሰማይ: ወምድር**) is an original work of ↗Gəᶜəz literature composed under *aṣe* ↗Zärᵓa Yaᶜəqob, possibly by the middle of the 15th cent.

An apocalypse, i.e. a revelation of secret truths equally unknown to the O.T. Prophets and to the Apostles, the work is divided into four treatises, the first one being formed chiefly by a ↗*dərsan* about Gen and Ex, followed by a ↗*tərgʷame*, i.e. a systematic commentary upon a passage of Ezek, and a *raᵓəy* ('vision') about ultimate things. The second treatise is an original *tərgʷame* on the ↗Revelation of John. The third and fourth treatises are two *dərsanat* concerning "the mystery of the divinity" (**ምሥጢረ: መለኮት**, *məśṭirä mäläkot*) and "the birth of ↗Enoch" (**ልደቱ: ለሄኖክ**, *lədätu lähenok*), respectively. According to its incipit, the work "unfolds the mysteries of the first and the last tabernacle, and explains the mysteries of the whole creation" (Perruchon 1903:1). Yet, this statement only refers to the initial treatise, concerning, in fact, the Pentateuch from the creation to the construction of the first tabernacle, the vision of Ezekiel (ch. 40) about the second tabernacle, and Christian ↗eschatology.

The M.m. was revealed to its probable author, the monk Yəsḥaq, by his spiritual father(s) *abba* Bäṣälotä Mikaᵓəl (mentioned only in the first treatise) and/or *abba* Bäḫaylä Mikaᵓəl (also called Zosimas), who seem to be, however, one and the same person (s. ZotBNat 140; Tubiana in PICES 1, 405). Although the text is somewhat unclear, Bäṣälotä Mikaᵓəl was probably introduced as the elder to whom Yəsḥaq owed his initiation into religious life; but the "master" had already died by the time the book was being composed. Thus, the M.m. conveys the teachings of Bäḫaylä/Bäṣälotä Mikaᵓəl as they were written down by his/their "disciple" Yəsḥaq. The identification of Bäṣälotä Mikaᵓəl with the famous 14th-cent. homonymous abbot of Däbrä Gʷäl is quite likely (cp. ↗Bäṣälotä Mikaᵓəl), albeit in respect of the author's pretension, not by the text's chronological definition.

Yəsḥaq was probably a Təgrəññə speaker, his language showing traces of his mother tongue. This, and his statement that "Habaši are the Təgray" (Perruchon 1903:25, in the context of telling reflections on biblical and local Ethiopian people and languages, 24ff., on which Fiaccadori 1992a:89ff.), led Conti Rossini (1911–12:601f. and 1913) to assume that he came from ↗Akkälä Guzay or the northernmost areas of ↗Təgray.

The work is transmitted in at least five manuscripts: Paris, BN éth. 117 (*olim* éth. 37), 16th cent., brought to France from Egypt, between 1633 and 1637, for Nicolas-Claude Fabri de ↗Peiresc (who actually thought it to be the then much sought after book of ↗Enoch, which he had requested); Paris, BN éth. 118 (*olim* éth. 36), a copy of the foregoing executed by Johann Michael ↗Wansleben in 1670; EMML 2161, A.D. 1783/84, fol. 2r–101v; EMML 4532, 18th cent., fol. 1r–45r; a partial exemplar (first three treatises, with peculiar variants), now in private hands, copied before 1899 from an older manuscript (of ↗Tämben?) at the request of *ras* ↗Mängäša (s. Tubiana in PICES 1, 403f.). An abridged version of the text is found in EMML 2229, 18th cent., fols. 167r–174v. A further testimony, EMML 7023 (uncatalogued), is indicated by Getatchew Haile (1981:115f., with striking ascription to the "fourteenth century [?]"), according to whom it contains a shorter recension, lacking a few passages that are included instead, e.g., in EMML 2161, and would be polemical additions from the ↗*Qälemənṭos*. Peiresc's codex was examined by Hiob ↗Ludolf in 1684, who referred to the M.m. both in his *Historia Aethiopica* (LudHist lib. III, cap. 4, § 49f.) and the relevant *Commentarius* (1691:347).

The first treatise was published and translated by Perruchon (1903, with the help of Guidi); the three others, by Grébaut (1911).

A unique piece in Ethiopian literature, the M.m. still deserves thorough investigation as to its sources, those hitherto known ranging from such apocrypha as the *Gospel of Nicodemus* (CANT no. 62) or the *Questions of Barthelemy* (ibid., nos. 63 and 80), here both with reference to Christ's descent from the cross (Piovanelli 1993:210ff.; cp. Kaestli – Cherix 1993:38–41), to

Copto-Arabic ecclesiastical writings prior to the 13th cent. (Schneider 1990, implicitly discarding the lost Hebrew chronicle advocated by Aešcoly 1937:105ff.; s. also Fiaccadori 1992b:445).

In Cerulli's view, entailed partly by the proposed identity of Bäṣälotä Mikaʾəl, the moods and topics of the work make it a typical late 14th-cent. product in the wake of the literary activity of the age of *aṣe* ↗ᶜAmdä Ṣəyon I (1314–44), the text belonging, by continuity, to the same intellectual framework as the ↗*Kəbrä nägäśt*, the *Life of Ḥanna* and the *Zena Ǝskəndər* (↗Alexander the Great). In particular, the marked exotericism of Bäḫaylä Mikaʾəl's teachings would betray that long standing Gnostic bias of Ethiopian ↗monasticism which is still detectable in the 17th-cent. writings by the ↗Zämikaʾelites (CerLett 42–45, 100f. and 145ff.; but s. now Piovanelli 2004:198, 204f.).

Gianfrancesco Lusini – Gianfranco Fiaccadori

Məśṭirä ṣəgeyat

M.ṣ. (**ምሥጢረ፡ ጽጌያት**, 'The Mystery of the Flowers', also 'The Mystery of the Rosary') is an Amharic ↗hymn praising St. ↗Mary. No Gəᶜəz version of the work has been discovered so far. The M.ṣ. could have been originally composed in Amharic, perhaps in the 17th cent., being therefore one of the earliest works of ↗Amharic literature, and one of a few examples of hymns written in Amharic.

According to Dillmann, the M.ṣ. contemplates the joy and the pains of St. Mary and the life of Christ (DillmBerl 65; but cp. Getatchew Haile in EMML IV, 322). The M.ṣ. presents Mary as the virginal mother of God. The title refers to the analogy of Mary with a flower or blossom. Flowers (sg. *ṣəge*, pl. *ṣəgeyat*) as a symbol of St. Mary are widely used in the Ethiopian Marian ↗hymns, cp., e.g., such works as *Mälkəʾa ṣəge* ('Image[s] of the Flower'; s. ↗*Mälkəʾ*), or ↗*Maḫletä ṣəge* (s. also GrohHymn 63f., 479). Jesus dwelt for nine months in Mary's body which is a holy place, to be compared with an immaculate piece of nature, a flower.

The M.ṣ. seems to be one of the very few Old Amharic poetic compositions extolling St. Mary (cp. another example in ms. BritLib Add. 11, 292, fols. 113–18). We can assume that the M.ṣ. was written during the "Portuguese time", and was deemed, along with some other writings in Amharic, to support the Ethiopian Orthodox faith and Ethiopian veneration of St. Mary against the Catholic reforms (also possibly to counterpart Marian hymns translated from Latin by the ↗Jesuits). After the fall of Catholicism, the M.ṣ. must have been quickly overshadowed by other Marian hymns.

The M.ṣ. has not been examined in recent studies devoted to the Amharic literature and language (cp., e.g., KaneLit 2ff.; RicLett 851ff.), being easily overlooked probably due to its Gəᶜəz title and extensive Gəᶜəz beginning preceding the Amharic rhyming stanzas (at least in ms.

Abbadie 235). In the beginning, every line starts with the words: **ኦማርያም፡ መሰረት** ..., *Omaryam mäsärät* ..., 'Oh Mary, the foundation ...', hence a second title of the M.ṣ. (s. CRAbb 137; for a hymn with the similar beginning, s. ChRep 350, no. 367). However, the M.ṣ. was among the Amharic sources used by Praetorius (1878), who argued (ibid. 10) that the features of the language attested through the M.ṣ. are similar to those described by ↗Ludolf in his Amharic grammar (1698).

Still unedited, the M.ṣ. is vouched for in a few manuscripts. The one which was known to Praetorius is ms. Berlin, Ms. or. oct. 234 (fols. 56r–79), probably the oldest known, dating to the second half of the 17th cent. (DillmBerl 65f.). In addition to the 19th-cent. ms. Paris, BN Abbadie 235, fols. 19r–23, a few more, all dating to the 18th/19th cent., have been recently discovered.

MḤDYS

M. (**መሐደየሰ**) was a king of ↗Aksum in the early 5th cent. Known only from his coins, he was possibly a successor of ↗Eon and a more or less immediate predecessor of ↗Ebana.

Although rarely attested, M.'s ↗coinage is indeed one of the most controversial of the entire Aksumite series: its legends, at least in a few exemplars, would even provide the first acknowledgement for (inscribed) words being separated by two or three vertical dots (West 2001). Until recently, it was assumed that he never issued gold coins, his only known "type" (no. 68 in Munro-Hay – Juel-Jensen 1995:161) being a modern forgery, namely a gold cast of a silver exemplar (Type 69, ibid. 162f.). An astounding struck gold issue, completely different from any other surviving Aksumite piece, came to light from ↗Yemen in the mid 1960s (Type 67, ibid. 160f.): at some time probably part of a pendant (as indicated by three small holes), its description was published in 1995, and has since been the object of much interest and speculation.

On the obv., at the centre, the king's image is featured, full-length standing rightwards, wearing an arcaded tiara of three elements, a curbed ribbon hanging behind; his right arm, bare, displays armlets and bracelets, the hand holding a long spear with a large leaf-shaped head, and two pellets where the latter joins the shaft; his left arm is concealed by a round shield at chest level, with a plain out border enclosing five pellets; from behind it, a short sword seems to emerge. Below the waist, the king wears wide and loose trousers, caught tight at the ankles. The Gəᶜəz legend reads: *ngś mwᵓ mḥdys*, 'The conqueror king MḤDYS'. On the rev., a winged female figure, Victory, stands facing left and holding a Greek cross with flared equal arms on a long staff formed of pellets in her right hand, while the left lifts the drapery of the robe, depicted in two layers. Gəᶜəz legend all round: *bz msql + mwᵓ* (*bz msql tmwᵓ* in Hahn 1996:88 n. 11 [Kropp], but s. *mwᵓ* on the obv.), 'By this cross + you shall (be) conquer(or)' – i.e. the Constantinian victory device, possibly inspired by ↗Eusebius of Caesarea (cp. Hahn 2000:303). The iconography of the rev., also appearing in contemporary gems (Devoto – Pedroni 2000), is taken from a Byzantine *solidus* minted by Theodosius II in 420/21 or 421/22 to celebrate either his *vicennalia* or his victory over the Persians and the ensuing cult freedom for Christians in ↗Iran: the Latin cross held by Victory (with no distinction between its lower arm and the staff) is here the gemmed one sent to Jerusalem in 416/17 by the same emperor at the request of his sister Pulcheria (Fiaccadori 2003:191ff. [239]).

In spite of the appearance of the flan, its weight, size and gold content, which conform precisely to the Aksumite pattern (Munro-Hay – Juel-Jensen 1995:161), the complete divergence from the usual design and refinement standard of Aksumite (gold) coinage – not to mention M.'s own (silver and copper) issues, albeit with typological innovations vs. those of his predecessors (Pedroni – Devoto 2003:48f.) – casts serious doubt on the authentic-

Coins of MḤDYS; drawing courtesy of Wolfgang Hahn

ity of this particular M. piece (Ricci 1999:243f., cp. Bausi 2003:172f., n. 42). Its obv. seems in fact to draw inspiration from figures found in much later Ethiopian illuminations: e.g., the *ṣäwärtä wälta* ('shield bearers, squires') of *itye* Amätä Lᵊul and *mäsfən* Yəmḥaränna Ǝgziᵓ in the 1453 ↗*Gädlä sämaᶜətat* ms. kept at ↗Däbrä Maryam Qʷäḥayn (BauEr I, 59–62 and pl. VII, fig. 7).

M.'s available silver pieces, in one type, are both cast and struck issues, the former clearly being forgeries (no. 69, ibid. 162f., ignored by Pedroni – Devoto 2003, pleading instead for minted coins as counterfeit; s. also Godet 1986:184 n. 17 and Hahn 2000:305 and n. 93). On the obv., the king is shown in a beaded outer border, half-length bust rightward, robed in a garment with the curving v-neck above a round collar; he is crowned with a tiara of three elements topped with discs, a curved ribbon hanging behind, his right arm, bare, wearing armlets and bracelets, while the hand holds a Greek-style cross on a long staff, and another such cross balances it on the other side. With the same Gəᶜəz legend as above: *ngś mwᵓ mḥdys*. On the rev., flared or Maltese cross on a plain stand flanked by two wheat stalks. Here too, the same Gəᶜəz legend as above: *bz msql + mwᵓ*.

On his copper issues (Type 70 in Munro-Hay – Juel-Jensen 1995:163ff.), the first ever inscribed in Gəᶜəz, the king is portrayed, on the obv., within a beaded outer border, head and bust profile rightwards, framed by two stalks springing from about shoulder level with a cross between their tops that reaches down to just about his head; he is draped in a garment with fold lines from shoulder to shoulder forming a v-neck double collar, and wears a head cloth with mostly round ribbon hanging behind. Gəᶜəz inscription: *mḥdys ngśᵓksm*, 'MḤDYS king of Aksum'. On the rev., within a beaded outer border, the whole centre field is occupied by a Greek cross with flared arms and gold inlaid central punch-hole enclosed in a heavily beaded inner circle (cp. Russo – Russo 1989:148). Gəᶜəz legend all round: *bz msql + mwᵓ*.

Apart from previous, far-fetched attempts of interpretation (de Contenson 1958:6), his name has been understood (and vocalized) by Godet (1986:209 and n. 24) as a noun or a participle from the root *ḥds*: **Mäḥaddəyəs* ('The Renovator'), pronounced [Mäḥaddis] by way of analogy with *ḥaddis* ('new'), *y* being but a *mater lectionis*. Objections have been raised that the participle form is *mäḥaddəs*, whereas *mäḥaddəyəs* is a "grammatical monstrum", [*mäḥaddis*] sounding just "unlikely" on its own (private communication of Roger Schneider to Wolfgang Hahn [1988], in Kropp 1996:98f.); and that none of the examples provided by Godet for *matres lectionis* in Gəᶜəz script is reliable, such representation of vowels occurring only in "Pseudo-Sabaic" written texts (ibid. 99). This seems to be confirmed, unwittingly though, by a recent contribution with no fitting case for a *mater lectionis* in Gəᶜəz script (Frantsouzoff 2005:53–56). Yet, besides those in "Pseudo-Sabaic" (s., e.g., Drewes in KayeLes vol. 2, 384; Sima 2003–04:275 and n. 36), two instances at least of *mater lectionis*, namely *mys* = *mes* ('hydromel') and *byt* = *bet* ('house'), have been plausibly recognized in as many Palaeo-Ethiopic inscriptions from ↗Mäṭära (Ricci in KayeLes vol. 2, 1297, 1305, nos. A.7, B.a.2, resp.; cp. 1300f., 1308f.).

According to Kropp (1996:98f.), the name M. should be explained rather as *Mäḥadyas*, vz. *Mähadyas*, i.e. a "doublet" of *Matyas* ('Matthias') in Act 1:23 (after Vaccaro 1967:25, no. 35, but s. already Id. 1953:66: "Mehadios = Matteo"), and possibly traced to that of Ματταθιας, *Mattathias* ("Hebrew long form" of *Matyas*), the father of the Maccabees (1 Macc 2:1, 5 Esra 1:40, etc.), *Mättateyu* in the Gəᶜəz ↗Bible (cp. Hahn 2000:303). Both this linguistically elaborated proposal, resorting to "Copto-Ethiopic tradition", and the examples thereof have been severely challenged by Bausi (2003:172–75), in whose opinion a satisfying solution is still to be awaited. In keeping with his conclusion, one might perhaps venture to think of a (South) Arabian name in the form of a participle: e.g., Ṣafaitic MḤDS (Harding 1971:530, cp. 180: ḤDS,

'walk'), i.e. **Muḥad(d)is*, or Sabaic, Minaic and Qatabānic *MḤDṮ, i.e. **Muḥad(d)iṯ* ('Founder, Renovator'; s. Beeston et al. 1982:65: ḤDṮ; Arbach 1993:46; Ricks 1989:61), then rendered in Ethiopic (via "Pseudo-Sabaic"?) with a *mater lectionis* – MḤDYS, i.e. **Muḥad(d)is*.

Mibäzḫu

The M. (ሚበዝኁ) is a ↗*qəne* of three verses (*bet*, pl. *abyat*) that is sung after each three lines of Ps 3. Its name is taken from the beginning of the same psalm (*ʾAgziʾo mi bäzḫu* ..., 'Lord, how are they increased ...'). Though this *qəne* has three *abyat* like ↗*zäʾamlakəyä*, it differs in the length of its verses and its melody, ↗*gəᶜəz*. The M. is employed in the ↗*Kəśtätä aryam* service. During the Easter period, the M. is replaced by other elements of the ↗*Dəggʷa*.

Habtemichael Kidane

Michael the Syrian

M. (Syr. Mīḵāʾēl Rabbā, 'M. the Elder/Great'; b. 1126/27, Melitene [today Malatya], d. 7 November 1199, Monastery of Bar Ṣawmā) was the Patri-

arch of the Syrian Orthodox Church from 1166 to 1199, and one of the major Syriac historians. The epithet *rabbā* was first used by a 13th-cent. Syrian historian Grigoryos Bar ʿEḇrāyā, who had to differentiate between M. and his nephew Michael "the Younger" (Syr. *Zaʿōrā*), the next patriarch of the Syrian Orthodox Church (1199–1215). In western tradition he is referred to as "M. the Syrian", after the sobriquet preferred by the editor and translator of his chronicle Jean-Baptiste Chabot, following the Armenian usage into which language the chronicle had once been translated.

Before his patriarchate, M. had been the archimandrite of the Bar Ṣawmā monastery near Melitene. It was a difficult period for the Syrian Church both internally (fall of ethical standards of the hierarchy, schisms) and externally (clashes between Crusaders and Muslim *amīrs*). M. showed extraordinary skills in taking care of the internal problems (reform attempts by passing disciplinary canons, deposing corrupt bishops, excommunicating schismatics). He kept good contacts with both the Christian (Armenian Cilicia, Byzantium, Crusader states), and the Muslim powers (in spite of a brief imprisonment), and was thus able to avert dangers menacing his Church.

M. is known to have composed an anaphora, homilies, hagiographical and theological writings, but his fame is based mainly on his authorship of a universal *Chronicle*, the largest ever written in Syriac, which covers the period from the Creation to his own epoch (1195/96). He made use of several earlier historiographical works, which he frequently quoted verbatim. For earlier epochs it is based on partly known and partly unknown sources. These are: until Constantine, ↗Eusebius of Caesarea (both the *Chronicle* and the *Church History*); for the years 325–431, the *Church Histories* of Socrates and Theodoret, for 431–565, the *Church History* of Zachariah the Rhetor, for the years 325–582 the *Church History* of ↗John of Ephesus. For the later period all of M.'s sources are lost (with the exception of the *Chronicle* of Jacob of Edessa, which survives in part).

The *Chronicle* was translated into Armenian (two versions) and Arabic. It contains valuable source material on the history of Ethiopia and adjacent countries, as well as a few more or less legendary traditions.

M. places "Indians" (= Ethiopians, s. ↗India as name of Ethiopia) among the sons of Ham (7, tr. Chabot vol. 1, 16), along with the Egyptians, and the countries of ↗Kush, Saba and Egypt in the domain of Cham (Africa). He provides the name of the eponym of the Ethiopians, an Egyptian by the name Ethiopos, which he explains as meaning "Kushite" (10, tr. ibid. 21). M.'s terms "Kushites", "Indians" and "Ethiopians" seem to mean almost the same, which proves him to be an intellectual heir of Greek geographical concepts of Late Antiquity. Yet, after Eusebius's *Chronicle*, he explains that Ethiopians left the area by the Indus and moved to live near Egypt (22, tr. ibid. 39), thus showing that he also accepted the belief in the continental connection between East Africa and the Indian Peninsula. ↗Moses, as an Egyptian high military commander, is said to be waging a ten year long war with the "Ethiopians" (tr. ibid. 40). For the Christian epoch M. provides the name of the apostle of the Kushites – Marmatos (93, tr. ibid. 150).

As one of the sources of M. was the *Church history* of Socrates, the story of Frumentius, Edesius and Athanasius introducing Christianity into "India Interior" found its way into the *Chronicle* (131f., tr. ibid. 258). Likewise, since another of his sources was the *Church History* of John of Ephesus, M. took from him the account of the martyrdom of the Christians of ↗Naǧrān in the beginning of the 6th cent., together with an introduction originating from ↗John Malalas (273–76, tr. Chabot vol. 2, 183–89). Also on the basis of John's work M. tells us that the great bubonic (the so-called "Justinianic") plague began to spread from the countries south of Egypt (Kush, ↗Ḥimyar; 305, tr. ibid. 235f.). From the same source comes information on the spread of ↗Julianism comes, which *inter alia* reached "Indians, Kushites and Ḥimyarites" (313, 320, tr. ibid. 251, 264f.), as well as that on the Christianization of the Alodians in ↗Nubia (371f., tr. ibid. 348).

For the Muslim epoch M. provides a passage on the visit of George, king of the Christian Nobades, to the caliph (836 A.D.; 530-34, tr. vol. 3, 90–94). He also mentions the conquest of Nubia by Salaḥaddīn (710, tr. ibid., 361).

Witold Witakowski

Michaelis, Johann Heinrich

M. (b. 1668, Halle an der Saale, Germany, d. 1738, Halle an der Saale, Germany) was one of the students of Hiob ↗Ludolf who continued his teacher's work in ↗Ethiopian studies. Unlike his mate Johann Michael ↗Wansleben, however, he never attempted to reach Ethiopia.

M.'s importance for Ethiopian studies lies in his 1724 publication of the biography of Peter ↗Heyling, the Protestant missionary and advisor of *aṣe* ↗Fasilädäs. It was based on manuscripts that M. found in his teacher's papers. Sources used were a confidential report by *abba* ↗Gorgoryos (who met Heyling in 1647), information of *ḫoğa* ↗Murād (the envoy of the Ethiopian ruler to Batavia in today's Indonesia), and a rather polemic account written by Wansleben (based on Catholic sources).

Since 1699 M. taught Oriental languages, and later theology, at the University of Halle. He was also the chief director of August Hermann Francke's *Collegium orientale theologicum*, a practical school of Biblical and Oriental philology quite unique at the time, thus continuing Ludolf's line of work in a prominent framework. In 1720 M. published an annotated Lutheran edition of the Hebrew Bible in Halle. M. was particularly renowned for his exegetical works (e.g., the 1720 *Uberiorum Adnotationum*); his Hebrew and "Chaldaean" Grammars were published in several editions (1708–48).

Other members of the M. family prominently continued M.'s work in Semitic philology. His grand-nephew was Johann David Michaelis from Halle, a biblical scholar, famous Semitist and geographer in Göttingen (cp. Carsten ↗Niebuhr).

Wolbert Smidt

Midda

M. (ምድ) is an area to the north of the historical district of ↗Märḥabete. It is part of Märḥabete in a broader sense. In the pre-1974 administrative division, M. formed a *wäräda* in the Märḥabete *awraǧǧa*. With the administrative reorganization in 1995, M. was merged with neighbouring Wäräm Wadätu into Midda Wärämo with the capital at Märañña (or Märanya, also capital of M. proper; for location s. Mähal Meda).

M. was one of the early Christianized regions of central Ethiopia. The Ethiopian Orthodox Church lists 46 churches in Märḥabete as founded by the early 16th cent., 26 of them in M.

Since the 16th-cent. ↗Oromo expansion the area has been inhabited by the Oromo; the local group becoming known also as the M. The Oromo of M. tried to oppose the 18th-/19th-cent. Šäwan expansion: before succeeding ↗Asfa Wäsän, his son and then *abägaz* of Märhabete *märədazmač* ↗Wäsän Sägäd suppressed a rebellion and submitted the M. Oromo.

M. was also the site of death for ↗Säyfu Śahlä Śəllase. In 1860, on his return from a Harärge expedition to Märḥabete he had to face a revolt from his own *məsläne* Kəbrat. Säyfu was killed in battle and buried in M.

During the reign of ↗Mənilək II, the governor of M. was granted the title ↗*ras*.

M. is a fast growing town, it has an air strip and has recently been connected by roads to both Šäwa and Wällo.

Middle East, relations with the

The term "M.E." refers to the countries of north-eastern Africa and south-western Asia, extending from Morocco to Afghanistan. Sometimes used interchangeably, as a more common definition, with "Near East", the term was coined along with the latter (and "Far East") a few years prior to ↗World War I, but entered the official vocabulary of most Western languages in the aftermath of the war. The post-war arrangements indeed reshaped the whole region. What used to be the ↗Ottoman Empire, the last all-regional Islamic state, was dismembered by the British and French occupiers, who initiated and enabled

the emergence of various separate modern states. Historically, the term "M.E." defined the new, Western influenced concept of a politically diversified region. A primary cause for the spread of this term was the simultaneous emergence among the local Muslim societies of various modern nationalist movements, royal dynasties, and local elite groups. In time – mostly after ↗World War II – such movements ensured the liberation of the different states from Western occupation and thus perpetuated the region's political diversity.

The dismemberment of the Islamic empire and the creation of the diversified M.E. ushered in a new phase in the history of Ethiopian–Oriental relations. Since ancient times, Ethiopia has been an extension of Near Eastern, then Christian Oriental, civilizations – and, due to its main religions, languages, political traditions and strategic affiliations has ever remained so. The emergence of ↗Islam in the 7th cent. and its hegemony as a form of political identity for 13 centuries reshaped and defined much of Ethiopian–Oriental relations.

The early 20th-cent. rendering of the "Land of Islam" into the "M.E." opened new opportunities. During the first half of the century, Ethiopia developed bilateral relations with the different states and societies. Relations were mainly developed in places where there were Christian interests, namely, ↗Egypt and ↗Jerusalem. Ethiopian students were often sent to Egypt, and an intensive dialogue over inner-church relations developed there. During the Italian aggression, Ethiopia sought help from various Arab countries, and in the aftermath of World War II, it established diplomatic relations with all newly independent Middle Eastern states, including the new Jewish one, ↗Israel.

In the 1950s and 60s, the "M.E." concept was confronted with a strong challenge from within. New social forces in the newly liberated Arab societies strove to reunite the region and recreate it as an "Arab World". In some central countries, those forces, led by young army officers, managed to overthrow the old elite groups and royal houses which had collaborated with the Westerners in creating the M.E. The Unification of Arab states (notably the Egyptians and Syrians in 1958–61) undermined the legitimacy of territorial states, monarchies, traditional social structures, and non-revolutionary politics. The redefinition of the region as "revolutionary" and "Arab" alienated Imperial Ethiopia, and threatened to ignite the same spirit among its Muslims. Eritrean secessionism and Somali irredentism were conceived by Ethiopia's ruling elite as being backed by a momentous pan-Arabism. At the same time, the newly emancipated Africa offered Ethiopia diplomatic seniority. It was against this substantially African background that Imperial Ethiopia turned its back on the M.E. and severed some of its ancient ties. In 1959, by having an Ethiopian patriarch appointed (↗*Paṗpas*), ↗Ḫaylä Śəllase I totally abolished the long-standing religious ties with ↗Egypt; in 1973 he broke diplomatic relations with Israel.

The "Arab World" secular, socialist and revolutionary concept, meanwhile, lost momentum. As of the late 1960s, the separate states had regained internal stability. With a few exceptions (Lebanon and Sudan), all Arab regimes have enjoyed continuity since 1970, and no meaningful efforts at pan-Arab unification and its potential effects on Ethiopia have been recorded. However, the re-assertion of the "M.E." concept – in particular the peace processes that resulted in the principal acceptance of Israel into the diversified region – has come under a new challenge since the late 1970s. Political Islam re-emerged in strong opposition to the modern states, their institutions and cultures. Aiming at re-uniting the region as a "Land of Islam" and at regaining Islam's political, legal, and moral dominance, radical Islam continues to challenge not only the Middle Eastern regimes, but also its neighbours, and has had a noticeable influence on some Muslims in Ethiopia, Somalia and Eritrea.

Ethiopia itself underwent profound changes during these periods. During Mängəśtu Ḫaylä Maryam's regime (↗Provisional Military Administrative Council), it lost much of its African seniority, but also refrained from reconnecting to what it conceived as an "Arab reactionary" M.E. The new regime, established in 1991, seems to be making an effort to rebuild Ethiopia's ancient ties to the M.E. as it attempts to maximize the benefits and minimize the obvious risks.

Mikaʾel ↗Angel(s)

Mikaʾel I

M. I (ሚካኤል) was a metropolitan (↗*Ṗappas*) of the ↗Ethiopian Orthodox Täwaḥədo Church in the early 12th cent., possibly the successor of ↗Giyorgis I. Christened as Ḥabīb al-Aṭfīḥī, he was consecrated by the Coptic patriarch Macarius II (1102–28), and remained in office during the pontificate of John V (1147–67).

According to the *History of the Patriarchs of Alexandria*, at the time of Patriarch Gabriel (1131–45), an unnamed "king of Abyssinia" (*malik al-Ḥabaša*) asked M. to consecrate for his land more bishops (cp. ↗*Eppisqoppos*), in keeping with the "the old custom". M. refused, since this would go beyond his prerogatives, and the king dispatched letters to both the Patriarch and the *ḫalīfa* al-Ḥāfiẓ (1130–49; ↗Fāṭimids) with the same request. The *ḫalīfa* was favourable, but Gabriel warned him that the number of bishops in Ethiopia would thus exceed the amount permitted by Canon ↗law and they would be able to consecrate a patriarch. The Ethiopians could become independent from the ↗Coptic Church of Egypt, become stronger and endanger the neighbouring countries, including the Muslim ones. The Patriarch dispatched a letter to the Ethiopian king, advising him to give up his intention. After returning to Egypt, the messengers of the Patriarch reported that Ethiopia was struck by calamities, and even the king's palace was hit by a "heavenly fire". The Ethiopian king did not insist on his position. He was blessed by the Patriarch, and the country immediately recovered. The same story was apparently translated into Gəʿəz, with a few variants, around 1400 A.D., and included in the ↗*Sənkəssar*, for 10 *Miyazya*, the day of the commemoration of Gabriel (ColSyn XII, 526f.; cp. SerHist 253).

Also, the *History of the Patriarchs* has it that, during the tenure of John V, an unnamed Ethiopian king sent a letter to ʿAlī b. as-Salār, *wazīr* of the *ḫalīfa* aẓ-Ẓāfir (1149–54), asking him to replace the old and weak M. It turned out, however, that the true reason was the opposition of M. to the new king, an usurper of the throne. The report has been interpreted by Conti Rossini as a reference to the seizure of political power by the ↗Zagʷe dynasty, which could have taken place around 1137 (CRStor 289f., 303). Viewing M. as a witness to the dynastic change connects him with the search for the last pre-Zagʷe ruler of Ethiopia. Some traditions claim that this was ↗Dəlnaʿod, whereas some others identify him with ↗Dəgnağan. Compiling the chronology of the pre-Zagʷe Ethiopian kings on the basis of traditional sources (in particular, the "kings lists"; cp. ↗Chronology), Śərgəw Hablä Śəllase has equated Dəgnağan with Anbäsa Wədəm, another early and less well known ruler, and called attention to a lengthy marginal note preserved in the "Golden Gospels" of ↗Mikaʾel Amba church, fol. 102r–v (SerHist 203 n. 117). Among others, it tells of "M. the sinner, the son of *abba* Ǝnṭones in Däbrä Ǝlʾaräbḫa [Arab. Dayr al-ʿAraba, i.e. Dayr Anbā Anṭūniyūs] that is (on) the coast of the Red Sea [*zäwəʾətu ṣənfä Erətra*]", who was consecrated bishop by Patriarch Macarius of Alexandria. According to the same note, M. was bishop of Ethiopia during the time of Anbäsa Wədəm, and consecrated Mikaʾel Amba in the year 866 of the Era of the Martyrs [= 1150 A.D.] (cp. MHAlex II, 139). Chronologically reliable, this record should be treated cautiously: the "Golden Gospels" may be dated to the second half of the 15th cent. at the earliest, while the note in question – with quite uncommon formulas and a few less credible stories – is an even more recent addition, written in a much later hand. Yet, it seems to partially reproduce an ancient, now lost document with good evidence about M. and his career in Egypt and in Ethiopia.

Denis Nosnitsin

Mikaʾel II

M. (ሚካኤል) was an early 13th-cent. metropolitan (↗*Ṗappas*) of the ↗Ethiopian Orthodox Church. According to the *History of the Patriarchs of Alexandria*, in *Šawwāl* 596 H. [July–August 1200] a delegation "from the king of Ethiopia and Nubia" (*malik al-Ḥabaša wan-Nūba*) was received by the Ayyūbid *sulṭān* al-Malik al-ʿĀdil Abū Bakr. It was asking for a new metropolitan, to substitute the one who had died (of unknown name, a successor of Mikaʾel I). The Alexandrian Patriarch John VI consecrated as metropolitan a certain Kīyīl (Miḫāʾīl) b. al-Mulabbas, bishop of Fūwa, who was then sent to Ethiopia, gladly welcomed and richly endowed by the local king. The *History of the Patriarchs* continues by relating of the reception of M. in the "city of the king", at

the "metropolitanate" (*al-muṭrāna*). When the first mass was celebrated by M., the country, which had long been suffering from drought was suddenly moistened by rain. Five years later, however, M. was back in Cairo, accusing the Ethiopian queen and her brother Ḫayrūn (who forced M. to consecrate him bishop) of harassment; but an investigation by a special messenger, the priest Mūsā, dispatched to Ethiopia with a letter for the king, provided a different version of the events: M. had in fact caused an Ethiopian priest, accused of theft, to be beaten to death, and had to flee the revenge of the latter's relatives; nor did Ḫayrūn pose any longer a threat, having died two months after M.'s flight. Mūsā returned to Egypt accompanied by Ethiopians with rich gifts for the *sulṭān* and the patriarch on behalf of the king, requesting thereby a new metropolitan. In 1210 M. was deposed, and the monk Isaac (Arab. Isḥāq) from Dayr Anbā Anṭūniyūs was consecrated instead, becoming *abunä* Yəsḥaq (I). He was sent to Ethiopia together with his elder brother Joseph (Yūsuf) as a coadjutor.

Within the records of this episode, the *History of the Patriarchs* provides important (and accurate) information on Ethiopia: its king was Lālibala b. Šanūda (*aṣe* ↗Lalibäla), his wife's name Masqal Kabrā (↗Mäsqäl Kəbra); the "tribe" of the King was called an-Nukba (= al-Bukna, i.e. Bugna?), and his "(royal) city" (*madīna*) ʿArafa (= ʿAdafa, i.e. Adäfa, the site close to the churches of Lalibäla). The same passage also mentions Lalibäla's sons, the older being Yabārak (definitively ↗Yətbarək), the junior, Abyab (= Laʾab, i.e. [↗Näʾakkʷəto] Läʾab.

Denis Nosnitsin

Mikaʾel IV

Abunä M. (ሚካኤል, fl. 1650, d. ca. 1663) was an Egyptian metropolitan (↗*Abun*) who succeeded *abunä* ↗Marqos III.

According to the short chronicle of ↗Fasilädäs's reign, M. arrived in Ethiopia in 1650, coming along the northern route, via ↗Sinnār. The same year, following the eastern route via Danakil (↗Dankáli), Yoḥannəs arrived; he had been requested by the ruler's brother *abeto* ↗Gälawdewos. Yoḥannəs was exiled to ↗Särqa, while M. was instituted as metropolitan (BassÉt 288; BegCron 51). It is unclear why the Alexandrian Patriarch sent two bishops, hence recognizing the legitimacy of Gälawdewos's demand. Their arrival seems confirmed by a list of metropolitans, most probably compiled ca. 1680. Since one of the purposes of this list was to make *abunä* ↗Sinoda the 100th metropolitan of Ethiopia, M. is considered the 97th and Yoḥannəs, who is not supposed to have exercized the charge, the 98th.

During M.'s episcopate the first synod officially dedicated to the debate between Unctionists (↗*Qəbat*) and Unionists (↗*Karra*) took place, on 23 June 1655 at ↗Aringo (Getatchew Haile 1990:31f.; cp. also BassÉt 289, BegCron 52, DombrChr 203). The conclusion of the synod favoured the *Qəbat* party. The position M. took there is not known (Getatchew Haile 1990:31f.). His successor was *abunä* ↗Krəstodolu (II).

(tr.).
Lit.: MHAlex II, 4, 86ff.

Anaïs Wion

Mikaʾel

Abba M. (ሚካኤል; birth name Kəfle Gärima Wäldä Kidan; b. 15 May 1886, Gəšän Maryam, Wällo, d. 14 October 1959, Gəšän Maryam) was the bishop of Gondär in 1940s–50s.

M.'s parents were *märigeta* Wäldä Kidan and *wäyzäro* Dästa Wäldä Gäbrəʾel. Having completed the first and the second stages of the traditional church ↗education at Gəšän Maryam (↗Amba Gəšän) he moved to ↗Boru Meda where he stayed for three years, studying the N.T. ↗*andəmta*-commentary from *mämhər* Dästa (later *abunä* Abrəham), an outstanding *andəmta*-scholar (s. Cowley in PICES 6, 47f.). He studied the ↗*Fəṭḥa nägäśt* from *aläqa* Zäyoḥannəs in Gondär and the liturgy from *aläqa* Wäldä Mikaʾel of ↗Mäkanä Iyäsus. On completion of the ↗*qəddase bet*, M. started teaching liturgy at ↗Mänbärä Mängəśt Qəddus Gäbrəʾel in Addis Abäba. After a while, he decided to continue his education and went for the ↗*mäṣḥaf bet* level to ↗Däbrä Libanos of Šäwa. There he became monk and was consecrated priest on 22 February 1924 by *abunä* ↗Matewos.

In 1924–25, M. made a pilgrimage to ↗Jerusalem where he stayed for six months. On return, he started teaching liturgy and N.T. at the then newly built Mänbärä Ləʿul Qəddus Marqos church (today within the compound of ↗Addis Ababa University). In 1926, under the auspices of *aṣe* ↗Ḫaylä Śəllase I, M. prepared and published the text of the liturgy (*Mäṣḥafä* ↗*qəddase*) and its *andəmta*, one of the first Ethiopian printed editions of traditional commentaries. In 1928 he was assigned as *mämhər* to the monastery of Gəšän Maryam.

In 1935 M. (as *mämhər* Kəflä Gärima) was appointed head of Ethiopian monasteries in Jerusalem. After the Italian war 1935–36, the metropolitan *abunä* ↗Qerəllos withdrew to Egypt, and the Italians installed *abunä* Abrəham. In December 1937 the Alexandrian Patriarchate excommunicated the Patriarch, installed by the Italians, but M. refused to recognize the Italian sovereignty and pleaded fidelity to the Alexandrian patriarchate. King Umberto of Italy appointed a new superior of the Jerusalem community, and M. was obliged to leave his office (formally, he lost even his Ethiopian citizenship; [Stoffregen-]Pedersen 1983:116). The case was made out of the "Regulations" (*dänb*), proposed to the Jerusalem community as early as 1925 but not accepted by the latter, and the position taken by Ḫaylä Śəllase in 1936 regarding the community's place in the new situation (ibid. 105f.). However, M. could not be deposed quickly; he fought to secure the buildings given to the community by Imperial officials (in particular, by *ətege* ↗Zäwditu) and helped Ethiopian refugees.

After the Liberation, M. was called to Ethiopia and ordained as M. II bishop of Gondär on 27 April 1946 (↗*Eppisqoppos*). M. contributed a lot while preaching and supporting monasteries, churches and traditional schools of his diocese. He kept close relation to Gəšän Maryam, attending the annual commemoration on 21 *Mäskäräm* when *aṣe* ↗Zärʾa Yaʿəqob is believed to have come and brought to Gəšän Maryam "the right wing fragment" of the Holy Cross (↗*Mäsqäl*). When M. went to Gəšän Maryam in 1959, he got sick after the feast there and soon died. His burial at Gəšän Maryam was attended by many high-ranking Church and government officials. A memorial service lead by the Patriarch *abunä* ↗Basəlyos and attended by the Emperor was held at the ↗Qəddəst Śəllase Cathedral, where a monument to him was erected.

Mersha Alehegne

Mikaʾel

Abba M. (ሚካኤል, fl. 1870s–80s) was a Šäwan monk and agent of *nəguś* Mənilək (↗Mənilək II). Guglielmo ↗Massaja wrote that before working for Mənilək, M. purchased slaves for him to be sent to the ↗Collège des Galla and was engaged in trade in Təgray and Gondär. Subsequently, he entered the service of Mənilək, advising him on issues of foreign policy.

In 1871 Mənilək accepted M.'s requests and sent him on a mission to ↗Italy and ↗France. M. probably had already done some travel abroad, perhaps to Jerusalem and the Middle East. In June 1872, he left for Europe, despite the objections of Massaja, who believed his lacking experience made him unfit for a diplomatic charge. He carried with him letters for the Pope, the President of France, Queen Victoria, and the Kaiser, but his mission was principally to the King of Italy. All the letters except those for the King of Italy and the Pope were delivered in Aden to European consuls. M., with the help of one of Massaja's missionaries and the Italian consuls, proceeded to Italy, with whose government he intended to conclude a treaty.

In November 1872, M. was granted an audience with King Vittorio Emanuele II of Italy where he met Orazio ↗Antinori. Altough no treaty was signed, the extravagant stories told by M. awakened Antinoris's interest in Šäwa. It is not clear where M. went after he accomplished his mission to Italy, but it is stated that he accompanied Pierre Arnoux and ↗Yosef Nəguse from Aden to Šäwa through ↗Zaylaʿ on a journey which lasted from February 1874 to January 1875. There is no mention of M. after his return to Šäwa. The subsequent mission of Pierre Arnoux in 1876 was intended to accomplish what M. had failed to secure; but Arnoux's mission proved to be totally unsuccessful.

Zewde Gabre-Sellassie

Mikaʾel

Abba M. (ሚካኤል, fl. late 15th–16th cent.) was a member of a group of Egyptian ecclesiastics dispatched to Ethiopia after the long vacancy following the death of *abunä* Gäbrəʾel in 1458 (↗Gäbrəʾel and Mikaʾel). In 1480/81, *aṣe* ↗Ǝskəndər sent a delegation to Egypt that, probably in 1481/82, brought to Ethiopia the "metropolitans" *abba* ↗Yəsḥaq and *abba* ↗Marqos, and the "bishops" *abba* Mikaʾel and *abba* Yoḥannəs (↗*Eppisqoppos*). The first two succeeded one another, although not immediately (*abba* ↗Yaᶜəqob being *pappas* in between).

M. must have been accompanying his father, Mikaʾel, even if he is not mentioned in the sources relating the arrival of those ecclesiastics (Guidi 1899:3 [list I], 9; more clearly, in the Vita of ↗Märḥa Krəstos, Kur 1972:88 [text]; s. Fiaccadori 2004:681).

Elsewhere, M. appears as a translator into ↗Gəᶜəz of several important works of the Christian Arabic literature. According to the colophons in mss. St. Petersburg, Institute of Oriental Studies Orlov 1 (Turaiev 1906:83), and BritLib Orient. 712, fol. 42b, this was the case with the hagiography of St. ↗George of Lydda. In the latter manuscript, he is called M. the Junior, son of the son of *abba* George, son of *abba* Mikaʾel the metropolitan (s. WrBriMus 190), the record presenting his relation to Mikaʾel ("the Senior"), son of the priest George – M.'s grandfather.

The same information is repeated in the colophon of ms. BritLib Orient. 713, fol. 81, with an additional note referring to the time of his version of the Acts of St. George (The Homily of Theodotos of Ancyra) as "the second year of the reign of Ləbnä Dəngəl, the son of Naᶜod", i.e. 1509/10 A.D. (WrBriMus 191; Budge 1930:65); the part of this colophon beginning with the words "and its completion" does not necessarily refer to the scribal copy (Arras in PICES 1, 284), but rather to the translation of the text (cp. Conti Rossini 1946:13f. for such an expression in the colophons of two other manuscripts). Yet, the Miracles of George in the ms. BritLib Orient. 713 have a different colophon, with the year 6980 "of Mercy"/1204 "of the Martyrs", i.e. 1487/88 A.D. (WrBriMus 191; Arras 1953:64 [tr.]).

In keeping with these elements, one should assume that the translation of the Miracles of St. George preceded that of the Acts.

It seems possible to trace better the identity of M. and his family background in ↗Egypt. In a Coptic Arabic manuscript with a homily on the *translatio* of part of St. George's relics to the church of Darb at-Tiqā dedicated to him in Upper Egypt (Qaṣr aš-Šamᶜ), an additional note states that another part of them was taken to Old Cairo by "the priest Michael, son of the priest George the Limped [*al-ᶜārīǧ*], a minister of the church of Darb at-Tiqā" in 1426 A.D., under Patriarch Gabriel V (Arras in PICES 1, 279). This is confirmed by the Ethiopic Miracles of St. George (no. 25, ed. Arras 1953:23–27), where M. speaks also of himself and of having gone to Ethiopia with his father (nos. 18, 21 and 24, ibid. 9f., 16–20 and 23). The "priest Michael, son of the priest George" – not necessarily one and the same with the later bishop of Ṣahrağt and Difrā according to the same Miracle (ibid. 27) – is indeed M.'s father, who was sent to Ethiopia as a bishop.

Among the hagiographic works devoted to St. George, the short "collection" of his Miracles (1–13 "Palestinian" miracles) is an old translation into Gəᶜəz, made before 1425 (Arras in PICES 1, 282). A few scattered elements of the contents of the Miracles – in particular, what the author tells about himself – confirm that miracles 14–79 were compiled and/or translated, in one or several stages, in Ethiopia (ibid. 283), most probably by M., alone or with assistants.

The *Mäṣḥafä ↗fälasfa ṭäbiban* is another work linked to *abba* M., for which he earned fame since the early period of ↗Gəᶜəz literature studies (cp. GuiSLett 82). M. "the Junior" appears in the colophon of the book: e.g., ms. d'Abbadie 81 (Conti Rossini 1946:8; Sumner 1974:36), again as the one who produced a translation "through his mouth" – probably, by oral explanation of the Arabic texts to the masters of Gəᶜəz – in 1510–22 (Sumner 1977:36; Pietruschka 2002:146).

Finally, in both mss. BritLib Orient. 739 and 740, containing theological writings, fols. 117b and 118b respectively, the preceding Commentaries of ↗John the Chrysostom on the Epistle to the Hebrews is said to have been translated "through the mouth" of ↗ᶜƎnbaqom and "Mikaʾel Gəbṣawi", apparently the same as *abba* M., in 1522/23 A.D. (WrBriMus 205, 208; Conti Rossini 1946:15).

Denis Nosnitsin

Mikaʾel ᶜAli

Nəguś M. (ሚካኤል, Arab. Mīkāʾīl b. *imām* ᶜAlī, horse name: Abba Šanqo, birth name Mäḥammäd ᶜAli; b. ca. 1847/50, Tänta, Wärrä Himäno, Wällo, d. 8 September 1918, Holäta, Šäwa) was an important ruler of Wällo and the entire northern Ethiopia. He was born Muslim and descended from the Oromo rulers of ↗Wärrä Himäno, as a son of *imām* ᶜAli "Abba Bula" by *wäyzäro* Geṭe, and thus grandson of *imām* ↗Libän Amäde from the ↗Mammädočč dynasty. M. was also a nephew of the Christian *ətege* ↗Mänän Libän and a relative of two well-known female rulers of Wällo, who governed when he was young: his step-mother ↗Wärqitu and his elder cousin's wife ↗Mästawät. There was a bitter rivalry between these two Oromo "queens" and their successors: on the one side, M. with Wärqitu, on the other, Amäde Libän (also known as Abba Waṭäw), the son of Mästawät, succeeded after his death in 1880 by his son, Libän "Abba Ğäbäl".

At a young age, after studying at a Muslim school at Tänta, M. succeeded his father as the ruler of Wärrä Himäno (s. MasMis 6f.). His *gəbbi* still exists at the natural fortress Tänta, his first stronghold, at the foot of Tänta Mikaʾel, Tač Tänta. In 1874 *nəguś* Mənilək of Šäwa (later *aṣe* ↗Mənilək II) recognized *imām* M.'s governorship of Wällo, before the then still more powerful Abba Waṭäw. In June 1877, however, M. joined *nəguś* Mənilək's wife, ↗Bafäna Gäččäw in her – abortive – rebellion against her husband. During that period the daughter of Bafäna was M.'s wife.

After Mənilək's submission to *aṣe* ↗Yoḥannəs IV in 1878, followed by the Council of ↗Boru Meda, M. converted to Christianity and assumed the baptismal name of "Mikaʾel". This expressed his (and his province's) symbolic union with *aṣe* Yoḥannəs IV, who became his godfather; part of Muslim Wällo tradition regards this apostasy as a betrayal of his fathers' religion "for worldly gains". M. was then granted the title of *ras*, but he had to share the governorship of Wällo with his rival Abba Waṭäw, who had also converted to Christiantity under the name Ḫaylä Maryam.

Aṣe Yoḥannəs always remained loyal to his alliance with M., at the same time maintaining a balance of power between M. and Mənilək. M. from his side tried to use both Yoḥannəs and Mənilək to safeguard his position. The history of Yoḥannəs's rule is marked by shifting alliances between the three personalities. In 1877, for example, M. sided with the Emperor, and M.'s province was devastated in an attack by the Šäwan army. In 1881 Wärrä Himäno was placed directly under Yoḥannəs IV instead of under Šäwa, with M. continuing to act as the governor. In 1885 M. was given central Wällo by Yoḥannəs while Mənilək was granted another part of that province. Finally, in February 1886, M. was appointed governor of the entire Wällo, replacing the son of the Emperor, *ras* ↗Arᵓaya Šəllase. In 1888 M. made ↗Däse his capital instead of Tänta (Shinn – Ofcansky 2004:121), the city evolving now around his new residential buildings. According to a report of Antonelli (s. Marcus 1975:195) Yoḥannəs then, in 1888, officially gave the governorship of ↗Goğğam to M. (which was not assumed by him, however). This was due to a conflict with *nəguś* ↗Täklä Haymanot of Goğğam (who got re-installed in his governorship in 1889), and was a measure to strengthen M.'s loyalty against the background of Mənilək's ambitions to the Ethiopian throne. M. then fought alongside Yoḥannəs at ↗Mätämma in 1889.

After the latter's death M. declared his submission to Mənilək II as the new Emperor and actively helped to defeat the rebellious ↗Mängäša Yoḥannəs, who also claimed the throne. M. stayed Mənilək's loyal subject till the end of his rule. He participated in the conquest of ↗Wälaytta in 1894 and was one of the military commanders of the battle of ↗ᶜAdwa in 1896.

Nəgusˊ Mikaʾel with his daughter Səḫin (left) and his son Iyasu (right), ca. 1915; photo courtesy of the IES

M.'s political marriages placed him in the network of the most influential ruling families. M. was married to at least five women consecutively and had more than eight children. From his first wife, Fantayeto Gäbru (also Fante, from a royal lineage), he had three daughters: Səḫin (mother of ↗Mänän Asfaw, later wife of *ras* Täfäri [*aṣe* ↗Ḫaylä Śəllase I]), Məntəwwab and Täwabäčč (married *ras* ↗Śəyyum Mängäša of Təgray in 1914) and two sons: ʿAli and Dästa. He did not have any children from his second wife Zännäbäčč ʿAli. From a political perspective the most important ones were his marriages to *nəgusˊ* Mənilək's step-daughter and daughter respectively: first he was given Man Alläbbəš (daughter of Bafäna) in marriage, and later, in 1892, M. married Šäwarägga Mənilək (b. 1867, d. August 1897). From her he had one son, the heir-to-the-throne *ləǧ* ↗Iyasu, and one daughter Zännäbä Wärq, who died young (b. mid-1890s, married in ca. 1905 by her grandfather *aṣe* Mənilək to *ras* ↗Bäzzabbəh Täklä Haymanot, governor of Goǧǧam; s. Bairu Tafla 1973:45, 48). M. had one more son from an early relationship, *ras* ↗Gäbrä Ḫəywät Mikaʾel (b. 1868). After Šäwarägga's death, M. linked himself with the Təgrayan dynasty of *aṣe* Yoḥannəs, marrying Alṭaš Waḥdä Wäldä Kidan, the widow of *ras* ↗Wäldä Mikaʾel Sälomon of Ḫamasen (niece of *šum tämben* ↗Mərčа Wäldä Kidan).

During the reign of *ləǧ* Iyasu, officially nominated heir-to-the-throne by *aṣe* Mənilək II in 1909, M. actively supported the rule of his son (cp. BZHist 121). On 11 March 1910 M.'s troops were involved in the coup against the de-facto regent ↗Ṭaytu Bəṭul, Mənilək's wife, and assured that the government would be taken over by the nominated regent *ras* Täsämma and his son, *ləǧ* Iyasu. After Iyasu had become the only ruler in 1911, he spent much time at his father's residence in Däse.

As a mark of his father's outstanding position in the country Iyasu decided to crown him *nəgusˊ* shortly after Mənilək's death. The ceremony was officiated by *abunä* ↗Peṭros on 31 May 1914 in Däse. On that occasion M. received the crown of *aṣe* Mənilək II and a new crown for himself. He became the governor-general of Wällo (together with Yäǧǧu and Lasta, M.'s grandson Ḫaylä Maryam Asfaw, b. 1888, d. 1915, now *ras*, becoming their governor at Säqoṭa) and Təgray (where M. nominated *ras* ↗Śəyyum Mängäša to rule in his name). In 1915 Bägemdər and Goǧǧam were allegedly added to his realm (Greenfield 1965:137), M. becoming the *nəgusˊ* of the entire northern Ethiopia (BZHist 125). Until 1916 M. occupied the second most powerful position in the country, being the key figure behind Ethiopia's ruler *ləǧ* Iyasu, governing the north almost as a sovereign and having great influence on Iyasu's decisions. His full title then was *nəguśä Śəyon wäwällo wägondär wägoǧǧam* (*nəgusˊ* of Śəyon, Wällo, Gondär and Goǧǧam; Śəyon standing for ↗Aksum Śəyon, i.e. Təgray, but could also be interpreted as an indirect claim to the rule of Ethiopia itself, s. Smidt 2007). He also kept an Arabic title, in which he calls himself *malik* ('king') of Wällo, Gondär, Goǧǧam and Təgray, referring to his Muslim origins as "son of *imām* ʿAlī, *malik* of Wällo" (ibid.).

In his province, Wällo, M. made important donations to churches and monasteries, such as those to the church Tänta Mikaʾel and the monastery ↗Däbrä Ḫayq Ǝsṭifanos. He was also appointed by *aṣe* Mənilək II as ↗*gäbäz* of the Šäwan ↗Ǝnṭoṭṭo Raguʾel church.

After the ↗Coup d'état of 1916, when Iyasu was dethroned, M. decided to stand for his son by leading his army against his grandson-in-law *ras* Täfäri. On 25 October 1916 he defeated *ras* ↗Ləʿul Sägäd Aṭnaf Sägäd at the battle of Tora Mäsk, but was defeated himself at the battle of

↗Sägäle on 27 October. He was captured on the battlefield and paraded as a prisoner through the streets of Addis Abäba on 3 November. M. spent one and a half years in detention under the custody of *fitawrari* ↗Habtä Giyorgis at Č̣äbo, and then another six months at ↗Holäta, between Männagäša and Addis ʿAläm. In the 1920s M. was reburied with honours at St. Michael church in Tänta. He is buried next to his second wife, Zännäbäčč, and the eldest sons.

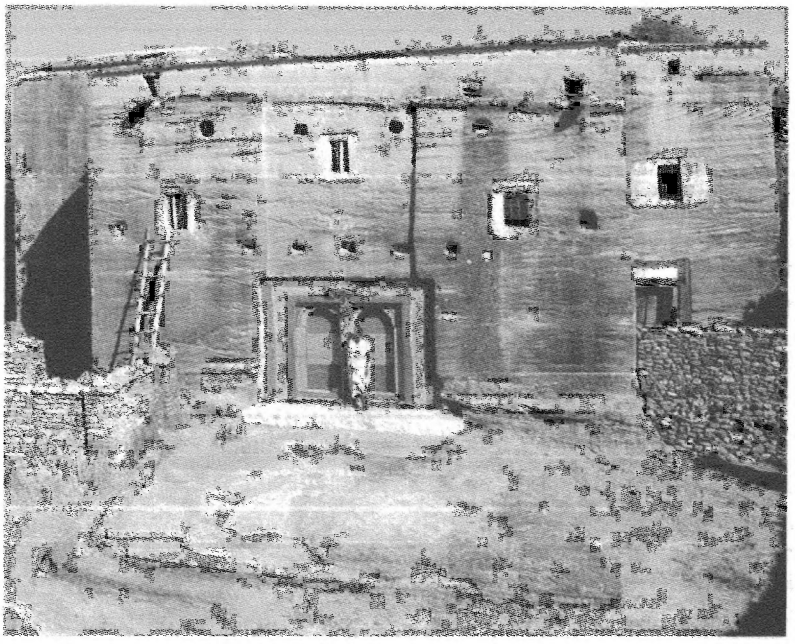
Mikaʾel Amba

M.A. (ሚካኤል፡ አምባ, also Mikaʾel Ǝmba) is a rock-hewn church located in Wämbärta, Kələttä Awləʿalo, Təgray. Situated on the top of an ↗*amba* 11 km south of Aṣbi, it is enclosed in a deep trench extended into the rock-cut courtyard with two hewn basins used for baptism and washing of the sick. One of the largest Ethiopian ↗rock-hewn churches (ca. 17 x 22.5 x 7.7–9.5 m), M.A.is a semi-monolithic structure, the free-standing part exceeding from the west façade approximately to the level where the third bays begin. Seen from above, it has the form of a Greek cross without eastern arm. The hewn caves in the surrounding rocks were once inhabited by monks, but the monastery attached to the church has since disappeared; it was last known to be active in 1973/74.

The complex, multi-section plan of M.A. belongs to the cross-in-square type and is similar to that of ↗Ṣəraʿ Abrəha wä-Aṣbəḥa and ↗Wəqro Qirqos excavated during the same period and probably by the same workshop. The main body of the church is divided into five aisles and three bays. The sections marking the shape of the cross are barrel-vaulted and higher than the others (with the exception of the eastern, which is flat and decorated with small crosses), the "transeptal", south-north axis is clearly pronounced due to its length and height. Four cruciform pillars connected by arches accentuate the central crossing-bay, covered by a flat ceiling and marked with crossed beams. The remaining eight sections, which form a square, also have flat ceilings and are divided by the pillars with chamfered shafts supporting flat beams. This part of the ↗church building serves as the *qəne maḥlet* and is thus commonly accessible, with the exception of three central eastern bays. These are elevated by tri-stepped platform and enclosed by a chancel, and belong to the sacred area, *qəddəst*.

The principal structure is extended to the west by a rectangular vestibule (originally opened, presently closed by a constructed wall and a double door), with a tall pillar in the centre and a large crypt (195 x 125 x 70 cm) cut under the floor level in the northern part. The vestibule is flanked by two side rooms opening into the interior of the church. They may have once served as the funeral chapels.

The eastern part of the church which functions as the sanctuary (↗*mäqdäs*) and houses three altar-tablets (↗*tabot*) dedicated to the archangels Michael, Gabriel and to St. Mary, was never properly explored by the scholars. Judging from the photographs taken from afar, the sanctuary is tripartite with addition of two extra rooms. Its central bay almost circular and covered by a flat cupola, opens to the church by an arch. It is extended to the east by a room ending in an apse, with a large monolithic altar. Two square side-rooms communicating with the aisles by narrow doorways are open to the central bay, but not to their full width. Since their furnishing and decorations are not known it is difficult to establish whether they functioned as the prothesis and diaconicon



Western façade of the church of Mikaʾel Amba, and courtyard; photo 2002, courtesy of Michael Gervers

or as a part of the sanctuary. The southern room is extended to the east by a square annex, which also might have been used as a funeral chapel.

There are three entrances to the church, all in the western façade: the main one, in the vestibule, and the southern and northern ones, placed symmetrically in the walls of the first external bays. The interior is poorly illuminated with light reaching only the principal body of the church through windows in the ends of the "transeptal" axis, above the side entrances and, indirectly through windows in the eastern wall of the vestibule and in the western walls of the western chapels.

The architectural decoration of M.A. is elaborate. An Aksumite-type frieze runs around the barrel vault and under the semi-cupola in the sanctuary apse. The cruciform pillars have bracket or stepped capitals. The engaged pillars along the north and south walls rise from plinths of ca. 1 m high, which also serve as the benches. The engaged pillars close to the south and north entrances are decorated with 2.8 m-long shafted crosses carved in stone. The window and door-frames are made of wood.

The wooden chancel screen separating the sanctuary, of which only the central and southern parts are still standing, consists of a balustrade (ca. 120 cm high) with the opening in the middle, accentuated by fine newels originally supporting an arch. The outer part of the balustrade is covered by carved coffered panels. Similar chancel pieces are preserved in two other churches of Aṣbidära, ↗Zarema Giyorgis and ↗Däbrä Sälam. An old wooden carved ↗*mänbärä tabot* (69 x 49 x 45 cm) is kept inside of the church. An original carved wooden door (180 x 94 cm) with elaborate lock still serves between the vestibule and the church; the other doors are stored, unused, in the vestibule.

Some fragments of wall ↗paintings have survived in the west bay of the northern aisle. The top of the haloed head of Christ and the eagle on the northern wall are all that remains from the ↗*Maiestas Domini*. Two male heads belonging either to the Apostles or to the Heavenly Priests are discernible on the western wall. The stylistic features and the range of colours make them comparable to the Coptic murals from the second half of the 12th cent. which suggests that the M.A.'s paintings might have been executed at the turn or at the beginning of the 13th cent.

According to a local tradition, the church was founded by Anbäsa Wədəm, a ruler appearing on the traditional king lists and conventionally placed in the 10th or 11th/12th cent. He is also connected with M.A. in some versions of the Vita of ↗Abrəha and Aṣbəḥa, where he figures, however, as the immediate successor of the two kings (Gire – Schneider 1970:75). A note preserved in the Gospel book kept at M.A. tells that the consecration of the church was performed in the year 866 of the Era of the Martyrs [= 1150 A.D.] by *abba* Mikaʾel during the reign of Anbäsa Wədəm (SerHist 203, n. 117). Whilst the genuineness of this note is dubious, the ecclesiastic may be identified as Ḥabīb al-Aṭfīḥī (*abba* ↗Mikaʾel I), who was appointed Ethiopian metropolitan in 1102 (TedEthPrel II, 1006; MHAlex 167–70). It is not known when he died or who ruled Ethiopia during his term.

The uncertainty of the historical circumstances is not the only factor which complicates the dating of the church. The structure itself presents an amazing mixture of old and new features, which on the one hand connects it to the ancient constructed churches (wooden frames of the openings, a chancel), while on the other, to advanced hewn structures (monumental interior with many elaborated details, almost united *mäqdäs* area). The dating of the murals is far from certain and cannot be used as a reliable *terminus ante quem*. At present one can suppose that the construction of M.A. took place between the beginning of the 12th cent. and the end of the 13th cent.

In 1974 the Oxford University Expedition reported 30 manuscripts in the church of which only nine were shown and examined. Among them, of particular value was the ↗*Sənkəssar* (36 x 52 cm), partly burnt and with folios in disorder, decorated with the miniatures and ↗*ḫarägʷ* in the ↗Gundä Gunde style. In 2006 only two folios, one with text and another bearing an illumination, were still in the church. Another illuminated folio belonging to the same manuscript is on display in the Yoḥannəs IV Museum in Mäqälä. Beside recent items, the church possesses two old iron shafted ↗crosses (161 and 157 cm) and another one made of dark wood (170 cm), which, according to a local tradition, belonged to *abunä* ↗Ewosṭatewos.

Mikaʾel Arägawi

M.A. (ሚካኤል፡ አረጋዊ, German: [Michael] Aragau; b. 1848/49, d. 1931 Ǧända) was a prominent Ethiopian missionary who worked among the ↗Betä Ǝsraʾel – during the second half of the 19th cent. and the beginning of the 20th cent. – as a representative of the ↗London Society for Promoting Christianity among the Jews.

M.A. was born in ↗Dämbəya. His father Habtu Gäbrä Maryam, who resided in ↗Jerusalem starting from ca. 1849, was the servant of Rev. J. Nicholayson, who had served as Johann Martin ↗Flad's cook on the former's first mission from Jerusalem to Ethiopia in 1855. M.A.'s mother, Täklit Adgu Agičäw, of a land-owning family from Dämbəya (and therefore almost definitely Christian), had died when he was three. His father gave him at the age of seven to Flad to raise, M.A. thus becoming Flad's first foster son (cp. Smidt 2005b:301f.: a letter of his written in 1865 in the German language). Flad supported M.A.'s further education by sending him to an orphanage in Germany in 1866. His education was completed in 1873 at the ↗St. Chrischona Pilgermission in Switzerland and M.A. was sent back to Ethiopia as a missionary, together with a group of other St. Chrischona-trained Ethiopian missionaries, all of them born Betä Ǝsraʾel (Agaže Sahlu, Säməʾanni Danəʾel and Sänbätu Danəʾel; s. Smidt 2005a).

After ↗Tewodros II had imprisoned European missionaries to Ethiopia in 1863, Betä Ǝsraʾel-born agents (such as *däbtära* ↗Bərru Wəbe, Gäbrä Ḫəywät and Iyob Nəguśe), ran the London Society mission in Ethiopia. M.A.'s group joined them in 1873, and the mission continued under the leadership of *däbtära* Bərru Wəbe. During his lifetime, M.A. preached, taught the Bible and converted Betä Ǝsraʾel, while making sporadic excursions to Europe when he was prevented from working in Ethiopia. M.A. married a relative of his elder colleague Bərru Wəbe, Tälaläč, a Betä Ǝsraʾel, who was the daughter of Iyasu Abərän and Abärräš Täddil, in Ǧända

He regularly sent letters back to the London Society and to the European director of the "Falasha Mission", Martin Flad in Switzerland, some of them being published (cp. London Society ... 1880). In 1880 he described his work at the mission school in Ǧända, and his success in baptising several Jews. His reports to the London Society include descriptions of ravaging wild animals, and the abduction and murder of a missionary. In 1883, he toured Betä Ǝsraʾel villages together with a co-missionary of Betä Ǝsraʾel origin, Goššu Mərčʿa, and participated in

several weddings with a view to converting the *Oritawi* (Torah-abiding) Betä Ǝsraʾel.

In 1885, he again visited Germany via Egypt and travelled from there to England with Flad to work on a revised version of the Amharic Bible. Upon his return to Ethiopia, he was incarcerated by the Mayor of Gondär after being accused of heresy (Ṣərä Maryam) by Ethiopian Christians, but was released after his co-missionary *däbtära* Bərru appealed to the governor of Gondär. During the ↗*Kəfu qän* famine (1888–92), M.A., like other local agents, suffered great hardship; however, he did succeed in converting many starving Betä Ǝsraʾel to Christianity during this period. By 1892, after *däbtära* Bərru died, M.A. became the director of the major "Fälaša" Christian station of the London Society at Ǧända, Lake Ṭana, and again briefly returned to Germany. In 1894, he organized an evangelist conference with Flad on the latter's last journey to Ethiopia.

Mikaʾel Arägawi during his stay in Europe; photo 1893, courtesy of the St. Chrischona Pilgermission

After the 1896 battle of ↗ᶜAdwa and Ethiopia's attempts to forge alliances with European powers, M.A. was officially permitted to operate in Ǧända and Azäzo, Dämbəya. In 1923, he was invited to St. Chrischona for the 50th anniversary of his dedication as an evangelist. There, he worked on a revised translation of the New Testament into Amharic, at the request of a Swedish mission, which was eventually printed at the Bərhanənna Sälam press in Addis Abäba (↗Bible translations, modern). He then returned to the mission station at Ǧända, where he lived until his death in 1931.

M.A. was survived by four children: three daughters – Asnäqa, Fätälwärq and Bällätäč – and a son, Mənkər Arägawi, who continued his father's missionary work in collaboration with Martin Flad's son, Friedrich. All three daughters married Betä Ǝsraʾel and their descandants live in Israel today as Jews. Mənkər married a "Fäläša Christian" from Ǧända, and continued his father's interest in promoting the study of crafts for the Betä Ǝsraʾel. M.A.'s successor as the director of the so-called "Falascha-Mission" became Friedrich Flad's son-in-law, Willy Heintze-Flad, in 1925. Friedrich Flad wrote M.A.'s biography, which was published in 1952, after Flad's death. The aim of the publication was to gain more support among the German and Swiss public for the then reviving Protestant mission among the Betä Ǝsraʾel.

Mikaʾel "Səḥul"

Ras M. (ሚካኤል፡ ሰሑል, 'M. the Astute', in his own chronicle also *səḥul əras* Mikaʾel [GuiIyas I, 213 = II, 223], variant *səḥul rəʾəsä rəʾusan* Mikaʾel, 'the astute *ras* of *rases* Mikaʾel' [BTafY 81], in Tgn. tradition known as *səḥul* Mikaʾel; b. ca. 1691, area of Ǝnda Abba Gärima near ᶜAdwa; d. 23 June 1777, ᶜAdwa) was an Ethiopian lord from Təgray.

M. was responsible for ushering in the ↗*Zämänä Mäsafənt*, a long period of political insecurity and lack of central government in Ethiopia, when he had ↗Iyoʾas I, the last emperor of the Solomonic monarchy with independent power, killed. The epithet *səḥul* (Tgn. 'astute', 'sharp') was given to him later in life due to his political and military success. In the work of the 18th-cent. Scottish traveller and eye witness ↗Bruce, M. appears as a character larg-

er than life, a ruthless and cold-blooded power politician. Ultimately, his political heritage was meagre, with both Təgray and the Ethiopian empire emerging fragmented and warring after his death. He was not a ruler with a political vision beyond control and self-interest. While he gave the decaying Solomonic monarchy in Ethiopia the final push, he ultimately did not replace it with anything else, so that the prestigious authority and office of emperor, based on the idea of descent, nominally remained in place.

M., son of the Təgrayan noble *abeto* Ḥəzqəyas Wäldä Ḫawaryat and of *wäyzäro* Ǝšäte Maryam, started his career around 1720 as a *blattengeta* to the governor of ↗Bambolo Məllaš, *däğğazmač* ↗ᶜAndä Haymanot. After having removed his rival *däğğazmač* Wälde, M. became a governor (with the title of *däğğazmač*) under ᶜAndä Haymanot in Təgray, starting from 1748. In 1759 he quarreled with his master ᶜAndä Haymanot, and in the ensuing fight had him imprisoned and executed with impunity. Starting from September 1759 he governed all of Təgray including neighbouring territories to the south. In this period, the Ethiopian monarchy was weak and ridden by regional rivalries. The problem was complicated by divisions within the Ethiopian Church between the followers of the *qəbat* ('Unctionists') and ↗*sost ləḏät* ('Three Births') schools who got the support of regional lords (AbPrince 39f.). M., not a religious man but quick to see the political importance of religion, became allied to the Gondär dynasty through empress-dowager ↗Bərhan Mogäsa (Məntəwwab), the long-living widow of *aṣe* Bäkaffa (d. 1730) and grandmother of *aṣe* Iyoʾas. In the early 1750s she had sought M.'s military and political support against Wällo and Yäğğu leaders who had entered court life following the marriage of her son Iyasu II with Wabi (Wəbit), baptized as Wällätä Bärsabəh, from the Wällo Oromo (Perret 1988:129–31). After Iyasu II's death, the widow of Iyoʾas and his mother became rivals. Məntəwwab had also given one of her daughters, Ǝleni, as wife to M.'s son *bäğərond* (later *qäñazmač*) Wäldä Ḫawaryat in 1765 (GuiIyas II, 227).

Earlier, Iyasu II had nominated M. *däğğazmač* of Təgray proper, i.e. with ↗ᶜAdwa in the centre, which was his residence (GuiIyas I, 214f. = II, 224f.). From here M. also submitted Ǝndärta in 1765, where *däğğazmač* Wälde had rebelled again, acquired the title *balgadda* and moved his residence to ↗ᶜAbi ᶜAddi in Tämben (GuiIyas

Portrait of Mikaʾel Səḥul by James Bruce; from Pankhurst – Ingrams 1988:47

I, 216 = II, 226). Within a short period of time he additionally received the governorship of Šire and Səmen and then submitted all the areas from ↗Säraye up to ↗Mänsaᶜ, Baqla and to ↗Akkälä Guzay (ibid. I, 217f. = II, 227f.). He also pillaged the ᶜAfar territories east of ↗Ṣəra.

Established as governor of the area east of the ᶜAngaräb river in addition to Təgray, he diverted trade income from caravans passing through Təgray to the coast, thus weakening the monarchy further while building his own army and importing rifles. The weak, but still calm monarchy then came into a serious crisis after the death of Məntəwwab's influential brother, *ras* ↗Wäldä Ləᶜul, in 1767. Opening the way for his power grab, M. was nominated *ras* on 20 September 1767 (GuiIyas I, 225 = II, 234; BTafY 31). M. was then virtually unstoppable and was called upon to intervene in the conflict between the Qʷara faction of Məntəwwab and the Wällo faction, erupting in 1767. But with his army of more than 20,000 men M. defeated both factions. Not much later he was raised to the rank of an imperial *ras bitwäddäd* on 22 January 1768 (Perret 1988:134). In this year he also received Empress Məntəwwab's daughter Aster in marriage (his second wife; Pankhurst 1979). Iyoʾas marshalled an army to stop M., but it was too late: in April 1769 M. defeated the coalition that supported the monarch and proceeded to try and execute him (by strangling) on 7 May 1769: an ominous precedent in the history of Ethiopia. Iyoᶜas was buried in ↗Qʷəsqʷam by his grandmother.

After the forced removal of *aṣe* Iyoᶜas, and the 5-month interlude of *aṣe* Yohannəs II, also killed by M., he put the latter's son *aṣe* Täklä Haymanot II on the throne. This "puppet Emperor" acted mainly as M.'s representative. M. was not claiming Solomonic descent to justify his position and did not try to install himself, or one of his relatives, as emperor. Also in his chronicle (*tarik zädäğğ azmač Mikaʾel*; GuiIyas I, 204ff. [text] = II, 214ff. [tr.]), which was inserted into the chronicle of *aṣe* Iyoʾas by M.'s order, he did not link himself with the Solomonids (ibid., I, 213 = II, 223; this link only appeared in later tradition, for such a genealogy s. BTafY 30f.). This chronicle covers the period up to 1769.

The lords of Damot and Wällo revolted against him, and he engaged in a series of fighting with them in Damot and Mäčča in late 1769 and early 1770. In the middle of 1770 he went to Təgray, and in December 1770 returned to Gondär and started a ruthless campaign of violent repression of any opposition. Many opponents, but also the *ᶜaqqabe säᶜat* Sälama and a group of ↗*azmari* that had performed a satire on him, were publicly executed (BruNile 1964:181f.), while others were abducted and killed in secret, and, according to Bruce (ibid. 187) the streets of Gondär were strewn with body parts and corpses that were denied decent burial.

M. could however not control the surrounding countryside, where the lords of Damot, Amhara and Bägemdər (the Oromo chief *däğğazmač* Fasil Wäräññña, *ras* Goššu Wädağe and *däğğazmač* Wänd Bäwäsän Ḫaylu) marshalled their armies against his tyranny in Gondär. In May 1771, M., still an energetic, but already aged man of over 80, was beaten on the battlefield at ↗Sarbakusa, south-east of Gondär, by the forces of Wänd Bäwäsän (who was married to a grand-daughter of M.) and *ras* Goššu. M. was imprisoned for about a year in Lasta. The stability of the empire, however, was not restored with M.'s removal, and all subsequent "emperors" until 1855 were nominal and did not command authority.

In 1772 he was sent back to Təgray as nominal governor, where he died in 1777 (or even after 1778, according to other sources, BTafY 31, BTafA 950). His stronghold in Təgray was the area between ᶜAdwa and ↗Tämben, to which he had genealogical links. His *gəbbi* at Mänawe was donated by him to the Church and serves as a church today. He was buried in the monastery of Dägna south of Aksum.

Milad: Mäṣḥafä milad

M.m. (መጽሐፈ: ሚላድ, 'Book of Nativity') is one of several works of ↗Gəᶜəz literature ascribed to *aṣe* ↗Zärʾa Yaᶜəqob and composed in the mid-15th cent. As its title indicates, the M.m. is a homiliary for the monthly feast of the Nativity of Christ (it is not clear why a loan word (from Arab. *mīlād*) is used in the title in place of ↗*Lədät*, the Gəᶜəz term for Nativity).

The ↗Ethiopian Orthodox (Täwaḥədo) Church, following the ↗*Senodos*, teaches that Jesus was born on 29 (28 in leap year) *Taḥśaś*, hence the assignment of the first homily to 29 *Taḥśaś*. Two months, *Gənbot* and *Ṭəqəmt*, have homilies for the 28th and 29th, which may have been originally related to the leap year shift of the feast. At the end of each month's homily – save for *Mäskäräm* – there is a short treatise on the ↗Trinity, titled ኖኅተ: ፀሐይ (*Ḫoḫətä Śäḥay*, 'Threshold/Window for the Sun'), in one of the two slightly different versions (thus the title of Wendt's edition of 1962–63). The symbolism is clear: the Window is Mary and the Sun is Christ.

Each homily opens with a renunciation of Satan, the same formula the faithful today begin their daily prayers with (በስመ: አብ: ወወልድ: ወመንፈስ: ቅዱስ: አሐዱ: አምላክ: በቅድስት: ሥላሴ: እንዘ: አአምን: ወእትመሓፀን: እክሕደክ: ሰይጣን: በቅድመ: ዛቲ: እምየ: (ቅድስት:) ቤተ: ክርስቲያን: እንተ: ይእቲ: ስምዕየ: ማርያም: ጽዮን: አሜን, 'In the name of the Father, the Son and the Holy

Spirit, One God. Believing and taking refuge in the Holy Trinity, I denounce you, Satan, before my (holy) mother Church, which is my witness Mary Zion. Amen'; s. Wendt 1962:1 [text]). Virtually every member of the Ethiopian Orthodox Church knows this prayer by heart. It is unclear, however, whether it originated from the M.m.

The work deals exclusively with the defence of the incarnation of the Word through temporal birth from Mary (↗Christology), and the Christian trinitarian theology, which touches also on the eternal birth of the Word from the Father. The work is not only apologetic regarding these two issues but also highly polemical in its addressing of two distinct groups that resisted the Emperor's theology of the Trinity. The first group (called here *Ayhudawi*, i.e. 'Jews', s. ↗Ayhud) did not believe in the existence of God in Trinity (s. Wendt 1962:3 [text]); the second group, followers of *abunä* ↗Ǝsṭifanos commonly known as the ↗Stephanites, being Christian, did believe in this concept but defined it differently (ibid. 13).

Some scholars have argued that Zär'a Ya'ǝqob was also in regard to the first group, implying a Christian sect, such as the Stephanites. However, it is difficult to imagine that Zär'a Ya'ǝqob would accuse the two groups whom he addresses in the M.m., the *Ayhudawi* and the Stephanites, of different theological views and take so much time to research the scriptures and historical sources on the Jewish people (cp. Wendt 1962:5ff. [text]) in order to refute their religious teaching unless there was indeed a Jewish community near him. Zär'a Ya'ǝqob defends the Christian interpretation of Gen 18–19 as an image of the Trinity visiting Abraham, denied by his opponents who described the visitors as "three men" or "God and two angels".

The second target group of polemics are the Stephanite monks. Though Christian, they did not share with the Emperor the understanding of the Unity and Trinity of God. Specifically, Zär'a Ya'ǝqob accused them of teaching the concept of the Trinity in a way that did not show the unity of the three persons. Though the description of the "heresy" in the M.m. (cf. Wendt 1962:38f.) might be exaggerated insofar that it is not clear whether Stephanites indeed claimed that each member of the Trinity existed "with his word and his spirit" independently of each other (the *Gädlä Ǝsṭifanos* only claims that the three are equal in divinity and authority), it is close to what *abba* ↗'Ǝzra maintained – that each person in the Trinity speaks with his own word, not through the Word (Caquot 1961:89f.).

Along with the other works of Zär'a Ya'ǝqob M.m. is one of the major sources on religious, political and social life in 15th cent. Ethiopia. Several monasteries preserve copies of the text, but only ms. EMML 6838 is from the 15th cent.

Milk and milk products

In Ethiopia and Eritrea the M. (Amh. **ወተት**, *wätät*, Tgn. **ጸባ**, *ṣäba*, Orom. *aannan*) of cows, goats, sheep and ↗camels is consumed. For pastoralists M. is an important ↗food item, whereas for sedentary peoples it is secondary to their grain-vegetable-meat-diet. Pastoralists' daily life is structured around caring for their animals (↗Pastoralism) and, thus, around the consumption and handling of M. and its products (cf. VSAe II, 58ff).

The yield of cow's M. is sufficient to be shared with humans and is the most popular type of M. The consumption of the slightly bitter tasting camel's M. is practiced rarely, while goat's and sheep's M. is enjoyed by almost all pastoralists and many agriculturists. For the lowland pastoralists camel's M. is very precious because of its limited availability. Praise songs about the beauty of women who drank camel's M. exist in abundance. The patterns of M. consumption are mainly religion-specific. While the M. (and meat) of camels is central to the diet of Muslim nomadic pastoralists, it is strictly forbidden for Ethiopian Orthodox Christians and ↗Betä Ǝsraʾel (Braukämper in PICES 7, 432). The con-

sumption of other kinds of M. is accepted by all religions. However, Christians abstain from M. and M. products as well as other animal foods including meat, eggs etc. on ↗fasting days. In addition to consumption, M. and its products are widely used in cosmetics and ↗healing.

During the rainy season and during transhumance, cow's M. tends to be overabundant and, therefore, realizes a poor price. During the hot months the price is theoretically high, however, the supply, once family and calf needs have been met, is insufficient. The availability of M. in the villages decreases in the dry season because only some of the animals return to the village every day, as they are herded in remote areas with better pasture. Thus diet varies considerably, with large quantities of M. and M. products being consumed at some times, and much smaller amounts in the "hungry season". Since goats and camels produce M. also during the dry season they can compensate a little for the decline in cow M. production.

Among the ↗ᶜAfar, camels and cattle for milking may be transferred to allies if they experience a shortage of M. and breeding stock. This custom is known as *hantilla*. Among the ↗Gurage and ↗Hadiyya, the women of the neighbourhood participate in an association (*↗Əqqub*) which meets weekly for the purpose of sharing M. Each member, in turn, receives M. from her neighbours. The idea of *əqqub* was applied to the rotating credit associations.

Milking is often highly ritualized and subject to a rigid labour division. There are some ethnic groups which allow only men to milk (e.g., ↗Beni ᶜAmər, ↗Beğa, ↗Yäm, ↗Basketo) and some which also allow women to do this (e.g., Boorana, Oromo, Təgrəññña-speakers; VSAe I, 194; II, 82f., 357; Rüppell 1840:53). In the religious context often only men are allowed to perform sacred M. rituals and to bless M. (VSAe II, 82). Due to their superior status, elders do not perform menial work like milking. The processing of M., like yoghurt making, butter churning, is traditionally considered as women's work. The same is true for small scale trade with M. and M. products.

Processing of milk products

According to its importance as daily food, pastoralists differentiate sweet, hot, cold, fresh cold, fresh warm, sour or curdled M. as well as M. products like liquid butter (Amh. *qəbe*, Tgn. *ṭäsmi*), butterfat, buttermilk, whey, yoghurt (Amh. *ərgo*, Beğa *todub*, Tgn. *rəgᵊo*, Tgr. *rugo*), curdled cheese (Amh. *ayb*, Tgn. *ağğəbo*) and colostrum (Volker-Saad 1997:29; VSAe II, 84). Their diet consists predominantly of liquid and hard sorghum porridges prepared with different products of cow's or goat's M. (Volker-Saad 2003:205). The production of curd cheese practiced among Amhara is not known among pastoralists (cf. VSAe II, 85).

Yoghurt is made of fresh M., poured into a leather bag and not touched for a day. On the second day it is shaken until the "butterfat" separates from the M. base. This "liquid butter" is taken out of the bag and fresh M. is added to what remains in the bag. On the third day the yoghurt is ready to be consumed. Yoghurt is consumed directly or with mashed bread (Amh. *čäččäbsa*, Tgn. *qəčča fətət*) or porridge (Amh. *gänfo*, Tgn. *gäᶜat*) among the Amhara, Oromo and Təgrəññña.

Fresh M. is shaken in bags made of skin until it ferments or becomes butter. Among the Amhara there is a distinction between crude butter (*läga qəbe*) and clarified butter or ghee (*yäbässälä qəbe*). Both boiled and shaken butter (fat) generally turn rancid, which does not decrease its value, but is a special cultural feature. For its preservation butter has to be refined, e.g., by adding the root of *rumex abyssinicus* (Amh. *mäqmäqqo*; PankIntro 156). Butter is used for cosmetics, ritual purposes (s. below) and is part of various dishes. Melted butter is often added to stew, raw meat, hash, and coffee.

Whey (Amh. *aggʷat*, Tgn. *ḥəqʷan*) is the serum or watery part of M. that is separated from the coagulated part or curd in the process of cheese or butter making. It can be used, e.g., for the production of *gušayb* (Amh. 'whey cheese').

Churns are made of wood, animal skin, ceramic, calabash, or metal. The simplicity of churns in various societies is only illusory and their design results from the accumulated experience of those who have used them through millennia.

The butter and other M. products are stored in smoked calabashes or different kinds of vessels which are often beautifully decorated, e.g., with kauris. Among the Boorana it is strictly forbidden to store M. in clay pots, thus they use wooden or grass vessels (VSAe I, 13f., 20f.; II, 84). Beni ᶜAmər women produce a special milking basket of doum palm fibres (Tgr. *ᶜamur*). A smaller basket *əfa* is used to milk goats. Before its first usage, the women plaster the basket's interior with the precious colostrum and smoke it over fire to

make it watertight. The smoking is repeated before each milking in order to disinfect the vessel (Volker-Saad 1997:77). This hygienic method is known all over the region and is applied also for clay vessels.

Socio-cultural aspects

M. and M. products in all societies of the Horn posses symbolic qualities and fulfil important functions in their socio-cultural systems, especially among pastoralists. M. signifies wealth, fertility, purity and blessing. Sayings indicate the social as well as economic value of M. The Təgre, for example, say *ḥalib sətе* ('drink milk') to express "thank you", when they received good news or a gift. The Gurage sometimes refer to M. as "God's daughter" (Leslau 1982:297). M.-blessings are uttered in many instances, e.g., by spraying a person and a vehicle before a journey with M. and saying *gäbäy ḥalib* (Tgr. lit. 'road of milk') to wish a safe trip (Volker-Saad 2003:210).

Butter serves as an important repository of wealth and values. Jars of butter are one of society's most important forms of accumulating wealth, since butter can be more easily exchanged than the cattle which produce it. Thus, decorated butter jars serve as important ↗gifts at occasions such as ↗birth, ↗circumcision, ↗marriage or annual feasts (cp., e.g., VSAe III, 133, 185). Butter was also paid as part of ↗tributes or as an additional gift added to the tax payment (PankIntro 179, 193, 187).

All over the region butter is used in rituals of anointment as well as cosmetics. This is indicated, e.g., by the linguistic connection in many Semitic languages of the terms for "smearing", "anointment" or "consecration [of a priest or king]" with the term for "butter", e.g., Gəᶜəz *qäbᵊa* or Amh. *qäbba*, 'to anoint, to consecrate, to smear etc.' and Gəᶜəz *qəbᵊ* or Amh. *qəbe*, 'butter' (cp. LesCDic 418; KaneDic 763).

Butter was used as skin cream and as a hair care product (cp. VSAe I, 146f., 352f.; II, 54, 56). Among many ethnic groups (e.g., Gurage, Rayya Azäbo), cloth or leather cloths were immersed in butter. Likewise, the body was smeared with it. A practical function of this usage was, besides the cosmetic and symbolic aspects, protection against mosquito bites.

Furthermore, anointment with butter (cp., e.g., ↗*Muuda*) played an important role in enthronment ceremonies of chiefs and leaders of traditional ↗religions as well as in rituals in the context of the ↗meritorious complex (s. cp. VSAe III, 202f., 467, but 320). Likewise, it was practiced as part of ↗initiation rites and as a blessing in religious ceremonies (s., e.g. VSAe I, 205f.; II, 220, 339, 449, 490, 503, 547; III, 193, 198). Periodic commemorations, occasional celebrations or rituals that demonstrate appropriate communication with the supernatural often include the sprinkling with M. or the smearing with butter of sacred sites or trees and paraphernalia among many peoples of Ethiopia (cp., e.g., Reminick 1973; VSAe II, 201, 541; III, 190). It was also used to embalm the dead body of high-ranking office-holders (VSAe I, 204, 222). Only a few examples of ritual usage can be mentioned here.

The newly circumcised girls and boys among the Dorse, as in many other ethnic groups in southern Ethiopia, announce their new status in the first days after the operation by going to the market with butter on their shaved heads (VSAe III, 199f.). Among the ↗Hamär, when a young man is initiated, his head is shaved, his body is rubbed all over with charcoal mixed with butter, and he is fed M. and ↗honey. Among the peoples of the Omo Basin, ↗blood is sometimes mixed with M. and consumed during the ritual that marks the transition from youth to adulthood (Almagor 1977; Little et al. 1988; Strecker 1988:210; VSAe I, 405).

The Təgre-speaking people know a ritual called *fərе* (Tgr. 'fruit'), performed during the seventh month of a woman's pregnancy. Non-pregnant women of the village visit the pregnant women with their *ᶜamur* filled with M. products to join a ritual meal that is supposed to be a blessing. Starting at sunset some boys pile up seven *ᶜamur*. After prayers and good wishes this "tower" is pushed towards the *qibla* (↗Mecca) seven times. The pregnant woman takes a small basket with M. or water and seven leaves of *Ziziphus spina Christi*. Seven women wash their faces with this liquid. After this they put their silver bracelets, which only married women wear, into the vessel. The pregnant woman pushes this vessel seven times from her bed. The women and young boys help to rearrange this setting seven times (Volker-Saad 1997:16f.; 2003:221).

As much as M. is a symbol for purity and goodness, it is prone to dangers which necessitate ↗taboos. For the Təgre- and Beğa-speaking women it is strictly forbidden during pregnancy to eat meat, to drink M. or consume butter from an unknown source, because it may cause stillbirth or even kill the woman. The women of the

Bet Mäᶜala and Ḥamasen clan in Harkokoč, a village in the Western Lowlands of Eritrea, do not eat cow's M. colostrum.

There is one taboo which is quite complex and exists in several versions. In ᶜAd Ṣäᶜada, a Beni ᶜAmər village in the Eritrean Western Lowlands people say that it is dangerous when a pregnant woman steps on the dung of an "unknown" cow (an animal which does not belong to her family or to the village), of which she neither had M. nor butter during the time of pregnancy. The consequence is that the pregnant woman has to search for the owner and buy M. and butter which has been produced from this particular cow; if it cannot be found, the foetus may be aborted. In Harkokoč, it is said to be dangerous when a pregnant woman steps on dung from a cow with cut ears. It is also dangerous to drink M. and butter from such cows. (For taboos connected with M. and M. products cp. also, e.g., VSAe II, 361).

Medical use

M. and M. products, particularly butter, are often used as traditional medicines. Thus, a purgative root is boiled in butter and ingested to cure tuberculosis, and wild honey and melted butter are consumed to cure malaria. A child is treated for conjunctivitis by having breast M. squirted in the eye; in the case of an adult, camel or cow's M. is used (Messing 1972:249–52). In Sidaama country it is used particularly to cure headaches and other minor pains. Among the Gurage butter is placed in the nose to cure tiredness in the morning, or smeared on the body at the end of the day. It is also rubbed into the foot to heal cracks and sores. For the treatment of syphilis an early 20th-cent. text recommends taking ground roots and leaves of *mäkan əndod* (fruitless ↗*əndod*) with a small amount of whey or buttermilk produced from the "milk of a cow that has the same colour as her calf" (Tsehai Berhane Sellassie 1971:118, 155).

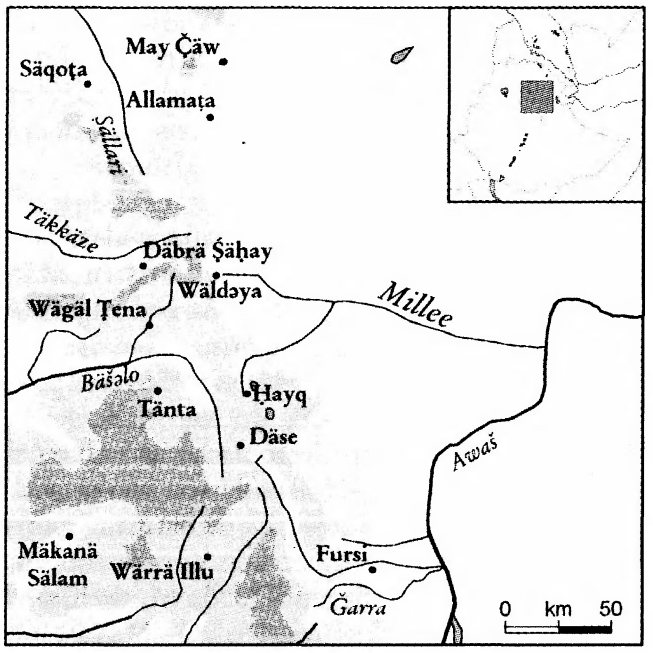
Kerstin Volker-Saad – Steven Kaplan – Abbebe Kifleyesus

Millee

M. (Amh. ሚሌ, Mille) is a river in northern ↗Wällo, most of it north of the ↗Ḥayq lake, which flows from west to east into the lowlands of ↗Awsa as one of the main tributaries of the ↗Awaš (M. outlet into the Awaš at 11° 25' E, 40° 58' N). The upper course of the M., with its source near Golbo, is situated south of Ḥayq in the South Wällo Zone.

The middle course of the M. traditionally separated the provinces of ↗Yäğğu and of Wällo. In the 1870s it is documented to have served as a boundary between the kingdom of *nəguś* ↗Mənilək (II) of Šäwa (which included Wällo proper up to the M.) and the province of *ras* Ali Bərru of Yäğğu. Later in the late 19th cent. the boundary moved slightly north to the Addif Wəha, a tributary of the M., thus incorporating ↗Wəčale and the M. into Wällo proper. The lowlands south of the middle M. are settled by Oromo, who were in the 19th cent. dependent on Wällo. The confluence of the M. and the Awaš, however, already lies in ᶜAfar territory. The great



plains north-east of the M. are inhabited by ᶜAfar. The middle M. today serves as the southeastern boundary of North Wällo Zone to South Wällo Zone, within the Amhara Regional State.

The M. is known in history for a nearby battle between Šäwa-Wällo armies and the then virtually independent Awsa sultanate on 30 January 1896, immediately preceding the battle of ↗ᶜAdwa. It is also known as the battle of ᶜArraddó, after the plain of Kaló (MorDicAfar 87). The Wällo armies under the command of *ras* (later *nəguś*) ↗Mikaʾel together with the Šäwan armies under the command of *ras* ↗Wäldä Giyorgis and *däğğazmač* ↗Täsämma Nadäw attacked Awsa with about 30,000 troops in order to impose Ethiopian overrule and prevent Italian influence in Awsa. The battle at the M. was a turning point in Awsa history. Oral tradition of Awsa underlines that it ended with a peace treaty (↗Treaties), by which both parties agreed "not to attack each other any more" and respect each other's autonomy. Starting from that moment on, the *sulṭān* ↗Maḥammad "Illaltá" of Awsa *de facto* recognized the suzerainty of Šäwa. However, the inner political structure of Awsa was not touched, and it remained a functioning state apart from the Ethiopian centre in everything concerning its internal affairs. ᶜAfar tradition claims that until the end of the reign of ↗Maḥámmad Yāyyó in the 1940s even no tributary relations were established.

M. is also the name of a small town (11° 18' E, 40° 48' N) in the hot ᶜAfar lowlands on the M. river, on the road to ↗ᶜAsäb. It lies near the Awaš confluence, in Awsa *awrağğa*, and today mainly serves as a truck stop. In 1971 it became known for the finding of prehistoric remains by Maurice Taieb. During the following debate, it was concluded by Louis Leaky that the fossils were one to two million year old animal bones; Mary Leaky said, however, that the stone tools dated only from the Middle Stone Age (Kalb 2001:46).

Wolbert Smidt – Yasin Mohammad Yasin

Millenarianism ↗Eschatology

Minas

Aṣe M. (ሚናስ [after St. ↗Menas]; b. between 1526 and 1529 [cf. below], d. 30 January 1563) ruled Ethiopia from April 1559 until his death. M.'s regnal ↗name was Admas Sägäd. This has traditionally been regarded as Gəᶜəz and hence as meaning 'The diamond submits [to him]', an understanding indeed suggested by a passage in M.'s chronicle (KrLebD 35f. [text]). Nonetheless it may be more appropriate here to interpret *admas* as Amh. 'horizon', with the resulting translation 'The [whole] horizon submits [to him]' (cp. Guidi 1893:10f., n. 2). This seems justified on account of both the less contrived semantics and the frequency of geographical terms in analogous contemporary names (e.g., Aṣnaf Sägäd, regnal name of M.'s brother and predecessor ↗Gälawdewos; ↗Wäsän Sägäd).

M. was, after ↗Fiqṭor and Gälawdewos, the third son of *aṣe* ↗Ləbnä Dəngəl and *ətege* ↗Säblä Wängel. In addition he had a younger brother, Yaᶜəqob, as well as a number of sisters. Indubitably attested are Amätä Giyorgis and Wälättä Qəddusan, less so Säbänä Giyorgis, Tewodada and Wälättä Ḥanna (Esteves Pereira 1888:58; Kropp 1989:176f., 179f.). M.'s own birth falls between 1526 (BeckHuntAlvar 247) and 1529. The latter date can be inferred from the fact that M. by or shortly after 1539 must have reached puberty (cf. below).

M.'s childhood was marked by ↗Aḥmad b. Ibrāhīm al-Ġāzī's ("Grañ's") ↗*ğihād* against the Christian kingdom, whose successes in the 1530s forced the imperial family to seek refuge in ever

more northerly parts of the realm. On 10 May 1539, however, M. in Wag fell into the hands of the Muslims and subsequently spent more than five years in their captivity.

There can be no reasonable doubt that during this period M. was made to convert to Islam. While this is never unequivocally acknowledged in the Ethiopian sources, the M. Chronicle strongly hints at this when it affirms that in 1559, when he was made emperor, M. again was "of sound heart, like before" and that "the perversion had not entered his mind" (cp. KrLebD 51 [text]). Moreover, Grañ and his main wife ↗Bati Dəl Wämbära some time after M.'s capture had conceived a plan to marry him to a daughter of theirs, a project for which M.'s conversion was a prerequisite. Even though the wedding was, according to the M. Chronicle, cancelled at the last minute because Grañ had been persuaded that it had the potential to undermine his own authority (KrLebD 41 [text]), M.'s previous conversion can hardly be in doubt. It even seems possible that the union indeed was made, but that the chronicle here bends the truth in an attempt to sanitize M.'s biography.

The marriage project – which incidentally also proves that M. must have reached puberty by 1541 at the latest – had its rationale in Grañ's and his wife's desire to link their family to the royal dynasty and generate Muslim Solomonid offspring with a claim to the Ethiopian throne. Thereby Grañ hoped to secure long-term Muslim rule over the conquests of his *ǧihād*. To this end, he had already once approached the beleaguered Ləbnä Dəngəl and offered him peace in exchange for the hand of one of his daughters – an offer which the monarch had scornfully rejected (KrLebD 16 [text]). M. however was obviously in no position to resist, all the more so because he otherwise faced the prospect of castration, a fate which two cousins who had been captured with him had already suffered.

Even if M. indeed was married to Grañ's daughter, the union of course became null and void upon M.'s return to the Christian sphere. In late 1544 he was exchanged against Grañ's teenage son Muḥammad (cf. BassHist 75 [tr.]) who in the wake of his father's defeat and death in the battle of ↗Wäyna Däga in February 1543 had fallen into the hands of the victorious Gälawdewos (Whiteway 1902:85). The exchange was negotiated by the two princes' mothers, Dəl Wämbära and Säblä Wängel, an indication of their independent authority. Yet external consent was also needed to secure M.'s release, since around the turn of 1541/42 Grañ had ordered his transfer from Ethiopia to the Ottoman *paša* of Zabīd in Yemen. This gesture of deference was occasioned by Grañ's desire to obtain additional Turkish support for his *ǧihād*, as in mid-1541 a Portuguese expeditionary force led by Cristovão da ↗Gama had landed in Ethiopia and begun to threaten the earlier Muslim gains.

On M.'s life between 1544 and 1559 we possess little information. We do know, however, that after his return to Ethiopia he was allowed to live in freedom, as Gälawdewos broke with a centuries-old tradition of Ethiopian monarchs and relegated neither him nor Yaᶜəqob to ↗Amba Gəšän. In the mid-1550s M. then wed Śəllus Ḫayla (regnal name ↗Admas Mogäsa) in a proper church ceremony, apparently prodded to do this by his mother. Säblä Wängel likely was concerned with propriety: Śəllus Ḫayla must at the time already have been M.'s consort or civil wife for a number of years, as their eldest son ↗Śärṣä Dəngəl was born ca. 1550. The couple's further sons were Ləssanä Krəstos and Fiqṭor, their daughters Taʾodra and Yosṭina (commemorated in the ↗*Sənkəssar* on 25 *Säne*). In addition, an 18th-cent. genealogy mentions a son of M. by the name of Alʾazar (Kropp 1989:182f.).

In April 1559 M. succeeded Gälawdewos on the throne because the latter, when he died in battle against the Adalite Muslims under ↗Nūr b. Muǧāhid, had no, or at least no legitimate, male offspring. Nonetheless M.'s succession seems not to have been a foregone conclusion, and during his short reign he had to contend with much internal opposition. This culminated twice in the installation of rival emperors by powerful lords. Already at the very beginning of his reign M. felt it necessary to enlist the support of his still influential mother in order to assert his authority and the legitimacy of his rule. The latter in particular could appear questionable due to his (as we assume) youthful conversion to Islam. Even if made under duress and later revoked, it constituted an abiding embarrassment for a ruler of Christian Ethiopia. Moreover, his captivity and conversion had not only tainted M.'s religious credentials, but apparently also scarred his personality and left him an irritable and irascible character (KrLebD 56, n. 226 [text]; PerChron 96f. [text]). This too perhaps contributed to some nobles' disaffection with him.

The not quite four years of M.'s rule were characterized by his almost constant campaigning in northern Ethiopia. After the rainy season of 1559, the Emperor's first move was directed against the ↗Betä Ǝsraʾel of Səmen, a foreshadowing of Śärṣä Dəngəl's much more vigorous assaults on the same community about two decades later.

After the inconclusive Betä Ǝsraʾel campaign, and after surviving an assassination attempt of unclear motivation, M. for the remainder of his rule had to focus on fighting internal challengers. Central among them was the *baḥər nägaš* ↗Yəsḥaq who managed to enlist the support of various other parties in his bid to become the effective master of the kingdom. Yəsḥaq's true colours first showed in 1560/61 when he, in connivance with M.'s cousin Yoḥannəs (a son of ↗Romanä Wärq and brother of ↗Ḥamälmal) and an otherwise little-known lord Kəflo, proclaimed M.'s nephew Täzkarä Dəngəl (or Täzkaro, a son of the meanwhile deceased Yaʿəqob) as counter-emperor. From Lasta M. moved against Yəsḥaq and eventually routed his opponent's army in ↗Adyabo. Yəsḥaq himself escaped, though, and thus remained a potential menace.

After this victory M. marched against Yəsḥaq's Amharic co-conspirators who camped in Bägemdər. There he surprised and defeated them in July 1561. The crushed forces included Portuguese contingents, mostly the remnants and offspring of da Gama's men, who had sided with M.'s opponents largely because he had manifested a pronounced anti-Catholic attitude (Andres de ↗Oviedo). After his victory M. initially showed clemency to his surrendering nephew Täzkaro, but later allegedly saw to it that his former rival was treacherously killed (PerChron 96f. [text]).

Despite these successes the challenge to M.'s rule was not over. Yəsḥaq had regrouped his forces on his home turf, secured the help of many of the remaining Portuguese, and even allied himself with the Ottomans who in 1557 had established a foothold in Eritrea (s. ↗Massawa; ↗Özdemir). Thus strengthened, he installed another puppet emperor against M., Täzkaro's younger brother Marqos. Once again M. without hesitation marched against Yəsḥaq (in late 1561/early 1562), but this time his army was resoundingly defeated in Ǝndärta due to its opponents' superior weaponry, as the Portuguese and Turks brought quite a few muskets and even pieces of artillery to the battle. Having learnt his lesson, M. spent the rainy season of 1562 producing and procuring better weaponry. He died, however, before he could confront the *baḥər nägaš* again: soon after his departure from his rainy season camp in Walä Mäčät in Amhara M. fell victim to a mysterious "light illness" (**ንስቲት ደዌ**, *nəstit däwe*, KrLebD 62 [text]). Yəsḥaq's challenge hence carried over into Śärṣä Dəngəl's reign.

Some manuscripts of the "Short Chronicle" report that M. was laid to rest in the church of ↗Tädbabä Maryam. He is briefly commemorated in the *Sənkəssar* on the day of his death, 5 *Yäkkatit*.

Michael Kleiner

Minas

M. (**ሚናስ**) is known in tradition as the second metropolitan (↗*Ṗaṗṗas*) of the Ethiopian Orthodox Church in ↗Aksum after Frumentius (*abba* ↗Sälama Käśate Bərhan). The information on M. is found in a few sources produced several centuries after the possible time of his tenure, between the late 4th and the 6th cent. ("10. Jh.?" in BrakKirche 124 n. 624). On account of that, his personality has been a subject of hypotheses and speculation.

In the traditional lists of metropolitans, *abba* Sälama is in fact followed by M., "bishop of Aksum", also called "Sälama II" (Guidi 1899:2f., cp. Chaîne 1925:266). Furthermore, M. is identified with the homonymous "bishop of Aksum" to whom a number of ancient homilies (cp. ↗*Dərsan*) are ascribed: e.g., in ms. EMML 1763 (first half of the 14th cent., from ↗Däbrä Ḥayq Ǝsṭifanos), those for the feast of the Holy Cross (fols. 10r–14r), on the "70 Disciples and 318 Orthodox Fathers" (fols. 27r–33v), on the commemoration of *abba* Yoḥanni (fols. 35v–37v; cp. StrANL 308), on the Dormition of the Virgin Mary (fols. 124v–29r), on the Apostles (fols. 259r–64r [also in BritLib, Or. 8192, fols. 120vb–28va; cp. Cowley 1983:77 n. 5]), and for the eve of St. John's day (fols. 276v–79r). The same works, belonging to one of the earliest layers of ↗Gəᶜəz literature, seem to be also contained in another manuscript of ca. the same age, the Homiliary of ↗Ṭana Qirqos (EMML 8509), and might be further looked for in the "twin" Homiliary of ↗Däbrä Asäbot (EMML 7602; s. Fiaccadori 1989:150). The study of those texts, as well as of the entire contents of these mss. remains a *desideratum*.

The Ethiopian ↗*andəmta* tradition claims that a certain M., archbishop of Ethiopia, translated the Revelation of John at the time of Anbäsa Wədəm, an obscure pre-Zagʷe king of uncertain chronology, "before the Muslims ruled Egypt" (Cowley 1983:78). Another reference to M. is found in the Vita of ↗Afṣe, where he appears as the bishop of Ethiopia and successor of Sälama at the time of the arrival of the ↗Nine Saints (SerHist 116 n. 9; Schneider 1985:107; MHAlex I, 68f., n. 177). This event, however, must have taken place in the late 5th–early 6th cent., but, according to some other sources, the metropolitan in that period was Elyas (e.g., the Vita of ↗Libanos, s. Bausi 2003; cp. CRStor 157).

Minerals

In Ethiopia, most deposits of metallic M. are associated with Precambrian basement rocks, predominantly with Neoproterozoic low-grade metavolcano-sedimentary (greenstone) belts. The Phanerozoic sedimentary rocks and the Cenozoic volcanic rocks are significant with respect to industrial M. and building materials.

Since biblical times, Ethiopia has been an important producer of ↗gold and platinum (Getaneh Assefa 1985; Aberra Mogessie – Kebede H. Belete 2000). ↗Salt production and mining for copper can also be traced back to pre-Christian times, ↗iron production to the Middle ages (Pankhurst 1961:224–29). Nevertheless exploration by mining companies did not start until the late 1890s (Masresha Gebre Selassie – Reimold 2000).

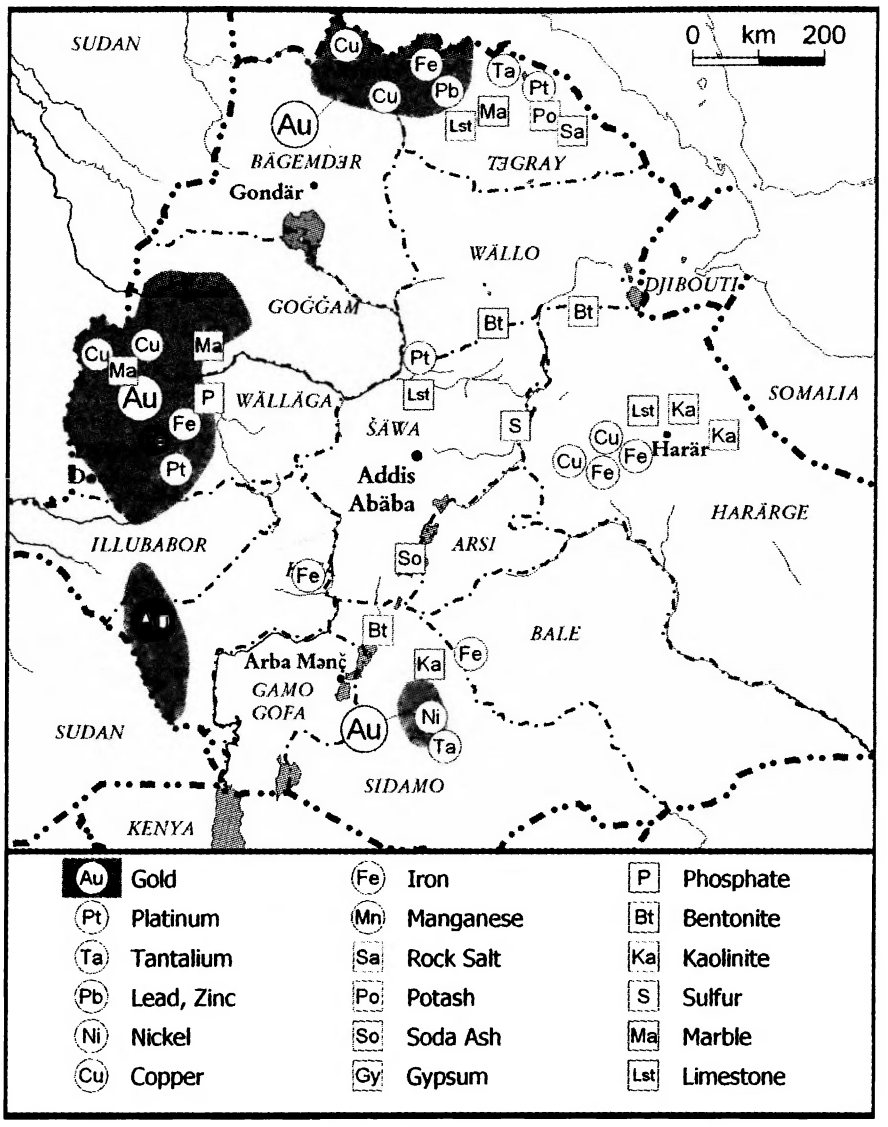
Metallic mineral deposits

Gold is present both in primary and in secondary (placer) deposits. It occurs in four major areas: in the Adola region (southern Ethiopia), in ↗Wälläga (western Ethiopia), in the Akobo region (south-western Ethiopia) and in Təgray (northern Ethiopia). At present the Adola gold field is the only active gold mining area except for artisanal mining in the above mentioned areas. Most of the primary gold occurrences are orogenic mesothermal in origin and bound to shear zone-hosted quartz veins developed within Neoproterozoic metavolcano-sedimentary rocks; gold-bearing volcanogenic massive sulphides and epithermal mineralizations were also detected (Solomon Tadesse et al. 2003). Gold occurs as free particles or within sulphides such as pyrite, galena or chalcopyrite. Gold-bearing placers are of eluvial and alluvial types (ibid.).

Platinum occurs in western Ethiopia, where mining is active in the Yubdo area. The platinum concentration formed by the alteration of ultramafic rocks, mainly dunites, to birbirites and serpentinites. Platinum is mostly present as Pt-Fe alloys (Aberra Mogessie – Kebede H. Belete 2000). The Pt-bearing sulphide M. kingstonite was first described from Yubdo (Stanley et al. 2005). Large-scale mining started in the 1920s concentrating on the lateritic weathering

zone, but has decreased during the last decades. Placers are still mined by locals.

Rare metals such as tantalum and niobium occur mainly in southern Ethiopia associated with pegmatites in Precambrian greenstone and serpentinised gabbro areas, in primary, in secondary weathering as well as in placer deposits. Tantalum is contained in columbo-tantalite, tantalum-rich columbite and in ixiolite (Masresha Gebre Selassie – Reimold 2000). Lead and zinc occur in the greenstone belts of western and northern Ethiopia. Nickel is found within serpentinized ultrabasic rocks in southern Ethiopia, mostly in laterites capping the serpentinite bodies. It occurs as pimelite, a M. of the garnierite group. Copper is present in the Neoproterozoic metavolcanosedimentary rocks of western and northern Ethiopia as disseminated ore or associated to quartz veins, mainly in the form of chalcopyrite, malachite and azurite. The "Adigrat Formation" in the ↗Čärčär Mountains contains stratiform copper mineralisations of the Red Bed type consisting of malachite, with minor azurite and chalcocite.



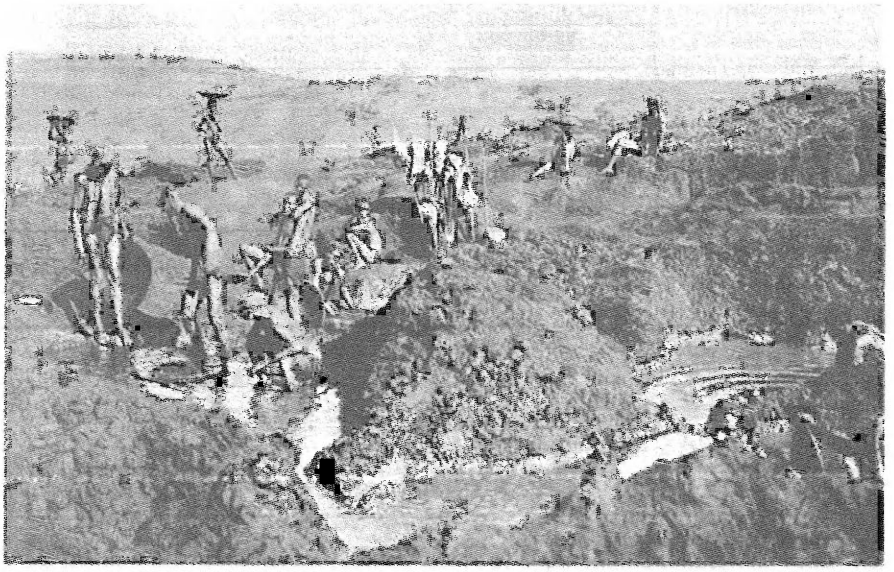
Sketch map of the mineral deposits of Ethiopia; after Wegner – Häußer 1996, Solomon Tadesse – Milesi – Deschamps 2003

Iron is widespread in Ethiopia, both as stratiform mineralizations in Precambrian metamorphic rocks, and as lateritic weathering or gossan-related concentrations in Precambrian rocks and Tertiary volcanites. Stratiform Precambrian iron ores consist mainly of magnetite and ilmenite, lateritic types of goethite and minor hematite (Wegner – Häußer 1996; Masresha Gebre Selassie – Reimold 2000). Manganese is present in Cenozoic sediments of the Danakil depression as stratiform ore consisting of psilomelane, pyrolusite and hollandite (Masresha Gebre Selassie – Reimold 2000).

Industrial mineral deposits

Rock salts such as halite, sylvinite and carnallite exist around Dallol in the ↗ᶜAfar Depression, and are associated with potash (Wondafrash Mammo Ghebre 2000). Soda ash deposits are found in salt lakes in volcanic calderas and in the ↗Rift Valley lakes (Getaneh Assefa 1985). Thick layers of gypsum form part of the Jurassic shallow marine sediments in the Blue Nile, Təgray, Čärčär mountains and ↗Ogaden regions, and occur in the Cenozoic evaporates of the ᶜAfar Depression. Phosphate deposits in western Ethiopia are related to intrusive basic rocks and consist of apatite. Native sulphur formed by solfatara activity in the ᶜAfar Depression and in the Rift Valley.

Clay M. deposits such as bentonite and kaolin are widespread. Bentonite formed by the alteration of volcanic and volcanoclastic rocks. It occurs in Quaternary lacustrine deposits in the ↗ᶜAfar region and former ↗Sidamo province. Kaolin results from the weathering of feldspat-rich rocks, such as granites, gneisses and pegma-



Platinium miners in Yubdo, washing out the ore; from CerEt vol. 2, pl. 14

tites. Feldspars and mica are associated with pegmatite dykes in Precambrian basement areas in ↗Harär region, Sidamo and Wälläga (Wegner – Häußer 1996).

Gemstones such as opal, garnet, beryl, rutile, tourmaline, topaz, spinel, olivine and chalcedon occur in situ and in recent river sediments (Getaneh Assefa 1985; Wegner – Häußer 1996) and are mined by artisanal and small scale miners.

Building stones

Marble exists in many Precambrian terrains of Ethiopia. Good quality granite is present as syn- and post-tectonic intrusions, e.g., in the Harär area and in Wälläga (Haileyesus Walle et al. 2000). Limestone suitable for the cement and the dimension stone industry forms part of the shallow marine Upper Jurassic sequences in central and northern Ethiopia, the Upper Jurassic and Cenozoic strata of the Ogaden Basin and of the ᶜAfar Depression. Pumice occurs widely in the Rift Valley, as recent shoreline sediments or as older lacustrine deposits (Getaneh Assefa 1985; Tibebu Mengistu – Haile Michael Fentaw 2000).

Minifire

The M. are a ↗Sāho-speaking group located between the ↗Asaorta (northern Sāho) and the ↗Ḥazo (for location s. Idda). They consist of three groups: the Đasamó, the Gaᶜasó and, according to some, the Dabrimēla (s. EAE vol. 5). Many Sāho consider the Đasamó and the Gaᶜasó the only "true" M., since their genealogical link with the rest of the M. is unknown. They are mentioned separately by Trimingham (TrIslam 178). The Đasamó wander between ↗Sänᶜafe and ↗Iṛāfálo on the Gulf of Zula. The Gaᶜasó are distributed from the region south of Iṛāfálo to ↗Amba Soyra. Some of them are agriculturalists while others are pastoralists. Towards the southeast, they reach the upper part of *wadi* ᶜIndēli.

According to the 1931 census, the M. accounted for 27 % of a total of 38,000 Sāho. The Đasamó are divided into five lineages: ᶜAbdallāh Ḥarag, Mōset Ḥarag, Nāfiᶜ Ḥarag, Subākum Ḥarag and Zellaᶜ ᶜAre. ↗Faḍé-k Ôbe, who is considered the greatest Sāho poet, was of Đasamó origin (Reinisch 1889:291; Morin 1999:95f.), as was Reinisch's interpreter ᶜAbdallāh "Đasamóyta". The Gaᶜasó consist of seven lineages where the term *gāša*,

'branch', is used instead of *ḥarag*, 'house, lineage', i.e. ᶜAbdallāh Gāša, ᶜAsa-Yōfisa Gāša, Šum-Aḥmad Gāša, Ḥasan Gāša, Yōfis Gāša, Silēman Gāša, Ōna-ᶜUmar-Dik. The word *ᶜáre* 'house' is used for the two Dabrimēla sub-groups: Alades ᶜAre (*ala des*, 'those who keep their goats') and Labhalet ᶜAre ('warrior's house'). From a strictly linguistic point of view, the M. dialect shares features with both the northern Sāho (as spoken by the Asaorta and the ↗Tarūᶜa), and the southern Sāho (Ḥazo and ↗Irob).

The three groups known as M. claim a common descent (*firé*) from *aṣe* ↗Minas (Sāho *Mína*). This alleged origin cannot be totally rejected because Ethiopian soldiers may have settled among the Sāho during the reign of Minas (1559–63) in order to defend against Turkish raids from the coast. A second local tradition (s. Martini 1946:46) refers to another Minas, the nephew of *aṣe* Naᶜod (r. 1494–1508) and a ↗Balaw woman. This Minas, after being recognized by his father, adopted the name *ras* Marsom in response to those who insulted him saying he was illegitimate. A third legend (s. Reinisch 1889:12) states that "Mina" was the son of a woman captured by a local chief, ᶜAsa Bōraytó. She gave birth to a male child who was nicknamed Mína (his birth-name was Wān). Another legend (PollEr 269) refers to a Turkish ancestor and claims that the M. identity has its origin in the political conflict between ↗Christianity and ↗Islam during the 16th cent.

Mission Dakar–Djibouti

The M.D.D. was a French ethnographic expedition that crossed Africa from its western to its oriental coast, between May 1931 and February 1933, through French West Africa (Senegal, French Sudan, Upper Volta, Dahomey), French Equatorial Africa (Cameroon, Central Congo), British-ruled Nigeria, the Belgian Congo, Anglo–Egyptian Sudan and Ethiopia. It was financed by French institutions, such as the Ministry of Internal Affairs, the Académie des Inscriptions et Belles-Lettres, the Museum of Natural History, the Ethnographic Museum of Trocadéro etc., by private donors (amongst them Rockefeller and David Weill) and by a special governmental enactment of March 1931, allocating an extraordinary budget from the Ministry of Education and Fine Arts.

This huge expedition was made possible thanks to the obstinacy of its leader, Marcel ↗Griaule. After having attended Marcel ↗Cohen's Semitic linguistic lessons at the Écoles des Langues Orientales and studied ethnology with Marcel Mauss, a proponent of field research for ethnologists, Griaule led, in 1928–29, the first ethnographic and linguistic mission to Goğğam, where he applied methods which he could systematize during the M.D.D.

One of the aims of the M.D.D. was to collect artefacts for the collections of the Ethnographic Museum of Trocadéro, another was to gather a scientific documentation (photos, films, notes and observations) for "the ethnographical facts" were already considered endangered by the development of tourism. Griaule planned to conduct "extensive surveys" to collect basic information for further research and "intensive surveys" to study in detail a selected population. Such "intensive surveys" were conducted in Sanga

(Dogon), Mali (29 September–19 November 1931), and in Gondär, Ethiopia (July–December 1932). The first retained the attention of Griaule during his entire career, making the Dogon one of the most studied West African people. After 1933 Griaule phased out his Ethiopian studies. His books published about Ethiopia after this date were edited on the basis of his first mission and he entrusted one of his student, Wilhelm Staude, the task to study the Ethiopian paintings brought back by the M.D.D.

Pragmatically, the law of March 1931 also claims, in order to convince the government to generously finance the mission, that ethnology "contributes necessarily to colonial methods by revealing to legislators, civil servants, colonists, the usages, beliefs, laws and techniques of the local population, and therefore permits a more human and fruitful collaboration by leading to a more rational exploitation of natural resources". The paradox of this mission was that its activities were oscillating between looting and safeguarding, between scientific observations and involvement in the colonial game, an ambiguity that has been intensively discussed since the mission returned in 1933.

The permanent members of the M.D.D. were: Marcel Larget, intendant and naturalist (member of Griaule's expedition in 1928–29); Éric Lutten, who lead the research on "technologies" and was at times cameraman; Marcel Griaule himself, head of the mission, and the surrealist writer Michel ↗Leiris, engaged as archivist and secretary. Some members left the mission before reaching Ethiopia such as Jean Mouchet (linguist), Jean Moufle (ethnographer) and André Schaeffner (musicologist), founder and director of the department of ethnomusicology at the Ethnographic Museum since 1929 and contributor, like Leiris and Griaule, to the surrealist journal *Documents*. For the Ethiopian part of the mission some additional members joined the team: Abel Faibvre (geographer), Gaston-Louis Roux (painter) and Deborah ↗Lifchitz, who mastered Gəᶜəz and Amharic.

The M.D.D. arrived at the Ethio–Sudanese border in April 1932. After having travelled one year through colonial Africa, the situation now changed and for being authorized to enter Ethiopia, the M.D.D. had to justify itself. Griaule and his team had planned to settle in Zäge, under the protection of *ras* ↗Ḫaylu Täklä Haymanot, and to prospect on Lake Ṭana. However, between 1929 and 1932 the political situation in Ethiopia had changed and *aṣe* Ḫaylä Śəllase I, the new emperor, building up a centralized and authoritarian state, felt defiant to provincial governors as much as to foreign missions. The M.D.D. got the wrong reference, *ras* Ḫaylu, who was imprisoned in June being accused of supporting *ləǧ* Iyasu. Furthermore, the M.D.D. was equipped with suspicious material, some guns and a boat, designed for the genuine scientific exploration of Lake Ṭana, an area considered a sensitive geopolitical zone. After leaving behind this material, Griaule alone could enter Ethiopia, escorted by Ethiopian soldiers and conducted to ↗Däbrä Tabor, to *däǧǧazmač* Wänd Bäwäsän, provincial governor of the Bägemdər region. Griaule could settle half-way, in Gondär, under the protection of the Italian consul, Raffaele di ↗Lauro.

At the beginning of July 1932, Leiris and the other members of the mission joined Griaule on the territory of the Italian consulate. There they erected a camp with proper buildings for the rainy season, from where they conducted different activities, all supervised by Griaule. One was dedicated to the study and acquisition of paintings, the most challenging project being the copying and replacement of the 17th-cent. mural paintings of Abba Anṭonyos church (St. Anthony) in Gondär, successfully completed but not without creating tensions amongst the religious and lay authorities. The old painter Kaśa worked for the Mission for four months, delivering paintings and texts for documenting the activity of "traditional painters". All mural and wood paintings were deposited at the Ethnographic Museum of Trocadéro (now Musée de l'Homme). Since 2005 they have been at the Museum of Quai Branly (Bosc-Tiessé – Wion, 2005).

Under the control of Deborah Lifchitz some 350 manuscripts and magic scrolls were collected. They are today deposited in the French national Library. Michel Leiris, assisted by *abba* ↗Jérome Gäbrä Muse, conducted enquiries about ↗possession cults and spirits. Marcel Griaule choreographed all this and conducted particular studies on slavery as well as on the cultures of the ↗Kəmant and ↗Betä Ǝsraʾel, proceeded to different demographic and sociological census, and collected oral traditions. The M.D.D. French team was assisted by a huge network of Ethiopian translators, informants and intermediaries, totalling ca. 100 persons in total.

The mission had planned to leave Gondär mid-October but the Europeans had to respond to

different claims beforehand. The fact that they had purchase slaves and liberated them led to incriminations. Slave trade was at this time forbidden in Ethiopia, although still very common and some could not accept that slaves had escaped from their condition and thus were lost from the market. The mission's huge collection of objects, manuscripts and paintings was a potential problem as well. For passing the provincial customs, the mission had to hide the most sensitive objects and, once the customs was passed without trouble, the collections were sent to Eritrea, at this time a safe colonial country. When, in February 1933, Griaule met Ḫaylä Śəllase in Djibouti, he intended to ask for a compensation for all the troubles the Ethiopian state and the local rulers had created, but he was dissuaded to do so by the French Ministry of Foreign Affairs and just reclaimed the charges pressed by the Ethiopian government, namely by *blattengeta* Ḫəruy.

Back in France, a huge exhibition of items collected by the M.D.D. was displayed in the Trocadéro Museum. Griaule later conducted other scientific missions, in West Africa, selecting the Dogon area to be his main field of study.

Missionari della Consolata

The M.C. (Istituto della Consolata per le missioni estere) is a missionary institution founded in Italy by Giuseppe Allamano in 1901. Inspired by the work of Cardinal Guglielmo ↗Massaia, Giuseppe Allamano asked the ↗Sacra Congregatio de Propaganda Fide to concentrate their missionary action among the Galla (↗Oromo) or across East Africa. However, the initial apostolate camp assigned to the institute was in 1902 in Kenya.

On 28 January 1913, Propaganda Fide established the Apostolic Prefecture of Southern ↗Käfa, separating it from the Apostolic Vicariate of ↗Harär, run by French ↗Capuchins, and entrusting it to the M.C. Due to governmental opposition, it was only on 25 December 1916

that the first Apostolic Prefect, Gaudenzio Barlassina, could reach Addis Abäba.

After some years of travelling in disguise as tradesmen, the M.C. were able to gain the goodwill of Ethiopian authorities, thanks in part to construction works carried out for *ətege* ↗Zäwditu and *ras* Täfäri (the future ↗Ḫaylä Śəllase I) and to the liberalization of attitude toward religion on the eve of Ethiopia's entrance into the ↗League of Nations. With the support of the National Association to assist Italian Catholic missionaries and of the Italian Anti-slavery Society, they opened missionary stations, orphanages, professional schools, hospitals, centres for the elderly, leper hospitals, "Villages of freedom" (places for freed slaves), and, from 1922, a seminary for the formation of indigenous clergy. On the eve of the ↗Italian war of 1935–36, there were 33 fathers and 53 nuns running these charitable institutions.

With the beginning of Italian operations in Ethiopia the good relationship between the Apostolic Prefecture and Ethiopian authorities suffered a radical change. Missionaries tended to comply with all requests coming from the Italian government, which encouraged initiatives favouring the diffusion of "italianità", tried to involve the clergy in strategic plans aimed at creating the *casus belli*, and used the missionaries' knowledge of local languages and peoples.

Between 1933 and 1934, the Ministry of Colonies granted the M.C. in Ethiopia some "extraordinary" subventions for teaching the Italian language, technical instruction of indigenous workers, sanitary assistance and the foundation of a boarding school in Addis Abäba for the children of the Ethiopian elite. This initiative, favoured by the Italian government, was intended to spread Italian language and culture among Ethiopian upper classes.

In early May 1935 the Ministry of Colonies, through the head of the Division Enrico ↗Cerulli, tried to involve the missionaries in the insurrection of some tribes, with the aim of creating incidents that would justify military intervention. The M.C. found themselves caught between the pressures of the Italian and the expectations of the Ethiopian government, which asked Barlassina – superior general since 1933, succeeded in Käfa by Santa – to undertake mediation and pacification action between the two States.

The initiatives undertaken by Barlassina following the failure of negotiations were inspired by the principle of obedience to Italians as the likely victors. While hoping that the missionaries would only be used in medical and spiritual assistance, Barlassina accepted that some also collaborated with Cerulli in his plans. General Rodolfo ↗Graziani received topographic maps and logistic information regarding southern Ethiopia from some fathers.

With the outbreak of war, the Ethiopian government compelled Italian missionaries to leave the country. For many of them the main objective was to go back to Ethiopia; some enrolled as military chaplains for Italian troops, others played an important role in operations against Ethiopian "rebels". The journal of the Consolata followed up on the war in providential and anti-Coptic terms.

With the creation of the ↗Africa Orientale Italiana and the expulsion of British, Swedish and American Protestant missionaries, and the "removal" of French Catholic missionaries, who were substituted by Italian staff, ecclesiastic circumscriptions were re-designed. On 25 March 1937, the Apostolic Prefecture of Käfa was enlarged and elevated in rank as Apostolic Vicariate of ↗Ǧimma. With the liberation and power transfer to the ↗British Military Administration, Italian missionaries were compelled to leave the country.

In 1970 the M.C. went back to Ethiopia, in the beginning with the name Fatima Fathers, to avoid reference to the colonial past. They first established missions in the Apostolic Vicariate of Harär. In 1980, they assumed the new Apostolic Prefecture of ↗Mäqi, elevated in 1991 to Apostolic Vicariate, where they have founded parishes, one hospital and two seminaries.

Missions

Although missionary activity is, to some extent, co-terminous with the history of ↗Christianity, and although the ↗Ethiopian Orthodox Täwaḥədo Church has itself carried out missionary activity, this article focuses on the efforts, since the 16th cent., by foreign religious bodies to bring Ethiopians under their influence. The vast majority of this activity was carried out by Catholic (↗Catholicism) and Protestant M. (↗Protestantism), but European Jews also sent missionaries to Ethiopia to work among the ↗Betä Ǝsraʾel. Since separate articles exist on all of the major M., this article provides an overview emphasizing historical themes and processes.

Widescale European missionary activity in Ethiopia began in 1555 – during the period of the worldwide expansion of Iberian Catholicism – with the establishment of a ↗Jesuit M. in the country sponsored by ↗Portugal (For earlier, though badly documented missions, cf. ↗Dominicans, ↗Franciscans). The arrival of the Jesuits rested on the (mis)understanding that the Ethiopian royal court was prepared to submit to Rome. *Aṣe* ↗Gälawdewos clarified his position and the Jesuit M. withered, until the arrival, in 1603, of Pedro ↗Paez, who was welcomed by Ethiopian monarchs, starting with ↗Zädəngəl. Almost immediately the M. became involved in the political struggles of the period. ↗Susənyos encouraged the Jesuits and sought their support. In 1621, he formally submitted his court to Rome. This met with formidable resistance, and in 1632, he was forced to abdicate in favour of his son, ↗Fasilädäs. Although the kingdom returned to Orthodoxy, the Jesuits left behind a legacy of theological controversies and hostility to Catholic M.

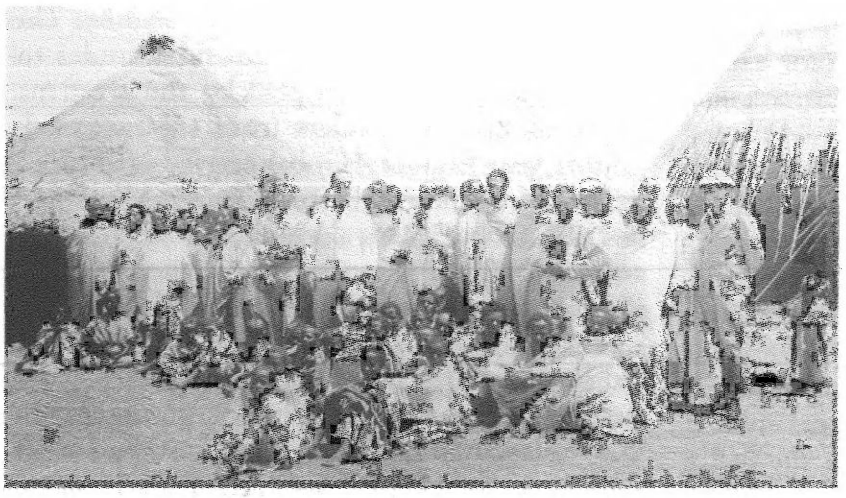
After that episode, the ↗Sacra Congregatio de Propaganda Fide entrusted the Catholic mission in Ethiopia to Carmelitans, Franciscans and ↗Capuchins. Accordingly, under the reigns of Fasilädäs and his successors, some M. – including single Jesuits and Franciscans – reached Ethiopia but without much success.

Ethiopian court policy changed in the middle of the 18th cent., when Empress Məntəwwab (↗Bərhan Mogäsa) entertained a small Franciscan mission led by Remedius ↗Prutky. This foreshadowed the more pragmatic attitudes towards European M., adopted by the great majority of Ethiopian rulers from 1830 onwards. In that year Samuel ↗Gobat arrived in Ethiopia on behalf of the Anglican ↗Church Missionary Society. Gobat's arrival re-kindled Catholic interest, which led to two missions, one, led by the ↗Lazarist De ↗Jacobis, directed to the members of the Ethiopian Orthodox Church, the other, led by the Capuchin ↗Massaja, directed to the ostensibly "pagan" peoples of south-west Ethiopia. It also stimulated European Jewish communities to organize missions to the Betä Ǝsraʾel.

The M. of the 19th and early 20th cents. must be viewed against the background of the rise of the modern missionary movement and of ↗colonialism. Ethiopian rulers' interest in the connection to Europe, its political power and technology (particularly ↗fire-arms), generally overcame their fear of the potential threats to Ethiopian cultural unity posed by the M. *Aṣe* ↗Tewodros II tolerated M., although his decision to imprison missionaries eventually led to his downfall. His successor, ↗Yoḥannəs IV, systematically attempted to eradicate them in the name of religious unity, but his death, in 1889, brought a return to pragmatism under ↗Mənilək II.

↗Ḫaylä Śəllase I encouraged European missionaries provided that they direct their proselytizing efforts to the non-Christian peoples of Ethiopia and that they establish schools and hospitals. The M. which successfully adapted themselves to

Departure of the Lazarist missionaries Coulbeaux (centre) and Le Priol from Addis Abäba to Təgray, October 1898; from Coulbeaux 1901:43



The Protestant mission at Ğända; photo around 1930, courtesy of the St. Chrischona Pilgermission

these conditions had a considerable impact on Ethiopia during his reign.

Italian policies (↗Africa Orientale Italiana), supporting Islam and opressing Orthodox Christianity, led to the expulsion of many non-Italian based M. and a moratorium on their activities (whereas Italian operated M. like the ↗Missionari della Consolata remained active). The imperial restoration soon led to a return of the status quo. In the 1950s and 1960s an unprecedented number of M. were active throughout Ethiopia.

M. played a vital role in the introduction of modern ↗education to Ethiopia. The ↗Swedish Evangelical Mission, the Brothers of Saint Gabriel, the Seventh-Day Adventists and the United Presbyterian Church were just a few of the M. which operated schools in the first decades of the 20th cent. They played a major role in the emergence of a modernizing elite. Although intended by the court to foster national unity, the M.'s educational activities often led to the strengthening of ethnic identities, particularly through their development and offering of instruction in local languages.

In this context, it is important to note that missionaries were often pioneers in the study of Ethiopian languages, cultures and history (↗Ethiopian studies). Leaving aside for the moment the historical value of their letters, memoirs and other descriptions of the country as primary sources, ↗Kolmodin's collection of traditions, Rubenson's historical volumes, and ↗Cowley's pioneering work on the ↗*andəmta* commentary tradition are only a few of the many examples in which foreigners who arrive under M. auspices contributed to scholarship. In no area, however, were the M. as important as in that of language study and translation. Vernacular versions of all or part of the ↗Bible in ↗Amharic, ↗Oromiffa, ↗Təgre, ↗Təgrəññña, and numerous other languages were the product of the M.'s need for texts. It is important to recall that such works were usually prepared in cooperation with local converts, such as ↗Onesimos Näsib, ↗Täwäldä Mädḫən Gäbrä Mädḫən and ↗Dawit Amanuʾel. Moreover, beyond their inherent religious purpose the M. were often the first to produce written texts in hitherto exclusively oral traditions and study their linguistic features. Thus some of the earliest scholarly grammars of Amharic, Oromiffa, ↗Käfa, ↗Kunama and ↗Wälaytta were also the product of missionaries' work. The M. were, moreover, instrumental in the introduction of ↗printing and printed books into Ethiopia.

In the 20th cent., medical M. became increasingly important. Dr. Thomas ↗Lambie of the ↗Sudan Interior Mission was probably the best known of the numerous medical missionaries active in Ethiopia in both primary care and the construction and maintenance of ↗hospitals. During the 20th cent., M. became increasingly involved in filling the gap left by a dearth of governmental services in such areas as rural and urban ↗development, famine relief, medical assistance and care for the poor (↗Relief and development organizations). This was especially true during the last decades of the century, when various Ethiopian and Eritrean governments sought to limit the presence of foreign groups in the country.

From the period of the Jesuits onward, the M. were often as critical of Ethiopian Christianity as they were of the adherents of traditional religions and Muslims. Despite the prohibitions on proselytizing among Orthodox Christians, many M. saw the "reform" of local Orthodoxy as a major goal. Yet, despite this ethnocentrism and cultural imperialism, it should also be noted that in some cases they were open to significant adaptations to meet the needs of local believers. The missionary De Jacobis thus adopted the practices and culture of Ethiopian orthodoxy, which eventually led to the establishment of a Catholic Church of the Ethiopian Rite.

As in many parts of Africa, the culmination of such policies of adaptation can be seen in those cases in which foreign M. were the seedbed for

the emergence of local churches. Thus, activities initiated in 1866 by Swedish Evangelical Lutherans led to the formation, in 1959, of the Ethiopian Evangelical Church ↗Mäkanä Iyäsus; while the Sudan Interior Mission, which traces its origins to 1928, gave rise to the ↗Qalä Ḫəywät Church. Lazarist and Capuchin missions eventually gave rise to an Ethiopian Catholic Church, which follows two distinct Rites, the churches in Addis Abäba, Təgray and Eritrea following the Catholic Ethiopian Rite, the churches in south and southwestern Ethiopia adhering to the Latin rite.

In 1994 Protestants composed roughly 10 % of Ethiopia's population, while Catholics composed just under 1 %, but a higher percentage of the population of Eritrea.

Mittwoch, Eugen

M. (b. 4 December 1876, Schrimm, Province of Posen, Germany [today's Poznan, Poland], d. 8 November 1942, London) was an eminent German orientalist. He enrolled in classical and oriental languages at Berlin University in 1894, and earned his doctorate in 1899 with a dissertation in Arabic studies. M. earned his postdoctoral lectureship qualification (Habilitation) in Semitic Philology in 1905, serving from 1907 as "Privatdozent" (lecturer) in ↗Gəᶜəz and ↗Amharic at the Berlin Seminar for Oriental Languages (Seminar für Orientalische Sprachen). In 1915 he was made "Extraordinarius" (i.e. reader), and in 1917 "Ordinarius" (tenured professor) at the University of Greifswald, succeeding Mark Lidzbarski. He simultaneously worked as the head of the German Foreign Office Information Centre. In 1919 he was offered a professorship at his institute in Berlin, which he accepted. In 1928 he became the director of the same institution, a position he kept until his retirement in 1935.

In his academic work, M. initially focused on Arabic literature and Arabic history. His main interest, however, soon shifted to Ethiopic philology and linguistics. In co-operation with his Ethiopian teacher *aläqa* ↗Tayyä Gäbrä Maryam who worked as a lecturer at the institute, he published a series of folklore texts (Mittwoch 1906, 1907, 1910 and 1911). Several of his publications are also based on material provided by his and Tayyä's former student, Lorenz ↗Jensen of Addis Abäba. In his *Die amharische Version der Soirées de Carthage*, (1934), M. provided further evidence for the hypothesis (previously expressed by ↗Conti Rossini) that the theological-philosophical writings previously attributed to the "Abyssinian philosophers" of the 17th cent. had indeed been authored by the 19th-cent. Italian priest Giusto da ↗Urbino. M.'s best-known work is *Die traditionelle Aussprache des Äthiopischen* (1926), a study on the contemporary pronunciation of Gəᶜəz.

During his last years in Berlin, M. studied Ancient South Arabian inscriptions (cp. Mittwoch – Mordtmann 1931, 1932). Many of his contributions to ↗Epigraphic South Arabian studies were published in the journal *Orientalia* (1932–38, sometimes in collaboration with ↗Schlobies). From 1922 to 1924 M. was the editor of the journal *Der Neue Orient*.

Apart from his work in Semitic studies, M. took an active interest in Jewish causes. He promoted the knowledge of Hebrew in Germany and Palestine. At the beginning of 1933 he was briefly head of the Department for Jewish affairs in the German Foreign Office. He was also active in several Jewish organizations, e.g. the "Gesellschaft zur Förderung der Wissenschaft des Judentums" (Society for the Promotion of Jewish Studies), where he served as the organization's last president, or the "Central-Verein deutscher Staatsbürger jüdischen Glaubens" (Central Association of German Citizens of Jewish Faith). When M., while staying in France, received news of the "Kristallnacht"-pogrom of 1938, he decided not to return to his country. In 1939 he emigrated to Great Britain.

There he worked for the Ministry of Information and was again active in Jewish organizations – such as the Association of Jewish Refugees in Great Britain – until his death.

Miyazya ↗Calendar, Christian

Mizan

M. (or Mizan Täfäri; 7° N, 35° 35' E, 1,451 m A.S.L.) is a town in the former ↗Käfa province in the historical region of ↗Gimira (today called ↗Benç). It lies at the confluence of the Akobo river and one of its tributaries and at the crossing of the road from Gore to the north and from Bonga to the west (for location s. Mağı).

M. appears as a toponym on the post-1936 Italian map but is not mentioned in the *Guida* of 1938. It grew during the 1950s–60s owing to the cultivation and trade in ↗coffee. It was during this period that *aṣe* Ḫaylä Śəllase I's birth name, Täfäri, was added to the name of the town to honour the sovereign (as it was also done with Asbä Täfäri).

Before 1987 M. was the capital of the Gimira *awraǧǧa*, a subdivision of the Käfa governorate-general and then region. From 1987 to the 1991 it was the capital of the Käfa region. Currently it is the capital of the Benç *wäräda* and of the Benç Mağı zone, subdivisions of the South Nations, Nationalities and Peoples' *kəlləl*.

In Bäbäka south of M. lies the largest coffee plantation in Ethiopia (6,537 ha) where 7,000 workers are employed producing 1,500 tons of Arabica coffee beans a year. In ↗Tepi, 65 km to the west, the second largest coffee plantation in Ethiopia is found, and in Wušwuš, 92 km to the east, the largest tea plantation in Ethiopia.

Since new roads were opened many migrants have come clearing the rain forests to plant coffee and also grow their food. From ca. 6,000 inhabitants in 1984 the population grew to over 10,000 in 1994 and nearly 20,000 in 2005 having thus tripled in 20 years. The M. airfield is regularly served by planes coming from ↗Addis Abäba because it is an administrative centre and because it is the only place from where tourists can reach Mağı and visit the ↗Omo National Park by car.

Alain Gascon

Moassa

M. (or *moggaasa*) is an ↗Oromo word conventionally translated as 'to adopt' but which also has the meaning of 'to give a name to'. It belongs to a set of related terms which also includes *moggoo*, people of the same ↗name, namesakes. Another Oromo word, ↗*guddifačaa* is similarly commonly translated as 'adoptive parents'. The connotation of this usage is undoubtedly the nurturing aspects of adoption as the root of the word, *guddaa* ('big, large'), occurs in many other words referring to rearing, growing and bringing up. For this reason, perhaps, *guddifačaa* is also used in contexts where, in English, the verb "to foster" would be more appropriate. This distinction is not rigidly made by Oromo.

Analytically, it is possible to distinguish two principal types of Oromo adoption. The first may be termed "domestic or individual adoption" and refers to the transfer, usually of infants, from one family to another, the child becoming wholly and irreversibly the offspring of its adoptive parents. Haberland (VSAe II) describes this as a common

practice among many Oromo groups, certainly more common than simple considerations of child welfare would imply. Other reasons given to Haberland for adoption include correcting a serious sexual imbalance in a household, helping childless households and cementing relationships between friendly households.

The second type of adoption may be called "political adoption". Here, the adopting and the adopted parties are groups. Individual lineages of one Oromo group can be adopted by another or sub-groups of stranger peoples or whole ethnic groups can be incorporated and given Oromo identity, even with the status of *boorana* or "pure" Oromo (↗Boorana; cp. VSAe II, 528: *akako*). In some cases "political adoption" leads to the development of ↗inter-ethnic clan relations. This type of adoption has been widely discussed by a number of scholars, for example, Hultin (1987), Mohammed Hassen (MHasOr) and Asmarom Legesse (2000). Its historical importance lies in the context of the Oromo expansion into central and northern Ethiopia. The Oromo's ability to assimilate the peoples they encountered in their northward movement, using techniques such as group adoption, enabled them, it is argued, to successfully accommodate to their new, and potentially threatening, circumstances and to avoid the creation of an unstable and alienated population of non-Oromo in their midst. Levine (1974) has argued, more generally, that the propensity of the Oromo to affiliate rather than to dominate, of which M. is a manifestation, is one of their key cultural features which has influenced the evolution of Ethiopian society.

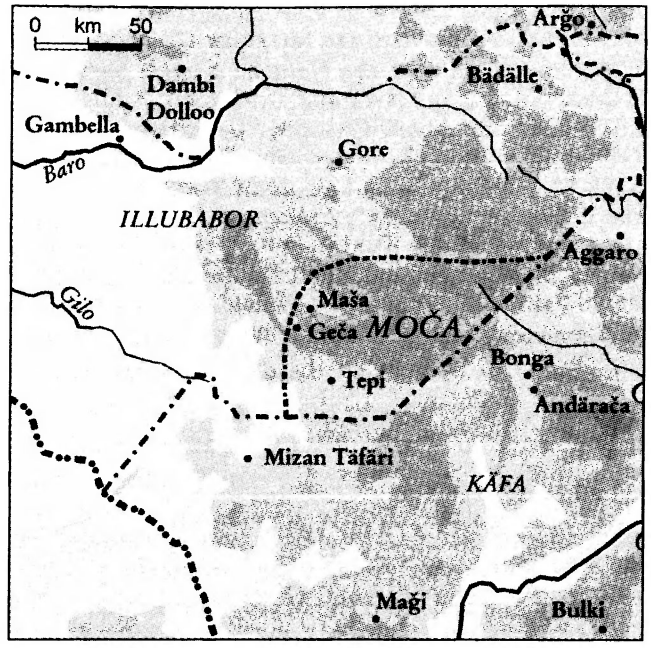
Hector Blackhurst

Moča

M. (ሞቻ) was an *awraǧǧa* that was dissevered in the 1991 administrative reform (↗Administrative division). Its territory was divided into the Gambella *kəlləl* (zones two and four), the Oromiyaa *kəlləl* (Illubabor/Illuu-Abbaa-Boraa zone) and the Southern Nations, Nationalities and Peoples' *kəlləl* (Käfiċċo Šakačo zone).



A wide variety of peoples were gathered into this *awraǧǧa*. The Oromo were predominantly settled north of the Baro River on the border of the former Gore *awraǧǧa*, and southward the ↗Šakačo (formerly called Moča) and ↗Käfa were located (both Omotic languages speakers). The area around the town ↗Tepi is inhabited by the ↗Maǧaŋgir.

M.'s core consists of highlands covered with rain forests. *Ǝnsät* (to the south) and coffee cultivators have begun clearing the forests intensively. Because demand for coffee and food are increasing, peasants have replaced their slash-and-burn agricultural sites with fallow land for permanent fields where they have begun to settle.

The capital of the M. *awraǧǧa* was Maša (cp. CSA 1984). This *kätäma* was founded in 1897 by *ras* Täsämma Nadäw, who jailed the last "king" of the Šakačo, Teči Gawočo. During certain periods in M.'s history, Geča, a small Käfa town, served as its capital. In 2000 Maša (8,344 inhabitants) was the capital of the Maša Andärača *wäräda*, while Geča (in the same district) had only 1,566 inhabitants and Tepi (capital of the Yäki *wäräda*) 14,685 inhabitants. In the 1970 census, the M. *awraǧǧa* (9,300 km²) was populated with 27,400 inhabitants (population density: 2,9 inhabitants/km²) while in 1984 117,685 inhabitants (density: 12,6 inhabitants/km²). The population increase may have been due to a number of reasons: the underestimation in the 1970 figures of this remote region; the influx of Sudanese refugees and resettlements from the North in 1984; the new *awraǧǧa* (Sor–Geba) created in the Illubabor *kəflä hagär*. In 1984 Maša had 2,417 inhabitants, Geča 529 and Tepi 4,459.

Alain Gascon

Moča ↗Šakačo

Mōdayto

The M. are an ↗ᶜAfar tribe that dominates the middle and lower Awaš valley (including Awsa). They originated from the Mabla mountains (north of ↗Obock, Republic of Djibouti) where there are still traces of their descendants. According to certain traditions, their eponymous ancestor, Môday, (or Mōdale Arbāhim), was the eldest son of Ḥaḍal Māḥis, the legendary ancestor of the ruling ᶜAfar tribes. The main genealogical division of the M. tribe is between the Kaḍḍa ᶜAli and the ᶜUnḍa ᶜAlih-sarra, which includes the politically dominant Aydāḥisso, the *sulṭān*'s clan. The tribe began their migration towards the fertile Awaš valley at the beginning of the 18th cent. The tomb of one of their ancestors Kaḍḍa Aydāḥis (ca. 1700) at Badayda, near the Dōbi Depression on the border with Ethiopia, indicates the location of the tribe before it took over ↗Awsa in ca. 1834.

According to Krapf and Harris (s. AbPrince 24), the Awsa *sulṭān* at the end of the 18th cent. was Yūsuf b. ᶜAlī b. Aydāḥis, and he is said to have expelled the Yemeni troops that were originally called upon by the Debnek Wēʾima coalition to help them fight against the M. Yūsuf's name, however, does not appear in the existing ᶜAfar sources (aš-Šāmī – aš-Šāmī 1997:342–59; MorDicAfar 74).

Didier Morin

Mogadishu s. vol. 5

Mogäs Asgädom

M.A. (ሞገስ፡ አስገዶም, b. 1911, Asmära, d. 1937, near Mätämma) was an Eritrean patriot who made an attempt on Italian Viceroy Rodolfo ↗Graziani's life on 19 February 1937.

M.A. attended Mənilək II School and later graduated from Täfäri Mäkʷännən School in Addis Abäba. In the years preceding the Italian occupation M.A. worked in the Municipal Land Registry Office and by the time the Italians entered Addis Abäba on 5 May 1935 M.A. was unemployed and managed to find shelter at the German Mission in Addis Abäba, where he stayed until 1937.

M.A. played an important role at the side of his friend ↗Abrəha Däboç, the mastermind of the attempt on Graziani's life.

M.A.'s material involvement with the attack started in September 1936 when he moved to ↗Däbrä Libanos of Šäwa as a guest of *abba* Ḥanna, the confessor of Ḥaylä Śəllase. On 9 February of the following year M.A. was joined by Abrəha Däboç in the last preparations before the attack. The two were helped by other patriots. A taxi-driver Səmᶜon Adäfrəs drove them to the lowlands around Mount Zəqʷala with Käbbädä Yardu, a soldier. Here they practiced the use of handgrenades under the supervision of the latter.

M.A. and Abrəha Däboç returned to Addis Abäba on 12 February. A week later they attacked Graziani during a public ceremony at the Viceregal Palace (the former ↗*Gəbbi*) in Addis Abäba. M.A. and Abrəha Däboç attempted to hit Graziani with a number of grenades launched from a balcony above the Palace's steps. However, Graziani was standing under the balcony and thus avoided a direct hit. Eight people died in the attack – an Ethiopian cleric, two zaptié, a carabiniere, two Italian technicians and two soldiers – and over 50 more were injured.

Ethiopian sources suggest an interpretation of the events as the result of the action of a handful of disgruntled Eritreans disconnected from the Ethiopian patriot movements and *ras* ↗Dästa. However, the first Italian investigations attempted to link the attack to a vaster network of Ethiopian dissidents, exiled nobility and the British secret service. Heavy repressions against Ethiopian intelligentsia followed the attack. Thus, the Italian administration quickly linked the two patriots to the clergy in Däbrä Libanos which, once considered active agents in the anti-colonial plot, were executed (↗Graziani massacre).

After the attack, M.A. and Abrəha Däboç were escorted north of Addis Abäba by Səmᶜon Adäfrəs as they planned to join *ras* ↗Abbäbä

Arägay's patriots. However, being Eritrean and having been previously involved with the Italian administration the two were shunned. As the Italian administration had offered a 10,000 Maria Theresa thaler reward for their capture they decided to cross to Sudan. M.A. and Abrəha Däboč were killed near Mätämma shortly thereafter. It remains unclear whether their death was related to their identification as plotters of the attempt on Graziani's life.

Matteo Salvadore

Mogäs ᶜƎqʷba Giyorgis

Mälʾakä gännät/liqä mäzämmərən M. (**ሞገስ፡ ዕጭባ፡ ጊዮርጊስ**, or Mogäs ᶜUqbagiyorgis; b. 12 September 1914, Kətmäwliᶜ, Loggo Č̣əwa, d. 19 March 1986, Asmära) was an outstanding church scholar. He began studying the alphabet and basic religious texts such as the ↗Psalter and the ↗*Wəddase Maryam* at the age of twelve at Ǝmni Ṣällim, Eritrea. He then moved to Ǝndärta, where he qualified in, and subsequently became a teacher of, ↗*qəne*. After that M. studied *aqʷaqʷam* in Gondär and in 1931 he began studying traditional ↗exegesis under *mämhər* Ayyälä, who had been awarded an honorary doctorate by *aṣe* Ḫaylä Śəllase I.

For a number of years M. remained at St. Mark's church in Addis Abäba. During that time, he additionally pursued other subjects such as the *liqawənt* (the writings of the Church Fathers) and ↗*abušakər*.

During the Italian war of 1935–36, M. was arrested and sent back to Eritrea. There, he taught for a short period in Ǝmni Ṣällim, and then continued in ↗Däbrä Dəmaḥ. There, M. devoted some time to learning the *Mäzgäbä* ↗*qəddase* (the Missal). After Däbrä Dəmaḥ, he continued to Käränwhere he taught *qəne* poetry and liturgy.

M. was a gifted teacher with a simple and profound teaching style. He was also one of the founding fathers of the ↗Maḫbärä Ḥawaryat Fəre Haymanot publishing house, and had numerous responsibilities in its day to day running. He also worked as a columnist for newspapers such as *Zena Ḥawaryat* and *Fənotä Bərhan*.

M. was a meticulous scholar with a thorough knowledge of Gəᶜəz and Arabic in addition to Təgrəññaand Amharic, and a prolific writer who, among other things, actively participated in editing and publishing biblical texts, e.g., the ↗New Testament published in Asmära in 1960/61 by the Kokäbä Ṣəbbaḥ Maḫbärä Ḥawaryat. Among his more notable publications are the editions of such important works of ↗Gəᶜəz literature as ↗*Śənä fəṭrät* and ↗*Ammənstu aᶜəmadä məṣṭir* (1962/63), *Mäṣḥäfä* ↗*säᶜatat* and ↗*Baḥrä ḥassab* (1964/65), *Märḥa ṣədəq* (1976/77) and others. He also published collections of philosophical sayings (1960/61), Amharic and Təgrəññaproverbs (1965/66 and 1966/67) and compiled an Amharic monolingual dictionary (1967/68). There have been posthumous editions of his books published without the knowledge of his family, who claim to hold the copyright.

Tedros Abraha

Moggaasa ↗Moassa

Mohamedally and Company

M.C., a Bohra Indian commercial concern, was the principal trading company in Ethiopia prior to the Italian Fascist invasion.

The firm was first established in Harär by the Gujarati Indian *mulla* Mohamedally Shaikh Sharafally Hararwala (b. ca. 1858, d. 1 January 1948, Sidhpur, North Gujarat) as early as 1888, shortly after the conquest of the city by *nəguś* ↗Mənilək (II) of Šäwa. The governor of Harär *ras* ↗Mäkʷännən Wäldä Mikaʾel invested considerably into the M.C. and formed a joint venture with Mohamedally. M.C. soon extended its business operations to the new capital of the country, Addis Abäba, and to the newly acquired western Ethiopian provinces. M.C. became the major supplier to the Ethiopian court from the time of *aṣe* Mənilək II until the Italian invasion. M.C. quite quickly established branches in several cities in Ethiopia, directed by other Indian merchants.

Starting from the early 20th cent., M.C. was cakked Goolamally Mulla Mohamedally & Co., after *ras* Mäkʷännən had retired from the business and Goolamally Abdulhusain Paghdiwala had become a partner. Another commercial house at Harär was called Hebtoolabhai M. Mahomedally & Co. and was directed by another partner of Mohamedally's, Hebtoolabhai Mohammedbhai Kera. A considerable number of Indian merchants migrated to Ethiopia to work with M.C.

The company thrived. It had offices in India at Bombay and Sidhpur, in the Middle East at Aden, Djibouti and Berbera, and in Ethiopia at Addis Abäba, Dərre Dawa, Harär, Ğiğiga, Ğimma, Naqamtee, and Wälamo. The company's main exports consisted of beeswax, coffee, hides and skins, and civet musk. Its imports were varied, and included textiles (cotton, wool and silk cloth and thread); manufactured goods (glassware, enamelware and porcelain); transport machinery (motor-cars, tractors, road-building equipment, tires, inner-tubes, automobile spare-parts, batteries, petrol, and machine-oil); photographic equipment, films and developing supplies; soap, bath and toiletry items; and foodstuffs. M.C. was also involved in productive activity, particularly mechanical grinding of grain, sawing of wood and bottling of mineral water. M.C. also possessed a sawmill concession at Gağı in Šäwa and was the exclusive agent for a number of great international companies, e.g., for General Motors, Chevrolet and Opel for automobiles, Texaco for petrol, Kodak etc. (ZerÉth 510).

The first modern general store of Addis Abäba was built by M.C. at the very beginning of the 20th cent. The beautiful Indian-style building was located close to the Arada market area, on a road between the *gəbbi* and the market. Mohamedally's own Indian-style house nearby, built within the same compound, is being restored, because of its historical and cultural importance, by Addis Wəbet, an Ethiopian NGO headed by *ləᶜəlt* Maryam Sänna Asfa Wäsän, which is committed to the preservation of traditional buildings.

Mohamedally was also active in the non-commercial sphere. During the time of Mənilək II, he was the spokesman of the Indian community at the royal court (Batistoni – Chiari 2004:72) and was the first Indian to receive a decoration from the Ethiopian Government. He also built a religious school at Harär. In the 1930s M.C. was acting as the official representative of one of the then two Indian communities in Ethiopia, the Bohra Indians, while the Hindus were represented by *sekh* Nathoo Mooljee Varia (ZerÉth 500).

Iconographic documents give us an idea of the ties between the Ethiopian royal government and M.C. A postcard printed before 1904 shows that Mənilək II visited personally the new store for its inauguration (Batistoni – Chiari 2004:72f.); *däğğazmač* Täfäri (later *aṣe* ↗Ḫaylä Śəllase I), the son of the governor of Harär, was photographed with Mohamedally during an official visit in 1905 (s. ill. for ↗Indians in Ethiopia). Empress ↗Zäwditu, *ras* Täfäri, the *əčč̣äge* and the court were also pictured together with the members of the company in front of the store on another postcard in the 1920s (Pankhurst – Gérard 1997). Mohamedally seems to have maintained a close relationship with *aṣe* Ḫaylä Śəllase I, the two being photographed together on several occasions. The contacts between his firm and the Emperor are also confirmed by the photo showing Ḫaylä Śəllase in company of one of Mohamedally's closest companions Abdullahbhoy Kera (publ. in HSLife [Amh.] vol. 1, 128). In that period, Mohamedally had allegedly become the richest merchant of Ethiopia. His will,

written in 1926, stated that he had 8,000,000 rupees at he Djibouti branch of the Bank of Abyssinia. The M.C. then consisted of six business partners: *mulla* Mohamedally, his brother *mulla* Ebrahim, *mulla* Goolamally, *mulla* Buxabhoy *shaikh* Abdul Rahim, *mulla* Abdullabhoy (Hebtoolabhai), each with 18%, and Salehbhoy M. Master, with 10%.

Mohamedally may also have pursued other unofficial activities in Ethiopia. Being Indian-operated, the M.C. was under the protection of the British government. Their political commitments are unclear, but several testimonies show that Mohamedally may have acted as an agent for several Anglophone governments. The businessman got for example acquainted with Robert P. Skinner, the special envoy of the US-American government in Ethiopia in 1903, then writing accounts of the situation in Ethiopia for him, especially during the ↗coup d'état of 1916 (s. EAE vol. 2, 1081; Steffanson – Starrett 1976:107). However, the frequency of this kind of contact is not known, nor which kind of agreement existed between them. A few years later, French diplomatic reports accused the company's owner of being "the best agent" of the British government in Ethiopia. The M.C.'s office of Ǧiǧiga was said to spy on the region for British authorities in exchange for funds (Archives du Ministère des affaires étrangères, Paris).

The main warehouse of G.M. Mohamedally & Co on one of the main squares of Djibouti; photo 1930s, collection of Johannes Bohnenberger

M.C. ran into severe difficulties after the Fascist occupation of Ethiopia, when the Italian authorities considered its trade inimical to prospective Italian commerce, and suspected it also of being an instrument of British imperialism. After the abortive attempt on the life of the Italian viceroy Rodolfo ↗Graziani, in February 1937 Italian intelligence reported that the firm's Berbera branch had been involved in importing the hand-grenades used in the plot. The firm was accordingly closed down, after tough negotiations, in September 1937 (Pankhurst 1971:53f.; Haile Mariam Larebo 1994:61).

Widely spread rumours claim a blood link between *aṣe* Ḫaylä Śəllase I and Mohamedally *shaikh* Sharafally, stating that the latter was the Emperor's illegitimate father (e.g., Evalet 1999:46) or Ḫaylä Śəllase's mother a half-Indian related to him. This rumour, still known today especially in Harär, for which there is no historical evidence, attacks the legitimacy of the Christian ruler by attributing a foreign (and Muslim) origin to him.

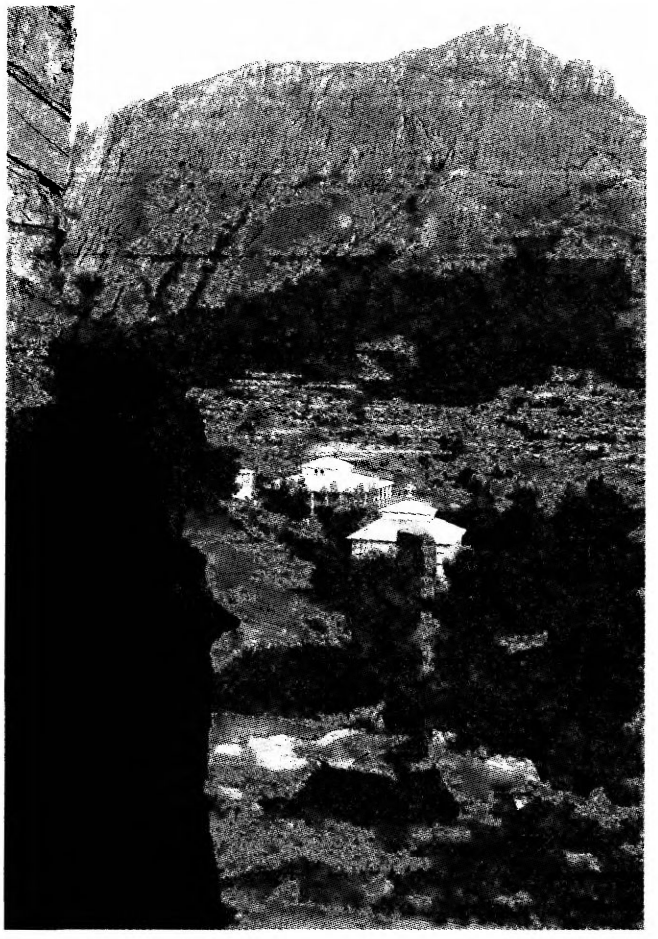
Richard Pankhurst – Estelle Sohier – Wolbert Smidt

Monarchy s. vol. 5

Monasteries

M. are among the most important institutions of the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC). The usual term referring to a M. is



The surroundings of the monastery of Ǝnda Abba Gärima near ᶜAdwa with several monastery buildings, seen from the main church; photo 2005, courtesy of Wolbert Smidt

↗*gädam*, or also ምኔት (*mənet*, its derivation is not known precisely, cp. LesCDic 351). The population of a M., i.e. the religious community comprising of people who devote themselves to a life of spirituality, can be referred to as ማኅበር, *maḫbär*. It is estimated that there are ca. 800 M. in Ethiopia and some 22 in Eritrea (cp. Chaillot 2002:158, 185; cp. BerTarik; Heyer 1972:145). Only a small percentage of them have been studied and properly documented in terms of history, architecture, organizational structure and artistic holdings. The most prominent M. are currently, in Ethiopia, ↗Däbrä Libanos of Šäwa, ↗Zəqʷala, ↗Waldəbba, ↗Däbrä Damo, ↗Däbrä Ḥayq Ǝsṭifanos, ↗Amba Gəšän, ↗Dima Giyorgis, and, in Eritrea, ↗Däbrä Bizän.

History, spread and social role

The early history of M. in the Aksumite and post-Aksumite times is difficult to trace. According to tradition, ↗monasticism and the phenomenon of M. reached Ethiopia from the Mediterranean region in the late 5th/early 6th cent., with the arrival of the ↗"Nine Saints", who are credited with the establishment of the earliest M. in ↗Təgray, particularly around ↗Aksum. Churches (though not monastic communities) exist today next to ancient ruins at several sites connected to these saints, e.g., Ǝnda Abba ↗Ṗänṭälewon and Däbrä Qʷänaṣəl of *abba* ↗Liqanos near Aksum; *abba* ↗Afṣe's church at ↗Yəḥa. The most venerated among the "Nine Saints", *abba* ↗Zämikaᵓel Arägawi, is specifically credited with the introduction of the monastic rule to Ethiopia, and with the foundation of what may well be the country's most ancient M., Däbrä Damo, certainly one of the most illustrious Ethiopian M. throughout the centuries. More ancient ecclesiastic foundations are located in northern Ethiopia and Eritrea, but only in a few cases (like ↗Däbrä Libanos of Šəmäzana) the existence of an early monastic community can be ascertained. The islands of Däbrä Ḥayq Ǝsṭifanos and ↗Daga Ǝsṭifanos were probably populated by ↗hermits and monks by the middle 13th and the late 13th cent. resp., before the establishment of larger M. there. Many M. were founded in the 14th–15th cent., when Ethiopian monasticism flourished.

M. importantly contributed to the expansion of the Ethiopian polity and incorporation of different ethnic groups. The rulers enhanced imperial control through co-ordinated monastic settlements. In some cases, the M. served as the vanguard of Christian expansion. In others, the establishment of M. marked the incorporation of new areas into the Christian state.

M. were the only permanent institutions during the time when the emperors constantly moved and itinerant camps (↗*Kätäma*) served as capitals (ca. 1270–1530s). The alliance of monarch and monks created solidarity and promoted the integration of social and cultural life. The royal court and M. provided the minimal social services and economic infrastructure that existed. M. were the centres of traditional ↗education; they were responsible, e.g., for preserving treasures, providing aid to those in distress, running markets, reconciling disputes. M. could be in charge of local administration and courts, and even organized militia to guard vulnerable borders.

During different periods M. spread in a number of ways. Large or prosperous M. established daughter monastic communities. Attempts of monastic evangelisation also led to the foundation of new M., such as those that emerged after the 14th-cent. *abunä* ↗Yaᶜəqob divided southern Ethiopia among twelve monastic leaders. A century later *aṣe* ↗Zärᵓa Yaᶜəqob divided northern Ethiopia among the M. there and assigned an

area for each to evangelize (Conti Rossini 1923).

A monk could depart from his community for personal, political or theological reasons, and establish himself in another locality as a missionary or hermit. His presence gradually attracted others, both those who had already taken the monastic habit and others who were going to. Eventually a new community was formed. Sometimes monks were forced to leave, as happened, e.g., with "purists" who emerged in some monastic communities. They advocated stricter observance of the rules of ascetic life and may have supported alternative theological views, and were thus viewed as being fundamentalist or schismatic by the Church. Frictions could result in monks retreating to distant locations. Thus, around 1429, *abunä* ↗Əsṭifanos was expelled from the monastery of Däbrä Qʷäyäṣa in ↗Šire and soon founded his own community, giving birth to the movement of the ↗Stephanites.

Historically, a religious community leading an ascetic life had to be officially recognized as M. (i.e. to be chartered as *gädam*). The consecration of the ↗*tabot* of the M.'s church as well as ordination of the church's ministers also required official recognition from the Church hierarchy. Royal patronage disappeared with the ↗Revolution of 1974, yet new M. appeared, often on bishops' or hermits' initiatives and with support from the church administration (an example of a recently established community is Awasa Däbrä Gäbrəʾel). Becoming a M. usually requires an announcement from the Patriarch and involves a series of administrative changes associated with a monastic lifestyle, such as the establishment of a monastic *gubaʾe* ('council') which decides communal policy.

M. now diversify their activities, running training centres (Abunä ↗Gorgoryos Monastery in Zʷay and ↗Muhər Iyäsus in Gurage), orphanages and schools (Säbäta Betä Dänagəl), producing ↗handicrafts and specializing in healing ministry and exorcism at sacred springs (cp. ↗Healers). Some gain additional significance during major religious festivals when they attract flocks of pilgrims – a source of income for the M.

M. often house ↗relics of the founding saint or other holy personages, which are important for the M.'s prestige, and attract visitors. Large numbers of pilgrims visit the tomb of *abunä* ↗Täklä Haymanot in Däbrä Libanos of Šäwa, the tomb of ↗Zena Marqos in ↗Däbrä Bəśrat, or the grave of ↗Buruk Amlak in ↗Däbrä Kol (Eritrea). Several M. also served as cemeteries for emperors and nobles. ↗Däbrä Nägʷädgʷad held the graves of *aṣe* Zärʾa Yaᶜəqob's father and mother and, for a time, of the king himself until his remains were moved to Ḥayq Əsṭifanos. Such M. were richly endowed to insure the commemoration (↗*Täzkar*) service for the deceased.

Location

The greatest concentration of M. are still found in Təgray and Eritrea, but monastic establishments have spread as far south as ↗Ğinka. The Ethiopian monastic tradition stresses renunciation and proximity to nature. Consequently M. were often built in inaccessible and isolated sites, such as mountain tops, cliff ledges, and islands. Däbrä Damo is one of several M. which can be reached only by rope. Lake Ṭana has numerous M. on islands, and promontories. Uninhabited wilderness and isolation protected the monastic communities from outsiders, provided the necessary separation from the distractions of the secular world, and limited admission to those deemed sufficiently pure. As a result, some M. emerged on the frontier of the Christian empire, close to non-Christian groups, thereafter gradually Christianizing them. However, in such areas as Eastern Goğğam important M. (↗Märṭula Maryam, Däbrä Wärq and Dima Giyorgis) are situated close to urban centres. Recently, a few monastic communities have been established in cities, most notably within the capital of ↗Addis Abäba. Abroad, Ethiopian monks have risen to prominence in ↗Egypt, and there are a number of Ethiopian M. in the Holy Land (↗Jerusalem).

Organization and governance

M. can follow the coenobitic (አንድነት, *andənnät*) or idiorythmic (ቍሪት, *qʷərit*) model. A com-

prehensively properly functioning monastic administration is associated with the coenobitic system; whereas in a fully idiorythmic system monks or nuns only received spiritual guidance, but are otherwise independent. The differences are due to local customs, lifestyles and historical circumstances. For example, ↗Maḫbärä Śəllase near Mätämma is a prime example of a centralized coenobitic M. not allowing private property; whereas in idiorythmic Waldəbba hermits live scattered over a wide area and some individual initiative is required. In Däbrä Ḥayq Ǝsṭifanos a tradition evolved that monks passed on property to nephews who followed in their footsteps. The difficulties of the *Därg* period encouraged arrangements whereby individuals provide for themselves through private handiwork or benefactors. In some cases monastic revival has led to the restoration of the coenobitic model which is traditionally considered superior.

Non-Chalcedonian monastic traditions stress having a rule of life communicated by a spiritual guide and writings such as the ↗Bible, the lives of the saints (↗Hagiography), and also ↗monastic literature and ↗Canon law texts. Most M. have a ሥርዓት (*śərᶜat*, 'rule[s]') or ደንብ (*dänb*, 'regulation[s]'), i.e. the collection of the rules regulating the life in the M. There are Gəᶜəz translations of the monastic *Rules of ↗Pachomius* and *Rules of St. ↗Antony*; some other similar Gəᶜəz texts are scattered in the manuscripts (cp. Cerulli 1952:264f.). There are also local rules written in Amharic or even transmitted orally, dealing with monastic life predominantly on the basis of the local practices (cp. Lusini 1997; rules and statutes of some M. were first written down under *aṣe* Mənilək II, s. MahZekr 570-81). Such rules refer to the local monastic issues but recall the charisma of the founder of the M., reflecting its history and significant reforms in the monastic community. The Amharic *Rule of Maḫbärä Śəllase* (Persoon 1997:496) is said to be a translation of the Gəᶜəz *Rule of St. ᶜAmdä Śəllase* (lived early 17th cent.). It has sections dealing with the monastic enclosure, the seven office-holders, the community prayers, admittance, discipline, and duties. It is unusual in making even razor blades, needles and wild fruit common property. Most of the monastic rules refer to the ↗*kidan* given to the M.'s founder by Christ and mention the protection of the natural environment surrounding the M. due to its sanctity. Northern monastic rules often associated with *abunä* ↗Ǝwosṭatewos are more egalitarian, while those of the followers of *abunä* Täklä Haymänot give more privileges to office holders. Rules of the most M. prohibit any female to enter the community's premises (↗Gundä Gunde), or prescribes that a woman or even a female animal must be kept distant from the M.'s precincts (Däbrä Bizän). In some other cases, the rules are less strict, or allow nuns to live nearby. A few M. are associated with ↗nunneries (cp. Cerulli 1958:262f.).

The head of a monastery is usually a ↗*mämhər* with an *afä mämhər* second in the hierarchy. He can also have the title of *abä mənet* (lit. 'father of the monastery') or ↗*mäggabi*. The head of ↗Däbrä Mäwiᵓ in Goğğam holds the title of ↗*gäbäz*; Däbrä Libanos of Šäwa is run by the *mäggabi* and ↗*ṣäbate*, who preside over a council of 12 representatives of the monks.

The head of a M. was usually supposed to keep his office until his death. A new head could be named by his predecessor or elected, but was sometimes also appointed by the emperor (cp. ↗*nəburä əd*). Such emperors as *aṣe* ↗Dawit II and especially ↗Zärᵓa Yaᶜəqob are known to have regularly intervened in the appointment of heads of important M.

The heads of the country's most important M. had close ties to the royal throne. From the 15th cent. onward, heads of at least some of the M. resided at the court, and others were summoned when their services were needed. Backed by their communities, monastic leaders played an active role in the political life of the court, forming alliances with local rulers and members of the royal family, and seeking to influence the succession process. The influential ↗*ᶜaqqabe säᶜat* was originally appointed among the monks of Däbrä Libanos of Šəmäzana and later those of Däbrä Ḥayq Ǝsṭifanos. In the 15th cent. the abbot of Däbrä Libanos received the title of ↗*əčč̣äge* and was seen as the head of Ethiopian M. Throughout most of the subsequent history of the Church the *əčč̣äge* continued to be the most important indigenous cleric.

While the smallest of M. might have only a handful of monks, larger institutions (Däbrä Libanos of Šäwa, Waldəbba, Däbrä Abbay) can have several hundred. Apart from the leadership, the population of an *andənnät*-community is usually composed of monks who have taken the monastic vow (Gəᶜəz: መነኮስ, *mänäkos*; Amh.: መነኩሴ, *mänäkʷəse*) and novices (ሬድኦ, *rädᵓ*). Each novice is supposed to have a spiritual mentor (cp. ↗*Śərᶜatä mənkʷəsənna*). Novices and younger

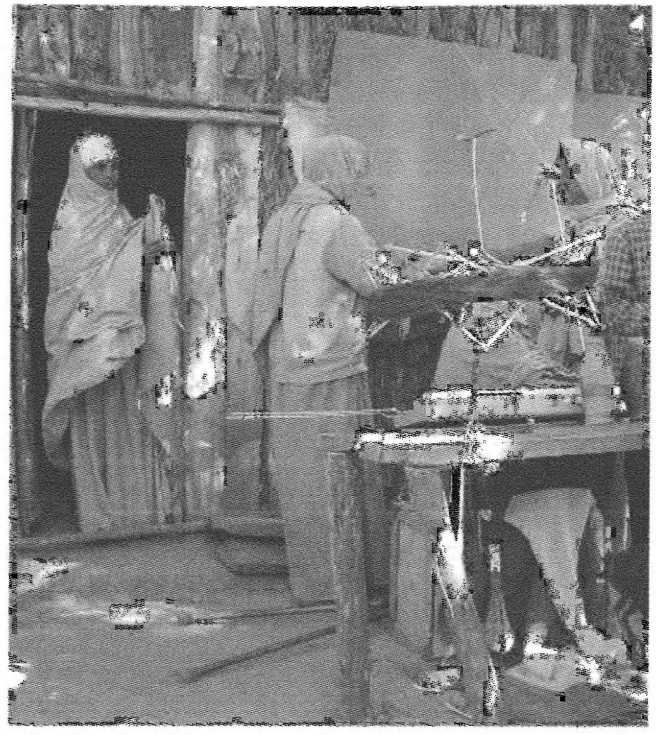
monks are mostly charged with manual work and with taking care of elderly monks. In some M. (like Waldəbba), older monks are allowed to practice ascetic life separately from the community. A few large and well-established M. such as Däbrä Libanos of Šäwa (but also some recently established M.) are noted for their sophisticated internal organization and efficient households.

Ethiopian M. originally had a special legal status and had the right to grant ↗asylum to those who had committed crimes, esp. manslaughter (cp. Guidi 1922). *Aṣe* ↗Ḫaylä Śəllase I abolished these privileges, and made M. subservient to the civil law code. They are under the direct authority of local bishops and have less to do with other organs of Church administration. Heads of the M. are chosen according to the local monastic rules. Often local bishops play a role, and important positions need to be ratified by the Patriarch.

Eritrean M. follow similar customs and rules to the M. of Təgray. They differ in that monks are controlled in their movements (i.e. unable to go to urban areas without permission) begging for ↗alms is not allowed, nor are there preaching hermits. Some M. are better organized, but they tend to be less integrated in the mainstream of public life than in Ethiopia.

Land tenure and economy

The ↗*gʷəlt*-holdings of M. were an integral part of Ethiopia's ↗land tenure system and administration. A M. often received land from the emperor or local ruler upon its foundation. In other cases, M. were founded in peripheral areas and were only endowed with land when the region and the M. came under royal auspices. Since gifts were dependent on the goodwill of the ruler, an intricate web of relations existed between M. and political leaders. In some cases M. refused royal gifts as an expression of their independence. ↗Däbrä Abrəntant was one of several M. which refused to accept *gʷəlt* from *aṣe* Dawit II. The grants and land transactions are often recorded in the marginalia of the manuscripts kept in monastic libraries (cp. ↗*Wängelä wärq*). Such grants provided the basis for the economic survival of the community. While monks often worked the land to provide for the needs of the community, the taxes paid by the peasants on M.'s land were also a major source of income. This was used to meet the needs of the M. and to acquire or manufacture church vessels and books. The M.'s charitable work was dependent on its ability to command and redistribute available resources.



Nuns producing textiles at Asir Mätira, Wəmbärta, Təgray, photo 2006, courtesy of Joachim Persoon

In the course of time, a number of M. accumulated substantial land holdings. On the basis of the purported cooperation of *abunä* Täklä Haymanot with *aṣe* ↗Yəkunno Amlak to topple the ↗Zagʷe dynasty, the Church (and M.) claimed revenues from a third of the arable lands. In the wake of the Revolution, M. lost most of their landholdings and were forced to depend upon donations from congregants and subsidies from central EOTC authorities. M. today have much smaller landholdings than before, and have to use irrigation and other techniques to farm more intensively. Some have established cereal grinding mills, and apiculture or animal breeding programs for extra income; they also have acquired real estate in towns which they rent out. Some receive support from local parishes, or income from festivals. Many isolated rural M. struggle to survive. In some cases (Zəqʷala, Waldəbba), the restoration of the monastic rule after the fall of the *Därg* went along with efforts to protect the places' ecological balance and integrity.

Spatial organization

M. vary in their physical appearance and structure. The regional differences are mainly due to the fact that M. are constructed according to local practice. In Northern Ethiopian M. resemble more the stone-built M. of the Middle East, while

central and southern M. use such techniques as wattle and daub. Certain spaces are necessary for each M.: at least one church, a *betäläḥem* for preparing the ↗Eucharist, an ↗*ʿəqa bet*, a cemetery and huts for the monks. However, there is no standard appearance for any of these. Many M. contain more than one church with several *tabots*. The liturgy (↗*Qəddase*) is normally celebrated in the M.'s church by consecrated monks (not married priests), though this distinction between different categories of churches has become blurred due to the urban migration of monks and impoverishment of rural M.

Changes in the community size, natural disasters (esp. fires) and human interventions all result in changes in the physical appearance of a M. over time. In Däbrä Bizän, ancient (deserted) structures can be seen next to those constructed in the mid-19th cent. ↗Däbrä Maryam on Lake Ṭana was destroyed during the *Zämänä mäsafənt* and rebuilt under *aṣe* ↗Tewodros II. Däbrä Mäwiʾ in Goğğam and ↗Däbrä Asäbot in eastern Harärge were both partially destroyed by the Italians and then reconstructed. Däbrä Libanos of Šäwa was nearly abandoned in the 17th cent.; since its revival in the 19th cent. the main church has been rebuilt several times. While intensive repairs and construction work are underway in many M. today, little or no consideration is given to the preservation of still remaining historical structures.

Numerous accounts speak of M. raided by external enemies (e.g., the 1557 Turks' raid on Däbrä Damo). Many M. were destroyed in the 16th cent. by *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"), whose troops burnt the buildings, plundered manuscripts, church vessels and precious metals. Many of those M. were never rebuilt (cp. ↗Däbrä Halleluya). Frequently, M. were also victims of feuds and internal struggles, ↗*šəfta* or brigands. Gundä Gunde was burnt under both Zärʾa Yaʿəqob and Naʿod; ↗Däbrä Baḥrəy on the Gasəčča plateau is said to have been burnt down three times, once by Grañ and twice by the local Muslims.

The destruction of a M. did not necessarily entail the end of the community. Having hidden or taken along the books, the *tabot* and sacred vessels, the monks could flee. After the danger was over, those who survived would return. A modest church building was sufficient to restore the *tabot* to its place. A M. could also be re-established after a considerable period of time, whenever a strong charismatic leader attracted disciples and established continuity, e.g., by discovering or translating the relics formerly preserved at the place.

Literary and artistic impact

Beyond their religious significance, M. were important cultural centres rivalled only by the royal court. Heldman (1998) has suggested an important distinction between those craftsmen who belonged to low status groups, and monastic artisans. Painters, metalworkers, scribes etc. of the latter group were members of the clergy trained in M. Monks were among the few literate people in pre-modern Ethiopia and thus M. were an important site for the copying and sometimes composition of literary works (↗Manuscripts; ↗Gəʿəz literature). All important M. have libraries, in some cases extending to hundreds of volumes. Members of the M. also illustrated the manuscripts, as well as painted murals and icons (↗Painting). M. often served major repositories of artefacts including liturgical vessels, vestments, crosses etc. In some cases, other precious objects such as royal ↗crowns were deposited in M. to enhance the M.'s prestige and assure the safekeeping of the valuables. Over the course of time some M., or monastic "houses" developed distinctive styles, particularly in the case of Gundä Gunde and the Ewosṭateans.

The role of M. as centres of expressive culture was not limited to material objects. M. were major centres for the training of musicians in the performance of church ↗music and for ↗education in different aspects of ecclesiastical learning. Often a M. would have a special reputation for the quality of its instruction in a particular field. For example, the scholars of ↗Däbrä Abbay are considered the highest authority and the most acclaimed teachers in the matters of liturgy.

Non-Christian monasteries

At least two other groups in Ethiopia have M. The ↗Betä Ǝsraʾel adopted monasticism in the 15th cent. and until sometime in the 20th cent. had a number of M. The missionary Johannes Martin ↗Flad claimed that Hurharwa, the largest Betä Ǝsraʾel M., had about 200 monks, but Joseph ↗Halévy reported only 12 to 15. The Betä Abrəham craftsmen of northern Šäwa and southern Wällo live in ca. 20 M. The most important of these is ↗Mugär Gädam in Šäwa.

Muslim rural retreats existing at some shrines (↗*Zāwiya*), like elsewhere in Islamic world, share some features with M. and are often referred to by Amh. *gädam* (Abbink in preparation).

Steven Kaplan

Monastic literature

M.l. comprises works devoted to monastic life, practice and thought. ↗Monasticism has been and still is a decisive factor in the religious, social and till recently also political life of the Christian societies of Ethiopia (and, to a certain extent, of the ↗Betä Ǝsraʾel), and the M.l. (largely in Gəʿəz, with a few developments also in Amharic) is both its literary expression and at the same time its essential premise and background (↗Gəʿəz literature). In its broader sense, M.l. also includes (I) hagiographic literature devoted to monastic saints. In its narrower sense M.l. is understood as (II) normative and prescriptive writings for all those who desire to conform to a more or less exactly determined discipline of monastic life, i.e. monastic rules; and (III) theoretical reflections on monasticism, i.e. treatises and writings of less prescriptive character, yet focusing on the practical, spiritual, and theological essence of monasticism and ascetic life.

I. Hagiographic literature devoted to monastic saints

(1) Generally speaking, all hagiographies devoted to saints who have practiced a monastic and/or an ascetic life can be considered M.l. Vitae of such early founders of monasticism as St. ↗Anthony, Paul the first hermit (*abba* Ṗawli), or of such exemplary figures as St. Alexis (Gəʿəz ↗Gäbrä Krəstos), had a lasting and profound influence on the further development of M.l. and monastic life itself.

For Anthony cp. Harmless (2004:57–113) for his Vita in general; the Gəʿəz version, still unpublished, is in mss. BN d'Abbadie 31, 60 [CRAbb nos. 209, 172]; BritLib Orient. 692, 696, 697, 698; EMML 141, 1844; also Six-Tana III, no. 164 [Ṭānāsee 164 = Dāgā Esṭifānos 53]; cp. Leloir 1984.

For *abba* Ṗawli, cp. ed. FRANCISCO MARIA ESTEVES PEREIRA, *Vida de S. Paulo de Thebas primeiro eremita. Versão ethiopica ...*, Lisboa 1903 and ID., *A Vida de S. Paulo de Thebas primeiro eremita segundo a versão ethiopica*, Coimbra 1904, from ms. BN d'Abbadie 60 (Bausi 2002:16, n. 57); additional mss.: EMML 141, fols. 54ra–70va; 1840, fols. 3ra–13vb; 1844, fols. 25ra–30r; cp. also a "debate of *abba* Ṗawli with Satan" in EMML 1939, fols. 86va–101va.

These and other monastic hagiographies are sometimes transmitted within large collections, properly termed *Gädlä qəddusan* (**ገድለ፡ ቅዱሳን**, '[Spiritual] Contendings of the Saints'), or even ↗*Gädlä säma*ʿ*ətat*, with reference to the prominent part the hagiographies of Martyrs has in them. These texts have in turn been taken as a model in the Vitae of the so-called "Egyptian Saints" of Ethiopian hagiography, such as Bula (or Abib), Laṭṣun, Nob, ↗Gäbrä Mänfäs Qəddus, ↗Yoḥannəs Məśraqawi, possibly ↗Tadewos of Däbrä Bartarwa and others (cp. Marrassini 2005).

It is likely that the *Life of Anthony* and the *Life of Paul the first hermit* were translated into Gəʿəz from Greek at an early stage of Ethiopian literary history, i.e. in ↗Aksumite age. The same is possible for the earliest recension of the *Life of St. Alexis*. It is also possible for some texts of the *Gädlä qəddusan* which have not yet been submitted to adequate philological scrutiny, although it is clear that most of them have been translated from Arabic starting from the 13th cent. at the latest.

(2) Various collections of noteworthy anecdotes about and pithy sayings from desert fathers (mainly from the mid-4th to mid-5th cent.) are attested in Gəᶜəz. They are indicated by the Greek term *Apophthégmata Patrum*, 'Sayings of the Fathers' (cp. Harmless 2004:167ff.), but may also include shorter hagiographical narratives. As such they may be considered both hagiography and M.l. There are various Gəᶜəz terms used to indicate these collections: **ገነተ፡ መነኮሳት** (*Gännätä mänäkosat*, 'Garden [or, Paradise] of the Monks'), **ነገረ፡ መነኮሳት** (*Nägära mänäkosat*, 'Story of the Monks'), **ዜና፡ አበው፡ ክቡራን** [or **ቅዱሳን**] (*Zena abäw kəburan* [or *qəddusan*], 'History of the Venerated [or Holy] Fathers'), etc.

The translation of these collections was previously believed not to antedate the early 15th cent. (cp. Conti Rossini 1899:265f.; GuiSLett 36; RicLett 827; Beylot 1993:245, and 252f., dates the *Collectio monastica*, cp. below, to the 17th cent.). The date, however, can go back to the end of the 13th cent. at the latest, as a manuscript of *Zena abäw* is mentioned in the list of manuscripts dating to 1292 A.D. (cp. Sergew Hable-Selassie 1992:246f.). Besides, ms. EMML 2071, from Däbrä Ḥayq Ǝsṭifanos, dates to the 14th cent., and ms. VatLib Etiop. 17 to the 14th/15th cent.

The identification of each text belonging to this genre is extremely difficult (as also in the Christian Arabic domain, cp. GrafLit vol. 1, 380–414): different collections circulate under the same extensive labels, an indication of their pervasive popularity among the monastic circles, or were even written down in the blanks of the ↗manuscripts, as it happens for monastic prescriptions (cp. Lusini 1998:55f.). For the main edited collections conventional labels were introduced by Arras (s. a–e). The still unedited pieces, however, can be neither exactly determined from the catalogues of manuscripts, nor evaluated in general.

(a) *Collectio monastica*

This is an anonymous collection of 67 chapters, partly containing doctrines and prescriptions derived from writings of Macarius the Egyptian, ↗Evagrius, ↗Pachomius, Isaiah the abbot, Amon, ↗Ephrem, Palladius and others, and partly *Apophthégmata*. Its absolute importance for preserving otherwise lost and unknown narrative pieces and sayings has been recently reasserted by specialists of M.l. (cp. Harmless 2000).

Ed.: VICTOR ARRAS (ed., tr.), *Collectio Monastica*, Louvain 1963 (CSCO 238, 239 [SAe 45, 46]); French tr. LUCIEN REGNAULT, *Les Sentences des Pères du Désert, nouveau recueil: apophtegmes inédits ou inconnus*, Sablé-sur-Sarthe 1970, 287–311.
Mss. used for the edition: BritLib Orient. 764 (17th cent.), fols. 103r–215r; VatLib Cerulli Etiop. 220 (18th cent.), fols. 96r–166v. Other mss.: HamTana I, no. 28 (Ṭānāsee 28 = Kebrān 28, 18th cent.), fols. 2ra–112ra; EMML 4447 (18th cent.), fols. 10r–78v, 85r–92v, 79r–84v, incomplete. Fragments (partially mentioned by Arras 1963) preserved in mss. BN d'Abbadie 178 (CRAbb no. 119), fols. 117r–124v (chs. 1–2); BritLib Orient. 593, fols. 121v (ch. 18), 126r (ch. 20), 128r (ch. 6); Orient. 766 (18th cent.), fol. 134r (ch. 20); Add. 16,222, fols. 76v (ch. 20), 128r (ch. 6); one fragment inserted within the text of the *Rules of Pachomius* in ms. BN d'Abbadie 75 (CRAbb no. 132, 18th cent.), fol. 163r (ch. 19). The identification is not certain for mss. EMML 19 (1928 A.D.), fols. 71r–149r; 414 (18th cent.), fols. 1r–154r.

(b) *Patericon Aethiopice*

This collection, bearing the Gəᶜəz title **መጽሐፈ፡ ዜናሆሙ፡ ለአበው** (*Mäṣḥafä zenahomu läʾabäw*, 'Book of the History of the Fathers'), consists of 450 (so numbered by the editor, 283 in the transmitted text) *Apophthégmata* and noteworthy episodes narrated by John Moschos, Anastasius of Sinai and others, as well as short contributions by ↗Ephrem the Syrian, ↗John Chrysostomos, Basilius, Macarius, Isaiah, John Saba, ↗Isaac of Nineveh and others.

As demonstrated by Sauget (in PICES 4, vol. 1, 386ff.), the collection is composed of four parts: a "systematic collection" of *Apophthégmata*; a series of various random extracts from patristic writings; a summary of the *Pratum Spirituale* ('Spiritual Meadow') by John Moschos (540/550 to 619/634 A.D.) with a final appendix; and a second "systematic collection" of *Apophthégmata* with additions at the beginning and at the end. According to Sauget, the collection transmitted to us was compiled starting from three different ones, already existing in Gəᶜəz at an earlier stage (1st section; 2nd section; and 3rd and 4th together). The primitive versions of each collection, in turn, do not antedate the 13th cent.

Ed.: VICTOR ARRAS (ed., tr.), *Patericon Aethiopice*, Louvain 1967 (CSCO 277, 278 [SAe 53, 54]).
Mss. used for the edition: BN Éth. 125 (15th cent.), fols. 1r–149v; d'Abbadie 75 (CRAbb no. 132, 17th cent.), fols. 1r–162v; BritLib Orient. 762 (17th cent.), fols. 98r–158r; Orient. 764 (17th cent.), fols. 3r–101r; Orient. 765 (18th cent.), fols. 1r–155r; Orient. 766 (18th cent.), fols. 2r–134v; Orient. 767 (18th cent.), fols. 1r–127r. Other mss.: SixDeu 91 (Stadt- und Universitätsbibliothek Frankfurt Ms. or. 7), fols. 251ra–280rb, 281va–283rb, 286r–336v; SixTana III, no. 24 (Ṭānāsee 135 = Dāgā Eṣṭifānos 24, 1765 A.D.), fols. 135ra–168vb (not complete); one long fragment of the first part has been identified (cp. Sauget 1978) in ms. VatLib Etiop.

33 (15th cent.), fols. 34r–52v. Other mss. with uncertain identification are EMML 19 (1928), fols. 1r–69r; 1096 (19th cent.); 1536 (20th cent.), fols. 3r–46v (only similar in contents), followed on fols. 46v–72v by sayings of Pachomius; 2071 (14th cent.); SixDeu 91 (Stadt- und Universitätsbibliothek Frankfurt Ms. or. 7, 19th cent.), fols. 345r–351v, similar in contents, but distinct from the *Patericon*; VatLib Cerulli Etiop. 124 (20th cent.), fols. 7rff. (286 entry numbers).

(c) *Asceticon*

The collection entitled **ዜና፡ ዘእምአበዊነ፡ ቅዱሳን** (*Zena zä'əm'abäwinä qəddusan*, 'History of our Holy Fathers') consists of 62 chs., mainly of *Apophthégmata*, also comprising homilies and treatises of ascetic subjects attributed to John Chrysostomos (nos. 49–50), Isaac (no. 51), Isaiah (no. 52), Paul the abbot (no. 53), Ephrem (nos. 58–59), including the "Rule of the Angel" sent to Pachomius (no. 57, corresponding to *Historia Lausiaca*, chs. 38–39) and rules of Anthony (no. 62, fols. 172r–173v).

Ed.: VICTOR ARRAS (ed., tr.), *Asceticon*, Lovanii 1984 (CSCO 458, 459 [SAe 77, 78]); partial French tr. by Regnault (1970, s. under I.a), 332–38.
Ms. used for the edition: BritLib Orient. 768 (18th cent.), fols. 111r–173v.
Additional identification of texts was proposed by LUCIEN REGNAULT, "Des apophtegmes des Pères redécouverts", in: ENZO LUCCHESI – UGO ZANETTI (eds.), *Ægyptus Christiana. Mélanges d'hagiographie égyptienne et orientale dédiés à la mémoire du P. Paul Devos bollandiste*, Genève 2004 (Cahiers d'Orientalisme 25), 149–62, here 150–54.

(d) *Geronticon*

This collection bears the Gəᶜəz title **ገድለ፡ አበው፡ ቅዱሳን** (*Gädlä abäw qəddusan*, '[Spiritual] Contendings of the Holy Fathers'), or *Gännätä mänäkosat*, in the explicit (cp. Arras 1986:363 [text]), and consists of 540 *Apophthégmata*.

Ed.: VICTOR ARRAS (ed., tr.), *Geronticon*, Lovanii 1986 (CSCO 476, 477 [SAe 79, 80]).
Mss. used for the edition: BritLib Orient. 763 (1586/87), fols. 2r–124v; BN d'Abbadie 85 (CRAbb no. 162, 18th cent.); mentioned, but not used, EMML 7469 (not yet catalogued).
Additional identification of texts was proposed by Regnault 2004 (s. I.c), 150–54.

(e) Quadraginta historiae monachorum

This collection of 40 ascetic and monastic narratives referring to Egyptian Monks of the 7th–8th cent. was probably first composed in Greek.

Ed.: VICTOR ARRAS (ed., tr.), *Quadraginta historiae monachorum*, Lovanii 1988 (CSCO 505, 506 [SAe 85, 86]).
Mss. used for the ed.: BritLib Orient. 768 (18th cent.), fols. 3r–110v; EMML 746 (20th cent.), incomplete; 7469 (not yet catalogued); an additional ms. was noted by Crum (1932).

(f) There are a number of other writings the relationship of which with the previous ones is very difficult to establish. Here follows a sample list:

Ms. Berlin, DillmBerl no. 83 (Ms. or. oct. 238, 19th cent.), fols. 103–106r, contains excerpts from sayings of Fathers and Monks on spiritual matters. The *Nägärä mänäkosat*, with *Apophthégmata* on the Egyptian Fathers, is preserved in ms. BritLib Orient. 757 (18th cent.), fols. 131rff., with extracts from several writers: Isaiah of Scete, John Climacus or of Mount Sinai, Sayings of Isaiah, Macarius, *abba* Bämnu etc. Ms. BN Éth. 34 (18th cent.), fols. 1, 223, 256 contains various *Apophthégmata*, partly in Arabic language written in Gəᶜəz script. Fragments of *Apophthégmata* are also in ms. BN Éth. 157 (18th cent.), fols. 4, 95–97, 2–3 and Éth. 159 (18th cent.), fols. 80ff. Ms. EMML 414 (18th cent.), fols. 154r–169r, has various sayings of the Fathers of the Desert, and also includes (like other mss.) an excerpt from the third series of *Apophthégmata Patrum* and one saying from the holy Fathers, fols. 163v–169r. Ms. EMML 930 (17th cent.), on fols. 65r–92v has a *Mäṣḥafä zenahomu lä'abäw qəddusan* or *Gännät*. Ms. EMML 1952 (18th cent.) contains excerpts from the sayings of the Fathers in the *Śərᶜatä betä krəstiyan*, fols. 17r–24v. Ms. EMML 4550 (20th cent.) has an excerpt from a monastic writing on fol. 19, and from the sayings of the spiritual Fathers on fols. 51r–54r. Ms. EMML 4722, fol. 1r, has a fragment. Ms. HamSixBerl no. 79 (Ms. orient. oct. 1307, 18th/19th cent.), fols. 21vb–46va, has texts similar in contents with *Collectio monastica*, *Patericon*, *Mäṣḥafä ↗ḥawi*, but not identical to them. Ms. in St. Petersburg, Asiatic Museum, described by Turaev (1906): no. III, 39, fols. 2ff. have *Zenahomu lä'abäw*, and fols. 126–65 have *Gännät zämänäkosat*, to be compared with BN Éth. 125; no. VI, 1, has *Apophthégmata* on fols. 159–60. Ms. VatLib Etiop. 14 (16th cent.), fol. 185, has one saying. Ms. VatLib Etiop. 17 (14th/15th cent.), fols. 34–45, has sayings of the Fathers (not further identified). There is no ms. in Tübingen and Wien, to the contrary of what was stated by Conti Rossini (1899:621, *s.v.* "*Gannat*").

According to Conti Rossini (1899:283), an Amharic version of the *Pratum Spirituale* was prepared by fathers Caldeira and Luiz d'↗Azevedo with the help of Fəqur Ǝgzi'.

(g) An absolute exception among the writings of this genre (all of them are translations), is the original composition ascribed to *abba* Näbyud of Däbrä Sihat, Eritrea (better known as ↗Däbrä Sina), consisting of visions and ascetic advises derived from various sources.

Ed.: ROBERT BEYLOT, *Abba Nabyud de Dabra Sihat. Visions et conseils ascétiques*, Louvain 1976 (CSCO 377, 378 [SAe 70, 71]).
Mss. used in ed.: BN Éth. 125 (15th cent.), fols. 165vb–218ra; BritLib Orient. 763 (1586/87 A.D.), fols. 132ra–162rc. Some excerpts are also preserved in ms. EMML 2183 (19th cent.), fols. 1r–6r.

II. Normative rules and rituals

(a) Monastic rules

These are collections of prescriptions concerning the conduct and the lifestyle of the monks and of the monastic communities. The most ancient are the *Rules of Pachomius* concerning coenobitic life, the first two sections of which date to Aksumite period and were translated from the original Greek, while a third section is an original composition added later (14th/15th cent.; cp. Conti Rossini 1899:203; GuiSLett 17, 41; Cerulli 1958:264f., 268f.; CerLett 23, 137; RicLett 813; Lusini 1998:54f.).

Ed.: DillmChrAeth 57–69; s. also OSCAR LÖFGREN, "Zur Kritik der äthiopischen Pachomiusregeln I, II", *Le Monde Oriental* 30, 1936, 171–86; ID., "Pakomius' etiopiska klosterregler. I. I svensk tolkning", *Kyrkohistorisk Årsskrift* 48, 1948, 163–84.

Ms. used by Dillmann: BN d'Abbadie 174 (CRAbb no. 34), fols. 91–101; cp. SimChrAeth 300ff.

Mss. used by Löfgren (1936): BN d'Abbadie 10 [CRAbb no. 101], fols. 1–5, first section; d'Abbadie 75 [CRAbb. no. 132], fols. 163–172, second section; Berlin, DillmBerl no. 31 [Ms. or. oct. 237, 17th/18th cent.], fols. 3–9v, with additional rules on fols. 9v–10 and 111–18; BritLib Orient. 768, fols. 149v–150v, first section, *scilicet*, within the *Asceticon*; Orient. 764, fols. 167r–168r, second section, *scilicet*, within the *Collectio monastica*; Add. 16,222, fols. 139–146, 3rd section.

Other mss.: BritLib Orient. 593 (18th cent.), fols. 126rf. (on the conduct of Monks); EMML 2183 (18th cent.), fols. 216r–218v, third part of the Rules; 2272 (18th cent.), fols. 56r–62r, third part of the Rules; 3200 (17th cent.), fols. 57r–60r, third part of the Rules plus another unidentified monastic writing on fols. 60r–61r; 4779 (19th cent.), fols. 67r–74v, first part of the rules (incomplete); VatLib Cerulli Etiop. 268 (19th cent.), fols. 57rff.

Besides, a number of other texts are still to be edited. Some texts bear the name of the saint to whom they are attributed, but most of them are simply indicated as ↗*Śərᶜatä mənkʷəsənna*.

Rules of Anthony circulate both in the *Asceticon* (s. I.c) and in mss. of his Vita:

E.g., mss. EMML 141, fols. 50rb–52va; 1844, fols. 23va–24rb; 1939, fols. 84ra–86rb; cp. also the *Śərᶜatä mənkʷəsənna* in ms. ANLin nos. 131 (15th/16th cent., in very poor condition), where Anthony is also mentioned.

A unique ms. seems to witness to the monastic *Rules of Stephen of Thebais* (cp. GrafLit vol. 1, 413), EMML 4493 (1528 A.D.), fols. 103r–105r.

A ቀኖና፡ መነኮሳት (*Qänona mänäkosat*, 'Monastic canon') was witnessed by ms. VatLib Comboni Etiop. 290 (lost at present), fol. 4 (cp. Raineri 2000:297).

At the same time monastic rules are scattered all over the original hagiographic literature, in some cases to a very systematic degree, such as the series of *Rules* in the Vita of ↗Filəppos of Däbrä Bizän.

Ed.: CARLO CONTI ROSSINI, "Il gadla Filpos e il gadla Yoḥannes di Dabra Bizan", *MRALm* ser. 5ª, 8, 1900, 62–170, here esp. 94*a*, l. 19 to 98*b*, l. 11 (text); ID., *Principî di diritto consuetudinario dell'Eritrea*, Roma 1916 (Manuali coloniali pubblicati a cura del Ministero delle Colonie), 381–87 (tr.).

Discussions and controversies on monastic rules also have a large part, directly or indirectly, in many works of more general interest: see the exemplary case of the delicate and obscure question of the ↗Ewosṭatean "lay abbot" in the *Mäṣḥafä ↗bərhan* (CRRicBerhan vol. 2, 145–56 [text], 82–87 [tr.], on which cp. also BauSen 44f.).

An extremely popular and influential monastic rule (yet, almost totally disregarded by the scholars), is the ነገር፡ ዘቅዱሳን፡ አበው፡ ፫፻፲፰፡ ዘይከውን፡ ሕንጻ፡ ለመነኮሳት (*Nägär zäqəddusan abäw 318 zäyəkäwwən ḥənṣa lämänakosat*, 'Discourse of the 318 Holy Fathers which will be Edifice to the Monks'), corresponding to the so-called Greek pseudo-Athanasian *Syntagma*, transmitted as *Didascalia of the 318 Nicene Fathers*, for which a Greek *Vorlage* could be proposed: incorporated within the ↗*Senodos*, it has a later, although recensionally much different, equivalent in the ↗*Haymanotä abäw*, certainly depending upon an Arabic *Vorlage*.

Ed.: ALESSANDRO BAUSI (ed., tr.), "La versione etiopica della *Didascalia dei 318 niceni* sulla retta fede e la vita monastica", in: ENZO LUCCHESI – UGO ZANETTI (eds.), *Ægyptus Christiana. Mélanges d'hagiographie égyptienne et orientale dédiés à la mémoire du P. Paul Devos bollandiste*, Genève 2004 (Cahiers d'Orientalisme 25), 225–48. Cp. ሃይማኖተ፡ አበው (*Haymanotä abäw*, 'The Faith of the Fathers'), Addis Abäba 1986 A.M. [1993/94 A.D.; 1st ed. 1955 A.M. = 1963 A.D.], 46–68.

(b) Monastic rituals

These texts rule the ceremony of the attribution of the monastic habit, though they may comprise even more general rules. One of the earliest rituals is probably the *Śərᶜatä mənkʷəsənna* transmitted under the name of the Syrian Father ↗Jacob of Serug. It was translated from Arabic in the 14th or at the latest in the 15th cent., as it is already quoted in the Vita of ↗Abäkäräzun (cp. CRAbb 115).

Not yet published, it is witnessed by mss. BN d'Abbadie 71 (CRAbb no. 78); EMML 499 (19th cent.), fols. 55r–76r; maybe also EMML 669 (20th cent.); 1012 (19th

cent.); VatLib Cerulli Etiop. 124 (20th cent.), fols. 176v (teaching of *abba* Yaʿəqob on Macarius the Great).

Another ritual (*Śərʿatä mənkʷəsənna*) is equally ancient.

Ed.: SYLVAIN GRÉBAUT, "Rituel éthiopien de prise d'habit", meant to be printed in *ROC* 30, 1935–46, 225–55, publ. as offprint at Mesnil (Departement Eure) 1940 (cp. HamTana II, 100).

Ms. used in ed.: BN Éth. 79 (14th cent.), 22 fols.

Other mss.: HamTana II, no. 81 (Ṭānāsee 81 = Dabra Māryām 23), fols. 6ra–57vb; Manchester, John Rylands Library Ethiop. 16 (17th cent., cp. Strelcyn 1974, no. 16); SixTana III, no. 155 (Ṭānāsee 155 = Dāgā Eṣṭifānos 44, 18th cent.).

There are a number of other similar, not easily identifiable texts. Some of them are termed *Mäṣḥafä mänäkosat*, and are described as monastic rituals. Examples are mss. EMML 31 (20th cent.), fols. 1r–60v (fols. 1r–13v: rite of clothing the nuns with the religious habit [*Śərʿatä ʿaśirä mänäkosayəyat anəst bäʾaskema qəddus*]; fols. 13v–25v: rite of clothing monks with the religious habit [*Śərʿatä ʿaśirä mänäkosat bäʾaskema qəddus*]; fols. 25v–50v: rite of religious profession [*Śərʿatä mənkʷəsənna*]; fols. 50v–60v: the confirmation of monks, extracted from the *Haymanotä abäw* [misinterpreted in EMML vol. 1, 32: *ḥənṣa mänäkosat zä-täqäddəḥo* (i.e. *täkəḥḥədu*?) *əm-haymanotä abäw*, 'the Confirmation of Monks who have Apostasized (?) from the Faith of the Fathers']); EMML 48 (1938/39 A.D.), fols. 103v–151v.

Others are simply described as monastic rituals: cp. mss. EMML 233 (ca. 1746 A.D.), fols. 7r–102v (various texts of monastic rituals), fols. 107r–111v (third rule from the sayings of the Fathers; rules for monks and penance for their infraction); EMML 634 (20th cent.); EMML 842 (19th cent.); EMML 930 (17th cent.), fols. 93r–122v (monastic ritual), fols. 122v–141v (various excerpts concerning the spiritual life); EMML 978 (18th cent.), fols. 9r–15r (homily on the conversion and life of the monk, entitled *Zena mänäkosat abäw qəddusan*), fols. 15r–67r (monastic ritual); EMML 1951 (18th cent.); EMML 2093 (19th cent.); EMML 2168 (18th cent.), fols. 3r–54v; EMML 2272 (18th cent.), fols. 1r–53r; EMML 2394 (19th cent.), fols. 1r–37v; EMML 2459 (17th cent.), fols. 40r–91r; EMML 2813 (17th/18th cent.); EMML 2852 (17th cent.), fols. 17r–56r; EMML 2816 (17th/18th cent.); EMML 4468 (19th cent.), fols. 5r–70v; EMML 4621 (18th cent.); EMML 4886 (19th/20th cent.), fols. 3r–44v; EMML 4934 (18th/19th cent.), fols. 1r–154v.

(c) Less identifiable texts

Ancient, unidentifiable texts are preserved in such mss. as

VatLib Etiop. 33 (15th cent.), fols. 2–25 (a treatise on monastic life), fols. 25–34 (ascetic prescriptions), fols. 53–72 (homily on ascetic life, by Isaac as the first piece, cp. Sauget 1978:44, n. 4), while for fols. 34–52v cp. the *Collection monastica*; ANLin no. 132 (StrANL no. 132, II and III), 8 fols. plus 1 fol.

Monastic rules were frequently written down in blanks of mss. Although Ethiopian M.l. is still too scarcely known to allow a precise evaluation of each single piece (cp., e.g., Bausi 2004 [s. under II. a], 226, n. 8), it is possible that in some cases these short texts be occasional deliberations from a particular monastic community, as in:

ms. BN Éth. 125 (15th cent.), fols. 160v–162r (cp. Lusini 1998, ed., tr.; but the monastic canons on fols. 162rb–165va, *ibid.* 56, were published and tr. by Grébaut 1940); EMML 5000 (19th cent.), fols. 2r–3v, monastic rules laid down by Abbot Qäṣäla Giyorgis for his community of Mayä Wäyn (in Amh.); a *Təʾəzazä mänäkosat* ('Order for the Monks') in ms. Berlin, DillmBerl no. 55 (Peterm. II Nachtr. 31, 16th cent.), fols. 1ff. and 128f. (guardleaves); excerpts of monastic rules, also extracted from "Sayings of the Fathers", are in ms. BritLib, DillmLond no. 18 (Add. 16,222, "antiquior"), fols. 76vff.; cp. also ms. München, SixBay no. 105 (Cod. aeth. 107), fols. 107ra–108vb (fragment of rules and prescriptions for the spirituals in a bad hand); VatLib Borg. Etiop. 20 (18th cent.), fols. 1–3v (fragment of monastic rules from the "Sayings of the Fathers"); Cerulli Etiop. 124 (20th cent.), fols. 185vff. (monastic rules in Amh.); EMML 1849 (19th cent.), fol. 2r (monastic rules uttered by one of the Fathers); 4380 (19th cent.), fols. 4r–9r (excerpts from monastic rules).

A collection of 59 documents from various mss., relating to the monastic communities of Jerusalem and Egypt, was published by Cerulli (CerPal vol. 2, 380–446, ed., tr.). The oldest document (no. 1, 1331/32 A.D., from ms. Firenze, Biblioteca Medicea Laurenziana, Orient. 148, fols. 4v and 3v, *ibid.* 380ff.) significantly begins by mentioning the *Rule of Anthony and Macarius*.

III. *Mäṣaḥəftä mänäkosat*

Various Patristic authors may be credited with having exerted a remarkable and lasting influence on Ethiopian M.l. Among the authors included in the collections listed under no. I, Evagrius Ponticus is also mentioned under the name *Akryos* (cp. Sauget in PICES 4, 358). Writings referring to monastic practice are inserted into the ↗*Wəddase amlak*. The *Mäṣḥafä ḥawi* also has sections relevant to M.l., as does the ↗*Fətḥa nägäśt*. Among Amharic works, e.g., the **ቃለ፡ ሃይማኖት፡ ወምዕዳን** (*Qalä haymanot wämaʿəḍan*, 'The Word of Faith and Admonition') has one section on monastic life (cp. mss. EMML 1310 [20th cent.], fols. 59v–66r; EMML 1315 [19th/20th cent.], fols. 62r–68v; EMML 1442 [20th cent.],

fols. 38r–45v; Cambridge, University Library, Or. 1882 [Ullendorff – Wright 1961, no. 43, 18th cent.], fols. 52vff. etc.).

However, the three Syrian authors whose writings are collected under the label of *Mäṣaḥəftä mänäkosat* ('Books of the Monks') have become by far the most popular. They are (in chronological order of translation into Gəᶜəz): (1) the ↗*Filkəsyos*, a questionary on monastic life through "the stories of the Fathers, Egyptian monks", attributed to Philoxenus of Mabbug, but really a work written in Syriac by the monk Dāḏīšōᶜ Qaṭrāyā (7th cent.); the work was translated from Arabic at the middle of the 14th cent. (LöfUpp no. 33, supposing that the note in ms. Uppsala, O Etiop. 7 [17/18th cent.], witnessing a tr. dating to 1021 of the Martyrs [1305 A.D.] by initiative of metropolitan ↗Sälama, is corrected to 1365 by reading 1081 instead of 1021, what would give year 1365 A.D.); (2) the *Mar Yəsḥaq*, i.e. the third treatise on spiritual asceticism by ↗Isaac of Nineveh (cp. ZotBNat 131–34, no. 114), translated from Arabic not later than the 16th cent. (Beylot 1993:250); and (3) the ↗*Arägawi Mänfäsawi*, the ascetic writings by John of Saba, translated from Arabic by ↗ᶜƎnbaqom during *aṣe* Ləbnä Dəngəl's reign, as attested by the *subscriptio* in, and age of, the most ancient known ms., Berlin, Ms. or. quart 491 (accomplished on 5 *Mäskäräm* 1517 A.M. = 1524 A.D., cp. DillmBerl 43f.; Conti Rossini 1899:271f.; GuiSLett 68f.; CerLett 140; RicLett 839; Rodinson 1975:244ff.; Beylot 1993:245 erroneously attributes the work to the 15th cent.; EAE vol. 2, 281); ms. EMML 4493 (1528 A.D.) dates to few years later.

The high number of manuscripts testify to the importance and central role attributed to them. Yet, the very existence of a canon of "Books of the Monks" composed of the three aforementioned works is certainly the result of a slow development. Most manuscripts have only two of the three works. Four are known to contain all three:

BritLib Orient. 759 (17th/18th cent.): *Arägawi Mänfäsawi*, fols. 2rff., *Filkəsyos*, fols. 81rff., *Mar Yəsḥaq*, fols. 129rff.; BritLib Orient. 760 (18th cent.): *Filkəsyos*, fols. 4rff., *Arägawi Mänfäsawi*, fols. 50vff., *Mar Yəsḥaq*, fols. 123rff.; EMML 15 (17th/18th cent.): *Arägawi Mänfäsawi*, fols. 1r–112r, *Mar Yəsḥaq*, fols. 113r–182r, *Filkəsyos*, fols. 183r–247v; EMML 2100 (17th cent.): *Arägawi Mänfäsawi*, fols. 2r–93v, *Mar Yəsḥaq*, fols. 94r–162v, *Filkəsyos*, fols. 163r–223r.

(1) The *Filkəsyos* is preserved in the following additional manuscripts (some of them not mentioned by Witakowski 2006):

Berlin, DillmBerl no. 46 (Ms. or. qu. 344, 17th/18th cent.), fols. 75–139; 48 (Peterm. II Nachtr. 44, 17th cent.); BN Éth. 157 (17th cent.), fol. 4 (only the beginning); d'Abbadie 23 (CRAbb no. 123, 18th/19th cent.), fols. 147rff.; d'Abbadie 37 (CRAbb no. 121, 18th/19th cent.), fols. 18rff.; d'Abbadie 172 (CRAbb no. 122, 18th/19th cent.), fols. 102rff.; BritLib Orient. 761 (18th cent.); EMML 418 (18th/19th cent.), also with a fragment of a Gəᶜəz commentary on the work on fol. 1r; 1387 (18th cent.), fols. 91r–201v; 1836 (17th cent.), fols. 112r–203v; 2127 (19th/20th cent.), fols. 10r–162v; 2837 (17th/18th cent.), fols. 4r–81v; Uppsala, LöfUpp no. 33 (O Etiop. 7, 17th/18th cent.); Hamburg, SixDeu no. 138 (Cod. orient. 412, 18th/19th cent.), fol. 1r–v (fragment); Stuttgart, SixDeu no. 233 (Cod. orient. quart. 42, 18th cent.), fols. 3ra–82va; VatLib Etiop. 79 (20th cent.), fols. 234rff., 237vff. (incomplete, with Amh. translation); Etiop. 294 (18th/19th cent.); Cerulli Etiop. 135 (19th cent.), also with a history of Philoxenus in Amharic on fols. 97vff.; Cerulli Etiop. 220 (18th cent.), fols. 7rff.; Cerulli Etiop. 237 (17th cent.), fols. 55rff.; cp. also EMML 2183 (18th cent.), fols. 211r–214v (introduction to the work in Amh.).

The Ethiopian Orthodox Täwaḥədo Church (EOTC) edition: መጻሕፍተ፡ መነኰሳት፡ ሁለተኛ፡ መጽሐፍ። ፊልክስዩስ፡ ገብረ፡ ክርስቶስ (*Mäṣaḥəftä mänäkʷäsat. Hulättäññä mäṣḥaf. Filkəsyus Gäbrä Krəstos*, 'The Books of the Monks. Second Book. Filkəsyus the Servant of Christ'), Addis Abäba 1982 A.M. [1989/90 A.D.].

(2) The *Mar Yəsḥaq* is preserved in the following additional mss.:

Berlin, DillmBerl nos. 46 (Ms. or. qu. 344, 17th/18th cent.), fols. 3–74; 47 (Peterm. II Nachtr. 47, 16th/17th cent.); BN Éth. 114 (19th cent.); Éth. 157 (17th cent.); Éth. 324 (Griaule 20, 19th cent.); d'Abbadie 33 (CRAbb no. 120, 18th/19th cent.); d'Abbadie 85 (CRAbb no. 162), fols. 1rff.; d'Abbadie 172 (CRAbb no. 122), fols. 4rff.; d'Abbadie 178 (CRAbb no. 119), fols. 1rff.; BritLib Orient. 754 (1638/47 A.D.), no. II; Orient. 755, 756, 757, fols. 4rff., 758 (all of the 18th cent.); EMML 1836 (17th cent.), fols. 1r–112v; 2183 (16th cent.), fols. 126r–210v; 2847 (17th cent.), fols. 5r–107v; 3441 (17th cent.); 4465 (1847/55), fols. 137r–142v (excerpts); 4771 (early 20th cent.); 4991 (18th cent.); VatLib Cerulli Etiop. 135 (19th cent.), also with a history of Philoxenus in Amh. on fol. 96r; Cerulli Etiop. 162 (19th cent.), fols. 135rff. An Amh. commentary is preserved in ms. Frankfurt, SixDeu 91 (Ms. or. 7, 19th cent.), fols. 3ra–242va; cp. also VatLib Cerulli Etiop. 204 (20th cent.), fols. 11rff. (an Amh. translation).

Monasticism s. vol. 5

Mondon-Vidailhet, Casimir

M. (François Marie Casimir M.; b. 1 February 1847, Saint-Gaudens, Gascogne, d. 30 November 1910, Paris) was a French journalist and scholar actively engaged in Ethio-European affairs who contributed with pioneer works to the knowledge of Ethiopia and its languages.

After receiving primary education in his father's school, M., at the age of 17, went on a long initiatory journey to the Orient. On his return ca. 1867, he started a career as a parliamentary chronicler in Paris. He was also engaged, within the colonial lobby, in the French attempts at setting establishments on the Red Sea. His interest for the region prompted his Ethiopianist career. M. soon managed to learn Amharic by his own

Casimir Mondon-Vidailhet; photo from Rouaud 1997:4

means. In 1891, he published a *Manuel pratique de langue abyssine*, a work that, despite its imperfections, remained for a long time the only handbook of Amharic in the French language. The same year, he was selected representative "semi-officiel" before *aṣe* ↗Mənilək II to support the French policies in the region. In January 1892 he left for Ethiopia, officially as special correspondent of *Le Temps*. He returned to France, against his will, in December 1897, to yield his place to the official representative Léonce Lagarde.

During his stay in Ethiopia, M. advised Mənilək on various matters and wrote for him projects of reform. Other activities he was intensely engaged in were the organization of the ↗Postal service, the setting up of the first printing press in Šäwa and the gathering of valuable Ethiopic manuscripts (113, of them 27 Gəᶜəz and 86 Amharic, today at the French National Library; s. ChMonV). M. was also a full supporter of Ethiopian independence; through his articles he influenced the French in its favour, and advocated weapon delivery to Ethiopia. Crediting him with the introdution of ↗eucalyptus in Ethiopia is, however, probably wrong, as in his own articles in *Le Temps* he described the existence of such trees in the Harärge province before his arrival in the country.

Back in Paris, on 16 June 1898, M. inaugurated a new course of Amharic at the École des Langues Orientales (later ↗Institut National des Langues et Civilisations Orientales, INALCO). He compiled for his pupils a *Grammaire de langue abyssine* (1898). With the notes he had collected in Ethiopia he also issued several works on various Semitic languages and cultures in Ethiopia, among them pioneer studies on ↗Harari and ↗Gurage, namely ↗Čaha, ↗Səlṭi, ↗Wäläne, ↗Soddo, and ↗Mäsqan (1902, 1913; s. Hetzron 1977:25). He published the chronicle of *aṣe* ↗Tewodros II by *däbtära* ↗Zännäb (MonVidTheo). M.'s contribution to the *Encyclopédie de la musique* in 1922 (MonVidMus; cf. Falceto 2003) remained for a long time the single reference available on Ethiopian music. M. also wrote short *feuilletons* for the French newspapers, some texts in his mother tongue Gascon, and overviews on a variety of languages. At his death, Marcel ↗Cohen took over his Amharic chair at the INALCO.

Alain Rouaud

Monfreid, Henry de

M. (b. 14 November 1879, Franqui, Aude, d. 13 December 1974, Ingrandes, Indre) was a French traveller and author. Born to George-Daniel de Monfreid, an Impressionist painter, he tried several professions. In 1911, he left France for ↗Djibouti, where he became agent for the firm Guignony trading in coffee and leather. In 1913, he married Armgart Freudenfeld, daughter of Alsace-Lorraine Statthalter. Despising the colonial lifestyle, he converted to Islam (adopting the name ᶜAbdalḫayr) and went to live among the indigenous population. He built his own boats and became active in illegal trading activities (hashish and arms dealing), for which he was twice jailed

by the French (1914–15, Djibouti) and English (1918, Berbera) authorities. Yet, he continued with these activities until in 1923 he established himself at ↗Dərre Dawa, where he invested his gains in hashish trade in a flour mill and an electric power plant. During the hot season he left Dərre Dawa for Harräwa, 10 km south from Harär on the road to Ğiğğiga, where he had a plantation (coffee, *čat*, cereals, mango trees). His house was confiscated in 1941 (picture in Davie Vovan et al. 2005:56)

In 1930 he met the writer and journalist Joseph Kessel, who was investigating the persistence of slave trade in Djibouti in spite of colonial administration. Kessel encouraged M. to publish his numerous writings (private diary, correspondance etc.). In 1932 *Les secrets de la mer Rouge* appeared, the first of his 75 books. In 1933, for the publication of *Vers les terres hostiles de l'Ethiopie* he was expelled from Ethiopia by ↗Ḫaylä Śəllase I. In 1935, he sided with the Italians, met ↗Mussolini and a year later repossessed his properties that had been confiscated in Ethiopia. Between 1942 and 1943 the British Army sent M. to a prison camp in Kenya. He could only return to France in 1947. He retired in Ingrandes, where a museum was later dedicated to him, and published his last book in 1973. He had four unsuccessful attempts at becoming a member of the Académie française.

A number of H.'s books obtained a great success and inspired films. They usually contain a subtle mixture of gossip, historical remarks, acute descriptions and observations of people and countries. They also reveal his misanthropy and his unscrupulous racketeering. M. was filled with hatred for the French colonial administration, Great Britain, Ḫaylä Śəllase and the bourgeoise morale. He contributed with his autobiographical novels to the introduction of Ethiopia and the Horn of Africa to the French and French-speaking general public.

Alain Gascon

Monkey(s)

Zoological overview

M. are members of the mammalian order of primates, which also includes galagos, lorises, lemurs, apes and humans. Due to the broken relief and varying precipitation regimes, the Horn of Africa is particularly habitat-rich and offers some of the most extreme primate habitats (e.g. temperate cool, treeless alpine meadows and hot, dry semi-desert).

Currently 13 primate species occur, among them two galagos and ten monkey species from the subfamily Cercopithecinae (cheek-pouched M.) and one from the subfamily Colobinae (colobine M.) (Yalden et al. 1977; Grubb et al. 2003). The species' ranges are generally determined by certain habitat types. The two galago species are the Ethiopian lesser galago (*Galago senegalensis dunni*) from southern Ethiopia, south of Wabi Šäbälle and in forests along the rift lakes, and the Somali lesser galago (*G. gallarum*) from Somalia and Ogaden, both associated with acacia trees. Both are small nocturnal, arboreal species (up to 250 g) feeding mainly on insects and gum. They live as solitary foragers, in contrast to the other primates of the region, which are diurnal and live in groups of up to several hundred individuals.

The patas M. (*Erythrocebus patas*), a terrestrial species of the open savannah is found within the region only along the western border of Ethiopia, as far south as the Omo River National Park (Yalden et al. 1996; ↗National Parks). Patas live in small one-male groups (5 to 30 individuals). This species shows a pronounced sexual dimorphism with males (up to 13 kg) almost twice as heavy as females.

The two guenons found in the forests and woodlands of south-western Ethiopia are more arboreal: De Brazza's M. (*Cercopithecus neglec-*

Male hamadryas baboon in the lowlands near Dogᶜali, Eritrea; photo 2005, courtesy of the author

tus) and Boutourlini's blue M. (*C. mitis boutourlinii*). A second subspecies of *C. mitis*, Syke's M. (*C. m. albogularis*) is found in southern Somalia, mainly along the larger rivers. These species also form one-male groups, and they too are sexually dimorphic (female 4.5 kg, male 8 kg). The main food for *C. neglectus* is fruits and seeds, for *C. mitis* it is fruits, leaves and animal prey. The *C. neglectus* population of Ethiopia represents a small isolated relict population. In contrast, *C. mitis* is widely distributed in central and eastern Africa. The most common primate within the region is the grivet M. (*Chlorocebus aethiops*). It is semi-terrestrial, omnivorous and uses a broad range of habitats, from forest to open savannah in low- and highlands (Yalden et al. 1977; Zinner et al. 2002). It is found in Eritrea, northern and central Ethiopia south to the Omo River and in Djibouti. It lives in multi-male multi-female groups (up to 50 individuals) and it is considered a crop raider and thus, it is chased and extirpated from many agricultural areas. *C. aethiops* is slightly lighter than the guenon species (female 3.5 kg, male 4.5 kg). Closely related to the grivets is the vervet M. *Chlorocebus pygerythrus*, which occupies the southern parts of the Rift, the eastern Ethiopian lowlands and southern Somalia; and the Bale Mountains grivet (*Chlorocebus djamdjamensis*) found in a small area in the north-western foothills of the Bale Mountains (Dandelot – Prevost 1972).

The largest primates in the region are the *Papio* baboons. Three species occur: northern yellow baboons (*Papio cynocephalus ibeanus*), olive baboons (*Papio anubis*) and hamadryas baboons (*Papio hamadryas*). Yellow baboons are found in south-eastern Ethiopia and Somalia along the Wabi Šäbälle and River Juba. Like the other baboons they are terrestrial, omnivorous primates, living in multi-male, multi-female groups of up to 100 individuals (female 15 kg, male 25 kg). Within their arid range, they are mainly confined to habitats along rivers and wadis. Valid and updated information about their status, in particular from Somalia, are missing. Whether hybridization occurs in the region with either hamadryas or olive baboons is not known.

Olive baboons are the heaviest of the baboons (female 20 kg, male 30 kg,) and they occupy the more humid western parts of Eritrea and Ethiopia from Tesseney in the north, to the Awaš Falls and south into Kenya. Their social organization is similar to that of yellow baboons. They are still abundant and in many areas they are chased and killed because they can damage crops. Hybridization with hamadryas baboons is reported from the Awaš National Park (Nagel 1973), the upper Wabi Šäbälle (Mori – Belay 1990) and the Baarentuu area (Zinner et al. 2001). Hamadryas baboons occupy the most arid habitats in eastern Eritrea and Ethiopia, in Djibouti and parts of Somalia. Their social organization differs from that of other baboon species. They live in a multi-level system with one-male groups as the smallest entity (Kummer 1968). A similar social organization is found in geladas (*Theropithecus gelada*) which are endemic to the highlands of Ethiopia. They are specialized grass feeders, living on alpine meadows.

The only colobine M. from the region is the guereza (*Colobus guereza*). Two subspecies are found in Ethiopia (*C. g. guereza*, West of Rift, Awaš valley, Omo river; *C. g. gallarum* highland forests East of Rift). They live in small one-male groups and their main food is leaves and fruits. The region's extant primate community represents only a small portion of the regional primate diversity during evolutionary times (↗Homo; ↗Palaeontology). The region is exceptionally rich in primate fossils including apes and humans. Several of the regional primate species are endangered due to habitat destruction, especially the two regional endemics, gelada and Bale Mountain grivets.

Dietmar Zinner

Cultural history

M. play a prominent role in many Ethiopian cultures. Their similarity to mankind is reflected in legends and myths as well as in children's ↗games. In some cultures the M. functions as an emblematic symbol for certain ethnic units.

From the perspective of traditional peasant culture, M. were serious food competitors. Especially at the beginning of the rainy season, M. came near human homesteads to invade the fields. For the defence of the crops the peasants prepared traps or posted guards during nighttime (cp. PankSoc 145f.). Today the number of M. has significantly decreased mainly due to the shrinking of their natural habitats. However, in remaining forests, river valleys and mountainous areas M. still can be numerous. The fact that wildlife habitats are often no longer able to feed bigger groups of M. makes them enter into the periphery of human settlements at night-time in order to search for food.

M. are killed to protect the crops or, traditionally, as a heroic deed in the context of the ↗meritorious complex (or killing complex). Sometimes the child of a killed M. mother is caught and raised in human households for the amusement of the children.

The coat or parts of the coat and the tail of M. were used as elements of traditional costumes. The long hair of baboons was used for hats and capes (s. e.g., VSAe I, 402; III, 360, 369). The M. coat is worn, for example, by the jesters of the ↗Fuga group who perform M.-like behaviour at public feasts (author's own observation in Hadiyya).

M. are rarely hunted for the meat because in many Ethiopian societies it is considered to be ritually impure. According to Ernesta Cerulli (CerPeople 130), in ↗Sidaama the evil eye (↗*Buda*) is ascribed to baboons, to wild pigs and wild goats, as well as to so-called ↗marginalized people (s. EAE vol. 5). Only the members of the despised hunter groups may hunt and eat M. meat, but in some cases even they refuse to consume it. An interesting but singular case was a possession cult among the Mağaŋgir: after the Liberation of 1941, Congolese soldiers (being part of the British contingent), whose diet included M. meat, inspired a cult in which possessed mediums ate the meat of M. and other "impure" animals. When not in an altered state of consciousness, however, the medium still avoided such meat (Stauder in PICES 3).

Some ethnic groups and sub-groups in their tradition claim a special mythical relation with M.; here only some examples from southern Ethiopia can be mentioned. The members of the pan-ethnic clan Aysti among the Basketto, Dokko and Balta, for instance, were considered "relatives" of the M. They believed that if they ate a M. they would die from a terrible skin disease (VSAe I, 214f.). Some groups directly trace themselves back to M. The *godini* priest's clan of the Ubamär, the Zoba, claim decent from M. The same is true for the Binnas clan of the Banna (VSAe I, 176, 366). A sub-clan of the Me'en people has the Colobus M. as an emblematic animal and never kills it. Likewise the Ora clan of the Banna has strong ties with the M. Members of the Ora clan never kill a M. If they find a dead M., they cover the corpse and mourn. It is believed that the M. also leave the forest to mourn for a dead Ora. A woman of the Ora clan who cannot give birth, puts the faeces of M. in her house to become fertile. It is reported that infertile Rengako Banna women hang a bundle containing M. faeces, little stones and bark around their neck to gain a similar positive effect. To prevent M. from invading the fields, the Ora put coffee beans near the field and tell the M. that they are invited for coffee. Unlike the neighbouring clans, the Ora are allowed to choose their marriage partners from any other group, as it is said "like M. eat ripe and none ripe fruits" (VSAe I, 49, 54, 322, 367). A legend of the Goyraš clan of Šangama relates that the clan founder came down from a tree together with a Colobus M. (Šangama: *goyra*). It is said that M. keep the fast and practice the ceremonies of the *kaši*-sacrifice as do their human relatives according to their autochtonous socio-religious system (VSAe I, 128f.).

Formerly, the ↗Yäm people were often associated with M. by outsiders. The reason for this may have been their old denomination "Ǧanǧäro" (probably derived from *Yämgar*, 'country of the Yäm') which was equated with the Amharic word ጨጬሮ (*ǧənǧäro*, also *zənǧäro* 'monkey, baboon') and today is rejected as pejorative. However, a certain significance of M. for the old Yäm culture is presumed by Straube (VSAe III, 270) who draws this conclusion from reports of Paez (BecRASO II, 273) and Bruce (BruNile vol. 2:273) that M. might have been once symbolically related to Yäm kingship rituals.

M., as close relatives of mankind, are a popular motif in myths and fables (s., e.g., Kellner 2001; Leslau 1983:111, 117; Sahlu Kidane 2002:81, 122f., 127; VSAe I, 184, 381f.; II, 635). Many of these stories have a humorous character. In some documented stories the similarity of man and M. is well reflected, e.g., being explained by ties of ↗kinship. The origin of M. in some cases is explained as being human. Among the Bodi, an etiological legend tells that M. formerly were people who had been cursed. The Bakka view M. as the descendents of a man who became mad and escaped into the forest. A son who did not respect the *kaši* haruspecium of his father was cursed to live in the forest and became a M. In some groups the story is told that the baboons stem from a man who burned his back. In other cases a tail grew from the back of a man (VSAe I, 49, 164, 214f., 336, 414).

Dirk Bustorf

Monneret de Villard, Ugo

M. (b. 16 January 1881, Milan, d. 4 November 1954, Rome) was an Italian archaeologist, art historian and epigrapher with a keen interest in ancient Christian and Islamic ↗architecture, as well as in the cultural relationships between East and West from late Antiquity to the Middle Ages and beyond. He began his career as an engineer, graduating in 1904 at the Politecnico in Milan, where he habilitated in 1908, and thereafter taught medieval architecture until 1924.

Before World War I, he had already initiated the characteristic "comparative" approach to western medieval art – initially in the wake of Joseph ↗Strzygowski – that was to inspire his scholarship for the years to come. In order to assess the coeval developments in the Near and Middle East, he then started extensive travelling: from the Balkans and Constantinople to Syria, Mesopotamia and ↗Egypt. Here, in 1921–28, he carried out research and excavations on behalf of the Italian Ministry of Foreign affairs, his main interest being early Coptic art and its Greek origins vs. local traditions and external (Syrian) influences (e.g., Monneret de Villard 1923, 1925–26, 1928 and 1930).

On the same official basis, from 1929 to 1934, he directed six excavation campaigns for the systematic exploration of Christian ↗Nubia (between the first and the second cataract) and its medieval monuments – which resulted in a major series of publications, and in two still fundamental historical monographs (Monneret de Villard 1935–57, 1938a and 1941).

In January–March 1937, entrusted by the Italian government with organizing the transfer to Italy of the fallen broken Aksumite obelisk (↗stelae) that was re-erected in Rome and remained there until 2005 (when it was returned, once again cut into three pieces), he was able to conduct an archaeological survey of ↗Aksum, and to gather what information he could from the military about the removal of monuments and pottery during the construction work undertaken by the new Italian colonial administration. This opportunity, in turn, afforded him the idea of producing a collection of sources (up to contemporary times) on the historical topography of the site that is still a standard work in the field (Monneret de Villard 1938b, but cp. Littmann 1939). He also briefly excavated the rock-hewn church of ↗Yäkka Mika'el near Addis Abäba (Monneret de Villard 1941).

Thereafter, M. concentrated on European library and archive material, implementing the publication of the enormous amount of information he had been gathering during his travels and expeditions. Along with those issued posthumously, he penned more than 200 articles and books in a wide variety of topics, showing

a constant attention to the European Middle Ages, and extending to the artistic traditions of Babylon and ↗Iran (with special emphasis on the Sasanian period and Manichaeism), the Hellenistic and Roman heritage in Buddhist central Asia and Kuṣāṇa ↗India (Id. 1948b), the formation of Islamic art until the fall of the ʿUmayyad dynasty (Id. 1966), the knowledge of Islam in the West during the 12th–13th cent. (Id. 1944), and the origins and fortunes of the eastern legends on the Three Kings (↗Magi, s. Id. 1952).

Ugo Monneret de Villard in 1898; photo from Augenti 2001:8, fig 1.

M.'s Ethiopian perspective (summarized, e.g. in Id. 1950c) was quite original for his time, albeit partially influenced by the peculiar insights of Joseph Marquart, and is still to be fathomed and furthered. Local tradition was always considered by him both within the framework of the Christian and Islamic Orient (Id. 1948b) and against the background of the civilizations of Asia Anterior and India and their impact on the historical and artistic development of East Africa as a cultural unit (↗Horn of Africa; s. Id. 1938c, 1940 and 1943b) – as many aspects of which he had an accomplished knowledge, profitably shared with such outstanding Orientalists and friends as ↗Conti Rossini, ↗Cerulli, ↗Tisserant and esp. Giorgio Levi della Vida (1886–1967), to mention only a few.

M.'s interests in Ethiopian matters included, thus, ↗architecture, ↗painting (miniatures), ↗liturgy and religious history (Id. 1935 and 1937; 1939a, 1945 and 1947b; 1942c and 1950b; 1942a, 1942b, 1943a, resp.), in all of which he underscored the survival, up to medieval and early modern times, of ancient features revealing a most peripheral and conservative historical model (for ↗inscriptions s. Id. 1939b and 1940; cp. also ↗Syrian influences). Of special relevance for Ethiopian studies, too, is M.'s edition and commentary of the 14th-cent. itinerary to the Holy Land by the Italian pilgrim Jacopo da Verona (Id. 1950a).

A much respected but isolated scholar throughout his life, also as a bitter opponent of Fascism, M. had no permanent academic position. He was appointed lecturer in Christian Archaeology at the University of Rome for the year 1943–44 alone. In 1950, however, he received the national prize of the Accademia Nazionale dei Lincei, of which he was then also awarded the most prestigious membership (as a "socio nazionale"). A street is named after him in Milan.

His valuable personal library and archive were bequeathed to the Biblioteca di Archeologia e di Storia dell'Arte at Palazzo Venezia (Rome). The "Fondo Monneret de Villard" comprises a large amount of important and rare books and off-prints on Oriental art and archaeology, along with sketches, drawings and photographs, mostly by M. himself, as well as notes and preparatory material for his large corpus of published and unpublished works.

Gianfranco Fiaccadori

Monnier, Paul Robert

M. (b. 12 June 1888, St. Quentin, France, d. 11 November 1939, Ǧantola, Ethiopia) was an officer engaged in the liberation of Ethiopia. The son of a pastor of the Reformed Church, after studies at the university and military service at the *Chasseurs Alpins*, he worked as a journalist and in the import-export business to Morocco. In 1914, when World War I was declared, he was re-enlisted in the *Chasseurs Alpins*, remaining in the army until 1924. Back in civil life, he worked as a business man and, at the same time, for the Secret Service.

In 1937, M. accepted to become a military counsellor of the Basque president Aguirre and as such participated in the Spanish Civil War on the Republican side. In Spain, he met the British author George Lowther Steer, whom he met again in France in 1939, at the time leading a campaign in support of French–British aid to *aṣe* ↗Ḫaylä Śəllase I. Steer introduced M. to ↗Loränso Taʾəzaz, engaged in the defense of the Ethiopian cause in Europe. Loränso Taʾəzaz suggested M. to accompany him to Ethiopia. With the agreement of the French authorities, who were interested in evaluating the situation of the Ethiopian resistance and finding out which kind of aid could be accorded, M. accepted to go.

At the beginning of August 1939, M., Loränso Taʾəzaz and others met in Sudan and crossed the border into Ethiopia. They were welcomed by Ethiopian resistants and facing the heavy rains the group split in two. Loränso Taʾəzaz headed to Goǧǧam. In October, M. and his comrades managed to cross the Atbara, the north of the Bägemdər and on 19 October reached Ǧantola, near the Täkkäze and north-east of Gondär. Despite being ill, M. rushed to organize a general upraisal, but died on 11 November. Buried in the compound of the church of Ǧantola, his body was transferred in 1963 to the ossuary of Massawa, erected for the soldiers of the ↗Brigade d'Orient, who died for the liberation of Ethiopia. Nonetheless, the plan "Monnier-Lorenzo" was later on applied successfully by Colonel Sandford and Orde ↗Wingate during the liberation of Ethiopia.

Alain Rouaud

Monophysitism

Etymologically, M. refers to a christological doctrine confessing one single nature (μόνος, *mónos*, 'single', φύσις, *phýsis*, 'nature') of Christ after the union of divinity and humanity. Historically the opponents of the two-natures doctrine of the council of ↗Chalcedon in 451 ("one person or hypostasis in two natures") were called monophysites; these Christians, namely the Copts, Syrian Orthodox (↗"Jacobites", West-Syrians), Armenians, Ethiopians, Syro-Orthodox Malankars, i.e. members of the so-called Old

Oriental or Oriental Orthodox Churches took the *mía phýsis* formula (μία φύσις τοῦ θεοῦ λόγου σεσαρκωμένη, 'one incarnated nature of the God Logos') as their central Christological formula. The term probably came into use only at the end of the 6th cent. (testimonies: 601/02 Lat. *monophysitae* in Gregory the Great, *Epistolae* XI 52 and XII 16, s. DH 478; in the 7th cent. Gr. μονοφυσίτης (*monophysítēs*) in Anastasius of Sinai, *Viae dux*, CCG 8, Index); before, they were called Severians (after ↗Severos of Antioch), Theodosians (after Theodosios of Alexandria), *Diakrinómenoi* ('Hesitants'), or in a pejorative sense Eutychians (after Eutyches). In a heresiological context M. means mostly a Eutychian opinion ("commixtion of divinity and humanity, Christ is not consubstantial with us") or, more generally, a position where, in any union of divine and human, the human part is dominated or engulfed by the divine one.

1. A problematic concept

Representatives of the Oriental Orthodox Churches today strongly reject to their being called Monophysites; in a heresiological respect, the term is in fact an incorrect description of their Christological position because the term insinuates that they confess a mono-nature in Christ. Confessing, however, that "our Lord's divinity and humanity are united in one nature", by "nature" these Churches understand not a simple but a composite nature, "in which divinity and humanity are united without division and without confusion" (Vienna Christological declaration of 29 August 1976, cf. Grillmeier 1987:335, n. 48). Therefore, it has been suggested as more appropriate to use the names Miaphysites or anti-Chalcedonians for the adherents of these Churches, since the *mía phýsis* formula and the rejection of the two natures doctrine of the council of Chalcedon are constituent for them.

M. wishes to emphasize the unity in Christ, starting from Jn 1:14 ("the Word became flesh"). Crucial is the concept of "nature" in the confession of one nature in Christ. ↗Cyril and his followers hold the concept of a nature that is existent only in a *hypóstasis* ("there is no *phýsis* without *hypóstasis*"). *Phýsis* and *hypóstasis* are synonymous for them in ↗Christology, although in a trinitarian context they distinguish these concepts following the Cappadocian Fathers (the divinity is one *phýsis* and three *hypostáseis*). On the other hand, the distinction of the concepts of *phýsis* and *hypóstasis* is presupposed in the definition of Chalcedon. For Cyril the distinction of the two natures after the union is possible only in thought (ἐν θεωρίᾳ μόνῃ); his follower Severos of Antioch opposed any possibility of duality after the union. Since the human nature in Christ has its existence in the divine *hypóstasis* of the Logos, most of the anti-Chalcedonians deny that the humanity of Christ can be called a *phýsis*. From a Chalcedonian point of view, however, with the *mía phýsis* formula, due to its Apollinarian background (s. paragraph 2 below), there remains some danger of undervaluing the humanity of Christ and of overstating the dominance of the God Logos.

2. Main representatives in the 5th and 6th cent.

A distinction has been made between a) a heretical "real M." and b) a "verbal M." which can be interpreted in an orthodox sense (i.e. Christ is confessed as real human being; cp. Lebon 1909).

(a) Here Eutyches and Eutychian groups rank (i.e. extremists attacked by Timothy Aelurus, s. Grillmeier 1996). The origin of real M. is seen with Apollinarius of Laodicea. He is also the author of the *mía phýsis* formula, which circulated through Apollinarian frauds and was taken up by Cyril of Alexandria, erroneously thinking that the formula was coined by ↗Athanasius (s. ACO I 1, 5:65, 25–30; PG 76, 1212AB; resp. PG 76, 349B; ACO I 1, 7:48, 28–33). The unity of divinity and humanity in Christ is understood by Apollinarius as a vital union determined by the Logos: just like the human being is a unity of body and soul, so Christ is seen as a unity of flesh (*sarx*) and Logos, whereby the Logos is the replacement of the human soul (eventually also the *noûs*). From the doctrine of Eutyches the anti-Chalcedonian Churches, as well as Dioscorus after 449, kept their distance.

(b) There are many theological schools of "verbal M.", all of them accepting ↗Cyril of Alexandria as the unrestricted authority. Severos purged the Cyrillian Christology aiming at strict *mía phýsis* doctrine (Grillmeier 1995). A special Christological idea was developed by Philoxenus with his concept of the incarnation as "God's becoming without change" (A. de Halleux). Julian of Halicarnass and his doctrine of aphtharsia caused a schism of the anti-Chalcedonians. The formula "one composite nature" (μία φύσις σύνθετος) of Christ and the synonymy of "nature" and *hypóstasis* was substantiated, based on Aris-

totelism, by John Philoponus in the 6th cent.; as a result, his nominalistic terminology led to tritheism.

3. The development of separate ecclesiastical hierarchies

Soon after the council of Chalcedon, ↗Jerusalem and Alexandria were the centres of resistance against its decisions. After the deposition of the Alexandrian patriarch Dioscorus in Chalcedon, the Chalcedonian Proterius held the office until his assassination in 457. Though he was at first Patriarch of Alexandria only for a short time (457–60), Timothy Aelurus also had great influence (not only in Egypt) also during his exile, when the Chalcedonian Timothy Salophakiolus (460–75, 477–82) was patriarch in Alexandria; in 475, Timothy Aelurus could return as patriarch until his death in 477. Again the Chalcedonian Timothy Salophakiolus became patriarch, but from the end of 482 till 538, all the Alexandrian patriarchs were opponents of Chalcedon. In the disorders between Theodosios and the Julianist Gaianus (in 535), emperor Justinian I took the initiative and appointed the Chalcedonian Paul of Tabennesi (ordination in 538) as patriarch, and other Chalcedonian (so-called Melkite) patriarchs succeeded. But Theodosios was thought to be the leader of the anti-Chalcedonians even during his exile in Constantinople until his death in 566; therefore, from 538 onwards, there were two Alexandrian hierarchies. The supporters of the Chalcedonian patriarchs were limited in number in Alexandria, and could be found especially in the upper classes. The anti-Chalcedonians, on the other hand, were split into many sub-groups until the ↗Coptic Church grew strong under the leadership of ↗Damian and ↗Benjamin.

In Antioch, however, Chalcedonian patriarchs were in office during the first 20 years after Chalcedon, without struggles. The situation changed, when in 470/71 Peter the Fuller with a strong miaphysite tendency (he introduced the so-called theopaschite addition "which was crucified for us" into the Trishagion) prevailed for the first time as an anti-Chalcedonian patriarch. During 471–85, Chalcedonian and anti-Chalcedonian patriarchs alternated, under grave riots. At the beginning of his last term (485–88), Peter the Fuller consecrated the Persian theologian Philoxenus, Bishop of Mabbug in 485 (cp. ↗*Filkəsyos*). Philoxenus's pertinacious agitation led finally to the deposition of Flavian of Antioch in 512 and to the installation of Severos. With the beginning of the Chalcedonian restoration under emperor Justin (after 518, deposition of Severos) a persecution of the anti-Chalcedonians started; the Severian hierarchy was nearly destroyed and existed only underground. In 543 the Arab vassal Ḥāriṯ (↗Arethas) went to empress Theodora in order to ask that the Alexandrian exile Theodosios should ordain two bishops for the anti-Chalcedonians, ↗Jacob Baradaeus and Theodore of Arabia. The restless activity of Jacob Baradaeus (from Alexandria up through Mesopotamia and Constantinople) led to the re-construction of an anti-Chalcedonian hierarchy, parallel to the dioceses held by Chalcedonians (hence "↗Jacobites") (around 557 ordination of Sergius as Patriarch of Antioch). The ordination of Aḥudemmeh by Jacob was the beginning of an anti-Chalcedonian hierarchy in Mesopotamia (later maphrianate).

In Armenia, the influence of Syriac anti-Chalcedonians at the Synod of Dvin (506) caused a negative attitude regarding Chalcedon, which was aggravated at the 2nd Synod of Dvin (555) under the influence of Syriac Julianists. Byzantine attempts for union (in 590/91, 633, 653 and 690) failed. After 719 the anti-Chalcedonian movement was consolidated in Armenia. For the development in Armenia, as also in Alexandria and Syria, the political and national opposition to Byzantium was an important factor.

↗Nubia joined the anti-Chalcedonian movement, on account of a missionary expedition sent by empress Theodora, and remained a Christian state till the Muslim conquest in 1323 and even later.

4. Ethiopia and Monophysitism

With the consecration of bishop Frumentius (*abunä* ↗Sälama Käśate Bərhan) by ↗Athanasius of Alexandria (328/29) the foundation of an orthodox (Nicaean) Christianity was laid. With the translation of the ↗*Qerəllos*, a Cyrillian pre-Chalcedonian and, simultaneously, an anti-Nestorian Christology became influential for theological and religious thinking in Ethiopia. Besides this Alexandrian influence and a strong Jewish or O.T. background, in Ethiopia also Syriac theological ideas had their impact.

In the progress of time, influenced by the ↗Nine Saints and other similar groups of immigrants or refugees from the eastern provinces of the ↗Byzantine Empire, the Ethiopian Church, dependent on Alexandria, joined the anti-Chal-

cedonian position of the Coptic Church (for events around 480 s. Grillmeier 1996:303 n. 33, and esp. Fiaccadori 2006:65 and nn. 104f.). However, in the war with the Ḥimyarites during the early 520s, king ↗Kaleb was obviously ready to co-operate with the Chalcedonian emperors Justin I and Justinian I, in order to protect persecuted Christians (↗Nağrān).

In Ethiopian symbols and ↗anaphoras, the baptism of Jesus has an important role (*Mäṣḥafä ↗bərhan*, s. CRRicBerhan; *Confessio Claudii*, s. LudHist 237–41). This may be due to ↗Syriac influence (Philoxenus of Mabbug; s. Grillmeier 1996:355–62). Yet, in Ethiopian liturgy Jesus's baptism was more deeply underscored than in Syrian anaphoras.

The strong emphasis upon Jesus as the Messiah is linked with the idea of anointment. This topic was already introduced with the *Qerəllos* and Philoxenus of Mabbug, which in the 17th cent. and later caused the debates on the unction of Christ (↗*Qəbat*; s. also ↗*Karra*, ↗*Ṣägga*, ↗*Täwaḥədo*; Grillmeier 1996:341–55).

Controversial formulas (such as the *mía phýsis* formula or the theopaschite addition to the Trisagion) are rare and used without polemic. Historical knowledge of the Christological controversies often remains incomplete (*Mäṣḥafä ↗məṣtir*), Chalcedon is rejected (↗*Mäzgäbä haymanot*).

In the liturgy, one can find throughout a Christology "from above" or with an emphasis on the divinity of Christ. Despite some one-sidedness in Ethiopian anaphoras, it is not necessary to assume therein M. (but, e.g., influences of apocryphal original-state teaching of Jewish origin). There is no absorption of Jesus's humanity into divinity in Ethiopian liturgy, as is witnessed by the references to the mysteries of the life of Jesus or the refusal of the teaching of Julian of Halicarnassus (Grillmeier 1996:381–88).

5. Efforts for union and dialogue

Efforts for union took place again and again, but did not succeed: like emperor Zeno's edict Henotikon in 482, or the negotiations with the Severians in 532 under emperor Justinian I. The council of Constantinople in 553 was not able to win the opponents of Chalcedon, just as two edicts (similar to the Henotikon) by emperor Justin II. The unions under the formula *mia energeia* (Monenergetism, Monotheletism) in Alexandria and Armenia in the 7th cent. did not last long.

Only after 1970 efforts for dialogue finally led to bilateral Christological declarations between Oriental Orthodox Churches and the Roman Catholic Church, and also multilateral declarations on Christology between the Oriental Orthodox and the Eastern Orthodox Churches, the Reformed World Alliance and the Anglican Church.

Montandon, George Alexis

M. (b. 19 April 1879, Cortaillod, Switzerland, d. 1944, 3 or 30 August 1944, Clamart, France) was an anthropologist and explorer. The son of a well-established family from Neuchâtel, he studied medicine at Geneva and Zurich. Later, he travelled to Hamburg and London, where he decided to become explorer.

In 1909, M. went to Ethiopia (Montandon 1913a:7). He arrived in Addis Abäba via Djibouti

by the end of 1909, being received by a sick *aṣe* ↗Mənilək II and *ras* ↗Täsämma Aśmärom. After a two-months stay in the capital he travelled for eleven months through the south-western regions of Ǧimma, Gimira and Illubabor. He left Ethiopia in July 1911 through Dərre Dawa and Djibouti, settling in Renens, near Lausanne. His main work, describing his Ethiopian explorations, appeared in 1913 (1913a). Anchored in the history and anthropology of Gimira, it was one of the most extensive and precise reports of the area at the time. M. also did some cartographical research, and many of his sketches and photographs as well as information he transmitted on the travel situation and on everyday life in Addis Abäba are of historical interest. His experience on the ground as well as the documents he had gathered in Ethiopia opened the gates to several geographical societies in England, France, Italy and Switzerland for him.

Thereafter, M. lived in Russia, Switzerland and Paris, where he was to work at the Musée d'Histoire Naturelle and the Musée Broca. He also turned into a vociferous advocate of racial theories (ethno-racism, eugenism) and a fierce antisemite, and befriended Louis-Ferdinand Céline. Having collaborated with the Nazis, he was reportedly killed by the Résistence.

Alfons Ritler

Monumental painting ↗Painting

Monumentum Adulitanum

The M.A., so named by its *editor princeps* Leone Allacci (Allatius 1631), is a twofold Greek ↗inscription engraved on a basalt tablet or stela (*eikṓn*) and a nearby white marble ↗throne (*díphros*) both once visible in ↗Adulis "at the town's entrance, to the western side, looking upon the way to ↗Aksum", as our only source, ↗Cosmas Indicopleustes, puts it (ed. Wolska-Conus 1968:365 [II, 54]). The M.A. survives in the copy made by him and his fellow trader Menas "at the beginning of the reign of the Roman emperor Justin [I, 518–27]", i.e. sometime around 518 or 523 (for the chronology s. Fiaccadori 2006:61ff.). They actually mistook two different texts for a single one – then inserted as such, with some further information, into Cosmas's *Topographia Christiana*, written ca. 547–49 (ed. Wolska-Conus 1968:371–79 [II, 58–63]). Here, a late antique illumination transmitted in medieval garb (the earliest ms. of the work is a 9th-cent. one; for the text tradition s. now Schneider 2006) features a simplified map of Aksumite ↗Ethiopia on which the inscribed stela and throne are also portrayed (Wolska-Conus 1968:367; s. ill.). The M.A. was copied by the two merchants at the request of Adulis's governor Asbâs (whose figure does fit the usual pattern of the "ports of trade"), in turn complying with an order by *nəguś* ↗Kaleb ƎllÄ Aṣbəḥa who was then "setting to wage war against ↗Ḥimyar" (ed. Wolska-Conus 1968:369 [II, 56]), as a reaction to the anti-Christian persecutions started in ↗Arabia (↗Naǧrān) by King Ḏū Nuwās (↗Yūsuf As'ar Yaṯ'ar).

First distinguished by Henry Salt, the two inscriptions forming the M.A. are the so called *Adulitana I*, by the *basiléus mégas* ("great king") of Egypt Ptolemy III Euergetes (246–21 B.C.), and the acephalous *Adulitana II*, by a ruler of Aksum (in no way an Adulite ruler) whose names and title must have stood at the beginning, the text lacking thereby any indication as to his identity. Both documents bear witness to the fortunes of Greek language and culture in Ethiopia, the *Adulitana I* being the oldest known Greek inscription of this country: it records, with some exaggerations, Ptolemy's Asiatic deeds (Dittenberger 1903:86 n. 15; Hauben 1990:30 and nn. 19–20); by hinting at "Trogodyte [i.e. Nubian] and Ethiopian ↗elephants", it confirms the well-known interests of the Lagid dynasty in the Red Sea and, especially, its western shore with the port of Adulis (↗Egypt).

More significant for the Horn of Africa in general and Ethiopia and Eritrea in particular is the *Adulitana II*, on the sculptured throne. Marked by an evident imitation of Ptolemy, and somehow conceived as a rhetorical *hypolepsis* or 're-

sumption' of the previous one (even in its excessive pride), this inscription remarkably complements the more formal ↗Greek literature and ↗historiography of Ethiopia with concrete first hand information about ancient geography, ethnography, climatology, orography, hydrography and demography in those parts of the Horn.

Clearly influenced by both the Roman tradition of the emperor's *res gestae* and the typically Greek concept of civil progress as opposed to the barbarity of people dwelling in unliveable places is the anonymous king, who narrates there in the first person his successful military enterprises, on account of which he had been able to extend his dominion on to both sides of the Red Sea. Most of the "nations" (*éthnē*) he claims to have conquered – and then "pacified", again in the Roman imperial tradition – are now difficult to trace, in spite of his descriptions of the respective lands and positions, or the almost contemporary scholia to the text, with a few more details in terms of 6th-cent. equivalents and/or explanations of the ethnonyms involved: e.g., *Tigrêtes* for "the tribes near Adulis", which might imply, by then, the earliest mention of (greater?) ↗Təgray (s. Fiaccadori 2004:117f.), and not of ↗Təgre speakers (as in Lusini 2006:451f.).

Stela and throne bearing the text(s) of the *Monumentum Adulitanum* within a map of Adulis and the kingdom of Aksum that is oriented to the south (Red Sea stream on the left); 9th-cent. illumination, ms. Vat. Gr. 699, fol. 15v; courtesy of the Biblioteca Apostolica Vaticana, Città del Vaticano

According to this "gazetteer" of the king's conquest, the people first defeated by him were all living around Aksum: among others, the Gázē and the Agáme and Samêne, i.e. the ↗Agᶜazi and the eponymous tribes of ↗ᶜAgamä and ↗Səmen (a scholion reads here: "Gázē are the Aksumites, and until these days they call themselves Agazē [Agazi]"). Next he vanquished the people "to the (north and) west as far as (*méchri*) the lands of ↗Aithiopía and Sasou", i.e. the (north-)western limits of the Ethiopian highland; and then the people "to the (south and) east as far as (*méchri*) the land of Aromatics" (↗Incense), i.e. today's ↗Somalia. Eventually, he crossed the Red Sea and subdued a few parts of Arabia, "from Leukē Kōmē", possibly al-Waǧḥ (not far from Petra), "to (*héōs*) the land of the Sabaeans", a formula (with *héōs* vs. *méchri*) implying that the latter was excluded. After his victories, he "come down" (*katêlthon*) to Adulis to "offer a sacrifice to Zeus and ↗Ares and to Poseidon for the (sake of the) sea-faring folk", and dedicated a throne "as a pledge to Ares", his "august god Ares", i.e. ↗Mäḥrəm of the Ethiopian pantheon (by then, already a dynastic deity, as later on for ↗ᶜEzana). This was "in the 27th year of [the king's] reign".

The ruler of the *Adulitana II* has been variously identified – with ↗Zoskales (or a king before him), ↗GDRT, ↗Sembrouthes or ↗Endybis – and dated from the 2nd to the 4th cent. A.D. (s. Pedroni 1997a:92, 102 and 1997b:20–34, 43; lastly, Munro-Hay 2002:234f., arguing for around the period of ↗ᶜEzana). Yet, as recently established, no Aksumite campaign against Egypt is alluded to therein but by a syntax misunderstanding of a passage in the Greek text (ed. Wolska-Conus 1968:375 [II, 60], to be in fact translated: 'Having subdued Atalmô and Begá, and all the tribes of the Tangaïtai with [i.e. allied to] them, who dwell as far as [*méchri*] the bounds of Egypt, I had them walk on the road [leading] from the ter-

ritories of my kingdom as far as [*méchri*] Egypt'), so that the late-3rd cent. chronology and the relevant "Palmyrene connection" can be definitely ruled out (Fiaccadori 2004:113–16). The *terminus post quem* of the "conquest" of ↗Meroë in ca. 260 or 269 A.D. should also be discarded, due to the erroneous equation of the text's *Aithiopía* to "↗Nubia" (ibid. 117f., 125–28). Other proposals, with reference to the 4th cent., are too vague and uncertain to be taken into serious consideration.

The expansion of Aksum as finally summarized in the *Adulitana II* follows a consistent development pattern that – owing to a stronger impact of Greek or Graeco-Roman elements – led from the "commons" (*plêthos*) to the "state-city" (*pólis*) of Aksum and its rising from among other contemporary small scale or petty kingdoms of the Ethiopian highland, all then subject to the Aksumite sovereignty (ibid. 132–40). Such a unification process under a unique rule was achieved by the anonymous king in about a quarter of a century, through subsequent military operations and annexations of the neighbouring people and countries: from the nearby highland zones to the farther coast regions and, beyond the sea, well into Arabia, up to touching on the boundaries of Saba – a point of special interest to *nəguś* Kaleb, clearly seeking a precedent for vindicating his own expedition.

In accordance to the South Arabian epigraphic evidence, such a geographical and historical picture would suggest dating the *Adulitana II* prior to the tenure of Śaʿir Awtar, the king of Saba and Dū Raydān (ca. 210–30 A.D.) under whom the conflict burst between Sabaeans and Aksumites, formerly allied against Ḥimyar. At the time of his predecessor ʿAlhān Nahfān (ca. 200–10 A.D.), the Ethiopians seem to be "new comers" to South Arabia (Robin in PICES 8, vol. 2, 150). A chronology to the end of the 2nd or the very beginning of the 3rd cent. is therefore most fitting for this portion of the M.A. (s. Desanges 1984:257ff.; Schneider 1987:609; Anfray in EtRicci 23; FHN III, 948, 953). Also, it rather favours the identification of the anonymous king with Sembrouthes, whose Greek inscription of ↗Däqqämḥare, from "the 24th year of [his] reign", shows a few striking similarities with the M.A. as a whole: namely, a general Hellenistic bias, the imitation of Ptolemy (as revealed by the use of the title *basiléus mégas*), the vaunt of the king in comparison with his predecessors, the dating system and the high number of regnal years are many common features. If so, Sembrouthes's inscription could refer to one of the (north-)western campaigns recorded, three years later, in the *Adulitana II*.

Moon

Practices and symbols attached to the M. permeate Ethiopian cultures. At least one pragmatic aspect is shared by all of them: at Ethiopian latitude the bright illumination of the moon facilitates night travel, which is especially desirable in the hotter regions (Levine 1965:65). Three analytical fields are central: (1) the references to the M. and the Sun in the Christian and Jewish thought, literature and art; (2) observation of the lunar cycle for ↗calendar reasons among some Cushitic and Omotic groups; (3) the M. in the cultures of peasants and pastoralists.

The attempts to identify the main Sabaean deities venerated in pre-Christian Ethiopia with the M. (↗Almaqah and ↗HWBS) and the Sun (↗Dāt Ḥimyam) seem dubious and are rejected now by specialists. Although the symbol, which is usually interpreted as "The Crescent and the Sun", appears on some ↗stelae (e.g., in ↗Mäṭära, cp. Kropp in WenDAE 323f.) and other monuments, it is not possible to connect it with any concrete deity, and its meaning remains unclear.

(1) The divinely promised royal legacy of the House of David, and its transfer to the ↗Solomonic dynasty of Ethiopia, is symbolized as being "ordained like the moon forever" (Ps 89, 37; cf. Budge 1932:120). The Sun and M. became symbols for the eternity of god-given kingship (Lepage 1986–87:64; VSAe II, 13; ↗Kingship, divine). Crucifixion scenes in Christian art often included the sun, the stars and the M. on top of the ↗cross (Chojnacki 1977:58; Museum für Völkerkunde Wien 1964, Kat. 38, 108; Lepage 1986–87:66, fig. 4; Lepage 1992:141; Balicka-Witakowska 2004:432). The sun may appear as a darkened eclipse and the M. as a blood-red disc, which underlines the eschatological setting of the crucifixion (Balicka-Witakowska 2004:436f.; for an example s. Jäger 1957, pl. 12). The Book of ↗Enoch is a further important text that contributed to the esoteric status of the M. in Christian and Jewish contexts (Caquot 1992; Leslau 1951:33, 153). In the Jewish context the M. is seen as "the light of darkness" (Leslau 1951:33). According to the Book of Enoch the M. has four names: Aśonyā, Eblā, Benāśe, and Eraᶜe, the last deriving from *yārēᵃḥ* (Hebrew 'moon') used in the O.T. (Leslau 1951:153; Uhlig 1984:659). Chs. 72–82 of the Book of Enoch are an astronomic treatise on the annual movement of the sun, the phases of the M. and the cycles of months. This part of the book of Enoch makes a case in favour of conciliation between the sun year and the M. year, an idea that also found representation in an illustrated manuscript of the early 18th cent. (Caquot 1992:130).

(2) In the south, such practices still determine local calendar systems, as among the ↗Boorana-Oromo (AsmGada) and among the Mursi (Turton – Ruggles 1978). The ritual cycle of the Boorana age- and generation grading system (↗*Gadaa*) is related to the observation of the wax and waning of the M. (Bassi 1988; Anneesa Kassam 1999). ↗ᶜAfar and ↗Somali developed similar capacities for observation, but adopted the Islamic lunar year (Paulitschke 1896:224, 265; VSAe II, 579). Oromo elaborated aspects of the lunar observation into a complex system of classification, with different names for several stages of the M. (*ǧiʾa*, also 'month'). The richest vocabulary is documented for the Boorana. The first four days are called *baatii* ('new moon, crescent', which stands among Muslim Oromo also for the notion of Arabic *hilāl* in the Islamic tradition); from the 5th to the 13th day the M. is *addeessa* ('white moon'); the 14th day is *qonč̣ora*; the 15th *goobana* ('full moon'); the 16th is *dukkana duro* ('waning moon, first darkness'), followed from the 17th to the 28th day by *dukkana* ('darkness'); the 29th day is *dukkana diba duda* ('covered by darkness'), and the 30th day is *luho* (Leus 1995:95 et passim). A related *guyyaa loʾoo* ('day of the cattle', i.e. the day when only the cattle sees the M.) was found among the Alabdu (VSAe II, 579). The historical

relation of the Boorana experts for the observations of the lunar cycles (the *ayyaantuu*) with the archaeological site of an ancient observatory at Namoratunga in Northern Kenya, is an open issue (Asfaw Beyene 1995:58).

(3) Strength and fertility are particular cultural tropes. Among the Amhara, the M. was seen as a powerful agent, the commander of an army of stars and an epitome for ruling nobility (Levine 1965:65; Crummey 1980:135). In the name of "Gobäna" (Orom. *goobana,* 'full moon', Arab. *badr*) the Oromo replicated the imagination of the M. as a strong-man (CerFolk 171). Among the ↗Dime, the full M. was considered as "a man," while the small M. was seen as a good mother, associated with rain and fertility (VSAe I, 257). Among the Amhara the sun contributed the seedlings and the M. caused the crops to grow (Levine 1965:65). The wax and waning of the M. found a reflection in folk-theories and tales (s., for example, LitPEA vol. 2, 65f.; VSAe II, 593). Oromo focus linguistic tropes and proverbs about fate and moral knowledge on aspects of the M. (CerFolk 45; Cotter 1990, passim; Biiroo Aadaa fi Beeksisa Oromiyaatti 1996, passim). Among Somali the M. was perceived as been covered by large woods, whereby the leaves of the trees represented the human beings. Each fallen leaf marked the end of a human being (Paulitschke 1896:224).

Thomas Zitelmann

Mooti

M. is a title used in most ↗Oromo kingdoms for the ruler. Probably derived from the Oromo word *mowuu* ('defeat, rout, win a victory over', TilDic 467f.), the word can best be translated to English as 'king'. The institution of ↗kingship and the establishment of kingdoms (sg. *mootummaa*, ibid.) among the Oromo developed from about the beginning of the 19th cent. (and even earlier, s., for example, ↗Amuma) as a series of local leaders defeated their rivals and consolidated their power over districts of varying size (e.g., ↗Gomma, ↗Guummaa, ↗Limmu Ǝnnarya, ↗Ǧimma Abbaa Ǧifaar, ↗Leeqaa Naqamtee or ↗Wälläga). The title itself was already used much earlier, as attested by the ancient example of the legendary ↗"Motälämi" (*mooti* Lämi?), who probably lived around the 13th cent.

Cerulli (CerEt vol. 2, 100) defines M. by contrasting it with ↗*hayyuu*, an office of the ↗*gadaa* system. He states that the title of M. is hereditary, while *hayyuu* are elected from a privileged clan. Yet, according to Haberland (VSAe II, 345), *hayyuu*, although formally elected, in his time often *de facto* inherited their office as well.

Among the Otu-↗Guğği, the M. was one of the four *gadaa* leaders subsumed under the term *hayyuu*, which included the *gadaa*, the *ğaldaba*, the *hooka* and the M. Like the other three *hayyuu*, a new M. of the Otu had to be confirmed and blessed during a collective pilgrimage of the *gadaa*-class then in power to the ↗*abbaa muudaa* of Alabdu, and was thus permitted to wear the ↗*kallačča* as a symbol of dignity. Among the ↗Guduru and ↗Leeqa, "M." was the title of the chief war leader originally part of the *gadaa* system. Despite his field of responsibility, he did not participate in the war personally (VSAe II, 345f.).

According to Cerulli's (CerEt vol. 2, 100) hypothesis, the egalitarian Oromo immigrants to the western territories were influenced by the features of kingship of the pre-Oromo inhabitants in that they developed the Oromo office of M. into that of a monarch. The legitimate wives of kings in the Gibe kingdoms, for example, bore the title *genne* or, in the case of the first spouse, *gennefa* (cp., e.g., ↗Genne Gummiti, i.e. 'Lady from/of Guummaa'). Cerulli holds that this title derived from the political terminology of pre-Oromo kingdoms of the region (cp. Käfa, *genne*, fem. of *genno*, 'lord', from *gan*, 'to own'), as it was the case with the title *donaččo* or *donzo* (e.g., in Anfillo, Käfa, Šakačo) for the heir to the throne (CerEt vol. 2, 101; LewJimm).

However, pre-Oromo influences are not sufficient to explain the evolution of states among the "republican" western Oromo. Besides certain features of pre-Oromo kingship being adopted, the Oromo had themselves developed socio-political stratification in addition to the egalitarian *gadaa*-system. Since political affiliation was not mainly based on corporate kinship or descent, wealthy land owners (↗*abbaa lafaa*) and, especially, successful war leaders who held the titles of ↗*abbaa bokkuu* or ↗*abbaa dulaa* could gather huge followings and accumulate power. By taking booty, acquiring land and distributing it to allied peasants/tenants, some of them were able to gain complete control over their own domains. Such mighty individuals and founders of petty states then often adopted the title of M., which became hereditary in the following generations (cp. Lewis 1964:140ff.).

Holders of the title of M. in a phase of transition from a "republican" to a hereditary system were, for instance, Abbaa Faro, the father of ↗Abbaa Magaal and founder of the historical nucleus of the kingdom of Ǧimma, ↗Abbaa Maale of Oboo, ↗Abbaa Gomol I of Limmu Ǝnnarya. Examples of important M. were ↗Gama Moras of Guduru, ↗Bakaree Godana of ↗Naqamtee, his son ↗Moroda and ↗Ǧootee Tulluu of Leeqaa Qälləm. Abbaa Gifaar II, king of Ǧimma, to whom his subjects referred to as *gooftaa* ('lord', probably adopted from Gurage *goyta*, s. CerEt vol. 2, 73f.), styled himself as ↗*sulṭān* on his royal seals, and by that showed a different Islamic understanding of Oromo kingship.

Mora

M. (ሞራ, Arab. مورە, Mūra) was a Muslim city or state in the north of ↗Ifat near ↗Awsa (HuntGeogr 91f.; PankBord 41; s. the map for Ifat) mentioned in an Arabic document on the early Šäwan sultanate (Cerulli 1941) and in the Chronicle of *aṣe* ↗ᶜAmdä Ṣəyon I.

The Arabic source (Cerulli 1941:8, 31) mentions that in 1264/65, the ruler of M. (*ṣāḥib Mūra*) was defeated and killed by ↗Dilgāmis, a ↗Maḫzūmī *sulṭān* of Šäwa; the war lasted until 1266/67, and it is not clear whether M. was completely incorporated in the Šäwa sultanate. In 1285, when ᶜAlī b. Wālī Asmaᶜ deposed the former Maḫzūmite *sulṭān* in Eastern Šäwa and made the ↗Walašmaᶜ the ruling dynasty in that area, he also took power over the neighbouring Muslim states M., ↗ᶜAdal, Hobät and ↗Gidāya, the invasion of M. taking place in 1288 (cf. Cerulli 1941:9, 13; TrIslam 58, 62). Since then, the destiny of M. was apparently bound to that of Ifat but nevertheless it seems that a certain degree of independence was still possessed by M.

The Chronicle of *aṣe* ↗ᶜAmdä Ṣəyon I speaks of M. making an alliance with ᶜAdal against ᶜAmdä Ṣəyon who defeated them (KrAmdS 16 [text]; MarAmdS 76, 78). Furthermore (KrAmdS 19 [text]; MarAmdS 82), M. is mentioned as one of the seven "big countries" (*ahgur ᶜabbäyt*) that unsuccessfully attacked ᶜAmdä Ṣəyon. The Chronicle also says that the Emperor managed to camp in M. after having first crossed Awaš and then another big river called Yas (KrAmdS 24 [text]; MarAmdS 92). In 1332, M. under the guidance of its king (*nəguś*) was again one of the partners of the great Muslim coalition that clashed with ᶜAmdä Ṣəyon I and was eventually defeated (KrAmdS 27 [text]; MarAmdS 98; TadTChurch 138). M., then, probably became a tributary to the new ruler of Ifat, ↗Ǧamāladdīn II b. Dalḥūy b. Manṣūr (TadTChurch 138, 141). After the decline of Ifat in the beginning of the 15th cent. there are no further records on M.

Morät

M. (ሞረት) is a historical district in lowland Šäwa, situated mostly in the *qʷälla* climatic zone. One of the home areas of the ↗Amhara, it is bordered by the Šäwa Meda plateau in the south, river Ǧämma and ↗ƎnsaroEnsaro in the south-west, and ↗Tägulät and ↗Märḥabete in the east and north-east. The natural western boundary was formed by the Bärsäna river, the Addäbay river limiting it from the north. In the pre-1974 administrative division it formed a *wäräda* of the Tägulät and Bulga *awraǧǧa*.

M., or rather its lower parts, are believed to have been Christianized during the 13th–14th cent. The area was the scene of the missionary activities of *abunä* ↗Täklä Haymanot, his disciples and *abunä* ↗Yaᶜəqob. In particular, ↗Zena Marqos is credited with the foundation of the important monastery of ↗Däbrä Bəśrat (also known as Däbrä Zena Marqos) in M.

M. was a district traditionally governed by the local hereditary rulers. In the late 17th cent., the period of M.'s flourishing, probably Ṭəddu (called in the Šäwan tradition "the King of *qʷälla*") built up connections with the Amhara Christian ƎnsaroEnsaro lowlands to the west, towards ↗Däbrä Libanos, pushing back the Oromo of ↗Sälale, and probably getting some influence among the Oromo in the Gərar area. However, today the plateau of the central M. is inhabited predominantly by the Ǧerru Oromo.

During the Šäwan expansion under ↗Asfa Wäsän M. was one of the few regions, along with Märḥabete, to offer resistance. When Asfa Wäsän suppressed the rebellion of his generals Nəgde and Marəyye, killing the latter, the former found refuge in M. and united forces with the M. ruler Ṭəddu to fight the Šäwans. However, the forces were inferior and Ṭəddu had to submit.

Shortly after the death of *märədazmač* ↗Wäsän Sägäd, the hereditary chiefs of M. and Märḥabete reasserted their independence for a while, Ṭəddu's son Ḫaylu taking over the reign in M. When *nəguś* ↗Śahlä Śəllase rose to power, he reunited the kingdom. His clashes with Ḫaylu were particularly hard, the area of Däbrä Zena

Marqos was devastated. The church was later rebuilt by ↗Mənilək II.

Even under Šäwan domination the hereditary rule in a certain form remained. The governor appointed in 1841 over M. was Ḫaylu's son Bisäwwər (whereas Märəd Ḫaylu was given Ǝnsaro). Śahlä Śəllase's first wife was Bäzzabbəš, Ṭəddu's granddaughter.

In 1870 Mənilək, then *nəguś* of Šäwa, made M. his stronghold, establishing a fortress at Ǝnnäwari.

Evgenia Sokolinskaia

Mordini, Antonio

M. (b. 14 February 1904, Barga, Lucca, d. 3 December 1975, Barga) was an Italian ethnologist and civil servant who made an important contribution to Ethiopian studies, chiefly by conducting archaeological, architectural and art historical field research in northern ↗Ethiopia (↗Təgray) and ↗Eritrea.

A scion of a family of fervent socialists and patriots (his homonymous grandfather, involved with Masonry, was Giuseppe Garibaldi's "prodictator" in Sicily), M. participated in Gabriele D'Annunzio's march on Fiume (1920), and later, in Benito Mussolini's march on Rome (1922).

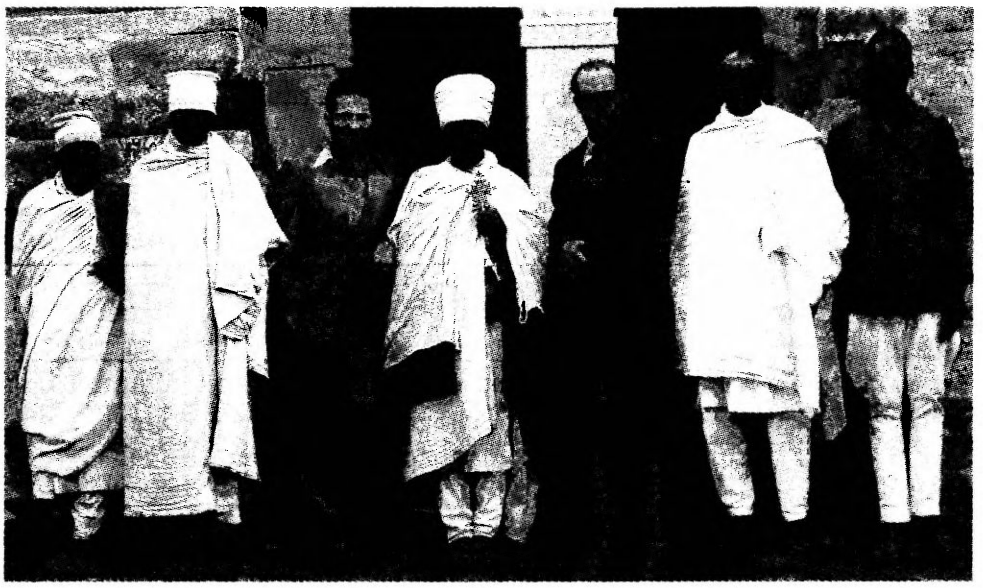
He graduated from Florence University in ethnology and archaeology, and attended courses in Berlin and in Sweden. In 1926, he started his scholarly activities, initially focusing on South America. Then his interest shifted toward Africa and the Persian Gulf. In 1932, together with Lidio Cipriani, he directed the expedition of the ↗Società Geografica Italiana to Fezzān, in Italian-controlled Sahara. After the occupation of Ethiopia, in 1936–37, M. joined the government ethnological mission to this country. In 1937 he was part of the demographic mission of the Ministero dell'Africa Italiana in Eritrea. From 1939 to 1944, M. was the head of the Ethnographic services (also for archaeological enquiries and restorations) of the ↗Africa Orientale Italiana, acquiring then a first-hand knowledge of the country and its monuments. From 1941 to 1943 he served as "editorial secretary for the Africa Orientale Italiana" of the ↗*Rassegna di studi etiopici.*

During the war and the subsequent British administration, M. became a personal councillor of Amedeo di ↗Savoia, Duke of Aosta. In this capacity, he was entrusted with protecting the Italian population. He succeeded in establishing good relationships with Emperor ↗Ḫaylä Śəllase I, the latter insisting on a personal meeting during a visit to Italy in the 1960s.

Besides providing information and materials, not only photographic, to other scholars, thus adding to their collections and publications (this being the case, e.g., with Carlo ↗Conti Rossini for the parchment fragments from ↗Däbrä Damo, or with Georg Gerster for this and other early churches of ↗Təgray), M. wrote a number of essays and minor notes (including a series of entries for the *Enciclopedia Italiana di Scienze, lettere e arti*) in which the results of his research on the Ethio–Eritrean region are presented.

His scholarly activity focused mainly on late antique and medieval monuments, with particular attention towards their preservation (hence his emphasis on such perishable parts as wooden doors and carvings). His records are, therefore, of special value for our knowledge of the history, art and architecture of important Ethiopian churches and monasteries: first and foremost, Däbrä Damo – for which he established a friendly co-operation with architect Derek H. Matthews – and ↗Gundä Gunde. He was in fact the first European scholar to provide detailed descriptions of these and other important sites, where he had undertaken basic restorations during his tenure in the Ethnographic services. His inventory of the ↗manuscripts of Gundä Gunde is still the most important source of information on the monastery's once richest library in Ethiopia.

His private collection of manuscripts (first described by M. himself, with the aid of Enrico ↗Cerulli), was acquired in 1994 for the Biblioteca Palatina of Parma (and is being catalogued there). Among others, it boasted such precious pieces as a 14th-cent. prier book (ms. Parm. 3845), a 15th-cent. copy (the oldest one) of the Ethiopic version of the *Shepherd* of ↗Hermas (Parm. 3842), a 17th-cent. painter's book (3853), a 17th–18th cent. collection of ↗*Sälam* (3848–49), all from Gundä



Antonio Mordini (third from right) at Däbrä Damo, with an assistant, monks and *mämhər* Gäbrä Mädḫən Yared; photo 1939, courtesy of the family

Gunde. By 1994, however, a few significant pieces had been long since dispersed on the market: e.g., a famous 16th-cent. illuminated copy of the Vitae of ↗Ǝsṭifanos and ↗Abäkäräzun (from Gundä Gunde, no. 103 of M.'s own inventory), which became the property of Lady Diana Spencer, and entered later the New York Public Library (Spencer Collection, Eth. ms. 7).

Noteworthy also are M.'s contributions to Aksumite numismatics. His collection of Ethiopian coins (ca. 120 in 1947), coming from his excavations or purchased from locals, merged later into that of Claudius Côte (Lyon), which was then bequeathed to the ↗Bibliothèque nationale (de France), where it is now kept in the Cabinet des médailles (Girola 2006:482 and n. 80).

Gianfranco Fiaccadori

Moreno, Martino Mario

M. (b. 8 September 1892, Torino, d. 13 June 1964, Rome) was an Italian state executive and one of the most important scholars in both Islamic and ↗Ethiopian studies.

On completing classical studies and graduating in 1912 from the Faculty of Humanities of the University of Genoa (with a dissertation on Greek tragedy), M. started a successful career as a civil servant within the Italian colonial administration in 1913. He was sent to Libya, and by 1920 he was playing a prominent role in the hierarchy of the Ministry of the Colonies. Between 1927 and 1929 he served in Cairo as an advisor to the Italian embassy and accomplished two missions in Yemen (1927–29). Between 1929 and 1931, he served as Director of political and civil affairs of the government of Colonia Eritrea in Asmära. From 1931 to 1934 he was an advisor to the Italian Embassy in Addis Abäba. After the occupation of Ethiopia he was appointed vice governor of the Governo del Galla e Sidama with the headquarters in Ǧimma. From 1938 he was Director General of political affairs at the Ministry of the Italian Africa.

After ↗World War II M. was integrated into the staff of the Ministry of Foreign Affairs. Between 1952 and 1956 he represented the Italian Government in Lebanon as Minister plenipotentiary, and became the first Director of the Italian Cultural Mission (later Italian Cultural Institute) in Beirut which today bears his name. In 1956–57 he was Minister plenipotentiary in Sudan.

M. taught at several universities: the University of Rome between 1939–44 (Non-Semitic languages) and 1951–52 (History and languages of Ethiopia); the University of Beirut between 1954–57 (Gəʿəz and Epigraphic South Arabian); the Academy of Fine Arts of Lebanon in the same years (Hebrew and Glottology); the ↗Istituto Universitario Orientale of Naples between 1958–62 (Hamito-Semitic philology, later Semitic philology, and Somali). Between 1957 and the year of his death he was the editor-in-chief of two journals: the ↗*Rassegna di Studi Etiopici*, then published by the Istituto per l'Oriente (I.P.O.) of Rome, and the *Levante*, by the Centro per le Relazioni Italo-Arabe of the I.P.O.

The prodigious plurilinguistic competence of M., together with his immediate and deep knowledge of peoples and countries, allowed him to conduct remarkable research in both Islamic and Ethiopian studies, with special attention to the description of languages, the theological debate among religious movements, and modern literature.

M. started teaching himself Arabic during the secondary school, and in 1910, when he was only 18 years old, published an Italian version of Ibn al-Muqaffaʿ's (d. 757) *Kalīla wa-Dimna*, a translation from Pahlavi (Middle Persian) of the Sanskrit tale *Pañcatantra*. His translation of the ↗Qurʾān (publ. 1967) is still widely accepted and has been recently reprinted. While working for the colonial administration, M. published monographs on linguistic, social and literary matters related to the peoples and religious communities of the countries he worked in. His research on Islamic theology and its relationship to Indian religious tradition, via the Persian link, as well as his studies on Lebanese poets are still valuable.

In the field of Ethiopian studies, M. was the first to describe such Cushitic languages as ↗Gideʾo, ↗Kambaata, ↗Allaaba, and ↗Burǧi. He isolated some morphological features of the West Cushitic languages of the Käfa region, which would later be called ↗Omotic. He wrote grammars of the most important Cushitic languages (↗Sidaama, ↗Oromiffa, ↗Somali), collected and published texts of Oromo and Amharic oral tradition (particularly folk tales and poetry) and translated one of the several versions of the Amharic Chronicle of ↗Tewodros II.

The close relationship between colonial duties and scholarly activities, and thus long periods spent in the field, allowed intellectuals like M. to produce fundamental works still relied upon by contemporary research.

Gianfrancesco Lusini

Mori, Attilio

M. (b. 12 September 1865, Florence, d. 16 December 1937, Florence) was an Italian geographer and cartographer. He became interested in geography while attending the courses of the Istituto tecnico of Florence. He was one of the principal contributors to the *Bullettino* of the Florentine section of the Italian African Society (Società Africana d'Italia, with its main seat in Naples) since its first issue in 1885, publishing articles on ↗Massawa, ↗Asäb, Italian expeditions to Africa etc.

In 1886 M. joined the Istituto Geografico Militare (I.G.M.) of Florence as an assistant topographer. He was later promoted to senior topographer and eventually to librarian of the institute. In 1901 he achieved the qualification of private lecturer and worked in different fields of geography under the guidance of such teachers as Bartolomeo Malfatti and Giovanni Marinelli, of which the latter's son Olinto, the editor of the *Rivista geografica italiana* and explorer of Eritrea (↗Dainelli, Giotto) became M.'s close friend.

During the Libyan war of 1911–12 M. headed the local colonial institute of the I.G.M. During World War I he was assigned to the onslaught of artillery troops. He taught geography at the University of Messina from 1915 until 1922, when he was transferred to the Istituto Superiore di Magistero in Florence.

M. devoted most his studies to his native Tuscany and, significantly, to colonial geography, closely following recent developments and current research. In 1907 he prepared a series of maps of the Colonia Eritrea: for ↗administrative division, for each Commissariato, as well as several detailed maps for the "residenze" and a map of itineraries. In 1912–14 a linguistic map, a map of climatic zones, of fauna distribution, of population density, of religious landscape and a map of telegraph connections followed. Numerous articles on Eritrean and Ethiopian geography by M. appeared in the *Rivista geografica italiana*, the editorship of which he took over upon Olinto Marinelli's death in 1926.

He was particularly interested in the history of exploration. His 1927 study on Libya was accompanied by a detailed geographical map showing the routes of the most important expeditions. He wrote a historical introduction on the exploration of the ↗Wabi Šäbälle basin for di Savoia's book (1932), and a chapter on the history of exploration of the ↗Africa Orientale Italiana for the Geographic Society's collection of 1935. He also contributed to the *Enciclopedia Italiana*, with the entry on Vittorio ↗Bottego (repr. vol. 7, 1949, 585–86), and by co-authoring the entry "Etiopia" with R. Almagià, A. Baldini, U. Cassato, E. Cerulli, C. Conti Rossini, A. Gaibi, I. Guidi, M. Guidi, N. Piccioni e G. Stefanini (1935).

Moroda Bakaree

Däğğazmač M.B. (Amh. ሞሮዳ፡ በከሬ, Moroda Bäkäre; b. 1841, Naqamtee, d. 1888, Naqamtee) was the son of ↗*mooti* Bakaree Godana of ↗Naqamtee, and Aya Urge Čančo of Hadiyya. He succeeded his father as *mooti* in the administration of ↗Leeqaa Naqamtee, ↗Wälläga in 1870, and ruled for 18 years.

M.B. united numerous warring tribes in Leeqaa Naqamtee and Sibuu and brought stability to the region. He allowed the rulers who came under his control to continue administering the districts they previously controlled as long as they paid him a nominal tribute. After conquering a region, he adopted the children of the vanquished Oromo rulers, such as Niqus Dalala of ↗Limmu or Wirtu Dango of Horo Dangoro. Thus, M.B. pre-empted future challenges to his rule. He took care to always consult important dignitaries and elder statesmen of his realm before passing a law. To discourage pillaging of invaded areas by unsalaried soldiers, as was the tradition at that time, he gave his fighters lands that they could use for their livelihood.

M.B. maintained good relations with the *mooti* of other areas of Wälläga, such as ↗Abbaa Ğoobir Abbaa Duula of Guummaa, Abəše Garbaa of Horo, Qadidaa Wandabit of Ğimma Rarre and *dağğazmač* ↗Ğootee Tulluu of Leeqaa Qälləm, to whom M.B. married his daughter Doʾe.

When the army of ↗Täklä Haymanot of ↗Goğğam headed by *ras* ↗Däräso Ṭabo reached Wälläga, M.B. recognized the sovereignty of the *nəguś* of Goğğam. He was christened by Däräso and promoted to the rank of *dağğazmač*. Later, when the Šäwan *nəguś* ↗Mənilək sent his army led by *ras* ↗Gobäna Daçi to the region, M.B. dispatched his brother *fitawrari* Dibaba Bakaree with gifts, pledging to accept Mənilək's suzerainty – against the advice of his elders who wanted to fight against the Amhara army just as Abbaa Ğoobir was doing. Mənilək accepted the gifts and the submission and appointed M.B. to rule his realm as long as he paid tribute to the kingdom of Šäwa. M.B. also influenced the remaining local rulers of Wälläga to submit to Mənilək. M.B. opted for collaboration because of a lack of co-operation among the Oromo rulers of the south and, most importantly, because of the Oromo's severe lack of sophisticated weaponry. Additionally, if the Wälläga Oromo were occupied by force, they would have been subject to the plundering of the ↗*näfṭäññä*, as was the fate of regions like Arsi, Bale, Harärge, Gumaa, Limmu, Wälaytta and Käfa. By paying a tribute of 1,000 ounces of gold, M.B. received Mənilək's permission to be totally responsible for his northern Wälläga territorial administration and to have the Šäwan *näfṭäññä* who came with Gobäna removed from his dominion.

In spite of M.B.'s occasional cruelties towards his rivals, he was a magnanimous individual known for outlawing two cruel traditional practices of the Oromo in his region: geronticide and female ↗circumcision. An example of his sense of justice concerns his father, Bakaree Godana, who had unjustly confiscated Sarba Golğa's property. Sarba killed him in retaliation and fled. While on his death bed, M.B. told his officials that Sarba could not be blamed for killing his father. He ordered them to give him a total pardon and let him return to his land.

M.B. was succeeded by his son Kumsaa, better known under his Christian name ↗Gäbrä Ǝgziʾabəḥer Moroda.

Paulos Milkias

Moses

The biblical patriarch M. (ሙሴ, Muse) is widely venerated in Ethiopia, by both the ↗Ethiopian Orthodox (Täwaḥədo) Church and among the ↗Betä Ǝsraʾel, as the person who stood in the beginning of the history of the Israelites and took part in biblical events basic for the self-consciousness of the Ethiopian people. In addition to the Biblical texts, a number of literary works are devoted in whole or in part to M. Some of them elaborate upon the stories of M. which appear in the ↗Old Testament, others include apocryphal information regarding his life not included in the Bible. The tradition recalls and elaborates upon many episodes from M.'s life, in the context of the great respect Ethiopians generally pay to the O.T. The canticle of M. comprises an obligatory part of the Ethiopic ↗Psalter.

According to some traditions derived from Num 12:1 testifying to M.'s marriage to an "Ethiopian" woman, M. was the ancestor of the ↗Zagʷe dynasty which ruled Ethiopia from ca. 1137 to 1270. This tradition is also echoed by ↗Abū Ṣāliḥ, who says the rulers of Ethiopia were "of the family of M. and Aaron, on the account of the coming of M. to Abyssinia. M. married the king's daughter" (Evetts – Butler 1895:288). Other sources, including Eusebius and Josephus and a number of later Jewish texts, have elaborated upon this "Ethiopian" woman to report of M.'s journey to and defeat in war of the Ethiopians (at Meroë; s. Rajak 1978).

The biblical account of M.'s encounter with Pharaoh's magicians (Ex 7:10–12) appears to have been the basis for a variety of prayers and other texts depicting M. as a magician. In the Betä Ǝsraʾel version of the ↗*Ardəʾət*, it is M. (as opposed to the Christian version's Jesus) who reveals the secret names (cp. ↗*asmat*) of God to his "disciples", the leaders of the twelve tribes of Israel. Another similar magical text known as the Prayer (or Acts) of M. (Strelcyn 1951) contains the prayer Moses used against his enemies in Egypt. Nollet (1933) has published a similarly themed text.

Ch. 98 of the ↗*Kəbrä nägäśt* (Budge 1922:177–83; BezKebr 136–41) consists largely of reinterpretations of biblical stories of M., and particularly his use of his rod, hence, the story in Ex 17:6 in which M. strikes a rock and brings forth water. The water is associated with the Apostles, the rock with Christ, and the rod with the wood of the Cross. Later in the same chapter, the Amalekites who fight the children of Israel are said to represent unbelievers, and M.'s rod, which when stretched forth defeats them, once again the wood of the Cross.

The biblical story of the conversation between God and M. on Mount ↗Sinai and the receiving of the tablets of stone with the Ten Commandments (*səllatä Muse*) is linked to the tradition of the origin of ↗*tabot*. The same episode is discussed in the work called ↗*Nägärä Muse*, purporting to be an account of that conversation. In response to a series of questions, God explains the rewards which follow certain types of good deeds and the punishments meted out for specific sins. These are followed by more philosophical inquiries and answers concerning the divine essence. The text appears to be of Syriac origin, and the Gəʿəz versions (both Christian and Betä Ǝsraʾel) are certainly derived from an Arabic source. Indeed, several manuscripts explicitly state that this work was translated from Arabic in the middle of the 18th cent. The Betä Ǝsraʾel version is a censored adaptation of the Ethiopian Christian text and retains Christian references to the Apostles, martyrs and saints at several points.

The biblical text's silence regarding the place and exact time of M.'s death (Dt 34) provides the background for the ↗*Motä Muse*, probably drawing on a 14th–15th cent. Arabic source.

Moses in art

The most common iconography of M., also in Ethiopia, is based on the biblical account of the event at Mount Sinai (Ex 34:1–30) and depicts him holding the Tablets of Law. The oldest presently known Ethiopian representation of M., the 13th-cent. wall painting in the ↗Gännätä Maryam church, shows him with a single, cross-marked tablet standing side by side with Aaron. He is portrayed in a similar way in two Gärʿalta churches, ↗Däbrä Ṣəyon and ↗Gʷəḥ Yəmʾata, while in a third one, ↗Qorqor Danəʾel, he is rendered as a priestly figure, together with ↗Melchizedek, Aaron and Stephan, each holding a censer (↗*Maʿəṭänt*). The Tablets of Law distinguish M. among the long rows of the holy figures decorating 15th and 16th-cent. ↗manuscripts, ↗paintings on wood and liturgical fans ↗*märawəḥ*.

The scene showing M. about to receive the Commandments from the hand of God, which emerges from the sky or a cloud, belongs to the programme of the illuminated ↗Psalters where it introduces the "canticle of M." (e.g., ms. Paris, BN, d'Abbadie 105). In the manuscript London BritLib Orient. 481 (a replica of the famous *Mäṣḥafä ↗ṭefut* of Gəšän Maryam [↗Amba Gəšän]), it is used as the frontispiece for the book of Genesis (fol. 4v). At the end of the 18th cent., the scene entered the programmes of the churches extensively decorated with wall paintings. Always placed on the eastern wall of the ↗*mäqdäs*, it shows God the Father in half-figure instead of the *manus dei* handing over the tablets.

Another biblical event connected to M. is also included in these programmes, namely the crossing of the Red Sea (Ex 14:15–30). It is represented as a rescue action accomplished by the archangel Michael on behalf of the Israelites. Aimed as an apotropaic picture, it is always placed on the western door leading to the *mäqdäs* (e.g., Narga Śəllase church). Some manuscripts of the ↗*Dərsanä Mikaʾel* also include this scene, for instance ms. Baltimore, Walters Art Museum, W 835, fol. 59, which additionally shows M. in front of God's angelic messenger and the burning bush (Ex 3:2–6). All three episodes became the subjects of an unusual magic picture devoted to M., kept in the collection of the British Museum (inv. no. Af 1912.2).

Another attribute of M. is the staff, with which he parted the waters of the Red Sea (Ex 14:15–16) and made water gush out of a rock in the desert (Ex 17:7). In Qorqor Maryam church M. is holding up a snake, obviously the allusion to the episode with the brass serpent (Num 21:6–9) interpreted as a *typos* of the ↗Crucifixion (Jn 3:13–15).

It seems that M. was an important figure for the painter who decorated the Octateuch of Amba Gəšän, because he depicted M. on three separate miniatures: carrying the Tablets of Law, sitting and writing the Commandments and holding his staff. The same series of pictures was repeated in the copy of the Amba Gəšän manuscript, ms. BritLib Orient. 481, while a very similar cycle illustrates the Octateuch kept in Pistoia (Biblioteca Fortegueriana, Martini etiop. 5).

Since the Ethiopians adopted the Byzantine scheme of the Transfiguration, which always includes the figure of M., he appears in all Ethiopian depictions of the scene; the oldest examples

Moses defying the magicians Jannes and Jambres before Pharaoh; miniature in ms. Dərsanä Mikaʾel, fol. 69r, 18th cent., church of Mädḫane ʿAläm, Mändabba monastery; photo 1993, courtesy of Michael Gervers

are to be found in the churches Gännätä Maryam and ↗Ǝmäkina Mädḫane ʿAläm. Otherwise, the Transfiguration is included in the developed Christological cycle which decorates a group of the 15th-cent. illuminated Gospels, for instance mss. New York, Pierpont Morgan Library, M. 828, fol. 11r, Baltimore, Walters Art Museum, W. 850, fol. 59v, Kəbran Gäbrəʾel, fol. 15r.

Moses of Adulis

M. (Μωϋσῆς, *Mōysês*, fl. first half of 5th cent. A.D.?) was a bishop of ↗Adulis, the "port of trade" controlled by the kingdom of ↗Aksum. He is mentioned in the first section of the Greek treatise *On the Races of India and the Brahmans* which might even have been genuinely by Palladius, bishop of Helenopolis in Bithynia (ca. 400–06) and then of Aspuna in Galatia (from ca. 412; d. ca. 431), under whose name the entire work is transmitted – in the form of a letter by him to an anonymous high ranking personage (s. Berg 1974 and Häuptli 2005; cp. Monneret de Villard 1947:614f., also for the Byzantine fortunes of the text).

The section, also surviving with variants in a few Latin versions (the *Commonitorium Palladii*, 'Instruction[s] of Palladius'), seems to provide actual evidence for Greek travellers and traders in the East from the late 4th to the mid 5th cent. (s. Desanges 1969:632, 639). It describes the journey to ↗India by an Egyptian *scholastikós* ('lawyer' or 'rhetor') from Thebes who went as far as the "eastern" country of the "slightly-built and indolent" Visadhes (Βισάδες, *Bisádes*), Tibeto-Burman "pepper-gatherers" dwelling in the mountains of Assam, and was captured and held prisoner there for six years. After visiting Adulis and Aksum, "in which a minor king(let) of the Indians [*basilískos mikròs tôn Indôn*] was sitting (on his throne)", he eventually embarked at Adulis on a ship meant for the "Indian trade" (I, 1. 4 and 7, ed. Berghoff 1967:2, 4 and 6) – but was then unable to reach Ceylon (*Taprobánē*). The situation depicted by Palladius, in turn depending upon a letter by the Theban *scholastikós*, has been thought to suggest a decline of Aksum at the time, its communications with Ceylon having slackened or become more difficult, its king being referred to so scathingly (for the title *basilískos* s. also Chrysos 1978:44f.). This way of introducing him may indeed reflect "the attitude of a Roman subject to almost any ruler in comparison to the Roman and Persian emperors" (MHAksum 82f.). However, in the first quarter or half of the 5th cent., witnessing the reigns of ↗Eon, ↗MḤDYS (possibly, with no gold ↗coinage) and ↗Ebana, a certain dimunition of Aksumite power cannot be excluded.

The story of the *scholastikós*, touching upon Brahmans, was possibly told ca. 420 by Palladius, who also speaks of himself as being interested in their life and philosophy: on account of that, he set out for India in the company of "the blessed Moses, bishop of Adulis [*episkopos tôn Adulēnôn*, lit. 'of the Aduleans' – a good mark of the still relative autonomy of the port of trade]", who was clearly dead by the time the work was composed. Moses's aim was probably to tie relationships with the Christian communities of India, already visited by ↗Theophilus the Indian, and placed under the authority of the Church of Persia (↗Nestorius, ↗Iran) by the end of the 5th cent. (Monneret de Villard 1947:620ff., cp. Desanges 1969:630f., and Fiaccadori 1992:66 and n. 63). With Moses, Palladius managed to reach at least India's – i.e., probably, Ethiopia's – outskirts (Berg 1974:7f., cp. Desanges 1969:628 and n. 17), where he had the opportunity of collecting direct information on the country, if not the testimony of the Egyptian *scholastikós*.

Gianfranco Fiaccadori

Moses the Black

M. (Eth. **ሙሴ ፡ ጸሊም**, Muse Ṣällim), also known as Anba Musa, Moses of Scetis or Moses the Ethiopian, was one of the first hermits of Scetis (late 4th cent. A.D.), and a saint. Three different people called "Moses" are mentioned in hagiographical literature (Apophthegmata Patrum, Palladius, Cassian, Sozomen, synaxaries, and lives of saints). J.-Cl. Guy (unpublished dissertation quoted in Sauget 1967) has shown them to be one and same person (a fourth name, "Moses of Kalamon", used by Cassian only, is also identified to be this M.). This saint is commemorated twice in liturgical practice (3 *Mäskäräm* and 24 *Säne*), but under different names. He was "black", thus probably originating from a Nubian tribe, and that is why he is called "the Ethiopian".

A former thief, after having been a slave, he converted and joined the monks of Scetis, where he lived in so edifying a manner that he was ordained a priest and had a large number of disciples. He was killed by the Barbarians when these destroyed Scetis for the first time (in 407 A.D. rather than in 395 A.D.). He refused to escape, saying that he was to fulfill the Lord's saying: "He who has killed with the sword shall die by the sword" (cf. Mt 26:52).

An Ethiopian life of Moses has been published by Raineri (1995), from the only known ms. (Vat. Aeth. 316); it translates the 'G' Arabic text as published by Pirone (1994), with some light omissions (e.g. ch. 25 of the Arabic) and additions (ch. 16 of the Ethiopic is not found in Arabic).

Ugo Zanetti

Mosiye

Mosiye language

The M. language (self-name: Mossittata, Mossittača, also Quǧire), spoken by ca. 6,500 speakers (Hudson 1999:93), belongs to the ↗Konsoid dialect chain of the ↗Lowland East Cushitic group within the ↗Cushitic family.

The only published materials on M. are surveys by Wedekind (in Dinote Kusia Shenkere et al. 1994 and in Wedekind 2002) and a study by Wondwosen Tesfaye (in PICES 14).

Wondwosen Tesfaye (ibid.) shows that there are two varieties of M.; northern and western. Northern M. is spoken in Bussa Baasso and Bussa Qilla (Moro Čabane), and Western M. in Bussa Naalo. The northern variety is influenced by ↗Omotic languages such as ↗Zayse and ↗Gamo, and the western one has borrowings from ↗Oromo and ↗Konso. The present description is based on Western M.

The consonant phonemes are: voiceless stops *p*, *t*, *k*, ʾ, affricate *č*, fricatives *f*, *s*, *š*, *h*, ejectives

p, (*t*), *č*, *q*, implosive *d*, nasals *m*, *n*, liquids *l*, *r*, glides *w*, *y*. Consonant voice is not distinctive in the language, e.g. [*roopa*] or [*rooba*] 'rain'. There are five vowels: *i*, *e*, *a*, *o*, *u*. Vowel length and consonant gemination are phonemic.

Pronouns are:

	sg.		pl.
1	*ana/anti*		*inno*
2	*heʾe/atti*		*išina*
3	*iša* (masc.)	*išeeta* (fem.)	*išoo*

Demonstrative forms are 'this' *sede*, 'that' *tossi*, 'these' *aregyan*, 'those' *toysiyo*.

Possessive markers are:

	sg.		pl.
1	*-ho*		*-yno*
2	*-yti*		*-ssina*
3	*-yyi* (masc.)	*-ddî* (fem.)	*-šina*

E.g., 'my cow' *saʾa-ho*; 'your cow' *saʾa-yti*, etc.

The Pluralform can be marked by 1) geminating the last stem consonant: 'house' *tika* (sg.) vs. *tikka* (pl.); or 2) adding the morphemes *-ddo* ('dog' *huuta* [sg.] vs. *huutaddo* [pl.]) or *-awwe/-awwa* ('sheep' *karda* [sg.] vs. *kardawwa* [pl.]).

Negation is expressed by either *akakka* or *ayya*, e.g.:

anti-ni	*piša*	*akakka/ayya*	*n-ukk-a*
I-NOM	water	NEG	I-drink-IMPF

'I do not drink water'

The imperfective marker is *-a* as in the following paradigm of the verb *dam-* 'to eat':

	sg.		pl.
1	*n-dam-a*		*dam-m-a*
2	*dam-t-a*		*dam-t-a-ni*
3	*dam-a* (masc.)	*dam-t-a* (fem.)	*dam-a-ni*

The perfective marker is *-e*:

	sg.		pl.
1	*n-dam-e*		*n-dam-m-e*
2	*dam-t-e*		*dam-t-i-n-e*
3	*dam-e* (masc.)	*dam-t-e* (fem.)	*dam-i-n-e*

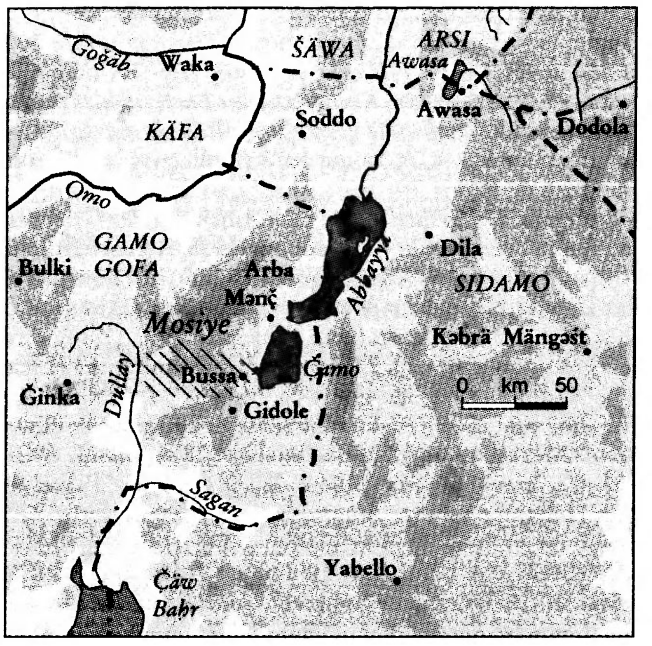
Question words include 'who' *ayno*, 'what' *moydiyo*, 'when' *etooti*, 'where' *ayyila*.

The word order is Subject–Object–Verb. There is no overt copula:

ağara-ti	*astamareta*
A-nom	teacher

'Ağara is a teacher' (example from Wondwosen Tesfaye in PICES 14, 1852).

The ten-word list is: 'one' *tokko*, 'two' *lakki*, 'three' *sessa*, 'water' *piša*, 'fire' *ʾabitta*, 'sun' *lat-*



ta, 'moon' *leʾa*, 'blood' *diika*, 'tongue' *ʾarraba*, 'tooth' *ʾillitta* (ibid. 1855ff.).

Alemayehu Gurmu Bileat

Mosiye ethnography

M. (Mossiye, Mussiye, Muusiye, Bussa) is the autonym of an ethnic group until 1999 part of ↗Gardula *wäräda* of the former ↗Gamo Gofa province (today North Omo zone). The territory of the M. is located west of the southern shore of Lake ↗Čamo. The M. territory reaches into the Dullayho (Amh. Wäyṭo) lowlands (700 m A.S.L.) to the west and beyond the ridge of Mount Gardula (ca. 2,500 m A.S.L.) up to Lake Čamo (1,108 m A.S.L.) in the east. The territory of the M. includes the settlements of Moro Čabane, Bussa Baasso, and Bussa Naalo.

The imperial administration is called the M. Bussa, after the former ↗*kätäma*. There is not much ethnographic information available in written form (Amborn 1990). Their social and economic structure has many similarities to that of their, also Konsoid-speaking, southern neighbours, especially the ↗Diraašša. Frequent

intermarriage with the ↗Zaysse and the ethnic groups of the Gamo highlands resulted into many "Omotic" features in their culture, including their language. In 1994 the "Bussa" population numbered ca. 9,205 (CSA 1996).

The traditional settlement area of the M. is situated above 1,800 m A.S.L.; above 2,000 m A.S.L., scattered hamlets with ↗*ənsät* gardens are predominant. Agriculture was originally characterized by similarity with that of the ↗Burği and ↗Konso cluster, but for decades the terraces have no longer been maintained. However, due to favourable ecological circumstances, which allow mixed farming with *ənsät*, cereals, small livestock and cattle, and a sparse population, food supply is assured. The variety of ↗ecological zones given by topography facilitates an all-season sequence of harvests and seasonally alternating use of the lush grazing grounds. Additionally, hunting is possible in the Dullayho lowlands, which are rich in game; but usually only small antelopes, referred to as "goats", are consumed. Handicraft products are purchased on the markets of neighbouring ethnic groups.

Like their southern neighbours, the M. have nine exogamous and patrilineal clans which are divided into lineages. Compared with their neighbours, they were more rigorously organized for military purposes. Centralist tendencies were also apparent in the institution of priestly chiefs (*ɗaama*) resembling the "kingship" (↗Kingship, divine) of the Omotic-speaking groups; especially of Käfa. They had a strong cavalry at their disposal, which in the 19th cent. enabled them to dominate areas up to the Sagan river. In Tuuro in north-western Konso stone ramparts against the M. cavalry still can be seen. During the 19th cent., areas like Alayša in southern M. were integrated into M. territory and parts of the Konso population were forcefully resettled in that area. Against the Diraašša, to whom they were linked by intermarriage between one of their two most important religious dignitaries and the Diraašša *ɗaama*, they led highly ritualized, but nevertheless violent, wars (Amborn 2005). According to oral tradition, the imperial army under *ras* ↗Lᵊul Sägäd attacked the ad hoc combined forces of Diraašša and M. several times, before they were finally subdued in about 1897.

According to their myth of origin, the first *ɗaama* of the M. emerged from a pond through which obtained the power to control the rain (↗Rainmaking). The *ɗaama* is buried in the same grave as his predecessors within a burial grove. When, in the time of the *Därg* regime, the *ɗaama* retreated into the impassable lowlands so as not to lose his authority, still nobody dared to violate the traditional taboo against cutting wood in the *ɗaama*'s burial grove. Thus, on Mount Gardula, part of the original mountain rainforest persisted as a sacred area.

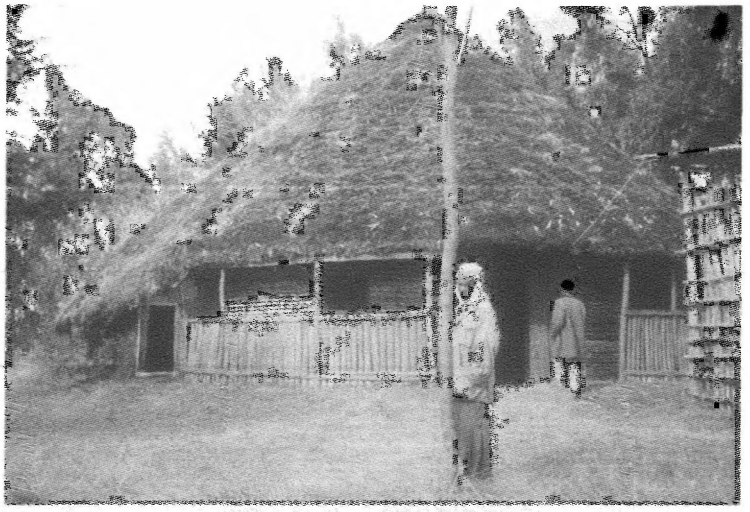
Mosques

M. (Arab. مسجد sg. *masǧid*, pl. *masāǧid*, lit. 'place of prostration'; Amh. and other Eth. languages መስጊድ, *mäsgid*) are places of organized public worship used by the followers of ↗Islam (Pedersen – Hillenbrand 1991:644f.). In principle, every ritually clean ground can be used as a place



Mosque of 19th cent. *šayḫ* Muḥammad Sərağ Aḥmad Raḥmi in the village of Hadrä near Qawwa Qoto, Aliččo-Wuriro, Səlṭe; photo 2005, courtesy of Dirk Bustorf

of worship, but the term M. is mainly used for buildings constructed specifically for this purpose. The role of the M. is not limited to prayer; they are also places of gathering, discussion, and rest. In M., the Qurʾān is recited and commented upon, religious lectures are given to the people, and learned men offer advice to visitors. In times of ↗famines and other calamities, M. call on Muslims to make financial and material contributions for relief work. They are also centres of traditional Islamic ↗education.

A *masǧid ǧāmiᶜ* (or more simply and currently, *ǧāmiᶜ*) is a M. that accomodates a large number of worshippers on the occasion of the compulsory weekly collective prayer on Fridays at *ẓuhr* time, which is necessarily preceded by the sermon (*ḫuṭba*). Whereas *ǧāmiᶜ* is usually the major religious building of a town, there is a simple *masǧid* in every neighbourhood.

The central elements of a modern M. building are the prayer hall (*muġaṭṭā*), prayer niche (*miḥrāb*), pulpit (*minbar*), minaret (*manāra, miʾḏana, maʾḏana*) and dome (*qubba*). Some M. also have a platform for the *muʾaḏḏins* (*dakka*) and a reading-stand (*kursī*) for the reading from the ↗Qurʾān. The floors are usually covered by carpets (*bisāṭ*). Common M. paraphernalia include chandeliers, reliquaries and ↗incense burners.

M. enhance the believers' commitment to their religious obligations, promote unity among the members of Muslim communities and guarantee doctrinal conformity as well as consensus on secular issues. Attendance of M. is at its fullest during the ↗*Ramaḍān*, especially in the evening when the *īšāʾ* (obligatory) and *tarāwīḥ* (optional but highly recommended) prayers (*ṣalāt*) are offered, at the two major Islamic festivals, *ᶜĪd al-fiṭr* and *ᶜĪd al-aḍḥā*, and the weekly Friday noon congregational prayer.

Personnel

All M. have at least one permanent ↗*imām*, who acts as a leader of prayer for the faithful. The *imām* is responsible for maintaining order and is in charge of the services offered in the M. The *imām* is chosen from among those well-versed in religious matters. During the service, the *imām* stands beside the *miḥrāb* or sometimes on an elevated position. Occasionally a M. has a deputy *imām*. The *imām* can also temporarily concede his function to another person present in the M. (e.g., in order to show respect to a senior guest or scholar). If a M. has several *imāms*, they can read parts of *ṣalāt* one after another or celebrate the service simultaneously in different parts of a M. The *ḫaṭīb* (deliverer of the Friday noon sermon) is often, but not necessarily, the *imām* of the M.

The *muʾaḏḏin* who summons people for prayer is another important member of the M. (cp. also ↗Bilāl b. Rabāḥ al-Ḥabašī).

Sometimes a M. may have an administrator (*nāẓir*) who would manage the finances and other affairs of the M. Many M. have committees that run their affairs and maintain loose administrative links with the office of the Supreme Council.

There are no government subsidies or guaranteed regular income for the personnel.

Types and development of edifices

In Ethiopia three types of M. can be distinguished, based on the materials out of which they are constructed and the architectural style.

The most basic type, and the earliest one to emerge and spread, is the rural *zāwiya*. For many centuries, this was the dominant type. *Zāwiya* buildings are constructed out of wood and mud, and often have a thatched roof but neither a dome nor a minaret. They do not differ much from ordinary houses except that they have a large prayer hall and a prayer niche. Sometimes the symbol of the star and crescent can be seen on the roof. A well-known example of an open prayer esplanade with merely a prayer niche and a pulpit is Ras Midr in ↗Massawa, which resembles one of early prayer spaces typical of the Ḥi-

ğāz in the early days of Islam.

In towns, more spacious M. made out of cut stones and bricks (or coral stones in coastal Eritrea), and at first attached to the residences of the pious and wealthy merchants and philanthropists, started to be constructed. They had ceilings supported by stone pillars, and were covered with imported or locally-made corrugated iron sheets. Architecturally, they reflected modified forms of Ottoman and North African styles. Each of these M. usually had a simple (and sometimes domed) minaret but not a large dome.

Since the 1980s a modern architectural style, reflecting the influence of the Arab Middle East and the Indo-Pakistani world, has been introduced. A typical M. has a semi-circular but not a bulbous or onion-shaped dome, as found in India under the Mughals (1526–1857) and in Asia in general, a square minaret, as in North Africa, and sometimes, a polygonal one. The construction of large domes and more than one minaret started only recently. The style of M. is often determined by persons and organizations financing their construction.

Pictures and images are traditionally excluded from the M. Elaborately-designed arched doors and glazed windows, exquisite carpets, book-shelves, wall clocks, calligraphic inscriptions from the Qurʾān on ceilings and walls, and large chandeliers are some of the new features of the decorative art displayed in the interior of recently-constructed M. Many have marble floors, mosaic pillars, large domes and several minarets.

Naming of mosques

In Ethiopia M. are popularly identified by the names of the neighbourhoods or quarters of the towns in which they are located. In today's ↗Addis Abäba, with the exception of al-↗Ǧāmiᶜ al-Anwar, the M. (estimated at 146 in total) are better known by the names of localities, ethnic groups, philanthropists who financed their construction, important personalities, and public institutions than by their official designations. These include, among others, Banin *Säfär* (an-Nūr, ↗Qatbare); *Säfär* Sälam (Bilāl), Kolfe (Ḥasan b. ᶜAlī), Qera (Salām); ↗Adäre *Säfär* (Ḥusayn b. ᶜAlī), Kʷas Meda (Abū Bakr aṣ-Ṣiddīq); *al-Ḥāǧǧī* Yūnus Aḥmad (Ṣalāḥaddīn); ↗Gurage (Maḥallī); Ādam Bädane (Hamza); and Fəl Wəha (at-Tawfīq). In Däse the principal M. are named after the town's neighbourhoods: Šäwa Bärr, Dawudo, Aräb Gända and Säññǒ Gäbäya. In Massawa and its surroundings M. were named after predominant legal schools (e.g., Ǧāmiᶜ al-Ḥanafī, Ǧāmiᶜ aš-Šāfiʾī), holy men (e.g., Šayḫ Aḥmad an-Naǧāš), the founders of Sufi orders and their descendants (e.g., Šayḫ ↗Muḥammad ᶜUṯmān al-Mīrġanī, ᶜAbdalqādir al-Ǧīlānī etc.) and locally powerful notables and families (e.g., Sayyid Muḥammad Masāwa). In Asmära, most of its ca. 30 M. (six of which are *ǧāmiᶜ*) are similarly named after the holy men or important personalities of Islamic history, e.g., ↗Ǧāmiᶜ al-Ḫulafāʾ ar-Rāšidīn, Ḫālid b. al-Walīd, ᶜUmar b. al-Ḫaṭṭāb, al-Ḥāǧǧ Abrāb and Abū Bakr aṣ-Ṣiddīq, ᶜAlī b. Abī Ṭālib, ᶜAlī Mūz, ᶜUmar b.

An Argobba mosque, typical for the Harär area; photo 1984, courtesy of Ewald Wagner

ᶜAbdalᶜazīz, and al-Ḥāǧǧ Ibrāhīm Muḥammad Ḥusayn. The M. named after ᶜAbdalqādir al-Ǧīlānī stands beside the *maqām* of the ↗*walī* where members of the Qādirīya *ṭarīqa* used to perform their ↗*ḏikr* every Thursday night.

History of M. construction

The first M. must have appeared in the Ethio-Eritrean region from the time of the advent of Islam. Arabic sources from the heydays of the Islamic principalities (9th–16th cent.; e.g., Ibn Faḍlallāh al-ᶜUmarī, s. TrIslam 73, 78) mention a number of M. However, with the expansion of the Christian empire beginning in the 14th cent., a large number of rural M. were destroyed. Christian emperors banned the construction of M. within the territory under their jurisdiction. Muslims had to revert to the use of *zāwiya*s which fulfilled all the functions of the M.

Ruins of mediaeval M. (by no means the oldest in the area) have been discovered recently in north-eastern ↗Šäwa. On a steep hill called Goze, to the north-west of the town of Šäwa Robit, there is an ancient M. with walls and roof made of stone slabs. The structure is still intact (Kebbede Geleta 2000:186ff.; Stitz in UNCES, 187; Chernet Tilahun in PNCES 1, 307). At Turu Sina, not far from Kämise, there is a M. which also serves as a place for mystical retreat. It was constructed with split logs of big and tall trees. Other ruins of M. were found in Wesiso Nora and Asberi in the plain of Rasa (Chernet Tilahun in PNCES 1, 307ff.).

For Eritrea, one can surmise that on the ↗Dahlak islands, M. were at the disposal of the faithful to perform the compulsory prayers since the very beginning of the Islamic presence there. In the village of Dahlak al-Kabīr "M. with short minarets" among the ruins of the old site were mentioned by Puglisi (in PICES 3, 38). Other ancient Muslim populations in Eritrea probably had their M. in the highland, as well as in the coastal areas but no sufficient archaeological evidence is so far available.

In ↗Harär, which has been the site of a great number of M. since at least the 12th cent., the central M. was converted into a church at the time of the Šäwan conquest in 1887 (Gibb 1997:382) and in the Muslim kingdom of Ǧimma no churches were built until its incorporation in 1932 (s. ↗Abbaa Ǧifaar II).

The revival of M. building started in the 19th and 20th cent. Three periods can be singled out: the development under the influence of the Turks, Egyptians and Yemeni Arabs, the Italian occupation, and the post-war period.

The Ottoman and later Egyptian occupation of Eritrea brought about a rapid development of Islam and many M. were constructed during the 19th cent. The Šayḫ Ḥammāl (or Ḥammālī) al-Anṣārī M. and shrine (Cresti 1990; Gori 1995:88) built in Massawa in the 16th cent. is one of the most renowned holy places of the city. The Ottomans also renovated M., notably the Ǧāmiᶜ al-Ḥanafī, associated with the legal school they promoted. Following their brief and ultimately unsuccessful attempt to gain a foothold in the Eritrean highlands, the Ottomans took ↗Dəbarwa in 1559 where they constructed a Friday M. and several lesser ones. From the mid-19th cent. a significant growth in M. construction on Massawa island is registered, their number tripling from four in the 1840s to twelve in the 1890s. In addition, Islamic court records from the mid- to late-19th cent. show that wealthy merchants in Massawa had endowed (Arab. *waqf*) various kinds of real estate property to local M. (Miran 2004:243–52).

At the same time new M. were built in Harär, whose rulers also patronized M. in distant areas, e.g., the 18th-cent. *amīr* ↗ᶜAbdaššakūr b. Yūsuf is associated with a M. at ↗Šayḫ Ḥusayn of Bale, dedicated to ᶜAbdalqādir al-Ǧīlānī. The architectural styles of Harär M. reflected the influence of those existing in the Islamic world, particularly in Egypt.

The same period gave impetus to the construction of the first M. in Addis Abäba. The oldest M. in the capital was founded in 1898 on a site not far from the imperial palace (↗*Gəbbi*). It was built on the initiative of an Indian Muslim mason, Walī Muḥammad, on the land he had been granted for his services in the construction of the palace. The idea of construction of a big M. came from the Turkish envoy of *sulṭān* ᶜAbdalḥāmid II, ↗Sadıq *paša*, who was sent to Mənilək in 1904. In the name of the local Islamic community of Addis Abäba (numbering ca. 2,000) he submitted a formal request for permission to build a main M. in the capital. Though Mənilək agreed, no such M. was built prior to the Italian occupation. A M. was built in Gondär in 1900/01 on a plot of land obtained with the permission of Mənilək II (Solomon Addis Getahun 1997:4). Banin *Säfär* M. was founded in 1911 (s. Hussein Ahmed 1997:340; Gori 2005:82).

The Italians, in an attempt to win the support of the indigenous Muslims, adopted a pro-Islamic policy. They restored the old M. in Massawa and promoted construction of new ones, both in Eritrea and later in Ethiopia. They financed the principal M. of ↗Asmära (1900; Ǧāmiᶜ al-Ḫulafāʾ ar-Rāšidīn was also renovated by the Italians in 1937), the Sayyid Hāšim shrine in ↗Ḥəṭumlo (1902) and another in ↗Ǝmbärämi near the revered *qubba* of the ↗ᶜAd Šek. The Italians also funded a Friday M. in ↗Kärän in 1896 as well as another one, following *sayyid* Ǧaᶜfar al-Mīrġanī's settlement in the town in 1903. Friday M. were constructed in ↗Asäb (1892), ↗Tïʾo (1907), ↗ᶜAddi Qayyəḥ (1909), ↗Aqordät (1911) and ↗Mändäfära (1912). By 1911 Massawa area alone had ca. 65 M. (Odorizzi 1911), and by the end of the colonial period there were over 20 M. in Asmära. M. were also constructed in ↗Ginda ᶜ (1933), ᶜAlī Gidir (1935), ↗Naqfa (1935), ↗Täsänäy (1937), Sägänäyti (1938) and ↗Barentu (1938). The "small" *ǧāmiᶜ* was built in ᶜAsäb in 1938. In Ethiopia, the Italians constructed new M. in Addis Abäba, repaired those at Säqota, Čəlga, Däbarq, Ǝslamge (↗Addis ᶜAläm in Gondär), Dangəla, Ḥayq, Däse, Mätämma, ↗Harär, Dərre Dawa, Ǧiǧǧiga, Miʾesso, Asbä Täfäri and Gobba (TrIslam 137). The Ǧāmiᶜ al-Anwar M. in Addis Abäba was founded in 1936.

Under the ↗British Military Administration in Eritrea more Friday M. were built in ↗ᶜAddi K̲ʷala (1943) and ↗Qarora (1948). By 1942, there were 27 M. in ↗Ḥərgigo. During the period of the ↗Ethiopian–Eritrean Federation, Ḫaylä Śəllase attempted to gain favour among Eritrean Muslims by funding the renovation of the Ḥanafī M. in Massawa (1953) and the *ǧāmiᶜ* in Aq̲ordät (1956–57). In 1956 there were 796 M. in Eritrea, 36 of them were Friday M. (Ibrāhīm al-Muḫtār 1958). The opening of the Ǧāmiᶜ ᶜAbdalqādir and the Ǧāmiᶜ Akriya in Asmära in 1961 raised the number of Friday M. in the city to three.

The post-war period, and particularly the post-1974 years witnessed an unprecedented boom in M. construction throughout the country, due to the liberalization of religious policies. In many cases the financial costs of construction were covered by the Muslim community, and in recent years, by external Islamic philanthropic organizations, or by anonymous, pious and rich individuals based inside and outside Ethiopia and Eritrea. Numerous new M. appeared in Addis Abäba (there is a growing trend of M. being constructed in new neighbourhoods), Asmära and elsewhere. Many M. have been constructed in the towns and rural areas of the regional states of Oromiyaa, the south, Amhara and ᶜAfar. Harär probably remains the town with the highest concentration of M. in relation to total area and population. In the early 21st-cent. new foreign-funded (mainly Saudi) M. were constructed at various locations in Eritrea, including Massawa, ↗Säncafe, Mändäfära and ᶜAddi K̲ʷala.

Often there are M. and churches in close proximity to each other, symboling peaceful coexistence of Islam and Christianity. Good examples are the Ǧāmiᶜ al-Anwar and the Raguʾel Church, and the *šayḫ* ↗Ḫʷağali M. and Rufaʾel Church, both in Addis Abäba, or the Ǧāmiᶜ al-Ḫulafāʾ ar-Rāšidīn and ↗Ǝnda Maryam Church in Asmära. The only two places where a ban on the building of M. is still in force are the towns of ↗Lalibäla and ↗Aksum (in nearby ᶜAdwa there are two M.) where several clashes between Christians and Muslims demanding the right to set up a M. took place in 2003 and 2004.

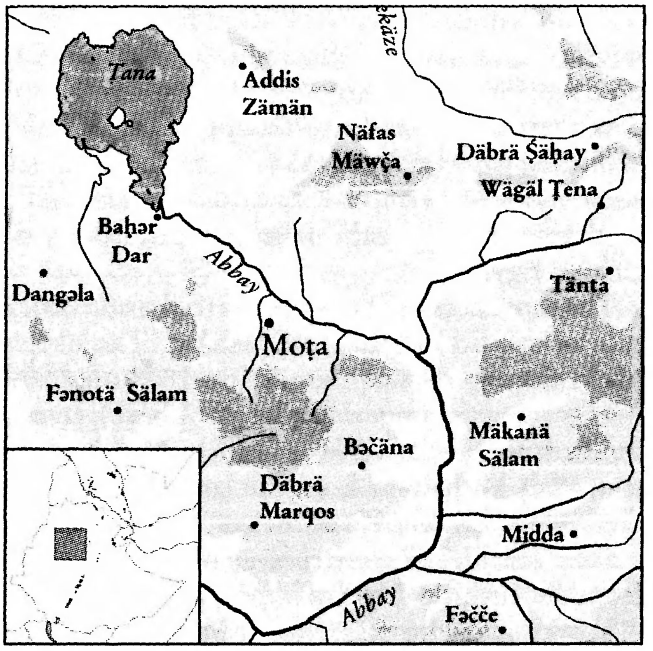
Moṭa

M. (ሞጣ) is a town located in the middle of a rich countryside north of Mt. ↗Č̣oqqe and south of the ↗Abbay canyon, at 2,536 m A.S.L.



This town, founded around the old ↗Moṭa Giyorgis church, has the most important market in East Goğğam. It also has administrative services and an airfield. The town's influence, however, is overshadowed by the growth of ↗Baḥər Dar and ↗Däbrä Marqos.

Before the 1991 federal reform, M. was the capital of M. *awraǧǧa*, a subdivision of the Goğğam administrative region (East Goğğam in 1987). Since the elimination of the *awraǧǧas*, M. has been the capital of the Hulät Əğ Ənnäse *wäräda*, a part of the Məsraq Goğğam zone of the Amhara *kəllәl*.

Populated with 12,934 inhabitants in 1984, the town grew quickly after the Baḥər Dar–M.–Däğän road was improved. It had 24,096 inhabitants in 2000.

After the completion of the Abbay Bridge, a main road directly connecting Baḥər Dar and Däbrä Marqos was built through Däbrä Marqos, south of Mt. Č̣oqqe. After the 1967 Goğğam revolt, the Ethiopian authorities improved the road running through M.

Motä Aron

The M.A. (ሞተ፡ አሮን, 'The Death of Aaron', also known as ገድለ፡ አሮን, *Gädlä Aron*, 'Acts of Aaron') is a ↗Betä Ǝsraʾel work based upon an Arabic–Christian version, itself derived from a Syriac homily by ↗Jacob of Serug, of the short biblical tale on the death of Aaron (Num 20:22–29) – which served as the basis for later Jewish, Christian and Muslim legends exploring the subject in greater detail.

According to the M.A., ↗Moses is informed of Aaron's approaching death, and despite Moses's intervention his brother is not spared. Aaron officiates as High Priest for the last time and passes his priestly vestments on to his son, Elazar. After bidding farewell to both Elazar and Moses, Aaron dies.

No Christian Ethiopic version of this legend has been discovered to date, but the M.A. is likely to derive from such a text, and to be not itself a direct translation from the Arabic. The existence, however implied, of an Arabic *Vorlage* would entail a dating of the Gəʿəz text not earlier than the 14th cent.

At present, the only available copies of the M.A. are two manuscripts in Tel Aviv University library, Faitlovitch collection, that reveal two successive stages in the adaptation of the text for Betä Ǝsraʾel's needs. One of these mss. contains a text in which only the most conspicuously Christian references have been deleted, while the attribution to "The Blessed and Holy Father Jacob of Serug" is retained. The other manuscript, used by Wurmbrand as the primary text for his 1961 edition and Hebrew translation, has been thoroughly "de-Christianized", with an attempt to eliminate some of the narrative inconsistencies passed from Syriac and Arabic into Gəʿəz.

Moṭa Giyorgis

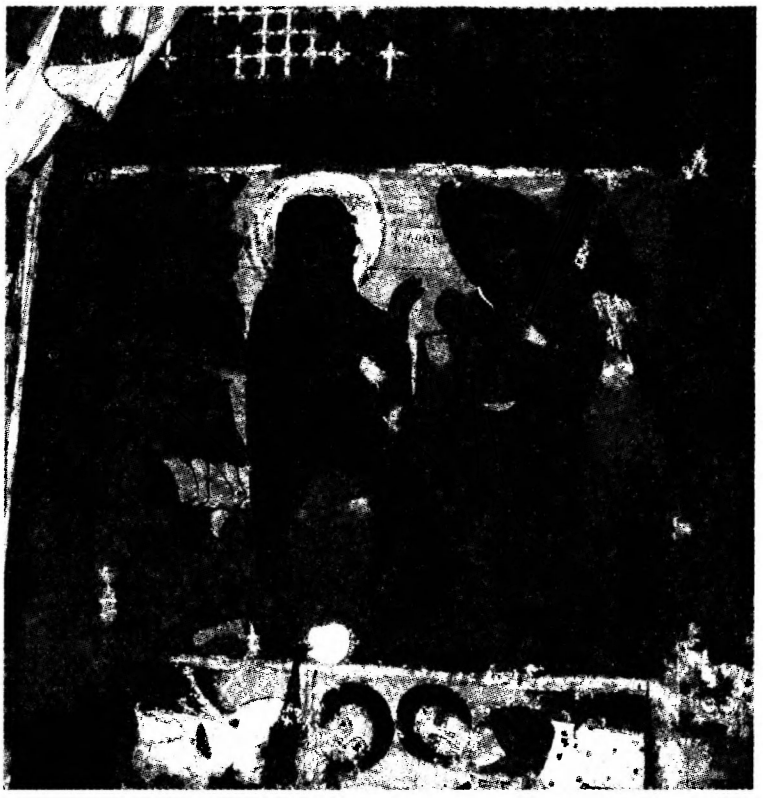
M.G. (ሞጣ፡ ጊዮርጊስ, also ሞጣ፡ ጊዮርጊስ፡ ደብረ፡ ገነት, Moṭa Giyorgis Däbrä Gännät) is a round church consecrated to St. George in Goǧǧam, Hulät Ǝǧ Ǝnnäse *wäräda* (formerly Moṭa *awraǧǧa*; currently East Goǧǧam zone of the Amhara region).

M.G. was founded by ↗Wälättä Ǝsraʾel, daughter of *ətege* Məntəwwab (↗Bərhan Mogäsa), during the reign of *aṣe* ↗Iyoʾas I (CrumLand 105; Habtamu Mengistie 2004:14, 44ff.). Richly endowed by Wälättä Ǝsraʾel, the church was to serve for the promotion of her family's interests in Goǧǧam. The text of Wälättä Ǝsraʾel's land grant followed the model of the ↗*gʷəlt* of ↗Däbrä Ṣäḥay Qʷəsqʷam (CrumLand 167f.). The pattern of the *gʷəlt* of M.G. was, in turn, followed by the grants to the Qäranyo Mädḫane ʿAläm church, often associated with M.G. and founded by Wälättä Ǝsraʾel's grandson *ras* ↗Marəd Ḫaylu, and to the Däbrä Elyas monastery founded by *aṣe* ↗Täklä Haymanot II (CrumLand 2000:213; Crummey – Daniel Ayana – Shumet Sishagne in PICES 11, vol. 1). The success of the formal and legal pattern of M.G.'s foundation (with 1/3 of the lands distributed to the *balärəst*, i.e. holders of ↗*rəst*, and 2/3 to the ↗*däbtära*) is confirmed by the substantial number of the charter's copies preserved in different Goǧǧam monasteries (Däbrä Marqos, Yägʷärä Qʷəsqʷam, Däbrä Elyas, Märṭulä Maryam; s. Habtamu Mengistie 2004:36, 44).

The M.G. church had the right of ↗asylum, like most of the important royal churches. Its head originally bore the title of ↗*aläqa*, whose second title was *liqä ṭäbbäbt* (s. ↗*liq*; according to Wälättä Ǝsraʾel's charters partially published by Habtamu Mengistie 2004:44ff.). Today the *aläqa* of M.G. has the additional honorific title of *mälakä gännät*.

Ever since its foundation, the M.G. church was an important centre of traditional ↗education (AbbSéjour vol. 2, 33). *Arat ʿayna* Goššu (lit. Goššu the "Four-eyed", d. 29 *Ṭərr* 1861 A.M. [6 February 1869 A.D.]), thus called for mastering the traditional exegesis of the four groups of church books (cp. ↗*Mäṣḥaf bet*), taught at M.G. in the mid-19th cent. Among his famous students was ↗Kəflä Giyorgis, who later became the assistant of Ignazio ↗Guidi (Cowley 1974:169).

In the second half of the 19th cent., the M.G. area was affected by the recession caused by the pillages of *ras* ↗Ali and then *aṣe* ↗Tewodros II on the one hand and the ↗famine on the other. A famous ↗*qəne* recalls the calamities of the ↗*Kəfu qän* (published in Maḫtämä Śəllase Wäldä



Moṭa Giyorgis church, *mäqdäs* wall-painting, miracle of St. Mary, saving the soul of the cannibal (garments of St. Mary made of textile enhanced with metal, end 18th cent.); photo 2006, courtesy of Paul Henze

Mäsqäl 1961/62, no. 169; tr. 'How to plough the lands of Moṭa and Qäranyo? / How to plough the lands of Dämbäčča and Däbrä Wärq? / Going from here to there I have seen no more oxen [or: I walked on dead bodies]').

Beautiful mural paintings have been preserved in M.G. (s. fig.). The walls of the ↗*mäqdäs* (on the west, south and north sides) bear murals dating most probably from the foundation time. Two representations of St. Mary are remarkable. On the northern wall, at the right side of the door, the "miracle of the cannibal" (*Bälaᶜe Säbᵓ*) is depicted (s. ↗*Täᵓammärä Maryam*; ↗*Kidanä məḥrät*). The mantel and the dress of the Virgin are made of textile and enhanced by metallic decorations around her head, shoulders and arms.

On the right side of the western wall of the *mäqdäs*, there is a conventional picture of St. Mary and Child protected by the archangels. It has been repainted by *aläqa* Dästa of Säqoṭa, but two ancient pieces of red textile with floral motifs have been kept on the Virgin's ↗*alga*. Noble ↗donors are painted at the bottom of both murals.

The Chronicle of Iyasu II accounts that Məntəwwab, while commissioning the mural paintings of Däbrä Ṣäḥay Qʷəsqʷam, ordered St. Mary's vestments to be made of precious textiles instead of being painted, and her neck and wrists to be gilded with necklaces and bracelets (GuiIyas 106). Whereas Däbrä Ṣäḥay Qʷəsqʷam's murals have disappeared, M.G. might testify to the same *modus operandi*. The foundation of Wälättä Ǝsraᵓel has therefore more than one common point with the foundation of her mother, whose baptismal name was Wälättä Giyorgis.

Interestingly, three stripes of paintings, dating most probably from the same period, have been preserved on the upper part of the inner wall of the *qəddəst* facing the northern and western faces of the *mäqdäs*. Some scenes depicted on them, such as, e.g., the killing of Uriah, husband of Bathsheba, arranged by King David (2 Kings 11), are quite unusual. This remarkable scene – maybe a *hapax* in Ethiopian painting – depicts the first in a chain of events that eventually led to the birth of ↗Solomon, Bathsheba's son.

While Goğğam played a prominent role as the centre of Unctionist (↗*Qəbat*) movement in the history of christological controversies (↗Christology), M.G., at least since the middle of the 19th cent., was the stronghold of the ↗*Täwaḥədo* (Kropp 1987:110). M.G.'s library possesses a copy of the ↗*Nägärä haymanot* (here preserved in a manuscript containing *Mäṣḥafä mänäkosat*; ↗Monastic literature), which synthesizes the ↗*Karra* point of view on the history and the ideologies of the different doctrinal schools. The text, known in a few copies, lays the foundation for the anti-*Qəbat* ideology (Kindeneh Endeg 2004, ch. 1; Getatchew Hayle in PICES 6, 242).

Motä Muse

M.M. (ሞተ፡ ሙሴ, 'The Death of Moses') is a Gəᶜəz work which focuses on the last days on earth of a major biblical figure (as do ↗*Motä Aron, Gädlä* ↗*Abrəham, Gädlä* ↗*Yəsḥaq* and *Gädlä* ↗*Yaᶜəqob*), its main protagonist being the greatest of the biblical prophets and patriarchs, ↗Moses (cp. ↗*Ardəᵓət* and ↗*Nägärä Muse*). In M.M., he is informed of the day, but not the date, of his death; and is thus troubled, having to leave his family. By showing him a worm living "in the stone", and yet feeding on green sprouts secured from Heavens, God assures him that the latter shall be taken care of. When the angel of death appears, Moses is granted the opportunity to take leave from his mother, wife and children. He then meets angels who are preparing his grave, and then dies.

M.M. is usually assigned to the literature of ↗Betä Ǝsraᵓel (who recite it at ↗funerals); and is perhaps the best studied piece of it, published in several editions which rely on a wide range of mss. All of the texts hitherto examined appear fairly uniform in format, with only minor variant readings distinguishing them from one other.

The M.M. is attested in recent mss. alone. Despite some general similarities with such well-known Jewish works as the Assumption of Moses (*Assumptionis Mosis*, also known as the Testament of Moses) and *Peṭirat Moše* ('The Death of Moses') it does not seem to directly draw on Jewish sources. Rather, a number of features have suggested the existence of a Muslim Arabic source for the Betä Ǝsraᵓel text, and thereby a dating of the latter to the 14th or 15th cent. – possibly, instead, a mere *terminus post quem*.

No Christian Ethiopian version of the work has been discovered so far; however, Moses is highly respected by both Christian and Betä Ǝsraᵓel traditions: unsurprisingly, the use of the M.M. in a Christian work is also attested (Nosnitsin 2003:159–62). A Christian version may have existed some time in the second half of the 15th cent. at the earliest, and was then possibly rejected when the text became identified with the Betä Ǝsraᵓel exclusively.

Motälämi

M. (ሞተለሚ; also Motälami, Motälome, Motä Lomi etc.) is the name of the half-legendary, mighty 13th/14th-cent. ruler of ↗Damot. The first part of the name (*motä-*) probably derives from the old south-Ethiopian title ↗*mooti*, to which a personal name of the ruler was attached.

M. is attested mainly in the Gəᶜəz hagiographic sources. The earliest mention of M., styled as *śəyyumä* ↗*Damot* ('governor of Damot'), is found in the commemorative text devoted to *abunä* ↗Täklä Haymanot on 24 *Näḥase* (included in the 16th-cent. version of the ↗*Sənkəssar*, but composed much earlier, s. Nosnitsin 2007). It tells that M. expanded his power over entire ↗Šäwa up to the river of ↗Ǧämma and invaded the place where the Saint's family lived (cp. ↗Ǝtissa). Täklä Haymanot's mother Ǝgziᵓ Ḫaräya was taken prisoner by M. but saved by Archangel Michael. Later, the Saint came to Damot and converted M. and his subjects, and destroyed the local warlocks and the sites of their cults (GuiSyn I, 378-83).

The existence of once powerful Damot, harassing both Muslim and Christian neighbouring regions, and of its capable local military leader(s), seems to be certain (cp. TadTChurch 121). Based mostly on the initial short account, other, more recent versions of the Acts of Täklä Haymanot expand the story (cp. Nosnitsin 2007). They include further details, which, whilst frequently

being contradictory, are not necessarily pure literary elaborations. However, the provenance and historical background of these details, generally referring to the historical realities of southern Ethiopia, is difficult to define. Among such details are, e.g., the names of M.'s mother Ǝsländäne and M.'s father Motäqal (*mooti* + name?). Mount Bilat appears as the main sanctuary in old Damot. Some features of M.'s authority are discernible: he was not an absolute ruler, but strongly depended on the "warlocks" and had to consider the opinion of his people. He took the wives of the rulers he had subdued as concubines. The capital of M., Mälbäradi (Mälbarade etc.), may be, in fact, not a toponym, cp. ancient terms designating the parts of the royal camp in the History of the Campaign of ↗ᶜAmdä Ṣəyon I: Märᶜade (KrAmdS 7 and no. 40 [tr.]; MarAmdS 54f.) and Mal/Gramal (KrAmdS 27 [tr.]; MarAmdS 92f.). Finally, the pattern of the conversion of M. and the evangelization of Damot also reflects the historical situation, including, e.g., Täklä Haymanot's deviation from some prescriptions of Canon ↗law while dealing with M. and other new converts (TurIz 86ff.). Later M. appears as a devote Orthodox Christian (though the traditional cults had not been eradicated in Damot by the 15th cent. and later).

As to other traditions, a valuable account appears in the 14th/15th-cent. Acts of ↗Yared, which tell of the last king of the ↗Zagʷe dynasty, Zena Ṗeṭros (cp. CRStor 317; he is usually excluded from the reconstructions of the Zagʷe line, s. DicEthBio 200-05), who went to fight the prince (*mäkʷännən*) of Damot M. and lost his life (Conti Rossini 1904:22-26). The priests of his royal camp (*kahənatä däbtära*) were captured by M., but then converted him, destroyed the "warlocks", and stayed in Damot until the coming of *aṣe* ↗ᶜAmdä Ṣəyon I (cp. Guidi 1889:63; indeed, M. is mentioned among the vassals of this Emperor). In the Acts of Täklä Haymanot, a similar story of the conversion of M., though not taken from the Acts of Yared directly, was incorporated into the 15th-cent. so-called Ḥayq or Däbrä Libanos 1 recension of the Acts. Here, Täklä Haymanot liberated the ecclesiastics who had spent years in the captivity of M. and retrieved their ↗*tabot*.

Some other saints' Acts contain further stories about M., which rather resemble "hagiographical novels" than accounts of real events. The common pattern is to attach the protagonist of the Acts (or his relatives) to Täklä Haymanot (or Ǝgziᵓ Ḫaräya). This is the case of the Acts of ↗Yoḥannəs Məśraqawi, which contain two accounts of Täklä Haymanot's and *abunä* Yoḥannəs's "fight" with M. (Marrassini 1981:167-82, 335-55). In the Acts of *abunä* ↗Qäwisṭos, the captivity of Ǝgziᵓ Ḫaräya is shared by the mother of the saint (Raineri 2004). The narrative structure in the Acts of *abunä* ↗Tadewos of Däbrä Maryam (Six 1975) is even more complex, since Tadewos faces M.'s brother Zəgna, the ruler of Damot, and Mayuṭ, "the King of the Muslims".

The identification of M. as ruler of ↗Hadiyya (and Damot as its capital) by ↗Aṣmä Giyorgis is arbitrary, though he mentions descendants of M., which can be found in ↗Ǝnnarya and ↗Käfa (BTafA 215ff.). Elsewhere, traditions in southern Ethiopia keep a discernible link between M. and his original ↗Sidaama background (Fiaccadori 1993). In the 20th cent., the story of M. was included into the Chronicle of *aṣe* Mənilək II, an account of M.'s conversion preceding that of the conquest of the country of ↗Wälaytta (GueCopMen 360f.). The story of M. has also been preserved in some Wälaytta oral traditions, as well as in a written historical account of this ethnic group (esp. Bureau 1990:54–58; influenced by the Acts of Täklä Haymanot; cp. Tsehai Brhane Selassie 1975).

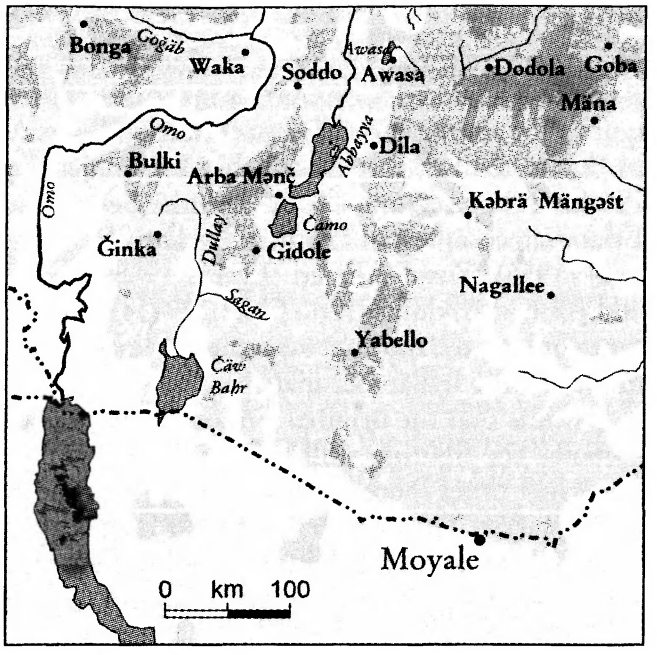
Moyale

M. (ሞዮሌ, Orom. Mooyalee, 3° 34' N, 39° 5' E) is a major border town located about 700 km south of Addis Abäba on the Addis Abäba–Nairobi international road connecting Ethiopia with ↗Kenya. It is the administrative centre of the *wäräda*, known by the same name, and the major regional market. There is an adjoining town by the same name on the Kenyan side, which was the site of an important British fort known as Fort Harrington, named so after the first British envoy to Ethiopia (Gwynn 1911:122; ↗United Kingdom of Great Britain and Northern Ireland). The town served as the seat of the British District Commissioner during the colonial period. A wide dry stream separates the two M.

M. is located in the ↗*q*^{w}*älla* agro-ecological zone, about 270–300 m A.S.L., and the area is prone to frequent drought. In Amharic, the name M. is used to refer to the chigger flea (*tunga penetrens*), which is widely found in and around M. (PankEcon 632). During the colonial period, pastoralists in ↗Boorana crossed the frontier to British M. to water their cattle at the wells maintained by the British.

M. became an important commercial town, due to its proximity to British East Africa and its location along the major trade route connecting Boorana, a major cattle raising area, and other major Ethiopian areas via the Waggeyra oasis to Kismaayo, the Kenyan Indian Ocean port. Because of its strategic location, M. has become a thriving town with an estimated population of 25,038 (Central Statistical Agency of Ethiopia 2005) on the Ethiopian side and 13,664 on the Kenyan side (Census 1999). The main ethnic groups in both parts of the town are Boorana and ↗Garre.

As early as 1902/03, the British officer Captain Maud carried out surveys along the frontier between Ethiopia and British East Africa to recommend the future frontier line, and predicted that M. would become "a considerable trade artery" because of its strategic location. After the opening of the M.–Nairobi road, trade across the southern frontier increased significantly. Zaphiro, the



Greek businessman and the frontier inspector at M. in 1910, reported on supplies being transported from M. via Badera to ↗Kismaayo, including ivory tusks, hides, coffee, rhinoceros horns, cattle, salt and other commodities. Imports from British East Africa through M. included cotton cloth and other manufactured goods (PankEcon 445).

In 1940 M. was the site of a major clash between British and Italian forces. The Italians crossed the border and attacked the well-fortified 1st King's Africa Rifle regiment, forcing it to abandon the base and retreat (MockWar 237). The British were able to retake the base after they received reinforcement from the south.

Since the partition of the M. region different governments have given weapons to the pastoralists who supported their causes. During the 1941 war, during the ↗Ogaden wars and even during the 1998–2000 and 2006–07 wars many refugees came to settle in both parts of the town.

Mulatu Wubneh

Mugād

M. is the term for associations of young people in ↗Harär. The descriptions of this institution differ quite a lot among the different sources. This may be due to the fact that Abdullahi Mohammed (in PICES 11) speaks mostly of the time before the Ethiopian conquest of Harär, while Duri Mohammed (1955), Yusuf Ahmed (Leslau 1965:112–19) and Ahmed Abdullah Kalo (ibid. 229–34) discuss, more or less, the time between the Ethiopian conquest and the Italian occupation.

It seems that the original aim of the M. was to enhance the fighting skills of the town's youth. In former times there existed only five M.: one in each quarter. The quarters had their names after the five gates and so did the M. The boys entered the M. after finishing the Qurʾān school (*qurān gēy*), usually at the age of 15 or 16. Every M. was hierarchically arranged into four ranks according to age. Each year, the oldest members, having occupied the highest rank for one year, retired from their membership, and all age-groups advanced by one rank, leaving the lowest rank to the newcomers.

The main activity of the M. was the stick fighting named *barti-barti* (Har. *barti*, 'stick') which took place at several occasions, e.g. on *Šuwāl īd* (observed on 8 *Šawwāl* [Har. *šuwāl*]) and in connection with the *ṭunsus*, the prenuptial celebrations. The biggest contests however, were organized on the 17th and 27th of ↗*Ramaḍān*: the former (Har. *Badri*), in commemoration of Prophet Muḥammad's victory over the Meccans at Badr, and the latter (Har. *Ḫātimat*), in celebration of the *Laylat al-Qadr*, the 'Night of Power', in which Muḥammad received the first revelation of the Qurʾān. In the presence of a huge crowd of spectators from both sexes and of the political and religious dignitaries of the town including the ↗*amīr*, the corresponding ranks of the different M. fought against each other, armed with sticks and shields. The members of the victorious M. were allowed to use not only the title of their own M.'s rank, but also that of the losing one. The members of the latter could not use the title anymore, unless they won it back in a later battle. The fights often resulted in severe wounds and even in lethal casualties, but it was not common to bring such cases before court.

The two big *barti-barti*-fights were forbidden by *ras* ↗Mäkʷännən Wäldä Mikaʾel, who was not interested in the military training of the Harari youth. The consequence of this was a change in the organization of the M. Most of them were then no longer affiliated to the five quarters of the town, but to the much smaller neighbourhood (*tōya*). Though the old names according to the gates further existed, most of the M. took their names from their *tōya* or from famous Harari warriors. The number of members of each M. varied from then on, from only a few up to 60, and the boys' M. got their counterpart in girls' M.

The *barti-barti*-fights were not totally abolished. They continued between the now much smaller M. during the month of *Raǧab*, on New Year (1 *Muḥarram*) and especially in connection with *ṭunsus*. If the bride's M. had invited a befriended boys' M., it could happen that the boys of a stronger M. would appear, drive those of the first M. away and take their place.

The main activity of the M., however, was then centred on the festivities at *Šuwāl īd* and even more on those of *ʿArafa* (*ʿĪd al-aḍḥā*, celebrated on 10 *Ḏū l-ḥiǧǧa*), with the M. gathering on the fifth day after *ʿArafa* (s. Leslau 1965:230f.): the boys rented a room where the members of their M. assembled and prepared meat and *uḫāt* (the Harari bread), while the girls met in the house of one of the members. It came to an exchange of food between the boys' and the girls' M. until finally the girls invited the boys to sing and dance together. After sunset the girls went home, whilst the boys retired to their hired room where they continued eating, drinking, and singing; they also slept there. The *ʿArafa* meetings lasted for a week or two.

Though the M. still existed when Sidney Ralph Waldron did his field research in Harär in the early sixties (Shack 1974:130, n. 4), they lost their social importance after the *ṭunsus* had been ostracized in the fifties because it promoted the mingling of sexes. Parents who allowed their daughters a *ṭunsus* were excluded from their ↗*afōča* (Leslau 1965:149f.).

Ewald Wagner

Mugär

The M. (ሙገር) is a tributary of the ↗Abbay (for location s. Mugär Gädam). Like many other Blue Nile tributaries in Šäwa, it originates in the mountainous massifs between Bulga in the east and Sälale in the north. The M. (whose upper course has also been known as Dubar in both 17th-cent. records and contemporary oral local tradition), runs northward from its source on Mount Alaltu into the Abbay.

The lower course of the M. (M. proper) has had particular strategic and political importance, esp. since the late 16th–early 17th cent. It was there that ↗Susənyos, then governor of Šäwa, drove the ↗Gafat people out to Goğğam. Having camped in Ǧaarso he attacked the whole area from Amonat to M. including Sälale, Angorča, Zega Däm (Zega-Wädäm). After he became Emperor in 1607, Susənyos gave order to launch a military expedition against the ↗Ittuu Oromo camping at Maqaa Waha (at the M.). The lower course of the M. seems to have been the site where he defeated and later pardoned them making them his subjects.

In the 19th cent., the M. valley, like that of the Abbay, was a crossroads for slave dealers between the Goğğam market of ↗Basso and the Šäwan market of Ǧaarso. One of the major gateways of the market of Roge in Sälale was Gəndä Bärät, sometimes called Mugär Bär.

During the Italian occupation (1936–41), the M. valley served as a power base for the Italian forces. It was from there that they tried to dislodge the ↗resistance base in Goğğam. In their attempt to neutralize the patriotic alliance between *däğğazmač* ↗Gäräsu Duki and ↗Mäsfən Səläši, the Italian forces, positioned in the area of today's Bakko as far as the Wälläga frontier, closely observed the M.

In the 1970s, a cement factory was built in the M. basin in western Šäwa (in the former Ǧebat-Mäčča *awraǧǧa*, now Western Šäwa Zone), another indication of the area's economic importance. A road was built to link the factory with the Addis Abäba–Naqamtee road in Holäta/Gännät.

In the pre-1989 administrative division of Šäwa, M. formed the eastern boundary of the Gəndä Bärät *wäräda* and the former Sälale *awraǧǧa*.

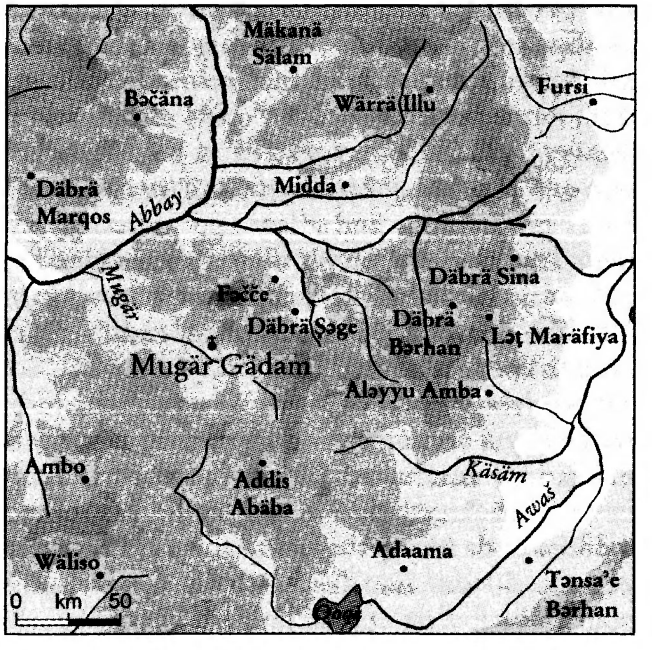
Mugär Gädam

M.G. (ሙገር ገዳም) is one of the most important *balä əğğ* (craftsmen's monasteries; s. Pankhurst 1995:145f.) of northern ↗Šäwa (cp. Məntək Gädam near ↗Ləṭ Maräfiya; Yällema Gädam in ↗Mänz). It is situated at the bottom of a deep ravine 30 km west of Däbrä Ṣəge (135 km north of Addis Abäba), next to two crevices in a cliff overlooking the ↗Mugär river. There is a spring above the crevices.

M.G. consists of several caves and traditional rectangular houses inhabited by monks and nuns (ca. 130 and 100 respectively in 2000). The first crevice is occupied by the *ṣälot bet* ('house of prayer'), the other by the kitchen and nuns' quarters.

M.G.'s history is linked to the ↗Betä Ǝsraʾel. According to the tradition, M.G. was founded in the late 17th cent. during the time of the Šäwan ruler *abeto* ↗Nägaśi Krəstos Wärädä Qal (interview with *abba* Bälaynäh) by the Betä Ǝsraʾel who settled in Šäwa at that time (Faitlovitch 1910:138). Other sources suggest a later date for the Betä Ǝsraʾel migration to Šäwa, during the rule of the mid-18th-cent. *märʿəd azmač* ↗Abbəyye (BTafA 513; AWTarik 69).

The life at M.G. today shows some affinity to the Betä Ǝsraʾel tradition. The monks practice the ↗blacksmiths' and ↗weavers' crafts, nuns special-



ize in ↗pottery (↗Handicrafts). They venerate Saturday ↗Sabbath, and live extremely frugally, eating only an evening supper for the rest of the week. The women have a *täkäto bet*, in which they are strictly confined during ↗menstruation. Unlike the Betä Ǝsraʾel, however, the *balä əgg* has no burial ground of its own, and uses the cemeteries of St. George or St. Michael churches nearby.

The ጸሎት፡ ቤት (*ṣälot bet*) is the centre of the monastery's religious life. Like in other craftsmen's monasteries, the function of ↗*tabot* is taken over by ምኩራብ (*məkʷərab*, 'shrine, sanctuary'). It has the shape of a tall altar-like erection, made of wood, situated in the centre of the chamber.

The monastery possesses several Christian manuscripts (IsKrapf 238ff.; Pankhurst 2001:173) and a number of printed texts.

Muggət

M. (ሙግት; properly Amh. ሙግት፡ በተጠየቅ፡ ሥርዓት, *M. bätäṭäyyäq śərʿat*, lit. 'litigation according to procedure of being interrogated', or *täṭäyyäq śərʿat*) is an ancient mode of litigation, named after a sort of "cross examination" (*täṭäyyäq*, lit. 'be interrogated!', s. below), which was one of the major parts of Amhara customary court proceedings and ↗law and judiciary system. Traditional open air courts were operative at least until the Italian occupation following the ↗Italian war of 1935–36, in many rural regions even to the second half of the 20th cent.

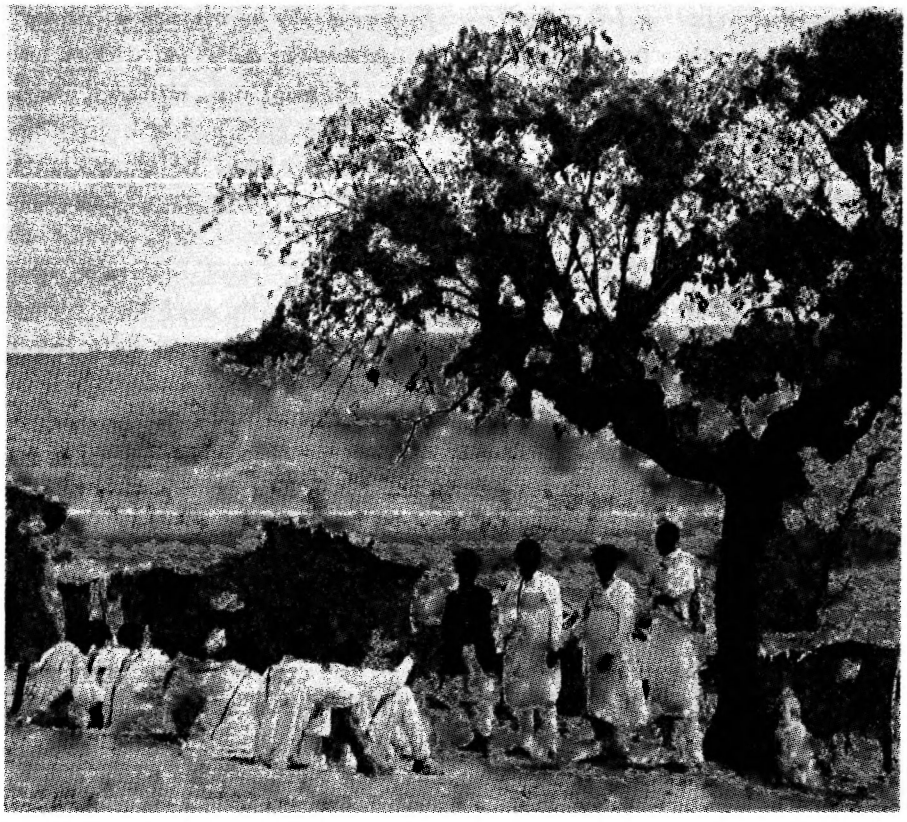
Daily conflicts at their initial stage used to be settled by a voluntary and spontaneous form of mediation, conducted by any passer-by. Only in case the "road-side judge" could not obtain a decision or found the matter beyond his competence, it was transferred to the next regular court. The lowest official judge (↗*Daññа*) could be any local representative (cp. Aberra Jembere 2000:248f.). Most people preferred to state their case themselves, without relying on an advocate or substitute.

To speak well at court was a great social value and highly esteemed. Combining a rather formalized frame of formulaic expressions with a high degree of spontaneity, subtle and ambiguous rhetorical devices and personal performance, M. is evidence of the great importance of verbal skills and rhetoric in traditional Ethiopia. Proverbs, riddles, poetry and other forms of ↗oral literature were used as a means of clarification and as techniques of establishing arguments.

Beside its legal function, M. was a great source of public entertainment. According to eye-witnesses, the whole process resembled a dramatic stage performance with the opponents displaying their dignity, rhetorical skills and credibility by verbal and non-verbal means of communication: bodily motions and impressing gestures, the using of leaning staff and the draping of *šämma* (↗Clothing) in special ways. (S., e.g., the lively report of the Swedish General Eric ↗Virgin as cited in Aberra Jembere 2000:250 and LevWax 230f.).

Regular court proceedings at all levels followed special stages with inherent rules. In criminal cases, the process normally started with a traditional investigation (↗*Leba šay*; ↗*Afärsata*), after 1941 by ↗police. (The greater part of cases, however, were civil matters such as debts, insults or land disputes.)

The following major constituents of court proceedings, partly overlapping and varying, can be quoted (for further details s. Aberra Jembere 2000:248–85): 1.) Securing a guarantor (የሥርዓት፡ ዋስ, *yäśərʿat was*): The court proceeding started with the naming of a guarantor who would secure that both parties respect procedures. 2.) Putting the claim forward (ክስ፡ ማቅረብ, *kəss maqərräb*): The judge required the plaintiff to put forward his claim, after that the defendant was required to admit or deny it. 3.) Laying wager or bet (ውርርድ፡ መትከል, *wərərrəd mätkäl*): Plaintiff and defendant laid wagers (be it in ↗*bərr*, ↗*amole* etc. or in kind, such as livestock and honey) or bets on the outcome to prove their credibility. Wagers were considered as part of the court fee and salary for the judge. 4.) Introduction of evidence (ማስረጃ, *masräggа*): Witnesses from each side were heard and possible documentary evidence was submitted to the court. 5.) "Cross examination" (ተጠየቅ, *täṭäyyäq*): After both parties had sworn obedi-



A *muggət* session in highland Ethiopia; from Osgood 1928:137

ence to the rules, plaintiff and defendant posed questions to each other, only one at a time, demanding a single and direct answer. If one of the parties violated these rules, it was required to pay the previously agreed bet or to name a guarantor for the payment. 6.) Poetic advocacy and challenge (**ውርድ፡ መንዛት**, *wərd mänzat*, sometimes called after the initial formula of this phase "**በላ፡ ልበልሃ**", *bäla ləbäläha*, lit. 'speak, so that I speak to you'; the final *-a* is used for the rhyme): Dialogic court poetry was crucial to the event, The parties used subtle verbal strategies and poetic devices including oral traditions in rhymed verse in order to convince the judge, the assessors and the audience. Each party strove to prove its credibility and to ridicule and harass the opponent by discrediting him in public or by flattering the judge and important members of the audience. 7.) Final judgement (**ፍርድ**, *fərd*): After assessors have given their opinion and recommended a decision, the *daññа* would give his judgement, demanding of the defeated to pay his bet and the court fees. 8.) An appeal to the decision (**ይግባኝ**, *yəgbaññ*) could be submitted to the next higher court. In some cases it proceeded through all the intermediary courts until it finally came before the crown court (**ዙፋን፡ ችሎት**, *zufan č̣əlot*), where the parties submitted to the decision of the Emperor.

After the administration of justice proclamation 1942, the M. system was replaced by modern procedural rules and ceased to exist.

Muguǧi ↗K^{w}egu-Muguǧi

Muḥammad

M. (محمد, M. b. ᶜAbdallāh b. ᶜAbdalmuṭṭalib, b. ca. 570, Mecca, d. 632, Medina), the Prophet of ↗Islam, is considered in the Muslim tradition to be the bearer of the last divine revelation to mankind. For the general facts of his biography, s., e.g., Watt 1953, 1956, 1961; Rodinson 1961; Buhl – Welch in EI²; Bobzin 2000. The present contribution focuses on M.'s attitude towards Ethiopia.

The sources commonly used for the reconstruction of M.'s life (mainly the *Sīra* by Ibn Isḥāq/↗Ibn Hišām, the *Taᵓrīḫ* by aṭ-↗Ṭabarī, the *Ṭabaqāt* by Ibn Saᶜd, various *ḥadīṯ* collections, and some Qurᵓānic commentaries) contain numerous pieces of information on his relationships with the Ethio–Eritrean area. The proximity of the land and the lasting and deep ties between ↗Arabia and the African shores of the ↗Red Sea fostered a quite intense connection of M. with al-Ḥabaša (↗Abyssinia). Some doubt

may be cast on the real historical value of the details preserved in the traditions but on the whole the episodes listed below can to a certain extent be considered reliable evidence for the strength of this connection.

It is not known exactly when M. was born. Only two dates in the life of M. are known: that of his *hiǧra* to Yaṯrib – Medina (622) and that of his death (632). Two verses of the Qurʾān (10:16 and 46:15) and, more clearly, an explicit passage from the *Sīra* (Ibn Hišām ed. by at-Tadmurī 1987, vol. 1, 263; Guillaume 1955:104) affirm that M. was 40 when he was granted the first divine revelation (*mabʿaṯ*). The *Sīra* also preserves a tradition that M. remained in Mecca within his Qurayš tribe for a little more than ten years, after he had been chosen by God (Ibn Hišām ed. by at-Tadmurī 1987, vol. 2, 154; Guillaume 1955:238, quoting a verse by Abū Qays Ṣirma b. Abī Anas). It is also accepted in Islamic tradition that the public preaching of M. probably started two or three years after he had received the first call to prophethood (Al-Mubārakfūrī s.d., 37, 52). From these data, we may thus surmise that M. was born in a lapse of time between 569 and 572. According to the prevailing but not unique Islamic tradition (Conrad 1986:234f.), M. was born during the "Year of the ↗Elephant" (*ʿām al-fīl*). This name is commonly explained with the famous episode of ↗Abraha's expedition to conquer ↗Mecca, destroy the Kaʿba and divert the great pilgrimage from the *ḥaram* (sacred enclosure) of the holy Arabian town to the church (al-Qullays) he had built in Ṣanʿāʾ (though other sources seem to place the episode in a year between 530 and 552; s. Conrad 1987:227f.). In the army of the Abyssinian leader there was a big and strong elephant called Maḥmūd which belonged to the ↗*naǧāšī* personally (according to Ibn Saʿd [n.d., vol. 1, 92], there were 13 elephants in Abraha's army). M.'s grandfather ʿAbdalmuṭṭalib, the head of Mecca at that time, tried to negotiate with Abraha, but to no avail. He asked the Abyssinan general to give back the camels he had seized but received a negative answer. Abraha attacked the Kaʿba but, according to all sources and the Qurʾān itself (*sūra* 106; Newby 1974), the divine intervention protected the "house of God". These events (Ibn Saʿd n.d., vol. 1, 90ff.; Ibn Hišām ed. by at-Tadmurī 1987, vol. 1, 64–69; CRStor 189–92) probably represent the background of the later Islamic tradition, sanctioned in a prophetic *ḥadīṯ* (al-Buḫārī 2001:286, *Kitāb al-ḥaǧǧ, Bāb Hadm al-Kaʿba, ḥadīṯ* no. 1596; an-Nawawī – Muslim n.d., *ǧuzʾ* 18, 252, *ḥadīṯ* no. 2909; Aḥmad b. Ḥanbal n.d., vol. 12, *ḥadīṯ* no. 7052–53; al-Fāsī 2000:175f.), that before the final judgement the Kaʿba will be demolished by an Abyssinian "with two thin legs" (*ḏū s-suwayqatayn*).

M.'s father, ʿAbdallāh b. ʿAbdalmuṭṭalib, had died before the boy was born, and M.'s mother Āmina gave him to a wet-nurse. The latter, Ḥalīma as-Saʿdīya, gave the boy back when he was five years and one month old. According to a tradition transmitted by Ibn Isḥāq (Ibn Hišām ed. by at-Tadmurī 1987, vol. 1, 192), this was preceded by an incident with some Abyssinian Christians. They saw M. with Ḥalīma after she had weaned him, asked her about him, turned him upside down and claimed that, aware of the exceptional status of the child, they were to take him with them to their king. The woman escaped with the child but preferred to give him back to his mother.

After his mother's death, M. was nursed by Umm Ayman al-Ḥabašīya, an Abyssinian woman who had been taken prisoner during Abraha's expedition and became a servant of M.'s father. When M. married his first wife Ḫadīǧa, he freed Umm Ayman, and she became the wife of Zayd b. al-Ḥāriṯ, another of M.'s freedman (an-Nawawī – Muslim n.d., *ǧuzʾ* 12, 343, *ḥadīṯ* no. 1771; according to Sayyid b. Muḥammad Ṣādiq 2001:273f., Umm Ayman was M.'s first nurse).

Later, too, M. maintained relatively close relationships with people of Abyssinian origin. Significantly enough, to indicate the duty to pay obedience to every ruler, in a famous *ḥadīṯ* the Prophet used the expression "even [if the ruler is] an Abyssinian slave" (al-Buḫārī 2001:1261f., *Kitāb al-Aḥkām, Bāb as-samʿ waṭ-ṭāʿa lil-imām, ḥadīṯ* no. 7162; an-Nawawī – Muslim n.d., *ǧuzʾ* 12, 467, *ḥadīṯ* no. 1837; Crone 1994). As it was common in Arabia, M. had Abyssinian servants in his household. Šuqrān al-Ḥabašī (Sayyid b. Muḥammad Ṣādiq 2001:61) was bought by M. (or received as a gift) from ʿAbdallāh b. al-ʿAwf, or inherited from his father ʿAbdallāh. The Prophet freed him after the battle of Badr (624). An Abyssinian (*ḥabašīya*) servant usually prepared a fermented but not intoxicating beverage called *nabīḏ* for M. (an-Nawawī – Muslim n.d., *ǧuzʾ* 13, 186, *ḥadīṯ* no. 2005). ↗Umm Ḥabība, the Prophet's wife, brought a servant called Baraka al-Ḥabašīya from Abyssinia (Sayyid b. Muḥammad Ṣādiq 2001:275). Hiding

behind a curtain in the mosque in Medina, M.'s beloved wife ʿĀʾiša saw some Abyssinians, called Banū l-Arfida, an apparent tribal name, who were dancing and playing with their spears during a feast (al-Buḫārī 2001:630, *Kitāb al-Manāqib, Bāb qiṣṣat al-ḥabaš, ḥadīṯ* no. 3520–30; ibid. 179, *Kitāb al-ʿīdayn, Bāb al-ḥirāb wad-daraq yawm al-ʿīd, ḥadīṯ* no. 949–50; an-Nawawī – Muslim n.d., *ǧuzʾ* 6, 433, *ḥadīṯ* no. 892).

M. apparently knew some Ethiopic, as in a tradition preserved by al-Buḫārī (2001:1057, *Kitāb al-Libās, Bāb al-ḥamīsa as-sawdāʾ, ḥadīṯ* no. 5823) he pronounced the words *sanāh, sanāh* meaning 'beautiful' (s. also CRStor 210). The Qurʾān has a number of Gəʿəz loanwords. Some of them are not attested in early Arabian poetry and thus, probably, are taken directly from Gəʿəz: notably, *raǧīm* 'stoned, execrated' < Gəʿəz *rəgum* 'cursed, execrated'; *ǧahannam* 'hell' < Gəʿəz *gahannam* (Jeffery 1938:106, 139f.).

Islamic tradition mentions 37 *ṣaḥāba* (companions of the Prophet) who are said to have been of Abyssinian origin. 30 (25 men and 5 women) are known by name (Sayyid b. Muḥammad Ṣādiq 2001:251–71, 273–78) while seven remain anonymous (ibid. 271–79). A certain number of them achieved an outstanding position in the history of early Islam: the first *muʾaḏḏin* of Islam ↗Bilāl b. Rabāḥ al-Ḥabašī; Abū Bikra al-Ḥabašī, who transmitted 132 *ḥadīṯ* of the Prophet; the *naǧāšī*'s nephew Ḏū Maḫmar (son of ↗Aṣḥam[a] b. Abǧar's brother), who came to Arabia accompanying ↗Ǧaʿfar b. Abī Ṭālib on his way home, and who also became a traditioner of *ḥadīṯ*; and Waḥšī b. Ḥarb who, when still a pagan fighting in the army of Qurayš, killed M.'s uncle Ḥamza b. ʿAbdalmuṭṭalib in the battle of Uḥud (625), and later, converted to Islam by the Prophet, fought against Musaylama al-Kaḏḏāb in the battle of ʿAqrabāʾ (634).

The emigration of some of M.'s companions to al-Ḥabaša in 615 ("the first ↗*hiǧra*") paved the way for an intensification of the relationships. Probably in 620, when M. was still in Mecca suffering from the political and economical pressure of the Qurayš pagans, a delegation made up of some 20 Christians, most likely from Ethiopia (although some traditions say they were from ↗Naǧrān; Ibn Hišām ed. by at-Tadmurī 1987, vol. 2, 42; CRStor 210), came to visit him, apparently to ascertain his true nature. They met M. in the *ḥaram* of Mecca. After the Prophet read them some passages from the Qurʾān, the Christians were so impressed that they eventually accepted M.'s prophetic mission and even convinced his uncle Abū Ǧahl, a stubborn pagan. The Qurʾān makes a direct reference to this episode in *sūras* 28:52–55 and in 5:82–84. In Ibn Kaṯīr's commentary on the Qurʾān (Ibn Kaṯīr 1994:380), a tradition transmitted by Saʿīd b. Ǧubayr is preserved, according to which the verses 28:52–55 were revealed to 70 priests whom the *naǧāšī* sent to the Prophet.

According to a tradition preserved by aṭ-Ṭabarānī in the *Muʿǧam aṣ-ṣaġīr* as quoted by as-Suyūṭī in his *Asbāb an-nuzūl* (n.d., 291), 40 Abyssinians took part in the battle of Uḥud against the pagans. Some of them were wounded. Seeing that the Muslims were very needy, they offered M. to share their properties with them and therefore the Qurʾānic verse 52:5 was revealed as a divine recognition of their faith and courage (s. also al-Baġawī 1992 vol. 4, 349, for a slightly different version: they were 40 Abyssinians who came together with Ǧaʿfar b. Abī Ṭālib).

The relationships between M. and the *naǧāšī* are well known. The Prophet received gifts from the Ethiopian king, such as a *ʿanaza* (a sort of spear) which M. used when preaching the two feasts' sermon (s. also CRStor 208) (according to other traditions [Ibn Saʿd n.d., vol. 1, 249], it was taken by Zubayr b. ʿAwwām from Abyssinia), and a pair of black "simple" (*sāḏiǧ*) shoes (ibid. 482). M. also had a ring with a stone from al-Ḥabaša (*faṣṣuhu ḥabašī*; ibid. 472; an-Nawawī – Muslim n.d., *ǧuzʾ* 14: 315, *ḥadīṯ* no. 2094 speaks of a silver ring).

According to Ibn Saʿd (n.d., vol. 1, 258f.), in the month of *Muḥarram* of 7 H. (628 A.D.), M. sent ʿAmr b. Umayya aḍ-Ḍamrī, who spoke Ethiopic, to the *naǧāšī* with two letters. The first letter called him to Islam, the second asked to arrange the wedding of the Prophet with Umm Ḥabība. According to the tradition, the *naǧāšī* converted to Islam, arranged the wedding, put the letters inside an ivory case and said that Abyssinia will be in prosperity as long as the two letters remain inside it. Aṭ-Ṭabarī (n.d., 652ff.) separates the two letters. He dates the mission of ʿAmr b. Umayya aḍ-Ḍamrī with one letter to the year 6 H., and mentions other details of the mission: the *naǧāšī* answered by a letter in which he openly accepted Islam and sent his son together with 60 companions to M., but they all perished in a sea wreck (s. also CRStor 209). Afterwards M. sent what seems to be the second letter concerning the marriage to Umm Ḥabība; finally Umm Ḥa-

bība and the other emigrants went back to Arabia on two boats, reaching M. while he was in an expedition against the oasis of Ḫaybar (628). When the Prophet came to know of the death of the *naǧāšī* in 630, he prayed for him (an-Nawawī – Muslim n.d., *ǧuzʾ* 7, 25, *ḥadīṯ* no. 951–53).

Muslims coming back from the Abyssinian *hiǧra* brought back some information about the country. Thus, Umm Ḥabība and Umm Salama told M. that in al-Ḥabaša they saw a church called Mārya, in which a holy man was buried and his image was painted. M. commented that to bury saints inside churches and paint sacred images on church walls was the custom among these people, but that those who do so will be the worst people in front of God on the day of Judgement (an-Nawawī – Muslim n.d., *ǧuzʾ* 6, 14, *ḥadīṯ* no. 528). Ǧaʿfar b. Abī Ṭālib's wife, Asmāʾ bint ʿUmays, who also participated in the *hiǧra*, saw the use of the bier (*naʿš*) for deceased people. She took it back to Arabia and put it into practice for the first time on the occasion of the death of Fāṭima, M.'s daughter (Ibn Saʿd n.d., vol. 8, 28).

During the period of illness that was to last until M.'s death, some of his wives together with other women and his uncle, al-ʿAbbās, decided to give the Prophet a medicine of apparently Abyssinian origin, called *ladūd* (see Ibn Manẓūr n.d., vol. 2, 357; Lane 1885, part 7, 2656f., for some observations on the meaning and origin of the word), to try to heal him. Made of seven ingredients, the *ladūd* was put into the patient's mouth on one side and rubbed in. It was brought to Medina by some women coming from Abyssinia (according to Ibn Saʿd n.d., vol. 2, 236, by Asmāʾ bint ʿUmays), and it seems to have been considered a good remedy for pleurisy (Ibn Hišām ed. by at-Tadmurī 1987, vol. 4, 300f.).

In Ethiopia, as elsewhere in the Islamic world, M. is highly revered by the faithful. This devotion is clearly expressed in a large number of poems written in praise of the prophet by Ethiopian and foreign authors both in Arabic and in local languages (Drewes 2007). These poetical texts are commonly recited and sung in every important religious celebration and festival, especially during ↗*mawlid*.

Christian Ethiopia is also well acquainted with M. Many traditions and legends on the life of M., the origin of his doctrine and the spread of his creed developed and are well attested in Gəʿəz and Amharic texts (details and bibliography in Mittwoch 1915; Gori 1993 [1995]).

Muḥammad ᶜAbdallāh Ḥasan

M. (b. ca. 1856, Buuhoodle district, Somalia, d. January 1921, Iimay, Ogaden) was an outstanding 19th–early 20th cent. Somali religious and political leader and poet.

M.'s name appears in many different ways. Muḥammad [b.] ᶜAbdallāh [b.] Ḥasan (Ḥassān in Cerulli EI¹ and Lewis EI²; Ḥasan Nūr – Somali sp. Xasan Nuur – in M.'s genealogy in Keenaadiid 1984:25, in Samatar 1982:100 and also in the Turkish document published in Caroselli 1931:223) represents the classical Arabic form of his name (محمد عبد الله حسن) which he himself used in his seals (e.g., Aw Jaamac Cumar Ciise 1976:130, 157). The current Somali orthography is Maxamed (or Maxammad) Cabdille Xasan. M. is also known by two nicknames. The *Sayyid* (Somali *sayid* or *siyid* Maxamed or simply *sayidkii* 'the Sayyid') is an epithet that he himself cherished. It could be interpreted as a reference to his prophetic ancestry (stated in one of his poems published by Keenadiid 1984:246f.) but is more commonly considered a honorific title given to him by his followers after M. became the most outstanding representative of the *Ṣāliḥīya ṭarīqa* in Somalia (↗Islamic brotherhoods) and a powerful political and military leader (Caroselli 1931:8; Keenadiid 1984:30; Abdi Sheik – Abdi 1993:45). His most famous nickname is, however, the "Mad Mullah" (Somali *wadaad waal*[*an*], s. Samatar 1982:183f.). Many different explanations exist concerning its origin (Caroselli 1931:7f.; Keenadiid 1984:30f.; Samatar 1982:182–85; Abdi Sheik – Abdi 1993:54ff.): it was used by local and foreign detractors and enemies of M. in a strongly derogatory sense, but also with a nuance of astonished admiration.

M.'s date and place of birth of are not exactly known. Most likely M. was born ca. 1856 in the valley of Saᶜmaddeeqo (Sacmaddeeqo), 10km north of the Buuhoodle water-holes, in the north-eastern part of the modern "Somaliland Republic" (Jaamac Cumar Ciise 1976:4, Samatar 1982:100; for other versions s. Caroselli 1931:17; Keenadiid 1984:25; Abdi Sheik – Abdi 1993:46f.). His father was *šayḫ* ᶜAbdille (Cabdille) from the Ogaadeen clan of the ↗Darood clan-family and his mother was ᶜArro (Carro) or Timiro Seed, a Ḍulbahante (Dhulbahante) of the ᶜAli Geri (Cali Geri) sub-lineage of the Darood. Later, the Ḍulbahante were to constitute the bulk of M.'s guerrilla fighting force.

The family of M.'s father counted several itinerant Muslim learned men who wandered in search of religious education. M. kept this family tradition and in 1894 went to *ḥağğ*. In ↗Mecca he studied under Muḥammad Ṣāliḥ, founder of the *Ṣāliḥīya* brotherhood, who was a Wahhābī-influenced Sudanese from ↗Dongola. M. was thus indoctrinated in Wahhābism, which adheres to a rigid, literalist interpretation of the ↗Qurᵓān and the *ḥadīṯ*: it denies the intercessory powers of saints and bans visits to their tombs for blessings, as opposed to the saint-revering *Qādirīya* brotherhood to which most Somalis belonged. The doctrinal rift was to cause violent clashes between the adherents of the two sects, that nearly plunged Somalia into civil war.

M. visited the Sudan in 1897, when the anti-British ↗Mahdist revolt was still raging. He seems to have borrowed the appellation of Dervish there. He was also considered a sort of Somali equivalent of the Sudanese Mahdī and, in fact, he is also frequently nicknamed so (Cerulli in EI¹; Lewis in EI²; Alame Eshete 1984). However, M. apparently never claimed to be the expected "Rightly Guided" of the Islamic tradition (Keenadiid 1984:31; Lewis in EI²; s. for the opposite opinion Jardine 1923:42), though in some of his verses he actually mentioned the Mahdī in a somewhat unclear sense (Keenadiid 1984:247). It is certain, however, that a strong aura of sanctity and of mystical power encircled his person in lifetime and after death: e.g., he is believed to have had full command over the ↗*ğinn* and other supernatural forces (Andrzejewski 1971).

Coming back home, M. settled among his mother's Ḍulbahante kinsmen. In 1899, after having been summoned by the British Authorities in ↗Berbera for involvement in the case of a rifle theft, he disdainfully refused any cooperation with the colonial administration and started his own holy war against the occupants of his country (↗Colonialism). He organized the Dervish (Somali *daraawiish* from Arab. pl. *darāwīš*) anti-colonial movement and led the Somali nationalist resistance struggle against the combined powers of Great Britain, Italy and Ethiopia from 1898 to 1920. During the complex and contradictory events of this long period of war, M. sought contact with first ↗Mənilək II (Aleme Eshete 1984) and later *ləğ* ↗Iyasu and the Ottomans (Jardine 1923:245f., 249, 287, 303; Caroselli 1931:215–47; Kakwenzaire 1985). *Ləğ* Iyasu sent M. a German technician named Emil Kirsch alias Casson who

was to take care of the ammunition and maintenance of the Dervishes' fire-arms. Mistreated by M. and his followers, Kirsch escaped but died in the desert (Jardine 1923:247f.).

This perception of M.'s movement, however, conceals the fact, that M. had *de facto* already become the leader of his own independent state within officially "colonialized" territory. Wide areas under his control were inaccessible for colonial officials for decades. Somali Dervishes were brilliant in guerrilla war tactics, nearly always eluding the pursuing British, Italian and Ethiopian armies. They disappeared into the dry, pathless Somali bush country when the enemy was strong, only to hit back when he was weak. However, the Dervishes lost their guerrilla advantage in an open country with the invention of air power and aerial bombardment. The airplane proved convenient, as a Royal Air Force pilot put it, to "bomb the old villain out of his hiding place" (Samatar 1982:130). Accordingly, in 1920 the British delivered a devastating air assault on the Dervish capital of Taleex, all but destroying the Dervishes as a fighting force. In the wake of this catastrophe, M. and a few followers staggered onto the Ethiopian-occupied Somali Ogaadeen where M. died of influenza.

M.'s contribution to Somali literature was even more remarkable. During the years of the struggle, he produced a magnificent body of oral poetry that is today considered to be the "jewel in the crown" of Somali heritage. He employed his polemical lyrics as an anti-colonial weapon, through which to communicate war-campaign propaganda in order to mobilize public opinion, to discredit his enemies, and to heap diatribes on colonial authorities. Below, an extract from his *Dardaaran* ('The Will'), composed in the wake of his defeat is given as a sample:

A beating we took, forced to flee, to swim across the river,
Stripped of stock, we reel, reduced to destitution,
Rejoice, then, you lackeys who remained behind.

Oh men, foolery leads to mental deterioration,
Yet some love to indulge in profitless disputation.
I, on my own volition, chose to fight the infidels.

It was I who said to the filthy unbeliever: "This land is not yours".
It was I who sought and found the Prophet's guidance,
It was I who rejected again and again the infidel's offer to buy me out.

Today, M.'s poetry is still chanted before enthusiastic audiences throughout the Somali peninsula, thus serving as a soothing source of comfort and compensation in the collapse of the Somali state and consequent chaos.

Said Samatar

Muḥammad ᶜAbdarraḥīm

Nāʾib M.ᶜA. (محمد عبد الرحيم, b. ca. 1825/30 [?], Ḥərgigo, d. 1904) was ↗*nāʾib* of ↗Ḥərgigo, holding this office several times between 1856 and 1887. His father was ᶜAbdarraḥīm Aḥmad, son of the 5th *nāʾib*, from the "Balaw family".

Nāʾib M.ᶜA. was the 16th (r. 1856–60), 18th (r. 1862), and then again the 20th *nāʾib* (r. 1865–87; s. Odorizzi 1910:155; Abdu Ali Habib 1973:1–4; Yəsḥaq Gäbrä Yäsus 1998:101). His rival, *nāʾib* Idrīs Ḥasan, was the 15th, 17th, and the 19th *nāʾib*. These shifts of power took place due to Ottoman intervention and the internal struggle between the two branches of the Nāʾib family, namely the Bet Ḥasan (M.ᶜA.) and the Bet ᶜUṯmān (Idrīs Ḥasan).

The Ottoman administration manipulated the power balance between the two families. Thus, in 1861, Idrīs Ḥasan was nominated as the 17th

nāʾib, while M.ᶜA. held his position without nominal power. Although the two *nāʾibs* lived in an uneasy relationship, they jointly opposed the Ottoman administration whenever it tried to collect taxes from the surrounding tribes. The taxes were collected through raids without consulting the Nāʾib families who considered themselves the traditional rulers of the country and wanted to maintain their monopoly on the collection of tributes. Thus, during the 1850s and 1860s, the *nāʾibs* conducted forceful expeditions against the Ḥamasen, the Mänsaᶜ, the Ḥabab and the Bogos (↗Bilin). This period was also characterised by numerous uprisings of the ↗Sāho against the Ottoman authorities which destabilized transport and communication between the coast and the highlands (↗Massawa Governorate). *Nāʾibs* who had been removed from office often allied themselves with Sāho-speaking groups to challenge the coastal authority and the acting *nāʾib* (Miran 2004:76f.).

After a conflict with the Ottomans, M.ᶜA. went to ↗Dəgsa in Akkälä Guzay in 1862 to hide among the Sāho tribes. He also used his refuge to re-establish his relations with the Ottomans. In the same year, he was re-installed as the 18th *nāʾib*, and his rival Idrīs Ḥasan was expelled to ↗Mecca. According to Rassam (s. House of Commons 1868:39), M.ᶜA. was sent as an envoy to *aṣe* ↗Tewodros by the Ottoman administration in 1863, to improve the trade relations with Ethiopia. When he declared that the Ottomans had ordered him to return soon, Tewodros grew angry about M.ᶜA.'s statement that the Ottomans were his masters and detained him for 41 days. After his release, friendly relations were restored (Abdu Ali Habib 1973:10 and n. 58).

The *mušīr* of Mecca decided to re-install Idrīs Ḥasan as the 19th *nāʾib* only 18 months after M.ᶜA.'s appointment. The dismissed M.ᶜA. travelled to Jeddah in order to exert pressure on the *mušīr* to allow him to retain his position. After less than one year he succeeded and returned to ↗Massawa as the 20th *nāʾib* in 1865, the year the Egyptians occupied that town. Upon his arrival, the new Egyptian Governor of Massawa found two *nāʾibs*, namely M.ᶜA. and Idrīs Ḥasan. He recognized both of them as *nāʾibs* and sent them to Ḥərgigo, their place of residence. However, he disallowed them to collect tribute from ↗Sämhar, ↗Saḥəl, and ↗Dänkäl (ᶜAfar). Thus, their traditional political power declined and they concentrated more on economic activities. They also got involved in military campaigns against the Ethiopian rulers. In 1874 M.ᶜA. joined ↗Arakel *bey*, *mumtāz bāšā* of Massawa, in the war against *aṣe* ↗Yoḥannəs IV (↗Egytian–Ethiopian war of 1875–76). In 1875, Arakel *bey* was killed in the battle of Gudda Guddi (↗Gundät), and M.ᶜA., who had received the title of "*bey*" from the Egyptians, was captured by the Ethiopians. After the battle of ↗Guraᶜ in 1876, he was re-installed as *nāʾib* by the Egyptians.

In 1885 the Italians occupied the port of Massawa and recognized both *nāʾibs*, Idrīs Ḥasan as the 19th and M.ᶜA. as the 20th *nāʾib*. In 1887 *nāʾib* M.ᶜA. took part in the battle of Dogᶜali against the Italians and was then deported by them to ᶜAsäb (Odorizzi 1910:155). M.ᶜA., however, was finally released at the orders of general Roberto Asinari di ↗San Marzano in 1888. He was given a monthly pension of 200 Lire and kept his title, with no power. His brother ᶜAbdalkarīm ᶜAbdarraḥīm succeeded him as the 21st *nāʾib*.

Muḥammad ᶜAlī ↗Mikaᵓel ᶜAlī

Muḥammad ᶜAlī s. vol. 5

Muḥammad Amān b. *šayḫ* ᶜAbdallāh

Muftī M. (محمد امان بن عبد الله; b. 1894, Gädäm Goze, Yəfat, d. 1978, Sakina, Yəfat), known among the local Oromo and ↗Argobba as *abbayye muftī*, was a prominent Islamic teacher of Argobba origin.

M. reportedly started his traditional Islamic ↗education at an early age. He completed the

first stage (↗Qurʾān and *fiqh*) under the supervision of his uncle, *šayḫ* Amanəyye at Ǝssoyye Gula and continued his studies at different centres of Islamic learning in ↗Yəfat and southern ↗Wällo. At Goze in Yəfat he mastered *tawḥīd*, or Islamic theology, and *tafsīr al-Qurʾān*, or exegesis. At Grañ in Dawway, Wällo, he studied *naḥw*, or Arabic grammar and syntax, under the guidance of *šayḫ* ᶜAlī Bərru.

In 1918 M. left for ↗Egypt to study at al-Azhar University in Cairo. He stayed there for ca. 25 years both as a student and teacher, being one of the four Ethiopians teaching in this University. While Gäzzahəññ Wändäfräš, Addamu Səläši and Wäldä Kiros Arägawi were teaching ↗Gəᶜəz, M. taught *naḥw*.

In 1943 M. returned to Yəfat and founded his own centre of learning at Lugo Sakina. Sakina is a small hill between the Argobba settlement of Lugo and the Oromo hamlets of Bäddessa and Hiğra, in the eastern part of the Efrata-Ğille *wärada*. He taught there for 35 years till his death in 1978, mainly specializing in *naḥw* and *tafsīr al-Qurʾān* and tutoring several distinguished *ᶜulamāʾ*.

Other written and oral sources highly credit him, apart from teaching, for his contribution in the arbitration of inter-ethnic conflicts between the Oromo and the ᶜAfar during the 1940s–60s. The representative elders of both communities are reported to have preferred M.'s advice to asking the officials of Ḫaylä Śəllase I's government. M. encouraged leading members of different Oromo clan groups to strictly practice Islam, and advised the well-to-do to perform the ↗pilgrimage to Mecca and Medina. He also advised all families to send their children to nearby schools, whether secular or religious. M. offered a local alternative to the government officials by seeking peaceful ways of conflict resolution; he publicly criticized the imperial government for corruption and social injustice. Nevertheless, the local *balabbats* could never challenge him as he always showed them deep respect. M. is known for having treated all people with respect irrespective of their religious, ethnic and social background and for offering help to the poor giving them food and shelter in times of difficulty.

Ahmed Hassen Omer

Muḥammad b. ᶜAbdalbāqī al-Buḫārī al-Makkī

M. (محمد بن عبد الباقى البخارى المكى, also Abū l-Maᶜālī ᶜAlāʾaddīn Muḥammad b. ᶜAbdalbāqī al-Buḫārī al-Makkī; s. Brockelmann 1938:519) was a 16th-cent. Arabic author whose fame is essentially linked to his only known book, *aṭ-Ṭirāz al-manqūš fī maḥāsin al-ḥubūš* ('The Coloured Brocade: on the Good Qualities of Ethiopians').

Hardly anything is known of M.'s life. According to the incipit of the book, he started writing it 991 H. [1583 A.D.] (Weisweiler 1924:12f. postpones the first section to 992 H.) and dedicated it to the *sulṭān* of Ḥiğāz (↗Arabia), Abū n-Naṣr Ḥusayn b. Ḥasan b. Abī Numayy b. Barakāt. M.'s two bynames may allow us to speculate about his life. The first *nisba*, al-Buḫārī, may hint to a possible family origin in Bukhara in Central Asia. The second, al-Makkī, could relate to a long stay by one of his ancestors, his father, or even M. himself in ↗Mecca, or even indicate that he was born in the holy city (Weisweiler 1924:11; van Donzel 2004:113). Ducatez (1979:1) proposes a Circassian origin for M,. but provides no supporting evidence. We can be certain M. lived in Medina because the introduction to his book states that he served as a *ḫaṭīb* there (a preacher for the collective Friday prayers).

The *Ṭirāz* is devoted to the praise of the Ḥabaš (i.e. Ethiopians, s. ↗Abyssinia) in general and the ↗*naǧāšī* in particular, with a particular reference to the virtues of Ethiopian female slaves. It is attested in numerous manuscripts. Brockelmann (1902:385; 1938:519) lists 16 mss. whereas Ducatez (1979:2) mentions 18, but admits not having been

able to examine those kept in the Dār al-kutub al-ğadīda in Cairo, including an autograph. Besides, the ms. Paris 4632 contains a different recension of the work (Brockelmann 1938:519), and an excerpt is kept in Bod. II 1363. Additional evidence that the *Ṭirāz* raised a degree of literary interest stems from the fact that a summary of the work was written by ʿAlī b. Ibrāhīm al-Ḥalabī (d. 1044 H. [1634 A.D.], Brockelmann 1938:418). This abridged version of M.'s work is contained in an apparently unique manuscript in Cairo, and was printed there in 1307 H. [1893/94 A.D.] (ibid. 519). The *Kitāb al-manqūš fī manāqib al-ḥubūš* contained in ms. BN Eth. d'Abbadie 224 (d'Abbadie 1859:218; ChAbb 129; CRAbb 236) and here attributed to an-Nawawī (d. 1277), is possibly another abridged version of the *Ṭirāz*.

The book consists of an introduction (*muqaddima*), four chapters (*bāb*, each subdivided into three or four paragraphs, *faṣl*) and a conclusion (*ḫātima*). The chapters and paragraphs bear subtitles. The introduction deals with the origins of the Ḥabaš long before the Prophet, the cause of their skin being black and the reason for the interest people take in them. In chapter one, arguments in support of the high esteem the Ḥabaš are held in are provided; chapter two deals with the merits and qualities of the *naǧāšī* and his companions (*aṣḥābuhu*); the third chapter lists Prophet's companions of Abyssinan origin, starting with the first *muʾaḏḏin* ↗Bilāl b. Rabāḥ; the fourth chapter contains a collection of excerpts from what men of letters (*ahl al-adab*) said about Abyssinans; finally, the conclusive section deals with the Ethiopians' tattooing (*luʾuṭ*) and scarification (*šurūt*) practices (↗Body ornamentation).

The book, its literary form and the historical and anthropological aspects have attracted scholarly attention since the early 20th cent. Weisweiler was the first to study the *Ṭirāz* in detail. He published an annotated German translation of the foreword, the introduction, and three of the four chapters of M.'s work on the basis of four manuscripts (1924). Moreover, he carefully analysed the contents of the *Ṭirāz*, and collocated it with similar works dealing with the same topic, highlighting M.'s relationship with his forerunners. A significant part of his *Ṭirāz* is clearly, whether directly or indirectly, drawn from ↗Ibn al-Ğawzī's *Tanwīr al-ġabaš* (Ibn al-Ğawzī 1998; s. van Donzel 1986, 1989) and as-Suyūṭī's *Azhār al-ʿurūš* and *Rafʿ šaʾn al-ḥubšān* (as-Suyūṭī 1991, s. Brockelmann 1902:158, 1938:198). Weisweiler also shed light on the literary nature of the *Ṭirāz*: a mix of different genres (*adab*, *faḍāʾil* and *aḫbār*), it should be dealt with very cautiously by those searching for a historical or anthropological source, since it was perhaps only conceived for entertainment with no serious scholarly goal in mind. Ducatez (1979) critically edited and annotated three chapters of the book on the basis of 13 manuscripts. The fourth chapter was left out because its text varied so much from one manuscript to another that it could in each case be considered an independent version (1979:4).

Muḥammad b. ʿAlī b. ʿAbdaššakūr

M. (محمد بن علي بن عبد الشكور, d. 1875) was the 17th *amīr* of the ʿAlī b. Dāʾūd dynasty, who ruled in ↗Harär from 30 August 1856 to 11 October 1875 (Tedeschi in PICES 4, vol. 1, 497f.). According to official documents, M. was the grandson of *amīr* ↗ʿAbdaššakūr b. Yūsuf. This genealogy is doubted, however, in some Harari and Oromo oral traditions, which claim that M.'s father, ʿAlī, was in reality a son of Māyū, a rich Oromo of the ↗Anniyya tribe. ʿAlī grew up in the court of ʿAbdaššakūr. Having gained favour, ʿAlī married Fāṭima bint ʿAlī, a relative of the *amīr*. Their son,

M., distinguished himself in campaigns against the Oromo during the reign of ↗ᶜAbdalkarīm b. Muḥammad. He married a younger half-sister of his mother, Ḫadīğa bint ᶜAlī, and adopted the name ᶜAbdaššakūr as that of his grandfather (Caulk 1977:378; Waldron 1984:29ff.). Furthermore, the records of the *dīwān* (the ↗*qāḍī*'s court) show that M. inherited from Amatallāh bint ᶜAbdaššakūr (ᶜAbdurahman Garad 1990:16, n. 6; Drewes 1983:71). Since there is no adoption in Islam, it is deduced that Amatallāh must have been M.'s real aunt and, consequently, ᶜAbdaššakūr his grandfather. It could also be that the Harari, who hated M., wanted to make a foreigner of him, and, inversely, the Oromo, who liked him, wanted to make him a relative.

When M.'s predecessor ↗Aḥmad b. Abī Bakr fell ill and had to turn over the government to his mother ↗Fāṭima bint Kawšan, M. was instigated by his wife Ḫadīğa bint ᶜAlī to organize a revolt. He fled the town about 1854/55 and went to live among the Alaa in Gara Mulläta west of Harär. In alliance with them, he defeated the Noolee (↗Qottu) who had previously terrified the other Oromo tribes. He joined in the brotherly relationship of *ilma gosaa* (lit. 'son of the tribe', s. ↗*Gosa*) with the Noolee, which made him a member of their tribe, and later on with the whole confederation of Afran Qalloo. In 1856, M. felt strong enough to march with his Oromo allies against Harär. He destroyed the city's gardens and cut the trade routes. During the siege, the *amīr* Aḥmad b. Abī Bakr died. The townspeople appointed and deposed two candidates in only a few hours and then called in M. to end the siege (Caulk 1977:378f.).

M. became known for his despotic rule. He was totally dominated by his Oromo allies, a fact that made him unpopular with the people of the town. He began his rule by taking revenge upon Fāṭima bint Kawšan, of Somali origin, for her anti-Oromo policy, and deprived her of her property. Later however, Fāṭima's popularity in the town made him change his attitude. He offered her that his eldest son, the later *amīr* ↗ᶜAbdullāhi b. Muḥammad, would marry her daughter. She only agreed on the condition that his daughter marry her grandson Yūsuf b. Aḥmad. Finally, M. himself married Fāṭima bint Kawšan (Mohammed Moktar 1876:391f.).

The *ilma gosaa* obliged M. to offer hospitality to the Oromo. Every week, especially in times of famine, hundreds of Oromo entered the town and were assigned by the *amīr* to the rich families, preferably those who were his enemies. The Oromo stayed with them for weeks and expected gifts in clothing and cash, before they left (Mohammed Moktar 1876:384ff.; Caulk 1977:379f.). To pay his Oromo "brothers", M. levied a special tax (*maḥallaq al-Gāllā*), monopolized the trade in several goods (coffee, ivory, ostrich-feathers, musk) and devalued the money twice, in 1862 and 1867 (Mohammed Moktar 1876:393; DouinIsm III.3A 623; ᶜAbdurahman Garad 1990:244).

The Harari had not only to suffer from the *amīr*'s economic and fiscal measures, but also from his personal whims: he prohibited the consumption of dates and rice, because such delicious foods were fit only for kings and *amīrs* (Mohammed Moktar 1876:394f.).

M. was, however, a well-educated man and a pious Muslim. The catalogue of his library shows that he owned about a hundred Arabic manuscripts covering the major disciplines of Islamic scholarship (Drewes 1983:70). He tried to propagate Islam among the Oromo by sending scholars to the tribes and building mosques in the villages (Caulk 1977:380f.).

On 16 July 1875, the *ḫidīw* ↗Ismāᶜīl decided to conquer Harär. He ordered ↗Muḥammad Raᵓūf *bāšā* to march from Zaylaᶜ towards the town. When the Egyptians came near, M. sent two letters of submission to Muḥammad Raᵓūf *bāšā* (DouinIsm III.3A 619f.; RubActa III, 188–92). On 11 October 1875, Muḥammad Raᵓūf *bāšā* entered Harär. He received the *amīr* warmly and honoured him with a robe and a gift in cash (Paulitschke 1888:239). On 11 November 1875, the *ḫidīw* bestowed on M. the nominal title of *muḥāfiẓ* (governor) of Harär (DouinIsm III.3A 627; Šawqī ᶜAṭāᵓallāh al-Ğamal 1959:129). By that date however, M. had already been strangled by one of Muḥammad Raᵓūf's *başıbozuks* (members of the irregular troops) during the evening prayer on 27 October 1875 (Paulitschke 88:231; Tedeschi in PICES 4, vol. 1, 497f.). The murderer was honoured by the Somali with the name *libaaḥ* (*libaax*, 'lion'), for killing a friend of the Oromo (Plazikowsky-Brauner 1957:315).

Muḥammad b. Aẓharaddīn

M. (محمد بن اظهر الدين, d. 1518) was the 24th ruler of the ↗Walašmaᶜ dynasty, ruling over ↗ᶜAdal between 1488 and 1518. M. came to power after the murder of Ibrāhīm b. *qāṭ* Naṣraddīn, who did not belong to the Walašmaᶜ dynasty. With M. the rule came back to the old family, though in another branch, since the predecessor of Ibrāhīm b. *qāṭ* Naṣraddīn, Šamsaddīn b. Muḥammad b. Aḥmad Badlāy, had no living descendants.

It seems that M. tried to remain at peace with the Christians. His policy, however, failed, as the intensified Islamic propaganda of fanatic leaders who had acquired control over ᶜAdal pushed the Walašmaᶜ *sulṭān* into the background. M.'s peaceful efforts were nullified, in particular, by the raids of ↗Maḥfūẓ b. Muḥammad, the governor of ↗Zaylaᶜ. After Maḥfūẓ was defeated by *aṣe* ↗Naᶜod, M. hastened to assure the Christian ruler his neutrality. An insecure truce followed in spite of spasmodic raids by Maḥfūẓ.

The relations with the Christian kingdom were peaceful throughout Naᶜod's reign and *ətege* ↗Ǝleni's interregnum, but ↗Ləbnä Dəngəl reversed that policy. On the Muslim side, Maḥfūẓ had recovered from his defeat after receiving ideological support, arms and trained men from Arabia. The policy of both sides led to confrontation. In July 1517, M. had to give way to religious pressures and to move, together with Maḥfūẓ, into the Ethiopian province of ↗Fäṭägar for an invasion. His army was heavily defeated, and Maḥfūẓ slain; Ləbnä Dəngəl invaded ᶜAdal, destroying the castle of Zankar – which may be identified with Dakar, the capital of ᶜAdal at that time. M. was saved with the help of Muslims from ↗Däwaro in Ləbnä Dəngəl's army. Yet, when he came home in 1518, he was murdered by his son-in-law and Maḥfūẓ's grandson, Muḥammad b. Abī Bakr b. Maḥfūẓ, who, according to ᶜArabfaqīh's *Futūḥ al-Ḥabaša*, ruled ᶜAdal for one year (BassHist 5 [text]). The Walašmaᶜ chronicle, on the other hand, does not mention Muḥammad b. Abī Bakr but, instead, ᶜAlī b. Muḥammad b. Aẓharaddīn, as the successor of his father (Cerulli 1931:42). It seems that ᶜAlī, from the Walašmaᶜ dynasty, became the nominal ruler, whereas the usurper Muḥammad b. Abī Bakr b. Maḥfūẓ, from the religious faction, was the *de facto* ruler.

Muḥammad b. Naṣīr b. ᶜUṯmān

M. (محمد بن نصير بن عثمان, r. 1573–76), *sulṭān* of ↗ᶜAdal, succeeded his father ↗Naṣīr b. ᶜUṯmān b. Badlāy in 1573. Being a grandson of the slave and renegade ↗ᶜUṯmān b. Badlāy who ruled after the death of ↗Nūr b. Muǧāhid, M. belonged to a family that traditionally stood for a pragmatic policy in relation to the ↗Oromo and the Christians. However, under the pressure of the militant religious party which continued the policy of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ), in 1575 M. declared ↗*ǧihād* on Christian Ethiopia. The timing seemed to be auspicious, because *aṣe* ↗Śärṣä Dəngəl had to grapple with a new plot of the *baḥər nägaš* ↗Yəsḥaq.

In 1576 *aṣe* Śärṣä Dəngəl and his army penetrated into Šərka (↗Šarḫa?) and, according to Aṣmä Giyorgis (BTafA 156f.), also ↗Bale. He met M. beyond the Wäbi River. The Emperor pitched his camp opposite to that of the Muslims. Already during the first fights, some of M.'s officers went over to the Christian side. After one month, there was a battle which brought no decision. In the night after this battle, an officer named Asmāʾaddīn who had already been in connivance with the Emperor and had given bad advice to M., deserted together with his soldiers to the Christian camp; other officers followed. With only a few fighters left, M. tried to flee towards home. Their way, however, was blocked by the ↗Hadiyya, whom M. and his people had robbed of their cattle. In this situation, M.'s officers decided to hand him over to the Emperor. Śärṣä Dəngəl wanted to spare his life, but the Christian noblemen demanded his death. M. was killed together with several other Muslim leaders, among them three sons of Nūr b. Muǧāhid.

Before leaving, M. had placed ↗Harär under the command of his brother, the *wazīr* Ḥāmid, who, however, was not able to defend the country against the attacks of the Oromo who took advantage of the *sulṭān*'s absence. The defence of Harär then passed to ↗Manṣūr b. Muḥammad b. Ayyūb who defeated the Oromo, but was removed by his own soldiers. Thus, after M.'s death, there was no ruler in Harär. That was a chance for a member of the religious party, ↗Muḥammad Ǧāsā I b. Ibrāhīm, who declared himself ↗*imām*. With M.'s death the rule of ʿUṯmān's family came to an end.

Muḥammäd Bäsäle

M.B. (መሐመድ በሰሌ; b. 16 March 1938, Gangahaa, Efrätä-Ǧillee, d. 14 April 1972) came from a family of Oromo nomads. His parents wanted him and his younger brother Ḥasan to pursue traditional Islamic education and to become cattle breeders like themselves. M.B., however, chose to wander around talking to elders during the day and attend dancing gatherings (*hammisaa*) at night, the latter disapproved by his family – partly because the *ʿulamāʾ* denounced the practice and partially because the *hammisaa* were prohibited by the government, which was afraid that the young Oromo could use the meetings to plan criminal acts or revolts.

By 1964, M.B. had joined the local *šəfta* brigades, and a stronger regional band in 1966. He was strongly influenced by the brigade leader Mammo Aššännafi. An Amhara of Gədəm, the latter had been adopted by Abdälle, the Oromo chief of Dugugguru and converted to Islam (taking the name Mammad, the local form for Muḥammad). M.B. announced that his banditry was a form of protest against the corrupt imperial government and was soon joined by Muḥammad Duli and Saʿīd Bašša. Among the victims of his nightly raids there were many local Oromo. M.B. justified himself by claiming they deserved it for serving the Amhara. When the tribute was refused he took it by force (e.g., the case of *al-ḥāǧǧ* Ḥasan ʿUmar Muḥammad, robbed and killed by M.B.'s men on 29 September 1968).

In November 1968, the district governor of Efrätä-Ǧillee sent a police force under Adanä Ǝrgäṭe to capture M.B. They clashed at the site of Hula-Ǝrgi, ca. 100 km east of Sanbäte on the bank of the Aṭayye River. M.B. (then nicknamed *anbässaw*, 'the ↗lion') and Mammad Abdälle were obviously stronger, and Adanä had to ask the local *balabbats* for help. The Oromo chiefs of Ǧillee and Dugugguru joined him at the head of a 500-men strong militia force. M.B. killed Adanä and wounded the Dugugguru chief Mūsā ʿAlī, son of *grazmač* Adame. By the end of the daylong fight the militia force was completely defeated.

Subsequently M.B. announced, indirectly, to the General *däǧǧazmač* Abbäbä Gämmada, and later to his successors *fitawrari* Asfaw Gäbrä Amanuʾel and Mammo Bäše, that he would never submit to the imperial rule and that he was ready to clean up the system that mistreated the Oromo.

M.B. was killed in a local incident by an Oromo young man; his name is still alive in oral tradition since his raids are seen as a form of social and political protest.

Muḥammad Gāsā I b. Ibrāhīm

M. (محمد جاسا بن ابراهيم, r. 1576–83, d. 22 November 1583, Awsa) ruled as *imām* over ↗Harär and later over ↗Awsa. During ↗Muḥammad b. Naṣīr b. ᶜUṯmān's campaign against ↗Śärśä Dəngəl, the Oromo took advantage of the *amīr*'s absence and attacked the town. The emergency of the siege made a new leader, ↗Manṣūr b. Muḥammad b. Ayyūb, stand up in Harär. He defeated the Oromo, but after occupying ↗Zaylaᶜ and Awsa, was attacked by his own soldiers in July/August 1576. This event, as well as the defeat and death of Muḥammad b. Naṣīr b. ᶜUṯmān, deprived Harär of a ruler. M. saw this as an opportunity to take the town.

M. did not use the titles *amīr* or *sulṭān*, but claimed the position of *imām*, as ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ") had done. This led Cerulli (1931:62, n. 116) to conjecture that he was a member of Aḥmad Grañ's family. Certain is, that with this title M. wanted to express the religious nature of his rule. The Awsa Chronicle (Wagner 1979:660) tells us that M. was a pious ruler who paid respect to the descendants of the Prophet and especially honoured the members of the Bā ᶜAlawī family. He was so eager to wage ↗*ǧihād* that he assembled an army of 600 horsemen and 1,000 foot-soldiers, equipped with 70 rifles.

Soon after the take-over of Harär, M. transferred his capital from Harär to Awsa, which was less exposed to Oromo raids. The Oromo, however, penetrated even into the Danākil Desert. M. himself eventually fell victim to their attacks. In Harär, M. installed his brother ↗Muḥammad Gāsā II b. Ibrāhīm as *wazīr*, in Zaylaᶜ *gärad* ↗Lādūh as governor. The latter's rule was interrupted when the eunuch Nūr, together with the Somali, sacked the town. M., however, was able to remove Nūr and to reinstall Lādūh. After M. was killed in Awsa by Wärrä Daya Oromo in 1583, power was seized by his treasurer Zuḫal b. ᶜAbdallāh al-Ḥasanī.

Muḥammad Gāsā II b. Ibrāhīm

M. (محمد جاسا بن ابراهيم, d. 13 May 1589, Farfar) ruled as ↗*imām* in ↗Awsa between 1584–89. When M.'s brother, ↗Muḥammad Gāsā I b. Ibrāhīm (it is common in Muslim families that brothers by different mothers have the same name) transferred his capital from ↗Harär to Awsa, he installed M. as his *wazīr* in Harär. After the death of Muḥammad Gāsā I on 22 November 1583, his treasurer Zuḫal b. ᶜAbdallāh al-Ḥasanī usurped the throne. During his eight-month rule, the ↗Oromo invaded the country. Only two places, Farfar and Warrāba, withstood their attacks. While Zuḫal stayed in Farfar, the people of Warrāba turned to ᶜAbbās b. *kabīr* Muḥammad from ↗Bale for help. He came to Warrāba, and the people of the place made him *wazīr* not of Zuḫal but of M., who was still in Harär at that time. That implies that they renounced their allegiance to Zuḫal. In addition to the siege by the Oromo, there was now a conflict between the two beleaguered places. It remained undecided until Aḥmad b. Abī Bakr Gāsā, the paternal uncle of the two Gāsā brothers, arrived in support of Zuḫal and expelled ᶜAbbās b. *kabīr* Muḥammad from Warrāba. ᶜAbbās fled to Harär to seek M.'s help. They marched together against Awsa and ended the conflict. In July 1584, M. became the new *imām*.

At the beginning M. was a just ruler. He appointed ᶜAbbās b. *kabīr* Muḥammad as his *wazīr* and commander in-chief. ᶜAbbās promptly used his privileged position to revolt, together with some members of the nobility, and made himself ruler of Awsa on 12 June 1585. M. was captured and sent to the then governor of Harär, Saᶜdaddīn, for detention. On 25 October, M. succeeded in fleeing from Harär. Supported by the ↗Ḥarla people, he occupied Zaylaᶜ on 6 and Awsa on 24 November. ᶜAbbās fled to Harär, but was handed over by Saᶜdaddīn who, now, obeyed to M. The latter cut off the hands and feet of ᶜAbbās and his companions, and made them pay homage to the *imām*. Later on, as they had again conspired, M.

had them transported to a waterless desert where they died of thirst.

After M. firmly established his rule, he started to neglect his subjects and his army. As a result, the strengthened Danākil (↗ᶜAfar) raided the country without opposition from a weak army reluctant to fight them. Several members of the nobility were killed by the Danākil in the ensuing battles.

M.'s death in Farfar was said to have been caused by a spell applied on his stomach. He was succeeded by the *wazīr* ᶜAbbās b. Abōya, during whose rule the decline of the Awsa state began.

Ewald Wagner

Muḥammad Muḫtār

M.M. *bāšā* (محمد مختار, b. 1835, Būlāq [Cairo], d. 20 November 1897, Cairo) was an Egyptian officer, whose service to the khedivial military forces led him to explore and write about regions of north-east Africa.

Around 1870, M.M. was recruited into the unit charged with the geographical exploration of territories coming under Egyptian control, including those that Egypt aspired to take over. In July 1875 M.M. surveyed the road linking Sinkat and ↗Sawākin in the eastern Sudan, searching for alternative provisions of water for Sawākin. Two months later, having attained the rank of *binbāšī* (Turkish *binbaşı*, Major), he joined the expeditionary force led by ↗Muḥammad Raʾūf *bāšā* for the conquest of ↗Harär. After the town was taken on 11 October 1875, M.M. was granted the fourth class of *maǧīdīya* decoration. In November 1875 M.M. was promoted to the rank of *qāʾimaqām* (Lieutenant-Colonel). M.M. published an invaluable report on the political, economic and social conditions of the town, its inhabitants and the region surrounding it (Mohammed Moktar 1876; cf. DouinIsm III.3A, 604–18, 620). With the help of his collaborators, esp. Major ᶜAbdallāh Fawzī, he drew several maps of ↗Zaylaᶜ, Harär and the region between the town and the coast (cf. Mustafa Amer 1937). M.M. spent twelve months in Harär, after which he conducted surveys in the ↗Gadabuursi area south-west of Zaylaᶜ. In 1878 he surveyed the regions of Cape ↗Gardafui and Rās Ḥafūn in Somalia.

In 1880 M.M. was promoted to the rank of chief of the Egyptian general staff in the Sudan. After the ᶜUrābī revolt (1882) which marked the beginning of the end of Egypt's "African Empire", M.M. served in various posts, first as governor of Massawa (1883), then in the military headquarters in Cairo, before receiving the rank of *liwāʾ* (Brigadier General) in 1886. He was finally appointed to the controllership of the khedivial household, where he served until his death. M.M. published a number of valuable articles between 1876 and 1893. He also published two books: a *General Introduction to Geography* and a concordance between the Gregorian, Coptic and Hiǧrī calendars (1893).

Muḥammad Nādī

M.N. *bāšā* (محمد نادى, b. 1836) was a high ranking Egyptian army officer who had served in various positions in Egypt's "African Empire" in north-east Africa. After undertaking a mission to Dār Fūr in 1869, M.N. was appointed deputy governor of Khartoum. He participated in the ↗Egyptian-Ethiopian war of 1876. In January 1880 M.N. was promoted *liwāʾ* (Brigadier General)

and appointed Governor General (*ḥukumdār*) of "Harär and its Dependencies", *Harär wa-mulḥaqātihā* (↗Harär, ↗Zaylaᶜ, ↗Berbera and ↗Tağūra), replacing Riḍwān *bāšā* (r. 1878–80).

Taking up his post in Harär in June 1880, M.N.'s chief concern was the restoration of security to the territory and the caravan routes between the coast and Harär, especially in the Somali regions between Zaylaᶜ and ↗Ǧildessa. M.N.'s governorship was characterized by its openness to European trading agencies and commercial entrepreneurs in the area (e.g., Xavier Alfred ↗Bardey), a policy that accounted for the revitalization of Harär as a major commercial hub during these years. It was also under his governorship that French missionary Taurin ↗Cahagne established a Catholic Capuchin mission station in Harär (1881; ↗Capuchins). M.N. was also responsible for major public works in Harär such as the elevation of the walls surrounding the city, the organization of a local police force, and the setting up of an urban civil administration.

Some degree of conflict opposed M.N. to ↗Abū Bakr Ibrāhīm Šaḥīm, Governor of Zaylaᶜ, over matters relating to the latter's implicit role in slave trading activities, that ran counter to official Egyptian policy. Consequently, in late 1881 Zaylaᶜ and Berbera were separated by the Egyptian government from the administration of Harär.

M.N.'s governorship came to an end in December 1882. He was replaced by ᶜAlī Riḍā *bāšā*. Following the British conquest of Egypt earlier that year and the collapse in the Sudan, Harär was to be evacuated in 1885.

Muḥammad Rātib

M.R. *bāšā* (محمد راتب, b. 1831, d. 1920) was the Commander-in-Chief of the Egyptian army during the battle of ↗Guraᶜ in the ↗Egyptian–Ethiopian war of 1876.

M.R.'s father was a member of the Turco-Circassian elite which had dominated Egyptian society for centuries, and whose descendants went on to serve in the modernized army of ↗Muḥammad ᶜAlī *bāšā* (s. EAE vol. 5). ᶜAbbās *bāšā*, succeeding Muḥammad ᶜAlī as Egypt's ruler, strengthened his reliance on that elite group. M.R. received his early training in a new military school (*Madrasat al-mafrūza*), opened by Muḥammad Saᶜīd *bāšā* in 1849. He was then chosen to pursue further studies in France, where he graduated from the Chasseur Military School. However, when Muḥammad Saᶜīd came to power in 1854, he decided to marginalize the Circassian elite and promote a new generation of native Egyptian officers. He also humiliated M.R. personally, to the extent that the latter tried to commit suicide by shooting himself (his face remained disfigured for the rest of his life). M.R. left to serve in the Ottoman army in Istanbul. When *ḫidīw* ↗Ismāᶜīl *bāšā* succeeded Muḥammad Saᶜīd in 1863, he reversed the latter's policy and chose to rely on the old guard of Circassian officers, and on European and American mercenaries. M.R. was summoned back to Cairo. He was awarded the rank of *liwāʾ* (Brigadier General) in 1864, and in 1867 he was appointed *sirdār* (Commander-in-Chief) of the Egyptian army.

Following the defeat of the Egyptian forces in the battle of ↗Gundät, in November 1875, Ismāᶜīl ordered the dispatching of a substantial army to destroy *aṣe* ↗Yoḥannəs IV and ensure Egyptian control of the Massawa–Khartoum route. M.R. was put in command of the expedition, which included a staff of 19 mercenaries, mostly Americans, led by *liwāʾ* William ↗Loring *bāšā*, who considered himself a co-commander. The Egyptian force landed in ↗Massawa in December 1875 and began advancing inland, but on 7–9 March 1876 suffered a most humiliating defeat by Yoḥannəs's army.

The Guraᶜ battle both ensured Yoḥannəs's survival and deprived the Egyptians of the ability to build a modern communication line to their possessions in the Sudan (including Bogos, s. ↗Bilin). The military clash was followed by a heated controversy between American officers and M.R. The officers accused M.R. of incompetence, lack of modern managerial skills, and even of cowardice.

The several middle-rank native Egyptian officers present in the expedition (among them *amīr alāy* [Colonel] Aḥmad ᶜUrābī, in charge of the commissariat between Massawa and the front) were embittered with both the mercenaries and

the Circassians. Returning to Egypt, they ignited a protest movement under the slogan of "Egypt for the Egyptians", which proved to be the first manifestation of modern Egyptian nationalism.

M.R. was removed by Ismāʿīl from the *sirdār*-ship for a mere month, and remained in office, awarded with a promotion to the rank of field marshal. When Ismāʿīl was exiled to Italy in 1879 M.R. left with him to Naples. In 1882, M.R. returned secretly in order to help the Turco-Circassian officers regroup against Aḥmad ʿUrābī's movement, but was exposed and again exiled. After the British quelled the ʿUrābī Revolt and conquered the country in September 1882, the old elite was restored. In 1888 M.R. was appointed Minister of War and Marine Affairs.

One of the decisions M.R. made immediately before the confrontation in Guraʿ had long reaching consequences for Ethiopia and Eritrea. In preparing for the battle he welcomed the defection from the Ethiopian side of *däğğazmač* (later *ras*) ↗Wäldä Mikaʾel Sälomon. After Wäldä Mikaʾel crossed the lines to the Egyptian headquarters, M.R., against the advice of Loring, appointed him to *farīq* (General), enabling Wäldä Mikaʾel to proclaim himself a *ras*. The Egyptians, after retreating to Massawa, continued to subsidize Wäldä Mikaʾel's efforts to maintain his power in Ḥamasen. In response, Yoḥannəs ceased negotiations with the Egyptians in October 1876 and appointed *ras* ↗Alula Ǝngəda over the same region. Only in 1878 Alula managed to destroy the Egyptian-backed Wäldä Mikaʾel in Ḥamasen and sent him to be imprisoned by Yoḥannəs.

Haggai Erlich

Muḥammad Raʾūf

M.R. *bāšā* (محمد رؤوف, b. 1832, d. 1888) was one of several high-ranking officers in the Egyptian army who played a major role in Egypt's imperialist enterprise in north-east Africa. He was said to be a Berberine on his father side. His mother, of whom he ever spoke with affection, was Ethiopian (HillBD 270).

Following his service in the Equatorial province, in Unyoro and in Uganda, M.R. was given the command of the expedition charged with the conquest of ↗Harär in September 1875.

Appointed Governor General (*ḫukumdār*) of *Harar wa-mulḥaqātihā*, "Harär and its dependencies" (including the ports of ↗Zaylaʿ and ↗Berbera), with the rank of *farīq* (General), M.R. employed all his efforts in establishing and consolidating Egyptian rule in Harär, its surroundings, and on the routes linking the inland city with the coast. He operated with vigour and harshness in consolidating his authority in the region and confronted resisting and rebellious Oromo and Somali groups with severity. Under M.R., the Egyptian administration devised a set of measures aiming at developing Harär's economy. Considerable efforts were oriented at the enhancement of Harär's commercial vitality and to the development of agriculture. The cultivation of ↗coffee and other crops introduced by the Egyptians was particularly encouraged. M.R. reorganized and established the new local urban administration and its institutions. Communications were improved, a new system of taxation was introduced, and many public works were undertaken during his tenure in office. Several important edifices were built in this period, notably the big Friday mosque *ğāmiʿ* Raʾūf (Paulitschke 1888:206).

Due to a conflict between M.R. and Riḍwān *bāšā*, starting from 19 *Rabīʿ al-awwal* 1293 H. [14 April 1876 A.D.] Berbera and Zaylaʿ were separated from Harär and put under Riḍwān *bāšā*. On 16 *Ṣafar* 1294 H. [1 March 1877 A.D.] Harär, Zaylaʿ, Berbera and ↗Tağūra were united in the general governorate of Sudan (under ↗Gordon *bāšā*); on 12 May 1878 Gordon definitively dismissed M.R. from the government of Harär. Ironically, M.R. succeeded Gordon as Governor

General of ↗Sudan in 1880, but his failure to repress the ↗Mahdist movement, sparked in 1881 by Muḥammad b. Aḥmad al-Mahdī, led to his replacement in 1882.

Muḥammad Šāfī

M.Š. (محمد شافي, Muḥammad Šāfī b. Muḥammad b. Ṭāhir b. *faqīh* Aḥmad, b. ca. 1743, Dure, Wärrä Babbo *wäräda*, Ambassäl *awraǧǧa*, d. 1814/15, Ǧama Nəguś) was one of the earliest and most renowned mystics and militant scholars of 18th-cent. ↗Wällo. He was also known by his sobriquet, *muǧāhid*, in recognition of his promotion of ↗*ǧihād* as an instrument for the consolidation of ↗Islam.

After completing his formal Islamic ↗education, M.Š. was initiated into the *Qādirī* order (↗Islamic brotherhoods) by *faqīh* Zubayr Yaḥyā of Gʷägur in ↗Yäǧǧu, from whom he obtained a teaching license (*iǧāza*). In Gärfa he met the local Muslim hereditary ruler, *imām* Yūsuf b. ʿUmar (d. 1815), to whom he disclosed his mission of reviving and propagating Islam. The *imām* expressed his enthusiastic support for his plans and provided him with financial and material assistance. M.Š. moved to the districts of Reqqe and Arṭumma in south-eastern Wällo where he preached a more rigorous form of Islam among the local Muslims by establishing ↗*zāwiyas* in ↗Dawway as centres for Islamic propagation and education. He also made efforts to convert local Christians to Islam.

M.Š. then moved to Ǧamma in Boräna, western Wällo, where he attempted to revive Islam, by purifying it from popular beliefs. He advocated strict adherence to the ↗*Šarīʿa* and the performance of the obligatory ritual prayers. In 1777/78 M.Š. took part in a religious expedition to Šāfī, Boräna (*šayḫ* Muḥammad Tāǧaddīn 313f.).

During his *ḥaǧǧ* to ↗Mecca (where he stayed for three years looking for spiritual guidance), M.Š. met *as-sayyid* ʿAqīl, the contemporaneous *ġawṯ* (one of the highest-ranking holy men in the *Ṣūfī* hierarchy), who advised him to promote Islam in Ethiopia not through armed *ǧihād* but by *ǧihād an-nafs*, a struggle against passions and bad inclinations of the soul (Muḥammad Tāǧaddīn 316; ʿAqīl's letter to M.Š. is quoted ibid. 313). Towards the end of his stay, M.Š. received authorization to organize the ↗*Mawlid* celebration he saw as a tool of the *ǧihād an-nafs*.

M.Š. finally settled in Albukko, at a place later named Ǧama Nəguś, where he established a community of disciples and taught *fiqh* (jurisprudence), *tawḥīd* (theology) and *ādāb aṭ-ṭarīqa* (proprieties of the Ṣūfī order). He is said to have divided the year into three parts, during which he concentrated on teaching, mysticism and launching of a series of campaigns against the surrounding Muslims who were lax in carrying out their religious duties as prescribed by the Qurʾān and the Sunna. He thus combined both peaceful and coercive methods in the propagation of Islam.

M.Š. possessed a small but well-organized and well-armed volunteer force, recruited from among M.Š.'s disciples, who participated in those campaigns. The strength of the army unit under the command of *bašša* ʿAbdassalām is illustrated by the tradition which claims that M.Š. established an alliance with the ruler of Wärrä Himäno, *imām* ↗Mäḥammäd Ali "Abba Ǧəbo". The *imām* asked for help to resist *aṣe* ↗Täklä Giyorgis I's campaign in Šäwa in 1783/84, claiming that otherwise he might have to consider abandoning Islam. M.Š. provided military support, and the combined forces managed to prevent the imperial army from pillaging the *imām*'s territory. However, Mäḥammäd Ali, who suspected M.Š. of harbouring political ambitions, turned against his former benefactor, and M.Š. had to withdraw his fighters from the area.

M.Š. fell ill and died while returning from one of the annual campaigns that he himself had led, and was buried at Ǧama Nəguś. He was survived by his son, *faqīh* Muḥammad Nūr, who succeeded his father as ↗*ḫalīfa* (leader of the community) and later initiated Ǧamāladdīn Muḥammad al-Annī (d. 1882) into the *Qādirī* order.

M.Š. was considered a ↗*walī* and is believed to

have worked miracles on several occasions. His shrine at Ǧama Nəguś is one of the most important centres of annual ↗pilgrimage, and attracts the faithful from all parts of the country. A festival is held there from the tenth to the twelfth of the month of *Rabiᶜ al-Awwal* on the occasion of the *Mawlid.* M.Š., however, most probably would not have personally permitted some of the lax practices that have been observed in these celebrations after his death (Muḥammad Tāǧaddīn 320).

M.Š. is the author of ca. 30 hitherto-unpublished treatises including *Maᶜūnat al-Faqīr* ('The Succour of the Needy').

Hussein Ahmed

Muḥammad Ṯānī b. Ḥabīb b. Bašīr

Šayḫ al-ḥāǧǧ M.Ṯ. (محمد ثانى بن حبيب بشير, Amh. Muḥammäd Sani Ḥabib; b. 1913/14, Adola Agär near Ančarro, southern Wällo, d. 30 April 1989 [22 *Miyazya* 1981 A.M. = 23 *Ramaḍān* 1409 H.], Addis Abäba) was undoubtedly the most prominent, popular and charismatic Muslim national and religious figure of 20th-cent. Ethiopia.

M.Ṯ. grew up in ↗Qallu, where his grandfather, originally from ↗Wälqayt in western Təgray, had settled in order to pursue Islamic education. After completing his Islamic studies (according to the *Ḥanafī* school) under such renowned teachers as *šayḫ* Aḥmad b. Bašīr (d. 9 June 1948; master of *naḥw* [grammar] and father of his colleague, *šayḫ al-ḥāǧǧ* Muḥammad Tāǧaddīn) and *šayḫ* Aḥmad Nure (d. 28 April 1948), he settled in ↗Däse. He also acquired secondary-level secular education including good Amharic reading and writing skills. For many years M.Ṯ. taught at the *madrasa* of the Šäwa Bärr mosque and, later, moral education and Islam at the Wäyzäro Səḥin Mikaʾel Secondary School in Däse. In 1938/39 he went on the ↗pilgrimage. On his way to ↗Mecca, he spent some time at ↗Massawa as a religious instructor.

In 1967, M.Ṯ. was appointed one of the two translators (the second being Sayyid Muḥammad Ṣādiq) of the first official translation of the Qurʾān into Amharic, commissioned by Emperor ↗Ḫaylä Śəllase I. M.Ṯ. moved to Addis Abäba where he completed the translation in 1968/69. He subsequently served as a teacher at the Däğğazmač ᶜUmar Samatar Elementary and Junior Secondary School situated in the compound of the ↗Ǧāmiᶜ al-Anwar mosque, of which he became deputy ↗*imām* and then full *imām*. He held the latter position until his death. His Friday sermons and lectures during ↗*Ramaḍān* are still remembered for their content and the lucidity of the language.

Apart from the usual tasks of an *imām*, M.Ṯ. played a key role in mobilizing the Muslim community for participation in national relief efforts. He also tutored many students of all ages at his residence and was honoured for his openness and generosity.

After the ↗Revolution in 1974, M.Ṯ. participated in the national ↗literacy campaign, relief and rehabilitation efforts, and several national committees. He also took part in the deliberations on the draft ↗constitution of 1987 and was elected by his local constituency to the national *Šängo* (assembly). In 1976 he became the founding chairman of the Ethiopian Supreme Council for Islamic Affairs. In his capacity as *imām* and chairman of the Supreme Council, he represented the Ethiopian Muslim community in official functions and liased between the state and the community.

M.Ṯ. attended international conferences held in various parts of the Muslim world as well as in the U.S.S.R. Even after two of his sons, suspected of being active members or sympathizers of the outlawed ↗Ethiopian People's Revolutionary Party, were executed by the *Därg* in 1977, M.Ṯ. continued to serve the Muslim community.

M.T. remained active until three weeks before his death. His funeral, the largest ever held for an Ethiopian Muslim public figure, was attended by senior government officials including the deputy prime minister, the patriarch of the Ethiopian Orthodox (Täwaḥədo) Church, and a large number of Muslim residents. He was buried at the Kolfe Muslim cemetery in the capital. He was survived by his wife, four sons and two daughters.

M.Ṯ. wrote a book about the tenets of the Islamic faith with the first full-length Amharic biography of the Prophet ↗Muḥammad, drawing

on several Arabic sources (1982/83), and a book on the *ḥağğ* and *ʿumra* (the greater and the lesser pilgrimage), the latter published posthumously. He also authored shorter pieces including one on the plight of rural students attending the high school in Däse in the early 1960s.

Hussein Ahmed

Muḥammad Tawfīq

M.T. (محمد توفيق, b. 30 April 1852, Cairo, d. 7 January 1892, Ḥulwān) was *ḫidīw* of ↗Egypt between 1879 and 1892. The son of *ḫidīw* ↗Ismāʿīl, he became the ruler of Egypt in June 1879 after the British and the French, through the Ottoman *sulṭān*, deposed his father. With regard to Ethiopian affairs, his term can be divided into two periods, namely before and after the British conquest of Egypt in September 1882.

During the first period, M.T. was an independent ruler who made at least two historically significant decisions concerning Ethiopia. One was related to the border dispute between Ethiopia and Egypt. M.T. inherited the consequences of the ↗Guraʿ defeat from Ismāʿīl (↗Egyptian–Ethiopian War). After March 1876 the Egyptians found it increasingly difficult to control their occupied territories between ↗Massawa and ↗Kärän, specifically in the region of Bogos (↗Bilin). Egypt had to confine itself to a chain of forts and to subsidizing local anti-Ethiopian rebels, notably *ras* ↗Wäldä Mikaʾel Sälomon, *fitawrari* ↗Däbbäb Arʾaya, and *balambaras* Kəflä Iyäsus. The Ethiopians, led locally by *ras* ↗Alula Əngəda, frequently raided the disputed areas, and the Egyptians suspected them of also preparing a full-fledged war on Massawa.

When M.T. came to power, Egypt's governor-general of the Sudan, the British national Charles ↗Gordon, thought it was high time to resolve the border dispute. When summoned to Cairo in July 1879 he suggested to M.T. to cease aid to the local rebels and relinquish Bogos in favor of a peaceful solution. The *ḫidīw* authorized Gordon to go to Yoḥannəs's court and negotiate a settlement that offered commercial relations but avoided any territorial compromise. Gordon attributed this inflexibility to M.T.'s weak character, to his being "a deceitful creature" who wished to see Gordon fail and to get rid of him. After meeting with *ras* Alula in September 1879 on his way to Yoḥannəs in ↗Däbrä Tabor, Gordon again wrote to M.T. trying to convince him to offer territorial concessions. As M.T. remained inflexible, Gordon's meeting with Yoḥannəs only aggravated the situation. Gordon himself returned to Cairo and resigned from the governorship of the Sudan. The ↗Mahdist uprising in the Sudan as of 1881 further complicated the situation for Egypt, as the Mahdists occupied its resources and allowed *ras* Alula to stabilize Ethiopia's hold in ↗Märäb Məllaš.

M.T.'s other important Ethiopia-related decision was in the religious-political sphere. Once Ismāʿīl had been deposed, Yoḥannəs renewed contacts with the patriarchate in Cairo and also approached *ḫidīw* M.T. asking for four bishops. In November 1881, following the intervention of the *ḫidīw*, four new bishops were sent to Ethiopia (↗Ṗeṭros, ↗Luqas, ↗Matewos and Marqos). While Yoḥannəs was thus temporarily successful with his policy of promoting religious unity and political decentralization, he at the same time enhanced the legitimacy of the Kingdom of Šäwa, thereby preparing the way for it to follow Təgray as the imperial centre.

Following the British occupation of Egypt in September 1882, relations between Ethiopia and Egypt changed course. Tension in the ↗Massawa-Bogos area mounted around 1883. At the same time the Mahdīya forces laid siege to the Egyptian garrisons, and the British decided to force the Egyptians to abandon the entire area. In June 1884 the ↗Hewett Treaty settled the territorial dispute between Ethiopia

and Egypt. Bogos was returned to Ethiopia, and Yoḥannəs undertook to assist the Egyptians in evacuating from eastern Sudan. He thus found himself facing the Italian landing in Massawa (February 1885) while provoking the Mahdīya. However, historical records show that throughout this complex chapter in history, fateful for both Ethiopia and Egypt, *ḫidīw* M.T. had little to say. Egypt's regional strategy was now directly shaped by the British and their Consul General in Cairo, Lord Cromer. Only M.T.'s successors and the emerging Egyptian nationalists would renew active Egyptian interest in the countries of the Upper Nile.

Muḥammad ᶜUmar Ḥasano

Sayyid M. (محمد عمر حسن; b. ca. 1925, Aqordät, d. 17 July 1962, Asmära) was a member of Cabinet in the Eritrean government during the ↗Ethiopian–Eritrean Federation. He was born of a prominent Təgre-speaking ↗Sāho (ᶜAsawərta-ᶜIdda) family, which collaborated closely with the Italian authorities. His grandfather was *sayyid* Muḥammad Ibrāhīm Ḥasano (ca. 1867–1933), merchant from ↗Kärän who organized caravans between ↗Massawa and the ↗Nara, and from 1889 was the representative of the Nara at the Italian post of Kärän. His uncle, the merchant al-Ḥasan Muḥammad Ḥasano, was the representative of the Nara and ↗Kunama in ↗Aqordät; his father, ᶜUmar Muḥammad Ibrāhīm Ḥasano, was an interpreter at the Commissariato of Aqordät, later *maʾmūr* of this city (1946) and as such had quelled the ↗Beni ᶜAmər rebellion of ᶜAli Muntaz, and in 1952 became Eritrean Staff Officer (ErDizBio 117, 208, 223).

M. received only basic education in Italian schools. However, during the ↗British Military Administration of Eritrea, he was employed as an "administrative assistant" in the Aqordät district and was in charge of the implementation of the British anti-*šəfta* policy in that area. Linked with the British anti-terrorist department he achieved the surrender of ↗Ḥāmid Idrīs ᶜAwate in 1951. At the same time, his cousin, the Italian, then British, police officer and *maʾmūr* of Kärän Aḥmad al-Ḥasan Muḥammad Ḥasano (ErDizBio 7) was an administrative assistant for the ↗Ḥalḥal and Kärän districts.

During the Federation M. was appointed administrator of the Aqordät division in 1955. In the elections for the second Assembly of Eritrea on 5–6 September 1956 he was elected member of the parliament, together with 19 others for "Keren Division". He, like most of them, was not affiliated with a party. In the same year the head of the Eritrean government, ↗Asfəḥa Wäldä Mikaʾel, appointed him head of the Department of Law and Justice, as the successor of ↗Ḥarägot Abbay. While he administered his ministerial post, the Representative of the Emperor in Eritrea successively transferred competencies of his ministry to the Ethiopian government.

M. lost his life in the ↗Eritrean Liberation Front's hand granade attack against Asfəḥa Wäldä Mikaʾel, other members of the Unionist Party and the Representative of the Emperor. Shortly afterwards the Federation was abolished.

Medhanie Admasu – Wolbert Smidt

Muḥammad ᶜUṯmān al-Mīrġanī

M.ᶜU. (محمد عثمان الميرغنى; b. *Rabīᶜ al-awwal* 1208 H. [October/November 1793] as-Salāma near at-Ṭāʾif, Ḥiğāz, d. 22 *Šawwāl* 1268 H. [8 August 1852]) was the founder of the *Ḫatmīya* order (↗Islamic brotherhoods) which played a central role in the history of Islam in the Sudan and Eritrea since the early 19th cent. Born into a prominent Šarīfian family, M.ᶜU. began his studies in the exoteric sciences before turning to mysticism. He studied in ↗Mecca under the distinguished Moroccan mystic, *ḥadīṯ* scholar and teacher Aḥmad b. Idrīs (d. 1837), who initiated M.ᶜU. into the final stages of illumination and with whom he later travelled to ↗Egypt. Between the mid-1810s and the 1820s M.ᶜU. conducted missionary tours in the Sudan where he was able to initiate followers and gain success particularly in the northern and eastern Sudan (eg., Sinnār, Šendi, Mätämma, ad-Dāmar, at-Tāka, among other places).

Cursory evidence found in Sudanese *Ḫatmī* sources and an Italian colonial report written in

the late 1920s, suggest that M.ᶜU. conducted several tours in the Eritrean area, including several passages through ↗Massawa on his way back to the ↗Ḥiğaz. M.ᶜU.'s earliest contact with the Eritrean region occurred during a visit to an unidentified place referred to as "Balġa" in ca. 1813. In the early to mid-1820s M.ᶜU. visited the western parts of modern Eritrea, where he had some success in initiating followers from among the Ḥalänga, Säbdärat, Algäden, Beni ᶜAmər, Barya (Nara) and Marya (both branches) groups. In many cases he appointed *ḫalīfas* and *ḫalīfat al-ḫulafāʾ* and hence incorporated them into his growing network of followers in the broader region. Evidence also suggests that M.ᶜU. conducted missionary tours in the Saḥəl and Sämhar regions. Indeed, it appears that M.ᶜU. was also able to build a base of followers on the coast, in Massawa and Ḥərgigo, where he left a wife and three children (all three died). In Massawa several *zāwiya* (Sufi lodges) were established by his representatives and followers. These early contacts and activities sparked and propelled the influence of the *Ḫatmīya* order in the Eritrean region, which would be later developed and consolidated by his descendants.

In the late 1820s M.ᶜU. joined his teacher Aḥmad b. Idrīs in Mecca. They stayed together in the Ḥiğāz and Yemen until the latter's death in 1837. Although there is little information about their relations in the later years, a series of letters from the earlier period seem to reflect some degree of tension arising between the quietist teacher and the more activist M.ᶜU. who had registered notable success in the Sudan and attracted thousands of followers to himself. Aḥmad b. Idrīs warned M.ᶜU. of the conceit that may result from people's attention and focus on his person. But M.ᶜU. continued to devote his time and efforts to the establishment and consolidation of the *Ḫatmīya* and was the only one of all of Aḥmad b. Idrīs's students to have established an independent *ṭarīqa* (order) in his master's lifetime. The *Ḫatmīya*'s emphasis on the spiritual eminence and intercessory powers of M.ᶜU. and the Mīrġanī family gradually distanced itself doctrinally from Aḥmad b. Idrīs and his memory (O'Fahey 1990:107–19, 142–53). In the 1830s M.ᶜU. sent his sons to spread the influence of his order in Yemen, Ḥaḍramawt and the Sudan. The establishment of a centre by his son Muḥammad al-Ḥasan (d. 1286/1869) in Kassala would prove an important factor in solidifying the order's influence over the Eritrean region from the 1840s onwards.

M.ᶜU. was a prolific writer, whose Qurʾānic commentary, *Tāğ at-Tafāsīr li-kalām al-malik al-kabīr* (or *Ḫitām at-Tafāsīr*), is perhaps his best known work in the wider Muslim world. Among his writings one finds his *rātib* (supererogatory exercise of devotion), *al-Anwār al-mutarākima*; a collection of *awrād* (litanies) known as *Mağmūᶜ al-awrād al-kabīr*; various commentaries; hagiographical texts (*manāqib*); poems on *tawḥīd* and poems and prayers in praise of the Prophet; texts on the Sufi notion of *ḫalwa* (retreat), mystical sayings allegedly addressed to M.ᶜU. by the Prophet; as well as works on the principles of spiritual life, or *ḥikam* ("sayings of wisdom"; s. a full list of M.ᶜU.'s writings in FahLit 187–98).

Jonathan Miran

Muḥammad Walī b. Aḥmad b. ᶜUmar

Šayḫ al-ḥāğğ M.W. (محمد ولى بن احمد بن عمر, Amh. Mäḥammäd Wäle; b. October/November 1935 [or 1933, according to a note in the *Kitāb īqāẓ himam al-aġbiyāʾ*], Gända ᶜArab, Därra *wäräda*, north-west Šäwa; d. 10 September 2005, ↗Mecca) was a prominent Ethiopian Muslim scholar. His father, *al-ḥāğğ* Aḥmad b. ᶜUmar b. Mūsā b. Wädağo b. Sahl, also known as *al-ḥāğğ* Aḥmad Därra after the area he was living in, was a highly revered *ᶜālim* (Islamic scholar), related to the ↗Mammädočč dynasty of ↗Wärrä Himäno in ↗Wällo. M.W.'s mother, *wäyzäro* Zubayda bint *šayḫ* Aḥmad b. *al-ḥāğğ* Muḥammad ᶜArab b. Ḥusayn b. *šayḫ faqīh* Nūr, came from a family of well-known clerics both on her paternal and maternal sides.

His traditional education included memorizing the ↗Qurʾān under his father's supervision, the *Ḥanafī* law books as well as *tawḥīd* (Islamic theology), *tağwīd* (the art of reciting the Qurʾān) and astronomy. After his father died in 1952, M.W. continued studying *fiqh* (Islamic jurisprudence) under the instruction of *al-ḥāǧǧ* ʿAlī Ādam of ↗Boräna. He then travelled to Minas to study *naḥw* (grammar) and *ṣarf* (morphology) under the guidance of *al-ḥāǧǧ* ʿAbdalbāsiṭ Muḥammad. Then he studied *muṣṭalaḥāt al-ḥadīṯ* (the study of technical terms and concepts of the *ḥadīṯ*) under *al-ḥāǧǧ* ↗Muḥammad Ṯānī b. Ḥabīb, who was also his teacher in *uṣūl al-fiqh* (the sources of jurisprudence) according to the *Ḥanafī* and *Šāfiʿī* rites, Qurʾān *tafsīr* (exegesis), *manṭiq* (logic) and other related subjects. He got *iǧāza* (certificates) from all his teachers.

Under *šayḫ* Ḥayāt b. ʿAlī, M.W. pursued his studies of the *ḥadīṯ* collections by al-Buḫārī and Muslim and was certified to teach *ḥadīṯ*. He was additionally certified to teach *al-kutub as-sitta* (the six canonical *ḥadīṯ* collections) by *al-ḥāǧǧ* Muḥammad [b.] Rāfiʿ [b. Busayr] and later, during his pilgrimage to ↗Mecca, by the Pakistani *muftī*, *šayḫ* Muḥammad ʿAbdarrašīd Nuʿmān. M.W. also spent several months learning from famous *ʿulamāʾ* at al-Azhar University of Cairo and in Mecca. M.W. obtained certificates in the recitation of ↗*ḏikr* from *šayḫ* Muḥammad Zayn of Dana, Mahdī b. Ḫalīfa of Märsa, Bašīr of Qäṭṭe and Muḥammad Nūr.

For more than 40 years, M.W. taught and served as ↗*imām* and *ḫaṭīb* at the mosque of an-Nūr in ↗Addis Abäba. During this time, he participated in international conferences in the U.S.S.R., the Kingdom of Saudi Arabia and Egypt. From 1990, he served as chairman of the Ethiopian *ʿUlamāʾ* Association. From 1991 to 1995 he was active securing legal recognition for the ↗*Šarīʿa* Court. He was one of the founding members of the Ethiopian Supreme Council for Islamic Affairs (the *Maǧlis*) and chairman of the Committee of *daʿwa* and *iftāʾ*. Before the 1995 incident in the ↗Ğāmiʿ al-Anwar, M.W. was chairman of the provisional *Maǧlis*. He was imprisoned after the incident; after his release in 1998 he preferred to leave Ethiopia for Saudi Arabia, also for health reasons.

In the last two years of his life, M.W. lived in Jeddah where he obtained a residence permit and from where he gave online lectures to Ethiopians living in Europe, USA and Canada. In 2004 he was invited to teach at the University of Umm al-Qurā in Mecca. The reputation he had acquired in his life time was reflected in the funeral prayer that was led by the *imām* of the Ḥaram Mosque and attended by thousands of Ethiopian residents of Jeddah, aṭ-Ṭāʾif and other towns. In accordance with his wish, M.W. was buried in Mecca, at the cemetery of Ḫadīğa al-Kubrā, the first wife of the Prophet ↗Muḥammad. He was survived by his wife and eleven children.

M.W. was a prolific author and translator, fluent in both Arabic and Amharic. From 1993 to 1995 he was also the Editor in Chief of *Bilāl*, the monthly magazine published by the Naǧāšī Publishers in Addis Abäba. He translated into Amharic an-Nawawī's *Riyāḍ aṣ-Ṣāliḥīn* (vol. 1, 1994) as well as the booklet on the rituals of the pilgrimage (1991/92) and authored an Amharic booklet *Imanənna Islam* (1994). M.W. also wrote a commentary on a handbook of *Ḥanafī* jurisprudence, where some information about his juridical formation is given (2001). He produced an article in Arabic on religious festivals in ↗Islam, a biographical note on *šayḫ* Muḥammad Ṣādiq ʿAbdalmalik (*Bilāl* 9, 1985 A.M.:37–39), a treatise on the ↗alms (*Ḥikma* [now *Quds*], 15 *Ṭərr* 1990 [23 January 1998]). The first volume of his book on Ethiopian Muslim scholars and saints was published by the Naǧāšī Publishers a few days before his death.

Hussein Ahmed

Muḫər

Muḫər language

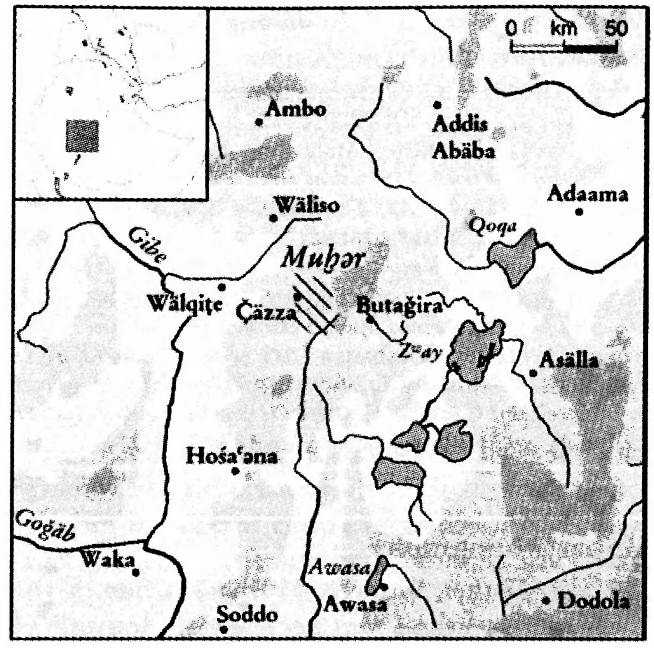
M. [*m*^{w}*äḵər*] is a ↗Gurage language spoken in the region of Č̣äzza in the Gurage Zone, by ca. 90,000 speakers (Gordon 2005:118). Genetically, it belongs to Outer South Ethiopic branch of ↗Ethio-Semitic languages. Leslau (1969) classifies M. as West Gurage (thus, together with ↗Čaha, ↗Ǝža, ↗Geto, ↗Ǝnnämor, ↗Ǝndägañ and ↗Mäsqan), while in Hetzron's classification (1977:17) M. is a separate branch, constituting together with West Gurage the *tt*-group of Outer South Ethiopic. Published texts in M. are found in Hetzron (1977) and Leslau (1981).

M. consonants are: labials *b*, *b*^{w}, *f*, *f*^{w}, *m*, *m*^{w}, *w*; alveolars *t*, *d*, *ṭ*, *s*, *n*, *l*, *r*; palatals *č*, *ǧ*, *č̣*, *š*, *ž*, *ñ*, *y*; velars *k*, *k*^{w}, *k*^{y}, *g*, *g*^{w}, *g*^{y}, *q*, *q*^{w}, *q*^{y}, *ḵ*, *ḵ*^{w}, *ḵ*^{y}; glottals *ʔ*, *ʔ*^{w}. *ḵ* is realized as [*kk*] when geminate. *q* and *q*^{w} reduce to [*ʔ*] and [*ʔ*^{w}] in post-vocalic position. The vowels are *i*, *e*, *a*, *o*, *u*, *ä*, *ə*, *ɔ*, *ɛ*. Consonants can be geminated medially and finally. Stress is normally penultimate. Etymological gutturals and glides *y*/*w* appear as vowels or palatalization/labialization: *däffa-m* ('turn on its side') < **dfʔ*, or *näč̣č̣ä-m*, 'pluck out' < **nṭy*.

There is no indefinite article, plural or gender marking on nouns. The definite marker is *-we*: *äč̣č̣ä-we wəṭṭaʔa* ('the tree fell down'). If the noun is qualified, *-we* appears on the qualifier: *ənəssəyä-we äč̣č̣ä* ('the small tree'). *yä-* marks dative, genitive (possessor) and definite accusatives. Locative is expressed by *bä-*, and comitative by *tä-*. Postpositions can combine with these prefixes: *bä-ṭaräbeza f*^{w}*en* ('on top of a table'). Adjectives, quantifiers, possessors, and demonstratives precede the noun: *bəžä säb* ('many people'). Possessives are suffixed: *bet-äññə* ('my house').

M. has the Semitic root-and-pattern system. Triradical verbs are classified into conjugation "types". Subject markers are suffixes in the perfective and prefixes and suffixes in the non-perfective. The penultimate consonant is geminated in some forms:

	perfective	imperfective	jussive
Type A 'break'	*säbbär-ä-m*	*yə-säbr-u*	*yä-sbər*
Type B 'return'	*žäbbär-ä-m*	*yə-žäbbər-u*	*yä-zäbbər*
Type C 'go away'	*žarräg-ä-m*	*yə-žarrəg-u*	*yä-žarg*
Quadriradical 'injure by stepping on'	*qəräṭṭäm-ä-m*	*yə-ʔräṭṭəm-u*	*yä-ʔärṭəm*



Examples of non-derived reduplicated verbs are *kässäsä-m* ('accuse, sue'), *dəräddärä-m* ('pile up'). Derived reduplicatives have an infix *-a-*: *näkkäsä-m*, 'bite' > *näkakkäs-ä-m*, 'bite repeatedly'. "Main verb markers" occur on the main clause non-negative verb. The imperfective main verb marker has three allomorphs: *-u*, *-t*, *-i* depending on subject marker and object suffix on the verb: *tə-lägd-u* ('you [masc.sg.] touch'); *yə-lägd-ma-t* ('they [fem.] touch'); *tə-lägd-i* ('she touches'), but *tə-lägədd-a-t* ('she touches her'). Object suffixes also have a complex set of allomorphs (Hetzron 1977; Rose 1996). Derivational prefixes include reflexive-passive (*tä-*) and causative (*a-* and *at-*). Negation markers (*an-*/*a-*) precede these prefixes: *q*^{w}*äññ-a-m* ('he roasted') > *tä-ʔ*^{w}*äññ-ä-m* ('it was roasted') > *an-tä-ʔ*^{w}*äññ-ä* ('it was not roasted').

Palatalization or vowel fronting indicates the 2 fem.sg. subject: *kəft* (2 masc. sg.) vs. *kəfč* (2 fem. sg.) ('open!'). Palatalization or labialization mark the impersonal and the 3 masc.sg. object: *läggädä-m* ('he touched') > *läggäǧ-i-m* ('one touched'), *tələgəǧǧ-t* ('you [masc.sg.] touch him/it'); *kättäfä-m* ('he chopped') > *kättäf*^{w}*-i-m* ('one chopped'), *təkätəff*^{w}*-t* ('you [masc.sg.] chop it').

The basic word order is Subject-Object-Verb: *älämu*$_{1}$ *b-äč̣č̣ä*$_{2}$ *əssat-we*$_{3}$ *g*^{w}*əsägg*^{w}*äs-ä-nn-əm*$_{4}$ ('Älämu$_{1}$ poked$_{4}$ the fire$_{3}$ with a stick$_{2}$'). Markers of subordination include *ḵäma* ('that') or *ḵänä* ('because') in final position, and *yä-*, *b*(*ä*)- ('if') and *t-* ('while, when') prefixed to the verb. Relative clauses precede the head noun; relative pronoun *yä-* appears on verb.

The ten-word list is as follows: *att* 'one', *ḵ*^{w}*ett* 'two', *sost* 'three', *əssat* 'fire', *əga* 'water', *č̣et*

'sun', *ṭärraqqa* 'moon', *däm* 'blood', *allämät* 'tongue', *sən* 'tooth'.

Muḫər ethnography

M. (also Muher, Gurage: Mʷäḫər) is one of the sub-groups of the *Säbat bet* ('Seven Houses') of Western ↗Gurage. The M. territory is the highest and the most northern part of Western Gurage. It is located on a high plateau extending from the eastern Great ↗Wabi River to the western summits of Zebidar mountains. M.'s population today is ca. 90,000 and constists of sedentarists practicing mixed farming and to a minor extent cattle-breeding.

The M. territory borders to the south and south-west to the *Säbat bet* groups of ↗Čaha and ↗Ǝža, an area formerly characterized by a religious network of the cults belonging to the autochthonous Gurage folk-religion. To the east, it touches the Kəstane (↗Soddo) region, well known for the old Christianity claimed by its population. Finally, M. has Muslim neighbours: the ↗Qabeena to the west and the ↗Mäsqan to the south-east.

The M. confederation of clans is divided into two parts: *anä bet* ('House of *anä*') and *ädi bet* ('House of *ädi*'). The two names derive from the words they respectively use for the 1st pers. sg., *anä* or *ädi*. The *anä bet* speak M. proper, whereas the *ädi bet* speak a variety of the Kəstane language (Hetzron 1977:3–6). This particular composition can be better understood in the light of M. and Kəstane histories.

Like the Kəstane, the M. people were seen at the end of the 19th cent. as an ancient Christian people (Cecchi 1886:ii, 96). Braukämper (2002:21, 44, 52, 65) established a relation between the name M. and the name Mugär or Mugan of the Christian written sources. If this is true, the contemporary M. population would descend from the Christian population of Mugär, a district mentioned in *aṣe* ↗ᶜAmdä Ṣəyon's (r. 1314–44) chronicle as a part of ↗Šäwa. European maps located this district next to Aymälläl, whose population is supposed to have been the origin of today's Kəstane. Thus, the northern parts of Gurage region could have constituted a common refuge for the two Christian medieval populations. During the *ǧihād* of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ) or during the time of the Oromo migrations, in the 16th cent., the now M. territory could have welcomed a major part of the Mugär population, and have kept a minor part of the Aymälläl population.

An oral tradition refers to an ancient Christianization of the local population, as the fruit of ↗Zena Marqos proselytism (Lebel 1974:101) This saint was allegedly the founder of the monastery of ↗Däbrä Bəśrat in Šäwa (Cerulli 1962). A monastic document redacted in the 16th cent. mentions ↗Morät in Šäwa, as his region of activity (DerDom 126f.). Thus, two hypotheses arise. First, the M. monastery of Gädamä Yäsus (and ↗Muḫər Iyäsus) may have been founded by Zena Marqos, as his *Gädl* claims, or one of his successors, and may have constituted a southern extension of his religious influence. Secondly, the traditions about Zena Marqos may have been imported by refugees from Mugär or Morät.

The Christianization process, or the arrival of a Christian population, can also be deduced from the oral traditions referring to Zena Marqos driving the most powerful spirits of Western Gurage religion: Ogʸät (↗Waq), ↗Dämʷamʷit, and Božžä out of M. (Gebreyesus Haylemariam 1991:141). Nevertheless, other oral sources deny this fact. For example, some present Ǧumʷäd, the first Božžä representative, as coming from ↗Allaaba, while some others declare that she was sacrificed to the river by her M. father, and then became the spirit medium of Božžä in other parts of Western Gurage. This last tradition stresses the integration of M. people to the political and cultural sphere of Western Gurage.

Indeed, from the political point of view, the M. belonged to the initial confederation of the *Aməst bet* ('Five Houses') Gurage, that formed the historical core of the *Säbat bet*. Moreover, the M. war leader *agäz* Šäbäta is well known for his participation in the resistance against Mənilək's conquest of the area, an attitude in stark contrast with the surrender of Kəstane leaders. Then, from the religious point of view, the M. people were completely involved in the religious life of Western Gurage. Similarly to the other Gurage

"houses", unity and solidarity of M. clans were enforced by the common cult rendered to their ↗Waq spirit Mägär Närir (ShGurage 53).

Finally, M. people may be seen as an old Christian population who settled there in 14th or 15th cent., or arrived there after the beginning of the 16th cent. After a possible Christianization of surrounding peoples, they participated fully in what led to the emergence of the Western Gurage culture, which was achieved in the beginning of 19th cent. This process differentiated them from their Kəstane neighbours, and constituted their culture as an interface between the *Säbat bet* and Kəstane regions.

Muhər Iyäsus

M.I. (**ሙህር፡ ኢየሱስ**, also Mohər [Gädamä] Iyäsus, Məhur Iyäsus) is a monastery in Korär Muhər (or Məhur) *qäbäle*, ƎŽa-Wäläne *wäräda* (formerly the Šäwa province, now Southern Nations, Nationalities and Peoples' Region), 200 km south-west of Addis Abäba and 50 km of ↗Wälqiṭe, at an altitude of 2,050 m A.S.L., on the river Käreb.

M.I. is one of the oldest monastic foundations (↗*Gädam*) in the historical southern part of Ethiopia. The local tradition claims that it was founded by *abunä* ↗Zena Marqos in the first half of the 14th cent. According to the late 16th-/early 17th-cent. Acts of the Saint, Zena Marqos established it, allegedly along ca. 150 more churches, to evangelize the population of "Hagärä Məhur" (according to the Vita, the local people had previously worshipped the ancestral spirits "Makos and Gerdan").

With the expansion of ↗Islam, the monastery gradually lost its importance. It remained almost deserted until a certain *abba* Ṭəgabu applied to *aṣe* Mənilək II for support in re-establishing the monastery. The medium-size octagonal church was rebuilt and monks were motivated to reside in the monastery. It is reported that *däğğazmač* ↗Balča Safo gave to the monastery some 100 ha agricultural land, to be used as a source of income.

Currently, along with the churches Soddo Mədrä Käbd (cp. ↗Gäbrä Mänfäs Qəddus) and ƎnorAmanuʾel, the monastery is one of the main Orthodox foundations in ↗Gurage area. It is also an important centre of traditional ↗education. Recently, the number of monks and church students increased, and, thanks to the financial support of the Ethiopian Church, a new clergy training centre was opened, aimed to intensify the Orthodox social and theological mission in the area, enabling it to compete with other religious denominations.

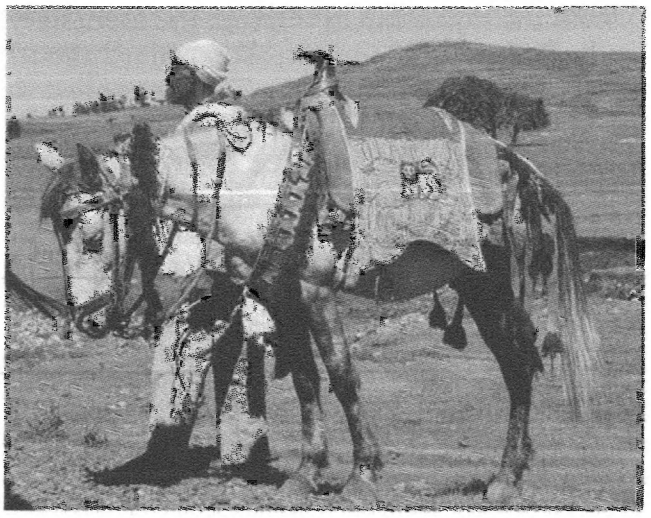
Mule(s)

M. (Amh. **በቅሎ**, *bäqlo*, Tgn. *bäqli*, Orom. *gaangee*) i.e. the offspring of a male donkey and a female ↗horse, were highly prized in traditional Ethiopia (for zoology s. ↗Animals). They were used extensively in the highlands in contrast to ↗camels in the lowlands, both for riding and as pack animals. Ethiopians going to war or on a hunting expedition would travel most of the way on a M., which they would abandon in favour of a horse at the last possible moment. This



Mule in decorative outfit: harness with metal pins and red tufts, saddle cloth with embroidered lion, in Dawənt; photo 2005, courtesy of Ewa Balicka-Witakowska

procedure was followed because the M. was the sturdier and more sure-footed of the two animals whereas the horse had greater maneuverability.

The importance traditionally attached to M. is evident from the early 16th-cent. narrative of Alvares. He stated that the court never travelled with "less than 50,000" of these animals, and that they "might reach 100,000". *Aṣe* Ləbnä Dəngəl used to come out of his tent riding a "dark bay mule [...] as big as a large horse". Covered all over with a M.-cloth it was held by the monarch "in great estimation", as a result of which he travelled with it, wherever he went. In a court ceremony, the ↗*bitwäddäd* of the Emperor emphasized his humility by telling the monarch that he was the lord who "saddles your mules and puts the head stalls on your baggage mules". M. were also paid as ↗tribute. Tribute brought from Goğğam, as witnessed by Alvares, included 30 saddled animals, followed by ca. 3,000 young pack-animals, male and female, as well as a number two or even three years old (BeckHuntAlvar 401, 426f.).

The prevalence of M. in the early 17th cent. was likewise reported by Almeida. He states that there were good she-animals, on which the nobility and "lower classes" both rode, as well as she- and he-M. serving as draught animals. Owners of horses, he confirms, did not travel on them, but rode on their M., which they led to battle with their right hand. *Aṣe* Susənyos usually mounted and dismounted from his M. in his tent, but if he alighted elsewhere his followers would surround him, and hide him from public with their clothes (BeckHuntAlm 50, 81, 94). The court official in charge of the M. was the ↗*baldäras*.

The breeding of M., according to Barradas, was at that time "very widespread" in Təgray, but particularly in ↗Bur and towards the coast. M. there were "reasonably priced": ordinary animals sold for two or three ↗*wäqet*, or ounces, of gold, and special ones for ten *wäqet* (Barradas 1996:29, 34, 72). M. were also used for the transportation of ↗*nägarit*, or drums, which were carried in pairs on either side of the animal. M. were ridden astride by both men and women (BeckHuntAlm 81; Barradas 1996:34, 72).

M.-breeding in the 19th and 20th cent. was a major occupation of the highland peasantry (ChTana 28). Such animals, the price of which rose from around four Maria Theresa thalers per head in 1840 to about 100 in 1900 (PankEcon 211), were extensively used in commercial caravans (Ferret — Galinier 1848:407-11; PankSoc 207ff.), constituted an export article at the port of Massawa, and were kept, together with horses, in every palace and also in houses of the nobility (Parkyns 1853:357; PankHist II, 76). The finest riding-M. continued to be highly regarded. Parkyns (1853:32f.) reported that the price of a M., eight or ten Maria Theresa thalers for an ordinary baggage animal and 120 dollars for a prize specimen, sometimes exceeded that of a horse. M. wore a saddle-cloth, made of leather rather than of cloth, as was the case with horses. M. wore around their neck a band of leather thongs attached with small chains to "a large number of brass plates, the jingling of which makes a pretty noise when the animal is gamboling". M.-cloths belonging to persons of substance were embroidered with a "mosaic of different coloured leathers in grotesque patterns of lions, men, &c". Such M. were often given as presents by rulers to visiting travellers whom they wished to honour (Lockhart 1984:12f.; RasTheo vol. 1, 245). When riding a M., persons of rank sometimes were accompanied by one or two ↗*däggafi*.

The animal remained the principal means of transportation in early 20th cent. Addis Abäba (Vivian 1901:175), and continues so to this day throughout much of the Ethiopian countryside.

Richard Pankhurst

Müller, David Heinrich von

M. (b. 6. July 1846, Buczacz/Galicia, d. 21. December 1912, Vienna) was an Austrian Orientalist. He began his studies in 1867 at the Jewish Theological Seminary in Breslau (Wrocław), and in 1869 he entered the University of Vienna, where he spezialized in Semitic languages. His teachers were the most renowned Orientalists of the time, Eduard Sachau in Vienna, Heinrich Leberecht Fleischer in Leipzig and Theodor ↗Nöldeke in Strasbourg. In 1875 M. obtained his doctoral degree in Vienna, in 1876 he got the qualification as lecturer in Semitic philology and in 1885 he was appointed as Full Professor.

M. was a versatile scholar who taught almost all the then known Semitic languages. Moreover, he was the founder of Sabaean studies (↗Epigraphic South Arabian) and encouraged students to go exploring ↗Arabia in search of ancient ↗inscriptions. He was co-founder of the Institute of Oriental Studies in Vienna (Orientalisches Institut, 1886) and co-editor of the *Wiener Zeitschrift für die Kunde des Morgenlandes* (1887). M. contributed a chapter to Bent's book *The Sacred City of the Ethiopians* (1893), in which he discussed a number of pre-Aksumite inscriptions from ↗Yəḥa (RIÉ 33, 36, 38, 40, 42, 43) as well as Aksumite inscriptions from the area of ↗Aksum (RIÉ 185, 186, 188, 189, 202, 270) and investigated their script and language. In 1898 he was elected full member of the Imperial Austrian Academy of Sciences. On behalf of this institution in 1898/99 he led an expedition to South Arabia and the island of ↗Soqoṭra, the aims of which were mainly epigraphic discoveries and linguistic research.

Walter W. Müller

Mulugeta Buli

M.B. (ሙሉጌታ፡ ቡሊ, b. 1917, Sidamo, d. 17. December 1960, Addis Abäba) was an officer and member of *aṣe* ↗Ḫaylä Śəllase I's government. He was educated at a mission school and at Täfäri Mäkʷännən School, Addis Abäba. From 1934 to 1936, he attended the ↗Holäta Military Academy, where he was the only Oromo Officer Cadet. After completing his studies, M.B. was gazetted a captain and became chief instructor at the Academy.

M.B. spent the early part of the Italian occupation in Djibouti and Kenya but returned to Ethiopia with Ḫaylä Śəllase I and the ↗Gideon Force and participated in the battle of ↗May Čäw. After Liberation, he served as commander of the ↗Imperial Bodyguard (1941–55). During this period, he established a Public Security Department that reported to the Ministry of the Interior. Ḫaylä Śəllase promoted him to Brigadier after he had thwarted at least two coup attempts.

In 1951, the Emperor ordered M.B. to establish the Kagnew (↗Qañňäw) Battalion that took part in the ↗United Nations operation in Korea (1951–53). The battalion's performance earned him a promotion to Major General. In 1952, some officers urged him to overthrow Ḫaylä Śəllase but he remained loyal to the Emperor.

In the late 1950s, M.B. held several portfolios, including Chief of Staff of the Armed Forces (1956–58), Private Chief of Staff to the Emperor (1958–59), and Minister of National Community Development (1959–60). Additionally, in 1959, he created the Imperial Private Cabinet that became Ḫaylä Śəllase's national security staff. This organization monitored the activities all Minis-

ters as well as others who might pose a threat to the Emperor.

In late 1960s, Ḫaylä Śəllase undertook a state visit to Brazil. On 14 December 1960, the leaders of the ↗Coup d'état 1960 (in EAE vol. 2, 1081–82), Brigadier General ↗Mängəśtu Nəway and his younger brother ↗Gärmame Nəway, announced the formation of a new government under Asfa Wäsän and appointed M.B. Chief of Staff of the Armed Forces. A royalist coalition that included the aristocracy, church, army, air force, and the general population immediately suppressed the coup. Intense fighting in Addis Abäba forced the rebels to take refuge in the ↗Gännätä Ləʿul palace. M.B. and other ministers were held as hostages. On 17 December 1960, loyalist forces attacked the palace but, before the fighting ended, the rebels had executed 18 hostages, one of whom was M.B. In his memoirs, Ḫaylä Śəllase maintained that M.B. had been "a loyalist."

Mulugeta Yəggäzu

M.Y. (ሙሉጌታ ይግዙ; b. 1865, Mänz, d. February 1936, Amba Aradom) was an important early 20th cent. military leader and politician, notable mostly for his part in the ↗Italian war of 1935–36, even if already in 1896 he had been among the commanders during the battle of ↗ʿAdwa. A descendant of the 18th-cent. ruler of ↗Morät, Ṭəddu, M.Y. was related to *aṣe* ↗Mənilək II.

In 1905, M.Y. was appointed secretary of the treasury and in 1907 he joined Mənilək's first cabinet as Minister of Finance. At that time he was bearing the title of *bäğərond*. His proximity to the Emperor can be illustrated by the fact that he was present in August 1908 during Mənilək's medical examination by doctors Vitalien and Mousali Bey after a thrombosis attack. In 1909 he was suspected, by German physicians of the Emperor, Max Steinkühler and Alfred Zintgraff, of having been involved in poisoning Mənilək, and they suggested to depose and arrest him. M.Y. was not arrested but he was demoted by *ləğ* ↗Iyasu, whilst the Regent of Ethiopia *ras* ↗Täsämma Nadäw appointed him Governor of ↗Gimira with the title of *däğğazmač* in 1910.

In 1916, M.Y. again became Minister of Finance and subsequently served as Minister of Foreign Affairs. In 1918, he was sacked, along with other ministers, after they had been accused of corruption. Despite this setback, he remained a politically influential personality. In 1924, M.Y. accompanied *ras* Täfäri on his first European tour. Three years later, he became Minister of War. In January 1931, he became a ↗*ras* and governor of a large part of southern and western Ethiopia, his power base being in ↗Illubabor.

M.Y. commanded the army that Täfäri sent to suppress the rebellion of *ras* ↗Gugsa Wale, who believed a victory against Imperial forces in Gondär and Bägemdər would end the regency. Whilst Gugsa commanded a 10,000-man army equipped with ten machine guns and two field guns, M.Y. left Addis Abäba heading for Yäğğu and Rayya on 23 January 1930, in command of a larger army mostly made up of ↗*näftäñña* settlers of southern provinces, well equipped with 30 machine guns and five field guns. On 31 March 1930, the battle of Ančim (or Zäbiṭ) took place near ↗Č̣äč̣äho, the historic pass connecting the provinces of Bägemdər and Wällo. Apart from the advantage in ground operations, M.Y. had French piloted planes drop bombs and propaganda leaflets on Gugsa's troops and conduct aerial reconnaissance missions. Within a few hours, *ras* Gugsa had been killed and his army defeated.

Ḫaylä Śəllase was, nevertheless, increasingly dissatisfied with the illiterate and obstinate M.Y. who opposed military reforms, lacked knowledge of world affairs, and repeatedly demanded that all foreigners be expelled from Ethiopia. Whilst the Emperor had at least three possible candidates, including *ras* ↗Getačč̣äw Abate, *fitawrari* ↗Bərru Wäldä Gäbrəʾel, and *bäğərond* ↗Täklä Ḫawaryat, he, however, eventually, decided to keep M.Y. on active duty.

Shortly after the outbreak of the Italian war, the Emperor ordered *ras* M.Y. to outflank Italian forces at Mäqälä and to cut their supply lines. Additionally, he instructed *ras* ↗Kaśa Ḫaylu and *ras* ↗Śəyyum Mängäša to attack Tämben, and *ras* ↗Əmməru Ḫaylä Śəllase to capture ↗Šire. On 31 January 1936, the newly arrived General Pietro ↗Badoglio began the "Great Strategical Battle of Təgray". He subjected M.Y.'s forces to two weeks of air and artillery bombardment while monitoring Ethiopian wireless communications.

On 10 February 1936, the decisive battle of ↗Amba Aradom (or of Əndärta) began; it lasted

for nine days. Badoglio had deployed four army divisions and two Blackshirt divisions to the field where M.Y.'s 80,000-man "army of the middle" (*yämahal särawit*) awaited enemy forces. M.Y.'s inventory included 400 machine guns, 18 old medium-calibre field guns, and a few anti-aircraft Oerlikons. Badoglio employed 280 artillery pieces that fired 23,000 rounds and machine guns that expended 30,000 rounds. Additionally, 170 *Regia Aeronautica* aircraft conducted 546 raids and dropped 396 tons of bombs, some of which contained mustard gas, on Ethiopian positions. In the days from 12 to 15 February 1936, well-prepared Italian forces encircled the Amba. Badoglio persuaded the Oromo of Rayya and Qobbo to fight against the Emperor's armies as M.Y.'s troops had looted their villages en route to the battle site. Oromo guerrillas and their Italian partners inflicted heavy casualties on the Emperor's army.

Ras Mulugeta Yəggäzu; photo 1917, collection of Maurice de Coppet, Helsinki University Library, Finland (no. E2424)

M.Y. downplayed this setback by launching a disinformation campaign. He told George Steer, the *Times* (London) correspondent, that there had been no major battle at Amba Aradom but only a series of skirmishes. Whilst Herbert Matthews, the *New York Times* correspondent, had witnessed the Italian victory at Amba Aradom, his editors did not print the story relying on M.Y.'s account as he was an "official" source.

On 15 February 1936, M.Y. abandoned the battlefield. As soon as the news leaked out, the Army of the Middle collapsed as large numbers of Ethiopian troops began the long trek to the south. On 20 February 1936, Oromo fighters killed M.Y.'s son mutilating his body. Shortly thereafter, M.Y., too, was killed in unclear circumstances. Badoglio believed that Azaboo Oromo had killed him, but others maintained that a strike by an Italian plane was responsible for his death. The Emperor unsuccessfully attempted to cover up the cause of M.Y.'s death by reporting that he had died of pneumonia.

Thomas P. Ofcansky

Munro-Hay, Stuart Christopher

M.-H. (b. as S.C.H. McIlwrath 21 April 1947, Northern Ireland, d. 14 October 2004, Chiang Mai, Thailand) was an archaeologist, numismatist, and researcher of Ethiopian history.

Educated at Liverpool University and the ↗School of Oriental and African Studies in London (SOAS), M.-H. began his career as an Egyptologist, but soon turned his attention to ↗Ethiopian Studies. In 1973–74 M.-H. began work with the British Institute in Eastern Africa (BIEA) excavations at ↗Aksum. Under the direction of Neville Chittick, he served as site supervisor and then as Assistant Director of the BIEA Aksum project. The results of the excavations were published in 1989. M.-H.'s research confirmed Chittick's view that the site's decline dated from the 7th, rather than from the previously estimated 8th-beginning of the 9th, cent. – a significant finding for the history of the region.

In 1978 M-H. received his Ph.D. from the SOAS, with a dissertation entitled *A Reappraisal of the History and Development of the Aksumite State from Numismatic and Archaeological Evi-*

dence, written under the supervision of the then BIEA President Sir Laurence Kirwan.

M.-H. taught at the Universities of Khartoum (1977–80), Nairobi (1980–82), Edinburgh and Cambridge (1985–87), as well as at the Humboldt University Berlin (2001–02).

Starting in 1991, he lived in Paris and Thailand and worked as a free-lance archaeologist, continuing research into Ethiopian history and ↗coinage. A collector of and specialist on Aksumite coins, he wrote extensively on Ethiopian and South Arabian ↗numismatics. Much of M.-H.'s large Ethiopian and South Arabian coin collection was sold to the Ethiopian Government during the 1980s. His extensive library of Æthiopica was bequeathed to the ↗Orbis Aethiopicus society.

M.-H. was the author of over a dozen books and numerous academic and non-academic articles on Ethiopia. Among his important publications are the works on the ↗Ark of the Covenant (1999, 2005) and the Ethiopian Orthodox Church (MHAlex), and especially on Aksum as "a late antique civilization" (MHAksum) – which proved to be a ground-breaking approach.

He also wrote a brief history cum detailed guide book for the visitor to Ethiopia (2002); collaborated with Richard Pankhurst on an annotated bibliography of Ethiopia (1995); and was a leading contributor to the catalogue of an important exhibition on Ethiopian church art (AfrZion).

Theodore Vestal

Munzinger, Werner

M. *bāšā* (in Ethiopian sources *ato*, later *qʷənsäl* Məsənğər [Mənsəğər], in Tgn. Məstänğär *bašay*, b. 21 April 1832, Olten, d. 15 November 1875, at the ᶜUddúmma lake, ↗Awsa sultanate) was a Swiss Orientalist, ethnographer and Egyptian governor.

His father was the Swiss Minister of Finance Joseph Munzinger, one of the first presidents of the newly created Swiss state. In 1849 M. entered the University of Berne where he studied languages and history, as well as physical geography and chemistry. He continued at Munich and Paris specializing in Oriental languages. In 1852 M. went to Egypt in the services of a trading-agency, and in August 1853 he was sent to the coasts of the Red Sea, and settled at ↗Massawa. For more than one year, he studied the town and its surroundings, whilst making his living as a merchant (with goods from Alexandria) and also trying to make a name for himself as a scholar with first publications in geographical journals. In 1854 he settled at ↗Kärän in the Bogos land of the ↗Bilin as a trader. There he married a local widow, Näffaᶜ (Christian name Wälättä Maryam), adopting her son Kəflä Maryam (Kəflu, later Egyptian commander of Kärän troops Kəfle *bey*, d. mid-1875 Kärän).

M. collected a maximum of ethnographic information from his surroundings. In 1859 his study of the customs and the law of the Bogos was published. In addition, he published a first detailed map of the region, documenting the river-system of the ↗Barka-↗ᶜAnsäba, the exact position of ↗Kassala etc. Later maps of the "northern Abyssinian borderlands" (mainly today's central Eritrea) largely depended on his research as well.

In July 1861 M. participated in the German Africa Expedition (↗Expeditions), funded by Ernst I of Saxe-Coburg-Gotha, known also as the Heuglin-expedition to Wadai in search of Dr. Eduard Vogel. The expedition started in Kärän and went to the land of the semi-nomadic ↗Marya (30 August to 15 September). At the end of October it continued into the highlands. Due to interpersonal differences, the expedition split into two groups in the village of May Šeka. Theodor von ↗Heuglin and Hermann Steudner proceeded to southern Ethiopia, following the expedition of Alexine Tinné (1839–69) from the Netherlands to the White Nile, whereas M. and Theodor Kinzelbach (1822–68) went westwards to the land of

the ↗Kunama ("Bazen") and the ↗Nara, where they collected important ethnographical and linguistic data (cp. also ↗Ilit and Sokodas). On 1 March 1862 they arrived at Khartoum. Later, at al-Ubayyiḍ, the capital of Kordofan, M. found confirmation for Vogel's death.

After eleven years in Africa, M. went back to Europe and reported on the results of the expedition in Gotha. On 27 May 1863 he was received by the President of Switzerland, Fornerod, in the Federal Palace Berne, where M. presented the results of his expedition. He reworked his linguistic, ethnographic and geographical notes and quickly published the results. The *Ostafrikanische Studien* (published in 1864, MunSt), later translated into Italian, are his main work. He declined, however, all offers to remain in Switzerland and in the autumn of 1864 he returned to his wife and former life. He continued his scholarly research during the subsequent years (e.g. publishing word lists of ↗Təgre and other languages), even though he became more involved in local politics. His well-researched ethnographic publications remain an important source until today.

In 1864 M. became the acting British vice-consul at Massawa, replacing vice-consul ↗Cameron. In 1865 he additionally became the French vice-consul. In 1867, when the British prepared for the intervention against *aṣe* ↗Tewodros II, M. participated in the reconnaissance party led by the British agent of Aden, Merewether. Their task was to identify a berth and a base for the troops in Egyptian territory on the coast, and adequate routes into the interior. M. served then within the intelligence department with the ↗Napier expedition. His linguistic skills (he spoke at least Arabic, Təgre, Təgrəññña and Amharic), his knowledge of the country and its leaders, and his own family networks helped to find the best routes through the difficult territory, and to successfully negotiate with the different chiefs. Despite his efforts, he did not receive the reward he had hoped for from the British Government. He received the Most Honorable Order of the Bath III, but the Vice-Consulate was thought to have become unnecessary and M. was dismissed without pay. As a French vice-consul, however, he now occupied a political key-position in the region, as several areas, such as ↗Ṣänᶜadäglä in Akkälä Guzay and Bilin of Bogos (Kärän), being close to the French ↗Lazarists' mission, were *de facto* placed under French protection.

In September 1869 he almost became the victim of an assassination attempt on his way from Kärän to Massawa, when a group of local dignitaries decided to reduce foreign influence and to eliminate M. as its most prominent agent. The three bullets nearly killed him, and it took him several months to recover. The leading figure behind the attempt was the Catholic priest *abba* ↗Ǝmnätu, who was expelled to Egyptian territory by Kaśa Mərčа (later *aṣe* ↗Yoḥannəs IV) and imprisoned at the French consulate at Massawa by M. From that moment on, M. strictly opposed the rise of Kaśa Mərčа, and went as far as threatening him with foreign intervention in 1871.

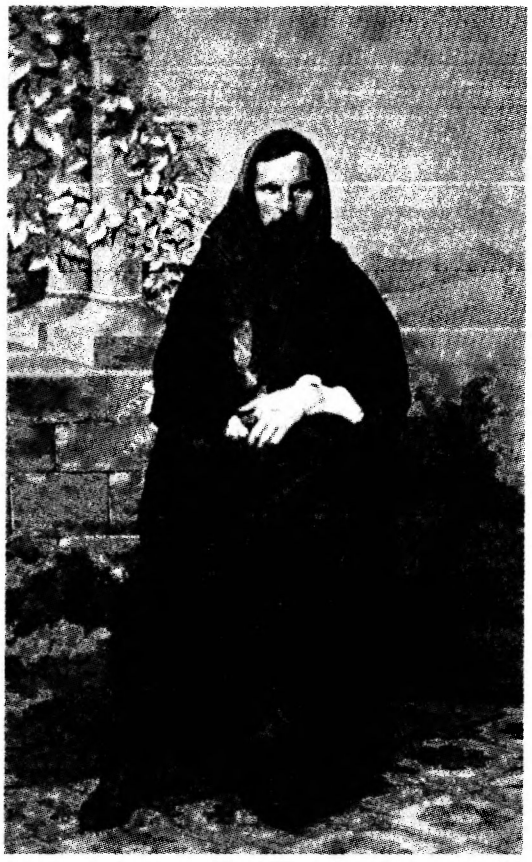
After the defeat of France in the Franco-Prussian war of 1870–71, M. was invited by the Egyptian government to enter into Egyptian services. M. was appointed governor of ↗Massawa Governorate and *bey*. From the beginning, M. energetically undertook reforms and started important investments in his Governorate. He established a telegraph line linking Massawa with the Sudanese interior and Egypt, planned a railway, built the dam (with a water pipeline) linking the island of Baṣəᶜ with the mainland, erected new government buildings at Massawa (e.g., the governor's palace on Ṭəwalät island in 1874), and set up a large-scale cotton production in the Barka lowlands. He supported both the Protestant ↗Swedish mission, at ↗Ǝmbärämi and Gäläb (↗Mänsaᶜ), and the French Lazarist mission, with their centre at Kärän (s. OMahPh). Politically he undertook strict measures against the slave trade (↗Slavery) and assured the allegiance of those tribes linked with the Ottoman Empire by a loose suzerainty or link with France; he planned the integration of the ↗salt plains (↗ᶜAfar Depression) into his Governorate. In July 1872, following an invitation by local Bilin leaders (albeit not by all), he annexed Kärän with its surroundings in the highlands, which became a source of a long history of diplomatic and armed conflicts between Egypt and Ethiopia until 1884 (the "Bogos affair"; cp. ↗Hewett Treaty).

In 1872 M. attained the rank of *bāšā*. In 1873 Massawa was integrated into the new "Governorate of the Eastern Sudan and the Red Sea Coasts" (comprising eastern Sudan from Sawākin to Khartoum, with its core partially corresponding to today's Eritrea; ↗Ottoman Empire), and M. was named as its governor-general. His successor in Massawa, who served under him, was ↗Arakel *bey* Dabroyan, an Austrian-born Egyptian official. M. continued to energetically pursue his politics of economic development. In the

same year M., through his secretary ↗Haggenmacher, presented his Red Sea Governorate and its products at the World Exhibition at Vienna. Following local customs (and allegedly encouraged by his barren wife), M. then married a second wife, the Oromo Tərungo *bint* Arakīl, freed from slave traders in Massawa (Smidt 2005). Their son, Joseph Munzinger, later lived in Cairo, then Switzerland.

In October 1875, M. was ordered by *ḫidīw* ↗Ismāᶜīl *bāšā* to lead a military-cum-settlers expedition to the kingdom of ↗Šäwa via the then still independent sultanate of Awsa, which was to be integrated into the Egyptian sphere of influence. The main aim was the establishment of an Egyptian–Šäwan alliance against *aṣe* Yoḥannəs IV. M. started from Tağūra, then formally belonging to his Red Sea Coasts Governorate as a suzerain territory. He was accompanied by Egyptian officers and soldiers, his intelligence officer Haggenmacher and several settlers, by his first wife and by *nəguś* Mənilək's ambassador to Egypt, *ras* ↗Bərru Wäldä Giyorgis. However, the Awsa *sulṭān*, pretending friendship, led them into an ambush with the help of ↗Ḥúmmad b. Loᶜoytá, and the ᶜAfar warriors annihilated almost the whole party in the night from 14 to 15 November. ᶜAfar oral tradition remembers this event as important; the battle-site is called Fursé ('place of Persians' = i.e. [Muslim] foreigners; Morin 2006:97). During the same period, other Egyptian military expeditions invaded Ḥamasen (battle of ↗Gundät), successfully annexed the Emirate of ↗Harär and also approached Ethiopia from the Sudan (cp. ↗Egyptian–Ethiopian War, 1875–76).

The exact role of M. in the Egyptian politics of expansion still needs to be assessed. Different historical accounts come to diametrically opposite results. His private papers show that he opposed Ismāᶜīl's politics of expansion; according to M., the aim of expedition to Šäwa was to make him perish or at least to remove him from his influential position, as M. planned to enter into the services of Mənilək. However, his letters to *aṣe* Yoḥannəs IV also prove that he followed his own aggressive policies. It might be that he saw his role mainly in the industrial and economical modernization of his territories, which included political measures and limited military action, but excluded full-scale military expansion (which was rather demanded by Arakel, his political adversary).



Werner Munzinger; photo 1864, courtesy of Schweizerische Landesbibliothek, Bern

After his death M. was the subject of many publications (sometimes misspelling his name as Münzinger, due to an erroneous reading of the German script). In historiography writing from an Ethiopian perspective (cp. RubInd), he is usually regarded as an enemy of Ethiopia (and too easily depicted as an "adventurer"). Eritrean historiography sometimes considers him as a precursor of the foundation of Eritrea. He is remembered positively in Kärän oral tradition as Məsənğər *bašša*y; the descendants of his adoptive son played a role as notables in that region. Swiss publications often idealize him, focusing on his life of explorer; several biographies were published in Switzerland (Keller-Zschokke 1891; Van Dovski 1954; Capus 1997, a successful biographic novel).

C. Detlef G. Müller – Wolbert G.C. Smidt

Murād

Ḫoǧa M. (b. ca. 1618 [or earlier], near Aleppo [Ottoman empire], d. ca. 1700, Ethiopia) was an Armenian merchant who acted as envoy of several Ethiopian kings. Born in a poor family, M. was illiterate but had a gift for languages (DonMurad 170). He may have been trading in Syria and Egypt before settling in Ethiopia ca. 1652.

Aṣe ↗Fasilädäs is reported to have sent M. regularly to al-Muḫa in Taʿizz province of Yemen to sell slaves and buy Indian merchandise, as well as to the English and Dutch East India Companies (↗United East India Companies; Bernier 1972:133f.).

In 1663 Fasilädäs sent M., accompanied by a Muslim merchant, on an embassy to ↗India, to congratulate the new Mogul emperor Awrangzīb on his ascension to the throne. With rich presents, including 25 selected slaves, horses, a zebra, two elephant's tusks, and a cow's horn filled with ↗zibeth, M. travelled from ↗Gondär via ↗Baylūl and al-Muḫā, where he sold 32 young slaves in order to cover the expenses of the journey. Via Bandar ʿAbbās he reached Surat in September 1663. During his stay there, the town was looted by Šivāǧī, the founder of the Marāṯā dynasty (Hardy in EI²). M. was taken prisoner but bought himself free with the presents. He also intervened successfully with Šivāǧī for the liberation of an Englishman. In 1664 M. and his companion arrived in Delhi. Though unable to offer presents, they were twice received by Awrangzīb, who presented them with costly gifts, including coined money, unknown in Ethiopia, which M. used to buy presents for Fasilädäs and the royal family. M. forwarded the letter in which the Ethiopian ruler allegedly requested a copy of the ↗Qurʾān and some famous Islamic works and promised Awrangzīb that he would press Fasilädäs to rebuild a ↗mosque destroyed by the Portuguese with the money the Indian ruler provided (cp. Manucci 1981:109–14; Bernier 1972:133).

In 1665 M. was on another mission to the Mogul, again bringing presents, among which a golden tree, 2 feet 4 inches high and 5 to 6 inches round the stem, with 10–12 branches (Tavernier 1889:i, XX).

In 1672 *aṣe* ↗Yoḥannəs I sent M. on an embassy to the Dutch governor-general in Batavia (Jakarta), loaded with presents and carrying a letter from the Emperor, written in Arabic (DonMurad 47f. [tr.] = pl. II–III [text]). M. travelled via Sūrat, the then well-known port in western India, where the Dutch lent him 1,000 rix-dollars (1674). In Malacca, M. asked the Dutch for another 100 rix-dollars. In February 1675 he arrived in Batavia where he was received according to the custom used for ambassadors; the zebras he brought were re-used as a gift to the emperor of Japan. Yoḥannəs's letter was translated into Dutch (DonMurad 46; it was later translated into Latin by ↗Ludolf and corrected by ↗Littmann). M. left in September 1675 with return presents. In November he was back in Sūrat where he also received the letter of response to carry back to Ethiopia.

M. can possibly be identified with the interpreter Murad who assisted during the visit of the Armenian bishop Hovhannes in 1679 (GuiIohan 39).

M. was sent again to Batavia by *aṣe* ↗Iyasu I in 1689, carrying once again a letter introducing the new Emperor (s. DonMurad 62f. [tr.] = pl. III–IV [text]). He arrived in May 1691. The letter was translated and forwarded. M. left in September, a few days after attending the ceremony of the

transfer of the function of governor-general. At M.'s departure, the loan of 1674 was acquitted (s. DonMurad 65ff. [tr.] = pl. V–IX [text]).

During his second stay in Batavia, M. answered the 13 questions regarding Ethiopia formulated by Ludolf and sent to M. via al-Muḫa back in 1685 (DonMurad 55ff.). M.'s answers were recorded by a Dutchman, Paulos de Roo (ibid. 70ff.; they were published by Ludolf in Latin translation in 1693).

In the beginning of 1693 M. was back in Massawa. His merchandise and the presents for the Emperor were confiscated by *nā'ib* Mūsā b. ʿUmar b. Qunnu. On receiving the news, Iyasu I, who was then in Aksum, ordered a food blockade against Massawa, whereupon Mūsā restored the merchandise and submitted to Iyasu (GuiIohan 171). Among the presents M. had received in Batavia were spices and two Dutch bells, which were hung in the church of ↗Däbrä Bərhan Śəllase in Gondär (DonMurad 84ff.).

In 1694 M. set out for Batavia once again, with another letter from Iyasu, apparently a simple letter of thanks accompanied by presents (s. DonMurad 87ff.). He arrived in Batavia in September 1696 travelling via al-Muḫa, Goa, Surat, Malabar, Ceylon and Coromandel. During his long stay in Batavia, he answered another questionnaire with 24 further questions by Ludolf (s. sources in ibid. 89–104). The reply letter M. took with him in 1697 mentions the return presents and expresses the wish to establish trade relations with Ethiopia (ibid. 107–10). Accompanied by the Dutchman Theodorus Zas, an employee of the ↗United East Indies Company who wanted to explore the trade opportunities on the spot, M. arrived in al-Muḫa in May 1698, and travelled on by himself to Massawa. He insisted on taking the presents along to give them to the king but refused to take Zas without the king's explicit permission (an excuse judged open to suspicion by Ludolf and the Dutch, ibid. 149-60). In July, he sent word that he had transmitted the letter from Batavia to the king. Since no further information was received, Zas abandoned the plan of going to Ethiopia and left for Surat in 1699.

M. is not mentioned in foreign sources after 1700/01 (ibid. 148, 168f.); he most probably died of old age around that time (ibid. 168f.). In any case, when Iyasu I needed a messenger to France in 1700, he sent M.'s nephew, ↗Murād b. Madlūm.

Murād b. Madlūm

M. (مراد ابن مدلوم, recte b. Maẓlūm, called M. "the younger", also Murād ibn Magdelon, Murad Celebi, b. Diyarbakır, Turkey, d. 1707, al-Muḫā or Muscat) was an Armenian merchant and envoy. The nephew of *ḫoğa* ↗Murād, he came to the fore at ↗Gondär in the spring of 1700, when the French physician Charles ↗Poncet was about to return to France. *Aṣe* ↗Iyasu I decided to seize the occasion to despatch an embassy to King Louis XIV of France. Since the elder Murād was apparently too old to travel, the mission was entrusted to his nephew – of whom he also desired, perhaps, to rid himself as "of a troublsome hanger-on" (Foster 1946:XXVIII; cp. DonMurad 244 n. 99).

M., who left with Poncet, encountered many difficulties. An elephant and horses intended as gifts for the French monarch died before reaching the coast. He thereupon returned to Gondär to procure replacements, while Poncet proceeded to ↗Massawa to arrange the Red Sea passage. M.'s joruney was delayed by the death of the Emperor's favourite son, Fasil, with the result that Poncet arrived in Egypt alone. M. meanwhile succeeded in crossing to Arabia with a number of young slaves, but these were seized by the ruler of Mecca, and he was subsequently ship-wrecked.

M. reached Cairo in 1701. There, he met with the distrust of the French consul, Charles de Maillet, and the enmity of Poncet, but also with the support of the local ↗Jesuits who thought he could help them to facilitate their re-admission to Ethiopia. After some discussions, it was arranged that Poncet and the Jesuit Father Verseau should go to France and present the letter brought by M. to Louis XIV along with some presents. The King accepted the letter and sent

in turn some presents. Back in Cairo Poncet, the Jesuit Father Du Bernat and M. were dispatched to Ethiopia, leaving Suez in November 1703. At Jeddah, Poncet and M. quarrelled and parted company. The latter did not go to Gondär but continued his wanderings. Witness to the authenticity of his mission was subsequently borne by the successor of Iyasu I, ↗Täklä Haymanot. Writing to the *bāšā* of Cairo, he claimed that he could "repay" him to "revenge the insult offered to the man Murād sent on our part".

Richard Pankhurst

Murād Kāmil

M.K. (مراد كامل, b. 1907, Cairo, d. 16 January 1975, Cairo) was an Egyptian scholar of Semitic and Ethiopian studies. Born in a family of a wealthy Coptic Christian, M.K. studied Arabic literature and Semitic philology at the King Fouad University in Cairo and from 1931 to 1935 at the universities of Berlin and Tübingen. At Tübingen, under the direction of Enno ↗Littmann, he obtained a Ph.D. with a scholarly edition of the Gəᶜəz version of the *Sefer Yosippon* (↗*Zena Ayhud*), based on twelve mss. (BN Paris, d'Abbadie 38).

M.K. taught Aramaic and Ethiopian languages and Arabic literature at the Fouad University in Cairo. From 1943 to 1945, following a call by ↗Ḫaylä Śəllase I, he was in charge of a project funded by the Egyptian government to enforce ↗education standards in Ethiopia. With a delegation of Egyptian teachers, he helped setting up elementary and commercial schools, and a Coptic Theologic seminar. Soon he was named vice-secretary of the Ministry of Education in Ethiopia with the title of *liqä maᵓəmməran* ('head of the learned'; ↗*liq*) and helped establishing an academy whose main aim was to standardize Amharic technical terms. During his stay, which he later described in the book *Das Land des Negus* (1953), he also translated Ethiopian historical texts from Gəᶜəz into Amharic.

In 1945, M.K. went back to Cairo and taught Arabic literature and Semitic philology at the Fouad University. In the early 1950s he re-established the Language school of the University College originally founded by Muḥammad ᶜAlī. He was member of several scientific societies. After becoming Emeritus Professor, he was Visiting Professor for Semitic Studies at the University of Freiburg/Breisgau in 1967.

M.K. was a prolific scholar with a wide scope of interests. His most important contribution to general Semitic studies is the analysis of the development of the four radical verbs in the modern Semitic languages, including observations on Amharic, ↗Təgre, ↗Təgrəññña, ↗Harari and ↗Gurage (1963).

In Arabic studies, M.K. edited the 6th vol. of Ibn Sīda's dictionary *Kitāb al-Muḥkam wal-muḥīṭ al-aᶜẓam fī l-luġa* (1972) and Ibn ᶜAbdaẓẓāhir's *Tašrīf al-ayyām wal-ᶜuṣūr fī sīrat al-malik al-Manṣūr* (1961). He described 50 manuscripts from the Littmann Collection in Tübingen (1936), acquired during the latter's travels in Aksum, Jerusalem and Cairo in the beginning of the 20th cent. In addition, he produced a first inventory on the more than 5,000 manuscripts from the Library of St. Catherine's Monastery in Sinai (1970).

In Ethiopian studies, beside his edition of the *Zena Ayhud* (1938), remarkable was his edition of Amharic "royal songs" (1957), which is a modern pendant to the Old Amharic royal songs of the 14th cent., edited by Guidi in 1889 and translated by Littmann in 1914. During his stay in Ethiopia M.K. had collected twelve panegyric songs performed during the celebrations of the birthday of Ḫaylä Śəllase I in 1944 and 1945, which are especially important as a repertory for the grammar and lexicographic study of Amharic. He also wrote an essay in Arabic on ↗*qəne* (1948; tr. into Germ. by Schall).

M.K. contributed to the scholarship of the varied history of Ethiopia and its neighbours by publishing pastoral letters, mostly in Arabic, sent by the 18th and 19th-cent. Alexandrian Patriarchs to Ethiopian metropolitans. He also edited ↗Ḥasan b. Aḥmad al-Ḥaymī's *Sīrat al-Ḥabaša* (1958), and used, in addition to the ms. Leiden Or. 2600, a Yemeni manuscript from the library of a descendant of the author, Qāḍī Luṭf Muḥammad al-Ḥaymī (1083 H. [1672 A.D.]). A detailed introduction on the author (pp. 5–90), the itinerary and foreign relations of Ethiopia, is added to the edition. However, he had omitted the concluding section of the text (1958, ²1972). With *ato* Yona Boggalä, M.K. also produced an Amharic translation of Castanhoso's text (1944) using Littmann's German version (1907).

M.K. contributed to the divulgation of Coptic culture and traditions as an important part of the history of Egypt, among which was the publication of the Berlin Academy *Aspects de l'Egypte Copte* (1965). Besides his studies on Syrian and Arabian history, he wrote accounts of his travels to Eritrea and Lake Ṭana in Arabic (1946, 1947).

Franz-Christoph Muth

Murle

Murle language

M. is a South-western ↗Surmic language (↗Nilo-Saharan) which is spoken by people also referred to as M. Most M. speakers live in Sudan's Upper Nile district (60,000), the M. having migrated clockwise around Lake ↗Turkana (Arensen 1992:24). 200 isolated M. left from migration in Ethiopia have mostly changed to the ↗Ñaŋatom language (Tornay 1981). A few other M., still part of M.-speaking society, herded cattle in far western ↗Käfa. Fighting in Sudan displaced hundreds more into Ethiopia. M. is not listed in the 1994 census.

Linguistically M. fits general Surmic patterns (tones, implosives, VSO order). Consonant system is: labials *p*, *b*, *ɓ*, *f*, *v*, *m*, *w*; dentals *t̪*, *d̪*; alveolars *t*, *d*, *ɗ*, *s*, *z*, *n*, *l*, *r*; palatals *č*, *ǧ*, *ñ*, *y*; velars *k*, *g*, *ŋ*. Vowel system is: *i*, *e*, *ɛ*, *a*, *u*, *o*, *ɔ*. Vowel length is phonemic (Arensen 1982:10f.). M. is a tonal language, though the sources available do not mark tones. The canonical maximum syllable is CVVC.

M. has four noun cases, with the accusative unmarked and the rest marked with suffixes: nominative *-i/-ɛ*, genitive *-o*, locative/instrumental *-a* (with various suffixes for plural forms). Nouns are marked for number in a variety of ways, often with separate suffixes for singular and plural forms (according to Arensen 1982:28, there are 18 classes of nouns with regard to number marking).

Adjectival functions are realized by intransitive verbs, often in relative clauses:

k-ačin	*naana*	*eet*	*či*	*amoor*
1SG-see	I	man	REL	sick

'I see the sick man'

The possessives in M. mark the number of the possessed as well as the possessor: *čan* 'my (sg.)', *čigan* 'my (pl.)', *činaaŋ* 'our (sg.)', *čineeŋ* 'our (pl.)', etc.

In verbs, the tense/aspect system differentiates between perfective, imperfective, and subjunctive (Arensen 1982:59). Person and number of

subjects is marked by a combination of prefixes and suffixes. Inclusive/exclusive is distinguished in the 1st pers. pl.

'to ask'	imperfective	perfective	subjunctive
1st sg.	*k-a-ğin*	*k-i-ğin-a*	*k-i-ğin*
2nd sg.	*a-ğin*	*i-ğin-u*	*ğin*
3rd sg.	*a-ğin*	*i-ğin-(un)*	*k-i-ğin*
1st pl. incl.	*k-a-ğin*	*k-i-ğin-it*	*k-i-ğin-it*
1st pl. excl.	*k-a-ğin-na*	*k-i-ğin-t-a*	*k-i-ğin-t-a*
2nd pl.	*a-ğin-nu*	*i-ğin-t-u*	*i-ğin-it*
3rd pl.	*a-ğin*	*i-ğin-it*	*k-i-ğin-it*

Suffixes mark person and number of direct object. Suffixes also mark reciprocal, passive, and direction on verbs. Verbal negation is marked with preverbal *ŋaan* or *alaŋ*.

Independent pronouns differ for case but do not distinguish between inclusive/exclusive (Arensen 1982:89ff.):

	nominative	accusative
1st sg.	*naana*	*aneeta*
2nd sg.	*niina*	*ineeta*
3rd sg.	*niini*	*nɔɔnɔ*
1st pl.	*naaga*	*ageeta*
2nd pl.	*niiga*	*igeeta*
3rd pl.	*niigi*	*nɔɔgɔ*

Demonstrative pronouns are: *ničini* 'this', *ničiğ̌i* 'these', *čo* 'that', *čoğ̌o* 'those'.

The basic word order is V[erb] – S[ubject] – O[bject], which is combined with postpositions, and with final position of question words (a typologically rare combination, s. Unseth 1987):

Awot	*taŋ*	*maam*	*ŋaa*
drink	cow	water	where

'Where is the cow drinking water?'

The ten-word list for M. is: 'one' *adoi*, 'two' *ram*, 'three' *iiyu*, 'fire' *goo*, 'water' *mam*, 'moon' *ñɛlok*, 'sun' *kɔr*, 'blood' *biyi*, 'tongue' *aat*, 'tooth' *ñigitat*, 'tree' *kɛɛt*.

The New Testament in M. was published in 1996.

Peter Unseth

Murle ethnography

The M. are a Sudanese agro-pastoral population of the White Nile basin, living around Pibor between the Lotilla and Kengen rivers. A minority is located in the Sudan not far from the Ethiopian border, on the Boma Plateau. Early explorers of the Lower Omo Valley, both before and after the conquest of the area by *ras* ↗Wäldä Giyorgis (1898–99), mentioned a third M. group. Since the 1950s, M. is nothing but a place name, on the eastern side of the Omo river and south of the Karo river. Thus the Omo M. had become a "ghost tribe" by the mid-20th cent. Except maybe as Sudanese refugees around ↗Gambella, there is no Ethiopian M. ("Omo Murle") community any more.

In 1895 Donaldson Smith, proceeding upstream along the east bank of the Omo found, to the south of Lake Dipa, just where "M." survives as a place name, three large M. villages of ca. 200 huts each. Smith (1896:228) estimated their population at 10,000, which, although a likely exaggeration, reflects M. prosperity. Only few small stock could be kept in the vicinity of the river, but the M. were experts in riverbank sorghum cultivation. At the turn of the 20th cent. travellers insisted on the disastrous effects of the Ethiopian conquest on the Lower Omo Valley inhabitants. In 1909 Stigand collected the first evidence of sleeping sickness ("sleepiness"). Explorations ceased and the area was forgotten for half a century.

The Sudanese M. – the main body of the tribe – had a very original political system. "Red chiefs", owners of the land, ruled "black commoners". Sacred drums symbolized chieftainship and played a central role in public affairs. M. country was divided into four "drumships" which were the major territorial and political divisions. The Larim are said to originate from the junior drumship of the M. (Lewis 1972). Boma M. and Omo M. had similar institutions. In interviews of the 1970s the ↗Ñaŋatom declared that, a decade or so after the conquest, "sleepiness" wiped out riverain villages, including their own. M. survivors fled to the Boma Plateau, while others took refuge among the pastoral Ñaŋatom of Kibiš to whom they soon assimilated. In that period, only a few old women remembered some M. vocabulary (s. Tornay 1981). But "M." was a clan name in the *Ngi-ngarič* section of the Ñaŋatom. The name *Ngi-ngarič* is clearly derived from *Ngandareč*. According to Lewis (1972:59), "the Murle always say that the Ngandareč are a Longarim

Murle solving a dispute; photo 1975, courtesy of the author

Serge Tornay

clan, and orote, who brought the drum, came from the Ngandareč Murle on the Omo river in Ethiopia". In their ethno-histories the M., like the Larim and the Didinga, claim that in ancient times they came from the East, from places like the Lower Omo Valley which eventually became part of Ethiopia.

A characteristic cultural feature of the M. in the Lower Omo Valley was a large conical lip-plug for women, a piece of wood or of zebu horn, 7–8 cm in diameter. In the 1910s and 1920s the Seligmans found this type of lip-plugs used by Longarim women. Today, neither the Larim nor the M. wear such ornaments any more, no doubt under the influence of the Toposa and the Ñaŋatom whose wives carry tiny plates of twisted copper thread. Ethiopian Surma (↗Surmic), especially the ↗Mursi, keep up to this day impressive lip-plugs. The large, round-shaped disks of terra-cotta of Mursi women, which became a logo for advertising for touristic expeditions, are quite different. The women of the ↗Čai and ↗Tirmaga, living to the West of the Omo, also wear these, in addition to large wooden, duck-bill shaped lip discs up to 18 cm in diameter. Like for the Omo M. of the past, such ornaments keep working as identity markers of Surmic-speakers in south-western Ethiopia (Bader 2002:105).

Mursi

The M. (self-name: Mun, sg. Muni) number less than 10,000 (1994 Census, CSA 1996) and live in the Lower Omo Valley. Their territory (2,000 km²), in the South Omo Zone of Ethiopia's Southern Regional State, is bounded by the rivers Omo to the west and Mago to the east, and lies within and between the Omo and Mago National Parks. Their language belongs to the ↗Čai-Tirma-Mursi dialect cluster. Amongst neighbouring groups, their closest cultural and linguistic links are with the more numerous (ca. 25,000) ↗Suri (known as Čai to the M.), who live west of the Omo and south of ↗Maği (Turton 1981).

Often described by highlanders and government officials as pastoral nomads, the M. in fact depend heavily on cultivation, mainly of sorghum and maize. There are two harvests each year, one along the banks of the Omo, where flood retreat cultivation is practiced, and one along the Omo's westward flowing tributaries, where forested areas are cleared for rain-fed cultivation. The flood crop is planted in September and October, as the flood recedes, and harvested in December and January. The rain-fed crop is planted as soon as the main rains have begun, during March and April, and harvested in June or July. The onset, duration and spatial distribution of the rains varies greatly, however, from one year to the next. It is the unpredictability of the rains, coupled with the limited area available for flood retreat cultivation, that makes cattle herding a vital additional resource for the M. Apart from providing an important source of protein, in the form

of milk, blood and meat, cattle and small stock can also be exchanged for grain in the nearby highlands during times of local crop failure and may thus provide a last defence against starvation for many families.

Although not primarily dependent on pastoral products for subsistence, the M. attribute overwhelming cultural importance to cattle, and virtually every significant social relationship – most notably marriage – is marked and validated by the exchange of cattle. Bridewealth (ideally consisting of 38 head of cattle) is handed over by the groom's family to the bride's father, who has to meet the demands of a wide range of relatives, from different clans, who have a right to share in the cattle of bridewealth. As amongst other East African herders, men are formed into named "age sets", and pass through a series of "age grades", from warriorhood to elderhood. Political leadership is exercised by individual elders who have achieved a position of influence in the local community, largely through their oratorical and debating skills. The only formally defined leadership role in the society is that of *komoru*, or Priest, an inherited office which is principally of religious and ritual significance. The priest embodies in his person the well-being of the group as a whole and acts as a means of communication between the community and God (*tumwi*), especially when it is threatened by such events as drought, crop pests and disease. Two distinctive features of M. society are ceremonial duelling (*ṯagine*), engaged in by local teams of young men (Turton 2002) and the large pottery discs or plates (*debiña*) which are worn by women in their lower lips and may reach twelve or more centimetres in diameter (Turton 2004).

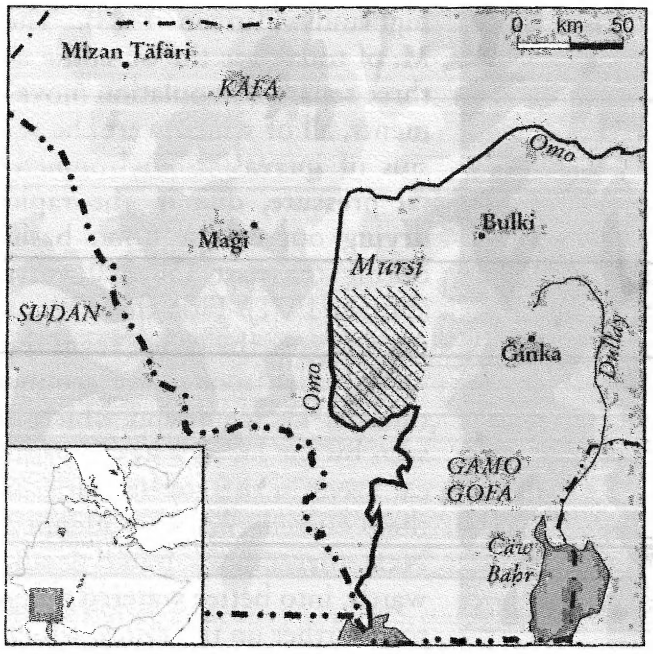
The M. became part of the Ethiopian state in the last years of the 19th cent., as *aṣe* Mənilək II established his control over what is now the southern region of the country. But they should not be thought of as an historically permanent and territorially bounded "culture" or "society". They are, rather, a relatively recent product of a large scale migratory movement of cattle-herding people in the general direction of the Ethiopian highlands (Turton 1988). The M. of today are the outcome of three separate population movements, all of which were the result of increasing environmental pressure, due to the rapid drying out of the Omo basin during the past 150–200 years (Butzer 1971). First there was a move across the Omo, from the west, which took place around the mid-19th cent. and which is seen by the M. as a key historical event in the construction of their current political identity. Next there was a move northwards, into better watered territory further up the valley, which took place in the early years of the last century. Finally, there was a third move, beginning in the early 1980s, which took the migrants still further into the upland plains of the lower Omo and into close and regular contact with their highland neighbours, the plough-cultivating ↗Aari. Each of these moves was made, initially, by a small group of families who travelled a relatively short distance to a new place on the frontier of the settled area. As the pioneers established themselves, they were followed, over succeeding years, by a drift of individuals and families. Each move was explained by the migrants as a response to environmental pressure and as part of a continuing effort to find and occupy a "cool place", a place blessed with riverside forest for cultivation and well watered grassland for cattle herding.

This search for a "cool place" has been brought to an abrupt halt over the past 20 years, as the M. have come face to face with the much more powerful "place-making" activities of the Ethiopian state (Turton 2005). At the same time, the range of items which have become necessary for a satisfactory lifestyle, but which are beyond their technological capacity to produce, has steadily expanded. These now include plastic gerry cans, aluminium pots, cotton cloth, blankets and commercially produced clothes. They have also come into increasing contact with the emissaries of the world of late modernity, including tourists, missionaries and anthropologists. Tourists are attracted to the Lower Omo by the image presented to them in travel agents' brochures of one of the last "wildernesses" in the world, inhabited



by wild animals, naked warriors and, in the case of the M., by women wearing large lip-plates. But it is their growing dependence on market exchange which drives M. women to play the demeaning part of archetypal primitives, as they line up, wearing lip-plates and elaborate body painting, to be photographed by passing tourists in exchange for a few *bərr* (Turton 2004).

Mūsā ᶜAlī

M.ᶜA. (موسى علی; ᶜAfar: Musaᶜálli) is an area and a large volcano situated on the borders between Eritrea, ↗Djibouti and Ethiopia. The area, dominated to the north by the volcano, is formed by solidified lava effusions, elevated hills and deep gorges. The M.ᶜA. volcano, situated on the northern border of Djibouti, is of elliptic shape, 35 km in length and 20 km in width. Its origins are recent, between 1 million to 150,000 years ago. Its peak at 2,021 m A.S.L. (12° 27' 55 N, 42° 24' 7 E) is the highest elevation in Djibouti. It stands on the boundary between the "Danakil horst" (ᶜAfar Alps) and the ↗ᶜAfar Depression, in a zone characterized by strong tectonic activities: the "Danakil horst", belonging to the Arabian plate, is slowly moving towards the north-north-east.

The emissions of the volcano are basically trachytes (90 % of the volume) as well as immense lava flows on the south-western foot, bordering the plain of Buya: in Asa Gera, Eger Dag and Ounda Eger Dag. Towards the southeastern slopes cones of volcanic scoria have been formed, the most remarkable being that of Faffahto, composed of porphyry rock and 672 m high.

The M.ᶜA. volcano, though in large part semi-desertic and of no economic interest, has strategic importance. Following the Ciano-Laval agreements of 1935 between Italy and France, the latter integrated the M.ᶜA. into the territory of the Côte française des Somalis. From there the French could control the traffic between ↗ᶜAsäb and Addis Abäba as well as eventual troop movements. In exchange, France ceded part of the western borders of the Côte française des Somalis, in particular the depression formed by Lake Abbe, to Italy. These border arrangements, which were never ratified, are today the source of disputes between Eritrea, Ethiopia and Djibouti.

In 1989, a telecommunications centre was installed on the slope of the volcano, 1,300 A.S.L., which is accessible through a track departing from the Margoyta depression.

Muse ↗Titles for Europeans

Muse

M. (ሙሴ, fl. second half of the 4th cent.?) is traditionally deemed to be a successor of Frumentius (*abba* ↗Sälama Käśate Bərhan) as a metropolitan (↗*Pappas*) of the ↗Ethiopian Orthodox Church. He might have held office in ↗Aksum immediately after ↗Minas, sometimes called "Sälama II" (a name seemingly given, instead, to M. himself

in the *Dərsanä Raguʾel*, ed. Caquot 1957:103), and before the long "vacancy" of the Ethiopian see – until the mid of the 9th cent. (↗Yoḥannes).

The information on M., whose name does not appear in the traditional lists of metropolitans, is yielded by his much later (18th cent.?) Vita, unpublished and hitherto only known from a scant summary: he came to Ethiopia twelve years after Frumentius, and built several churches in ↗Amhara (KinBibl 85, no. 119). An accessible manuscript of this text is kept, however, at the monastery of Yäčəra Mädḫane ᶜAläm in ↗Wadla (↗Wällo). There it is stated that the lenghty hagiography of M. has been compiled at the nearby "Dəbba", clearly referred to in the (Amharic) hagiotoponym ↗Yädəbba Maryam, designating the church at Gärsa in ↗Dawənt (Wällo), ca. 8 km to the north-west of the central market (*gäbäya*), within a monastic complex also named, after him, Däbrä Abunä Muse. Here an exemplar of the Vita seems to have been preserved of which the Yäčəra Mädḫane ᶜAläm manuscript is probably a copy.

In the latter manuscript, among many fabulous details (including a visit of M. to ↗India, so as to get the blessing of St. Thomas's hand), one reads that M. was of Egyptian origin, the son of the nobles Justus ("Yosṭos, son of Yosef") and Priscilla (Ṗeresqela), and became a king with the name of Anastasius (Anəsṭəsəyos, recalling the homonymous Byzantine emperor), abdicated in favour of his son Yonani (also well-known in Ethiopian literature, esp. the ↗*Sənkəssar*, as a Byzantine emperor, s. Marrassini 1983:386f.), and retired then to the desert of Scete (Wādī n-Nāṭrūn), where he took the monastic habit from Macarius the Great; eventually, on the request for a metropolitan by the holy Kings ↗Abrəha and Aṣbəḥa, he was appointed and sent to Ethiopia (*Mängəśta Azeb*, 'The Kingdom of the South') by Patriarch ↗Athanasius of Alexandra.

At the end of the manuscript, there is a series of liturgical commemorations with the obituary of "the abbots [*mämhəran*] of the sanctuary of Mary in the land of Dawənt", i.e. of Yädəbba Maryam. As to M., it is said that on 20 *Säne* he was taken by the angels to the highest heaven, the "feast of his kingship" (*bäᶜalä nəgəśtu*) falling on 12 *Mäskäräm*.

Believed to have been built by M. himself, the rock-hewn church of Yädəbba Maryam has an irregular plan, with a double row of three pillars and ornamented arches; and shows important 16th-cent. paintings – theories of holy men, including *abba* M. himself, with inscriptions repeatedly hinting at "*abunä* Bəʾəse Sälam and his (spiritual) son Habtä Maryam", not mentioned in the clearly more recent obituary – on both the pillars of the nave and the walls and ceiling of a small domed chamber connected by a tunnel-like corridor.

Muse

The monk M. (ሙሴ, fl. first half of the 6th cent.) was the brother of King ↗Kaleb ∃llä Aṣbəḥa, and likely the son of King ↗∃lla ᶜAmida (II) – ranging therefore, with his brother, among the very first examples of "Monks and Holy Men of Noble Origin" (s. list in KapMon 133f.).

M. only appears in the 14th-cent. Vita of ↗Ṗänṭälewon (ch. XII): already a monk, he asks for the saint's blessing, and moves to ↗Jerusalem with twelve other fellows, as the "city of his father", i.e. ↗Aksum, is not conducive to his own monastic vocation. Before leaving, M. is requested by Ṗänṭälewon to send him, from Jerusalem, both written information "about the state and measures" of the Holy Places, and "gifts to venerate", i.e. ↗relics (Conti Rossini 1904:59). Another confused mention of M., as "the son of *aṣe* Gäbrä Mäsqäl" who "abandoned this world, become a monk and went to live in Jerusalem", is found in *aläqa* ↗Gäbrä Śəllase chronicle of *aṣe* ↗Mənilək II (ch. LXXII), but the holy man is then mistaken for ↗Moses the Black, with a clear hint at "mount Lebanon" and possibly, thereby, to the Ethiopian community of Mār Mūsā al-Ḥabašī (GueCopMen vol. 2, 512; cp. Conti Rossini 1948:196 and n. 1).

In spite of its much later age, but in keeping with the original 6th-cent. tradition about Kaleb

sending his royal crown as a thank-offering to the Holy Sepulchre, the lore surfacing in these texts might well preserve a much earlier document of the Ethiopian interest and presence in Jerusalem since Aksumite times – long before *nəguś* ↗Armaḥ congratulated the Byzantine emperor ↗Heraclius on recovering the city and the Holy Cross (↗*Mäsqäl*) in ca. 630.

Museums s. vol. 5

Music

The Amharic term for M., ሙዚቃ, *muziqa*, is a relatively recent borrowing from a European language. The term has been widely absorbed into Amharic speech and writing, as well as into everyday discourse, especially in regard to modern (ዘመናዊ, *zämänawi*) M. from the popular domain.

Indigenous concepts of Ethiopian phenomena that an outside observer would term "M." are categorized differently in different regions of the country. Throughout Ethiopia, M. tends to be closely associated with occasions on which it is performed, and is classified accordingly; songs and instrumental pieces are often named according to the ritual orders or festivals of which they are an important part. The situational associations and cultural contexts for M. making also shape broader schemes of classification. For instance, among Christians of several ethnic communities, and the ↗Betä Ǝsraʾel formerly of the central and northern Ethiopian highlands, M. is perceived according to a sacred/secular dichotomy: M. of everyday life, *zäfän* (↗Songs), is contrasted to ↗*zema*, the sacred M. of the ↗Ethiopian Orthodox (Täwaḥədo) Church or Betä Ǝsraʾel liturgy.

One further finds marked differences in musical style depending on location, with the primarily unison and heterophonic textures of the northern highland plateau musical traditions giving way to polyphony among peoples in the south and south-west regions.

Different ethnic communities each have some distinctive instruments, play characteristic rhythmic patterns, and perform their own styles of dance. But our understanding of the ways in which M. and its performance vary according to geographical location and ethnic heritage is limited by available research, which is uneven in subject matter and approach according to its dates and different disciplinary orientations. The earliest studies, both those by early observers (such as Mondon-Vidailhet, s. MonVidMus), and the first wave of professional ethnomusicologists (Ashenafi Kebede 1971; Kimberlin 1976; Shelemay 1982, 1986, etc.), focused primarily on the musical traditions of Christian and other communities in the central highland plateau region. After a hiatus in field research during the *Därg* period (↗Provisional Military Administrative Council), a new wave of musical exploration since the 1990s shifted its attention to the M. of Ethiopian communities previously unstudied, giving long overdue attention to peoples of the south and south-west, such as the ↗Arbore (Gabbert in PICES 15) etc. Recent scholarship brings to the fore knowledge of Ethiopian musical traditions previously unstudied and opens possibilities for comparative investigation; thus, study on *zikri* among the ↗Harari (Tarsitani in PICES 15) enables comparison with ↗*ḏikr* ceremonies among Muslim peoples outside Ethiopia (Qureshi 1986).

Much of our data about different Ethiopian regional and ethnic M. is based on sound recordings produced as serendipitous outcomes of research by scholars not trained in musicology. One notable early example is a recording made during a brief field trip to Betä Ǝsraʾel villages by linguist Wolf ↗Leslau (*Religious Music of the Falashas [Jews of Ethiopia]*, Folkways Records, FE 4442, New York 1959). Likewise, sound recordings on 37 wax cylinders were produced by the physician Erich Kaschke during the ↗Deutsche Aksum-Expedition. Other recordings were made by ethiopiasants in collaboration with ethnomusicologists not expert in Ethiopian studies, as is the case of the recording of M. of the ↗Dorze people, produced through collaboration between anthropologist Daniel Sperber, longtime ethnographer of the Dorze, and ethnomusicologist Bernard Lortat-Jacob (1977). Similarly, a recording of M. of the ↗Hamär with detailed notes by anthropologist Ivo Strecker, has been published in collaboration with ethnomusicologist Artur Simon in Berlin (*Musik der Hamar/Südäthiopien*, Museum für Völkerkunde Berlin Staatliche Museen, MC 6, Decca, Hamburg 1979). Numerous other recordings of Ethiopian M. from a variety of ethnic communities have been pro-

duced by ethnorecordists in different media since the 1960s and are widely available commercially (e.g. JEAN JENKINS, *Ethiopia I: Copts*, Bärenreiter Musicaphon BM 30: 2304, Kassel 1965; ID., *Ethiopia*, vols. 1–3, Tangent Records TGM 101–103, 1970 [re-issued by Topic Records, 1994]).

Ritual musics of Ethiopia

Ethiopian Christian sacred M., *zema* (divided according to three melodic categories: ↗*araray*, ↗*gəᶜəz*, and ↗*ᶜəzəl*) is performed by highly trained clerics (↗*däbtära*). *Zema* is associated primarily with the transmission and performance of the Ethiopian Christian liturgy (↗*Qəddase*), but is also used to designate the sacred M. of other communities such as the Betä Ǝsraʾel. Traditionally attributed to the inspiration of St. ↗Yared in the early centuries of Christian Ethiopia, Ethiopian chant possesses a distinctive modal system, and with the exception of improvization during ↗*qəne* performance, stresses continuity over time rather than innovation. The conceptual breadth of *zema*, subsuming song, instrumental performance, and dance (↗*Aqʷaqʷam*) within the same framework, is a distinctive aspect of Ethiopian Christian musical thought and practice. Ethiopian Christian chant is transmitted by oral tradition as well as by a notational system, ↗*məlәkkәt*, which constitutes the only indigenous system of musical notation in Africa. Based primarily on signs derived from the ↗Gəᶜəz syllabary, the notational system serves as a mnemonic device to prescribe melodies used for the annual Church liturgical cycle (Shelemay – Jeffery 1993).

Many other Ethiopian religious communities have distinctive ritual cycles with distinctive musical content. Some, for instance the Dorze, observe Christian festivals such as ↗*Mäsqäl* and the feast of St. ↗George of Lydda through performing their own musical repertories that enact different moments in the ritual as well as provide settings for celebration by members of the broader community (Lortat-Jacob 1977). Other communities, such as the Betä Ǝsraʾel, maintained in the past their own distinctive liturgical orders that at the same time shared aspects of musical and liturgical organization as well as textual content with Ethiopian Christian rituals (Shelemay 1986).

The ritual M. of Ethiopian Muslims has been little studied to date, although recent work on *zikri* rituals in Harär offers insights into their melodic and rhythmic content and suggest textual influences from Oromo domains (Tarsitani in PICES 15). Dating from the entry of Protestant missions in the 19th cent., and the flowering of 20th cent. evangelical churches, strophic hymnody has exerted strong influence on Christian musical practices throughout Ethiopia (McLeod 2006).

Regional and ethnic musical styles

Ethiopian M. vary greatly in their musical structure and performance styles. M. of Eritrea, the central highland plateau, and Islamic areas of eastern Ethiopia, such as Harär, resemble more closely Middle Eastern M. in their monophonic or heterophonic textures, whether performed by voices or instruments. The vocal and instrumental timbres of these regions tends to be nasal, and both instrumental and vocal styles, highly ornamented. The rhythmic vocabularies of these M. have been little studied. While often driving and syncopated, Ethiopian rhythms rarely approach the metric complexity found throughout other areas of sub-Saharan Africa.

Preliminary research on Ethiopian dance sheds some light on Ethiopian rhythms and temporal organizations. The distinctive movement styles associated with different regions and ethnic communities are performed to different beats, which

An Ethiopian musician with a *bägäna*; photo end 19th cent., from Buchs 1898:140/41

are stylized and serve to characterize a dance. For instance, dance studies suggest that certain ethnic communities privilege specific rhythmic structures, such as triple rhythms among the ↗Təgrəñña and duple rhythms among the ↗Gurage (Vadasy 1971). The shoulder dance (*əskəsta*), which uses a wide range of jerking and springing motions and is closely associated with ↗Amhara culture, is widely dispersed throughout the country, with many variations such as additional body movements among the Gurage and the Amhara of Mənǧar region (Vadasy 1970, 1971). Preliminary dance studies further indicate a wide range of foot motifs and other motions in the Oromo circle and line dances.

Some highland vocal M. that features two voices singing in call-and-response or in alternation (as in the M. of the ↗*lalibäločč*) produces overlap at the end of phrases that occasionally approaches polyphony. The pitch content of M. in greater Ethiopia tends toward pentatonicism of various types; the categories of melody and tuning systems for instruments are called *qəñña* among secular musicians of the highland plateau region. Most musicians identify four main *qəñña*, named *təzzəta*, *bati*, *ančihoye*, and *ambassäl*.

Among the many styles of M. in south and south-western Ethiopia, the M. of the Dorze is notable for its intense polyphonies. Dorze M., termed *yets*, is primarily vocal and divides into more than 30 genres associated with occasions ranging from funerals, saints days, and annual festivals, to work. Polyphony (*edo*) is particularly prominent in Dorze songs of homage to individuals, called *halaqa*, and for celebration of the annual *Mäsqäl* festival (Lortat-Jacob 1977). In contrast to detailed information about Dorze polyphony, however, relatively little research has been carried out on pitch or rhythmic systems among the Dorze or other peoples in adjacent regions.

Musical ↗instruments (lyres, aerophones, membranophones and idiophones) are widespread in Ethiopia, many shared across ethnic and geographic boundaries with small variations in structure. They can be played alone and are also used to accompany singing and dance. Beyond their sound, musical instruments convey important symbolic meanings within Ethiopian culture.

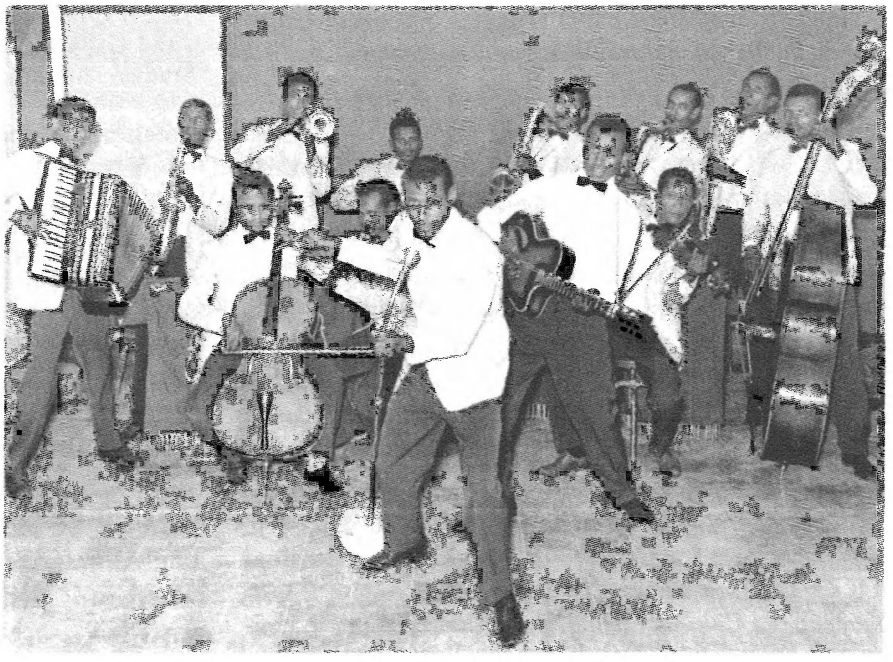
Changing contexts of musical transmission and performance

M. is widely performed in the context of Ethiopian community life to accompany work in rural and urban locales; to mark events in the life cycle ranging from birth, to puberty rites, to weddings, to funerals; and for entertainment. In the past, secret musical codes were sung by messengers to identify positively the sender of a written message (Messing 1971). There exist special song genres such as ↗*šəlläla*, which incite patriotism and fervor for battle, and the ↗*fukkära*, which commemorate or praise prominent warriors. Laments (*läqso*, s. ↗*Ǝngʷərgʷərro*; ↗Burial) are sung at funerals and during periods of mourning.

Some musicians, including the *däbtära* and other types of indigenous ↗healers, use M. to mitigate illness and to exorcize malevolent spirits. M. is also employed by professional musicians, including the ↗*azmari* and the *lalibäločč*, to garner financial support.

Professional musicians so prominent in the highland plateau region, such as the *azmari*, are

not as common in the south, where M. making is distributed more broadly among the general population (Gabbert in PICES 15). Among the Arbore and Hamär peoples in southwest Ethiopia, for instance, songs are sung for recreation, to accompany work, and for occasions of ritual and social commemoration. Among the Hamär, songs of the ancestors (*aeke gadi*) recall occasions of historical importance, transmitting texts that narrate the past and serve to bless the community present at their performance (Simon – Strecker 1979). Songs also document many aspects of everyday life in local environments, such as one Arbore song describing a plane that brought grain and other supplies during a drought in the 1970s (Gabbert in PICES 15).



A modern music group in the 1960s: the Eritrea Police Band; photo 1962/63, courtesy of collection éthiopiques (Francis Falceto)

Since the beginning of the 20th cent., musical ensembles have been organized to both represent the polity and to unify the multi-ethnic state. The ↗Imperial Bodyguard Orchestra, founded in 1929, performed western M. at state events and to welcome visiting dignitaries (Falceto 2001). The 1960s saw the founding of ↗Orchestra Ethiopia, which brought together musicians from all regions and many ethnic groups in the country to perform at official government functions as well as on Ethiopian television and radio (Shelemay in SegBodLes). The ↗Yared Music School, established in 1967 in Addis Abäba, has offered instruction in sacred and secular Ethiopian M. as well as western styles.

The flowering of Ethiopian popular M. has been sparked by influence from diverse sources, e.g. the first European military band sent to Ethiopia by Tsar Nicholas II in 1897, or 40 orphan Armenian youth musicians who arrived in the country in 1924 (Falceto 2001). The second half of the 20th cent. saw the emergence of many new styles of musical performance in Ethiopia, partly due to the impact of radio and commercial recordings.

From the 1950s onward, Ethiopian musicians produced their own original popular M. through processes described as "creative incorporation" (LevWax 15). Early jazz bands such as the Ḫaylä Śəllase I Theatre Orchestra with saxophonist Getaččäw Mäkʷərya synthesized cosmopolitan and Ethiopian sounds that led to what has been called the "golden age" of Ethiopian popular M. during the 1960s and early 1970s. During this period, musicians such as Mahmud Ahmäd, Ṭəlahun Gässäsä, and Bəzunäš Bäqqälä performed and made recordings, many released by producer Amha Ǝšäte's *Amha Records* between 1969 and 1975. In the early 1970s, too, the renown Ethiopian musician Mulatu Astaṭqe, trained abroad, returned to Ethiopia to innovate Ethio-Jazz.

After the ↗Revolution of 1974 and the unraveling of the popular M. scene in Addis Abäba, some musicians who remained in Addis Abäba continued to play, founding bands such as the *Ethio Stars* (cp. *Ethio Stars – Tukul Band*, [*Pi'ra: nha*], Global Music Center, Berlin n.d.) and the *Roha Band*, both of which played in various Ethiopian hotels during the 1980s. By the 1980s, however, musicians began to disperse abroad, many congregating in Washington, D.C., where a large Ethiopian ↗diaspora community took shape. Performers established careers outside Ethiopia, such as Astär Awwäqä (Aster Aweke) who broke through with the release of her album *Aster* by Columbia Records (CD/Cass, Triple Earth, Columbia, 1989), or as Ǝgğəgayyähu Šəbabaw (Ejigayehu "Gigi" Shibabaw) who performed and released recordings abroad (such as *Abyssinia Infinite. Zion Roots*, Network, Frankfurt/Main 2003). Some musicians such as Mulatu

Astaṭqe maintained transnational careers divided between Ethiopia and diaspora communities.

The import of popular M. from abroad and an active local recording industry have both heightened the impact of foreign M. and dispersed Ethiopian M. to an international audience. The growth of large Ethiopian diaspora communities have also brought the live performance of the full range of Ethiopian M. to a growing audience. The release of vintage and new recordings on the *Éthiopiques* series edited by Francis Falceto for the *Buda Musique* label (s., e.g. *Éthiopiques* 17: *Tlahoun Gèssèssè*, Buda Music, Paris 2004) has also contributed to the new life of Ethiopian M. both at home and abroad.

Muslim League

The M.L. (Arab. *ar-Rābiṭa al-islāmīya*), established in ↗Kärän on 3 December 1946, can be regarded as the first modern, Islamic, institutionalized movement in the Ethiopian–Eritrean historical theatre. It was also a pioneering body in that it combined social struggle with both a religious-Islamic and an Arab cultural program, along with modern Eritrean nationalism.

The first roots of the movement were social and intra-Islamic. After the ↗British liberated ↗Eritrea from Italian colonization in 1941 (↗British Military Administration), the ↗Təgre-speaking serfs began defying their own tribal aristocracy whose feudal privileges had been supported by the Fascists. ↗Ibrāhīm Sulṭān ʿAlī, educated in Kärän and formerly an interpreter for the Italians, began working with the British to emancipate the serfs and reorganize the entire tribal system. He successfully mobilized fellow Muslim urbanites from Kärän, Asmära and other centres, where a Patriotic Association had already been established in 1941. After the British legalized the formation of political organizations in October 1946, Ibrāhīm Sulṭān gathered those activists and announced the establishment of the M.L., appointing himself secretary general.

The M.L. had an obvious religious agenda. Its titular president was *sayyid* Abū Bakr al-Mīrġanī, head of the *Ḫatmīya-Mīrġanīya* Sufi fraternity (↗Islamic brotherhoods) headquartered in nearby Sudanese Kassala, and it adopted Arabic as its official language. In the spirit of modern Islamic politics, the League avoided the term "party", ↗*maḥbär*, which was introduced and used by most Eritrean movements of the time. *Rābiṭa* had the connotation of a comprehensive, social-cultural-economic approach, and the M.L. indeed attempted to fulfil the undertaking. The

League's activists led the socio-economic emancipation of the serfs and the reorganization of the tribes, a process completed with British support by July 1949. Its branches around Eritrea worked to open schools, youth clubs and nurseries, enhance welfare activities, organize both Sufi ceremonies and Sunni orthodox education and law. It also published a newspaper, *Ṣawt arrābiṭa* ('The Voice of the League'), and tried to spread the learning of Arabic among the new generation of Təgre speakers. At its peak in the late 1940s the M.L. claimed to have over 700,000 members and it obtained 40.5 % of the indirect vote in the Four Powers Commission polling. The Commission however estimated the number of M.L. members at half the figure it claimed.

From its very inception the M.L. integrated these social and Islamic dimensions within the Eritrean nationalist agenda. It never advocated Islam in fundamentalist terms, and it refrained from reviving Islamic political concepts. As the future of the ex-Italian colony was debated, the M.L.'s second conference in Kärän, 20 – 21 January 1947, resolved to resist the partition of Eritrea or its unification with Ethiopia, and work for full independence. Naturally opposed to joining a Christian empire, the Eritrean cause was also fuelled by the social struggle. Many of the leading Təgre aristocrats favoured unity with Ethiopia, hoping its imperial regime would restore their privileges. As the unfolding political drama gained momentum, Ibrāhīm Sulṭān channelled his energies to the nationalist sphere. He led missions to the Arab League headquarters in Cairo and to the UN assembly in April 1949, presenting the case for independence, arguing that the majority of Eritreans were Muslims yearning to fulfil Eritrean self-determination. The League opened offices in Egypt, Lebanon, Sudan and Italy, heralding the connection between Eritrean nationalists and Arab and international politics. At home it was involved in escalating violence culminating with the assassination on 31 March 1949 by advocates of unity with Ethiopia of ↗ᶜAbdälqadər Käbirä, the head of the League's Asmära branch, who was supposed to leave with the mission to the UN. The growing emphasis on a nationalist agenda also worked against the unity of the factions within the League. Joining the all-Eritrean cause implied co-operating with Christians, occasionally at the expense of Islamic solidarity. This, together with personal rivalries – Ibrāhīm Sulṭān's domineering character alienated his colleagues – and different regional and social interests, soon led to splits in the League. By April 1947 the National Moslem Party of Massawa, led by Muḥammad ᶜUmar Qāḍī, began challenging the League, while several Eritrean Muslims opted for unity with Ethiopia. On 25 July 1949 ↗Idrīs Muḥammad Ādam's nationalist priority was institutionalized with the establishment of the ↗Independence Bloc, which was initiated and led by himself. The Bloc united Muslims and Christians, co-operated with the pro-Italian Eritrean wing and obtained subsidies from both the British and the Italians. In response, western Eritrea's Təgre speakers established the Muslim League of the Western Province in 1950. This new branch of the League was led by *šayḫ* ↗ᶜAli Mäḥammäd Musa Räd'ay, the head of the M.L.'s Kärän branch and Ibrāhīm Sulṭān's personal rival. The new, seceding League opted first to partition Eritrea and the western region adjoining Sudan, and later joined forces with the Unionist Party to advocate unity with Ethiopia.

By the end of 1950, the tattered Muslim League had lost most of its supporters, and most of its agenda. Many of its activists, together with the remaining leaders of the Independence Bloc, regrouped in a new Eritrean Democratic Front. The Front ran in the elections for the ↗Eritrean Assembly, and were elected in accordance with the federal arrangement with Ethiopia. The League continued to exist under an acting secretary, Sulaymān Aḥmad ᶜUmar, and in 1952 published a new newspaper called *Ṣawt Iritrīya* ('the Voice of Eritrea'). Its articles calling for the preservation of local rights and identity angered the imperial authorities, who sued the editors. On 8 December 1954 the newspaper was closed and five members of the editorial staff were imprisoned. The League's offices were closed and most of its modest achievements – the welfare associations, the spreading of Arabic culture, etc. – were systematically destroyed throughout the 1950s. Ibrāhīm Sulṭān continued to struggle in the Assembly to preserve some degree of autonomy, but finally had to acknowledge defeat and leave the country in 1959, to join the founders of the Eritrean Liberation Front (E.L.F.).

Though failing in the short run, the M.L. heralded the emergence of the liberation fronts of the 1960s. The M.L. was the first movement to combine social, cultural, religious and political dimensions in a modern nationalist movement, and link them all to the spheres of the Arab and the Islamic Middle Eastern worlds.

Haggai Erlich

Mussolini, Benito

M. (29 July 1883, Dovia di Predappio, Forlì-Cesena, 28 April 1945, Giulino di Mezzegra, Como, known as "il Duce") was prime minister of Italy and the founder of Fascism. He had studied to become a teacher and spent four years in Switzerland as a migrant worker. Upon his return to Italy, he first devoted himself to teaching and then to political activism and journalism. A member of the revolutionary current of the Socialist Party, he was already at the head of the important socialist federation in the Romagna district in 1910.

M.'s first contact with Africa dates back to the Italian invasion of Libya, which he strongly opposed. During World War I, however, he embraced the cause of interventionism, on account of which he was expelled from the Socialist party. In 1919, he founded the *Fasci di combattimento* (a fighting league reviving such symbols of ancient Rome as the fasci, 'bundles [of rods tied around an axis]', suggesting the idea of strength through unity); then, in 1921, the Fascist party. In October 1922, he led the March on Rome, after which he was appointed prime minister. After the elections of 1924, he established a dictatorship in 1925 that was to last until July 1943.

In the beginning, M. saw colonization as a means to obtain power and international prestige. Some of the highest officials of his régime (De ↗Bono, De Vecchi, Balbo and ↗Graziani) were sent to Africa in military campaigns, which had the welcome side-effect of removing several possible competitors of the *Duce* from Rome. M. himself held the Ministry of Colonies *ad interim* in 1928–29.

In this phase, the colonial policy introduced by M. was already marked by a systematic recourse to military force and a practice of direct control from Italy, reducing as much as possible the involvement of Africa-based officials in the management of the colonies. He first considered these campaigns pure military undertakings, but soon realized that a demographic colonization could be a central point in his propaganda.

In November 1932, Italy began preparing an invasion of Ethiopia (↗Italian war 1935–36). M. considered the conflict to be an occasion on which to show the political and military power of Italy, and lavishly devoted men and means to this end. Clearly, he had staked most of his political career and of the prestige of his régime in the Ethiopian endeavour. He then turned the Colonia ↗Eritrea into the main logistics base for the invasion. On 16 January 1935, M. assumed the charge of Minister of the Colonies (till 1936), thus having the preparations and operations of the campaign permanently under his supervision. On 14 November 1935, he dismissed Emilio De Bono of his functions in charge of operations, for his sitting too much on the fence: De Bono had in fact refused to carry out the *Duce*'s order to attack ↗Ambalage. It was always M. who personally authorized the use of gas during the operations. He also took personal care of regularly supervizing, before publications, the daily bulletins dispatched from ↗Asmära.

The quick Italian victory, that resulted in the fall of Addis Abäba (5 May 1936), the proclamation of the empire (9 May) and the creation of ↗Africa Orientale Italiana (AOI), was skilfully turned into a triumph of the régime by the Italian propaganda apparatus. The conquest of Ethiopia became M.'s "political masterpiece" and the peak of consensus to his régime (De Felice 1974:642ff.).

Between 1937 and 1939, M. was Minister of Africa Italiana. He continually invested substantial resources into the creation of infrastructures intended to pave the way to a demographic colonization of the area. At the same time, any cooperation with the Ethiopian ruling class was categorically ruled out, a policy expressed by two popular slogans: "Nessun potere ai ras" ('No power to the *ras*') and "Nessun potere a mezzadria" ('No power as métayage'). Since 1937, the regime promoted an increasingly severe racial legislation, prohibiting mixed marriages and introducing a group of offences against "racial prestige". These measures contributed to the

strenthening of the Ethiopian ↗resistance, which had to be quelled by a permanent involvement of the Italian army in colonial police operations. These operations, coordinated by the *vicerè* of A.O.I., General Graziani, were always closely followed by M., who often inspired Graziani's methods, while not always approving of his crude behaviour (↗Graziani massacre).

Yet, the state of permanent instability of a vast part of Ethiopia frustrated any attempt of economic exploitation and increased the costs of the conquest. Between 1935 and 1939, Ethiopia is reckoned to have absorbed 46 billion of liras, that is 20 to 25% of the State expenditure. Facing the lack of results and the sacrifices imposed on the country, Italy gradually lost enthusiasm in Italian East Africa. Since 1938–39, M. himself waived direct control on the area, and the new *vicerè*, Duke Amedeo di ↗Savoia, seemed to promote a more realistic policy, open to the local political and customary element.

The outbreak of World War II highlighted the utmost fragility of Fascist policy. M. declared that "Italian East Africa had to do by itself", thus ratifying its collapse (1941). On 24 July 1943, M. was removed from office and arrested. Liberated by Germans, he established at Salò the short-lived *Repubblica Sociale Italiana*. While trying to flee to Switzerland, on 27 April 1945, he was arrested by a partisan unit and executed.

Massimo Zaccaria

Muṣṭafā ↗Hāšim b. ʿAbdalʿazīz

Muuda

M., the anointment of ritual objects and parts of the human body, especially the head, with butter (↗Milk and milk products), is an integral part of many ↗Oromo ritual performances. It is mainly a blessing, but it can be understood as a gift or offering as well. Additionally, butter is believed to have a healing effect. The term M. became synonymous with the pilgrimages made by representatives of various Oromo groups to holy sites in their respective cradle-lands. During a ceremony after the pilgrims arrived at the holy shrine, the ↗*abbaa muudaa* ('father of anointment'; ↗*qaalluu*), having received gifts of calves from the pilgrims, anointed their heads with butter, and gave them myrrh and blessings.

The M. pilgrimage was closely connected with the Oromo ↗*gadaa* system, for it was the outgoing *gadaa* class who – at the very end of their ruling period – made the pilgrimage. Some members of the next classes joined the pilgrimage in order to be recognized by the *abbaa muudaa* as future office-holders. After their return home the *gadaa* councillors handed over power to the next *gadaa* class, themselves semi-retiring and acquiring a nearly sacred status as ↗*ǧiila*, a term otherwise used to designate festivities as well as the M. pilgrimage itself. Time during and after the pilgrimage was defined by a set of ritual taboos and prescriptions for M. participants.

Mystagogia ↗Təmhərtä ḫəbuʾat

Naadh ↗Nuer

Näʾakkʷəto Läʾab

N.L. (ነአኩቶ፡ ለአብ, b. 1203/04?, d. 1250?) was a 13th-cent. Ethiopian ruler from the ↗Zagʷe dynasty, believed to have succeeded king ↗Lalibäla to the throne. As to the precise relationship between the two rulers, the Acts of N.L. (ed. and tr. Conti Rossini 1943) are ambiguous. According to the hagiography, N.L. was the son of Lalibäla's brother "Gäbrä Mäsqäl" and a certain Märkeza (ibid. 178). Whilst Gäbrä Mäsqäl is (homonymous with) the regnal name of Lalibäla himself, N.L.'s father is believed to have been Lalibäla's brother ↗Ḥarbay (ibid. 106; Tedeschi 1990:336f.). In a manuscript mentioned by Raffray (1882:345f.), N.L.'s father's and Lalibäla's brother's name is given as Gäbrä Maryam (considered the correct regnal name of Ḥarbay by Belaynesh Mikael [in DicEthBio], but s. Tedeschi 1990:337). Lalibäla is also mentioned as the "carnal and spiritual father" of N.L. (Conti Rossini 1943:183), which might mean that the former was the latter's godfather. In any case, one should not take these texts literally: the confusion reflects the complexity of the succession to the throne after Lalibäla and the will of the author of the Acts to present N.L. as his legitimate heir. N.L. succeeded Lalibäla twice: first, when Lalibäla seems to have abdicated in his favour but taken power back 18 months later, and second, after the death of Lalibäla.

The fact that N.L. succeeded his uncle can be explained by the matrilineal system in the Zagʷe dynasty which could be linked to a specific land donation system in the ↗Lasta region. This matrilineal system could explain the reason why in the Zagʷe dynasty a son could never succeed his father. It is always the brother (Lalibäla after his brother Ḥarbay) or the nephew (N.L. after Lalibäla, Yətbarak after N.L.) to succeed the king (Marrassini 1994:210–14).

According to his hagiography, N.L. was baptised on 29 *Səbaṭ* (the month of ↗*Lədät*) of the year of mercy 338 [= 1153/54 A.D.] (Conti Rossini 1943:184). Tedeschi (1990:339f.) believed 338 to be an error for 388 [1203/04 A.D.] which seemed to him more likely from a chronological point of view. Since N.L., according to his Acts, lived for 47 years, the year of his death would be 1250, which would coincide with the enthronement of ↗Yətbaräk according to the Acts of ↗Iyäsus Moʾa (KurMoa 25, 31 [text]; Tedeschi 1994:512). This could be seen as confirming the calculation of the date of birth, but since the Acts of N.L. mention him retiring to his church at the end of his life, which might mean that Yətbaräk had usurped N.L.'s throne (s. also Tedeschi 1990:338f.), he did not necessarily die in 1250.

Conti Rossini used two manuscripts for his 1943 edition: a copy of the 16th-cent. ms. belonging to the Ethiopian community of ↗Jerusalem (now ANLin, Conti Rossini 113; for the Jerusalem ms. s. Isaac 1984-86:68), and a 17th-cent. one (BN d'Abbadie 29). Two more mss. are in VatLib collection (Cerulli etiop. 148 and 224). At least eight more manuscripts of the Acts have been microfilmed in the Lasta churches by EMML.

Like all Zagʷe hagiographies, the life of N.L. has been dated to the 15th cent. by Conti Rossini, who pointed out that the Trinitarian incipit is very similar to that of the *Mäṣḥafä* ↗*məśtir*, dating from 1425 (Conti Rossini 1943:177 n. 1–2; YaqMis 63). The similarities between the Acts of Lalibäla and those of N.L. are striking, with a tendency of overstatement in the latter (divine election before the birth, ascension to the sky before the age of 3). It seems that the ↗*gädl* of N.L. tries to supersede Lalibäla's hagiography.

Two episodes from N.L.'s life are of some interest. The first concerns the famous "rebel of Goğğam", Ṣärä Qəməs, who refused to submit to the Christian ruler and against whom Lalibäla sent his nephew. N.L. defeated Ṣärä Qəməs and brought him to Lalibäla's court making him swear on the Bible he would submit. On his way back to Goğğam, Ṣärä Qəməs died (Conti Rossini 1943:141–46). The name of Ṣärä Qəməs recalls Zanakəmər in the Acts of the 14th-cent. saint ↗Yafqərännä Ǝgziʾ (Wajnberg 1936:18). It is probable that the episode related in the Acts of N.L. is an anachronism.

The second episode is narrated in one of the two miracles following the *gädl* of N.L. When he succeeded Lalibäla, Egyptians refused to pay the usual tribute. By the saint's prayer, there was no more rain in Egypt, nor flood of the Nile for three years and seven months (Conti Rossini 1943:228). The motif of the Ethiopian superiority over Egypt is characteristic of the 14th and 15th cent., as in the *Gädlä ↗Marqorewos* and the *Visions of ↗Shenuti*. Thus, this might be another anachronistic episode, confirming that the Acts were not written before the second part of the 15th cent.

According to his Acts, N.L. founded several churches: one dedicated to the Virgin in Wägrä Səḫin/Däbrä Səḫin (Conti Rossini 1943:146, 150, 152 etc.), one to Ǝsṭifanos in the land of Dänsa (ibid. 152f.) and one in the region of Qoqḥəna (ibid. 173). He also completed the church of Däbrä Ṣəyon in ↗Ǝšätän, founded by Lalibäla (ibid. 222). Wägrä Səḫin ('Sanctuary of incense') is also mentioned in the Acts of ↗Yəmrəḥannä Krəstos (Marrassini 1995:83, 85f.) and is today considered as another name for the church of Ǝšätän Maryam on the slopes of Mt ↗Ǝšätän (Däbrä Ṣəyon could be the church known as the lower Ǝšätän Maryam, cf. Sauter 1963:269). Local tradition identifies the sanctuary dedicated to Ǝsṭifanos with Mawre Ǝsṭifanos near Gännätä Maryam. The toponym Qoqḥəna indicates a territory above the actual Näʾakkʷəto Läʾab church in ↗Lalibäla, also connected to N.L. by the tradition. Built in a cave at the feet of Ǝšätän (Miquel 1959:145), the church was restored at the beginning of the 20th cent. What the visitor can see today is probably very different from the ancient church.

According to his Acts, N.L. died in Wägrä Səḫin on 3 *Ḫədar*, the day he is commemorated in the Näʾakkʷəto Läʾab church. There is, however, no grave of the king anywhere in Lasta, as his body is believed to have been carried to Heaven.

N.L.'s son by his wife Nəṣəḥt Maryam, Bäḫaylä Mäsqäl, died at the age of 3 (Conti Rossini 1943:163f.). N.L. was succeeded by Lalibäla's son ↗Yətbaräk.

Näʾakkʷəto Läʾab in art

The visual representations of N.L. seem to appear first in the 17th cent., in the artistic milieu of ↗Lasta and ↗Säqota, the regions connected with the ↗Zagʷe dynasty. In a group of five ↗*sənsul* originating from the ↗Lalibäla area and painted in a distinct "geometric" style, N.L. stands in a row of the Zagʷe kings, all in a strict frontal position and holding a codex. Most probably he is one of the three figures portrayed in the same manner in the manuscript of the Vitae of Zagʷe kings (fol. 3r) kept in the ↗Yəmrəḥannä Krəstos church. The ↗*Täʾammərä Maryam* manuscript in Näʾakkʷəto Läʾab church, which belongs to the same stylistic group, has an added miniature of the first Gondär school of ↗painting showing N.L. riding a brown horse and spearing an armed figure (fol. 66v). Although the accompanying inscription is not related to the event, we may surmise that the scene illustrates N.L.'s campaign against the rebellious chief of Goğğam Ṣärä Qəməs, after which ↗Lalibäla abdicated in N.L.'s favour. N.L. is also depicted on horseback together with three other Zagʷe rulers in the 17th-cent. painting decorating the façade of the rock-cut church of Wəqro Mäsqäl near Säqota.

The church dedicated to N.L. near Lalibäla possesses two large canvas paintings representing various episodes from his life. The older piece, dating to the 18th cent. and belonging to the second Gondärine school of painting shows N.L. sitting on the throne in the centre, encircled by the armed courtiers, and, underneath, the episode with the Goğğam rebel brought by N.L. to king Lalibäla. Two other scenes showing N.L. in prayer and pierced by the swords are related to the penitential period of his life.

The second 1967 painting copies all above mentioned scenes making some additions. The rebel is delivered by N.L. to two enthroned kings, Lalibäla and Yəmrəḥannä Krəstos. In the upper left corner N.L. emerges together with his father from the clouded sky, certainly an allusion to the local tradition telling that the body of N.L. ascended to heaven. The blessing God the Father depicted at the top may express the idea about the holiness of the king, always cloaked in divine grace.

Näʾakkʷəto Läʾab

Wag šum N.L. (**ንአኩቶ፡ ለአብ**, fl. 1746–47) was the son of *wag šum* ↗Arʾayo. In 1746 N.L. assumed power from a rival *wag šum* family that had previously been deposed by his father. Soon after, *aṣe* ↗Iyasu II led an expedition into ↗Wag, forcing N.L. to flee for his life. His house and property along with that of his son ↗Gigar, were sacked during this expedition. N.L. and Gigar later confronted the Emperor at ↗Wäfla, but were defeated and had to flee again. At ↗Säqoṭa, the capital of the *wag šum*, Iyasu discharged N.L. and appointed *wag šum* Täklä Haymanot, the great grandson of the *wag šum* deposed by N.L.'s father.

Nabtāb ↗Beni ᶜAmər

Nadäw

Däğğazmač N. (**ናደው**, "horse name" Abba Baḥər; b. 1810?, d. 1888?) was a military commander and a close associate of ↗Mənilək II.

Born into a Šäwan noble family, N. made career as a military leader under Mənilək, the *nəguś* of Šäwa. He had been the tutor of Mənilək first in Tämqe near Ankobär and later during the latter's confinement at Mäqdäla. He later assisted Mənilək in his escape from the fortress and eventually became one of his most trusted advisors.

Few details are known of N.'s life. In the 1870s he was the commander of Mənilək's army, with the title of ↗*fitawrari*. In his role as confidant of Mənilək, N. frequently mediated between him and *aṣe* ↗Yoḥannəs IV. In 1878, he was made a

↗*däğğazmač*, after already having been named ↗*abägaz* of the Oromo in Šäwa. In 1885 N. was appointed as governor of the predominantly Oromo-inhabited Č̣älliha district. He was married to *wäyzäro* Qonğit Däbnäh and later to *wäyzäro* Käfäy, daughter of *ras* ↗Wale Bəṭul and empress ↗Ṭaytu's cousin. N. died around 1888–90, and was succeeded by his son ↗Täsämma Nadäw as royal councillor and military leader.

Nadäw Abba Wällo

Ras N. (ናደው፡ አባ፡ ወሎ, "horse name" Abba Mäbräq; b. in Šäwa, d. 1929) belonged to the powerful Adisge "clan" of northern Šäwa, and was a prominent politician involved in foreign affairs during ↗Mənilək II's and Empress ↗Zäwditu's time. He was also the governor of Illubabor province for many years until his death.

In 1917 N. acted as the head of the mission sent by Empress Zäwditu and *ras* Täfäri Mäkʷännən (later ↗Ḫaylä Śəllase I) to the ↗United Kingdom and the ↗United States, with the task of congratulating the allies upon their victory in World War I as well as underlining Ethiopia's independence and its role on the international scene.

In the period of Ethiopia's efforts to enter the ↗League of Nations, N. acted as Ethiopia's representative. In August 1922 he headed the delegation to Geneva; the group included two other envoys, ↗Ḫəruy Wäldä Śəllase and Fasika.

He also accompanied *ras* Täfäri during the latter's journey to Europe in 1924.

Nadel, Siegfried F.

N. (Siegfried Ferdinand [later Frederick, "Fred"] Stephan N.; b. 24 April 1903, Lemberg, Austria [today Lwów, Ukraine], d. 14 January 1956, Canberra, Australia) was an Austrian-born naturalized British universal scholar, whose anthropological interests touched Eritrea.

N. was the son of the lawyer Dr. Moritz Nadel and Adele Hirschsprung, both of Jewish descent. In 1912 the family moved to Vienna. Although N. made a career as a social anthropologist, he was also a fully trained conductor and composer (Musikakademie Wien and Musikhistorisches Institut, 1920–23; he worked as assistant conductor for Düsseldorf Opera House in 1925) and held a Ph.D. in Psychology and Philosophy (Universität Wien, 11 November 1925). In July 1926 he married the Austrian musicologist Lisbeth Braun, with whom he had one daughter. In 1932, after having studied ethnomusicology and African languages in Berlin, N. was awarded a Rockefeller fellowship for studies in African anthropology. The same year he moved to the United Kingdom.

From October 1932 until 1937 N. studied at the London School of Economics (L.S.E.) under Bronisław Malinowski and Charles Gabriel Seligman. He carried out field work on the Nupe culture in Nigeria in 1933–35 and 1935–36 with a field research fellowship from the International African Institute, and on the Nuba in Sudan as government anthropologist for the Anglo–Egyptian Sudan in 1938.

Early in 1941 N. enlisted in the Sudan Defence Force and later that year transferred to the British Army, East African Command. For about a year he was in charge of a frontier post at the Eritrean-Ethiopian border. He subsequently became Secretary of Native Affairs in the ↗British Military Administration (B.M.A.) in Asmära, with the rank of Major. During this period he collected materials on Eritrea and wrote several articles and reports on the ethnic setting in this and the neighbouring countries, as well as on the ↗land tenure in the highlands (NadEr, Nadel 1944, 1945, 1946, 1947).

In 1945 N. was transferred to the Home Establishment, and in May 1945 to Tripolitania with the rank of Lieutenant-Colonel. There he was again Secretary of Native Affairs and also became Deputy Chief Secretary in the B.M.A. In June

1946 he returned to England and was released from the army. In the same year, N. was awarded the Wellcome Medal for the anthropological writings based on his wartime experiences.

N. returned to scholarship and taught social anthropology at such renowned institutions as the L.S.E. (as Senior Lecturer), Durham University (King's College, Newcastle, as Reader in Anthropology and Head of Department, 1948). From 1950 until his death he held the Chair in Anthropology and Sociology at the new Australian National University. His unpublished estate, including his Eritrean diaries and photo collections, is kept in the archive of the L.S.E.

Kerstin Volker-Saad

Näfas Mäwçça

N.M. (ነፋስ፡ መውጫ, Amh. 'the place of going forth of the winds'; possibly an allusion to the legend found in the *Mäṣḥafä* ↗*Aksum* about tunnels under stele where winds blew out all lights) is a megalithic structure situated at the western end of the Central Stelae Field, ↗Aksum. The structure is overlain by a recumbent ↗stela (Stela 1) that possibly fell during erection at some point in the early 4th cent., the date providing a terminus post quem for the underlying construction. The structure comprises a massive 360-tonne syenite central capstone supported by an ashlar superstructure. The ↗Deutsche Aksum-Expedition (DAE II, 94ff.) conducted planning and clearance work here in 1906; subsequent archaeological research by Doresse, de Contenson and notably by the British Institute of Eastern Africa (BIEA) expedition led by Neville Chittick expanded on the DAE plans (Munro-Hay 1989:116–20, 165f.).

In plan, the building is of rectangular form, approximately 14.5 m wide (north-south axis) and 22.5 m long (west-east axis). A narrow corridor or ambulatory runs around a central "room" flanked itself by two corridors on the northern and southern edges. These areas may have been filled with rubble to better support the weight of the capstone. A sound hypothesis, formulated by Phillipson (2000:481), is that this is a tomb of an elite king or a royal relative. Its scale, monumental construction and proximity to the tomb complexes in the Central Stele Field would support this statement, although it does not seem to be associated with a standing stela (as is the case with the mausoleum and the "east tomb" on the terrace above). In these regards, it closely resembles the "Tomb of the False Door".

Bronze and glass fragments recovered in situ during excavation would initially point perhaps to elite grave goods, but their contextual provenance is doubtful. 35 bronze coins of late Aksumite rulers, mostly from the 6th-7th cent. A.D., have been unearthed at the site, on the second level, formed after the stela had fallen (Contenson 1959:32). Further excavation work is needed in order to furnish stratified material that will help date the structure and yield more concrete clues as to its main function.

A historical settlement by the same name, east of Lake Ṭana, appears in several Ethiopian royal chronicles, including those of Susənyos and Yohannəs I.

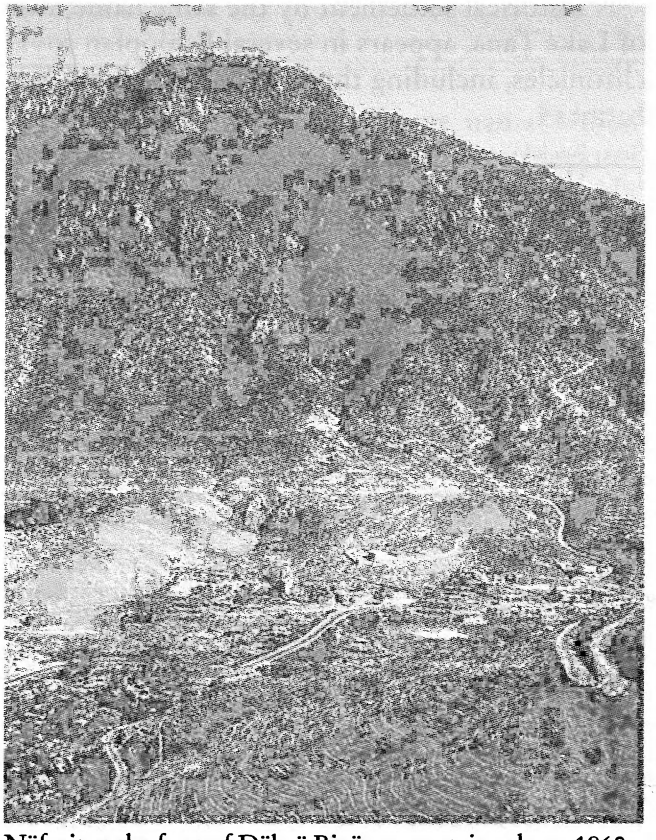
Näfasit

N. (ንፋሲት, Tgn. 'windy' [fem.]) is a settlement in the escarpments of ↗Ḥamasen, at the traditional border to the lowlands (↗Sämhar), ca. 25 km south-west from ↗Ginda^{c} and 20 km east of ↗Asmära at 1,648 m A.S.L. (15° 2' E, 39° 3' N; for location s. Nägaš). It is situated in a long valley that served as an ancient caravan route between ↗Massawa and the Ḥamasen highlands, surrounded by the mountain massifs of ↗Däbrä Bizän and Däbrä Ləssa.

The toponym N. seems to be older than the town it probably originally signified a small roadside hill at the foot of Däbrä Bizän (s. map of the Colonia Eritrea 1889/90). The settlement was founded during the construction of the ↗railway (littorina) from Massawa to Asmära. A folk etymology connects the name N. with Italian constructors calling their work (particularly difficult in N. and above) "nefasto" ('ill-fated'). From N. the now disused railway rises in serpentines to another small former railway station, Arba^{c} Ruba^{c} (2,064 m A.S.L.), on the namesake steep mountain (2,343 m A.S.L.) and continues to Asmära. A road runs along the railway; another connects N. with ↗Däqqämḥare Ǝggäla via May Ḥabar. The *ruba* ^{c}Addi Ruso, another ancient caravan route, links the N. valley to May Ḥabar, known for its fruit (papaya, mango) plantations.



Näfasit at the foot of Däbrä Bizän mountain; photo 1960s, courtesy of Mike Metras

The vegetation is no longer as abundant as in Ginda^{c}. Most of the rocky area is covered by cactae; ↗euphorbia dominated until the 1960s, replaced today by the ↗*bäläs*, the fruits of which are a source of income for the population. ↗Juniper trees also grow in the valley.

Situated at the crossroads between Ḥamasen, Sämhar and ↗Akkälä Guzay, the N. region is ethnically and culturally diverse. In pre-colonial times it was a lowly populated border area, dominated by semi-pastoralist ↗Təgre. In the 19th cent. it was a Muslim region, with occasional Christian presence. The monks of the monastery traditionally used the spot to keep contact with the road to the sea, and by pilgrims to make a halt. According to oral traditions, during a conflict in the 1840s, the deposed regent of Ḥamasen, ↗Ǝllen, allegedly found refuge in a cave nearby, at the foot of Däbrä Bizän. The first Christians to settle here permanently came during the railway construction (according to a local tradition, some of them came from another N. in Təgray, another possible explanation for the place name). Today, the population is partially Christian Orthodox, partially Muslim; the majority of ca. 9,000 inhabitants speaks ↗Təgrəññña or Təgre. There is also a Catholic mission, but only very few Catholics.

The two churches of N., Ṭaḥanit Mäkina and Abunä Filəppos, have close relationship to Däbrä Bizän and house some of its monks.

Ancient Təgre families in the N. area are the Mäkki, most of them agriculturalists at the *ruba* ^{c}Addi Ruso, and at ^{c}Addi Ḥabab. The seasonal ↗Sāho camp of La^{c}aytän at Däbrä Bizän on the road to May Ḥabar, and administratively part of N., changed into a permanent settlement in the 1990s. The government has given the territory to the Muslim Sāho, against the protests of the Däbrä Bizän monastery, traditionally claiming jurisdiction over all the territories on the mountain down to the valley.

Wolbert Smidt

Näffaᶜ Wäd ᶜƎtman

N. (ነፋዕ፡ ወድ፡ ዕትማን, b. ca. 1882, northern Eritrea, d. 1909) was a learned man and a writer in his mother tongue, ↗Təgre, as well as ↗Littmann's most important informant for that language.

The son of a ballad singer of noble origin (Tgr.: *šəmagälle*, s. ↗*šəmagəlle*), N. spent his childhood among the ↗Mänsaᶜ, a Təgre-speaking tribe of ↗Sänḥit. Against the wishes of his Muslim family, he decided to be educated at the Protestant school in Gäläb, run at that time by ↗Sundström (s. ↗Swedish Evangelical Mission). Having converted to Christianity, N. himself became a teacher and a missionary in 1901; besides, he began to collect and write down the traditions of his people.

At the end of 1905, Littmann, then head of the ↗Princeton University Expedition to Abyssinia, arrived at Gäläb, and started working with N. on the Təgre language. N. also became his assistant in collecting the tales, dirges and other texts and language materials from Təgre. Two years later, N. was able to go with Sundström to Strasbourg, where he again met Littmann, and stayed with him for two years. During this period, N. studied German, Italian and Arabic. At the same time, he assisted Littmann in the edition and interpretation of the texts previously collected. N. disappeared on his way back to Eritrea, on 16 April 1909, during a ship journey between Naples and Catania.

The texts collected, edited and interpreted with N.'s help, were eventually included in Littmann's *Publications* (LitPEA), the first volume of which appeared in 1910 (when N. had already disappeared). The third volume, a collection of Təgre songs, also contains an introduction composed by N. in his native language (pp. XI–XXIV).

Later, N.'s observations were of primary importance for the publication of the *Wörterbuch der Tigre-Sprache* by Enno Littmann and Maria ↗Höfner (1962). In this dictionary, the abbreviation "Mscr." at the end of a lexical entry indicates that the word and its meaning are taken from Littmann's manuscript notes, in turn based on data orally transmitted by N.

Lit.: ArEvang 358f.; LitPEA vol. 1, XI–XV, vol. 3, XI–XXIV; ENNO LITTMANN, "Erinnerungen an Naffaᶜ Wad ᶜEtmân", *Der Neue Orient* 2, 1918, 587–91 [repr. in: RUDI PARET – ANTON SCHALL (eds.), *Ein Jahrhundert Orientalistik. Lebensbilder aus der Feder von Enno Littman und Verzeichnis seiner Schriften* ..., Wiesbaden 1955, 14–25]; ID. – MARIA HÖFNER, *Wörterbuch der Tigrē-Sprache*, Wiesbaden 1962, V–VI; SHLOMO RAZ, "Source Materials for the Study of the Tigre Language", in: *SegBodLes* 307–22, here 308ff.

Gianfrancesco Lusini

Näfs abbat

N.a. (Amh. [የ]ነፍስ፡ አባት, [*yä*]*näfs abbat*, lit. 'the soul's father'; Gəᶜəz አበ፡ ነፍስ, *abä näfs*) – father confessor – is one of the important institutions of the ↗Ethiopian Orthodox (Täwaḥədo) Church since the N.a.'s ministry covers almost all the facets of the pastoral ministry at family, personal and associative levels. Rather informal as it may be, the network of the N.a. is in fact what holds the Christian community together. The N.a. is characterised by his intimate relationship with, and knowledge of, his parish (↗*Aṭbiya*). In this regard, he is often likened to the "family doctor" or the parish priest in rural areas of Western Europe. Ordained presbyters only can become N.a. on account of their participation into the Petrine ministry (*simätä abunä Ṗeṭros*, cf. *Mäṣḥäfä qəddase* 1966/67 , *Anaphora of the Apostles*, § 162; cp. ↗*kəhnät*; ↗*qäsis*). N.a. are usually married clergy, although monks are increasingly involved as N.a. outside the monastery. The *abunä qäsis* (lit. 'our father priest') is the monk in whom a bishop confides and is part of his entourage. Monks confess to their abbot or elder monks.

The N.a. is the priest one normally approaches to receive the sacrament of ↗Penance, i.e. a confessor (and is also called in Gəᶜəz አበ፡ ንስሐ, *abä nəssəḥa*; Amh. የንስሐ፡ አባት, *yänəssəḥa abbat*, lit. 'the father of Penance'). Understandably, one and the same priest is both the spiritual father and the confessor. While the name "spiritual father" describes this priest in his permanent socio-religious role and relationship, the name "confessor" reveals his function in one particular sacramental moment.

The N.a. is almost omnipresent in traditional Ethiopian Christian society. From the age of seven, any person may freely select his/her spiritual father. However, while the choice of the N.a. is free, it may not be changed at will. If dissatisfaction arises between the N.a. and his spiritual son/daughter, the latter may turn to another priest. In any case, before changing, one must ask the leave of the previous N.a., who never refuses it. Travellers may look for a priest while on journey: they introduce themselves and ask for the priest's blessing and absolution before going to sleep so that they can be sure that, in case of sudden death, they will receive a Church ↗burial.

A N.a.'s visit to a family or individual does not have to be a formal procedure, and he makes himself available for various types of advice or reconciling people in conflict. A sure mark of

how much a N.a. is appreciated is the level of support he receives from his spiritual children. Throughout the year two mandatory visits to the N.a. take place. The first is on the feast of *Däbrä Zäyt* (mid-Lent), when the "spiritual children" visit their spiritual father and bring him money (in the case of town dwellers) or grain (for those in the countryside), an income upon which the N.a.'s family is relying. Those who visit the N.a. may be offered ↗*ṭälla*-beer or *ṭəre* (grains) prepared by the priest's wife. The second visit takes place on the feast of *Däbrä Tabor* (the Transfiguration, 13 *Näḥase*). Besides, the N.a. visits those who were not present at the church service of Palm Sunday and were therefore unable to attend the Absolution (↗*Fəṭḥat*) of those who might die during Holy Week. This visit, during which neither food nor drink are offered, is important because no funeral services are held during the Holy Week (cp. ↗*Gəbrä Ḥəmamat*).

The N.a. has an active involvement in all important decisions, and his advice is always taken into consideration. Called after a birth, he purifies the home with holy water and arranges for the infant's ↗baptism. He is involved in ↗wedding arrangements, whether sacramental or not (cp. ↗Marriage; ↗Matrimony). When someone is dying, the N.a. accompanies him, and his family, during his/her last days. During this time he will hear the person's last confession, absolve him/her and may, although extremely rarely, celebrate the Anointing of the Sick (↗*Qändil*). He may administer the last Eucharistic communion, celebrating Liturgy (↗*Qəddase*) in the nearby church and bringing the Eucharist to the person's home with the assistance of a deacon; otherwise, he would celebrate Liturgy in a tent erected near the house by the community. The N.a. is instrumental in receiving the dying person's last will (↗*Nuzaze*) and disclosing it in due time, normally at the ↗*täzkar* of the 40th day.

The ministry of the father confessor may have existed in Ethiopia since the introduction of ↗Christianity or at least since the development of the monastic movement there. Indeed, both spiritual guidance and penance are linked with the monastic tradition. The latter found from the start its evangelizing outlet in the ministry of the holy monks who were consulted by pilgrims eager to obtain an advise that would set them on the right way, or who took spiritual care of newly converted Christians. The ministry is well-described in some writings of the Canon ↗law adopted by the Ethiopians. Four books of the Ethiopic *Senodos* repeat the canon which exhorts bishops, priests and even deacons not to violate Jesus Christ's word saying that there will be great joy in heaven for one sinner who repents (Lk 15:7; cp. Metzger 1985:171ff.). However, it is not known how exactly the institution of N.a. was embedded in the society during the early period. The revival of the ministry is ascribed to *aṣe* Zär'a Ya'əqob, who enforced it to ensure that his religious reforms would reach each family (TadTChurch 238). In the *Mäṣḥäfä* ↗*milad* Zär'a Ya'əqob invokes the ministry referring to both the ↗*Didəsqəlya* (Harden 1920:33f. [ii.20]; Platt 1834:42) and ↗*Senodos* (Horner 1904:5).

Historical sources refer to the ቄስ፡ሐፂ, *qes ḥaṣe* (or /ሐፃይ, *ḥaṣäy*), or the monarch's personal confessor, the position of considerable importance throughout centuries: *qes ḥaṣani* Zäkaryas and Zä'adonay of ↗Lalibäla (CRDLib 13, no. 6; 16, no. 7, resp.); *qes ḥaṣe* (*ḥaṣäy*) Zakaryas of *aṣe* ↗Zär'a Ya'əqob (CRAxum 25, no. 17; Kropp 2005:119, 133; cp. PerrZarY 38); ↗Aśärä Krəstos of *aṣe* ↗Yoḥannəs I; Matewos of *aṣe* ↗Iyasu I (GuiIohan 63); ∃lfəyos of *aṣe* ↗Iyasu II (GuiIyas 29) etc. (the last having been *abba* ↗Gäbrä Ḥanna Ğimma).

Among the ↗Betä ∃sra'el, every adult has a N.a. who serves as a spiritual guide and confessor.

Näfṭäññä

The Amharic term N. (ነፍጠኛ) means originally: 'someone carrying a muzzle-loaded rifle', i.e., a soldier in *aṣe* ↗Mənilək II's army in the 1890s. The word probably derives from the older Arabic word *näfṭ* for what was then called "Greek" or "liquid" fire (explosives) and subsequently for rifles (Ferrier in EI² vol. 7, 884ff.; Pankhurst 1971:48). The term N. was known under the 17th-cent. *aṣe* ↗Susənyos (s. Strelcyn 1964:262) and was also used in the 18th cent. by *aṣe* ↗Bäkaffa, who was said to have used Muslim N. in his army (Pankhurst 1971:51). It came in vogue in the last decade of the 19th cent., although it was also used for *aṣe* ↗Tewodros's rifle soldiers (cf. GueCop-Men 103). Its popular meaning in the 20th cent. became: descendant of soldier-settlers or armed immigrants associated with the invading imperial army and living in the conquered southern parts of Ethiopia (cf. KaneDic 1086). So this included non-gun bearing people (women and children) who happened to be born in the area after their fathers' migration. In pre-19th-cent. sources, settlers or migrants from northern Ethiopia moving to the south in earlier times were not called N., as they were mostly religious functionaries (Orthodox priests and monks, Muslim preachers) and traders. Its contemporary meaning, especially since 1991 when a new regime came to power in Ethiopia, has become very pejorative and polemic, indicating something like "violent, illegal northern settlers on southern Ethiopian lands not theirs, mostly Amhara, with a domineering/arrogant attitude". The use of the term N. in ideological, ethnicized discourse, especially on website polemics and in partisan literature, has become widespread, but is a largely sterile term of insult. As a result, the historical complexity of the phenomenon of N. is conveniently forgotten, and a now diffuse and pan-ethnic category of people tends to be labelled thus in terms of "collective guilt".

Historically then, the N. were the Ethiopian emperor's riflemen, usually of different ethnocultural background, who secured the conquest and manned the state's garrisons (↗*Kätäma*, which later evolved into villages and towns), receiving tributary rights over people (↗*gäbbar*, for forced *corvée* labour and produce) or land, either expropriated from local people or claimed from vacant, unused space. In pastoral areas, however, this system did not successfully take hold. The N.-*gäbbar* relationship was fundamentally exploitative and deeply resented (cf. McClellan 1988:72; Alexander Naty 2002:60). The number of *gäbbars* per N. household differed; it could be from two to ten for a common soldier, but might rise to 30 to 80 for an officer or district chief (BrHad 307). For the ↗Gide'o area even higher numbers were reported (McClellan 1988:64f.). N. land rights were based on grants allocated by the Emperor, as owner of all conquered or newly incorporated areas. There was a variety of forms, and land was also bought.

As the army of *aṣe* Mənilək had soldiers from many regions, but especially from central Ethiopia, mainly N. of ↗Amhara, ↗Oromo, ↗Gurage and ↗Təgray and Orthodox-Christian background settled in the south. Being mostly Orthodox, they cherished their own civilizational identity as above that of the local people, who adhered to traditional-local religions or cults.

The original numbers of N. in the South are difficult to determine exactly, but in view of the size of the various imperial armies led by, e.g., *ras* ↗Täsämma Nadäw, *ras* ↗Wäldä Giyorgis Aboyye and others (each ca. 20,000 to 30,000 men), they counted probably not more than a 100,000 people, expanding steadily as new arrivals came and families were established. Their position of power, buttressed by armed force and exploitation especially in the early decades after the conquest, was highly unpopular and contested – but only occasionally by collective armed revolts (cf. Abbink 1992:81; Garretson 1986:205; cf. McClellan 1988:73). Only in later years a *modus vivendi* evolved whereby patterns of co-operation, incorporation or accommodation developed between local people and settlers. In the wake of the armed settlers other groups, like traders, farmers, Orthodox priests, administrators, etc. also arrived, and were by implication reckoned as "N." as well. This second wave of settlers, however, faced conflict with the established N. in several places (cf. McClellan 1998:187f.). The more important land-holding elite among the N. became known as ↗*mälkäññä*, and many of the lo-

cal indigenous elite were integrated into the new system of power. Over the years, N. were partly "indigenized" – there was inter-marriage with local people (often with members of leading families), they adopted the local language and became well-rooted in local society, although politically and economically they remained the power elite.

The record of the N. in southern Ethiopia varied widely, with some having a reputation of gross abuse and arbitrary exploitation, while others integrated and co-operated with local people. In some areas, like ↗Arsi, ↗Mağı, Gideʾo and ↗Dime, rule by state agents and N. in the era up to World War II was severe, leading to great human suffering, economic and social crisis, and depopulation in some areas (cf. Haberland 1993:13, 188; Todd 1979:215f.). Similarly oppressive conditions, however, also existed in parts of north- and central Ethiopia, like in the Goğğam Amhara region under *ras* ↗Ḫaylu Täklä Haymanot.

In the wake of the Italian conquest of Ethiopia, many N. were attacked or forced out by their *gäbbars* and members of the indigenous-local elites. After the Italians left in 1941, various patriots (*arbäññočč*) were rewarded by *aṣe* ↗Ḫaylä Śəllase I with land grants in southern areas (not in those where they had fought) and became 'landlords' (↗*Balabbats*) in their own right, but they differed from the N. in regard to social background, ambitions and power position.

In Ḫaylä Śəllase's reign since 1930, marked by centralization and state reform, the reign of N. and their leaders was curtailed, and abuse discouraged and sometimes sanctioned by fines and demotion. N. were gradually replaced by salaried police and army forces. In 1941 the N.-*gäbbar* system was formally abolished. The feudalist system of patron-client labour relations, however, did not fundamentally change. Most former *gäbbars* became tenants, often in a much worse position. Local *balabbats*, many of northern N. descent, remained the pivotal power brokers. In the post-war years up to the Ethiopian revolution, people of N. background, due to their knowledge of Amharic and their wealth or better educational profile, were often the contact people for the national government in the peripheral areas, as administrators, civil servants, teachers, entrepreneurs, etc., but the N. as such disappeared.

After the demise of the Empire in 1974, the revolutionary-Marxist *Därg* regime (↗Provisional Military Administrative Council) decried the record of the "exploitative feudal class" to which the descendants of N. were seen to belong (often as *balabbat*) and their gradual decline of fortune became visible. Many were forcefully dispossessed, especially after the 1975 land reform (leading to nationalization and expropriation). Their social decline accelerated after 1991, when the new government intensified an ideological campaign against perceived northern ("Amhara") "oppressive classes" or elites in newly defined "ethnic" areas, notably in the south. In statements read to local ethnic communities after the take-over of power, the N. were explicitly mentioned as the former "oppressive class" from which the new regime had come to liberate the people. Despite the tide turning against them and their being vilified on often unspecified, ideological grounds, descendants of N. have survived and adapted, and the majority of them still live in their areas of birth, forming a diffuse category of people.

Nägädä Iyäsus

N.I. (ንገደ፡ ኢየሱስ, b. 15th cent., d. 15/16 February 1534), according to a note in the Kəbran Gospel, was a *liqä liqawənt* (↗*Liq*) when Tewologos was

↗*ᶜaqqabe säᶜat* of Däbrä Ḥayq Ǝsṭifanos during the reign of *aṣe* Naᶜod (ms. Kebrān 1, fol. 4v); N.I. became *ᶜaqqabe säᶜat* under *aṣe* ↗Ləbnä Dəngəl (CRAxum 29–41).

A contemporary of the Portuguese mission, N.I. met Francisco ↗Alvares, and was still at Ləbnä Dəngəl's court during the war against ↗Aḥmad b. Ibrāhīm al-Ġāzī "Grañ" (BassHist 326f.). N.I. held a high position at the royal court, and Alvares reports that one of N.I.'s sons married the Emperor's sister Romanä Wärq – an indication that, while being an *ᶜaqqabe säᶜat*, N.I. belonged to the married clergy and was not a monk (BeckHuntAlvar 108, 270f., 286, 305, 326f.).

During the 16th cent., the *ᶜaqqabe säᶜat* seems to have had scant links with his own Ḥayq community, N.I. spending most of his time at the royal court. However, he kept his control over the community as attested by the two documents preserved in the so-called Gospel book of Iyäsus Moᵓa (EMML 1832, fol. 184v, 269r). Most probably his authority was held by his representative at the monastery, the *afä ᶜaqqabe säᶜat*. During his charge there were at least two *afä ᶜaqqabe säᶜat*: Luqas and Kəflä Yoḥannəs (Ṗāwlos Ṣādwā 1952:25; EMML 1832, fol. 184v).

A powerful ecclesiastic and courtier, he was also one of the main opponents of *əčč̌äge* ↗ᶜƎnbaqom of Däbrä Libanos of Šäwa (RicEnbYoh IV, 85, 130f.).

The career of N.I. came to an end in 1532 when Däbrä Ḥayq Ǝsṭifanos was sacked by the soldiers of Aḥmad Grañ. N.I. fled together with *aṣe* Ləbnä Dəngəl. Finally, N.I. was captured and killed by Grañ's soldiers on 21/22 *Yäkkatit* 1526 A.M. [15/16 February 1534], according to the "Short Chronicle" and the first chapter of the Chronicle Śärṣa Dəngəl (KrLebD 14; DombrChr 163; BassÉt 105). The name of his successor is unknown. It could have been be a certain *ᶜaqqabe säᶜat* Yoḥannəs who was in charge during Ləbnä Dəngəl's reign (EMML 1942, fol. 85r).

Marie-Laure Derat

Naǧāḥids

The N. were a dynasty of Ethiopian slaves with their capital in Zabīd in Tihāma, the Red Sea coastal plain of ↗Yemen, where they ruled between the years 1022 and 1158. Their history is best described in the account of ᶜUmāra (d. 1174), though this author confuses facts and fiction and seldom provides precise dates. Other Arab writers largely depend upon ᶜUmāra's text.

The N. history begins with the arrival of Naǧāḥ in Zabīd in 1022. Naǧāḥ, previously a slave governor of the Ziyādids, a dynasty in control of Tihāma during the 9th and early 10th cent., took over affairs outside Zabīd, while his brother, Nafīs, ruled within the town. The latter, however, was soon ousted by the former and Naǧāḥ received a diploma from the Abbasid caliph in Baghdad and was able to assume the insignia of royalty, strike his own coins and have his name inserted in the *ḫuṭba*. N. territory expanded northwards as far as Ḥaraḍ. The highlands remained in the hands of various other ruling houses, such as the Šīᶜī Ismāᶜīlī Ṣulayḥids of Ṣanᶜāᵓ and Ḏū Ǧibla, that rose to particular prominence in ca. 1047. Their history is closely connected to that of the N. The first Ṣulayḥid, ᶜAlī, is said to have poisoned Naǧāḥ in 1060 and, in the ensuing confusion, occupied Zabīd. Two sons of Naǧāḥ fled to the ↗Dahlak islands in the Red Sea. Two other sons, Saᶜīd (nicknamed al-Aḥwal, 'the cross-eyed') and Ǧayyāš, decided to regain power. They emerged in Zabīd killing ᶜAlī the Ṣulayḥid and kidnapping his wife, Asmāᵓ, in 1081. The large number of Ethiopian slave troops rallied to Saᶜīd and he was recognized as lord. ᶜAlī's son, al-Mukarram, rescued his mother in 1083 and the N. were once again compelled to flee to Dahlak; Ǧayyāš fled further to ↗India. In 1086, Saᶜīd was able to return as ruler, but he was put to death in 1088 at the instigation of the Ṣulayḥid queen, as-Sayyida Arwā, al-Mukarram's wife. Ǧayyāš returned to regain power in Zabīd in 1089. With his death in 1105 or 1107, the information becomes even more scanty and confused as power over Tihāma swung to and fro between the N. and the Ṣulayḥids. Ǧayyāš's son, Fātik I, died young in 1109 and, after a period of rule by a *wazīr*, when Fātik's grandson Fātik II became ruler. Killed in 1137, he was followed by his cousin, Fātik III. The N. asked other parties for assistance in the Tihāma affairs, including the Zaydīs whose territory was centred in the northern highlands of Yemen. They agreed to help on condition that

Fātik III be deposed and the Zaydī *imām* be recognized as lord of Zabīd. The N. gave their consent, but in 1156 another local Tihāmī dynasty, the Mahdids, entered Zabīd and murdered the last N. slave minister, essentially putting an end to the house. The dynasty itself finished with the death of Fātik III in 1158.

Other aspects of N. political history and social life in Tihāma under them are undocumented. It is known that, like the Ziyādids before them, the N. constantly brought over shiploads of Ethiopian slaves to Yemen to join their armies and populate the potentially fertile Tihāma. A 13th-cent. source (Ibn al-Muğāwir ed. 1954:235) mentions that the new town of Ḥays was populated almost exclusively by Ethiopians brought in specifically for that purpose.

No great caches of N. coins have been found, but Lowick (1976) has described four, all minted in Zabīd, and undoubtedly N.

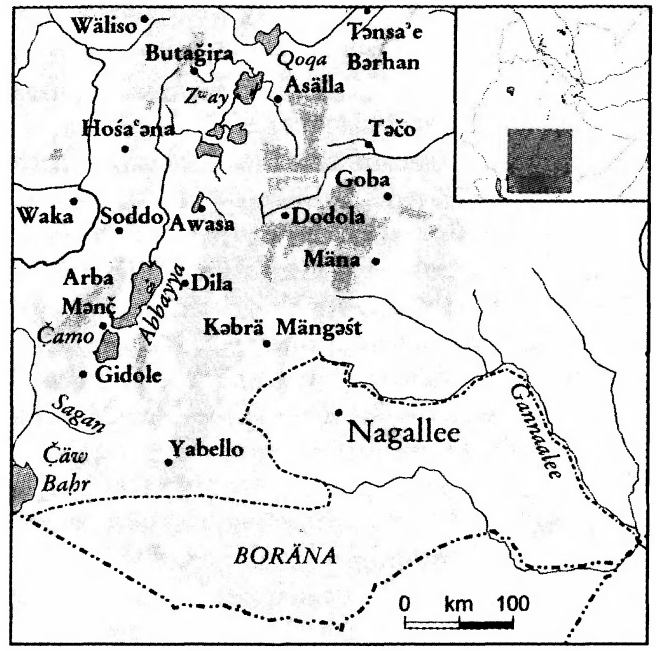
Nagallee

The town of N. (Nageellee, Amh. ነጋሌ, Nägale, 05° 17' N, 39° 42' E, 1,449 m A.S.L.) is located on the interfluve of the ↗Ganaalee river and the Dawa river, where plateau and highland meet.

N. was already a small town in 1936, when, after *ras* ↗Dästa Damṭäw attacked the Italians at ↗Dolo Odo in October 1935 and was defeated, Graziani counter-attacked and with the support of heavy bombing, took and razed the town to the ground on 20 January (Guida 597; Gentizon 1936:12–32). N. served as a sanctuary for the regular army during the Bale revolt led by Waqoo Gutu (Gebru Tareke 1991:125–59; Gilkes 1975:214–26). In early 1974, the garrison stationed there to keep an eye on the activities of the Western Somalia Liberation Front rebelled, at the same time as the troops engaged in Eritrea.



Until the 1987 reform N. was the capital of the Boräna *awraǧǧa* of the Sidamo region, up to 1991 it was the capital of the Boräna region. For some years it was then the capital of the Libän *wäräda* and of Boräna zone, Oromiyaa *kəllәl*. Today N. belongs to Guǧǧi *wäräda*, while the capital of Boräna zone shifted to ↗Yabello.

Between 1970 and 1984 the Boräna *awraǧǧa*, affected by Oromo and Somali guerrilla warfare and droughts, saw its population decline from 122,500 to 104,113 inhabitants. In 1984 N. was only a small administrative centre with a population of 11,997 inhabitants, an inflated figure because of the presence of soldiers. With peace progressing in the region since 1991 the population has been expanding quickly and it is now roughly 25 % of the total figure for the Libän *wäräda*. It rose from 32,289 inhabitants in 2000 to over 39,000 inhabitants in 2004 and even 47,763 inhabitants in 2005. This urban growth caused by the influx of pastoralists has been accelerated by an improved road network and better administrative framework.

Nägärä haymanot

N.h. (**ነገረ፡ ሃይማኖት**, 'The Account of the Faith') is an Amharic treaty synthesizing the ↗*Karra* views of the history and doctrines of the Unctionist (↗*Qəbat*) and Adoptionist (↗*Ṣägga ləğ* or ↗*Śost lədät*) religious movements. It was most probably written after the council of ↗Boru Meda in 1878.

Seven copies of the N.h. are known, in private possession of ecclesiastics and intellectuals (mss. EMML 1710, 2906, 2950, 4641), or in monastic libraries (↗Moṭa Giyorgis in Goğğam; churches in Šäwa: mss. EMML 1533, 1648). Extracts sometimes appear under other titles (e.g., *Nägärä guba'e zä'abäw*, 'Account of the Council of the Fathers'; s. Berhanou Abebe 1994). The N.h. has not been edited; summaries have been published by Gäbre-Yesus Haylu (in PICES 1, after ms. EMML 2906) and Kindeneh Endeg (2004, ch. 1, after the ms. from Moṭa Giyorgis).

The N.h. narrates how, ever since the time of Pope Leo I, it was the Alexandrian Church alone (including the Ethiopian Church) that preserved the true doctrine of two births and one nature of Christ. It was the only belief in Ethiopia throughout the Aksumite times, after the ↗"Nine Saints", during the ↗Zag^{w}e era, under *abba* ↗Gäbrä Mänfäs Qəddus, and in the age of ↗Ewosṭatewos, until the Europeans came and preached one person and two natures. According to the N.h., Alfonso ↗Mendes (here "Awfänyos"), after being expelled by ↗Fasilädäs, stopped at ↗Fəremona on his way to the Red Sea and indoctrinated two Ethiopians from Goğğam: "Dəhu" Ewosṭatewos from Sänk^{w}a Giyorgis, Mäčča, and "Qurenč" Täklä Haymanot from Ğärr Gäbrə'el. They introduced the foreign teaching to their home areas, the former teaching the *Qəbat* and the latter the *Śost lədät* doctrine. They were defeated by *əčč̌äge* Bäträ Giyorgis in an oral dispute at Gondär, but went on teaching, making Goğğam the motherland of Ethiopian Orthodox heresies.

The N.h. then tells of the success of the *Qəbat* during *aṣe* ↗Yoḥannəs I's reign. Such doctrine is said to have been written down in the text referred to as **አዕማደ፡ ምሥጢር** (*A^{c}əmadä məśṭir*, 'Pillars of Mystery'). This work should not be confused with the ↗*Amməstu a^{c}əmadä məśṭir*, a well-known *Täwaḥədo* writing, but can probably be identified with the text known in Goğğam as *Mäṣḥafä məśṭir*, one of the few *Qəbat* versions of the history of the theological schools from the 16th to the 18th cent., which is attributed to *abba* ↗Zəkrä Maryam and *abba* ↗Ṗawli. The N.h. states that ↗Dawit III also supported the *Qəbat* party and persecuted the *Täwaḥədo* supporters.

Concerning the *Ṣägga ləğ*, or *Śost lədät*, party, the N.h. narrates how the 18th-cent. Šäwan ruler ↗Ammənḫa Iyäsus protected three *Ṣägga* monks from Tädbabä Maryam. His son ↗Asfa Wäsän grew up with their teaching and, on coming to power, imposed the *Ṣägga* doctrine on Däbrä Libanos, promising the monks to give them back their lands, which constituted one third of the Šäwan territory. All churches and monasteries in Däbrä Libanos's influence zone were thus expected to accept the *Śost lədät* doctrine as taught by "Qurenč" Täklä Haymanot, as the true doctrine of *abba* ↗Täklä Haymanot. A *qəne* teacher of Tädbabä Maryam taught the doctrine to *^{c}aqqabe sä^{c}at* Käbte (fl. ca. 1760–80), who in turn spread it to Gondär. It was *aṣe* ↗Tewodros II who eventually put an end to this dissent by choosing the *karra* doctrine as the one and only true faith (cp. ↗*Hulätt lədät*).

The reception of the N.h. by *Qəbat* and *Ṣägga* traditions has to be further investigated. *Qəbat* traditions claim that the character of "Dəhu" Ewosṭatewos (whom they call *kähadi* ['the apostate'] Ewosṭatewos) was invented by their adversaries to dismiss the sanctity of their spiritual leader St. ↗Ewosṭatewos.

Nagärä Maryam s. vol. V

Nägärä Muse

N.M. (**ነገረ: ሙሴ**, 'The Colloquy of Moses [with God on Mount Sinai]', sometimes called *Gädlä Muse*) is the Ethiopic title of the apocryphon known as the *Colloquy of Moses with God on Mount Sinai*.

An English translation of the Arabic version, based on one ms., has been published by Curzon (1855), but many more mss. exist (s. GrafLit I, 207f.). A Syriac version of the *Colloquy*, with an English translation, was published by Hall (1891). Manuscript evidence shows that the apocryphon (ca. 4,000 words long in translation) originated earlier than the 15th cent.

The *Colloquy* is written in the form of a *Responsa*: Moses asks and God answers. The first part describes God's rewards for those who behave well – read prayers, give alms, take care of orphans etc. (cp. ↗*Kidan*) – and punishment for those who commit evil. The second part, beginning with God lifting up Mount Sinai and showing Moses the whole world, is devoted to the discussion of the nature of God.

N.M. was translated into Gəᶜəz from an Arabic *Vorlage*. In Ethiopic tradition, two versions exist; Christian and ↗Betä Ǝsraʾel. Differences between them are, however, minor. The Christian Gəᶜəz text, translated presumably by the 17th-cent. *abunä* ↗Krəstodolu, was published with a German translation by Goldschmidt (1897). A new German translation was made by Duensing (1958). Zuurmond (in StudAeth) published a general introduction to the *Colloquy*, with a partial English translation of the Gəᶜəz, Arabic and Syriac versions in three synoptic columns. A French translation of the Betä Ǝsraʾel text with a short introduction appeared in Kaplan (1990). An edition of the Betä Ǝsraʾel text does not exist but several manuscripts containing it are known: Paris BN d'Abbadie 232 (19th cent.), Tel Aviv Faitlovich nos. 8 and 14 (18th cent.), and at least one more in private hands.

Compared with the Arabic and the Syriac, the Ethiopic version is about one fifth shorter. A large addition in the Arabic and Syriac versions is of obvious Christian character. Numerous allusions to the ↗New Testament in the Ethiopic version make it likely that the text was originally introduced within the Christian context and was later adapted by the Betä Ǝsraʾel tradition. However, the ethics and theology of the Ethiopic version of the N.M. fit in with ↗Judaism and ↗Islam as well.

Texts with similar structure and contents exist in the traditions of Muslims of Mozambique (the known text in Swahili possibly originating in Kenya) and of 16th-cent. Spain (in Spanish in Arabic characters).

Nägarit

N. (Amh., Tgn. **ነጋሪት**, Tgr. **ንጋሪት**, *nəggarät*; Orom. *nagaariita*) is a kettledrum, the name of which is considered to derive from Amh. **ነገረ**, *näggärä*, 'to speak' (Ashenafi Kebede 1995:63; LesCDic 392). Alternatively, it can be related to the Arab. *naqqāra*, which is also a term for kettledrum (cf. BassHist 61, n. 2 [tr.]); a double kettledrum called *naqqara* is known in North Africa, e.g. among the Tuareg of the Sahara.

There appears to be two main types of N. in Ethiopia. One is the large cauldron shaped N. usually made of copper (sometimes gilded), or other metal. The drumhead, having a diameter of up to 92 cm, is struck with softheaded wooden drumsticks (one or two) or mallets. The N. has a head consisting of a stretched membrane hide mounted on a hoop held in place by a ring (counterhoop); through the ring pass threaded screws or rods that allow one to alter the pitch by adjusting the skin's tension. Sometimes an L-shaped turnkey is fitted to the screw for loosening or tightening the stretched membrane on the head. The N. were placed across the backs of mules with the players walking alongside striking them with mallets (Tesfaye Lemma 1975:28).

The N. of the other type are bowl-shaped, usually smaller and made from carved wood or hollowed tree trunks although the body can also be

made of clay, leather, or metal. The bowl-shape has a diameter ranging from 15 to 25 cm. The drum head uses prepared animal skin (or parchment) such as ox stretched over the head, but the skin can cover the entire instrument and be sewn together with cross cords tied round the middle of the lacing to increase its tension and alter its pitch (Marcuse 1975:357). These N. were played with beaters/sticks by men riding on horseback, where N. were placed at the player's waist and secured by a belt or harness (Tesfaye Lemma 1975:28).

The N. of both types utilize a basic rounded curved (bowl or cauldron) shape and have the capacity to have their drum heads tuned. The stretched head is attached to the top of the head or in the case of the second type, covers the head or the entire body. Size and materials determine the overall sound of the N.

Nägarit in Harär, announcing the arrival of Ḫaylä Śəllase I, 1934; from the Wochenschau film of Martin Rikli

The N. of the ↗Betä Ǝsraʾel, structurally identical to the Christian N., was a double-headed drum struck directly with the hands while the player was standing. Together with a small bell called ↗*qaṭ̌əl*, it could accompany religious service chanting (Shelemay 1986:76f., 184f.).

Historically, N. in Ethiopia belonged to the insignia of royalty and symbols of political power, alongside with ↗*mäläkät* and ↗*əmbilta* (also, the instrument known as *qända* – a small drum held under the arm and beaten with the hand – has been included as one of the royal insignia). N. accompanied every imperial proclamation or announcement and were often left standing near the throne. When a new emperor ascended to the throne, and when proclamations of national concern (↗*ʿAwağ*) were made, the N., together with the *mäläkät* and the *əmbilta*, would summon the people and proclaim the news. N. also heralded the approach of royalty or a person invested with political authority (like provincial governors). The kings and rulers sometimes donated their N. to churches and monasteries, as in the case of ↗crowns (CRHist 79 [text]). Finally, N. were war drums, used to summon the troops and to encourage them during combat; they were considered symbols of military honour (s., e.g. GueCopMen 28, n. 1, 431, 436, 444).

N.'s shape, size and material could often indicate the rank of their possessor. The N. belonging to princes had silver shells, and those of high officials were made of copper, whereas the N. of lesser persons were made of wood (Powne 1968:13f.). In the Ethiopian royal chronicles, a drum called ድብ፡ አንበሳ, *dəbb anbäsa*, obviously a kind of N. (s. Bairu Tafla in PICES 7, 366; DTWDic 327), is frequently mentioned as the emperor's largest drum (lit. 'bear-lion', PerrZarY 45, 61; CRHist 79, 130, 135 [text]; PerChron vol. 1, 332 [text]; cp. *dəbb wäʾanbäsa*, 'bear and lion', in LudHist II, 14, 18; Ludolphus 1682:218; cp. also HabKön 117, where it is derived from *dibbe*, a term for drum among many southern Ethiopian peoples; s. also LesCDic 119). Alongside with the *dəbb anbäsa*, a blown instrument called *məsr qana* or *nəsr qana* (probably a kind of *mäläkät* or *əmbilta*, cf. LesCDic 403; DTWDic 823) was usually played. The royal silver N. played a major role on occasions of state in the Gondärine kingdom in the early 17th cent. Thus, James ↗Bruce describes "... two kettle-drums of large size placed one on each side of the outer gate of the king's house [i.e. palace]", called "the lion and the lamb". "The lion is beat at the proclamations which regard war, attainders of conspiracies and rebellions, promotions to supreme commands... The lamb is heard only on beneficent, pacific occasions, of gifts from the crown, of general amnesties, of private pardons, and reversals of penal ordinances". The drum called the lamb was "...

of beaten silver; the Abyssinians say, that this metal alone is capable of conveying the sweet sound contained in a proclamation of peace" (BruNile vol. 1, 602).

Generally, the Ethiopian ruler gave a N. to a newly appointed governor or a tribal chief confirmed by him. Thus, after *aṣe* ↗Iyasu II granted Həbtes, the head of the ↗Ḥabab in Northern Eritrea, the title of *käntebay* (s. ↗*Käntiba*) and presented him with an N. and other insignia of this rank, N. came to be a symbol of the *käntebay*'s power, and its possession an essential element in the struggle for the title (d'Avray 1996:50f., 2000:19). Likewise, N. or similar drums were symbols of the king's power among the southern peoples, e.g., *nägara* among Šeko (VSAe III, 46). N. (one of silver and another of copper) were among the symbols of power of the king of ↗Käfa (s. GueCopMen 463). The Oromo and Somali also used N., and among them it also served as a symbol of power (Paulitschke 1893:148). In the ↗Təgre-speaking tribe of ↗Mänsaᶜ, N. could be used to accompany important announcements such as the declaration of a slave becoming a free man (s. Höfner 1952:658; Rodén 1913:101).

Today, the instrument's function is primarily ceremonial (Ashenafi Kebede 1995:63).

Cynthia Tse Kimberlin

Nägarit Gazeṭa

The N.G. (**ነጋሪት፡ ጋዜጣ**, 'Gazette of the ↗*nägarit*') was the official journal of the Ethiopian government from 1942 to 1974. Previously, during the rules of *aṣe* Mənilək II and *ras* Täfäri Mäkʷännən (↗Ḫaylä Śəllase I), various imperial edicts were sporadically published (↗*Bərhanənna Sälam*), and some edicts were stuck to the gates of the municipality or made known to the people through the governors of various districts (cp. ↗ᶜ*Awäg*).

The N.G. published the official laws of the government in Amharic and English. The first issue appeared on 21 *Mäggabit* 1934 A.M. [30 March 1942 A.D.] and ratified its authority, containing a provision that no law or by-law would be valid or come into force until it was published in the N.G. The new publication, required by the proclamation to be monthly, was not without problems: some regulations having the force of law never appeared in it (cp. ↗Customary law), and many laws did not appear in print until long after their promulgation. Nevertheless, the N.G. was an important step forward in the codification of Ethiopian laws according to modern practice. Having government actions officially proclaimed and immediately verifiable in print was a significant change for a monarchy where much political information was secretive or by word of mouth.

From 1942 to 1974, all major legislation, proclamations, appointments, and legal notices of the Imperial Ethiopian Government were published in the N.G. Among the first laws appearing in the publication were those setting out the pow-

ers and responsibilities of the various ministers; a law creating and defining the provincial administration of Ethiopia; the establishment of the State Bank of Ethiopia; and "The Slavery (Abolition) Proclamation" of 21 *Näḥase* 1934 A.M. [27 August 1942 A.D.] that made it an offence punishable either with imprisonment or death for any person to deal with, or to transport a slave, or to prevent one from asserting his freedom.

The N.G. chronicled the development of modern, post-restoration institutions in Ethiopia in their founding proclamations: e.g., the Administration of Justice Proclamation setting up the court system; the Imperial Army Proclamation; the organization of the Defence Ministry and the Imperial Board of Telecommunications of Ethiopia; the setting up of the Ethiopian Airlines Corporation, the Addis Ababa Chamber of Commerce, and the Ethiopian Red Cross Society. Among public policies announced in the N.G. were: the "Currency and Legal Tender Proclamation" introducing a new Ethiopian currency in place of the East African Shilling and ↗Maria Theresia Thaler (the N.G. of 8 *Ḥamle* 1937 A.M. [15 July 1945 A.D.]); the first revised customs schedule in 1943; and the first (1944–45), and succeeding national budgets. Changes in government structure such as the ↗Ethiopian–Eritrean Federation of 1952 were also made public by "The Federal Legislation" printed in N.G.

With the restoration of Parliament in 1942, laws passed by both houses and approved by the Emperor were published in the N.G. preceded by the preamble: "Conquering Lion of the Tribe of Judah, Haile Selassie I, Elect of God, Emperor of Ethiopia. In accordance with Article 34 of Our Constitution We approve the resolutions of Our Senate and the Chamber of Deputies and We proclaim as follows: (...)" The end of the proclamation then was signed by the Minister of the Pen (*↗Säḥafe təʾəzaz*). All bylaws were published above the signature of the Minister concerned.

The Minister of the Pen was empowered to publish the N.G. by the Ministers' Order of 1943. When ↗Aklilu Habtäwäld became deputy Prime Minister as well as Minister of Pen, he used his supervision of the N.G. to advance his own purposes. For example, in 1958, instead of going through the Council of Ministers, Aklilu used the N.G. to announce an increase in the powers of his brother Mäkʷännən Habtäwäld – to the surprise of the other ministers concerned.

The Government of the Federal Republic of Ethiopia recovered the name of the N.G. for its official journal, the *Federal Nägarit Gazeṭa* (1st issue in August 1995). Ethiopian regions may have their own official journals (e.g., *Nägarit Gazeṭa Təgray).* In independent Eritrea, the function of the N.G. is carried out by the *Gazeṭa Awağat Erətra.*

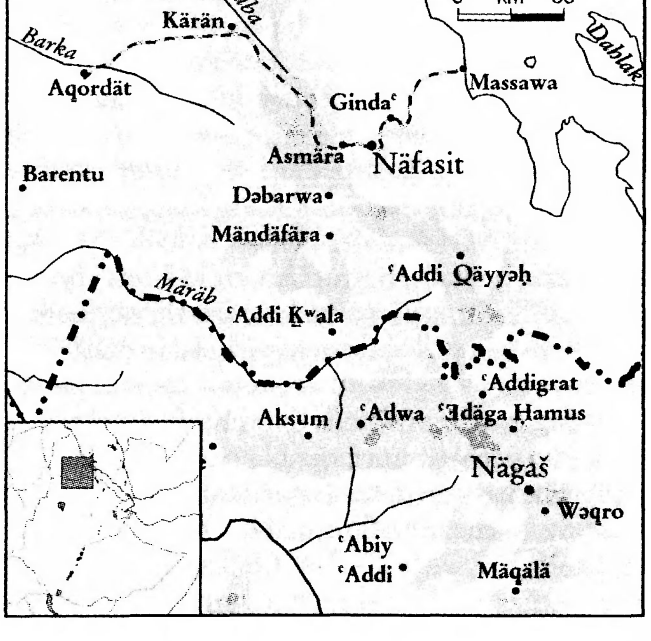
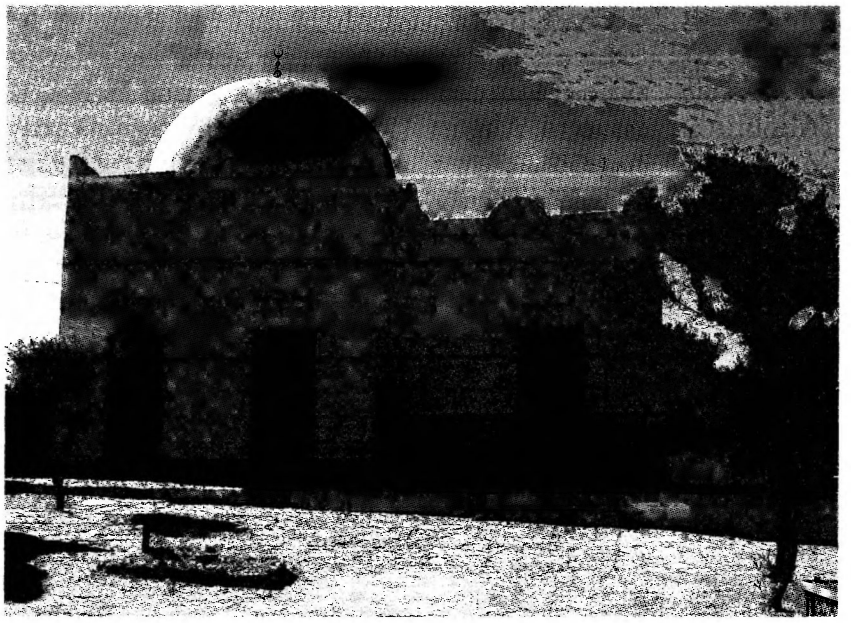
Nägaš

N. (ናጋሽ, 13° 53' N, 39° 36' E) is a small village lying along the main Mäqälä–ᶜAddigrat road ca. 10 km north from ↗Wəqro, in a mountain pass dominating the Gunfäl valley (s. Guida 300) in historical ↗Ǝndärta.

The village has ca. 1,500 inhabitants, half of them Muslim and half Christian. There is a local tradition of the Italian presence in N.; most probably it was used as a camp during the military campaign. On top of the N. pass, a rock still shows an Italian inscription "Passo Negasc anno XIV E.F." ('N. pass. 14th year of the Fascist Era [= 1936]').

N. is perhaps the most important holy place (*↗Zāwiya*) for Muslims not only of Ethiopia, but also of the entire ↗Horn of Africa, as it hosts the shrine of the *↗Nağāšī* and the tombs of twelve of ↗Muḥammad's companions (*ṣaḥāba* or *aṣḥāb*) in the first *↗hiğra* of 615. The asylum





Mausoleum of the *Nağāšī* at Nägaš; photo 2006, courtesy of Alessandro Gori

that the righteous king of al-Ḥabaša (i.e. Ethiopia; s. ↗Abyssinia), in whose kingdom "no one suffers injustice" – as underscored in *as-Sīra an-nabawīya*, granted the Muslim refugees led by ↗Ğaᶜfar b. Abī Ṭālib, and the subsequent conversion of the king to ↗Islam is the most revered tradition north-east African Muslims have about their origins (Ahmäd Ahmädin n.d.; Muḥammäd Šakir 1995/96, Muḥammäd Ṭoyyəb 1998/99; Sayyid b. Muḥammad Ṣādiq 2001:91–135). This tradition gives Muslims of the Horn the confirmation of the antiquity of their presence *vis à vis* the Christian state and, simultaneously, it allows for a certain prestige in the eyes of their co-religionists in the Arabian Peninsula (↗Arabia), as it makes their home the second region in the world to have been touched by the Islamic message.

The existence of this holy site is mentioned for the first time in the ↗*Futūḥ al-Ḥabaša. Imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, during his conquest of Təgray in 1533, in pursuit of the *šum ᶜagame* (the Ethiopian governor of ↗ᶜAgamä), passed by the tomb of Aḥmad an-Nağāšī (which was also the name he had given to his child born shortly before). The troops wanted to visit the shrine but the *imām* compelled them to proceed to meet their enemy, promising that they would come back the next day for the *ziyāra* (↗Pilgrimage) – a promise that was perhaps not possible to keep (BassHist 318). The passage in the *Futūḥ* is also important as it attests to the use of the name Aḥmad attributed to *an-Nağāšī*, instead of al-↗Aṣḥam [or Aṣḥama] b. al-Abğar, which is the name currently preserved in Arabic sources. As Basset remarks (BassHist 318 n. 7), the name Aḥmad has been glossed, in the margin of the *Futūḥ* manuscripts, with *al-maᶜrūf Aṣḥama an-Nağāšī* ('the famous Aṣḥama an-Nağāšī'): this comment seems to prove that Aḥmad was not the universally known name of the *Nağāšī*, and one can surmise that this name originates from a local tradition. Ahmäd Ahmädin (n.d.:3) says that, in one of Muḥammad's letters, the *Nağāšī* was called *wändəmme Ahmäd* ('my brother Aḥmad'), but this seems rather to be a corrupted reference to the incipit of the first letter sent by the Prophet to Aṣḥama, *Aḥmadu ilayka Allāh* ('I commend God to you').

The holy place is presently contained in a wide compound with two green domed buildings. Both are recent, no trace of older remnants is found. The bigger building hosts the shrine of the *Nağāšī*, the smaller one that of the *ṣaḥābī* ᶜUday b. Naḍla (whose name is variously spelled in the sources), the first Muslim refugee to die in Ethiopia.

In the yard between and in front of the two buildings, other scattered ground tombs are those of the companions of the Prophet. An inscription on the left side of the main building, dated 1418 H. [1997/98 A.D.], gives the name of ᶜAbdarraḥmān al-Ğabartī as that of the person buried in a covered tomb.

Outside the holy graveyard, a big ↗mosque has been built with the financial support of the Ethio-Yemeni-Saudi millionaire Muḥammad Ḥusayn al-ᶜAmūdī.

The *ziyārat an-Nağāšī* is on the ᶜ*Āšūrāʾ* day (10 *Muḥarram*), when thousands of pilgrims come to show their reverence to the king from all over the Horn of Africa and the Sudan.

The village also has another Islamic holy place: the tomb of *šarīf* ᶜAbdī (or ᶜAmday), a recently built or re-built anonymous shrine on the right side of the main road from Wəqro, some 300 m from the *Nağāšī* area. Every Thursday night a ceremony is performed in honour of the holy man whose epithet *šarīf* points to a noble descendant of the Prophet, but apparently no periodical *ziyāra* is performed for him.

There are two churches inside the village of N., one dedicated to the Lord and one (under con-

struction in 2006) to *abunä* Täklä Haymanot. Some 5 km outside the village, to the left of the road to ᶜAddigrat, on top of a hill, the monastery of Amanuʾel Maᶜagʷä dominates the valley. Some 2 km outside the village, the church of St. Mary stands on a slope, to the left of a bend on the road descending to Wəqro. Islamic sources (Sayyid b. Muḥammad Ṣādiq 2001:134) mention that this church was built on the site of the grave of the wife of the *Nağāšī*, who died as soon as she heard about her husband's conversion to Islam.

Alessandro Gori

Nägaš Bäzzabbəh

Däğğazmač N.B. (**ንጋሽ፡ በዛብህ**, b. 1908, d. 1964, Nähase) was a ↗resistance fighter and political figure. His grandfather was *ras* ↗Bäzzabbəh Täklä Haymanot. During the ↗Italian war 1935–36, N.B. fought against the Italians with other Goğğame patriots. Some saw him as a weak leader who failed to control his sub-chiefs. When ↗Ḫaylä Śəllase I and his British allies selected Goğğam as the region to begin an offensive against the Italians (1940), N.B. joined the united front that worked for Ḫaylä Śəllase's restoration.

After the Emperor's return to power, N.B. became vice minister in the Prime Minister's office and then President of the Senate (1942–43). In 1951, he became involved in an unsuccessful conspiracy to assassinate Ḫaylä Śəllase. Some of the plotters hoped to enthrone N.B. while others advocated the creation of a republic under *ras* ↗Əmməru Ḫaylä Śəllase, who at the time had been Ethiopia's ambassador to Washington D.C. and had nothing to do with the attempted *coup*. The conspiracy was uncovered and N.B. was arrested, tried by the Emperor's Special Court and condemned to death. He subsequently received a pardon from Ḫaylä Śəllase and lived in exile in Ǧimma.

Thomas P. Ofcansky

Nağāšī

N. (Arab. النجاشي, always with the definite article) is a loanword borrowed by Arabic from ↗Gəᶜəz *nägaśi* (cp. also the borrowing into ↗Epigraphic South Arabian, *ngs²y*, which stood for 'the king [of Aksum]'; s. Beeston et al. 1983:93, s.v. *ngs²*). For the detailed discussion of the term s. ↗*Nəguś*.

In Islamic texts, N. is specifically used for the king of Aksum at the time of the first ↗*hiğra* of ca. 615, indeed ↗Aṣḥam[a] b. Abğar (i.e. b. *al-Ḥataza, 'son of [Ǝllä] ↗Ḥataz'?) or ↗Ǝllä Ṣäḥam (r. ca. 603–23; cp. SerHist 185; Hartmann 1895; cp. ↗Armaḥ). The most detailed information about this N. is found in the biography of the Prophet Muḥammad (*Sīra*) by Ibn Isḥāq (d. ca. 770 A.D.), revised and completed by ↗Ibn Hišām (tr. by Guillaume 1955).

According to the *Sīra*, the N. received the newly converted Muslims hospitably, and refused to expel them, as the ↗Qurayš wanted. At an audience, he questioned the Muslims as to what this religion, for which they had forsaken their own people without embracing Christianity or any other religion, was. In his answer, ↗Ǧaᶜfar b. Abī Ṭālib praised Muḥammad's achievements and underlined that Muslims worship God alone without associating anything with Him (referring to polytheism, but also to the ↗Trinity, cp. Qurʾān, *sūra* 112). By an evident *vaticinium post factum*, Ǧaᶜfar, in order to show that Muḥammad had received a divine revelation, recited a few verses from Qurʾān's *sūra* 19 (alluding to the same tradition as Lk 1), and the N. and his bishops were deeply moved. But ᶜAmr b. al-ᶜĀṣ, one of the two messengers from Mecca, told the N. in private that the Muslims consider Jesus, son of Mary, as a creature (i.e. not as the son of God). During another public audience, Ǧaᶜfar said that Jesus is the slave of God, His apostle, His spirit, and His word

which He cast into Mary. The N. took a stick and said that Jesus does not exceed what Ǧaᶜfar had said by the length of a stick, meaning that there is only a small difference between ↗Islam and ↗Christianity as far as Jesus is concerned. The Abyssinian generals were not happy about this, but the N. said that the Muslims would be safe in his country.

Ibn Isḥāq further relates about a rebellion against the N., which he suppressed, fortunately for the Muslims. There is also an account as to how the N. became king: his father, once king, was killed, and the N. had been sold as a slave by his uncle but had later regained his throne.

Ibn Isḥāq also narrates that the Abyssinians blamed the N. for having betrayed his religion and therefore revolted against him; the N. then had ships prepared for Ǧaᶜfar and his companions to flee in case he would be defeated. It did not happen, since the N. was able to appease his subjects: putting his hand upon his breast, he publicly testified that Jesus is the Son of God. By that gesture of confirmation he was referring, however, to a "paper" he had put in his gown on which he had written that Jesus, the son of Mary, was no more than God's slave, apostle etc. His trick was understood by no one but by the Muslims. The Prophet was informed about this; when the N. died, the Prophet prayed that his sins might be forgiven.

The Arab historian aṭ-↗Ṭabarī (d. 923, s. Ibn Isḥāq 1955:657) gives the text of two letters allegedly exchanged between the Prophet and N. al-Aṣḥam b. Abǧar (cp. Caetani 1905:736; Montgomery Watt 1956:345f.; Muhammad Hamidullah 1935, vol. 1, 205ff.). In the incipit of the letters, the N. apparently uses Islamic formulas that let the reader think that he was converted to Islam. The contents of the letters are almost identical with those of the conversation of Ǧaᶜfar with the N. according to the *Sīra*. One subsequently reads that the N. sent his son Arhā (i.e. Armaḥ) to the Prophet, with the significant remark that he had control only over himself (i.e. not over his subjects, at least as far as Islam is concerned), and that he will come to the Prophet if the latter wishes him to do so. The historian was further told that the N. had sent 60 Abyssinians with his son to the Prophet, but that they all had perished when crossing the sea.

The N. represented at Quṣayr ᶜAmra (Jordan, before 711/12), together with the Byzantine emperor and the Persian emperor Chosroes, is traditionally seen as an enemy of Islam, more recently however as a respected ruler – probably Ǝllä Ṣäḥam – to whom the Prophet also had sent an embassy in 628 (Ettinghausen 1977:39ff.; ErlEth 193 n. 30; s, now Di Branco 2007).

Ibn Isḥāq's implicit statement that the N. became Muslim has been made quite explicit by Muslim authors after him. Yet, no independent source seems to be available to confirm this (cp. Hussein Ahmad 1992:21f.; Cuoq 1981:35; ErlEth 16ff.).

Emeri van Donzel

Nägaśi Krəstos

Abeto N.K. (ነጋሢ ክርስቶስ, also Nägaśe Krəstos, d. ca. 1703 or 1705, Gondär) was the ruler of ↗Šäwa from ca. 1682 to 1703. He was thus a contemporary of *aṣe* ↗Iyasu I.

Most of the scanty information on N.K. comes from 19th–early 20th-cent. sources. Some indicate that he was related to the ↗Solomonic dynasty through his mother *wäyzäro* Sänbält, who was of royal descent, while his father was a rich landowner from Anga(n)ča (AWTarik 67f.; cp. LevWax 31), in the district Gera(mədər) of ↗Mänz. Some state that his paternal line ascends to *aṣe* Ləbnä Dəngəl's son *abeto* ↗Yaᶜəqob, via

N.K.'s father *ras* Faris (HarAeth vol. 3, 7; CecZeila vol. 1, 235ff.), or via Səgwä Qal, Wärädä Qal and Ləbsä Qal (cp. GueCopMen 56; AWTarik 67f.; TSTarik IV, 431; s. also LevWax 289 n. 24). Still other sources leave the question of N.K.'s Solomonic link open (cp. BTafA 499; Taddäsä Zäwälde 1955/56:15ff.; LevWax 289, n. 24). N.K. is traditionally considered the founder of the Šäwan branch of the Solomonids, from which both *aṣe* ↗Mənilək II and ↗Ḫaylä Śəllase I were descended (TSTarik IV, 431; LevWax 32).

N.K. succeeded in uniting some districts of the Amhara, which, fragmented after the 16th-cent. Muslim wars, had found themselves surrounded by large ↗Oromo enclaves and at odds with each other (AbPrince 144f.). He thus started the Šäwan expansion.

As a young man N.K. received high recognition for the valour proved in many battles. His military success brought him many followers who helped him to accumulate possessions. N.K. established his base in Angača where he founded the church of Kidanä Məḥrät (s. Levine in PICES 2, 209). He started his campaigns in the regions settled by the Oromo, south of Mänz, where he achieved a victory over ↗Arsi-Oromo and set the cornerstone for the town of ↗Ayne in ca. 1683 (BTafA 501f.; AWTarik 73; CecZeila vol. 1, 237). N.K. also fought ↗Wälloand ↗Yäğğu-Oromo. Apparently on behalf of *aṣe* ↗Iyasu I and in alliance with the ↗*wälasma* he waged war on the Oromo who were trying to penetrate ↗Yəfat (BTafA 501f.; AbPrince 146). N.K. also led his army to such districts as Däbdäbo, Mängəst, ↗Mafud, Asändabe and ↗Doqaqit (CecZeila vol. 1, 237), and established settlements and churches in the places he took over from the Oromo (BTafA 503ff.). Unable to prevent the encroachment of the Oromo in ↗Tägulät, he chose ↗Däbrä Bərhan for his capital. There, N.K. is said to have re-established the old palace of *aṣe* ↗Zärʾa Yaᶜəqob (PankHist I, 185).

By the end of the 17th cent. N.K. had emerged as the most important Amhara chief of the area. He proclaimed himself ruler of Šäwa, overpowering all those who disputed this claim (including, according to some traditions, Gera, one of the founders of Mänz, s. AWTarik 71; Levine in PICES 2, 208). Around 1700 N.K. arrived at ↗Gondär to offer tribute to *aṣe* Iyasu I and receive the official recognition of his rule from the Emperor (whose Chronicle, however, does not mention this episode). Traditions differ as to what happened next. N.K. is said to have been rewarded by Iyasu I with twelve ↗*nägarit*s and a seal ("*mahtam*", s. CecZeila vol. 1, 238 [describing, in fact, a ↗*matäb*, not seal]; HarAeth vol. 3, 8; BTafA 505; AWTarik 73). It seems that N.K., however, never returned to Šäwa, but rather died in Gondär in 1703, probably of smallpox. He is said to have been buried with great honours at Gondär, at the church Fit Abbo (BTafA 505). The site of his camp in Gondär is still called Nägaśi Meda.

N.K. fathered six children, Akawa, Dana, Səbəste (↗Səbəstyanos), Šänko, Yonaʾel and Wärqitu (AWTarik 71). After his death, an internal fight broke out. Səbəste eventually prevailed, to become later the first Šäwan ↗*märəd azmač* (BTafA 507; LevWax 32f.; EgeClass 22, 25).

Sophia Dege

Nägga Tägäññ

Major General N.T. (**ነጋ፡ ተገኝ**, b. 24 July 1930, Šäme Maryam, Gondär, d. 2002, London) was a military officer. Born to *ato* Tägäññ Yəggäzu and *wäyzäro* Assälläfäčč Bälačč'äw, during the Italian invasion he had to flee into the woods with his parents until the liberation in 1940. Shortly after, his uncle, *qäññazmač* Daññäw Dästa, took him to Addis Abäba and in 1943 he began his primary education at the ↗Mənilək II Elementary School. He then enrolled for two years in the Technical School of Addis Abäba. In 1946, he joined the ↗Imperial Bodyguard Cadet School lead by the Swedish Military Team, graduating in 1949 as a Deputy Lieutenant with distinction.

From 1951–53, N.T. served as Captain for approximately 18 months in Korea, with the Ethiopian ↗Qañňäw contingent under the ↗United

Nations command. Upon return, he studied at the Commercial School of Addis Abäba, earning a Diploma in Commerce. As a Major (1954–59), he was sent to India for further training at Willington Staff College, and completed the Maow Senior Officers Course. In 1960, he joined the ↗Harär Military Academy as an instructor. In 1961–63, he served as a Battalion and Brigade Commander for the eastern region of Ethiopia.

N.T. was involved in several international missions in Nigeria, Congo and Angola on behalf of the ↗Organization of African Unity. In 1971, he was sent to the United Kingdom for further training at the Royal College of Defence Studies. In 1972, he was appointed as the Head of the Third Division in Eastern Ethiopia and in 1973, now Major General, he was appointed governor of Gondär.

At the onset of the 1974 Revolution, N.T. emigrated to the Sudan and with General Iyasu Mängäša and *ras* Mängäša Śəyyum formed the Ethiopian Democratic Union. From 1975 to 1978 he led resistance activities against the *Därg* (↗Provisional Military Administrative Council). He then fell out with his colleagues and withdrew from public positions. From 1989 till his death in 2002, N.T. lived in the United Kingdom. Whilst there, he was engaged in research and consultation on Ethiopian politics and military development. He was one of the most highly decorated military figures in Ethiopian military history, receiving numerous promotions and awards, including 22 medals. He was married three times: to Blandina Philip, with whom he had a son, Täkle Nägga; to Princess Ḫirut Dästa, daughter of *ras* ↗Dästa Damṭäw and Princess ↗Tänañña Wärq Ḫaylä Śəllase; and to *wäyzäro* Nəgəśt Ḫayle, who bore him Rahel and Ḫəbrät Nägga.

Fentahun Tiruneh

Näggadras

The word N. (ነጋድራስ, lit. 'head of the merchants', from Amh. *näggade*, 'merchant, trader', and ↗*ras*) was originally designated to the leaders of long-distance trading caravans which carried trading goods throughout Ethiopia and to the coast. The use of the office of N. as a primary means of commerce control and as a means to unify Ethiopia seems to have begun in the period of the ↗Gondärine kingdom and later expanded and developed in ↗Addis Abäba, the new capital, and throughout Ethiopia.

By the 19th and 20th cent., it was the N. who specifically controlled and organized customs collection throughout most of the country (cp. ↗*Kella*). They were appointed over local and regional markets (Amh. ገበያ, *gäbäya*) by a local aristocrat or the emperor to control ↗trade. Often they also judged local commercial cases at the market. *Aṣe* ↗Mənilək II was the first emperor who successfully began to control the expanding commercial life of the Empire through his network of N. *Ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I) expanded the N.'s role and made them more efficient at extracting revenue. The most famous N. of Ethiopia was N. ↗Ḫaylä Giyorgis, who became the first N. of Addis Abäba and the person to whom *aṣe* Mənilək II delegated most of the responsibility for dealing with foreigners. Thus, it was logical in 1907 to make him the first Minister of Commerce and Foreign Affairs – a position which also had responsibility for customs. Ḫaylä Giyorgis exploited these positions to become one of the richest men in the whole of Ethiopia, with respect to liquid assets, and also during *ləğ* ↗Iyasu's reign to become Ethiopia's first Prime Minister. The increasing importance of the office of the N. coincided with the growth of Ethiopia's small middle class. The N.'s efflorescence was from the late 19th cent. to the ↗Italian war 1935–36.

A number of leading Ethiopian intellectuals held the title of N., such as ↗Gäbrä Ḫəywät Baykädañ and ↗Afäwärq Gäbrä Iyäsus. Both were appointed over ↗Dərre Dawa which, after Addis Abäba, was the most lucrative position for a N. to hold. Both had control over and organized customs revenue which brought in the most income. Other significant N. during Mənilək's and Ḫaylä Śəllase's reign were at ↗Gambella, ↗Gondär, ↗Harär, ↗Mätämma and ↗Wälläga. After 1918 the role of ↗*käntiba* of Addis Abäba seems to have absorbed that of the N. of Addis

Abäba. Although the title remained in existence after the Liberation of 1941, N. were no longer as powerful and influential as they had been during the latter part of Mənilək's and the beginning of Ḫaylä Śəllase's reign.

Peter Garretson

Naggiar, Joseph Paul

N. (born Yūsuf an-Naǧǧār; b. 1854, Cairo, d. January 1923, Palma de Mallorca) was a French diplomat. He was born into an Egyptian Christian family (the an-Naǧǧār were dragomans at the French Consulate in Alexandria). In 1869, N. began to work at the French consulate in Cairo. In 1884, he was naturalized French. He married Cécile Maksud, a Christian Syrian, with whom he fathered four children.

In 1887, N. was named to replace Lucien Labosse in the French consulate in Ismailia, Egypt, when Labosse left for a mission to ↗Zayla^{c}. After some years of duty in Greece, in 1906 he was appointed to diplomatic service in ↗Harär. He spent much time in ↗Dərre Dawa assisting in the works by the Compagnie de Chemin de fer franco-éthiopien (↗Railway). From December 1908 to June 1909 he was also head of the provisional administration of the Chemin de fer in Ethiopia. On two occasions he had to travel to France: in 1908, to receive the Légion d'Honneur and in 1911 for a health cure.

N.'s relations with the Ethiopian authorities, and with *ras* Täfäri Mäkʷännən (↗Ḫaylä Śəllase I) in particular, were excellent. In agreement with Antony ↗Kłobukowski, he reorganized the French diplomatic services in Ethiopia, especially in Harär: transformation of the vice-consulate into a consulate etc. In 1911 he left Ethiopia for Zanzibar, where he stayed until 1913. In 1916, though retired, he administered the French consulates in Syva and, from 1919 until his death, in Palma de Mallorca.

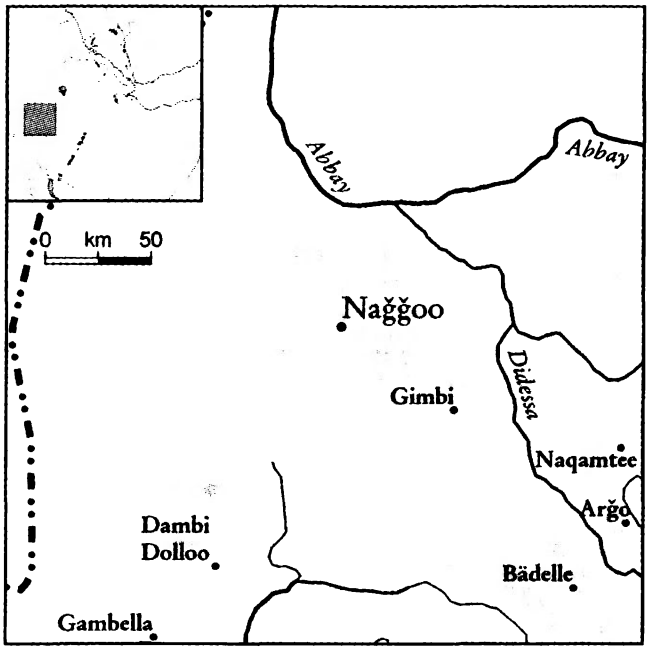
Naǧǧoo

N. (Orom. sp.: Najjoo; Amh.: ነጆ) is an important commercial town in ↗Wälläga. Its location at the historical crossroads between the Sudan, Wänbära, ↗Qälləm and ↗Illubabor contributed significantly to N.'s economic development.

In the 17th cent., a group of Sibuu Oromo under Naǧǧoo Muraram took control of the area, which was later named after the *gadaa* leader. Other Oromo clans were gradually incorporated by the N. chiefs and the name extended to the surrounding area.

Similar to Odaa Nabee and Odaa Bisil, N. served as a traditional centre for the ↗*buttaa* ceremony, ↗*čaffee* assembly, and promulgation of laws and conflict resolutions before it developed into a modern town. A wide plain at the top of the hill to the south-west of present-day N. was chosen by the Sibuu at Tulluu Yaaʾi ('Mountain of assembly') for the traditional assembly which served all the Oromo living in the vast territory west of the Dabbus river until the 1950s.

The site gained economic importance as people began to frequent it for *gadaa* rituals. On that occasion, they also bartered their produce and exchanged ideas. The most important trade goods were ↗gold and ↗iron items. Locally produced iron tools were considered of particularly high quality and attracted many traders from outside, including Beni Šangul and Goǧǧam. Eventually trade routes assumed a greater importance throughout the region, and the settlement grew into a town. Traders from the Sudan, Goǧǧam, Šäwa, Illubabor (Gore) and other places frequented N. market at Minyaʾa. It was this prosperity, and particularly gold, which might have instigated *mootii* ↗Moroda Bakaree of Leeqaa Naqamtee to occupy the region in the late 1880s.



The gold deposit at Kattaa Qammi near N. was not only coveted by the Leeqaa rulers but also by *aṣe* Mənilək II, who sent Alfred ↗Ilg in 1898 to explore N. for gold. In the early 20th cent., N. was described as the principal market centre, exporting, according to local engineers, £ 80,000 gold a year, with the tribute to the Emperor constituting up to one half of this quantity (Weld Blundell 1906:544). The locally made gold rings enjoyed a regional renown; travellers compared them with those of the monuments of Senusret Usitersen and Thutmosis (ibid. 544f.).

At the beginning of the 19th cent., the ↗Mahdists attempted to take control over the prosperous area but were defeated at the battle of Guutee Dilii near N. in 1888. Subsequently, the victorious Bakaree family made N. the administrative centre for Leeqaa Naqamtee. Moroda Bakaree's son Kumsaa (later ↗Gäbrä Ǝgziʾabəḥer), who took office in 1889, had his *masaraa* ('palace') built at N. Court and ecclesiastic officials were given land to build houses at N. The market place was moved from Minyaʾa a little to the south of the palace. As the market grew, they transferred it again to the centre of the town where it is still situated today. N. played an important role not only as a residence of governors but also as a second capital of Wälläga after Naqamtee (cp. ZerÉth 397).

In the early 20th cent., Protestant missions spread in the area (cp. ↗Nasiisee Liiban).

In 1982, N. had a total population of 6,904.

Naǧrān

N. (Arab. نجران, Gəʿəz ናግራን, Nagran), already mentioned in Old Sabaic inscriptions of the 7th cent. B.C. as NGRN (cp. von Wissmann 1964), also known as RGMTM (cp. Müller 1974:186), at present a semi-autonomous province of Saudi Arabia along the border with Yemen, is the historical name of a group of oases at the northwestern end of the ancient South Arabian kingdom of ↗Ḥimyar. Located at the intersection of North and South Arabian civilizations, in later times N. was probably one of the most ancient outposts of Christian missionary activity in the area (↗Arabia), as indicated by the *Gädlä ↗Azqir* (originally a Syriac text, according to Conti Rossini 1910, it has survived only in an Arabic-based Gəʿəz version). This text focuses on the ↗martyrdom in N. of a Christian priest by order of king Šaraḥbiʾil Yakkuf, instigated by the local Jewish community, during the reign of the Byzantine emperor Anastasius I, i.e. in 490–518 (according to Bowersock 2004:269ff.), or some decades earlier (ca. 455–75, if the South Arabian king is to be identified with that of epigraphic sources, cp. EAE vol. 1, 421f.).

Already a battle-field during early confrontations between Sabaeans and Aksumites in the first half of the 3rd cent. A.D., N. was directly controlled by an Aksumite prefect (ʿQB, not a Gəʿəz term) named S¹BLQᵐ in Epigraphic South Arabian evidence (cp. Robin in PICES 8, 150ff.) ca. 240/250. The main historical event of relevance to Ethiopian history connected with N. is the persecution of Christians (including Aksumite troops in the capital Ẓafār) during the first decades of the 6th cent. (dates vary from 518 to 523, and previous persecutions are likely to have taken place) by order of the Jewish king ↗Yūsuf Asʾar Yaṯʾar (YWS¹F ʾS¹ʾR YṮʾR in South Arabian ↗inscriptions, Ḏū-Nuwās in Islamic tradition, Masrūq in Syriac sources, Finḥas in Arabic and

Gəᶜəz hagiographical texts, Δουναάς and similar forms in Greek). The dramatic siege and slaughter of the inhabitants of N. was the climax of a Jewish anti-Christian persecution that extended to all the areas of the kingdom of Ḥimyar. The exceptional echo of the persecution in a large part of the Christian world caused the Emperor Justin (518–27), through the Patriarch of Alexandria, to formally ask ↗Kaleb/Ǝllä Aṣbəḥa, then king of ↗Aksum, to launch a punitive military expedition against Ḥimyar. The subsequent invasion finally ended with the complete defeat of the Ḥimyarite king and the conquest of South Arabia by the Aksumites, who then governed it for some time. The events can be reconstructed from sources and first-hand reports (a series of South Arabian and Gəᶜəz inscriptions, the *Letter* of ↗Simeon of Beth Arsham), as well as more literary developed texts such as the so-called *Second Letter* (by the same Simeon according to Shahîd 1971) and a number of Byzantine sources. Among the main ones is a Greek hagiographical text, the *Martyrdom of ↗Arethas* (cp. Detoraki 2000), transmitted in Arabic and in Gəᶜəz, where, under the title of *Gädlä Ḫirut*, it is included in the collection *Gädlä sämaᶜətat* (cp. Bausi – Gori 2006), but also translated into Armenian and Georgian; a shorter Gəᶜəz version of the story is also incorporated into the *Gädlä ↗Ṗänṭälewon*. The Martyrdom is named after the most famous martyr of the persecution, the alleged head of N., al-Ḥāriṯ b. Kaᶜb (a name under which the tribe of the Banū Ḥāriṯ can be recognized), and relates the events up to the final defeat of the South Arabian king. So does the *Book of the ↗Ḥimyarites* (cp. Moberg 1924), where some information on the antefacts may be found. A probable echo of the persecution of N. is the mention of the *aṣḥāb al-Uḫdūd*, traditionally identified with the martyrs of N. burnt in a pit, in the Qurᵓān (85,4–9; cp., however, Paret in EI²).

During the Persian (since 570 A.D.) and the subsequent Islamic dominations, N. faced a gradual decadence; its inhabitants were also obliged to move to Iraq, where an-Naǧrānīya, not far from al-Kūfa, was founded, although it seems that part of the population still remained in the historical N. till the 10th cent. at least (cp. Shahîd in EI²).

The enduring memory of the events connected to N. can be appreciated from several echoes in Ethiopian tradition, probably all depending upon the *Gädlä Ḫirut* and/or the *Gädlä Ṗänṭälewon*, namely, in a few texts of the hagiographic cycle of the "Nine Saints" and in the last chapters of the ↗*Kəbrä nägäśt* (chs. 116f.). According to the latter text, while the first son of Kaleb, ↗Gäbrä Mäsqäl, succeeds his father to the throne of Ethiopia, the second one, ↗Ǝsraᵓel, is here called "king of N.", an evident allusion to the Ethiopian sovereignty over South Arabia (cp. BezKebr 169bff. [text] = 136ff. [tr.]). The speech of the Ethiopians who took part in the Council of ↗Florence in 1441, transmitted by Biondo Flavio (↗Italy), also refers to the tradition on the persecution in N. and the subsequent events (cp. Cerulli 1933:350ff.; Bausi – Gori 2006:5f.).

A monastery or a region by the name of N. is traditionally located in Eritrea, "on the northern border, on the Haggär mountains" (cp. Conti Rossini 1938:432), owing likely, as stated by some authors (cp. Caquot 1955:63), to confusion with the South Arabian place where the Jewish anti-Christian persecution of the 6th cent. took place.

Nāʾib

N. (نائب, Arab., Ottoman Turkish 'deputy', 'substitute', Tgn./Amh. ናይብ, *nayb*) was the local official governing the Eritrean coastal and eastern areas from the 17th cent. until mid-19th cent. The local dynasty which held this office, the N. family, originated from the ↗Balaw. The term N. was also used as a title by the office holders (including former ones, cp. the 19th-cent. *nāʾib* ↗Muḥammad Abdarraḥmān).

The N. family was an influential local dynasty of power brokers and regional rulers who were able to effectively control and impose their authority on Təgre and Sāho-speaking societies. The office of N. became *de facto* hereditary in the same family, and from the Italian colonial period onwards it has been used as a family name among descendants, following the example of old families of the nearby port of ↗Massawa, such as Käkkiya (descendants of Ottoman military office holders, the *kaḥya*), or the Sardal, Šawiš, Afandi (names derived from Ottoman and Egyptian military ranks and titles). The two politically most important branches of the N. family were Bet (Bayt) ʿUṯmān and the Bet Ḥasan, tracing their descent to the two sons of ʿAmər b. ʿAlī, himself a descendant of Ḥaməd b. ʿAmər "Qanʿ", who ruled the ↗Sämhar region in the 17th cent. (Abdu Ali Habib 1973:1, 3 and n. 16).

The Balaw group the N. family originates in was formed as the result of a gradual ethno-cultural fusion of Beğa-speaking nomads and Arabs in the eastern Sudan. According to Balaw historical traditions, several families migrated to the coastal strip of Sämhar around the 15th cent. They established a power base at ↗Ḥərgigo and exercized influence around the port of Massawa and in the coast area.

In 1557 ↗Özdemir *paša* occupied Massawa and the coast for the Ottoman empire and established the province of ↗Ḥabeš. Several unsuccessful attempts to gain a foothold on the highland plateau led the Ottomans to withdraw their forces to the coast and abandon their expansionist ambitions in the region. Leaving only a modest force in Massawa, the Ottomans devolved power to a N. The exact date of the transfer of power does not seem clear from available sources: many estimate the date of appointment of the first N. as the late 17th cent.; some have, however, suggested the 16th. The N.'s basic duties included the maintaining of order in Massawa's close hinterlands, providing security on the trading routes connecting the inland with the coast, and thus securing the commercial vitality of the port of Massawa. In return, the Ottoman authorities presented the N. with the paraphernalia symbolizing their power and authority (a silk robe and a golden-handled sword) as well as a monthly payment from the Massawa customs.

The N. were often successful in manoeuvring their way through imperialist and regional politics, whilst carefully preserving the viable power balance in their relations with the rulers of the highland province of ↗Təgray. While promoting their own autonomy and hegemony, highland Ḥabäša rulers engaged in power politics vis-à-vis the N., usually vacillating between various degrees of forceful intimidation and interested/useful collaboration. In the mid-18th cent., e.g., N. ʿUṯmān ʿĀmir (r. 1741–81) received from highland rulers 44 *gʷəlt* lands in exchange for firearms. The lands were located in localities near ʿAddi Qäyyəḥ, to the west of Ḥalay, Ǝmba Dərho, Bäläza, Bet Maḳa (↗Ḥamasen) as well as other lands in ↗Säraye and in the proximity of ʿAdwa. All in all, the conjunction of the state of political instability in the central and northern highlands (↗*Zämänä mäsafənt*), and the decline of Ottoman interest in their province of Ḥabeš provided a fertile ground for the expansion and consolidation of N. dominance in the coastland regions and beyond.

The authority of the N. under Ottoman indirect rule grew significantly in the mid-18th cent.,

and in the second half of the 18th cent. they were the most powerful rulers of the region between the sea and the highlands. The precise geographic limitations of N. influence fluctuated over time. At the peak of their power they extended their authority or influence over the vast majority of Təgre-speaking pastoral and agro-pastoral populations in the regions of Sämhar, Saḥəl, and the northern coasts as far as Aqiq, ca. 300 km north of Massawa. The most important groups (numerically) were the Ḥabab, the Mänsaᶜ, and segments of the Bet Ṭaqʷe (↗Bilin). In various periods the N. also spread their influence over Saho-speaking pastoralists in the foothills of Təgray, Akkälä Guzay and Ḥamasen, of which the ᶜAsawərta (↗Asaorta) and the ↗Ṭarūᶜa were the most significant groups. Other ᶜAfar, Sāho and Təgre-speaking societies, who came in certain periods under N. influence, inhabited the ↗Buri peninsula, the ↗Zula area, and regions on the ᶜAfar coast as south as ↗ᶜƎdd, as well as the ↗Dahlak islands.

The most important sources of power that N. supremacy and hegemony rested upon was their control of an organized semi-military apparatus composed of Turks, Kurds, Arabs, Ottoman soldiers from Bosnia and Albania as well as local coastal, mostly Təgre- and Sāho-speaking militiamen. As in other parts of the Ottoman Empire, these mixed forces gradually developed into relatively powerful military households (e.g. Bet Kaḥya, Bet Sardal, Bet Šawiš, Bet Askär). N. Idrīs ᶜUṯmān (r. 1801–31), e.g., received 1,005 thalers per month from the Massawa customs administration to keep a force of approximately 400 soldiers and provide for his militias. Other sources of N. authority were rooted in their role in the regional political economy. The N. and their associates controlled valuable grazing lands, caravan stations and routes, transportation means, strategic market villages and centres of commercial exchange in Massawa's orbit (e.g. ᶜAylät, ᶜAsus, Gumhot). The N. also collected tribute from those societies coming under their influence and were heavily involved in "tribal" politics by investing chiefs, administering justice and through marriage alliances. They also operated energetically in spreading Islam among mostly Təgre-speaking communities through their alliances with several holy families such as the Bet Šek Maḥmud, the ↗ᶜAd Šek, the ↗ᶜAd Mäᶜallim and the ᶜAd Dərqi.

The N. were able to maintain their autonomy under Ottoman indirect control until the middle decades of the 19th cent. During the tumultuous and tortuous 1840s, the N. found themselves in the midst of escalating power struggles between Ottomans, Egyptians and Ethiopians over the domination of Massawa and the coast. Egyptian advances from their Sudanese dominions prompted a "scramble for the coast", which culminated in several violent skirmishes involving the forces of *däğğazmač*↗Wəbe Ḥaylä Maryam, the Egyptians and the N. until the mid-19th cent. It was in this period that N. Ḥasan Idrīs famously defied one of the Ottoman governors of Massawa by declaring that "the Sultan rules in Istanbul, the Pasha in Egypt, and N. Ḥasan in Massawa!" Aspiring to develop its empire in north-east Africa and the Red Sea area, Egypt, under Muḥammad ᶜAlī and his descendants, constantly challenged Ottoman supremacy in the region. These trials of power progressively increased Egyptian dominance and culminated in *ḫidīw* Ismāᶜīl *bāšā*'s acquisition of Massawa and Sawākin from the Porte in 1865 (↗Massawa Governorate). The establishment of direct Egyptian administration in Massawa and the coastlands significantly eroded the power of the N. and transformed their political status and influence. For some time the N. were charged with collecting taxes for the Egyp-

The early 19th cent. *nāʾib* of Ḥərgigo Ḥasan Idrīs; from LefAbyss vol. 1, 204

tian administration, often placing them under substantial pressure both from the authorities and inland societies.

The Egyptian administration (1865–85) made efforts to hold a tighter grip on the populations of their dominions in Massawa's hinterlands, and in the process co-opted the N. whose political, economic and social networks in the region were deemed instrumental for mobilizing local populations and securing their loyalty to the government. In the early 1870s the Egyptian administration awarded N. Idrīs Ḥasan (ca. 1825–1905) the honorary military title of Major (*ṣāġ qōl āġāsī*) and appointed him *nāẓir* of Sämhar. But such gestures were more symbolic than anything else. Much like in the 18th cent. under the Ottomans, both the Egyptians and the Italians (from 1885) capitalized on the historic rivalry between two factions of the N. family, the Bet Ḥasan (cp. ↗Muḥammad ʿAbdarraḥīm) and Bet ʿUṯmān, and manipulated contesting holders to the office of the N. and its privileges, to employ "divide and rule" tactics.

Under the Italian colonial period, the N. worked with the administration in various capacities, received government subventions and maintained some administrative autonomy in their villages in Massawa's suburbs (esp. Ḥərgigo, ƎmkuIlu). Accommodation to Italian colonial rule was instrumental in promoting some local municipal and economic interests but their former politically powerful position remained a symbolic vestige of the past. In 1888 the Italian authorities formally divided the office of the N. between the two family lines. The Bet Ḥasan preserved Ḥərgigo under ʿAbdalkarīm ʿAbdarraḥīm and the Bet ʿUṯmān took charge of ƎmkuIlu and Ḥəṭumlo under Idrīs Ḥasan. Members of the N. family fought and died alongside Italian forces in Ǝmba Alage, Sägänäyti and ʿAdwa in the campaigns of 1895–96.

In the 20th cent. the N. family maintained some social and political influence in Sämhar while some members of the family were involved in nationalist politics and the Eritrean liberation struggle. Many also fled the country in the 1970s.

Jonathan Miran – Emeri van Donzel

Nallino, Carlo Alfonso

N. (b. 16 February 1872, Turin, d. 25 July 1938, Rome) was an Italian Arabist and Islamicist.

Having taught himself Arabic as a schoolboy, N. studied Oriental studies at the University of Turin from 1889 to 1893, under the guidance of the Iranist Italo Pizzi and the geographer Guido Cora. From 1894 to 1902 he taught Arabic at the Regio Istituto Orientale (↗Istituto Universitario Orientale) of Naples, and then at the University of Palermo until 1913, when he was transferred to the University of Rome as professor of History and Institutions of the Islamic world. N. also served the Ministry of the Colonies and the Ministry of Foreign Affairs as an expert of Islamic matters, especially after the conquest of Libya and in the aftermath of World War I.

N. was a member of the most prestigious academies in Italy and abroad: Accademia dei Lincei (1916), Accademia d'Italia (1932), honorary fellow of the Royal Asiatic Society (1923), the Royal Academy of the Arabic Language in Cairo (1933) and of the Deutsche Morgenländische Gesellschaft (1934). For a while he directed the Scuola Orientale dell'Università di Roma and edited its journal, the *Rivista degli studi orientali*. In 1921 he was elected scientific director of the newly founded Istituto per l'Oriente in Rome (which has borne N.'s name since 1982) and chief editor of its still current journal, *Oriente Moderno* (Rossi 1938; Vacca 1973).

N. made numerous extended trips to various Arab countries. Upon his graduation, he spent five months in Egypt on a scholarship from the Ministry of Education; later he was also a visiting professor at the Egyptian University in 1909,

1910–11 and 1911–12. He was regularly invited to teach in Cairo from 1927 to 1931. He also visited Algeria, Tunisia, Libya, Syria, Mesopotamia and Saudi Arabia (the results of his 1938 trip to Ǧidda and aṭ-Ṭā'if were published in 1939).

N.'s mastery of Arabic and direct knowledge of Arab countries enabled him to deal with all the different and contradictory aspects of the Arab world and its culture. He edited several important texts; the major part of the huge corpus of his articles, reviews and notes were collected and republished posthumously by N.'s daughter Maria (1939–48). Among his main fields of interest were Arab astronomy (cp. ed. of al-Battānī, 1899–1907); Qur'ān (the anthology he published in 1893, at the age of 20, remains a fundamental reference); Islamic theology, law and philosophy; as well as the history of the Arabs. He catalogued the Oriental manuscripts of the National Library and the Royal Academy of Sciences in Turin (1900), and wrote a detailed description of Egyptian Arabic with a series of dialogues (1900, repr. 1913, 1939 [enlarged]; Sarnelli Cerqua 1973).

N.'s works of particular use for those specializing in ↗Ethiopian studies are his summary (1933) of the results of ↗Cerulli's Ethiopian journey of 1927–28 (CerEt) as well as his articles on Ancient ↗Arabia (1930) and ↗Epigraphic South Arabian (1931, a review of ↗Conti Rossini's *Chrestomathia Arabica meridionalis epigraphica*). N.'s numerous studies of Christian Oriental law are also important for scholars of Ethiopian juristic literature, not unknown to N. (he refers to the ↗*Fəṯḥa nägäśt*, 1921:73f.). In his contribution on Saudi Arabia (= vol. 1 of the *Raccolta* ..., 109f.) N. speaks about the Italian-built hostels in ↗Mecca and Medina for Muslim pilgrims from ↗Africa Orientale Italiana, including Ethiopia and Eritrea. In the entries *qāḍī* and *muftī* he wrote for the Italian law encyclopaedia *Nuovo digesto italiano* (1937, 1939) he speaks in detail about these legal institutions in the Italian colonies.

Name(s)

N. and naming in Ethiopia and Eritrea is a complex topic which has yet to be the subject of systematic cross-cultural study. Generally speaking, N. are verbal means of identification and mark a person's identity as an individual and often as a member of a group or category of people. Thus, N. and systems of naming may reflect social status, religious affiliation or dignity, ethnicity and moral values but also individual characteristics or coincidental events related to the person. Every culture and historical period has its own traditions as to how N. are chosen and constructed, in which contexts N. are given or changed and what rules of combination are valid.

1. Pre-Aksumite and Aksumite names
2. Regnal names
3. Islamic names
4. Ethnographical overview
5. Horse names

[For toponymy s. ↗Topography, historical]

Pre-Aksumite and Aksumite names

A number of personal N. have been transmitted in historical sources on pre-Aksumite and Aksumite periods: ↗Inscriptions (in Epigraphic South Arabian, Greek and Gəᶜəz) and coins (↗Coinage), as well as, to a much lesser extent, literary texts, mainly in Greek (the ↗*Periplus of the Erythraean Sea*, with the famous ↗*Zoskálēs*, and the *Christian Topography* by ↗Cosmas Indicopleustes), and in Syriac (the *Letter of Simeon of Beth Arsham* and other texts related to the persecution in ↗Nağrān).

Later indigenous post-Aksumite traditions recorded in Gəᶜəz chronicles, hagiographies and in the king lists, as well as, occasionally, in other foreign writings, such as the Greek dossier on St. ↗Gregentios or the Arabic chronicles, equally deemed to refer to the earliest stages of Aksumite civilization, also conceal N. more or less allegedly traceable to the pre-Aksumite and Aksumite periods. Yet, in the absence of other corroborating elements, the chronology itself of those traditions and sources – as far as the indigenous ones are concerned, not prior to the 13th/14th cent. – makes them a scarcely reliable witness.

The study of pre-Aksumite and Aksumite N., albeit relatively few in number (no more than 200 personal N. appear in well-defined epigraphic and/or numismatic corpora), is hardened by the nature of the available evidence: one may think here of the irregular linguistic correspondences (e.g., ᶜ = ḥ, cp. Drewes 1998:129; ᶜ as *mater lectionis*: ibid. 134, 137); of such ancient Semitic N. as MLGʾ, arguably applied to the ↗[Adkämä] Məlgaʾ who claim their origins, instead, from Lasta (ibid. 130); and, as a more general problem, of verbal forms, i.e. the basic onomastic elements in Semitic personal N., only approximatively distinguishable in consonantal inscriptions (ibid. 131f.). In addition, any linguistic hypothesis bears immediate implications to the early history of Ethiopian peopling.

Pre-Aksumite N. attested in Sabaic inscriptions found in Ethiopia definitely reflect mainly Semitic patterns, and are extensively built on roots attested in Semitic languages (for a panorama of N. studies in Semitic, cp. Streck – Weninger 2002). If comparisons with N. attested in Sabaic inscriptions found in South Arabia (among the several studies on that, cp. at least Ryckmans 1934–35, Avanzini 1989, Tairan 1992, al-Said 1995, Hayajneh 1998, Sholan 1999, Arbach 2002) are not always satisfactory, those with Epigraphic North Arabian languages (esp. Ṯamudic, Liḥyanic and Safaitic, cp. Harding 1971) are in many cases more fitting, to a degree that sensibly varies according to the different scholarly opinions (cp., e.g., the only available systematic studies by Marrassini 1985, 2003; Drewes 1998, 2000; partial list also in DicEthBio).

It should also be stressed that royal personal N. in Sabaic inscriptions found in Ethiopia normally consist of only one onomastic element, instead of two as in Sabaic N.: along with other linguistic features (esp. characteristic for the so-called second group of Ethiopian Sabaic inscriptions), this is one of the peculiarities (not only linguistic, but also cultural) that has long been called upon for assuming the independence of ancient Ethiopian civilization from the South Arabian one (cp., e.g., Drewes 1998:127ff.). Yet, even if pre-Aksumite N. are indeed formed in accordance with Semitic patterns and typology, their meaning is often a reflection of that according to Ethio-Semitic roots. In short, the linguistic and ethnic complexity of pre-Aksumite Ethiopia is fully mirrored in personal N., but in spite of detailed contributions and proposals (cp. above), and in the absence of a complete indexing of all known inscriptions, is still waiting for systematic treatment.

Aksumite N. include N. of both the pre-Christian and the Christian periods. Notwithstanding language shifts in the course of time, a number of N. adopted since the introduction of Christianity are continuously attested throughout Ethiopian history, up to modern times: they dramatically show the pivotal importance of the Gəᶜəz language at every level of Christian Ethiopia's social life. This is obviously due to Ethiopian Christian culture using Gəᶜəz language since the very beginning. In quite a few cases, however, Aksumite N. are better explained by way of comparison with modern languages than with Gəᶜəz (cp., e.g., ʾBʾBWT in the *Book of the* ↗*Ḥimyarites*, according to Müller 1978, recalling Amh. Abbäbäčč, or Old-Amh. Abbäbut/Abbäbät). Yet, the survival of ancient Christian N. in Gəᶜəz through post-Aksumite, modern and contemporary times, has not been without adaptations in the vernacular languages through complex linguistic processes: on the formal level, chiefly by borrowings, phonetic adaptations and developments, loan translations or partial replacements of Gəᶜəz onomastic elements with terms from modern languages (e.g., *Barya*, *Gila*,

instead of Gəᶜəz *Gäbrä* as the first element in a construct state); on the semantic level, by a different understanding of the original grammatical sequence, to be supposed in some cases, although to which extent is not always easy to detail, for lack of systematic and comparative surveys (first attempt in Meaza Haile Revol-Tissot 1999).

However, alongside Aksumite N. surviving for centuries until modern times (such as Barok, Danəʾel, Dawit, Fəśśəḥa, Mamas, Mängäśa, Wäldä Ǝgziʾabəḥer, Zäkrəstos, Zäyoḥannəs, etc.: cp. Drewes 1998:130f.), a long series of Aksumite N. of minor or major importance exist (in particular, royal N. found in legends on coins) that are not etymologically perspicuous (cp. the case of ↗MḤDYS; for brief treatment of problems in monetary royal N. cp. Bausi 2003).

Some other N. instead, quite clear in their linguistic origin, are far different from later types, and did not survive through subsequent times; this also applies to a number of Jewish and Greek N., which form a substantial part of Aksumite onomastics (cp. Meaza Haile Revol-Tissot 1999). On the other hand, a few scholars (e.g., Kropp 1994) tend to emphasize the importance of the non-Semitic component in Aksumite N. Yet, the same considerations expressed for pre-Aksumite N. are also valuable for Aksumite N., the linguistic and ethnic stratification of coeval Ethiopia being, here too, fully reflected – which confirms that Aksumite N. do not simply depend upon a common Semitic heritage, and strongly attest to genuine Ethiopian "innovations" and complex cultural relationships (cp., as to be expected, the non-Semitic N. of the king of Agʷəzat, Ab[b]äʾalkəᶜo, in RIÉ no. 187.5, 9).

Within the bulk of Aksumite N., a fundamental distinction should be drawn between "speaking" and "non-speaking" N. While the semantic and grammatical meaning of the former is more or less immediately clear, as they are composed according to grammar rules (cp. above), the latter are essentially foreign N. derived from Christian tradition: Jewish N. from the O.T. and N.T., N. from Christian literary texts, i.e., Semitic but also Greek (and Latin) N. in particular. Meanings of foreign N. may in some cases have been eloquent enough in the respective cultures, while generally – apart from Semitic N. – this was no more the case for their transference into Gəᶜəz within the Ethiopian framework.

A problem of its own is that of supposed Syriac N. in the Aksumite period (N. of the ↗"Nine Saints" etc.), to be dealt with under the general heading of "↗Syriac influences" in Aksumite and/or Ethiopian culture.

Some royal Aksumite N. known from inscriptions and/or from coins (Ǝllä ᶜAmida, Kaleb, Gäbrä Mäsqäl, Ǝllä Gäbäz) appear to have been preserved in hagiographic traditions on Ethiopia's early Christianization (e.g., those of the Nine Saints and the ↗*Ṣadəqan*). As to royal N., two specific problems may be mentioned: (1) several N. are characterized by the presence of an *əllä*-element that is generally interpreted as a plural relative pronoun (for an alternative hypothesis, cp. Lusini in StudAeth), also attested in a variously explained *əlle*-variant (cp. Bausi 2005a, 2005b; Bulakh 2007); a surprising modern survival of this onomastic type is Tgn. *Ǝlläqal*, 'Those of the Word' (cp. Moreno 1931:42, on which Meaza Haile Revol-Tissot 1999); (2) the structure of the royal Aksumite N. – at least in some cases, a complete sequence being rarely known – seems to have been threefold, as in the epigraphic titlary of Kaleb: KLB/ʾL ʾṢBḤ WLD TZN/BʾS LZN (RIÉ no. 191.7f.), where the probable throne N. (KLB) is followed by the personal N. (ʾL ʾṢBḤ) with patronymic (WLD TZN), and then by a third element introduced by the word *bʾsy* (in non-vocalized writing)/*bəʾəsəyä* (in vocalized texts, archaic form for the later *bəʾəse*)/*bʾs* (in non-vocalized text, certainly representing later *bəʾəse*)/BIΣI (on coins with Greek legends), i.e., in Gəᶜəz 'man (of)', followed by a variously explained problematic element (cp. Schneider 1987:605ff.). The *bəʾəse*-N. are different in all eight attested occurrences (and the king lists), in spite of the fact that the Aksumite kings cannot all have been unrelated to each other. Moreover, Kaleb's son in RIÉ no. 192.7, WᶜZB, is BʾS ḤDFN (probably to be read ḤDQN, cp. below), while his father was BʾS LZN (cp. above). Different explanations have been offered. Some scholars (de Blois 1984) believe that it would be a sort of "matronymic" or "matrilinear clanic" N. (↗Kinship). References to special N. of ↗military units (s. EAE vol. 5), organized on a regional basis, have been also suggested. More recently, a new tentative proposal has been advanced (cp. Manzo 1995:74ff., proposing, in this perspective, the alternative reading ḤDQN for ḤDFN, cp. above), according to which the onomastic element 'man (of)' would introduce South Arabian place-names – the possibility of connections with N. of military units and/or clanic matrilinear descents remaining open as well.

The *bəʾəsi*-element reappears in the early 13th-cent. feudal deeds of *aṣe* Lalibäla, who is styled as *bəʾəsi ʿazal* in two documents of the "Golden Gospel" of Däbrä Libanos (cp. CRDLib; Bausi 2007:84f.). The segment, meaning here '*vir fortis*, strong man' (DillmLex 791; LesCDic 52*b*), is probably an awkward imitation of the original Aksumite expression and only a hint to the glorious past. The same *bəʾəsi ʿazal* epithet (probably borrowed from the "Golden Gospel") was later used by the chronicler for ʿAmdä Ṣəyon (cp. MarAmdS 46f., 142f.; KrAmdS 48 [text], 52 [tr.]); a repetition never registered for Aksumite kings.

Regnal names

From the 14th cent. onwards, a duality in the N. of Ethiopian monarchs is increasingly documented, and around 1500 at the latest a royal onomastic dualism appears as fully fledged. From *aṣe* ↗Naʿod up to the so-called ↗*Zämänä mäsafənt*, all Ethiopian monarchs of the 16th and 17th cent., as well as most of the 18th, are attested in the sources as having borne, in addition to their baptismal N. of an explicitly Christian nature, a so-called regnal N., the ስመ፡ መንግሥት (*səmä mängəśt*, pl. *asmatä mängəśt*), which emphasized their worldly prowess. While the future emperors received their baptismal N. shortly after their births, they adopted or were assigned their regnal N. only upon their accession to the throne, or even only after they had already governed for some period.

With the exception of Naᶜod, whose regnal N. was Anbäsä Bäṣär ('A lion against the enemy'), all the other *asmatä mängəśt* of the 16th to 18th cent. followed the pattern *X sägäd* (or: *säggäd*, depending on whether one reads ሰገድ as Gəᶜəz or Amharic) = 'X has submitted/submits [to the monarch in question]'. The terms standing in for X normally designated either territories, or one or a group of enemies. Regnal N. with a territorial reference for instance are Aṣnaf Sägäd ('The furthest borderlands submit to him', regnal N. of both ↗Gälawdewos and ↗Zädəngəl), Adyam Sägäd ('[All] the provinces submit to him', regnal N. of ↗Iyasu I, ↗Iyasu II [in addition to Bərhan Sägäd] and ↗Iyoᵓas) and even ᶜAläm Sägäd ('The [whole] world submits to him', regnal N. of *aṣe* ↗Fasilädäs). Regnal N. claiming the submission/subjugation of enemies on the other hand are, e.g., Wänag Sägäd ('The lion has submitted to him', i.e. to ↗Ləbnä Dəngəl; since *wanāg* is a ↗Harari word, a reference probably to the ᶜAdalite general ↗Maḥfūẓ b. Muḥammad whom Ləbnä Dəngəl vanquished); Mäläk Sägäd ('The king submitted to him', i.e. ↗Śärṣä Dəngəl; since *mäläk* is derived from Arabic *malik*, a reference possibly to ↗Özdemir *paša* who at the time temporarily occupied parts of Eritrea for the Ottoman *sulṭān*); Mäsiḥ Sägäd ('The anointed one has submitted to him', i.e. ↗Bäkaffa; *mäsiḥ* here refers not to Christ but to the counter-king Wäldä Giyorgis, a brother of Bäkaffa whom he had to subdue before he could effectively assume the reins of power); or a more generic Aᵓəlaf Sägäd ('Countless myriads have submitted to him', i.e. ↗Yoḥannəs I) and Aśrar Sägäd ('The enemies have submitted to him', i.e. ↗Tewoflos). In the 18th cent. we also encounter regnal N. like Ṣäḥay Sägäd ('The sun has submitted to him', i.e. ↗Yosṭos), Bərhan Sägäd ('The light has submitted to him', i.e. Iyasu II), Ṭəbäb Sägäd ('Wisdom has submitted to him', i.e. ↗Täklä Haymanot II) and Fəqr Sägäd ('Love has submitted to him', i.e. ↗Täklä Giyorgis). Such extravagant and particularly grandiloquent *asmatä mängəśt* are perhaps best understood as compensatory reactions to the decline in real power suffered by the monarchs of that time. Overall though the use of regnal N. during the *Zämänä mäsafənt* slowly diminished and appears to have come to an end by the beginning of the 19th cent. From this time onwards horse N. (s. subarticle) perhaps at least partially assumed the function of extolling the martial virtues of monarchs that previously had been fulfilled by the regnal N.

Imperial spouses also bore regnal N. that regularly echoed the *X Sägäd* pattern of their husbands' regnal N. as *X Mogäsa* ('X is her grace/dignity/happiness'). If *aṣe* ↗Minas, e.g., was Admas Sägäd ('The [entire] horizon submits to him'), his ↗*ətege*, baptized as Śəllus Ḫayla, automatically acquired the regnal N. of Admas Mogäsa. This pattern of female *asmatä mängəśt* formation is best interpreted as elliptic, namely as shortened from the full regnal N. of her husband + *mogäsa*. Admas Mogäsa would thus be shorthand for *Admas Sägäd Mogäsa, i.e. 'In [her husband] Admas Sägäd resides her grace/dignity/happiness'. Without the supposition of ellipsis, such female regnal N. as Mäläk Mogäsa, Səlṭan Mogäsa (*səlṭan*, 'the Sulṭān') or Abrak Mogäsa (*abrak*, 'knees') would be rather bizarre and make little to no sense.

The clear-cut dualism in royal nomenclature observable from the 16th to 18th cent., during which period grandiloquent and martial regnal N. complemented the monarchs' baptismal N. (which implied their bearers' creatural subordination to God and thus in this respect their commonality with their subjects), had antecedents in earlier times. In the 14th and 15th cent. monarchs like ↗ᶜAmdä Ṣəyon I and ↗Yəsḥaq bore the additional regnal N. of Gäbrä Mäsqäl ('Servant of the Cross'), while ↗Dawit II, ↗Zärᵓa Yaᶜəqob and ↗Ǝskəndər were also known as Qʷäsṭanṭinos (i.e. Constantine). In these cases, however, there is no, or at least no pronounced, antinomy between baptismal and regnal N., as the latter is equally Christian in character – even if a N. like Qʷäsṭanṭinos also carries martial overtones. Yet already in the 14th and 15th cent. we here and there encounter baptismal-regnal N. pairs which are marked by the pronounced dualism characteristic of the 16th to 18th cent. Cases in point are Nəwayä Krəstos – ↗Säyfä Arᶜad ('Vessel of Christ' – 'He who makes the [enemy's] sword tremble'), ↗Nəwayä Maryam – Wəddəm Asfäre ('Vessel of Mary' – 'Settler of the wilderness') or ↗Täklä Maryam – Ḥəzbä Nañ ('Plant of Mary' – 'Disperser of the [enemy] people'). Some late 13th-/early 14th-cent. monarchs such as, e.g., Ḥəzbä Asgäd ('He who subjected the [enemy] people') or ↗Wəddəm Räᶜad (or Arᶜad; 'He who made the wilderness tremble') are even only known by secular martial N. Yet since these early Solomonids (↗Solomonic dynasty) were already programmatically Christian, one must assume that they had baptismal N. as well. Thus the full-fledged onomastic complementarity of the 16th

to 18th cent. apparently has roots reaching back to the earliest Solomonid times. One cannot even exclude that this dualism was already operative, at least sporadically, under the ↗Zagʷe monarchs or in late Aksumite times.

The most easily accessible comprehensive list of the royal N., baptismal as well as regnal, can be found in GuiSLett. Also to be consulted are such publications as WrBriMus, Littmann (1909), Tekle-Tsadik Mekouria (1966) and Bartnicki –Mantel-Niećko (1978).

Islamic names

Ethiopian Muslims typically conform to the general Islamic ways with some local peculiarities. The theological basis for naming is formed by some prophetic sayings that indicate how and when a child should be correctly named according to the tradition (s. Ibn Qayyim al-Ǧawzīya 1988). It is a recommendable practice to name a child on the seventh day after birth though some *aḥādīṯ* allow the N. to be given on the very day of birth. As on the Judgement Day every creature will be called by his N., it is recommended that even the miscarried foetus receive a N.

N. is usually chosen by the parents but also strangers to the family may be consulted occasionally. Unacceptable N. include the 99 *al-asmāʾ al-ḥusnā* reserved for God only (e.g., Raḥmān, 'the Merciful'; Raḥīm, 'the Beneficient') and those which have a polytheistic connotation (e.g., ʿAbdalʿuzzā, 'servant of [the goddess] ʿUzzā'). Preferable N. are (1) theophorous N. made up by *ʿabd* ('servant') and one of the designations of God (e.g. ʿAbdallāh, fem. Amatallāh; ʿAbdarrahmān); (2) N. related to the Prophet ↗Muḥammad (his cognates and all the prophetical epithets, Aḥmad; Maḥmūd; Muṣṭafā; Bašīr, etc.); (3) N. related to other prophets accepted by Islam (Ibrāhīm; Ismāʿīl; Dāwūd; Sulaymān; Yaḥyā; ʿĪsā) and (4) to the great personages of Islamic sacred history (Hāǧar; Maryam; Āmina; Ḫadīǧa; Abū Bakr; ʿUmar; ʿUṯmān; ʿAlī). N. borrowed from the ancient national history and mythology of the Islamic peoples are also used, as well as N. (predominantly in Arabic but also in local languages or in phonetically modified Arabic) carrying a positive meaning of well-being (Saʿd, 'good luck, satisfaction'), harmony (Ǧamīl/a, 'beautiful'); piety (ʿAfīf/a, 'chaste'); bravery (Fāris, 'horseman'; Niḍāl, 'fight') or taken from flora and fauna (Usāma, Asad, 'lion'; Ṣaqr, Šāhīn, 'falcon'); they all are considered as well-wishing.

Arabic name structure

Ethiopian Muslims incline to use N. of Arabic origin (due to the special status of the ↗Arabic language in ↗Islam). The typical Arabic N. is normally composed of several elements: (1) *ism* (or *ism ʿalam*), the personal N.; (2) *kunya*, tecnonym; N. of the first-born normally preceded by *abū* ('father of') or *umm* ('mother of') – this element may take the sense of a nickname (e.g., Umm Ḥabība; [Saʿdaddīn] Abū l-Barakāt); (3) *nasab*, patronymic (or series) introduced by *ibn* ('son of') or *bint* ('daughter of'); (4) *laqab* (Bosworth in EI²), sobriquet, nickname or descriptive N. related to the profession, a physical characteristic or defect (e.g. al-Ġāzī, 'the warrior'); and, finally, (5) *nisba*, relative adjective linking the person with a relevant element in his or her life: a place, a family, a descent group, a school of law, a mystical brotherhood etc. (e.g., al-Ḥabašī, 'the Abyssinian', al-ʿUmarī, descendant of ʿUmar the second caliph, al-Qādirī, etc.). The complete set of elements is rarely used, normally one or two of the components are quoted to refer to a person (s. EI², vol. 4, 179ff.; Caetani – Gabrieli 1915).

Ethiopia-specific features

The N. of the Ethiopian Muslims possess most of the general characteristics of Islamic N. giving (as also examples above show). The lack of a proper extensive prosopographical repertoire of Islamic Ethiopia hinders a serious onomastical analysis of Ethiopian Muslims but some observations can be safely made. Arabic N. are often adapted to the phonetics of the local languages (Mähammäd, Mahamud, Säyəd, Bäšir, Ṭolha, Sadiq, Kaltuma, Firdawsa, etc.). N. made up by *ʿabd*+N. of God (ʿAbdaššakūr, ʿAbdallāh, ʿAbdalfattāḥ) are wide-spread; N. originally

derived from ancient dynastic *laqab*s (Kramers 1926; Dietrich 1961) made up by a common propitiatory N. and a fixed second element *-dīn* ('religion', i.e. Islam, e.g., Saᶜdaddīn, Ṣabraddīn, Ǧamāladdīn, Ḥaqqaddīn, and also, more peculiarly, Aḥmaddīn, Aẓharaddīn, Asmāʾaddīn, and ᶜUmardīn); N. composed from a famous personal N. with a eulogical epithet (Nūr Ḥusayn; Muḥammad Amān; ᶜUmar ar-Riḍāʾ) and, particularly among the Təgre, "double names" of different origin (e.g., Ḥamad-lul, Maḥamud-ker; s. LitPEA vol. 2, 178f.). When an identical onomastic form is available in the local language, the Arabic version of the N. is preferred, and in the Amharic translation of the Qurʾān all prophets are called according to the Arabic-Islamic form of their N. (*Qəddus Qurʾan* 11).

Hypocoristic or apparently hypocoristic forms (on Arabic hypocoristica s. Littmann 1953) are attested in written sources and in practical use (ᶜAbdoš, Aḥmadūš, Amano [probably from Amanallāh], Mumme [likely from Muḥammede], Amade, Faṭuma). The Təgre usually give a boy a second N. (*səqrat*) to be used only by women of his family (LitPEA vol. 2, 190–93).

In sources, persons are usually identified through *ism ᶜalam* and *nasab*; the *nisba* is also widespread, especially in more religion-focused literature (e.g., Muḥammad Wale 2005).

In Harär, the *laqab* is often added to the patronymic sequence (s. the list in Abduraḥman Maḥammad Qorram 1986: appendix).

Name-giving and conversion

Converts are recommended to assume a new N., though there is no general legal obligation to do so, unless their pre-Islamic N. had some clear anti-Islamic connotation. In earlier phases of Islamization local pre-Islamic N. continued to be used (e.g., N. used in the sultanates of Šäwa and Ifāt, such as Badīt bint Māyā; Dilgāmis; Dunyāḥūz, Baziyū, Goodanaa Babboo). With the deepening of Islamic consciousness, Muslim N. were often combined with non-Islamic or pre-Islamic ones (e.g., Aḥmad Ḥarb Arᶜad, Aḥmad Badlāy; Muḥammad Gāsā). This is also the trend in areas of more recent Islamization (e.g., among the Muslims of Wällo and Gurage one finds such N. as ᶜUmar Wadāǧo Ǧaᶜfar Bukko, ᶜUmar Bäqsa, etc.). Some N. of apparently Christian origin (e.g., Tīdros; Abādir – on this last example s. CerIslam 321ff.; CerStud I, 48–51) were seldom used by Muslims.

Individuals passing from Islam to Christianity almost always changed N.: in Gəᶜəz hagiography the conversion of a Muslim is completed by the Christianization of his N. (Marrassini 1981:LXXV [lit.]). More recently, among the Mammädoččˇ, Mäḥammäd ᶜAli became ↗Mikaʾel, Amäde Kolase became ↗Wäldä Gäbrəʾel. The N. of the Christian father is normally kept in the *nasab* (e.g., ᶜUmar Mäkʷännən, Maḥmūd Nūr Ḥusayn Bərhanu).

Ethnographical overview

Traditions of construction and choosing of N. often reflect the idea that a N. is not merely an arbitrary designation, but determines the character of the thing being named. Individuals often have multiple N. (e.g., a person may have a baptismal N., a mundane N., a nickname and a horse N.) in some cases reflecting changing circumstances over time; in some cases, different functions or

relationships at a given moment (e.g., religious conversion, initiation etc.).

Name-giving

Among Ethiopian Orthodox Christians N. are given on the 40th (boy) or 80th (girl) day after ↗birth, when the child is baptized (↗Baptism). This N. is often chosen referring to the saints' day on which the naming takes place. It may also refer to a Biblical figure, religious concept or attribute of God. The baptismal N. will normally only be used at communion, church weddings, burial and confession. It is usually not used in daily mundane interactions. For these purposes another N. is given, usually based on an event or other propitious indicator (especially among Amhara); the latter N. is the one under which someone is publicly known.

The ↗Betä Ǝsraʾel follow a pattern similar to Christians, both in the timing and meaning of N., and may even refer to the ceremony as *krəstənna*. The ↗Kəmant perform a ceremony called *kenona* 20 to 30 days after the birth of a child, in which the infant is given several N., including a "religious name" (Gamst 1969:101).

Among the ↗Đáasanač (Almagor 1978:119ff.) a new born is given a "pot-N." at a ceremony called *lil-meč meto* which takes place after the umbilical cord has dropped off. Only close kin attend. The father of the infant and the "name-giver", usually a distinguished older person, drink coffee and blow it over the child. The N.-giver becomes the child's confidant because "they have the same name". He becomes something like a god-parent, although the relationship is depicted as that of siblings. This is the strongest form of "bond-partnership".

According to the ↗Oromo tradition, children were brought to the ↗*qaalluu* for the *(h)ammačiisaa* N.-giving ritual in which the *ayyaana* divinity was asked to choose a N. or approve the N. given by the parents. This usually took place 2–4 years after birth, whether the child had been given a baptismal N or not. Among the ↗Boorana the final N. was given, connected to the shaving of the head, when entering into the fifth class (*gamme*) of the ↗*gadaa* system. Among the ↗Arsi, after the decline of the *gadaa* system, children were named before their mothers stopped to breast-feed them (VSAe II, 196, 233ff., 327, 484). Among the Šangama, a N. is given by the paternal grandfather in the sixth month after birth (VSAe I, 143).

N. are sometimes taken from the circumstances of the birth or events that took place on the day of birth. This is the case among, e.g., the Baka (↗Aari), ↗Basketo, ↗Ubamer, ↗Dime and ↗Kunama. The Kunama, e.g., may name someone whose birth was difficult Anši ('difficulty') or a baby born after a victorious battle Kuuya ('victory'). Within the Christian culture the saint's N. to whom the day of birth (or baptism) was dedicated often influences the choice of a N. (e.g., someone born on the 12th of a month called Mikaʾel). N. were chosen in many cultures according to the time of day the bearer was born, after the place of birth, after their appearance or after an ancestor's N. While in some cultures the N. of living relatives had to be avoided, in others (e.g., Oromo) the eldest grandson could be named after his grandfather even while he was alive (VSAe I, 80ff., 181, 220, 234f., 260f.). Among some ethnic groups almost every word can become a N., such as Klašni ('Kalashnikov') among the Kunama, meaning strength. N. can also contain hidden allusions, political, religious, or related to personal events.

Name formation

People are commonly addressed by their first N., usually headed by a polite form of address (e.g., ↗*ato* Baḥru, ↗*wäyzäro* Sara) or a title (e.g., Professor Taddäsä; ↗*abägaz* Ḫaylu; cp. ↗Titles).

Among most of the peoples of northern Ethiopia and Eritrea, a personal N. is formed using the individual's personal (first) N. and his or her father's first N. Thus Taddäsä Täsfa is Taddäsä, the son of Täsfa. Taddäsä's son Baḥru would be called Baḥru Taddäsä. Accordingly, there is, with some exceptions (s. below), no cross-generational "family N." as is common in many cultures with European heritage. Indeed, while the Ethiopian ↗Civil Code of 1960 stipulated that "Every Ethiopian [...] must have a family name ..." (Vanderlinden 1969:23), this never materialized. Modern bureaucratic rules established both in Ethiopia and Eritrea now require that the ID card of an individual contains his N. together with his father's and grandfather's N.

In addition, among Christians compound personal N. based on Gəʿəz vocabulary and grammar such as Täklä X ('Plant of X'), Zärʾa X ('Seed of X'), Ḫaylä X ('Might of X'), Gäbrä X ('Servant of X'), Wäldä X ('Son of X'), Täsfa X ('Hope of X') are common. These elements are followed by the N. of God, Jesus, the Holy Spirit, Mary, an Arch-

angel or even other saints (e.g., Täklä Maryam, Gäbrä Mikaʾel, Täsfa Iyäsus). Such names could undergo phonetic changes in the spoken languages. Thus, in eastern Təgray, Gäbrä Mikaʾel can be called Gärä[n]čäʾal (abbreviated as Gäre), while the proper form is used in official contexts. In Eritrea, the same N. would be Gäränkəʾel (abbreviated as Gäbrä). Wäldä Mikaʾel would be Wälläńčäʾal in eastern Təgray and Wäldänkəʾel in Eritrea (abbreviated Wälday or Wällay).

Naming rules reflect the importance of genealogical knowledge (↗Genealogy). N. are simplified genealogies: the traditional question of "your seven names", important particularly at marriage, has to be answered with a list of N. of at least seven (paternal) generations. In cases when the father was less known than the grandfather, or if the grandfather's N. would underline a political claim, the grandfather's N. was often preferred to the father's N. (cp. *ras* ↗Alula [Ǝngəda] Qubbi). This grandfather's N. could even be that of the mother's father (*ləǧ* ↗Iyasu [Mikaʾel] Mənilək, *ras* ↗Kaśa [Ḫaylu] Darge).

The Konta also have both a personal N. and the N. of the father or grandfather (CerPeople 102). Among the ↗Konso (Hallpike 1972:101) all siblings share the same second N. as their father, but only the eldest son passes this N. on to the next generation. Thus both of AB's sons would be named CB and DB. However, while the children of CB would be named EB and FB, those of DB would be named GD and HD.

Nicknames and hypocoristics

N. used in a private or family context often differ from the full N. as used in documents. Thus, a child is often given a pet N., such as Mamuš (literally referring to a baby), or nickname (Amh. *yäqəṭṭəl səm*). Such a N. frequently refers to some traits of its bearer (e.g., Afənčo, 'snubnosed'; Ṭoṭa, 'monkey') and is used in order to tease him (s. Leslau 1995:877). Among the Təgre, each child is given a second N. (Tgr. *səm səqrät*), by which the women of his family call him. Apart from a *səqrät* N., a nickname (Tgr. *atkaras*) can be given according the person's peculiarities, sometimes eventually becoming his normal N. (LitPEA vol. 1, 136, vol. 2, 149f., 190; Littmann – Höfner 1962:181, 399). Among Oromo, various nicknames can be given to each other by the ↗*hariyyaa* members (s. VSAe II 184).

Abbreviated forms of the full N. are widespread and sometimes replace the official N. in daily use. The formation of hypocorisms depends on the local context. In Amharic, the suffixes are usually employed, such as *-š*, even for non-Amharic N. (e.g., Käbbəš for Käbbädä; Zäriš for the Tgn. N. Zärʾi Sənnay), *-əyye* (e.g., Gäbrəyye [from Gäbrʸe] for Gäbrä X), *-u* (e.g., Gäbru for Gäbrä X, Säyfu for Säyfä X), *-e* (Damṭe for Damṭačč̣äw, Kəfle for Kəflä X), *-o* (e.g., Täklo for Täklä Iyäsus). Among the Təgre, diminutive suffixes can be attached to N. in the same way as to common nouns (Elosay < Elos; Näffəᶜetay < Näffaᶜ, LitPEA vol. 1, 146).

In an urban context, nicknames, especially in communication among youngsters, are more and more oriented towards the west, Dawit becoming "Dave", Yoḥannəs "John", etc. A special case are the N. used only among family members if the family lives in a "foreign" context. An individual might officially bear a N. common in the surrounding culture, but be called with another N. by his family members (e.g., an Ethiopian Christian may be called Muḥammad in the Sudan, but Gäbrä Ǝgziʾabəḥer ['Servant of God'], or Gäräzgəher, at home).

Cattle names and additional names

Among many peoples in north-east Africa, mostly pastoralists, it is common for a man to take an "ox N." or "cattle N." based on the N. or colouring of his favourite beast. This phenomenon, similar to that of the highland Ethiopian "horse names" (s. below), is classically described by Evans-Pritchard (1956:252) among the ↗Nuer. It is common in Ethiopia among not only the Nuer and ↗Añwaa, but a variety of other groups, such as the ↗Suri who derive all personal N. from the colours or patterns of cattle coat (Abbink 2003:347). While the first N. in ↗Banna and ↗Hamär are those of ancestors or, in some cases, related to events which took place at the day of birth, a young man gets a second N. according to the N. of the first cow he jumped over during the leap-upon-the-cattle initiation (VSAe I, 330, 335, 343f.).

A teenage Đáasanač boy selects a new N. as he begins to form his own herd within that of his family. After the birth of his first child, a Đáasanač man will be referred to as the "Father of [N. of child]", and a woman, the "Mother of [N. of child]" (cp. also, e.g., *abū / umm* in Islamic N.).

Names of families and lineages

While common people do not have family N., there are a few exceptions among Muslim ur-

ban families in Eritrea, especially of ↗Massawa, whose family N. result from the heritage of an old title (such as ↗Nāʾib) or refer to a foreign origin (such as Kurdi, Turki, Hindi; cp. ↗Ottoman empire). Similar to medieval European leading families, several ancient Ethiopian and Eritrean families also possess a "kinship N.", like ʿAd Azzaž for the family of the traditional bearers of the title *azzaž* in Təgray, ʿAd Däggiyat for the rulers of Ḥamasen (who beared the title *däggiyat*), [ʿAd] Nāʾib for the local dynasty of the *nāʾibs* of ↗Ḥərgigo, and Käkkiya (from Ottoman *kaḫya*) for another family of Ottoman administrators in Eritrea. Today the latter two are especially used as real family N. These N. reflected the families' claim for heritable titles and offices, supported by genealogies. They are to be distinguished from other denominations used for kinship groups and lineages, which are never used as personal N. (e.g., ↗*ənda X*, *däqqi/däqqä X*, *betä X*, *beni X* and other kinship terms which sometimes encompass large groups).

Even if family N. are rare in the Horn of Africa, another N. system documented especially from aristocratic families approaches the idea of a family N., transmitting N. or N. particles from one generation to the next. In 14th- to 18th-cent. Təgray and ↗Säraye, a leading family of overlords bore N. ending with ∃gziʾ; every member of the family could be recognized by this. Similarly, some leading families often transmit the same first N. to following generations (e.g., *ras* Mängäša Śəyyum being the son of *ras* ↗Śəyyum Mängäša; ↗∃ndalkačč̣äw Mäkwännən the son of ↗Mäkwännən ∃ndalkačč̣äw; Mäkʷännən or Asfa Wäsän in the family of *aṣe* Ḫaylä Śəllase I).

Name changes

Changes in status are commonly marked by a change in N. Thus, rulers and even smaller chiefs (e.g., in Basketo [VSAe I, 200]) often took a regnal N. after enthronement (s. sub-article on regnal N.). Likewise, a secular person who became monk assumed a new N. along with his or her monastic garb. Similarly, converts, whether to Christianity or Islam, usually accepted a new N. when they accepted their new faith (↗Conversion; a prominent example being *ras* ↗Mikaʾel ʿAlī, the former *imām* Muḥammad ʿAlī). Throughout Ethiopian history, princes assumed a royal N. with the ascension to the throne. In N. changes, the choice of a N. is often intended to make a statement regarding the person's new identity. Thus monks would carry such N. as: Gabrä Mänfäs Qəddus, 'Servant of the Holy Spirit', Täklä Haymanot, 'Plant of Faith', Iyäsus Moʾa, 'Jesus has Conquered'. Throughout Ethiopian history, princes assumed a royal N. with the ascension to the throne. Emperors chose N. which recalled past glories: Tewodros, recalling the messianic ruler awaited by Christian Ethiopians, or Mənilək II referring to the son of Solomon and the Queen of Sheba (↗Mənilək I). In other cases, the N. was meant to convey the sense of royal power: Adyam Sägäd, 'the periphery [of the kingdom] bowed'. A specific case are regnal N. of Muslim Oromo kings in the Gibe states. In the moment they accessed the throne, their personal N. could not be used any more, having become "sacred". Instead, their "war N." (i.e. the horse N., preceded by "Abbaaa") became the only one to be used in public discourse. In addition, they assumed another, Muslim, N. for use in official documents in Arabic. For example, the ruler of Gimma, ↗Abbaa Ǧifaar II (i.e., 'Father of the brindled [horse]'), sealed with the N. "Muḥammad b. Dawūd" (CerEt 73f.; seal s. Borelli 1890:159).

Although Ethiopian women do not take on their husband's N. (father's personal N.), there are bridal N. (*yädabbo səm*, lit. 'bread N.'). This N. is given at a ceremony on the evening of the wedding at which the bride presents her in-laws with a large round loaf of bread. Before the bread is sliced, various N. are proposed until a consensus is reached. Each person in turn then calls the bride by this new N. before receiving a slice of bread. Traditionally, the family of the groom will always refer to his wife by this N. (Leslau 1995:877; Elias Yemane 2004:184–88).

In the context of Protestant and Catholic ↗mission starting from the 19th cent., a number of new naming rules appeared. Protestant converts sometimes combined personal N. and baptismal N. (the latter not being "secret" any more), like ↗Mikaʾel Arägawi or ↗Gäbrä ∃gziʾabəḥer [Gobbaw] Dästa. N. changes after (re-)baptism also occurred. While Christian highlanders normally did not change their N. upon conversion, others did, such as early Catholic or Protestant Oromo converts (e.g., Pauline ↗Fathme; ↗Onesimos Näsib; ↗Ruufoo). A peculiarity are the N. of those who entered the Capuchin mission (s. Metodio da Nembro 1953). A Capuchin generally does not keep his secular N., which is replaced with a religious N. combined with the place of origin (Mario da ʿAbiy-ʿAddi, or briefly P. Mario, is *abba* ↗Ayyälä Täklä Haymanot;

abba Agostino da Hebo is *abba* ↗Agoṣṭinos Tädla [also "Agoṣṭinos Zäḥebo"]; cp. also Léon des ↗Avanchers, Francesco da ↗Bassano, ↗Mauro da Leonessa).

As enslavement meant a change to a new, in this case inferior, status, there were special N. which were only applied to slaves, such as Säṭṭäñ, 'He [God] gave me [this slave]'. Sometimes a slave was given a N.-phrase, so that he was called by the first part of the phrase, and had to respond by the second half of the phrase to complete the meaning of the N. For example, a girl called *ləkʷəra bähullu*, 'Let me have a reason to be proud towards everyone', had to respond with the words *əmmete sallu* 'as long as my mistress is there', or 'because of my mistress' (MolTrad 27; Elias Yemane 2004:178–82). Slaves "exported" from Ethiopia into Muslim countries were generally given a Muslim N. (e.g., Fāṭimah in the case of Pauline Fathme). 19th cent. Massawa registers contain long lists of freed slaves, who assumed the N. of their "liberators" as a second N., instead of a father's N.

Whereas in the cases mentioned above the change of N. takes place to mark a change of status, the process can in some instances be reversed. Thus, if a child is sick, parents may decide to change its N. in the hope that this will bring about a change in his or her fortune. This custom relates the widespread belief that disease might be linked with evil ↗spirits, who "know" a person by one N. This N., as a consequence, is changed to divert the spirits' attention.

Name avoidance

In some relationships one or both of the parties involved are forbidden to address the other by N. In many cultures a man does not use the birth N. of his in-laws. Rather he uses their ancestral N., battle N., or even cattle N. Among the Gurage a newly married woman will not use her husband's N., substituting it with a similar sounding word (Leslau 1959). Among the Oromo, the custom known as *laguu* or *lagača* prohibits husbands, wives and in-laws from using each other's N. Various strategies are used, including pronouns, familiar descriptions "father or mother of [N. of child]", cattle N., references to the person's appearance, and rhyming or other similar words (Mbaya 2002).

Magic and names

For divination in the Christian Orthodox context a diviner needs a person's (usually baptismal) N. as well as the N. of his/her mother and perhaps father (MolTrad 102; ↗*Asmat*). For ↗magic purposes the baptismal N. is especially needed. There is a common belief that someone who knows someone's baptismal N. can use it to gain influence over that person (ibid. 115). A "personalized" ↗magic scroll consequently contains the baptismal N. of a person, same as sacral objects donated to churches. Divination is often performed by assigning a numerical value to each letter in the person's N., thus following a method also known in the Jewish Kabbala tradition.

Modern developments

During the period of Amharization, in the time of Ḫaylä Śəllase I's reign, it was common for people of non-Christian and non-Muslim backgrounds seeking to be accepted by the elite to take on more Christian-sounding N. In recent years, as ethnic diversity has become more politically accepted, people not only retain but also re-assume their original N. Modern political developments have strongly influenced naming. N. might refer to revolutionary struggle (Tgn. male N. ᶜAwät, 'victory', female N. Ḥurrīya, from Arab. 'freedom', Näṣannät, 'independence') or to nationalistic pride (female N. Ityoṗya, Erətra).

In recent years, ↗migration has disrupted traditional patterns as the bureaucratic demands of host countries have demanded a single "family N." ignoring the migrants' cultures. Often the father's second N. i.e. the paternal grandfather's first N. serves this purpose. In very few cases an ethnic subgroup's or clan N. is also used (especially among non-Christian migrants). Over the course of time, N., particularly first N. tend to become either formally or informally adapted to those of the host countries. In Israel many Ethiopians had their N. officially Hebraicized upon their arrival, although they continued to use their traditional N. among family members and within the Ethiopian community (Anteby 1999). Thus, N. used within the community often differ from those used outside, in the context of the host country.

Steven Kaplan – Wolbert Smidt

Horse names

The ↗horse N. (Amh.: **የፈረስ፡ ስም**, *yäfäräs səm*; Gəᶜəz: **ስመ፡ ፈረስ**, *səmä färäs*) was a significant cultural feature in the Christian, Muslim as well as "animistic" sections of the Ethiopian highland society, particularly in the period ca. 1750–1935. In the earlier periods (especially 13th to 17th cent.), there were some occurrences of connotatively horse-name-like compounds such as Haräb Asfärre, Wədəm Asfärre, Wədəm Arᶜad, Säyfä Arᶜad etc.; but we cannot assert with certainty at this stage that they were of the same nature as the horse N. of later periods. They are generally assumed to have been royal appellations (s. subarticle on regnal N.) or bynames.

In spite of the abundant references to horse N. in internal and external literary sources, and in spite of the superb nomenclatural samples compiled by Maḫtämä Śəllase (MahHorse 195–303) and of the equestrian sporting association of Ethiopia, no taxonomic and/or semantic study of horse N. has so far been made. The same applies to the historical origin and spread of the horse in the region. Although the use of horses in Egypt, South Arabia and the Byzantine empire prompted some historians to speculate the existence of horses in the Aksumite empire (e.g., PankIntro 30; HabKön 132; MHAksum 259), neither the Greek, the Roman and the Arabic documents nor the numismatic, epigraphical and archaeological sources have as yet hinted to the existence of any type of equid in northeast Africa in contrast to the evident presence of tamed ↗elephants.

The German scholar Haberland, who researched in southern Ethiopia, found out (cf. HabKön 132ff.) that the horse and the appellations for its paraphernalia spread to the south, particularly among the Oromo and the western Cushitic speakers, in the 16th cent. The sovereigns used the ↗mule for travel, though a decorated horse always accompanied the royal hybrid.

The underlying concept of horse N. was that the horse and its rider were strongly identified with each other. Both executed their duties in warfare, game hunting and sports so harmoniously that one could not attribute the achievements to one of them without being unfair to the other. Apparently, this conception developed out of the cultural assimilation of the Semitic- and Cushitic-speaking peoples, particularly the Oromo and the Amhara, whose interactions were intensified with the decline of the monarchy's power in the second half of the 18th cent. The use of horse N. culminated after the middle of the next century. The notion was expressed through the combination of ↗*abba* or ↗*abbaa* and the N. of a distinguished or most favoured horse. By custom, every horse was given a N., but it was only the one most favoured by the owner and groomed for a particular purpose whose N. was taken as a component of the owner's horse N. In exceptional cases, some owners had two or more horses to whose N. *abba/abbaa* was at-

tached. At times two or more contemporaries also used identical horse N., apparently without any conflict resulting thereof. Although the use of horse N. was by no means restricted to any social group, the samples so far collected belonged entirely to the notabilities. Examples: "Abba Qañňäw" = *ras* ↗Mäkʷännən Wäldä Mikaʾel, "Abba Mäla" = *fitawrari* ↗Habtä Giyorgis Dinagde, "Abba Fänqəl" = *däğğazmač* ↗Asfa Wäsän Kaśa, etc. No woman has been included in the list. The compilers have included the sovereigns in their lists, apparently having overlooked the significance of the change of N., rank and prestige through coronation. As long as they counted among the *mäkʷanənt* (↗Aristocracy) or *mäsafənt* (as the case may be) and retained their mundane N., the would-be sovereigns had horse N. of their choice. For instance, "Abba Taṭäq" Kaśa = *aṣe* ↗Tewodros II, "Abba Gahid" Gobäze = *aṣe* ↗Täklä Giyorgis II, "Abba Bäzbəz" Kaḥśay (also Kaśa) = *aṣe* ↗Yoḥannəs IV, "Abba Daňňäw" Mənilək = Śahlä Maryam (= *aṣe* ↗Mənilək II), and "Abba Ṭäqəll" Täfäri = *aṣe* ↗Ḫaylä Śəllase I. None of the available sources combines the horse N. and the regnal N.

The conceptual terms used to form the N. of a horse may roughly be categorized in the following three groups: (1) colours of the horse: *sanqo* or *gurračča*, 'black'; *dama* or *dima*, 'reddish'; *daläč* or *dales*, 'grey '; *sənde*, 'wheat-coloured' etc.; (2) nominals with certain implications understandable for contemporary society: *dina*, 'enemy' (usually referring to the Oromo); *təntag*, 'firebrand'; *ğahid* or *ğəhad*, *'ğihād'* (allusion to Muslims); *mäla*, 'unriddling'; *ṭəggu*, 'refuge'; *baḥər*, 'sea'; *mädoša*, 'hammer'; *šäyṭan*, 'Satan, demon' etc.; (3) imperative forms of verbs of motion or action: *səbär*, 'break ... [it, them, etc.]'; *daňňäw*, 'administer justice'; *bäzbəz*, 'rob, plunder'; *gässəṭ*, 'rebuke, censure'; *qañňäw*, 'survey, spy' etc. It should be emphasized that it was the owner (and not the horse) that was referred to by the composite appellation ("Abba" + "..."), though one is at the same time reminded that a particular horse was involved in the uttered sobriquet. Hence, the second component (i.e. the actual N. of the horse) was carefully chosen to reflect the character, achievements, prestige or ambitions of the owner (cf. MahHorse 195–202; Čä Färäsä 2005:73–87), for it was a custom for poets and singers to speak praising, critical or inciting lines in relation to the horse N. In fact, it appears in many cases that the first horse N. was attached by the artists and the public at large, though probably not without the approval of or even the surreptitious initiative of the notable in question.

When, how and under what circumstances the chosen horse N. was made public has not been recorded. An oral tradition collected from Šäwa in the late 1960s alleges that occasionally groups of youths underwent a kind of ↗initiation to manhood in which they demonstrated their horsemanship and in which each announced his horse N. On the other hand, a chronicler of Goğğam recalls an anecdote (cf. Girma Getahun 1991, ch. 24) which alleges that *däğğazmač* Kaśa (later *aṣe* Tewodros II) requested a notable of Goğğam either to give up his horse N. in his favour or to suggest a horse N. which he could use, although he was no longer a youth. The arrogant notable suggested a term which implied that the ruler's political attempt was futile, an incident which enraged Kaśa violently and prompted him to undertake a military campaign against the notable.

Ñaŋatom

Ñaŋatom language

Ñ. (Nyangatom, also known as Donyiro, Dongiro, or Bume) is an Eastern ↗Nilotic (↗Nilo-Saharan) language spoken by ca. 14,000 people in south-western Ethiopia and the neighbouring Sudan. It is part of a dialect cluster known as the Teso-Turkana group (also "Karimoğoŋ cluster"), which further includes varieties like Dodoth [*Dodoṯ*], Ğie, Karimoğoŋ, Toposa, ↗Turkana and the more distantly related Teso language.

Ñ. consonants are: labials *p*, *b*, *m*, *w*; alveolars *t*, *d*, *s*, *n*, *l*, *r*; palatals *č*, *ğ*, *ñ*, *y*; velars *k*, *g*, *ŋ*.

Ñ. has a terraced-level tone system with high and low tone, downstep, and downdrift. As is common with languages in the area, it employs

how much a N.a. is appreciated is the level of support he receives from his spiritual children. Throughout the year two mandatory visits to the N.a. take place. The first is on the feast of *Däbrä Zäyt* (mid-Lent), when the "spiritual children" visit their spiritual father and bring him money (in the case of town dwellers) or grain (for those in the countryside), an income upon which the N.a.'s family is relying. Those who visit the N.a. may be offered ↗*ṭälla*-beer or *ṭəre* (grains) prepared by the priest's wife. The second visit takes place on the feast of *Däbrä Tabor* (the Transfiguration, 13 *Näḥase*). Besides, the N.a. visits those who were not present at the church service of Palm Sunday and were therefore unable to attend the Absolution (↗*Fəṭḥat*) of those who might die during Holy Week. This visit, during which neither food nor drink are offered, is important because no funeral services are held during the Holy Week (cp. ↗*Gəbrä Ḥəmamat*).

The N.a. has an active involvement in all important decisions, and his advice is always taken into consideration. Called after a birth, he purifies the home with holy water and arranges for the infant's ↗baptism. He is involved in ↗wedding arrangements, whether sacramental or not (cp. ↗Marriage; ↗Matrimony). When someone is dying, the N.a. accompanies him, and his family, during his/her last days. During this time he will hear the person's last confession, absolve him/her and may, although extremely rarely, celebrate the Anointing of the Sick (↗*Qändil*). He may administer the last Eucharistic communion, celebrating Liturgy (↗*Qəddase*) in the nearby church and bringing the Eucharist to the person's home with the assistance of a deacon; otherwise, he would celebrate Liturgy in a tent erected near the house by the community. The N.a. is instrumental in receiving the dying person's last will (↗*Nuzaze*) and disclosing it in due time, normally at the ↗*täzkar* of the 40th day.

The ministry of the father confessor may have existed in Ethiopia since the introduction of ↗Christianity or at least since the development of the monastic movement there. Indeed, both spiritual guidance and penance are linked with the monastic tradition. The latter found from the start its evangelizing outlet in the ministry of the holy monks who were consulted by pilgrims eager to obtain an advise that would set them on the right way, or who took spiritual care of newly converted Christians. The ministry is well-described in some writings of the Canon ↗law adopted by the Ethiopians. Four books of the Ethiopic *Senodos* repeat the canon which exhorts bishops, priests and even deacons not to violate Jesus Christ's word saying that there will be great joy in heaven for one sinner who repents (Lk 15:7; cp. Metzger 1985:171ff.). However, it is not known how exactly the institution of N.a. was embedded in the society during the early period. The revival of the ministry is ascribed to *aṣe* Zär'a Ya'əqob, who enforced it to ensure that his religious reforms would reach each family (TadTChurch 238). In the *Mäṣḥäfä* ↗*milad* Zär'a Ya'əqob invokes the ministry referring to both the ↗*Didəsqəlya* (Harden 1920:33f. [ii.20]; Platt 1834:42) and ↗*Senodos* (Horner 1904:5).

Historical sources refer to the ቄስ፡ሐፂ, *qes ḥaṣe* (or /ሐፃይ, *ḥaṣäy*), or the monarch's personal confessor, the position of considerable importance throughout centuries: *qes ḥaṣani* Zäkaryas and Zä'adonay of ↗Lalibäla (CRDLib 13, no. 6; 16, no. 7, resp.); *qes ḥaṣe* (*ḥaṣäy*) Zakaryas of *aṣe* ↗Zär'a Ya'əqob (CRAxum 25, no. 17; Kropp 2005:119, 133; cp. PerrZarY 38); ↗Aśärä Krəstos of *aṣe* ↗Yoḥannəs I; Matewos of *aṣe* ↗Iyasu I (GuiIohan 63); ∃lfəyos of *aṣe* ↗Iyasu II (GuiIyas 29) etc. (the last having been *abba* ↗Gäbrä Ḥanna Ǧimma).

Among the ↗Betä ∃sra'el, every adult has a N.a. who serves as a spiritual guide and confessor.

Näfṭäññä

The Amharic term N. (ነፍጠኛ) means originally: 'someone carrying a muzzle-loaded rifle', i.e., a soldier in *aṣe* ↗Mənilək II's army in the 1890s. The word probably derives from the older Arabic word *näfṭ* for what was then called "Greek" or "liquid" fire (explosives) and subsequently for rifles (Ferrier in EI² vol. 7, 884ff.; Pankhurst 1971:48). The term N. was known under the 17th-cent. *aṣe* ↗Susənyos (s. Strelcyn 1964:262) and was also used in the 18th cent. by *aṣe* ↗Bäkaffa, who was said to have used Muslim N. in his army (Pankhurst 1971:51). It came in vogue in the last decade of the 19th cent., although it was also used for *aṣe* ↗Tewodros's rifle soldiers (cf. GueCop-Men 103). Its popular meaning in the 20th cent. became: descendant of soldier-settlers or armed immigrants associated with the invading imperial army and living in the conquered southern parts of Ethiopia (cf. KaneDic 1086). So this included non-gun bearing people (women and children) who happened to be born in the area after their fathers' migration. In pre-19th-cent. sources, settlers or migrants from northern Ethiopia moving to the south in earlier times were not called N., as they were mostly religious functionaries (Orthodox priests and monks, Muslim preachers) and traders. Its contemporary meaning, especially since 1991 when a new regime came to power in Ethiopia, has become very pejorative and polemic, indicating something like "violent, illegal northern settlers on southern Ethiopian lands not theirs, mostly Amhara, with a domineering/arrogant attitude". The use of the term N. in ideological, ethnicized discourse, especially on website polemics and in partisan literature, has become widespread, but is a largely sterile term of insult. As a result, the historical complexity of the phenomenon of N. is conveniently forgotten, and a now diffuse and pan-ethnic category of people tends to be labelled thus in terms of "collective guilt".

Historically then, the N. were the Ethiopian emperor's riflemen, usually of different ethnocultural background, who secured the conquest and manned the state's garrisons (↗*Kätäma*, which later evolved into villages and towns), receiving tributary rights over people (↗*gäbbar*, for forced *corvée* labour and produce) or land, either expropriated from local people or claimed from vacant, unused space. In pastoral areas, however, this system did not successfully take hold. The N.-*gäbbar* relationship was fundamentally exploitative and deeply resented (cf. McClellan 1988:72; Alexander Naty 2002:60). The number of *gäbbars* per N. household differed; it could be from two to ten for a common soldier, but might rise to 30 to 80 for an officer or district chief (BrHad 307). For the ↗Gideʾo area even higher numbers were reported (McClellan 1988:64f.). N. land rights were based on grants allocated by the Emperor, as owner of all conquered or newly incorporated areas. There was a variety of forms, and land was also bought.

As the army of *aṣe* Mənilək had soldiers from many regions, but especially from central Ethiopia, mainly N. of ↗Amhara, ↗Oromo, ↗Gurage and ↗Təgray and Orthodox-Christian background settled in the south. Being mostly Orthodox, they cherished their own civilizational identity as above that of the local people, who adhered to traditional-local religions or cults.

The original numbers of N. in the South are difficult to determine exactly, but in view of the size of the various imperial armies led by, e.g., *ras* ↗Täsämma Nadäw, *ras* ↗Wäldä Giyorgis Aboyye and others (each ca. 20,000 to 30,000 men), they counted probably not more than a 100,000 people, expanding steadily as new arrivals came and families were established. Their position of power, buttressed by armed force and exploitation especially in the early decades after the conquest, was highly unpopular and contested – but only occasionally by collective armed revolts (cf. Abbink 1992:81; Garretson 1986:205; cf. McClellan 1988:73). Only in later years a *modus vivendi* evolved whereby patterns of co-operation, incorporation or accommodation developed between local people and settlers. In the wake of the armed settlers other groups, like traders, farmers, Orthodox priests, administrators, etc. also arrived, and were by implication reckoned as "N." as well. This second wave of settlers, however, faced conflict with the established N. in several places (cf. McClellan 1998:187f.). The more important land-holding elite among the N. became known as ↗*mälkäññä*, and many of the lo-

cal indigenous elite were integrated into the new system of power. Over the years, N. were partly "indigenized" – there was inter-marriage with local people (often with members of leading families), they adopted the local language and became well-rooted in local society, although politically and economically they remained the power elite.

The record of the N. in southern Ethiopia varied widely, with some having a reputation of gross abuse and arbitrary exploitation, while others integrated and co-operated with local people. In some areas, like ↗Arsi, ↗Mağı, Gideʾo and ↗Dime, rule by state agents and N. in the era up to World War II was severe, leading to great human suffering, economic and social crisis, and depopulation in some areas (cf. Haberland 1993:13, 188; Todd 1979:215f.). Similarly oppressive conditions, however, also existed in parts of north- and central Ethiopia, like in the Goğğam Amhara region under *ras* ↗Ḫaylu Täklä Haymanot.

In the wake of the Italian conquest of Ethiopia, many N. were attacked or forced out by their *gäbbars* and members of the indigenous-local elites. After the Italians left in 1941, various patriots (*arbäññočč*) were rewarded by *aṣe* ↗Ḫaylä Śəllase I with land grants in southern areas (not in those where they had fought) and became 'landlords' (↗*Balabbats*) in their own right, but they differed from the N. in regard to social background, ambitions and power position.

In Ḫaylä Śəllase's reign since 1930, marked by centralization and state reform, the reign of N. and their leaders was curtailed, and abuse discouraged and sometimes sanctioned by fines and demotion. N. were gradually replaced by salaried police and army forces. In 1941 the N.-*gäbbar* system was formally abolished. The feudalist system of patron-client labour relations, however, did not fundamentally change. Most former *gäbbars* became tenants, often in a much worse position. Local *balabbats*, many of northern N. descent, remained the pivotal power brokers. In the post-war years up to the Ethiopian revolution, people of N. background, due to their knowledge of Amharic and their wealth or better educational profile, were often the contact people for the national government in the peripheral areas, as administrators, civil servants, teachers, entrepreneurs, etc., but the N. as such disappeared.

After the demise of the Empire in 1974, the revolutionary-Marxist *Därg* regime (↗Provisional Military Administrative Council) decried the record of the "exploitative feudal class" to which the descendants of N. were seen to belong (often as *balabbat*) and their gradual decline of fortune became visible. Many were forcefully dispossessed, especially after the 1975 land reform (leading to nationalization and expropriation). Their social decline accelerated after 1991, when the new government intensified an ideological campaign against perceived northern ("Amhara") "oppressive classes" or elites in newly defined "ethnic" areas, notably in the south. In statements read to local ethnic communities after the take-over of power, the N. were explicitly mentioned as the former "oppressive class" from which the new regime had come to liberate the people. Despite the tide turning against them and their being vilified on often unspecified, ideological grounds, descendants of N. have survived and adapted, and the majority of them still live in their areas of birth, forming a diffuse category of people.

Nägädä Iyäsus

N.I. (ንገደ፡ ኢየሱስ, b. 15th cent., d. 15/16 February 1534), according to a note in the Kəbran Gospel, was a *liqä liqawənt* (↗*Liq*) when Tewologos was

↗*ᶜaqqabe säᶜat* of Däbrä Ḥayq Ǝsṭifanos during the reign of *aṣe* Naᶜod (ms. Kebrān 1, fol. 4v); N.I. became *ᶜaqqabe säᶜat* under *aṣe* ↗Ləbnä Dəngəl (CRAxum 29–41).

A contemporary of the Portuguese mission, N.I. met Francisco ↗Alvares, and was still at Ləbnä Dəngəl's court during the war against ↗Aḥmad b. Ibrāhīm al-Ġāzī "Grañ" (BassHist 326f.). N.I. held a high position at the royal court, and Alvares reports that one of N.I.'s sons married the Emperor's sister Romanä Wärq – an indication that, while being an *ᶜaqqabe säᶜat*, N.I. belonged to the married clergy and was not a monk (BeckHuntAlvar 108, 270f., 286, 305, 326f.).

During the 16th cent., the *ᶜaqqabe säᶜat* seems to have had scant links with his own Ḥayq community, N.I. spending most of his time at the royal court. However, he kept his control over the community as attested by the two documents preserved in the so-called Gospel book of Iyäsus Moᵓa (EMML 1832, fol. 184v, 269r). Most probably his authority was held by his representative at the monastery, the *afä ᶜaqqabe säᶜat*. During his charge there were at least two *afä ᶜaqqabe säᶜat*: Luqas and Kəflä Yoḥannəs (Ṗāwlos Ṣādwā 1952:25; EMML 1832, fol. 184v).

A powerful ecclesiastic and courtier, he was also one of the main opponents of *əčč̌äge* ↗ᶜƎnbaqom of Däbrä Libanos of Šäwa (RicEnbYoh IV, 85, 130f.).

The career of N.I. came to an end in 1532 when Däbrä Ḥayq Ǝsṭifanos was sacked by the soldiers of Aḥmad Grañ. N.I. fled together with *aṣe* Ləbnä Dəngəl. Finally, N.I. was captured and killed by Grañ's soldiers on 21/22 *Yäkkatit* 1526 A.M. [15/16 February 1534], according to the "Short Chronicle" and the first chapter of the Chronicle Śärṣa Dəngəl (KrLebD 14; DombrChr 163; BassÉt 105). The name of his successor is unknown. It could have been be a certain *ᶜaqqabe säᶜat* Yoḥannəs who was in charge during Ləbnä Dəngəl's reign (EMML 1942, fol. 85r).

Nağāḥids

The N. were a dynasty of Ethiopian slaves with their capital in Zabīd in Tihāma, the Red Sea coastal plain of ↗Yemen, where they ruled between the years 1022 and 1158. Their history is best described in the account of ᶜUmāra (d. 1174), though this author confuses facts and fiction and seldom provides precise dates. Other Arab writers largely depend upon ᶜUmāra's text.

The N. history begins with the arrival of Nağāḥ in Zabīd in 1022. Nağāḥ, previously a slave governor of the Ziyādids, a dynasty in control of Tihāma during the 9th and early 10th cent., took over affairs outside Zabīd, while his brother, Nafīs, ruled within the town. The latter, however, was soon ousted by the former and Nağāḥ received a diploma from the Abbasid caliph in Baghdad and was able to assume the insignia of royalty, strike his own coins and have his name inserted in the *ḫuṭba*. N. territory expanded northwards as far as Ḥaraḍ. The highlands remained in the hands of various other ruling houses, such as the Šīᶜī Ismāᶜīlī Ṣulayḥids of Ṣanᶜāᵓ and Ḏū Ǧibla, that rose to particular prominence in ca. 1047. Their history is closely connected to that of the N. The first Ṣulayḥid, ᶜAlī, is said to have poisoned Nağāḥ in 1060 and, in the ensuing confusion, occupied Zabīd. Two sons of Nağāḥ fled to the ↗Dahlak islands in the Red Sea. Two other sons, Saᶜīd (nicknamed al-Aḥwal, 'the cross-eyed') and Ǧayyāš, decided to regain power. They emerged in Zabīd killing ᶜAlī the Ṣulayḥid and kidnapping his wife, Asmāᵓ, in 1081. The large number of Ethiopian slave troops rallied to Saᶜīd and he was recognized as lord. ᶜAlī's son, al-Mukarram, rescued his mother in 1083 and the N. were once again compelled to flee to Dahlak; Ǧayyāš fled further to ↗India. In 1086, Saᶜīd was able to return as ruler, but he was put to death in 1088 at the instigation of the Ṣulayḥid queen, as-Sayyida Arwā, al-Mukarram's wife. Ǧayyāš returned to regain power in Zabīd in 1089. With his death in 1105 or 1107, the information becomes even more scanty and confused as power over Tihāma swung to and fro between the N. and the Ṣulayḥids. Ǧayyāš's son, Fātik I, died young in 1109 and, after a period of rule by a *wazīr*, when Fātik's grandson Fātik II became ruler. Killed in 1137, he was followed by his cousin, Fātik III. The N. asked other parties for assistance in the Tihāma affairs, including the Zaydīs whose territory was centred in the northern highlands of Yemen. They agreed to help on condition that

Fātik III be deposed and the Zaydī *imām* be recognized as lord of Zabīd. The N. gave their consent, but in 1156 another local Tihāmī dynasty, the Mahdids, entered Zabīd and murdered the last N. slave minister, essentially putting an end to the house. The dynasty itself finished with the death of Fātik III in 1158.

Other aspects of N. political history and social life in Tihāma under them are undocumented. It is known that, like the Ziyādids before them, the N. constantly brought over shiploads of Ethiopian slaves to Yemen to join their armies and populate the potentially fertile Tihāma. A 13th-cent. source (Ibn al-Muğāwir ed. 1954:235) mentions that the new town of Ḥays was populated almost exclusively by Ethiopians brought in specifically for that purpose.

No great caches of N. coins have been found, but Lowick (1976) has described four, all minted in Zabīd, and undoubtedly N.

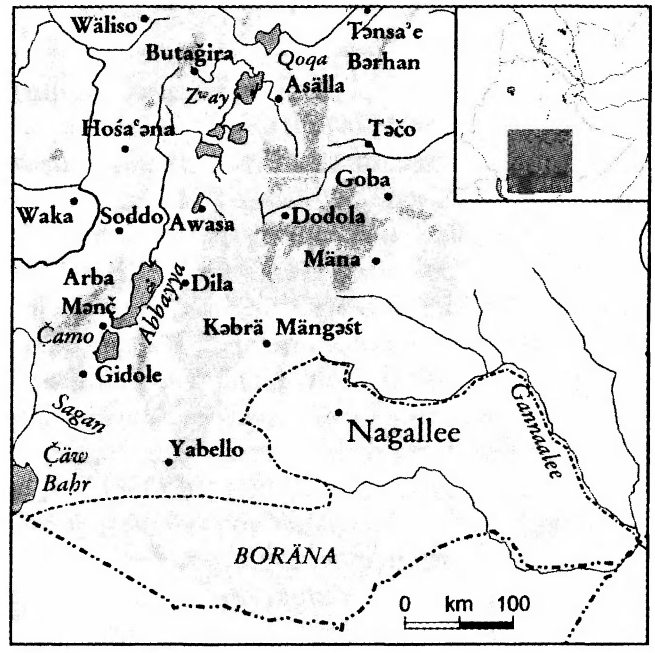
Nagallee

The town of N. (Nageellee, Amh. ነጋሌ, Nägale, 05° 17' N, 39° 42' E, 1,449 m A.S.L.) is located on the interfluve of the ↗Ganaalee river and the Dawa river, where plateau and highland meet.

N. was already a small town in 1936, when, after *ras* ↗Dästa Damṭäw attacked the Italians at ↗Dolo Odo in October 1935 and was defeated, Graziani counter-attacked and with the support of heavy bombing, took and razed the town to the ground on 20 January (Guida 597; Gentizon 1936:12–32). N. served as a sanctuary for the regular army during the Bale revolt led by Waqoo Gutu (Gebru Tareke 1991:125–59; Gilkes 1975:214–26). In early 1974, the garrison stationed there to keep an eye on the activities of the Western Somalia Liberation Front rebelled, at the same time as the troops engaged in Eritrea.



Until the 1987 reform N. was the capital of the Boräna *awraǧǧa* of the Sidamo region, up to 1991 it was the capital of the Boräna region. For some years it was then the capital of the Libän *wäräda* and of Boräna zone, Oromiyaa *kəllәl*. Today N. belongs to Guǧǧi *wäräda*, while the capital of Boräna zone shifted to ↗Yabello.

Between 1970 and 1984 the Boräna *awraǧǧa*, affected by Oromo and Somali guerrilla warfare and droughts, saw its population decline from 122,500 to 104,113 inhabitants. In 1984 N. was only a small administrative centre with a population of 11,997 inhabitants, an inflated figure because of the presence of soldiers. With peace progressing in the region since 1991 the population has been expanding quickly and it is now roughly 25 % of the total figure for the Libän *wäräda*. It rose from 32,289 inhabitants in 2000 to over 39,000 inhabitants in 2004 and even 47,763 inhabitants in 2005. This urban growth caused by the influx of pastoralists has been accelerated by an improved road network and better administrative framework.

Nägärä haymanot

N.h. (**ነገረ፡ ሃይማኖት**, 'The Account of the Faith') is an Amharic treaty synthesizing the ↗*Karra* views of the history and doctrines of the Unctionist (↗*Qəbat*) and Adoptionist (↗*Ṣägga ləğ* or ↗*Śost lədät*) religious movements. It was most probably written after the council of ↗Boru Meda in 1878.

Seven copies of the N.h. are known, in private possession of ecclesiastics and intellectuals (mss. EMML 1710, 2906, 2950, 4641), or in monastic libraries (↗Moṭa Giyorgis in Goğğam; churches in Šäwa: mss. EMML 1533, 1648). Extracts sometimes appear under other titles (e.g., *Nägärä guba'e zä'abäw*, 'Account of the Council of the Fathers'; s. Berhanou Abebe 1994). The N.h. has not been edited; summaries have been published by Gäbre-Yesus Haylu (in PICES 1, after ms. EMML 2906) and Kindeneh Endeg (2004, ch. 1, after the ms. from Moṭa Giyorgis).

The N.h. narrates how, ever since the time of Pope Leo I, it was the Alexandrian Church alone (including the Ethiopian Church) that preserved the true doctrine of two births and one nature of Christ. It was the only belief in Ethiopia throughout the Aksumite times, after the ↗"Nine Saints", during the ↗Zag^{w}e era, under *abba* ↗Gäbrä Mänfäs Qəddus, and in the age of ↗Ewosṭatewos, until the Europeans came and preached one person and two natures. According to the N.h., Alfonso ↗Mendes (here "Awfänyos"), after being expelled by ↗Fasilädäs, stopped at ↗Fəremona on his way to the Red Sea and indoctrinated two Ethiopians from Goğğam: "Dəhu" Ewosṭatewos from Sänk^{w}a Giyorgis, Mäčča, and "Qurenč" Täklä Haymanot from Ğärr Gäbrə'el. They introduced the foreign teaching to their home areas, the former teaching the *Qəbat* and the latter the *Śost lədät* doctrine. They were defeated by *əčč̌äge* Bäträ Giyorgis in an oral dispute at Gondär, but went on teaching, making Goğğam the motherland of Ethiopian Orthodox heresies.

The N.h. then tells of the success of the *Qəbat* during *aṣe* ↗Yoḥannəs I's reign. Such doctrine is said to have been written down in the text referred to as **አዕማደ፡ ምሥጢር** (*A^{c}əmadä məśṭir*, 'Pillars of Mystery'). This work should not be confused with the ↗*Amməstu a^{c}əmadä məśṭir*, a well-known *Täwaḥədo* writing, but can probably be identified with the text known in Goğğam as *Mäṣḥafä məśṭir*, one of the few *Qəbat* versions of the history of the theological schools from the 16th to the 18th cent., which is attributed to *abba* ↗Zəkrä Maryam and *abba* ↗Ṗawli. The N.h. states that ↗Dawit III also supported the *Qəbat* party and persecuted the *Täwaḥədo* supporters.

Concerning the *Ṣägga ləğ*, or *Śost lədät*, party, the N.h. narrates how the 18th-cent. Šäwan ruler ↗Ammənḫa Iyäsus protected three *Ṣägga* monks from Tädbabä Maryam. His son ↗Asfa Wäsän grew up with their teaching and, on coming to power, imposed the *Ṣägga* doctrine on Däbrä Libanos, promising the monks to give them back their lands, which constituted one third of the Šäwan territory. All churches and monasteries in Däbrä Libanos's influence zone were thus expected to accept the *Śost lədät* doctrine as taught by "Qurenč" Täklä Haymanot, as the true doctrine of *abba* ↗Täklä Haymanot. A *qəne* teacher of Tädbabä Maryam taught the doctrine to *^{c}aqqabe sä^{c}at* Käbte (fl. ca. 1760–80), who in turn spread it to Gondär. It was *aṣe* ↗Tewodros II who eventually put an end to this dissent by choosing the *karra* doctrine as the one and only true faith (cp. ↗*Hulätt lədät*).

The reception of the N.h. by *Qəbat* and *Ṣägga* traditions has to be further investigated. *Qəbat* traditions claim that the character of "Dəhu" Ewosṭatewos (whom they call *kähadi* ['the apostate'] Ewosṭatewos) was invented by their adversaries to dismiss the sanctity of their spiritual leader St. ↗Ewosṭatewos.

Nagärä Maryam s. vol. V

Nägärä Muse

N.M. (ነገረ፡ ሙሴ, 'The Colloquy of Moses [with God on Mount Sinai]', sometimes called *Gädlä Muse*) is the Ethiopic title of the apocryphon known as the *Colloquy of Moses with God on Mount Sinai.*

An English translation of the Arabic version, based on one ms., has been published by Curzon (1855), but many more mss. exist (s. GrafLit I, 207f.). A Syriac version of the *Colloquy*, with an English translation, was published by Hall (1891). Manuscript evidence shows that the apocryphon (ca. 4,000 words long in translation) originated earlier than the 15th cent.

The *Colloquy* is written in the form of a *Responsa*: Moses asks and God answers. The first part describes God's rewards for those who behave well – read prayers, give alms, take care of orphans etc. (cp. ↗*Kidan*) – and punishment for those who commit evil. The second part, beginning with God lifting up Mount Sinai and showing Moses the whole world, is devoted to the discussion of the nature of God.

N.M. was translated into Gəᶜəz from an Arabic *Vorlage*. In Ethiopic tradition, two versions exist; Christian and ↗Betä Ǝsraʾel. Differences between them are, however, minor. The Christian Gəᶜəz text, translated presumably by the 17th-cent. *abunä* ↗Krəstodolu, was published with a German translation by Goldschmidt (1897). A new German translation was made by Duensing (1958). Zuurmond (in StudAeth) published a general introduction to the *Colloquy*, with a partial English translation of the Gəᶜəz, Arabic and Syriac versions in three synoptic columns. A French translation of the Betä Ǝsraʾel text with a short introduction appeared in Kaplan (1990). An edition of the Betä Ǝsraʾel text does not exist but several manuscripts containing it are known: Paris BN d'Abbadie 232 (19th cent.), Tel Aviv Faitlovich nos. 8 and 14 (18th cent.), and at least one more in private hands.

Compared with the Arabic and the Syriac, the Ethiopic version is about one fifth shorter. A large addition in the Arabic and Syriac versions is of obvious Christian character. Numerous allusions to the ↗New Testament in the Ethiopic version make it likely that the text was originally introduced within the Christian context and was later adapted by the Betä Ǝsraʾel tradition. However, the ethics and theology of the Ethiopic version of the N.M. fit in with ↗Judaism and ↗Islam as well.

Texts with similar structure and contents exist in the traditions of Muslims of Mozambique (the known text in Swahili possibly originating in Kenya) and of 16th-cent. Spain (in Spanish in Arabic characters).

Nägarit

N. (Amh., Tgn. ነጋሪት, Tgr. ንጋሪት, *nəggarät*; Orom. *nagaariita*) is a kettledrum, the name of which is considered to derive from Amh. ነገረ, *näggärä*, 'to speak' (Ashenafi Kebede 1995:63; LesCDic 392). Alternatively, it can be related to the Arab. *naqqāra*, which is also a term for kettledrum (cf. BassHist 61, n. 2 [tr.]); a double kettledrum called *naqqara* is known in North Africa, e.g. among the Tuareg of the Sahara.

There appears to be two main types of N. in Ethiopia. One is the large cauldron shaped N. usually made of copper (sometimes gilded), or other metal. The drumhead, having a diameter of up to 92 cm, is struck with softheaded wooden drumsticks (one or two) or mallets. The N. has a head consisting of a stretched membrane hide mounted on a hoop held in place by a ring (counterhoop); through the ring pass threaded screws or rods that allow one to alter the pitch by adjusting the skin's tension. Sometimes an L-shaped turnkey is fitted to the screw for loosening or tightening the stretched membrane on the head. The N. were placed across the backs of mules with the players walking alongside striking them with mallets (Tesfaye Lemma 1975:28).

The N. of the other type are bowl-shaped, usually smaller and made from carved wood or hollowed tree trunks although the body can also be

made of clay, leather, or metal. The bowl-shape has a diameter ranging from 15 to 25 cm. The drum head uses prepared animal skin (or parchment) such as ox stretched over the head, but the skin can cover the entire instrument and be sewn together with cross cords tied round the middle of the lacing to increase its tension and alter its pitch (Marcuse 1975:357). These N. were played with beaters/sticks by men riding on horseback, where N. were placed at the player's waist and secured by a belt or harness (Tesfaye Lemma 1975:28).

The N. of both types utilize a basic rounded curved (bowl or cauldron) shape and have the capacity to have their drum heads tuned. The stretched head is attached to the top of the head or in the case of the second type, covers the head or the entire body. Size and materials determine the overall sound of the N.

Nägarit in Harär, announcing the arrival of Ḫaylä Śəllase I, 1934; from the Wochenschau film of Martin Rikli

The N. of the ↗Betä Ǝsraʾel, structurally identical to the Christian N., was a double-headed drum struck directly with the hands while the player was standing. Together with a small bell called ↗*qaṭ̌əl*, it could accompany religious service chanting (Shelemay 1986:76f., 184f.).

Historically, N. in Ethiopia belonged to the insignia of royalty and symbols of political power, alongside with ↗*mäläkät* and ↗*əmbilta* (also, the instrument known as *qända* – a small drum held under the arm and beaten with the hand – has been included as one of the royal insignia). N. accompanied every imperial proclamation or announcement and were often left standing near the throne. When a new emperor ascended to the throne, and when proclamations of national concern (↗*ʿAwağ*) were made, the N., together with the *mäläkät* and the *əmbilta*, would summon the people and proclaim the news. N. also heralded the approach of royalty or a person invested with political authority (like provincial governors). The kings and rulers sometimes donated their N. to churches and monasteries, as in the case of ↗crowns (CRHist 79 [text]). Finally, N. were war drums, used to summon the troops and to encourage them during combat; they were considered symbols of military honour (s., e.g. GueCopMen 28, n. 1, 431, 436, 444).

N.'s shape, size and material could often indicate the rank of their possessor. The N. belonging to princes had silver shells, and those of high officials were made of copper, whereas the N. of lesser persons were made of wood (Powne 1968:13f.). In the Ethiopian royal chronicles, a drum called ድብ፡ አንበሳ, *dəbb anbäsa*, obviously a kind of N. (s. Bairu Tafla in PICES 7, 366; DTWDic 327), is frequently mentioned as the emperor's largest drum (lit. 'bear-lion', PerrZarY 45, 61; CRHist 79, 130, 135 [text]; PerChron vol. 1, 332 [text]; cp. *dəbb wäʾanbäsa*, 'bear and lion', in LudHist II, 14, 18; Ludolphus 1682:218; cp. also HabKön 117, where it is derived from *dibbe*, a term for drum among many southern Ethiopian peoples; s. also LesCDic 119). Alongside with the *dəbb anbäsa*, a blown instrument called *məsr qana* or *nəsr qana* (probably a kind of *mäläkät* or *əmbilta*, cf. LesCDic 403; DTWDic 823) was usually played. The royal silver N. played a major role on occasions of state in the Gondärine kingdom in the early 17th cent. Thus, James ↗Bruce describes "... two kettle-drums of large size placed one on each side of the outer gate of the king's house [i.e. palace]", called "the lion and the lamb". "The lion is beat at the proclamations which regard war, attainders of conspiracies and rebellions, promotions to supreme commands... The lamb is heard only on beneficent, pacific occasions, of gifts from the crown, of general amnesties, of private pardons, and reversals of penal ordinances". The drum called the lamb was "...

of beaten silver; the Abyssinians say, that this metal alone is capable of conveying the sweet sound contained in a proclamation of peace" (BruNile vol. 1, 602).

Generally, the Ethiopian ruler gave a N. to a newly appointed governor or a tribal chief confirmed by him. Thus, after *aṣe* ↗Iyasu II granted Həbtes, the head of the ↗Ḥabab in Northern Eritrea, the title of *käntebay* (s. ↗*Käntiba*) and presented him with an N. and other insignia of this rank, N. came to be a symbol of the *käntebay*'s power, and its possession an essential element in the struggle for the title (d'Avray 1996:50f., 2000:19). Likewise, N. or similar drums were symbols of the king's power among the southern peoples, e.g., *nägara* among Šeko (VSAe III, 46). N. (one of silver and another of copper) were among the symbols of power of the king of ↗Käfa (s. GueCopMen 463). The Oromo and Somali also used N., and among them it also served as a symbol of power (Paulitschke 1893:148). In the ↗Təgre-speaking tribe of ↗Mänsaᶜ, N. could be used to accompany important announcements such as the declaration of a slave becoming a free man (s. Höfner 1952:658; Rodén 1913:101).

Today, the instrument's function is primarily ceremonial (Ashenafi Kebede 1995:63).

Nägarit Gazeṭa

The N.G. (ነጋሪት፡ ጋዜጣ, 'Gazette of the ↗*nägarit*') was the official journal of the Ethiopian government from 1942 to 1974. Previously, during the rules of *aṣe* Mənilək II and *ras* Täfäri Mäkʷännən (↗Ḫaylä Śəllase I), various imperial edicts were sporadically published (↗*Bərhanənna Sälam*), and some edicts were stuck to the gates of the municipality or made known to the people through the governors of various districts (cp. ↗*ᶜAwağ*).

The N.G. published the official laws of the government in Amharic and English. The first issue appeared on 21 *Mäggabit* 1934 A.M. [30 March 1942 A.D.] and ratified its authority, containing a provision that no law or by-law would be valid or come into force until it was published in the N.G. The new publication, required by the proclamation to be monthly, was not without problems: some regulations having the force of law never appeared in it (cp. ↗Customary law), and many laws did not appear in print until long after their promulgation. Nevertheless, the N.G. was an important step forward in the codification of Ethiopian laws according to modern practice. Having government actions officially proclaimed and immediately verifiable in print was a significant change for a monarchy where much political information was secretive or by word of mouth.

From 1942 to 1974, all major legislation, proclamations, appointments, and legal notices of the Imperial Ethiopian Government were published in the N.G. Among the first laws appearing in the publication were those setting out the pow-

ers and responsibilities of the various ministers; a law creating and defining the provincial administration of Ethiopia; the establishment of the State Bank of Ethiopia; and "The Slavery (Abolition) Proclamation" of 21 *Näḥase* 1934 A.M. [27 August 1942 A.D.] that made it an offence punishable either with imprisonment or death for any person to deal with, or to transport a slave, or to prevent one from asserting his freedom.

The N.G. chronicled the development of modern, post-restoration institutions in Ethiopia in their founding proclamations: e.g., the Administration of Justice Proclamation setting up the court system; the Imperial Army Proclamation; the organization of the Defence Ministry and the Imperial Board of Telecommunications of Ethiopia; the setting up of the Ethiopian Airlines Corporation, the Addis Ababa Chamber of Commerce, and the Ethiopian Red Cross Society. Among public policies announced in the N.G. were: the "Currency and Legal Tender Proclamation" introducing a new Ethiopian currency in place of the East African Shilling and ↗Maria Theresia Thaler (the N.G. of 8 *Ḥamle* 1937 A.M. [15 July 1945 A.D.]); the first revised customs schedule in 1943; and the first (1944–45), and succeeding national budgets. Changes in government structure such as the ↗Ethiopian–Eritrean Federation of 1952 were also made public by "The Federal Legislation" printed in N.G.

With the restoration of Parliament in 1942, laws passed by both houses and approved by the Emperor were published in the N.G. preceded by the preamble: "Conquering Lion of the Tribe of Judah, Haile Selassie I, Elect of God, Emperor of Ethiopia. In accordance with Article 34 of Our Constitution We approve the resolutions of Our Senate and the Chamber of Deputies and We proclaim as follows: (...)" The end of the proclamation then was signed by the Minister of the Pen (↗*Ṣäḥafe təʾəzaz*). All bylaws were published above the signature of the Minister concerned.

The Minister of the Pen was empowered to publish the N.G. by the Ministers' Order of 1943. When ↗Aklilu Habtäwäld became deputy Prime Minister as well as Minister of Pen, he used his supervision of the N.G. to advance his own purposes. For example, in 1958, instead of going through the Council of Ministers, Aklilu used the N.G. to announce an increase in the powers of his brother Mäkʷännən Habtäwäld – to the surprise of the other ministers concerned.

The Government of the Federal Republic of Ethiopia recovered the name of the N.G. for its official journal, the *Federal Nägarit Gazeṭa* (1st issue in August 1995). Ethiopian regions may have their own official journals (e.g., *Nägarit Gazeṭa Təgray).* In independent Eritrea, the function of the N.G. is carried out by the *Gazeṭa Awağat Erətra.*

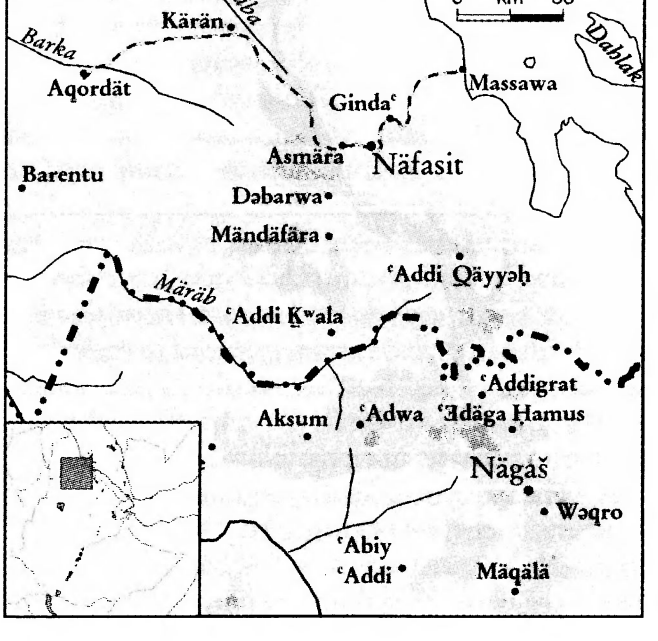
Nägaš

N. (ናጋሽ, 13° 53' N, 39° 36' E) is a small village lying along the main Mäqälä–ᶜAddigrat road ca. 10 km north from ↗Wəqro, in a mountain pass dominating the Gunfäl valley (s. Guida 300) in historical ↗Ǝndärta.

The village has ca. 1,500 inhabitants, half of them Muslim and half Christian. There is a local tradition of the Italian presence in N.; most probably it was used as a camp during the military campaign. On top of the N. pass, a rock still shows an Italian inscription "Passo Negasc anno XIV E.F." ('N. pass. 14th year of the Fascist Era [= 1936]').

N. is perhaps the most important holy place (↗*Zāwiya*) for Muslims not only of Ethiopia, but also of the entire ↗Horn of Africa, as it hosts the shrine of the ↗*Nağāšī* and the tombs of twelve of ↗Muḥammad's companions (*ṣaḥāba* or *aṣḥāb*) in the first ↗*hiğra* of 615. The asylum



Mausoleum of the *Nağāšī* at Nägaš; photo 2006, courtesy of Alessandro Gori

that the righteous king of al-Ḥabaša (i.e. Ethiopia; s. ↗Abyssinia), in whose kingdom "no one suffers injustice" – as underscored in *as-Sīra an-nabawīya*, granted the Muslim refugees led by ↗Ğaᶜfar b. Abī Ṭālib, and the subsequent conversion of the king to ↗Islam is the most revered tradition north-east African Muslims have about their origins (Ahmäd Ahmädin n.d.; Muḥammäd Šakir 1995/96, Muḥammäd Ṭoyyəb 1998/99; Sayyid b. Muḥammad Ṣādiq 2001:91–135). This tradition gives Muslims of the Horn the confirmation of the antiquity of their presence *vis à vis* the Christian state and, simultaneously, it allows for a certain prestige in the eyes of their co-religionists in the Arabian Peninsula (↗Arabia), as it makes their home the second region in the world to have been touched by the Islamic message.

The existence of this holy site is mentioned for the first time in the ↗*Futūḥ al-Ḥabaša. Imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī, during his conquest of Təgray in 1533, in pursuit of the *šum ᶜagame* (the Ethiopian governor of ↗ᶜAgamä), passed by the tomb of Aḥmad an-Nağāšī (which was also the name he had given to his child born shortly before). The troops wanted to visit the shrine but the *imām* compelled them to proceed to meet their enemy, promising that they would come back the next day for the *ziyāra* (↗Pilgrimage) – a promise that was perhaps not possible to keep (BassHist 318). The passage in the *Futūḥ* is also important as it attests to the use of the name Aḥmad attributed to *an-Nağāšī*, instead of al-↗Aṣḥam [or Aṣḥama] b. al-Abğar, which is the name currently preserved in Arabic sources. As Basset remarks (BassHist 318 n. 7), the name Aḥmad has been glossed, in the margin of the *Futūḥ* manuscripts, with *al-maᶜrūf Aṣḥama an-Nağāšī* ('the famous Aṣḥama an-Nağāšī'): this comment seems to prove that Aḥmad was not the universally known name of the *Nağāšī*, and one can surmise that this name originates from a local tradition. Ahmäd Ahmädin (n.d.:3) says that, in one of Muḥammad's letters, the *Nağāšī* was called *wändəmme Ahmäd* ('my brother Aḥmad'), but this seems rather to be a corrupted reference to the incipit of the first letter sent by the Prophet to Aṣḥama, *Aḥmadu ilayka Allāh* ('I commend God to you').

The holy place is presently contained in a wide compound with two green domed buildings. Both are recent, no trace of older remnants is found. The bigger building hosts the shrine of the *Nağāšī*, the smaller one that of the *ṣaḥābī* ᶜUday b. Naḍla (whose name is variously spelled in the sources), the first Muslim refugee to die in Ethiopia.

In the yard between and in front of the two buildings, other scattered ground tombs are those of the companions of the Prophet. An inscription on the left side of the main building, dated 1418 H. [1997/98 A.D.], gives the name of ᶜAbdarraḥmān al-Ğabartī as that of the person buried in a covered tomb.

Outside the holy graveyard, a big ↗mosque has been built with the financial support of the Ethio-Yemeni-Saudi millionaire Muḥammad Ḥusayn al-ᶜAmūdī.

The *ziyārat an-Nağāšī* is on the *ᶜĀšūrāʾ* day (10 *Muḥarram*), when thousands of pilgrims come to show their reverence to the king from all over the Horn of Africa and the Sudan.

The village also has another Islamic holy place: the tomb of *šarīf* ᶜAbdī (or ᶜAmday), a recently built or re-built anonymous shrine on the right side of the main road from Wəqro, some 300 m from the *Nağāšī* area. Every Thursday night a ceremony is performed in honour of the holy man whose epithet *šarīf* points to a noble descendant of the Prophet, but apparently no periodical *ziyāra* is performed for him.

There are two churches inside the village of N., one dedicated to the Lord and one (under con-

struction in 2006) to *abunä* Täklä Haymanot. Some 5 km outside the village, to the left of the road to ᶜAddigrat, on top of a hill, the monastery of Amanuʾel Maᶜagʷä dominates the valley. Some 2 km outside the village, the church of St. Mary stands on a slope, to the left of a bend on the road descending to Wəqro. Islamic sources (Sayyid b. Muḥammad Ṣādiq 2001:134) mention that this church was built on the site of the grave of the wife of the *Nağāšī*, who died as soon as she heard about her husband's conversion to Islam.

Nägaš Bäzzabbəh

Däğğazmač N.B. (ንጋሽ፡ በዛብህ, b. 1908, d. 1964, Nähase) was a ↗resistance fighter and political figure. His grandfather was *ras* ↗Bäzzabbəh Täklä Haymanot. During the ↗Italian war 1935–36, N.B. fought against the Italians with other Goğğame patriots. Some saw him as a weak leader who failed to control his sub-chiefs. When ↗Ḫaylä Śəllase I and his British allies selected Goğğam as the region to begin an offensive against the Italians (1940), N.B. joined the united front that worked for Ḫaylä Śəllase's restoration.

After the Emperor's return to power, N.B. became vice minister in the Prime Minister's office and then President of the Senate (1942–43). In 1951, he became involved in an unsuccessful conspiracy to assassinate Ḫaylä Śəllase. Some of the plotters hoped to enthrone N.B. while others advocated the creation of a republic under *ras* ↗Ǝmməru Ḫaylä Śəllase, who at the time had been Ethiopia's ambassador to Washington D.C. and had nothing to do with the attempted *coup*. The conspiracy was uncovered and N.B. was arrested, tried by the Emperor's Special Court and condemned to death. He subsequently received a pardon from Ḫaylä Śəllase and lived in exile in Ǧimma.

Nağāšī

N. (Arab. النجاشي, always with the definite article) is a loanword borrowed by Arabic from ↗Gəᶜəz *nägaśi* (cp. also the borrowing into ↗Epigraphic South Arabian, *ngs²y*, which stood for 'the king [of Aksum]'; s. Beeston et al. 1983:93, s.v. *ngs²*). For the detailed discussion of the term s. ↗*Nəguś*.

In Islamic texts, N. is specifically used for the king of Aksum at the time of the first ↗*hiğra* of ca. 615, indeed ↗Aṣḥam[a] b. Abğar (i.e. b. *al-Ḥataza, 'son of [Ǝllä] ↗Ḥataz'?) or ↗Ǝllä Ṣäḥam (r. ca. 603–23; cp. SerHist 185; Hartmann 1895; cp. ↗Armaḥ). The most detailed information about this N. is found in the biography of the Prophet Muḥammad (*Sīra*) by Ibn Isḥāq (d. ca. 770 A.D.), revised and completed by ↗Ibn Hišām (tr. by Guillaume 1955).

According to the *Sīra*, the N. received the newly converted Muslims hospitably, and refused to expel them, as the ↗Qurayš wanted. At an audience, he questioned the Muslims as to what this religion, for which they had forsaken their own people without embracing Christianity or any other religion, was. In his answer, ↗Ǧaᶜfar b. Abī Ṭālib praised Muḥammad's achievements and underlined that Muslims worship God alone without associating anything with Him (referring to polytheism, but also to the ↗Trinity, cp. Qurʾān, *sūra* 112). By an evident *vaticinium post factum*, Ǧaᶜfar, in order to show that Muḥammad had received a divine revelation, recited a few verses from Qurʾān's *sūra* 19 (alluding to the same tradition as Lk 1), and the N. and his bishops were deeply moved. But ᶜAmr b. al-ᶜĀṣ, one of the two messengers from Mecca, told the N. in private that the Muslims consider Jesus, son of Mary, as a creature (i.e. not as the son of God). During another public audience, Ǧaᶜfar said that Jesus is the slave of God, His apostle, His spirit, and His word

which He cast into Mary. The N. took a stick and said that Jesus does not exceed what Ğaᶜfar had said by the length of a stick, meaning that there is only a small difference between ↗Islam and ↗Christianity as far as Jesus is concerned. The Abyssinian generals were not happy about this, but the N. said that the Muslims would be safe in his country.

Ibn Isḥāq further relates about a rebellion against the N., which he suppressed, fortunately for the Muslims. There is also an account as to how the N. became king: his father, once king, was killed, and the N. had been sold as a slave by his uncle but had later regained his throne.

Ibn Isḥāq also narrates that the Abyssinians blamed the N. for having betrayed his religion and therefore revolted against him; the N. then had ships prepared for Ğaᶜfar and his companions to flee in case he would be defeated. It did not happen, since the N. was able to appease his subjects: putting his hand upon his breast, he publicly testified that Jesus is the Son of God. By that gesture of confirmation he was referring, however, to a "paper" he had put in his gown on which he had written that Jesus, the son of Mary, was no more than God's slave, apostle etc. His trick was understood by no one but by the Muslims. The Prophet was informed about this; when the N. died, the Prophet prayed that his sins might be forgiven.

The Arab historian aṭ-↗Ṭabarī (d. 923, s. Ibn Isḥāq 1955:657) gives the text of two letters allegedly exchanged between the Prophet and N. al-Aṣḥam b. Abğar (cp. Caetani 1905:736; Montgomery Watt 1956:345f.; Muhammad Hamidullah 1935, vol. 1, 205ff.). In the incipit of the letters, the N. apparently uses Islamic formulas that let the reader think that he was converted to Islam. The contents of the letters are almost identical with those of the conversation of Ğaᶜfar with the N. according to the *Sīra*. One subsequently reads that the N. sent his son Arhā (i.e. Armaḥ) to the Prophet, with the significant remark that he had control only over himself (i.e. not over his subjects, at least as far as Islam is concerned), and that he will come to the Prophet if the latter wishes him to do so. The historian was further told that the N. had sent 60 Abyssinians with his son to the Prophet, but that they all had perished when crossing the sea.

The N. represented at Quṣayr ᶜAmra (Jordan, before 711/12), together with the Byzantine emperor and the Persian emperor Chosroes, is traditionally seen as an enemy of Islam, more recently however as a respected ruler – probably ƎllÄ Ṣäḥam – to whom the Prophet also had sent an embassy in 628 (Ettinghausen 1977:39ff.; ErlEth 193 n. 30; s, now Di Branco 2007).

Ibn Isḥāq's implicit statement that the N. became Muslim has been made quite explicit by Muslim authors after him. Yet, no independent source seems to be available to confirm this (cp. Hussein Ahmad 1992:21f.; Cuoq 1981:35; ErlEth 16ff.).

Emeri van Donzel

Nägaśi Krəstos

Abeto N.K. (ነጋሢ ክርስቶስ, also Nägaśe Krəstos, d. ca. 1703 or 1705, Gondär) was the ruler of ↗Šäwa from ca. 1682 to 1703. He was thus a contemporary of *aṣe* ↗Iyasu I.

Most of the scanty information on N.K. comes from 19th–early 20th-cent. sources. Some indicate that he was related to the ↗Solomonic dynasty through his mother *wäyzäro* Sänbält, who was of royal descent, while his father was a rich landowner from Anga(n)ča (AWTarik 67f.; cp. LevWax 31), in the district Gera(mədər) of ↗Mänz. Some state that his paternal line ascends to *aṣe* Ləbnä Dəngəl's son *abeto* ↗Yaᶜəqob, via

N.K.'s father *ras* Faris (HarAeth vol. 3, 7; CecZeila vol. 1, 235ff.), or via Səgwä Qal, Wärädä Qal and Ləbsä Qal (cp. GueCopMen 56; AWTarik 67f.; TSTarik IV, 431; s. also LevWax 289 n. 24). Still other sources leave the question of N.K.'s Solomonic link open (cp. BTafA 499; Taddäsä Zäwälde 1955/56:15ff.; LevWax 289, n. 24). N.K. is traditionally considered the founder of the Šäwan branch of the Solomonids, from which both *aṣe* ↗Mənilək II and ↗Ḫaylä Śəllase I were descended (TSTarik IV, 431; LevWax 32).

N.K. succeeded in uniting some districts of the Amhara, which, fragmented after the 16th-cent. Muslim wars, had found themselves surrounded by large ↗Oromo enclaves and at odds with each other (AbPrince 144f.). He thus started the Šäwan expansion.

As a young man N.K. received high recognition for the valour proved in many battles. His military success brought him many followers who helped him to accumulate possessions. N.K. established his base in Angača where he founded the church of Kidanä Məḥrät (s. Levine in PICES 2, 209). He started his campaigns in the regions settled by the Oromo, south of Mänz, where he achieved a victory over ↗Arsi-Oromo and set the cornerstone for the town of ↗Ayne in ca. 1683 (BTafA 501f.; AWTarik 73; CecZeila vol. 1, 237). N.K. also fought ↗Wälloand ↗Yäğğu-Oromo. Apparently on behalf of *aṣe* ↗Iyasu I and in alliance with the ↗*wälasma* he waged war on the Oromo who were trying to penetrate ↗Yəfat (BTafA 501f.; AbPrince 146). N.K. also led his army to such districts as Däbdäbo, Mängəst, ↗Mafud, Asändabe and ↗Doqaqit (CecZeila vol. 1, 237), and established settlements and churches in the places he took over from the Oromo (BTafA 503ff.). Unable to prevent the encroachment of the Oromo in ↗Tägulät, he chose ↗Däbrä Bərhan for his capital. There, N.K. is said to have re-established the old palace of *aṣe* ↗Zärʾa Yaʿəqob (PankHist I, 185).

By the end of the 17th cent. N.K. had emerged as the most important Amhara chief of the area. He proclaimed himself ruler of Šäwa, overpowering all those who disputed this claim (including, according to some traditions, Gera, one of the founders of Mänz, s. AWTarik 71; Levine in PICES 2, 208). Around 1700 N.K. arrived at ↗Gondär to offer tribute to *aṣe* Iyasu I and receive the official recognition of his rule from the Emperor (whose Chronicle, however, does not mention this episode). Traditions differ as to what happened next. N.K. is said to have been rewarded by Iyasu I with twelve ↗*nägarits* and a seal ("*mahtam*", s. CecZeila vol. 1, 238 [describing, in fact, a ↗*matäb*, not seal]; HarAeth vol. 3, 8; BTafA 505; AWTarik 73). It seems that N.K., however, never returned to Šäwa, but rather died in Gondär in 1703, probably of smallpox. He is said to have been buried with great honours at Gondär, at the church Fit Abbo (BTafA 505). The site of his camp in Gondär is still called Nägaśi Meda.

N.K. fathered six children, Akawa, Dana, Səbəste (↗Səbəstyanos), Šänko, Yonaʾel and Wärqitu (AWTarik 71). After his death, an internal fight broke out. Səbəste eventually prevailed, to become later the first Šäwan ↗*märəd azmač* (BTafA 507; LevWax 32f.; EgeClass 22, 25).

Sophia Dege

Nägga Tägäññ

Major General N.T. (**ነጋ፡ ተገኝ**, b. 24 July 1930, Šäme Maryam, Gondär, d. 2002, London) was a military officer. Born to *ato* Tägäññ Yəggäzu and *wäyzäro* Assälläfäčč Bälačč'äw, during the Italian invasion he had to flee into the woods with his parents until the liberation in 1940. Shortly after, his uncle, *qäññazmač* Daññäw Dästa, took him to Addis Abäba and in 1943 he began his primary education at the ↗Mənilək II Elementary School. He then enrolled for two years in the Technical School of Addis Abäba. In 1946, he joined the ↗Imperial Bodyguard Cadet School lead by the Swedish Military Team, graduating in 1949 as a Deputy Lieutenant with distinction.

From 1951–53, N.T. served as Captain for approximately 18 months in Korea, with the Ethiopian ↗Qañňäw contingent under the ↗United

Nations command. Upon return, he studied at the Commercial School of Addis Abäba, earning a Diploma in Commerce. As a Major (1954–59), he was sent to India for further training at Willington Staff College, and completed the Maow Senior Officers Course. In 1960, he joined the ↗Harär Military Academy as an instructor. In 1961–63, he served as a Battalion and Brigade Commander for the eastern region of Ethiopia.

N.T. was involved in several international missions in Nigeria, Congo and Angola on behalf of the ↗Organization of African Unity. In 1971, he was sent to the United Kingdom for further training at the Royal College of Defence Studies. In 1972, he was appointed as the Head of the Third Division in Eastern Ethiopia and in 1973, now Major General, he was appointed governor of Gondär.

At the onset of the 1974 Revolution, N.T. emigrated to the Sudan and with General Iyasu Mängäša and *ras* Mängäša Śəyyum formed the Ethiopian Democratic Union. From 1975 to 1978 he led resistance activities against the *Därg* (↗Provisional Military Administrative Council). He then fell out with his colleagues and withdrew from public positions. From 1989 till his death in 2002, N.T. lived in the United Kingdom. Whilst there, he was engaged in research and consultation on Ethiopian politics and military development. He was one of the most highly decorated military figures in Ethiopian military history, receiving numerous promotions and awards, including 22 medals. He was married three times: to Blandina Philip, with whom he had a son, Täkle Nägga; to Princess Ḫirut Dästa, daughter of *ras* ↗Dästa Damṭäw and Princess ↗Tänañña Wärq Ḫaylä Śəllase; and to *wäyzäro* Nəgəśt Ḫayle, who bore him Rahel and Ḫəbrät Nägga.

Fentahun Tiruneh

Näggadras

The word N. (ነጋድራስ, lit. 'head of the merchants', from Amh. *näggade*, 'merchant, trader', and ↗*ras*) was originally designated to the leaders of long-distance trading caravans which carried trading goods throughout Ethiopia and to the coast. The use of the office of N. as a primary means of commerce control and as a means to unify Ethiopia seems to have begun in the period of the ↗Gondärine kingdom and later expanded and developed in ↗Addis Abäba, the new capital, and throughout Ethiopia.

By the 19th and 20th cent., it was the N. who specifically controlled and organized customs collection throughout most of the country (cp. ↗*Kella*). They were appointed over local and regional markets (Amh. ገበያ, *gäbäya*) by a local aristocrat or the emperor to control ↗trade. Often they also judged local commercial cases at the market. *Aṣe* ↗Mənilək II was the first emperor who successfully began to control the expanding commercial life of the Empire through his network of N. *Ras* Täfäri Mäkʷännən (later *aṣe* ↗Ḫaylä Śəllase I) expanded the N.'s role and made them more efficient at extracting revenue. The most famous N. of Ethiopia was N. ↗Ḫaylä Giyorgis, who became the first N. of Addis Abäba and the person to whom *aṣe* Mənilək II delegated most of the responsibility for dealing with foreigners. Thus, it was logical in 1907 to make him the first Minister of Commerce and Foreign Affairs – a position which also had responsibility for customs. Ḫaylä Giyorgis exploited these positions to become one of the richest men in the whole of Ethiopia, with respect to liquid assets, and also during *ləğ* ↗Iyasu's reign to become Ethiopia's first Prime Minister. The increasing importance of the office of the N. coincided with the growth of Ethiopia's small middle class. The N.'s efflorescence was from the late 19th cent. to the ↗Italian war 1935–36.

A number of leading Ethiopian intellectuals held the title of N., such as ↗Gäbrä Ḫəywät Baykädañ and ↗Afäwärq Gäbrä Iyäsus. Both were appointed over ↗Dərre Dawa which, after Addis Abäba, was the most lucrative position for a N. to hold. Both had control over and organized customs revenue which brought in the most income. Other significant N. during Mənilək's and Ḫaylä Śəllase's reign were at ↗Gambella, ↗Gondär, ↗Harär, ↗Mätämma and ↗Wälläga. After 1918 the role of ↗*käntiba* of Addis Abäba seems to have absorbed that of the N. of Addis

Abäba. Although the title remained in existence after the Liberation of 1941, N. were no longer as powerful and influential as they had been during the latter part of Mənilək's and the beginning of Ḫaylä Śəllase's reign.

Naggiar, Joseph Paul

N. (born Yūsuf an-Naǧǧār; b. 1854, Cairo, d. January 1923, Palma de Mallorca) was a French diplomat. He was born into an Egyptian Christian family (the an-Naǧǧār were dragomans at the French Consulate in Alexandria). In 1869, N. began to work at the French consulate in Cairo. In 1884, he was naturalized French. He married Cécile Maksud, a Christian Syrian, with whom he fathered four children.

In 1887, N. was named to replace Lucien Labosse in the French consulate in Ismailia, Egypt, when Labosse left for a mission to ↗Zayla^{c}. After some years of duty in Greece, in 1906 he was appointed to diplomatic service in ↗Harär. He spent much time in ↗Dərre Dawa assisting in the works by the Compagnie de Chemin de fer franco-éthiopien (↗Railway). From December 1908 to June 1909 he was also head of the provisional administration of the Chemin de fer in Ethiopia. On two occasions he had to travel to France: in 1908, to receive the Légion d'Honneur and in 1911 for a health cure.

N.'s relations with the Ethiopian authorities, and with *ras* Täfäri Mäkʷännən (↗Ḫaylä Śəllase I) in particular, were excellent. In agreement with Antony ↗Kłobukowski, he reorganized the French diplomatic services in Ethiopia, especially in Harär: transformation of the vice-consulate into a consulate etc. In 1911 he left Ethiopia for Zanzibar, where he stayed until 1913. In 1916, though retired, he administered the French consulates in Syva and, from 1919 until his death, in Palma de Mallorca.

Lukian Prijac

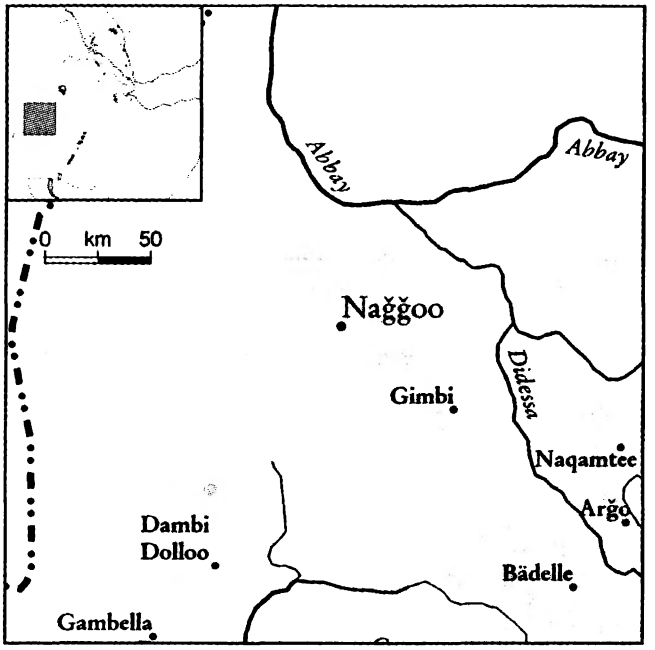
Naǧǧoo

N. (Orom. sp.: Najjoo; Amh.: ነጆ) is an important commercial town in ↗Wälläga. Its location at the historical crossroads between the Sudan, Wänbära, ↗Qälləm and ↗Illubabor contributed significantly to N.'s economic development.

In the 17th cent., a group of Sibuu Oromo under Naǧǧoo Muraram took control of the area, which was later named after the *gadaa* leader. Other Oromo clans were gradually incorporated by the N. chiefs and the name extended to the surrounding area.

Similar to Odaa Nabee and Odaa Bisil, N. served as a traditional centre for the ↗*buttaa* ceremony, ↗*čaffee* assembly, and promulgation of laws and conflict resolutions before it developed into a modern town. A wide plain at the top of the hill to the south-west of present-day N. was chosen by the Sibuu at Tulluu Yaaʾi ('Mountain of assembly') for the traditional assembly which served all the Oromo living in the vast territory west of the Dabbus river until the 1950s.

The site gained economic importance as people began to frequent it for *gadaa* rituals. On that occasion, they also bartered their produce and exchanged ideas. The most important trade goods were ↗gold and ↗iron items. Locally produced iron tools were considered of particularly high quality and attracted many traders from outside, including Beni Šangul and Goǧǧam. Eventually trade routes assumed a greater importance throughout the region, and the settlement grew into a town. Traders from the Sudan, Goǧǧam, Šäwa, Illubabor (Gore) and other places frequented N. market at Minyaʾa. It was this prosperity, and particularly gold, which might have instigated *mootii* ↗Moroda Bakaree of Leeqaa Naqamtee to occupy the region in the late 1880s.



The gold deposit at Kattaa Qammi near N. was not only coveted by the Leeqaa rulers but also by *aṣe* Mənilək II, who sent Alfred ↗Ilg in 1898 to explore N. for gold. In the early 20th cent., N. was described as the principal market centre, exporting, according to local engineers, £ 80,000 gold a year, with the tribute to the Emperor constituing up to one half of this quantity (Weld Blundell 1906:544). The locally made gold rings enjoyed a regional renown; travellers compared them with those of the monuments of Senusret Usitersen and Thutmosis (ibid. 544f.).

At the beginning of the 19th cent., the ↗Mahdists attempted to take control over the prosperous area but were defeated at the battle of Guutee Dilii near N. in 1888. Subsequently, the victorious Bakaree family made N. the administrative centre for Leeqaa Naqamtee. Moroda Bakaree's son Kumsaa (later ↗Gäbrä Ǝgziʾabəḥer), who took office in 1889, had his *masaraa* ('palace') built at N. Court and ecclesiastic officials were given land to build houses at N. The market place was moved from Minyaʾa a little to the south of the palace. As the market grew, they transferred it again to the centre of the town where it is still situated today. N. played an important role not only as a residence of governors but also as a second capital of Wälläga after Naqamtee (cp. ZerÉth 397).

In the early 20th cent., Protestant missions spread in the area (cp. ↗Nasiisee Liiban).

In 1982, N. had a total population of 6,904.

Naǧrān

N. (Arab. نجران, Gəᶜəz ናግራን, Nagran), already mentioned in Old Sabaic inscriptions of the 7th cent. B.C. as NGRN (cp. von Wissmann 1964), also known as RGMTM (cp. Müller 1974:186), at present a semi-autonomous province of Saudi Arabia along the border with Yemen, is the historical name of a group of oases at the northwestern end of the ancient South Arabian kingdom of ↗Ḥimyar. Located at the intersection of North and South Arabian civilizations, in later times N. was probably one of the most ancient outposts of Christian missionary activity in the area (↗Arabia), as indicated by the *Gädlä* ↗*Azqir* (originally a Syriac text, according to Conti Rossini 1910, it has survived only in an Arabic-based Gəᶜəz version). This text focuses on the ↗martyrdom in N. of a Christian priest by order of king Šaraḥbiʾil Yakkuf, instigated by the local Jewish community, during the reign of the Byzantine emperor Anastasius I, i.e. in 490–518 (according to Bowersock 2004:269ff.), or some decades earlier (ca. 455–75, if the South Arabian king is to be identified with that of epigraphic sources, cp. EAE vol. 1, 421f.).

Already a battle-field during early confrontations between Sabaeans and Aksumites in the first half of the 3rd cent. A.D., N. was directly controlled by an Aksumite prefect (ᶜQB, not a Gəᶜəz term) named S¹BLQᵐ in Epigraphic South Arabian evidence (cp. Robin in PICES 8, 150ff.) ca. 240/250. The main historical event of relevance to Ethiopian history connected with N. is the persecution of Christians (including Aksumite troops in the capital Ẓafār) during the first decades of the 6th cent. (dates vary from 518 to 523, and previous persecutions are likely to have taken place) by order of the Jewish king ↗Yūsuf Asʾar Yaṯʾar (YWS¹F ʾS¹ʾR YṮʾR in South Arabian ↗inscriptions, Ḏū-Nuwās in Islamic tradition, Masrūq in Syriac sources, Finḥas in Arabic and

Gəᶜəz hagiographical texts, Δουναάς and similar forms in Greek). The dramatic siege and slaughter of the inhabitants of N. was the climax of a Jewish anti-Christian persecution that extended to all the areas of the kingdom of Ḥimyar. The exceptional echo of the persecution in a large part of the Christian world caused the Emperor Justin (518–27), through the Patriarch of Alexandria, to formally ask ↗Kaleb/Ǝllä Aṣbəḥa, then king of ↗Aksum, to launch a punitive military expedition against Ḥimyar. The subsequent invasion finally ended with the complete defeat of the Ḥimyarite king and the conquest of South Arabia by the Aksumites, who then governed it for some time. The events can be reconstructed from sources and first-hand reports (a series of South Arabian and Gəᶜəz inscriptions, the *Letter* of ↗Simeon of Beth Arsham), as well as more literary developed texts such as the so-called *Second Letter* (by the same Simeon according to Shahîd 1971) and a number of Byzantine sources. Among the main ones is a Greek hagiographical text, the *Martyrdom of ↗Arethas* (cp. Detoraki 2000), transmitted in Arabic and in Gəᶜəz, where, under the title of *Gädlä Ḫirut*, it is included in the collection *Gädlä sämaᶜətat* (cp. Bausi – Gori 2006), but also translated into Armenian and Georgian; a shorter Gəᶜəz version of the story is also incorporated into the *Gädlä ↗Ṗänṭälewon*. The Martyrdom is named after the most famous martyr of the persecution, the alleged head of N., al-Ḥāriṯ b. Kaᶜb (a name under which the tribe of the Banū Ḥāriṯ can be recognized), and relates the events up to the final defeat of the South Arabian king. So does the *Book of the ↗Ḥimyarites* (cp. Moberg 1924), where some information on the antefacts may be found. A probable echo of the persecution of N. is the mention of the *aṣḥāb al-Uḫdūd*, traditionally identified with the martyrs of N. burnt in a pit, in the Qurᵓān (85,4–9; cp., however, Paret in EI²).

During the Persian (since 570 A.D.) and the subsequent Islamic dominations, N. faced a gradual decadence; its inhabitants were also obliged to move to Iraq, where an-Naǧrānīya, not far from al-Kūfa, was founded, although it seems that part of the population still remained in the historical N. till the 10th cent. at least (cp. Shahîd in EI²).

The enduring memory of the events connected to N. can be appreciated from several echoes in Ethiopian tradition, probably all depending upon the *Gädlä Ḫirut* and/or the *Gädlä Ṗänṭälewon*, namely, in a few texts of the hagiographic cycle of the "Nine Saints" and in the last chapters of the ↗*Kəbrä nägäśt* (chs. 116f.). According to the latter text, while the first son of Kaleb, ↗Gäbrä Mäsqäl, succeeds his father to the throne of Ethiopia, the second one, ↗Ǝsraᵓel, is here called "king of N.", an evident allusion to the Ethiopian sovereignty over South Arabia (cp. BezKebr 169bff. [text] = 136ff. [tr.]). The speech of the Ethiopians who took part in the Council of ↗Florence in 1441, transmitted by Biondo Flavio (↗Italy), also refers to the tradition on the persecution in N. and the subsequent events (cp. Cerulli 1933:350ff.; Bausi – Gori 2006:5f.).

A monastery or a region by the name of N. is traditionally located in Eritrea, "on the northern border, on the Haggär mountains" (cp. Conti Rossini 1938:432), owing likely, as stated by some authors (cp. Caquot 1955:63), to confusion with the South Arabian place where the Jewish anti-Christian persecution of the 6th cent. took place.

Nāʾib

N. (نائب, Arab., Ottoman Turkish 'deputy', 'substitute', Tgn./Amh. ናይብ, *nayb*) was the local official governing the Eritrean coastal and eastern areas from the 17th cent. until mid-19th cent. The local dynasty which held this office, the N. family, originated from the ↗Balaw. The term N. was also used as a title by the office holders (including former ones, cp. the 19th-cent. *nāʾib* ↗Muḥammad Abdarraḥmān).

The N. family was an influential local dynasty of power brokers and regional rulers who were able to effectively control and impose their authority on Təgre and Sāho-speaking societies. The office of N. became *de facto* hereditary in the same family, and from the Italian colonial period onwards it has been used as a family name among descendants, following the example of old families of the nearby port of ↗Massawa, such as Käkkiya (descendants of Ottoman military office holders, the *kaḥya*), or the Sardal, Šawiš, Afandi (names derived from Ottoman and Egyptian military ranks and titles). The two politically most important branches of the N. family were Bet (Bayt) ʿUṯmān and the Bet Ḥasan, tracing their descent to the two sons of ʿAmər b. ʿAlī, himself a descendant of Ḥaməd b. ʿAmər "Qanʿ", who ruled the ↗Sämhar region in the 17th cent. (Abdu Ali Habib 1973:1, 3 and n. 16).

The Balaw group the N. family originates in was formed as the result of a gradual ethno-cultural fusion of Beğa-speaking nomads and Arabs in the eastern Sudan. According to Balaw historical traditions, several families migrated to the coastal strip of Sämhar around the 15th cent. They established a power base at ↗Ḥərgigo and exercized influence around the port of Massawa and in the coast area.

In 1557 ↗Özdemir *paša* occupied Massawa and the coast for the Ottoman empire and established the province of ↗Ḥabeš. Several unsuccessful attempts to gain a foothold on the highland plateau led the Ottomans to withdraw their forces to the coast and abandon their expansionist ambitions in the region. Leaving only a modest force in Massawa, the Ottomans devolved power to a N. The exact date of the transfer of power does not seem clear from available sources: many estimate the date of appointment of the first N. as the late 17th cent.; some have, however, suggested the 16th. The N.'s basic duties included the maintaining of order in Massawa's close hinterlands, providing security on the trading routes connecting the inland with the coast, and thus securing the commercial vitality of the port of Massawa. In return, the Ottoman authorities presented the N. with the paraphernalia symbolizing their power and authority (a silk robe and a golden-handled sword) as well as a monthly payment from the Massawa customs.

The N. were often successful in manoeuvring their way through imperialist and regional politics, whilst carefully preserving the viable power balance in their relations with the rulers of the highland province of ↗Təgray. While promoting their own autonomy and hegemony, highland Ḥabäša rulers engaged in power politics vis-à-vis the N., usually vacillating between various degrees of forceful intimidation and interested/useful collaboration. In the mid-18th cent., e.g., N. ʿUṯmān ʿĀmir (r. 1741–81) received from highland rulers 44 *gʷəlt* lands in exchange for firearms. The lands were located in localities near ʿAddi Qäyyəḥ, to the west of Ḥalay, Ǝmba Dərho, Bäläza, Bet Maḳa (↗Ḥamasen) as well as other lands in ↗Säraye and in the proximity of ʿAdwa. All in all, the conjunction of the state of political instability in the central and northern highlands (↗*Zämänä mäsafənt*), and the decline of Ottoman interest in their province of Ḥabeš provided a fertile ground for the expansion and consolidation of N. dominance in the coastland regions and beyond.

The authority of the N. under Ottoman indirect rule grew significantly in the mid-18th cent.,

and in the second half of the 18th cent. they were the most powerful rulers of the region between the sea and the highlands. The precise geographic limitations of N. influence fluctuated over time. At the peak of their power they extended their authority or influence over the vast majority of Təgre-speaking pastoral and agro-pastoral populations in the regions of Sämhar, Saḥəl, and the northern coasts as far as Aqiq, ca. 300 km north of Massawa. The most important groups (numerically) were the Ḥabab, the Mänsaᶜ, and segments of the Bet Ṭaqʷe (↗Bilin). In various periods the N. also spread their influence over Saho-speaking pastoralists in the foothills of Təgray, Akkälä Guzay and Ḥamasen, of which the ᶜAsawərta (↗Asaorta) and the ↗Ṭarūᶜa were the most significant groups. Other ᶜAfar, Sāho and Təgre-speaking societies, who came in certain periods under N. influence, inhabited the ↗Buri peninsula, the ↗Zula area, and regions on the ᶜAfar coast as south as ↗ᶜƎdd, as well as the ↗Dahlak islands.

The most important sources of power that N. supremacy and hegemony rested upon was their control of an organized semi-military apparatus composed of Turks, Kurds, Arabs, Ottoman soldiers from Bosnia and Albania as well as local coastal, mostly Təgre- and Sāho-speaking militiamen. As in other parts of the Ottoman Empire, these mixed forces gradually developed into relatively powerful military households (e.g. Bet Kaḥya, Bet Sardal, Bet Šawiš, Bet Askär). N. Idrīs ᶜUṯmān (r. 1801–31), e.g., received 1,005 thalers per month from the Massawa customs administration to keep a force of approximately 400 soldiers and provide for his militias. Other sources of N. authority were rooted in their role in the regional political economy. The N. and their associates controlled valuable grazing lands, caravan stations and routes, transportation means, strategic market villages and centres of commercial exchange in Massawa's orbit (e.g. ᶜAylät, ᶜAsus, Gumhot). The N. also collected tribute from those societies coming under their influence and were heavily involved in "tribal" politics by investing chiefs, administering justice and through marriage alliances. They also operated energetically in spreading Islam among mostly Təgre-speaking communities through their alliances with several holy families such as the Bet Šek Maḥmud, the ↗ᶜAd Šek, the ↗ᶜAd Mäᶜallim and the ᶜAd Dərqi.

The N. were able to maintain their autonomy

The early 19th cent. *nāʾib* of Ḥərgigo Ḥasan Idrīs; from LefAbyss vol. 1, 204

under Ottoman indirect control until the middle decades of the 19th cent. During the tumultuous and tortuous 1840s, the N. found themselves in the midst of escalating power struggles between Ottomans, Egyptians and Ethiopians over the domination of Massawa and the coast. Egyptian advances from their Sudanese dominions prompted a "scramble for the coast", which culminated in several violent skirmishes involving the forces of *däğğazmač* ↗Wəbe Ḥaylä Maryam, the Egyptians and the N. until the mid-19th cent. It was in this period that N. Ḥasan Idrīs famously defied one of the Ottoman governors of Massawa by declaring that "the Sultan rules in Istanbul, the Pasha in Egypt, and N. Ḥasan in Massawa!" Aspiring to develop its empire in north-east Africa and the Red Sea area, Egypt, under Muḥammad ᶜAlī and his descendants, constantly challenged Ottoman supremacy in the region. These trials of power progressively increased Egyptian dominance and culminated in *ḫidīw* Ismāᶜīl *bāšā*'s acquisition of Massawa and Sawākin from the Porte in 1865 (↗Massawa Governorate). The establishment of direct Egyptian administration in Massawa and the coastlands significantly eroded the power of the N. and transformed their political status and influence. For some time the N. were charged with collecting taxes for the Egyp-

tian administration, often placing them under substantial pressure both from the authorities and inland societies.

The Egyptian administration (1865–85) made efforts to hold a tighter grip on the populations of their dominions in Massawa's hinterlands, and in the process co-opted the N. whose political, economic and social networks in the region were deemed instrumental for mobilizing local populations and securing their loyalty to the government. In the early 1870s the Egyptian administration awarded N. Idrīs Ḥasan (ca. 1825–1905) the honorary military title of Major (*ṣāġ qōl āġāsī*) and appointed him *nāẓir* of Sämhar. But such gestures were more symbolic than anything else. Much like in the 18th cent. under the Ottomans, both the Egyptians and the Italians (from 1885) capitalized on the historic rivalry between two factions of the N. family, the Bet Ḥasan (cp. ↗Muḥammad ʿAbdarraḥīm) and Bet ʿUṯmān, and manipulated contesting holders to the office of the N. and its privileges, to employ "divide and rule" tactics.

Under the Italian colonial period, the N. worked with the administration in various capacities, received government subventions and maintained some administrative autonomy in their villages in Massawa's suburbs (esp. Ḥərgigo, ∃mkullu). Accommodation to Italian colonial rule was instrumental in promoting some local municipal and economic interests but their former politically powerful position remained a symbolic vestige of the past. In 1888 the Italian authorities formally divided the office of the N. between the two family lines. The Bet Ḥasan preserved Ḥərgigo under ʿAbdalkarīm ʿAbdarraḥīm and the Bet ʿUṯmān took charge of ∃mkullu and Ḥəṭumlo under Idrīs Ḥasan. Members of the N. family fought and died alongside Italian forces in ∃mba Alage, Sägänäyti and ʿAdwa in the campaigns of 1895–96.

In the 20th cent. the N. family maintained some social and political influence in Sämhar while some members of the family were involved in nationalist politics and the Eritrean liberation struggle. Many also fled the country in the 1970s.

Jonathan Miran – Emeri van Donzel

Nallino, Carlo Alfonso

N. (b. 16 February 1872, Turin, d. 25 July 1938, Rome) was an Italian Arabist and Islamicist.

Having taught himself Arabic as a schoolboy, N. studied Oriental studies at the University of Turin from 1889 to 1893, under the guidance of the Iranist Italo Pizzi and the geographer Guido Cora. From 1894 to 1902 he taught Arabic at the Regio Istituto Orientale (↗Istituto Universitario Orientale) of Naples, and then at the University of Palermo until 1913, when he was transferred to the University of Rome as professor of History and Institutions of the Islamic world. N. also served the Ministry of the Colonies and the Ministry of Foreign Affairs as an expert of Islamic matters, especially after the conquest of Libya and in the aftermath of World War I.

N. was a member of the most prestigious academies in Italy and abroad: Accademia dei Lincei (1916), Accademia d'Italia (1932), honorary fellow of the Royal Asiatic Society (1923), the Royal Academy of the Arabic Language in Cairo (1933) and of the Deutsche Morgenländische Gesellschaft (1934). For a while he directed the Scuola Orientale dell'Università di Roma and edited its journal, the *Rivista degli studi orientali*. In 1921 he was elected scientific director of the newly founded Istituto per l'Oriente in Rome (which has borne N.'s name since 1982) and chief editor of its still current journal, *Oriente Moderno* (Rossi 1938; Vacca 1973).

N. made numerous extended trips to various Arab countries. Upon his graduation, he spent five months in Egypt on a scholarship from the Ministry of Education; later he was also a visiting professor at the Egyptian University in 1909,

1910–11 and 1911–12. He was regularly invited to teach in Cairo from 1927 to 1931. He also visited Algeria, Tunisia, Libya, Syria, Mesopotamia and Saudi Arabia (the results of his 1938 trip to Ǧidda and aṭ-Ṭāʾif were published in 1939).

N.'s mastery of Arabic and direct knowledge of Arab countries enabled him to deal with all the different and contradictory aspects of the Arab world and its culture. He edited several important texts; the major part of the huge corpus of his articles, reviews and notes were collected and republished posthumously by N.'s daughter Maria (1939–48). Among his main fields of interest were Arab astronomy (cp. ed. of al-Battānī, 1899–1907); Qurʾān (the anthology he published in 1893, at the age of 20, remains a fundamental reference); Islamic theology, law and philosophy; as well as the history of the Arabs. He catalogued the Oriental manuscripts of the National Library and the Royal Academy of Sciences in Turin (1900), and wrote a detailed description of Egyptian Arabic with a series of dialogues (1900, repr. 1913, 1939 [enlarged]; Sarnelli Cerqua 1973).

N.'s works of particular use for those specializing in ↗Ethiopian studies are his summary (1933) of the results of ↗Cerulli's Ethiopian journey of 1927–28 (CerEt) as well as his articles on Ancient ↗Arabia (1930) and ↗Epigraphic South Arabian (1931, a review of ↗Conti Rossini's *Chrestomathia Arabica meridionalis epigraphica*). N.'s numerous studies of Christian Oriental law are also important for scholars of Ethiopian juristic literature, not unknown to N. (he refers to the ↗*Fəṯḥa nägäśt*, 1921:73f.). In his contribution on Saudi Arabia (= vol. 1 of the *Raccolta* ..., 109f.) N. speaks about the Italian-built hostels in ↗Mecca and Medina for Muslim pilgrims from ↗Africa Orientale Italiana, including Ethiopia and Eritrea. In the entries *qāḍī* and *muftī* he wrote for the Italian law encyclopaedia *Nuovo digesto italiano* (1937, 1939) he speaks in detail about these legal institutions in the Italian colonies.

Alessandro Gori

Name(s)

N. and naming in Ethiopia and Eritrea is a complex topic which has yet to be the subject of systematic cross-cultural study. Generally speaking, N. are verbal means of identification and mark a person's identity as an individual and often as a member of a group or category of people. Thus, N. and systems of naming may reflect social status, religious affiliation or dignity, ethnicity and moral values but also individual characteristics or coincidental events related to the person. Every culture and historical period has its own traditions as to how N. are chosen and constructed, in which contexts N. are given or changed and what rules of combination are valid.

1. Pre-Aksumite and Aksumite names
2. Regnal names
3. Islamic names
4. Ethnographical overview
5. Horse names

[For toponymy s. ↗Topography, historical]

Pre-Aksumite and Aksumite names

A number of personal N. have been transmitted in historical sources on pre-Aksumite and Aksumite periods: ↗Inscriptions (in Epigraphic South Arabian, Greek and Gəᶜəz) and coins (↗Coinage), as well as, to a much lesser extent, literary texts, mainly in Greek (the ↗*Periplus of the Erythraean Sea*, with the famous ↗*Zoskálēs*, and the *Christian Topography* by ↗Cosmas Indicopleustes), and in Syriac (the *Letter of Simeon of Beth Arsham* and other texts related to the persecution in ↗Naǧrān).

Later indigenous post-Aksumite traditions recorded in Gəᶜəz chronicles, hagiographies and in the king lists, as well as, occasionally, in other foreign writings, such as the Greek dossier on St. ↗Gregentios or the Arabic chronicles, equally deemed to refer to the earliest stages of Aksumite civilization, also conceal N. more or less allegedly traceable to the pre-Aksumite and Aksumite periods. Yet, in the absence of other corroborating elements, the chronology itself of those traditions and sources – as far as the indigenous ones are concerned, not prior to the 13th/14th cent. – makes them a scarcely reliable witness.

The study of pre-Aksumite and Aksumite N., albeit relatively few in number (no more than 200 personal N. appear in well-defined epigraphic and/or numismatic corpora), is hardened by the nature of the available evidence: one may think here of the irregular linguistic correspondences (e.g., ᶜ = ḥ, cp. Drewes 1998:129; ᶜ as *mater lectionis*: ibid. 134, 137); of such ancient Semitic N. as MLGʾ, arguably applied to the ↗[Adkämä] Məlgaʾ who claim their origins, instead, from Lasta (ibid. 130); and, as a more general problem, of verbal forms, i.e. the basic onomastic elements in Semitic personal N., only approximatively distinguishable in consonantal inscriptions (ibid. 131f.). In addition, any linguistic hypothesis bears immediate implications to the early history of Ethiopian peopling.

Pre-Aksumite N. attested in Sabaic inscriptions found in Ethiopia definitely reflect mainly Semitic patterns, and are extensively built on roots attested in Semitic languages (for a panorama of N. studies in Semitic, cp. Streck – Weninger 2002). If comparisons with N. attested in Sabaic inscriptions found in South Arabia (among the several studies on that, cp. at least Ryckmans 1934–35, Avanzini 1989, Tairan 1992, al-Said 1995, Hayajneh 1998, Sholan 1999, Arbach 2002) are not always satisfactory, those with Epigraphic North Arabian languages (esp. Ṯamudic, Liḥyanic and Safaitic, cp. Harding 1971) are in many cases more fitting, to a degree that sensibly varies according to the different scholarly opinions (cp., e.g., the only available systematic studies by Marrassini 1985, 2003; Drewes 1998, 2000; partial list also in DicEthBio).

It should also be stressed that royal personal N. in Sabaic inscriptions found in Ethiopia normally consist of only one onomastic element, instead of two as in Sabaic N.: along with other linguistic features (esp. characteristic for the so-called second group of Ethiopian Sabaic inscriptions), this is one of the peculiarities (not only linguistic, but also cultural) that has long been called upon for assuming the independence of ancient Ethiopian civilization from the South Arabian one (cp., e.g., Drewes 1998:127ff.). Yet, even if pre-Aksumite N. are indeed formed in accordance with Semitic patterns and typology, their meaning is often a reflection of that according to Ethio-Semitic roots. In short, the linguistic and ethnic complexity of pre-Aksumite Ethiopia is fully mirrored in personal N., but in spite of detailed contributions and proposals (cp. above), and in the absence of a complete indexing of all known inscriptions, is still waiting for systematic treatment.

Aksumite N. include N. of both the pre-Christian and the Christian periods. Notwithstanding language shifts in the course of time, a number of N. adopted since the introduction of Christianity are continuously attested throughout Ethiopian history, up to modern times: they dramatically show the pivotal importance of the Gəᶜəz language at every level of Christian Ethiopia's social life. This is obviously due to Ethiopian Christian culture using Gəᶜəz language since the very beginning. In quite a few cases, however, Aksumite N. are better explained by way of comparison with modern languages than with Gəᶜəz (cp., e.g., ʾBʾBWT in the *Book of the* ↗*Ḥimyarites*, according to Müller 1978, recalling Amh. Abbäbäčč, or Old-Amh. Abbäbut/Abbäbät). Yet, the survival of ancient Christian N. in Gəᶜəz through post-Aksumite, modern and contemporary times, has not been without adaptations in the vernacular languages through complex linguistic processes: on the formal level, chiefly by borrowings, phonetic adaptations and developments, loan translations or partial replacements of Gəᶜəz onomastic elements with terms from modern languages (e.g., *Barya*, *Gila*,

instead of Gəᶜəz *Gäbrä* as the first element in a construct state); on the semantic level, by a different understanding of the original grammatical sequence, to be supposed in some cases, although to which extent is not always easy to detail, for lack of systematic and comparative surveys (first attempt in Meaza Haile Revol-Tissot 1999).

However, alongside Aksumite N. surviving for centuries until modern times (such as Barok, Danəʾel, Dawit, Fəśśəḥa, Mamas, Mängäśa, Wäldä Ǝgziʾabəḥer, Zäkrəstos, Zäyoḥannəs, etc.: cp. Drewes 1998:130f.), a long series of Aksumite N. of minor or major importance exist (in particular, royal N. found in legends on coins) that are not etymologically perspicuous (cp. the case of ↗MḢDYS; for brief treatment of problems in monetary royal N. cp. Bausi 2003).

Some other N. instead, quite clear in their linguistic origin, are far different from later types, and did not survive through subsequent times; this also applies to a number of Jewish and Greek N., which form a substantial part of Aksumite onomastics (cp. Meaza Haile Revol-Tissot 1999). On the other hand, a few scholars (e.g., Kropp 1994) tend to emphasize the importance of the non-Semitic component in Aksumite N. Yet, the same considerations expressed for pre-Aksumite N. are also valuable for Aksumite N., the linguistic and ethnic stratification of coeval Ethiopia being, here too, fully reflected – which confirms that Aksumite N. do not simply depend upon a common Semitic heritage, and strongly attest to genuine Ethiopian "innovations" and complex cultural relationships (cp., as to be expected, the non-Semitic N. of the king of Agʷəzat, Ab[b]äʾalkəᶜo, in RIÉ no. 187.5, 9).

Within the bulk of Aksumite N., a fundamental distinction should be drawn between "speaking" and "non-speaking" N. While the semantic and grammatical meaning of the former is more or less immediately clear, as they are composed according to grammar rules (cp. above), the latter are essentially foreign N. derived from Christian tradition: Jewish N. from the O.T. and N.T., N. from Christian literary texts, i.e., Semitic but also Greek (and Latin) N. in particular. Meanings of foreign N. may in some cases have been eloquent enough in the respective cultures, while generally – apart from Semitic N. – this was no more the case for their transference into Gəᶜəz within the Ethiopian framework.

A problem of its own is that of supposed Syriac N. in the Aksumite period (N. of the ↗"Nine Saints" etc.), to be dealt with under the general heading of "↗Syriac influences" in Aksumite and/or Ethiopian culture.

Some royal Aksumite N. known from inscriptions and/or from coins (Ǝllä ᶜAmida, Kaleb, Gäbrä Mäsqäl, Ǝllä Gäbäz) appear to have been preserved in hagiographic traditions on Ethiopia's early Christianization (e.g., those of the Nine Saints and the ↗*Ṣadəqan*). As to royal N., two specific problems may be mentioned: (1) several N. are characterized by the presence of an *əllä*-element that is generally interpreted as a plural relative pronoun (for an alternative hypothesis, cp. Lusini in StudAeth), also attested in a variously explained *əlle*-variant (cp. Bausi 2005a, 2005b; Bulakh 2007); a surprising modern survival of this onomastic type is Tgn. *Ǝlläqal*, 'Those of the Word' (cp. Moreno 1931:42, on which Meaza Haile Revol-Tissot 1999); (2) the structure of the royal Aksumite N. – at least in some cases, a complete sequence being rarely known – seems to have been threefold, as in the epigraphic titlary of Kaleb: KLB/ʾL ʾṢBḤ WLD TZN/BʾS LZN (RIÉ no. 191.7f.), where the probable throne N. (KLB) is followed by the personal N. (ʾL ʾṢBḤ) with patronymic (WLD TZN), and then by a third element introduced by the word *bʾsy* (in non-vocalized writing)/*bəʾəsəyä* (in vocalized texts, archaic form for the later *bəʾəse*)/*bʾs* (in non-vocalized text, certainly representing later *bəʾəse*)/BIΣI (on coins with Greek legends), i.e., in Gəᶜəz 'man (of)', followed by a variously explained problematic element (cp. Schneider 1987:605ff.). The *bəʾəse*-N. are different in all eight attested occurrences (and the king lists), in spite of the fact that the Aksumite kings cannot all have been unrelated to each other. Moreover, Kaleb's son in RIÉ no. 192.7, WᶜZB, is BʾS ḤDFN (probably to be read ḤDQN, cp. below), while his father was BʾS LZN (cp. above). Different explanations have been offered. Some scholars (de Blois 1984) believe that it would be a sort of "matronymic" or "matrilinear clanic" N. (↗Kinship). References to special N. of ↗military units (s. EAE vol. 5), organized on a regional basis, have been also suggested. More recently, a new tentative proposal has been advanced (cp. Manzo 1995:74ff., proposing, in this perspective, the alternative reading ḤDQN for ḤDFN, cp. above), according to which the onomastic element 'man (of)' would introduce South Arabian place-names – the possibility of connections with N. of military units and/or clanic matrilinear descents remaining open as well.

The *bəʾəsi*-element reappears in the early 13th-cent. feudal deeds of *aṣe* Lalibäla, who is styled as *bəʾəsi ʿazal* in two documents of the "Golden Gospel" of Däbrä Libanos (cp. CRDLib; Bausi 2007:84f.). The segment, meaning here *'vir fortis*, strong man' (DillmLex 791; LesCDic 52*b*), is probably an awkward imitation of the original Aksumite expression and only a hint to the glorious past. The same *bəʾəsi ʿazal* epithet (probably borrowed from the "Golden Gospel") was later used by the chronicler for ʿAmdä Ṣəyon (cp. MarAmdS 46f., 142f.; KrAmdS 48 [text], 52 [tr.]); a repetition never registered for Aksumite kings.

Regnal names

From the 14th cent. onwards, a duality in the N. of Ethiopian monarchs is increasingly documented, and around 1500 at the latest a royal onomastic dualism appears as fully fledged. From *aṣe* ↗Naʿod up to the so-called ↗*Zämänä mäsafənt*, all Ethiopian monarchs of the 16th and 17th cent., as well as most of the 18th, are attested in the sources as having borne, in addition to their baptismal N. of an explicitly Christian nature, a so-called regnal N., the ስመ መንግሥት (*səmä mängəśt*, pl. *asmatä mängəśt*), which emphasized their worldly prowess. While the future emperors received their baptismal N. shortly after their births, they adopted or were assigned their regnal N. only upon their accession to the throne, or even only after they had already governed for some period.

With the exception of Naᶜod, whose regnal N. was Anbäsä Bäṣär ('A lion against the enemy'), all the other *asmatä mängəśt* of the 16th to 18th cent. followed the pattern *X sägäd* (or: *säggäd*, depending on whether one reads ሰገድ as Gəᶜəz or Amharic) = 'X has submitted/submits [to the monarch in question]'. The terms standing in for X normally designated either territories, or one or a group of enemies. Regnal N. with a territorial reference for instance are Aṣnaf Sägäd ('The furthest borderlands submit to him', regnal N. of both ↗Gälawdewos and ↗Zädəngəl), Adyam Sägäd ('[All] the provinces submit to him', regnal N. of ↗Iyasu I, ↗Iyasu II [in addition to Bərhan Sägäd] and ↗Iyoᵓas) and even ᶜAläm Sägäd ('The [whole] world submits to him', regnal N. of *aṣe* ↗Fasilädäs). Regnal N. claiming the submission/subjugation of enemies on the other hand are, e.g., Wänag Sägäd ('The lion has submitted to him', i.e. to ↗Ləbnä Dəngəl; since *wanāg* is a ↗Harari word, a reference probably to the ᶜAdalite general ↗Maḥfūẓ b. Muḥammad whom Ləbnä Dəngəl vanquished); Mäläk Sägäd ('The king submitted to him', i.e. ↗Śärṣä Dəngəl; since *mäläk* is derived from Arabic *malik*, a reference possibly to ↗Özdemir *paša* who at the time temporarily occupied parts of Eritrea for the Ottoman *sulṭān*); Mäsiḥ Sägäd ('The anointed one has submitted to him', i.e. ↗Bäkaffa; *mäsiḥ* here refers not to Christ but to the counter-king Wäldä Giyorgis, a brother of Bäkaffa whom he had to subdue before he could effectively assume the reins of power); or a more generic Aᵓəlaf Sägäd ('Countless myriads have submitted to him', i.e. ↗Yoḥannəs I) and Aṣrar Sägäd ('The enemies have submitted to him', i.e. ↗Tewoflos). In the 18th cent. we also encounter regnal N. like Ṣäḥay Sägäd ('The sun has submitted to him', i.e. ↗Yosṭos), Bərhan Sägäd ('The light has submitted to him', i.e. Iyasu II), Ṭəbäb Sägäd ('Wisdom has submitted to him', i.e. ↗Täklä Haymanot II) and Fəqr Sägäd ('Love has submitted to him', i.e. ↗Täklä Giyorgis). Such extravagant and particularly grandiloquent *asmatä mängəśt* are perhaps best understood as compensatory reactions to the decline in real power suffered by the monarchs of that time. Overall though the use of regnal N. during the *Zämänä mäsafənt* slowly diminished and appears to have come to an end by the beginning of the 19th cent. From this time onwards horse N. (s. subarticle) perhaps at least partially assumed the function of extolling the martial virtues of monarchs that previously had been fulfilled by the regnal N.

Imperial spouses also bore regnal N. that regularly echoed the *X Sägäd* pattern of their husbands' regnal N. as *X Mogäsa* ('X is her grace/dignity/happiness'). If *aṣe* ↗Minas, e.g., was Admas Sägäd ('The [entire] horizon submits to him'), his ↗*ətege*, baptized as Śəllus Ḫayla, automatically acquired the regnal N. of Admas Mogäsa. This pattern of female *asmatä mängəśt* formation is best interpreted as elliptic, namely as shortened from the full regnal N. of her husband + *mogäsa*. Admas Mogäsa would thus be shorthand for *Admas Sägäd Mogäsa, i.e. 'In [her husband] Admas Sägäd resides her grace/dignity/happiness'. Without the supposition of ellipsis, such female regnal N. as Mäläk Mogäsa, Səlṭan Mogäsa (*səlṭan*, 'the Sulṭān') or Abrak Mogäsa (*abrak*, 'knees') would be rather bizarre and make little to no sense.

The clear-cut dualism in royal nomenclature observable from the 16th to 18th cent., during which period grandiloquent and martial regnal N. complemented the monarchs' baptismal N. (which implied their bearers' creatural subordination to God and thus in this respect their commonality with their subjects), had antecedents in earlier times. In the 14th and 15th cent. monarchs like ↗ᶜAmdä Ṣəyon I and ↗Yəsḥaq bore the additional regnal N. of Gäbrä Mäsqäl ('Servant of the Cross'), while ↗Dawit II, ↗Zärᵓa Yaᶜəqob and ↗Ǝskəndər were also known as Qʷäsṭanṭinos (i.e. Constantine). In these cases, however, there is no, or at least no pronounced, antinomy between baptismal and regnal N., as the latter is equally Christian in character – even if a N. like Qʷäsṭanṭinos also carries martial overtones. Yet already in the 14th and 15th cent. we here and there encounter baptismal-regnal N. pairs which are marked by the pronounced dualism characteristic of the 16th to 18th cent. Cases in point are Nəwayä Krəstos – ↗Säyfä Arᶜad ('Vessel of Christ' – 'He who makes the [enemy's] sword tremble'), ↗Nəwayä Maryam – Wəddəm Asfäre ('Vessel of Mary' – 'Settler of the wilderness') or ↗Täklä Maryam – Ḥəzbä Nañ ('Plant of Mary' – 'Disperser of the [enemy] people'). Some late 13th-/early 14th-cent. monarchs such as, e.g., Ḥəzbä Asgäd ('He who subjected the [enemy] people') or ↗Wəddəm Räᶜad (or Arᶜad; 'He who made the wilderness tremble') are even only known by secular martial N. Yet since these early Solomonids (↗Solomonic dynasty) were already programmatically Christian, one must assume that they had baptismal N. as well. Thus the full-fledged onomastic complementarity of the 16th

to 18th cent. apparently has roots reaching back to the earliest Solomonid times. One cannot even exclude that this dualism was already operative, at least sporadically, under the ↗Zagʷe monarchs or in late Aksumite times.

The most easily accessible comprehensive list of the royal N., baptismal as well as regnal, can be found in GuiSLett. Also to be consulted are such publications as WrBriMus, Littmann (1909), Tekle-Tsadik Mekouria (1966) and Bartnicki –Mantel-Niećko (1978).

Michael Kleiner

Islamic names

Ethiopian Muslims typically conform to the general Islamic ways with some local peculiarities. The theological basis for naming is formed by some prophetic sayings that indicate how and when a child should be correctly named according to the tradition (s. Ibn Qayyim al-Ǧawzīya 1988). It is a recommendable practice to name a child on the seventh day after birth though some *aḥādīṯ* allow the N. to be given on the very day of birth. As on the Judgement Day every creature will be called by his N., it is recommended that even the miscarried foetus receive a N.

N. is usually chosen by the parents but also strangers to the family may be consulted occasionally. Unacceptable N. include the 99 *al-asmāʾ al-ḥusnā* reserved for God only (e.g., Raḥmān, 'the Merciful'; Raḥīm, 'the Beneficient') and those which have a polytheistic connotation (e.g., ᶜAbdalᶜuzzā, 'servant of [the goddess] ᶜUzzā'). Preferable N. are (1) theophorous N. made up by *ᶜabd* ('servant') and one of the designations of God (e.g. ᶜAbdallāh, fem. Amatallāh; ᶜAbdarrahmān); (2) N. related to the Prophet ↗Muḥammad (his cognates and all the prophetical epithets, Aḥmad; Maḥmūd; Muṣṭafā; Bašīr, etc.); (3) N. related to other prophets accepted by Islam (Ibrāhīm; Ismāᶜīl; Dāwūd; Sulaymān; Yaḥyā; ᶜĪsā) and (4) to the great personages of Islamic sacred history (Hāǧar; Maryam; Āmina; Ḫadīǧa; Abū Bakr; ᶜUmar; ᶜUṯmān; ᶜAlī). N. borrowed from the ancient national history and mythology of the Islamic peoples are also used, as well as N. (predominantly in Arabic but also in local languages or in phonetically modified Arabic) carrying a positive meaning of well-being (Saᶜd, 'good luck, satisfaction'), harmony (Ǧamīl/a, 'beautiful'); piety (ᶜAfīf/a, 'chaste'); bravery (Fāris, 'horseman'; Niḍāl, 'fight') or taken from flora and fauna (Usāma, Asad, 'lion'; Ṣaqr, Šāhīn, 'falcon'); they all are considered as well-wishing.

Arabic name structure

Ethiopian Muslims incline to use N. of Arabic origin (due to the special status of the ↗Arabic language in ↗Islam). The typical Arabic N. is normally composed of several elements: (1) *ism* (or *ism ᶜalam*), the personal N.; (2) *kunya*, tecnonym; N. of the first-born normally preceded by *abū* ('father of') or *umm* ('mother of') – this element may take the sense of a nickname (e.g., Umm Ḥabība; [Saᶜdaddīn] Abū l-Barakāt); (3) *nasab*, patronymic (or series) introduced by *ibn* ('son of') or *bint* ('daughter of'); (4) *laqab* (Bosworth in EI²), sobriquet, nickname or descriptive N. related to the profession, a physical characteristic or defect (e.g. al-Ġāzī, 'the warrior'); and, finally, (5) *nisba*, relative adjective linking the person with a relevant element in his or her life: a place, a family, a descent group, a school of law, a mystical brotherhood etc. (e.g., al-Ḥabašī, 'the Abyssinian', al-ᶜUmarī, descendant of ᶜUmar the second caliph, al-Qādirī, etc.). The complete set of elements is rarely used, normally one or two of the components are quoted to refer to a person (s. EI², vol. 4, 179ff.; Caetani – Gabrieli 1915).

Ethiopia-specific features

The N. of the Ethiopian Muslims possess most of the general characteristics of Islamic N. giving (as also examples above show). The lack of a proper extensive prosopographical repertoire of Islamic Ethiopia hinders a serious onomastical analysis of Ethiopian Muslims but some observations can be safely made. Arabic N. are often adapted to the phonetics of the local languages (Mähammäd, Mahamud, Säyəd, Bäšir, Ṭolha, Sadiq, Kaltuma, Firdawsa, etc.). N. made up by *ᶜabd*+N. of God (ᶜAbdaššakūr, ᶜAbdallāh, ᶜAbdalfattāḥ) are wide-spread; N. originally

derived from ancient dynastic *laqab*s (Kramers 1926; Dietrich 1961) made up by a common propitiatory N. and a fixed second element *-dīn* ('religion', i.e. Islam, e.g., Saᶜdaddīn, Ṣabraddīn, Ǧamāladdīn, Ḥaqqaddīn, and also, more peculiarly, Aḥmaddīn, Aẓharaddīn, Asmāʾaddīn, and ᶜUmardīn); N. composed from a famous personal N. with a eulogical epithet (Nūr Ḥusayn; Muḥammad Amān; ᶜUmar ar-Riḍāʾ) and, particularly among the Təgre, "double names" of different origin (e.g., Ḥamad-lul, Maḥamud-ker; s. LitPEA vol. 2, 178f.). When an identical onomastic form is available in the local language, the Arabic version of the N. is preferred, and in the Amharic translation of the Qurʾān all prophets are called according to the Arabic-Islamic form of their N. (*Qəddus Qurʾan* 11).

Hypocoristic or apparently hypocoristic forms (on Arabic hypocoristica s. Littmann 1953) are attested in written sources and in practical use (ᶜAbdoš, Aḥmadūš, Amano [probably from Amanallāh], Mumme [likely from Muḥammede], Amade, Faṭuma). The Təgre usually give a boy a second N. (*səqrat*) to be used only by women of his family (LitPEA vol. 2, 190–93).

In sources, persons are usually identified through *ism ᶜalam* and *nasab*; the *nisba* is also widespread, especially in more religion-focused literature (e.g., Muḥammad Wale 2005).

In Harär, the *laqab* is often added to the patronymic sequence (s. the list in Abduraḥman Maḥammad Qorram 1986: appendix).

Name-giving and conversion

Converts are recommended to assume a new N., though there is no general legal obligation to do so, unless their pre-Islamic N. had some clear anti-Islamic connotation. In earlier phases of Islamization local pre-Islamic N. continued to be used (e.g., N. used in the sultanates of Šäwa and Ifāt, such as Badīt bint Māyā; Dilgāmis; Dunyāḥūz, Baziyū, Goodanaa Babboo). With the deepening of Islamic consciousness, Muslim N. were often combined with non-Islamic or pre-Islamic ones (e.g., Aḥmad Ḥarb Arᶜad, Aḥmad Badlāy; Muḥammad Gāsā). This is also the trend in areas of more recent Islamization (e.g., among the Muslims of Wällo and Gurage one finds such N. as ᶜUmar Wadāǧo Ǧaᶜfar Bukko, ᶜUmar Bäqsa, etc.). Some N. of apparently Christian origin (e.g., Tīdros; Abādir – on this last example s. CerIslam 321ff.; CerStud I, 48–51) were seldom used by Muslims.

Individuals passing from Islam to Christianity almost always changed N.: in Gəᶜəz hagiography the conversion of a Muslim is completed by the Christianization of his N. (Marrassini 1981:LXXV [lit.]). More recently, among the Mammädočč, Mäḥammäd ᶜAli became ↗Mikaʾel, Amäde Kolase became ↗Wäldä Gäbrəʾel. The N. of the Christian father is normally kept in the *nasab* (e.g., ᶜUmar Mäkʷännən, Maḥmūd Nūr Ḥusayn Bərhanu).

Ethnographical overview

Traditions of construction and choosing of N. often reflect the idea that a N. is not merely an arbitrary designation, but determines the character of the thing being named. Individuals often have multiple N. (e.g., a person may have a baptismal N., a mundane N., a nickname and a horse N.) in some cases reflecting changing circumstances over time; in some cases, different functions or

relationships at a given moment (e.g., religious conversion, initiation etc.).

Name-giving

Among Ethiopian Orthodox Christians N. are given on the 40th (boy) or 80th (girl) day after ↗birth, when the child is baptized (↗Baptism). This N. is often chosen referring to the saints' day on which the naming takes place. It may also refer to a Biblical figure, religious concept or attribute of God. The baptismal N. will normally only be used at communion, church weddings, burial and confession. It is usually not used in daily mundane interactions. For these purposes another N. is given, usually based on an event or other propitious indicator (especially among Amhara); the latter N. is the one under which someone is publicly known.

The ↗Betä Ǝsraʾel follow a pattern similar to Christians, both in the timing and meaning of N., and may even refer to the ceremony as *krəstənna*. The ↗Kəmant perform a ceremony called *kenona* 20 to 30 days after the birth of a child, in which the infant is given several N., including a "religious name" (Gamst 1969:101).

Among the ↗Đáasanač (Almagor 1978:119ff.) a new born is given a "pot-N." at a ceremony called *lil-meč meto* which takes place after the umbilical cord has dropped off. Only close kin attend. The father of the infant and the "name-giver", usually a distinguished older person, drink coffee and blow it over the child. The N.-giver becomes the child's confidant because "they have the same name". He becomes something like a god-parent, although the relationship is depicted as that of siblings. This is the strongest form of "bond-partnership".

According to the ↗Oromo tradition, children were brought to the ↗*qaalluu* for the (*h*)*ammačiisaa* N.-giving ritual in which the *ayyaana* divinity was asked to choose a N. or approve the N. given by the parents. This usually took place 2–4 years after birth, whether the child had been given a baptismal N or not. Among the ↗Boorana the final N. was given, connected to the shaving of the head, when entering into the fifth class (*gamme*) of the ↗*gadaa* system. Among the ↗Arsi, after the decline of the *gadaa* system, children were named before their mothers stopped to breast-feed them (VSAe II, 196, 233ff., 327, 484). Among the Šangama, a N. is given by the paternal grandfather in the sixth month after birth (VSAe I, 143).

N. are sometimes taken from the circumstances of the birth or events that took place on the day of birth. This is the case among, e.g., the Baka (↗Aari), ↗Basketo, ↗Ubamer, ↗Dime and ↗Kunama. The Kunama, e.g., may name someone whose birth was difficult Anši ('difficulty') or a baby born after a victorious battle Kuuya ('victory'). Within the Christian culture the saint's N. to whom the day of birth (or baptism) was dedicated often influences the choice of a N. (e.g., someone born on the 12th of a month called Mikaʾel). N. were chosen in many cultures according to the time of day the bearer was born, after the place of birth, after their appearance or after an ancestor's N. While in some cultures the N. of living relatives had to be avoided, in others (e.g., Oromo) the eldest grandson could be named after his grandfather even while he was alive (VSAe I, 80ff., 181, 220, 234f., 260f.). Among some ethnic groups almost every word can become a N., such as Klašni ('Kalashnikov') among the Kunama, meaning strength. N. can also contain hidden allusions, political, religious, or related to personal events.

Name formation

People are commonly addressed by their first N., usually headed by a polite form of address (e.g., ↗*ato* Baḥru, ↗*wäyzäro* Sara) or a title (e.g., Professor Taddäsä; ↗*abägaz* Ḫaylu; cp. ↗Titles).

Among most of the peoples of northern Ethiopia and Eritrea, a personal N. is formed using the individual's personal (first) N. and his or her father's first N. Thus Taddäsä Täsfa is Taddäsä, the son of Täsfa. Taddäsä's son Baḥru would be called Baḥru Taddäsä. Accordingly, there is, with some exceptions (s. below), no cross-generational "family N." as is common in many cultures with European heritage. Indeed, while the Ethiopian ↗Civil Code of 1960 stipulated that "Every Ethiopian [...] must have a family name ..." (Vanderlinden 1969:23), this never materialized. Modern bureaucratic rules established both in Ethiopia and Eritrea now require that the ID card of an individual contains his N. together with his father's and grandfather's N.

In addition, among Christians compound personal N. based on Gəʿəz vocabulary and grammar such as Täklä X ('Plant of X'), Zärʾa X ('Seed of X'), Ḫaylä X ('Might of X'), Gäbrä X ('Servant of X'), Wäldä X ('Son of X'), Täsfa X ('Hope of X') are common. These elements are followed by the N. of God, Jesus, the Holy Spirit, Mary, an Arch-

angel or even other saints (e.g., Täklä Maryam, Gäbrä Mikaʾel, Täsfa Iyäsus). Such names could undergo phonetic changes in the spoken languages. Thus, in eastern Təgray, Gäbrä Mikaʾel can be called Gärä[n]čäʾal (abbreviated as Gäre), while the proper form is used in official contexts. In Eritrea, the same N. would be Gäränkəʾel (abbreviated as Gäbrä). Wäldä Mikaʾel would be Wälläńčäʾal in eastern Təgray and Wäldänkəʾel in Eritrea (abbreviated Wälday or Wällay).

Naming rules reflect the importance of genealogical knowledge (↗Genealogy). N. are simplified genealogies: the traditional question of "your seven names", important particularly at marriage, has to be answered with a list of N. of at least seven (paternal) generations. In cases when the father was less known than the grandfather, or if the grandfather's N. would underline a political claim, the grandfather's N. was often preferred to the father's N. (cp. *ras* ↗Alula [Ǝngəda] Qubbi). This grandfather's N. could even be that of the mother's father (*ləǧ* ↗Iyasu [Mikaʾel] Mənilək, *ras* ↗Kaśa [Ḫaylu] Darge).

The Konta also have both a personal N. and the N. of the father or grandfather (CerPeople 102). Among the ↗Konso (Hallpike 1972:101) all siblings share the same second N. as their father, but only the eldest son passes this N. on to the next generation. Thus both of AB's sons would be named CB and DB. However, while the children of CB would be named EB and FB, those of DB would be named GD and HD.

Nicknames and hypocoristics

N. used in a private or family context often differ from the full N. as used in documents. Thus, a child is often given a pet N., such as Mamuš (literally referring to a baby), or nickname (Amh. *yäqəṭṭəl səm*). Such a N. frequently refers to some traits of its bearer (e.g., Afənčo, 'snubnosed'; Ṭoṭa, 'monkey') and is used in order to tease him (s. Leslau 1995:877). Among the Təgre, each child is given a second N. (Tgr. *səm səqrät*), by which the women of his family call him. Apart from a *səqrät* N., a nickname (Tgr. *atkaras*) can be given according the person's peculiarities, sometimes eventually becoming his normal N. (LitPEA vol. 1, 136, vol. 2, 149f., 190; Littmann – Höfner 1962:181, 399). Among Oromo, various nicknames can be given to each other by the ↗*hariyyaa* members (s. VSAe II 184).

Abbreviated forms of the full N. are widespread and sometimes replace the official N. in daily use. The formation of hypocorisms depends on the local context. In Amharic, the suffixes are usually employed, such as *-š*, even for non-Amharic N. (e.g., Käbbəš for Käbbädä; Zäriš for the Tgn. N. Zärʾi Sənnay), *-əyye* (e.g., Gäbrəyye [from Gäbrʸe] for Gäbrä X), *-u* (e.g., Gäbru for Gäbrä X, Säyfu for Säyfä X), *-e* (Damṭe for Damṭaččäw, Kəfle for Kəflä X), *-o* (e.g., Täklo for Täklä Iyäsus). Among the Təgre, diminutive suffixes can be attached to N. in the same way as to common nouns (Elosay < Elos; Näffəʿetay < Näffaʿ, LitPEA vol. 1, 146).

In an urban context, nicknames, especially in communication among youngsters, are more and more oriented towards the west, Dawit becoming "Dave", Yoḥannəs "John", etc. A special case are the N. used only among family members if the family lives in a "foreign" context. An individual might officially bear a N. common in the surrounding culture, but be called with another N. by his family members (e.g., an Ethiopian Christian may be called Muḥammad in the Sudan, but Gäbrä Ǝgziʾabəḥer ['Servant of God'], or Gäräzgəher, at home).

Cattle names and additional names

Among many peoples in north-east Africa, mostly pastoralists, it is common for a man to take an "ox N." or "cattle N." based on the N. or colouring of his favourite beast. This phenomenon, similar to that of the highland Ethiopian "horse names" (s. below), is classically described by Evans-Pritchard (1956:252) among the ↗Nuer. It is common in Ethiopia among not only the Nuer and ↗Añwaa, but a variety of other groups, such as the ↗Suri who derive all personal N. from the colours or patterns of cattle coat (Abbink 2003:347). While the first N. in ↗Banna and ↗Hamär are those of ancestors or, in some cases, related to events which took place at the day of birth, a young man gets a second N. according to the N. of the first cow he jumped over during the leap-upon-the-cattle initiation (VSAe I, 330, 335, 343f.).

A teenage Đáasanač boy selects a new N. as he begins to form his own herd within that of his family. After the birth of his first child, a Đáasanač man will be referred to as the "Father of [N. of child]", and a woman, the "Mother of [N. of child]" (cp. also, e.g., *abū / umm* in Islamic N.).

Names of families and lineages

While common people do not have family N., there are a few exceptions among Muslim ur-

ban families in Eritrea, especially of ↗Massawa, whose family N. result from the heritage of an old title (such as ↗Nāʾib) or refer to a foreign origin (such as Kurdi, Turki, Hindi; cp. ↗Ottoman empire). Similar to medieval European leading families, several ancient Ethiopian and Eritrean families also possess a "kinship N.", like ᶜAd Azzaž for the family of the traditional bearers of the title *azzaž* in Təgray, ᶜAd Däggiyat for the rulers of Ḥamasen (who beared the title *däggiyat*), [ᶜAd] Nāʾib for the local dynasty of the *nāʾibs* of ↗Ḥərgigo, and Käkkiya (from Ottoman *kaḫya*) for another family of Ottoman administrators in Eritrea. Today the latter two are especially used as real family N. These N. reflected the families' claim for heritable titles and offices, supported by genealogies. They are to be distinguished from other denominations used for kinship groups and lineages, which are never used as personal N. (e.g., ↗*ənda X*, *däqqi/däqqä X*, *betä X*, *beni X* and other kinship terms which sometimes encompass large groups).

Even if family N. are rare in the Horn of Africa, another N. system documented especially from aristocratic families approaches the idea of a family N., transmitting N. or N. particles from one generation to the next. In 14th- to 18th-cent. Təgray and ↗Säraye, a leading family of overlords bore N. ending with Ǝgziʾ; every member of the family could be recognized by this. Similarly, some leading families often transmit the same first N. to following generations (e.g., *ras* Mängäša Śəyyum being the son of *ras* ↗Śəyyum Mängäša; ↗Ǝndalkačč̣äw Mäkwännən the son of ↗Mäkwännən Ǝndalkačč̣äw; Mäkʷännən or Asfa Wäsän in the family of *aṣe* Ḫaylä Śəllase I).

Name changes

Changes in status are commonly marked by a change in N. Thus, rulers and even smaller chiefs (e.g., in Basketo [VSAe I, 200]) often took a regnal N. after enthronement (s. sub-article on regnal N.). Likewise, a secular person who became monk assumed a new N. along with his or her monastic garb. Similarly, converts, whether to Christianity or Islam, usually accepted a new N. when they accepted their new faith (↗Conversion; a prominent example being *ras* ↗Mikaʾel ᶜAlī, the former *imām* Muḥammad ᶜAlī). Throughout Ethiopian history, princes assumed a royal N. with the ascension to the throne. In N. changes, the choice of a N. is often intended to make a statement regarding the person's new identity. Thus monks would carry such N. as: Gabrä Mänfäs Qəddus, 'Servant of the Holy Spirit', Täklä Haymanot, 'Plant of Faith', Iyäsus Moʾa, 'Jesus has Conquered'. Throughout Ethiopian history, princes assumed a royal N. with the ascension to the throne. Emperors chose N. which recalled past glories: Tewodros, recalling the messianic ruler awaited by Christian Ethiopians, or Mənilək II referring to the son of Solomon and the Queen of Sheba (↗Mənilək I). In other cases, the N. was meant to convey the sense of royal power: Adyam Sägäd, 'the periphery [of the kingdom] bowed'. A specific case are regnal N. of Muslim Oromo kings in the Gibe states. In the moment they accessed the throne, their personal N. could not be used any more, having become "sacred". Instead, their "war N." (i.e. the horse N., preceded by "Abbaaa") became the only one to be used in public discourse. In addition, they assumed another, Muslim, N. for use in official documents in Arabic. For example, the ruler of Gimma, ↗Abbaa Ǧifaar II (i.e., 'Father of the brindled [horse]'), sealed with the N. "Muḥammad b. Dawūd" (CerEt 73f.; seal s. Borelli 1890:159).

Although Ethiopian women do not take on their husband's N. (father's personal N.), there are bridal N. (*yädabbo səm*, lit. 'bread N.'). This N. is given at a ceremony on the evening of the wedding at which the bride presents her in-laws with a large round loaf of bread. Before the bread is sliced, various N. are proposed until a consensus is reached. Each person in turn then calls the bride by this new N. before receiving a slice of bread. Traditionally, the family of the groom will always refer to his wife by this N. (Leslau 1995:877; Elias Yemane 2004:184–88).

In the context of Protestant and Catholic ↗mission starting from the 19th cent., a number of new naming rules appeared. Protestant converts sometimes combined personal N. and baptismal N. (the latter not being "secret" any more), like ↗Mikaʾel Arägawi or ↗Gäbrä Ǝgziʾabəḥer [Gobbaw] Dästa. N. changes after (re-)baptism also occurred. While Christian highlanders normally did not change their N. upon conversion, others did, such as early Catholic or Protestant Oromo converts (e.g., Pauline ↗Fathme; ↗Onesimos Näsib; ↗Ruufoo). A peculiarity are the N. of those who entered the Capuchin mission (s. Metodio da Nembro 1953). A Capuchin generally does not keep his secular N., which is replaced with a religious N. combined with the place of origin (Mario da ᶜAbiy-ᶜAddi, or briefly P. Mario, is *abba* ↗Ayyälä Täklä Haymanot;

abba Agostino da Hebo is *abba* ↗Agoṣtinos Tädla [also "Agoṣtinos Zäḥebo"]; cp. also Léon des ↗Avanchers, Francesco da ↗Bassano, ↗Mauro da Leonessa).

As enslavement meant a change to a new, in this case inferior, status, there were special N. which were only applied to slaves, such as Säṭṭäñ, 'He [God] gave me [this slave]'. Sometimes a slave was given a N.-phrase, so that he was called by the first part of the phrase, and had to respond by the second half of the phrase to complete the meaning of the N. For example, a girl called *ləkʷəra bähullu*, 'Let me have a reason to be proud towards everyone', had to respond with the words *əmmete sallu* 'as long as my mistress is there', or 'because of my mistress' (MolTrad 27; Elias Yemane 2004:178–82). Slaves "exported" from Ethiopia into Muslim countries were generally given a Muslim N. (e.g., Fāṭimah in the case of Pauline Fathme). 19th cent. Massawa registers contain long lists of freed slaves, who assumed the N. of their "liberators" as a second N., instead of a father's N.

Whereas in the cases mentioned above the change of N. takes place to mark a change of status, the process can in some instances be reversed. Thus, if a child is sick, parents may decide to change its N. in the hope that this will bring about a change in his or her fortune. This custom relates the widespread belief that disease might be linked with evil ↗spirits, who "know" a person by one N. This N., as a consequence, is changed to divert the spirits' attention.

Name avoidance

In some relationships one or both of the parties involved are forbidden to address the other by N. In many cultures a man does not use the birth N. of his in-laws. Rather he uses their ancestral N., battle N., or even cattle N. Among the Gurage a newly married woman will not use her husband's N., substituting it with a similar sounding word (Leslau 1959). Among the Oromo, the custom known as *laguu* or *lagača* prohibits husbands, wives and in-laws from using each other's N. Various strategies are used, including pronouns, familiar descriptions "father or mother of [N. of child]", cattle N., references to the person's appearance, and rhyming or other similar words (Mbaya 2002).

Magic and names

For divination in the Christian Orthodox context a diviner needs a person's (usually baptismal) N. as well as the N. of his/her mother and perhaps father (MolTrad 102; ↗*Asmat*). For ↗magic purposes the baptismal N. is especially needed. There is a common belief that someone who knows someone's baptismal N. can use it to gain influence over that person (ibid. 115). A "personalized" ↗magic scroll consequently contains the baptismal N. of a person, same as sacral objects donated to churches. Divination is often performed by assigning a numerical value to each letter in the person's N., thus following a method also known in the Jewish Kabbala tradition.

Modern developments

During the period of Amharization, in the time of Ḫaylä Śəllase I's reign, it was common for people of non-Christian and non-Muslim backgrounds seeking to be accepted by the elite to take on more Christian-sounding N. In recent years, as ethnic diversity has become more politically accepted, people not only retain but also re-assume their original N. Modern political developments have strongly influenced naming. N. might refer to revolutionary struggle (Tgn. male N. ᶜAwät, 'victory', female N. Ḥurrīya, from Arab. 'freedom', Näṣannät, 'independence') or to nationalistic pride (female N. Ityopya, Erətra).

In recent years, ↗migration has disrupted traditional patterns as the bureaucratic demands of host countries have demanded a single "family N." ignoring the migrants' cultures. Often the father's second N. i.e. the paternal grandfather's first N. serves this purpose. In very few cases an ethnic subgroup's or clan N. is also used (especially among non-Christian migrants). Over the course of time, N., particularly first N. tend to become either formally or informally adapted to those of the host countries. In Israel many Ethiopians had their N. officially Hebraicized upon their arrival, although they continued to use their traditional N. among family members and within the Ethiopian community (Anteby 1999). Thus, N. used within the community often differ from those used outside, in the context of the host country.

Steven Kaplan – Wolbert Smidt

Horse names

The ↗horse N. (Amh.: የፈረስ፡ ስም, *yäfäräs səm*; Gəᶜəz: ስመ፡ ፈረስ, *səmä färäs*) was a significant cultural feature in the Christian, Muslim as well as "animistic" sections of the Ethiopian highland society, particularly in the period ca. 1750–1935. In the earlier periods (especially 13th to 17th cent.), there were some occurrences of connotatively horse-name-like compounds such as Haräb Asfärre, Wədəm Asfärre, Wədəm Arᶜad, Säyfä Arᶜad etc.; but we cannot assert with certainty at this stage that they were of the same nature as the horse N. of later periods. They are generally assumed to have been royal appellations (s. subarticle on regnal N.) or bynames.

In spite of the abundant references to horse N. in internal and external literary sources, and in spite of the superb nomenclatural samples compiled by Maḫtämä Śəllase (MahHorse 195–303) and of the equestrian sporting association of Ethiopia, no taxonomic and/or semantic study of horse N. has so far been made. The same applies to the historical origin and spread of the horse in the region. Although the use of horses in Egypt, South Arabia and the Byzantine empire prompted some historians to speculate the existence of horses in the Aksumite empire (e.g., PankIntro 30; HabKön 132; MHAksum 259), neither the Greek, the Roman and the Arabic documents nor the numismatic, epigraphical and archaeological sources have as yet hinted to the existence of any type of equid in northeast Africa in contrast to the evident presence of tamed ↗elephants.

The German scholar Haberland, who researched in southern Ethiopia, found out (cf. HabKön 132ff.) that the horse and the appellations for its paraphernalia spread to the south, particularly among the Oromo and the western Cushitic speakers, in the 16th cent. The sovereigns used the ↗mule for travel, though a decorated horse always accompanied the royal hybrid.

The underlying concept of horse N. was that the horse and its rider were strongly identified with each other. Both executed their duties in warfare, game hunting and sports so harmoniously that one could not attribute the achievements to one of them without being unfair to the other. Apparently, this conception developed out of the cultural assimilation of the Semitic- and Cushitic-speaking peoples, particularly the Oromo and the Amhara, whose interactions were intensified with the decline of the monarchy's power in the second half of the 18th cent. The use of horse N. culminated after the middle of the next century. The notion was expressed through the combination of ↗*abba* or ↗*abbaa* and the N. of a distinguished or most favoured horse. By custom, every horse was given a N., but it was only the one most favoured by the owner and groomed for a particular purpose whose N. was taken as a component of the owner's horse N. In exceptional cases, some owners had two or more horses to whose N. *abba/abbaa* was at-

tached. At times two or more contemporaries also used identical horse N., apparently without any conflict resulting thereof. Although the use of horse N. was by no means restricted to any social group, the samples so far collected belonged entirely to the notabilities. Examples: "Abba Qañňäw" = *ras* ↗Mäkʷännən Wäldä Mikaʾel, "Abba Mäla" = *fitawrari* ↗Habtä Giyorgis Dinagde, "Abba Fänqəl" = *däğğazmač* ↗Asfa Wäsän Kaśa, etc. No woman has been included in the list. The compilers have included the sovereigns in their lists, apparently having overlooked the significance of the change of N., rank and prestige through coronation. As long as they counted among the *mäkʷanənt* (↗Aristocracy) or *mäsafənt* (as the case may be) and retained their mundane N., the would-be sovereigns had horse N. of their choice. For instance, "Abba Taṭäq" Kaśa = *aṣe* ↗Tewodros II, "Abba Gahid" Gobäze = *aṣe* ↗Täklä Giyorgis II, "Abba Bäzbəz" Kaḥśay (also Kaśa) = *aṣe* ↗Yoḥannəs IV, "Abba Dañňäw" Mənilək = Śahlä Maryam (= *aṣe* ↗Mənilək II), and "Abba Ṭäqəll" Täfäri = *aṣe* ↗Ḫaylä Śəllase I. None of the available sources combines the horse N. and the regnal N.

The conceptual terms used to form the N. of a horse may roughly be categorized in the following three groups: (1) colours of the horse: *sanqo* or *gurračča*, 'black'; *dama* or *dima*, 'reddish'; *daläč* or *dales*, 'grey '; *sənde*, 'wheat-coloured' etc.; (2) nominals with certain implications understandable for contemporary society: *dina*, 'enemy' (usually referring to the Oromo); *təntag*, 'firebrand'; *ğahid* or *ğəhad*, '*ğihād*' (allusion to Muslims); *mäla*, 'unriddling'; *ṭəggu*, 'refuge'; *baḥər*, 'sea'; *mädoša*, 'hammer'; *šäyṭan*, 'Satan, demon' etc.; (3) imperative forms of verbs of motion or action: *səbär*, 'break ... [it, them, etc.]'; *dañňäw*, 'administer justice'; *bäzbəz*, 'rob, plunder'; *gässəṭ*, 'rebuke, censure'; *qañňäw*, 'survey, spy' etc. It should be emphasized that it was the owner (and not the horse) that was referred to by the composite appellation ("Abba" + "..."), though one is at the same time reminded that a particular horse was involved in the uttered sobriquet. Hence, the second component (i.e. the actual N. of the horse) was carefully chosen to reflect the character, achievements, prestige or ambitions of the owner (cf. MahHorse 195–202; Čä Färäsä 2005:73–87), for it was a custom for poets and singers to speak praising, critical or inciting lines in relation to the horse N. In fact, it appears in many cases that the first horse N. was attached by the artists and the public at large, though probably not without the approval of or even the surreptitious initiative of the notable in question.

When, how and under what circumstances the chosen horse N. was made public has not been recorded. An oral tradition collected from Šäwa in the late 1960s alleges that occasionally groups of youths underwent a kind of ↗initiation to manhood in which they demonstrated their horsemanship and in which each announced his horse N. On the other hand, a chronicler of Goğğam recalls an anecdote (cf. Girma Getahun 1991, ch. 24) which alleges that *däğğazmač* Kaśa (later *aṣe* Tewodros II) requested a notable of Goğğam either to give up his horse N. in his favour or to suggest a horse N. which he could use, although he was no longer a youth. The arrogant notable suggested a term which implied that the ruler's political attempt was futile, an incident which enraged Kaśa violently and prompted him to undertake a military campaign against the notable.

Bairu Tafla

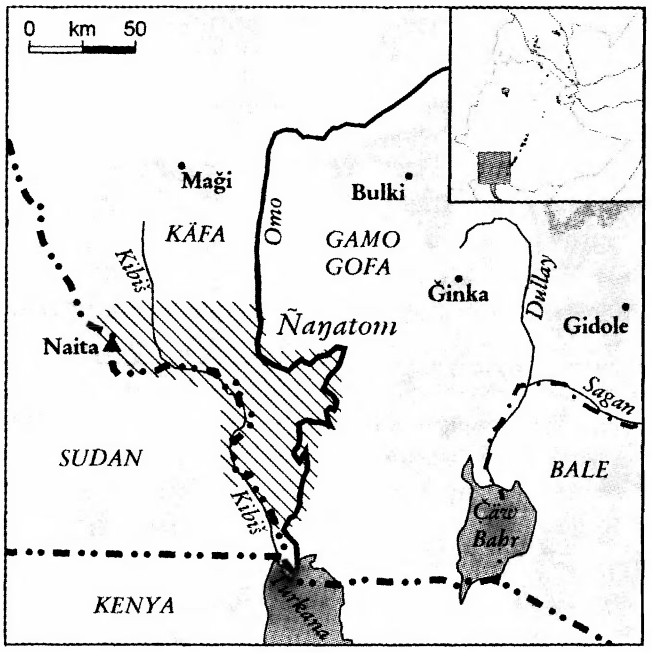
Ñaŋatom

Ñaŋatom language

Ñ. (Nyangatom, also known as Donyiro, Dongiro, or Bume) is an Eastern ↗Nilotic (↗Nilo-Saharan) language spoken by ca. 14,000 people in south-western Ethiopia and the neighbouring Sudan. It is part of a dialect cluster known as the Teso-Turkana group (also "Karimoğoŋ cluster"), which further includes varieties like Dodoth [*Dodoṯ*], Ğie, Karimoğoŋ, Toposa, ↗Turkana and the more distantly related Teso language.

Ñ. consonants are: labials *p*, *b*, *m*, *w*; alveolars *t*, *d*, *s*, *n*, *l*, *r*; palatals *č*, *ğ*, *ñ*, *y*; velars *k*, *g*, *ŋ*.

Ñ. has a terraced-level tone system with high and low tone, downstep, and downdrift. As is common with languages in the area, it employs



a system of "advanced tongue root (ATR)" harmony restricting the co-occurrence of specific vowels within the same word. Vowels are: *i*, *e*, *o*, *u* [+ATR], *ɪ*, *ɛ*, *a*, *ɔ*, *ʊ* [-ATR]. Vowel length is distinctive in Ñ., as in *ǧík* 'completely' vs. *ǧíík* 'always'. Before a pause, short vowels carrying a single (as opposed a complex) tone are devoiced: *é-tál(i)* [*étál̥i̥*] 'custom'; such voiceless word-final vowels (here written between parentheses) are realized as extra-short voiced vowels before another word.

Apart from an extensive set of plural-marking suffixes (e.g. 'tongue' *á-ŋáǧép* [sg.] – *ŋá-ŋàǧèp-á* [pl.]), Ñ. also uses singulatives ('Ñaŋatom man' *é-ñáŋàtɔ́mé-ít* [sg.] – *ŋí-ñáŋàtɔ́m(è)* [pl.]), as well as replacement (i.e., marking of number on singular as well as plural forms: 'diviner' *é-múró-n(i)* [sg.] – *ŋí-múró-k* [pl.]). Most nouns carry a masculine, feminine, or neuter gender prefix. Cp. *é-ñáŋàtɔ́mé-ít* 'Ñaŋatom man'; *á-ñáŋàtɔ́mé-ít* 'Ñaŋatom woman'; *ŋá-ñáŋàtɔ́m(è)* 'Ñaŋatom language'. Gender is also shown on nominal modifiers, e.g., adjectives or numerals, but not in pronouns or in verbal morphology. Compounding is relatively rare in Ñ.; it occurs, e.g., in the ethnonym *-ñáŋà-tɔ́m(è)*, lit. 'yellow-guns'. Case is marked by way of tonal inflection on noun phrases and pronouns: 'stomach' *ákɔ̀ɔ́k(ì)* (Nom.) vs. *ákɔ́ɔ́k(ì)* (Acc.); 'I' *áyɔ̀ŋ* (Nom.) vs. *áyɔ́ŋ* (Acc.). Ñ. makes a distinction between 'we (inclusive)' (*sʊ̀á*) and 'we (exclusive)' (*ŋwɔ̀ní*) with independent pronouns, but not with a pronominal subject (or object) marking on the verb.

Ñ. has a complex verb morphology, involving stacking and fusion of morphemes marking person, number, causative, ventive, itive, dative, instrumental, frequentive, habitual, as well as various modality forms.

Ñ. is a verb-initial language (both Verb-Subject-Object and Verb-Object-Subject sentences are possible): *kà-ryéb-ì*$_1$ *áyɔ́ŋ*$_2$ *ákɔ̀ɔ́k(ì)*$_3$, 'I have a stomach ache' (lit. 'the stomach$_3$ hurts$_1$ me$_2$'), *kà-ràm-í*$_1$ *ŋésì*$_2$ *áyɔ́ŋ*$_3$ '(s)he$_2$ hit$_1$ me$_3$'.

The ten-word list is as follows: *á-péy* 'one', *ŋá-árév* 'two', *ŋá-úní* 'three', *á-kìm(í)* 'fire', *ŋá-kípǐ* 'water', *á-kɔ̀lɔ́ŋ* 'sun', *é-láp* 'moon', *ŋá-ákɔ́t* 'blood', *á-ŋáǧép* 'tongue', *é-kɛ́lá-í* 'tooth'.

Gerrit J. Dimmendaal

Ñaŋatom ethnography

Known in Ethiopia as the "Bume", the Ñ. inhabit the south-western corner of Ethiopia, the Lower Omo Valley. Ecologically, the region is a ↗Rift Valley lowland: its climate is hot, rainfall is low; the area thus offers a sharp contrast to the Ethiopian highlands. The Ñ. and their neighbours are semi-nomadic agro-pastoralists. They live on sorghum, maize, soja beans and tobacco cultivation, but their cultural preference is zebu cattle and small stock raising. They also keep donkeys as beasts of burden for their migrations from wet season to dry season pastures.

The Ñ. are a part of a larger group, the Karimoǧoŋ cluster, which is spread over four countries: Uganda with the Karimoǧoŋ, Ǧie and Dodoth; Kenya with the Turkana; Sudan with the Toposa and Ǧie; and Ethiopia with the Ñ. Ethno-history suggests that the Ñ. are rather recent incomers (mid 19th cent.) into the Lower Omo Valley, as a result of a late-18th cent. migration from the Koten-Magos area in Karamoǧa, Uganda, which brought the Ñ. and the Sudanese Toposa to their present locations. The Lower Omo Valley is a cultural melting pot: two of the four major African linguistic families are represented in the area: Nilo-Saharan (Ñ., Turkana, ↗Mursi); Afro-Asiatic, with its Omotic (↗Hamär) and Cushitic branches (↗Ðáasanač).

The Ñ. have their settlements in the centre of the Lower Omo Valley, on the western banks of the Omo and on the Kibiš river which consti-

tutes the Ethio–Sudanese border, and thus they nomadize more or less freely into the south-eastern corner, known as the "Ilemi Triangle", of the Eastern Equatoria Province of the Sudan. There they meet their best allies, the Toposa, but also traditional rivals like the Turkana on the southern, Kenyan side, of the Triangle and the ↗Suri or Surma to the north of it. Since the 1990s they have pushed the Suri to the north and established, together with the Toposa, an important pastoral and military settlement at the foot of Mount Naita, on Ethiopian territory and/or on the Ethio–Sudanese border. Even in the Lower Omo Valley, proximate neighbours are potential enemies, such as the Mursi to the north, the Đáasanač to the south, the Karo (↗Kara) and the Hamär to the east, on the left bank of the river. But fortunately the chronical state of intergroup raiding is mitigated by strong ties of "personal friendship" between members of opposed, and also complementary, groups.

The area was included into the empire of Mənilək II by the armies of *ras* ↗Wäldä Giyorgis in 1898/99. Except for a brief Italian episode (1938–40) the Ñ. and their neighbours became Ethiopians, although living on the margins of the country and drawing very little from its administration. It was not until the 1960s that anthropological study of the area really started, with a large number of publications on the Đáasanač, the Hamär, the Mursi, the Ñ. and others. Under the *Därg*, the Ñ. and their neighbours were recognized, under their self denomination, as full members of the national community.

The demography of the Ñ. remains difficult to evaluate. They were less than 5,000 in the early 1970s, when the present author started his study, but they might have been over 14,000 on the eve of the third millenium. The demographic expansion was connected with health and relief assistance dispensed for 30 years (1972–2002) by the Swedish Philadelphia Church Mission (↗Sweden). But such a lasting assistance might have enhanced the dependency of a people living in an area of scarce resources. The NGO's withdrawal from the area is bitterly felt by the population.

In the course of their early migration from Uganda, the pastoral ancestors of the Ñ. had been scorned as "Elephant-eaters" (*Ñam-etom*), a nickname which they aptly transformed into "Yellow Guns" (*Ñaŋ-atom*), thus underlining the martial intentions of their emerging community. The Ñ. share with other peoples of the Karimoǧoŋ cluster the main features of their social organization. They are divided into about 20

Ñaŋatom women restoring a warrior into civil society; photo 1970s, courtesy of Serge Tornay

patrilineal descent groups or clans, half of them being well attested in the rest of the cluster. The size of such clans varies from a few individuals to several hundred. The clans are no political units; these are formed by "territorial sections". Given names of migratory birds such as *Storks, Flamingos, Ibises*, but also ethnic (*Kumam, ŋaric*) or common names (*Castor trees*), such sections have no fixed boundaries, but they express the relative positions of the settlements and reflect the nomadic routines of their members. The main originality of Ñ. society is a generation-set system which, embracing men and women alike, allowed the Ñ. to separate from their parent stock, which included the Toposa, and to become an autonomous polity. The males of one generation – originally just those of the age-set of the "Founders" of the new independent polity – procreate all the members of the generation to come, that of their sons, who procreate their own sons, and so on. Each generation is given a social identity through the name of a species: thus, Ñ. ethno-history is recording the "Founders", their sons the "Wild dogs", then the "Zebras", the "Tortoises", the "Mountains" (extinct generations), then the "Elephants", the "Ostriches", the "Antelopes", and the "Buffaloes" (living generations). As of 2000, the name of the children of the "Buffaloes" was unknown. Any generation is given one of only

two statuses: their members, whatever their age, are considered to be either the "Fathers" or the "Sons of the Country". Alternate generations, that is grandfathers and grandchildren, share a common status. In the daily routine, the sons slaughter oxen in feasts dedicated to feeding their fathers. This is the first stage of initiation. The second stage, the transmission of sovereignty from the "Fathers" to the "Sons of the Country", occurs only once in 50 to 55 years. It requires a barely disguised human sacrifice: after the ceremony, the *asapan-man*, medium of the regeneration of the society, loses, like his generation-mates, his status of "Father", but he also loses his mind, so that his fate is to perish in the bush. This custom, recorded solely among Ñ., is an unparalleled paradigm of the regicide reported for other Nilotes. The *asapan* ceremony was outlawed under Mängəstu's regime and the Ñ. today are paving their way to modernity through their adhesion to Pentacostalism and their political and economic integration into the regional community of the "Southern Nations, Nationalities and Peoples' Region", with the headquarters in Ǧinka.

Nao

↗Nayi

Naᶜod

N. (ናዖድ, also Naʾod [Eth. version of the name of the biblical judge Aod, or Ehud (Judg 3:12–30)], Qäläyoṗa, Anbäsa Bäṣär ['Lion for the enemies'], r. 1494–1508) was a son of *aṣe* ↗Bäʾədä Maryam and queen Romna (presumably hypocoristic for Romanä Wärq; s. PerrEsk 346 [text]; Cerulli 1933:104) who succeeded his brother ↗Ǝskəndər and the latter's son ↗ᶜAmdä Ṣəyon II to the throne in 1494.

N.'s rise to power put an end to a succession struggle caused by two dignitaries, Täka (or Täklä) Krəstos and Zäśəllus, each supporting a different candidate to the throne after Ǝskəndər's death. According to the only known extract of N.'s chronicle (PerrEsk, using mss. Oxford 29 and BN éth. 143), the ↗*ṭäwa* from ↗Ifat supported N., however hard Täka Krəstos tried to use them against him. After Täka Krəstos was defeated and exiled, the new monarch promulgated a general amnesty in the kingdom in order to restore peace.

Like his brother Ǝskəndər and his mother Romna before him, N. had a close relationship with the monastery of ↗Däbrä Libanos in Šäwa and its head, *abba* ↗Märḥa Krəstos. One cannot exclude that this ↗*əṭṭäge* played a role in power legitimization in this period of deep political crisis.

Several sources mention a ↗Betä Ǝsraʾel revolt in ↗Səmen that N. suppressed at the beginning of his reign, and the bloody repression that followed (PerrEsk 51f.; the *Mäṣḥafä ↗kidanä məḥrät* in Conti Rossini 1910:599f. [text]; the Acts of Märḥa Krəstos in Kur 1972:101f. [text]). Some other texts also present N. as the rescuer from the power of the Jews (Miracle of Mary, EMML 1874, fol. 150r; the Acts of N.'s confessor ↗Habtä Maryam, EMML 2142, fol. 24v).

In ↗Bale, N.'s army fought the rebellious forces of Wänag Žan, a convert to Islam. The latter was captured. However, through the intercession of his brother, Wäsän Sägäd, he was spared, converted back to Christianity and after a while even appointed governor of Bale. Wänag Žan, however, betrayed the Christian kingdom a second time, had the Christian notables of Bale massacred and tried to hand over the province to the ᶜAdalite Muslims. This second betrayal, which, like the first, ultimately did not produce the desired results, may have taken place only much later, in the early years of Ləbnä Dəngəl's reign (BassHist 164ff.).

Whilst during the first years of N.'s reign the ↗Stephanites were still suppressed, the ruler's attitude towards them changed drastically around 1499. At that time he asked an ecclesiastic council to examine the Stephanite faith. The church officials around *abba* Sinoda of Saf (Ṭana) questioned ↗ᶜƎzra of Gundä Gunde. As a result, N. decided to leave the followers of ↗Ǝsṭifanos in peace (Beylot 1991:10). He was also benevolent to ᶜƎzra who remained at the court until N.'s death in 1508 (Caquot 1961:79–90 [text]).

N. continued the policy of his predecessors

↗Dawit and ↗Zärᵓa Yaᶜəqob with regard to the cult of St. ↗Mary. According to the text of a miracle (↗*Täᵓammərä Maryam*), he established the monthly commemorations for the annual feasts of her Nativity (↗*Lədäta*, 1 *Gənbot*), Dormition (↗ᶜƎräfta, 21 *Ṭərr*) and Assumption (↗*Fəlsäta*, 16 *Näḥase*). He is also credited with the authorship of many texts dedicated to the Virgin, including the ↗*Mälkəᵓa Maryam*, the ↗*Wəddäse Maryam*, a *sälam* in honour of Mary, *Täfäśśəḥi Maryam* and some other hymns (BassÉt 103; Cerulli 1933:107; Caquot 1955:108). The manuscript BritLib Orient. 706, containing a collection of ↗*śəllase qəne* ascribed to N., probably dates from N.'s reign (Turaev 1904).

Two churches are believed to have been founded by N. One is mentioned only in the ↗*Futūḥ al-Ḥabaša* (BassHist 217), whereas the other, ↗Mäkanä Śəllase, also in Christian texts; Alvares mentions it as the church completed by N.'s son and successor ↗Ləbnä Dəngəl (BassHist 284f.; BeckHuntAlvar 378f.; Derat 2003:342f.).

According to Alvares, N. had five wives in total (BeckHuntAlvar 410), though apparently mostly before he became emperor and perhaps even then successively and not simultaneously. In any case, his *ətege* ↗Naᶜod Mogäsa is the only one whom we know by name. In addition to N.'s successor Ləbnä Dəngəl, we know of two daughters of the royal couple, Wälättä Qälämsis (Amätä Wəṭən, wife of ↗Dägälhan) and ↗Romanä Wärq (apparently named after her paternal grandmother).

Another daughter of N., Amätä Ṣəyon, is commemorated in the ↗*Sənkəssar* (ColSyn XIII, 267). She was buried in ↗Daga Ǝsṭifanos. The link between N. and Daga Ǝsṭifanos is further illustrated by an episode found in some versions of the "short chronicles" and in a copy of the monastery's own chronicle (in BN éth. 143 but not in Oxford 29; DombrChr 157). Moreover, in the third year of his reign, N. allegedly translated the body of *aṣe* Zärᵓa Yaᶜəqob to Daga.

N. died on 7 *Näḥase* (30 July) 1508 during a military expedition against Muslims in Ifat (BassÉt 13; Taddesse Tamrat 1972:296). The sources differ on the place of his burial. According to the "short chronicle", he was buried on ↗Amba Gəšän (BassÉt 13; BegCron 14), and according to Alvares and the *Futūḥ*, near Mäkanä Śəllase (BeckHuntAlvar 360f.; BassHist 284f.). On 12 January 1521 his body was translated into the completed church, in a solemn ceremony attended by the metropolitan *abunä* ↗Marqos, N.'s successor Ləbnä Dəngəl and the dowager queen Naᶜod Mogäsa.

Naᶜod Mogäsa

N.M. (ናዖድ፡ ሞገሳ) was a 15th/16th-cent. empress. The wife of *aṣe* ↗Naᶜod and mother of *aṣe* ↗Ləbnä Dəngəl, she was a native of Təgray, according to the ↗*Futūḥ al-Ḥabaša* (BassHist 82; Basset erroneously identified the "mother of the king" as the queen ↗Ǝleni). N.M. was a member of the regency council of her son, along with Ǝleni. In all probability, the latter was pre-eminent in this council, as indicated in the introductory chapter of the chronicle of Ləbnä Dəngəl (Conti Rossini 1894:622; KrLebD 3).

The historical sources are quite silent about N.M. She does not appear in the fragment of the Naᶜod chronicle known to us (PerrEsk). Nor is her name mentioned by Alvares who only hints at her in connection with the translation of her husband's body to the church of ↗Mäkanä Śəllase in 1521 (BeckHuntAlvar 360f.).

N.M. is traditionally credited with the foundation of at least three royal churches: ↗Getesemane Maryam in Goğğam (Sergew Hable Selassie 1993:40f.; there exists, however, an oral tradition claiming foundation by Bäᵓədä Maryam, s. Spencer in PICEA 1, 53f.); the church of Badəqe,

near the royal residence situated in ↗Fäṭägar, destroyed by the armies of ↗Aḥmad Ibrāhīm al-Ġāzī ("Grañ"; BassHist 82f., 114); and Betä Sämayat in Amhara, where she was buried. Her body is reported to have remained there until Grañ's invasion, when the priests transferred it to ↗Amba Gəšän just before the destruction of the church (BassHist 313).

Napata

The name N. (Gr. τὰ Νάπατα [pl.; Strab. XVII, 1, 54], ἡ Ναπάτη [Cass. Dio LIV, 5, 4], Lat. Napata/ [Na]bata [Plin., *Nat. hist.* VI 189]) represents Egyptian *npt* (the first time occurring in Urk. IV, 1297). The city- or mountain-determinative poit to N.'s location near Ǧabal Barkal, the water-determinative to the Nile and to a pun with Egyptian *np* , 'moisten' and Meroitic *ato* 'water' (Zibelius 1972:138; Yoyotte 1954–57; s. map to ↗Kush for location). The exact meaning of this indigenous toponym is obscure, but sun- and god-determinatives suggest a Proto-Meroitic (?) connection (Dunham 1949:378–88; cp. ↗Meroë). The Meroitic form is *napate-te* (McAdam 1949:53), with *-te* as locative; the Egyptian name is *ḏw-wʿb*, 'high/holy mountain', referring to Ǧabal Barkal – an important center of the cult of Amun.

The cult of this Theban god was introduced during the Middle Kingdom, as shown by the middle-Egyptian vocalization of his name there: *ʾImn(.w)*, 'Amun' – *amani* – (New Kingdom > *amun*). Having incorporated aspects of an indigenous ram cult, the ram-shape was the prominent representation of Amun even when Alexander the Great visited Sīwa (Kendall 1997:76–81). In the 25th dynasty, Amun of N. – amalgamated to *Amanapa/Manapa* (Peust 1999:214) – became the central god in the kingdom of Kush, and was thought to reside in the mountain itself (*ḫr.ỉ ỉb ḏw wʿb*), while the great temple of Amun (B500) was built right at the foot of this 90 m steep massif. A formerly gold-covered inscription of Pharaoh Taharqa suggests that the characteristic pinnacle of the massiv (75 m) was interpreted as a royal *uraeus* or rearing cobra (Kendall 1996:161–71).

In 1820–21, Frédéric Cailliaud was the first to note and describe the ruins of N., situated 15 km north of the 4th cataract. Following preliminary examinations by Budge and Breasted, George Andrew Reisner excavated 18 pyramids, seven temples and two palaces in 1916 and 1920 (Dunham 1970; Reisner 1917–21, 1931). Since 1972 and 1986, three teams led by Sergio Donadoni and Alessandro Roccati (Rome; temples, palace B1500), Timothy Kendall (Boston; Gebel, temples) and Francesca Berenguer (Barcelona; necropolis), respectively, continue to explore N. The actual city (residential buildings, cemetery) probably situated between the temples and the bank of the Nile, has not yet been located (Donadoni – Bosticco 1982), as some other well-known structures (B1700–2400; B3000) still await excavation. The site has been occupied from the prehistoric times onwards, especially in the Kerma period. The origins of the Egyptian city however, are probabely to be found in the up to now not located fort built by pharao Thutmosis III, who conquered Nubia reaching the 5th cataract and destroyed the empire of Kerma (Ǧabal Barkal stela Urk. IV:1127–43). During the Egyptian domination of ↗Kush, N. was not an administrative but merely a trade and religious centre and southern border town.

Under the Kushite dynasty (↗Ethiopian dynasty), N. became residence, coronation and burial place of the Napatan and Meroitic kings (before that, ancestrial burial places were al-Kurru and Nuri near N.). After the move of the capital to Meroë under king Ergamenes (ca. 270 B.C.), N. lost much of its political significance, but remained one of the religious centres of Kush. Due to a partly parallel use of the pyramid fields of N. and Meroë, it has been suggested that the "royal" burials in N. belong to a dynasty of "anti-kings" (Reisner 1923; Hintze 1973:134f.), but their royal nature is far from clear. Similarly disputed is whether the Egyptian pharao Psammetik II, in 591 B.C. (s. the Shellal stelae and Herod. II, 161; for destruction level, Kendall 1990), and the Roman prefect C. Petronius, in 23/22 B.C., during his campain against the ↗Candace (Sauneron – Yoyotte 1952; Hofmann 1977), reached and conquered N.

The temple of Amun B500 with 150 m in length is the largest "Egyptian" temple in Nubia (Dunham 1970; Kendall 1994, 2004). Its origins go back into the Thutmoside and Ramesside eras, but

the cult, possibly ceased, was revived in the Kushite period – which lead to large renovations and extensions of the complex especially under Piankhy and Taharqa. Most of the historic inscriptions of Kushite rulers were found here ("victory-, dream- and election-stela", etc. [FHN]). The nearby temple B800 was likewise enlarged in brick by some Pre-Kushite ruler and, like B500, rebuilt in stone by Piankhy. It seems that two different aspects of Amun were worshipped here, corresponding to Amun of N. and Amun of Thebes. Striking features of temple B300 ("Typhonium"), erected by Taharqa, are the pillars in form of the dwarfshaped god Bes and hathoriform capitals. Smaller temples are B1100, B700 (kings Atlanersa and Senkamanisken) and B600, where foundation deposits of Thutmosis IV were found.

The Napatan palace B1200, repeatedly enlarged, has its origins in the Pre-Kushite era, as proved by the stray blocks bearing the cartouches of Ramses II that are found beneath its lowest level (Kendall 1990, 1997:13). Stairs suggest the existence of a second floor. The huge "palace of Natakamani" B1500 was even built on a platform nearly 2 m high (Donadoni 1993). N. was used as a royal residence as late as the Meroitic times (B100).

Some two dozen "Barkal" pyramids (Bar.) (Dunham 1957) are concentrated in two main areas (South [Bar. 1–8] & West [Bar. 9–25]); they were occupied in two phases (Bar. 11, 14, 15 ca. 315–270 B.C.; Bar. 2, 4, 6 ca. 90–50 B.C.). Having the very steep angle of 60°–73°, the Napatan pyramids follow Egyptian models of the New Kingdom. The burial chambers lie structurally independent under the pyramids, in the east front of which offering chapels with pylons are erected. The surface of the pyramids is terraced, with exception of a rim at the border. The best-preserved monument (Bar. 3) is 13 m high.

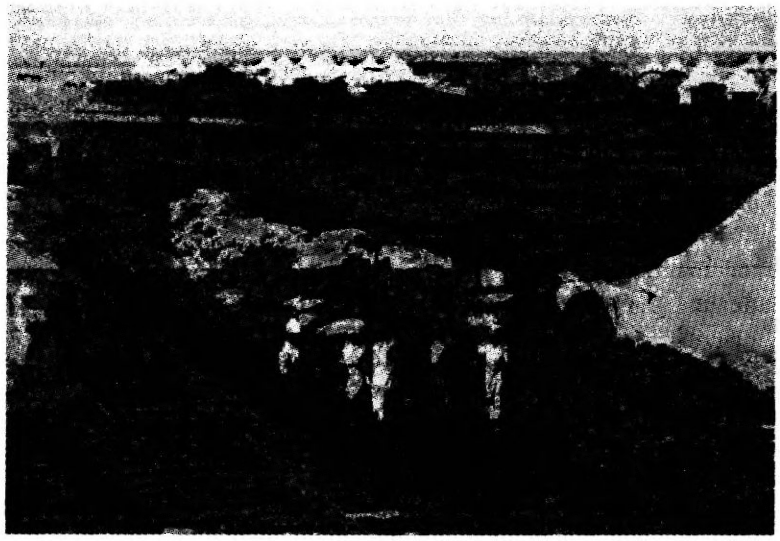
Francis Breyer

Napier expedition

The N.e. of 1867–88 resulted in the suicide of *aṣe* ↗Tewodros II and the collapse of his attempts at modernization. It was undertaken by the British Government (↗United Kingdom) to liberate a number of European hostages, including a British consul, a special envoy of Queen Victoria, and a score of Swiss and German Protestant missionaries.

The dispute between Tewodros and the British began in 1862 when the Ethiopian monarch wrote to the British Government, proposing to send an ambassador to England, and requesting Britain to protect the latter in accordance with a previous agreement between the two countries. The British, wishing to remain on cordial terms with the Ottoman empire, then expanding into Ethiopian territory, vouchsafed no reply. Tewo-



The installations of the British-Indian army at Zula Bay; photo 1867/68, cortesy of the Wallraf-Richartz-Museum, Köln

dros, a proud man, considered this a slight to his own – and Ethiopia's – dignity. He blamed the British consul, Duncan ↗Cameron, who had disobeyed his instruction to take the letter to Britain in person, and had instead sent it only through a messenger. The Emperor accordingly arrested Cameron, together with several Swiss and German missionaries, the most prominent of whom was Henry ↗Stern. The British responded by despatching a second envoy, Hormuzd ↗Rassam, whom Tewodros likewise detained. This high-handed action, and the failure of negotiations between the two sides, led the British Government to decide on launching a military expedition against the Emperor, whose power was then rapidly declining.

Around the middle of April 1867, the British Government began seriously considering the practicability of such a military expedition. The best starting-point for the proposed intervention was judged to be the west Indian port of Bombay. The commander-in-chief of the British Bombay army, Sir Robert Napier (b. 1810, d. 1890), was therefore appointed leader of the proposed expedition, on 30 August 1867, after which extensive preparations for the operation were undertaken. The N.e. consisted of 14,700 fighting men, two-thirds of them Indian, plus 27,000 camp-followers, 19,000 mules or horses, 1,700 donkeys, over 5,700 camels, and 44 elephants. The force was exceptionally well-armed, with 16 cannons, two mortars, and 16 rocket-launchers, as well as numerous Snider breech-loading rifles not previously used in war. The N.e. was also equipped with a small photographic unit, which enabled it to take the first ever shots of Ethiopia. The expedition was also accompanied by the German explorer Gerhard ↗Rohlfs who served as an interpreter; as well as Count Seckendorff of the Prussian Guards and K.K. Major Kodolitsch on behalf of the Austrian-Hungarian Emperor in Vienna (s. Smidt 2005).

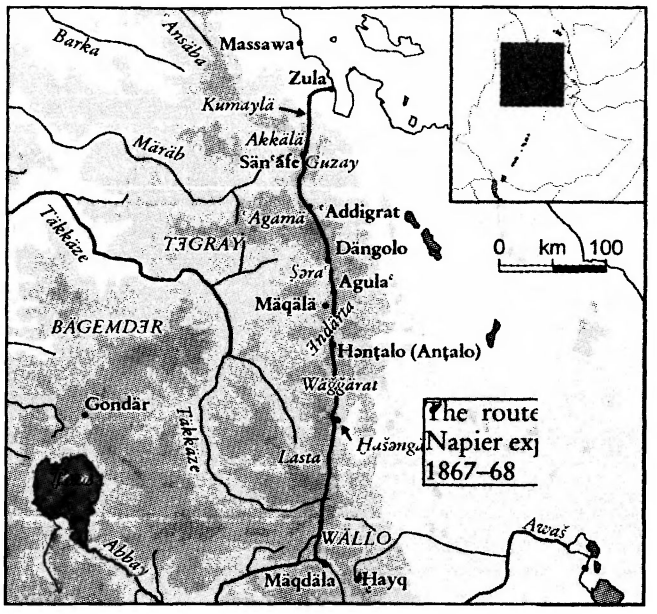
The advance force landed on 30 October 1867 at Zula, at a place known to the expedition as Annesley Bay, so called after the early 19th-cent. British traveller of that name. This was the starting point for an arduous 650-km march through rugged terrain, which took the N.e. to Tewodros's principal fortress at ↗Mäqdäla. Ten days earlier, the Ethiopian monarch, then residing further south at ↗Däbrä Tabor, had started a much shorter though scarcely less difficult march to Mäqdäla, which took him eastwards to confront the British invaders there. British intervention was carried out with the agreement of the Egyptian government, which dominated the port of ↗Massawa and the nearby Red Sea coast. The N.e. also negotiated a modus vivendi through ↗Mərčа Wärqe with *däğğazmač* Kaśa Mərčа of Təgray (↗Yoḥannəs IV), who regarded Tewodros as a usurper, and agreed to facilitate the British purchase of supplies. Support was also obtained from *däğğazmač* ↗Mäšäša Tädla of Lasta and the Oromo queen ↗Mästawät, who together were posed to cut off the monarch's possible line of retreat.

The British began by building a short 17-km railway from the coast, after which they rode or marched inland, making ᶜAddigrat their advance base, and succeeded in crossing the whole of northern Ethiopia without encountering any armed opposition. Welcomed by Kaśa Mərčа and most of the chiefs through whose territories they passed, and supplied with vast quantities of ↗Maria Theresa dollars, specially minted for the expedition, they were able to purchase adequate supplies of grain and cattle.

The first, and principal, battle with Tewodros's forces took place on the afternoon of Good Friday, 10 April 1868, when the Emperor, encamped on the mountain, opened fire with his artillery on the invaders who had advanced to a lower mountain spur called Fala. Tewodros's locally-made guns, fired by untrained men, proved worthless. The invaders by contrast displayed overwhelming superiority of fire-power. Over 700 Ethiopian troops, including many chiefs, were

killed, and over 1,000 were wounded, many of them seriously. The N.e. suffered only two fatal casualties, and 20 wounded. The Emperor, realising that further resistance was useless, attempted on 11 April to sue for peace. He released most of his European prisoners, beginning with Rassam, Cameron, Martin ↗Flad, Pauline Flad and their three children, Lieutenant Prideaux, Dr. Blanc, both from the Bombay Army and sent emissaries down to the British camp to negotiate. Napier, however, insisted on his enemy's unconditional surrender. This Tewodros refused. On Sunday 12 April he attempted, unsuccessfully, to commit suicide after which he offered Napier a gift of cattle as an Easter and peace offering. Napier seems at first to have accepted this gift, which consisted of 1,000 cattle and 500 sheep. This caused the Emperor to believe that peace had been concluded. Napier, however, then rejected the cattle, and hence the monarch's peace initiative. Tewodros naturally felt deceived. On 13 April the N.e. shelled and opened deadly fire on Mäqdäla for several hours after which it successfully stormed the citadel, whereupon Tewodros finally placed a pistol to his head, and committed suicide.

Troops of the N.e. immediately looted the citadel, including the palace and church of Mädḫane ᶜAläm. The booty was then auctioned to raise "prize money" for the troops. This loot, most of which was taken to the British Museum (and later assigned to the ↗British Library), the Royal Library in Windsor Castle and other British libraries, included two royal ↗crowns, numerous ↗crosses and almost 500 ↗manuscripts, some of which were later published in Europe by ↗Budge and others. British troops then set fire to the town, and destroyed all but two of Tewodros's pieces of artillery. The British thereupon withdrew from Ethiopia, in accordance with promises they had earlier made both to the Egyptian government and to *däğğazmač* Kaśa Mərčа, whose friendly co-operation they rewarded with a gift of 850 muskets and a good supply of ammunition. The N.e., and the loot it took back, increased European interest in Ethiopia, and was followed by publications on the country by geographers, archaeologists, zoologists, meteorologists, and geologists. The expedition was widely acclaimed in Britain, where many streets and public houses were named after both Napier (who received the victory title and a hereditary peerage as the "1st Baron of Magdala") and "Magdala", i.e. Mäqdäla. Others, however, considered the £12 million



spent on the N.e. excessive, while then-emerging Indian nationalists were also critical.

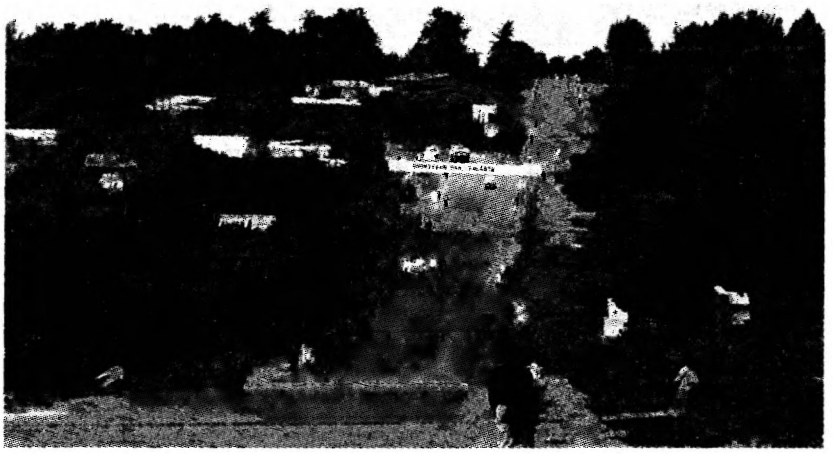
Naqamtee

N. (Orom., also Laqamtee; Amh. ነቀምቴ, Näqämte, also Läqämt(e); 2,101 m A.S.L.) is the historical capital of ↗Wälläga (for location s. Nonno). From 1942 to 1987, N. was the capital



Main street of Naqamtee, view of the site of the former *gəbbi* (i.e. the compound on the forested hill in the left background), with the slogan *Oromiyaan Maa Lalistu* ('May Oromiyaa flourish!') on the arch; photo 1995, courtesy of the author

of the Wälläga governorate-general (later region). Since 1991, N. has served as the capital of both the Guto Wayu *wäräda* and the East Wälläga zone, which are subdivisions of the Oromiyaa *kəlləl*.

N. was built on an interfluve between tributaries of the Didessa. The town developed around the site of the former ↗*mooti* palace (↗*Gəbbi*), built on a small forested hill. In the compound of the former palace there was a church and offices of the regional administration. A network of large avenues, mapped out by the Italians, still serves the principal districts. N. was the *masaara* or district of the ↗Leeqaa *mooti*. In 1881 ↗Moroda Bakaree, the last king, was subdued by *ras* ↗Gobäna Dači and paid tribute to *nəguś* Mənilək of Šäwa (future *aṣe* ↗Mənilək II). When his possessions had been confirmed by the Ethiopian king, Moroda left ↗Nağğoo and moved to the city of N. After he was baptized and promoted to *däğğazmač*, he ordered workmen to build the church in his *gəbbi*. In 1885, he sent his son Kumsaa (*däğğazmač* ↗Gäbrä Ǝgziʾabəḥer) to Mənilək's court. In 1889, *aṣe* Mənilək appointed Gäbrä Ǝgziʾabəḥer governor of Wälläga. In 1924 he was succeeded by his son, ↗Habtä Maryam. As descendants of a sovereign, these two relatively autonomous governors developed their capital and gave permission for the ↗Swedish Evangelical Mission to establish a base in their province. Up until the ↗Revolution, members of the former royal family had been in charge over the Wälläga region at the different government levels.

In spring 1991 the Wäyyane fighters (↗Tigray People's Liberation Front, with some elements of the Oromo Liberation Front), came from ↗Goğğam via the Bure Bridge and captured N. They forced the regular army, which defended Addis Abäba along the Abbay Canyon, to open a second front. The rebels, after briefly rolling back, took the town again and pushed the army back to the national capital.

N. now stands at a major crossroad: to the south, since the completion of the Didessa Bridge, Ǧimma is now accessible; to the north, since the construction of the new Abbay Bridge, Goğğam can now be reached.

The coffee harvested in Wälläga has ensured N.'s growth. Many lorries loaded with sacks of coffee, cereal, and animal hides carry their goods to Addis Abäba. Numerous garages, workshops, bars and hotels are being set up because of the constantly improving road transportation network. A regular air service links N. to the national capital. As a regional capital, N. hosts various administrations, a hospital, state and mission schools, and the second Ethnographic Museum in Ethiopia. A bishop of the Ethiopian Orthodox Täwaḥədo Church is located there, in addition to various Protestant and Catholic missions.

The growth of N. is similar to the expansion of the other regional capitals, which form a circle of more than 300 km around Addis Abäba. Its population grew from 10,000 in 1938 to 16,105 in 1970 to 28,500 in 1984. The growth sped up after the improvement of the Addis Abäba–Gimbi–Gambella road. Today, N. is a bursting town with the population estimated at 65,518 in 2000 and at 80,260 in 2004.

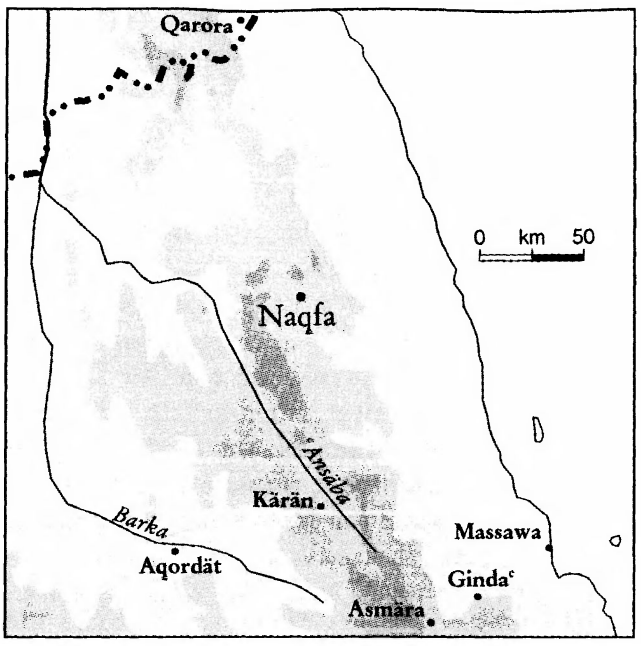
Naqfa

N. (Tgn. ናቕፋ, Tgr. ንቕፋ, Näqfa, Arab. نقفة, Naqfa; 16° 40' N 38° 29' E; 1,750 m A.S.L.) is a small Eritrean town situated on the northernmost edge of the Asgäde plateau, between ↗Qarora in the north (to which it is connected by the wadi Falkat) and ↗Kärän in the south, and between the mountain range Rora ↗Ḥabab and the Häday river valley (Maydon 1924:48, 54). It lies in the area historically populated by ↗Təgre-speaking peoples.

In August 1902, N. became an Italian administrative and military post (Residenza del Sahel) whose area of jurisdiction extended to the ↗ᶜAd Təmaryam, ᶜAd Tawra, ↗ᶜAd Mäᶜalləm, ↗ᶜAd Šek, ᶜAd Ḥasəri and ↗Rašāʾida (d'Avray 2000:2, 142, 287f.; Martini 1946:429; Maydon 1924:54). In 1905, Littmann described it as a village of the ᶜAd Həbtes (LitPEA vol. 1, 281; vol. 2, 338). By 1929, N. had a big marketplace and was considered the main commercial centre of the Ḥabab. It had 650 inhabitants (Bertarelli 1929:636), but the number had decreased by 1938, when only 300 people are counted (Guida 215). An ancient "Abyssinian" tomb is mentioned "at the foot of a hill where the offices of the Residenza are".

N. played a prominent role in the Eritrean struggle for independence. After early attacks by the ↗Eritrean Liberation Front (E.L.F.), N. became an Ethiopian garrison in 1967. In late August 1976, combat brigades of the Eritrean People's Liberation Forces (later ↗Eritrean Peoples' Liberation Front, E.P.L.F.) under the to-be Foreign Minister ᶜAlī Saᶜīd ᶜAbdallāh surrounded N., which was defended by experienced Ethiopian troops under Colonel Mammo, among them Ḫaylä Śəllase's former ↗imperial bodyguards. The besieged town depended entirely on air supply, while the E.P.L.F. brought in supplies on camelback from Faḥ, Bläqat and Mərsä Täḵlay in the coastal plains through rugged terrain, and was able to provide a simple but effective Front Surgical Unit at nearby Tänas. During the months-long siege, exhausting Ethiopian troops as well as the rivalling E.P.L.F. and E.L.F. forces, the fighters said *Naqfa, menqūfa, mā tiḡihā wa mā tišūfhā*! (vernacular Arab. for 'N. the cursed, do not visit it and do not see it!', cf. Tekeste Fekadu 2002:94). The town was taken on 22–23 March 1977, opening the way for the temporary liberation of such Eritrean towns as ↗Afᶜabät and Kärän and the siege of Asmära and Massawa.

The U.S.S.R.'s extensive military support of Mängəśtu Ḫaylä Maryam's *Därg*, however, forced the E.P.L.F. to its strategic withdrawal – a 'long march' of armed forces, public administration staff, mass organization officials and pupils of the Zero Revolutionary School back to N., following the strategic principles of Mao Zedong's people's war (cp. ↗China, relations with), thus securing its military and political survival in a rear base area. Thousands of fighters, including some troops from the ↗Tigray People's Liberation Front (T.P.L.F.) in 1982, defended the town and its surroundings in an extended trench network around Mount Dändän against the overwhelming manpower and weaponry of the *Därg*'s eight major offensives launched from the Afᶜabät road and the coastal plains between July 1979 and November 1985. The defenders were supplied through a corridor linking N. to the Sudanese border in the north. Several thousand Eritreans and tens of thousands of Ethiopian soldiers died during this period around N. Ethiopian air force and artillery levelled N., with the exception of the ↗mosque (funded by Ḫaylä Śəllase, with the help of two Italians, according to local traditions) which became as much a symbol of the E.P.L.F.'s steadfastness in a period of growing international isolation as N. itself. The stalemate finally ended with a counteroffensive in December 1987, leading to the battle of Afᶜabät 17–19 March 1988.



Up to the administrative reform of 1995, N. was the provincial capital of Saḥəl, now part of Zoba Səmenawi Baḥri ('Northern Red Sea Administrative Region'), with the capital in ↗Massawa. Due to its climate the area is locally called Umm Burud (from Arab., lit. 'mother of coldness').

The inhabitants of N. are Təgre petty traders and craftsmen, as well as Təgrəññña speakers from Asmära assigned to local administration or running business in the vastly war-damaged but gradually re-constructed town. N. is an important local marketplace for the Təgre agro-pastoralists of the surrounding countryside. It also houses the Winna Technical College.

The Eritrean currency *naqfa* (Engl. sp. "Nakfa", abbr. Nfa), named so in remembrance of the town's strategic and symbolic role for Eritrean independence, was first issued in late 1997, after the E.P.L.F. had chosen N. for its 3rd congress in March 1994, where it transformed itself into the People's Front for Democracy and Justice (P.F.D.J.; cf. KilHDic 321f.).

↗Yaᶜqūbī, al-

Nara

N. (also Nera; self-name: *Nara-Bana*, lit. 'sky-talk') is a ↗Nilo-Saharan language spoken in western Eritrea, in and to the north-west of the town of ↗Barentu in the ↗Gaš-↗Barka region. In the past, the language and the people were also referred to as ↗Barya.

While Tucker and Bryan (1956:78) had left N. as an "isolated unit", Greenberg (1963) placed it within the Eastern Sudanic family of Chari-Nile (his former Macro-Sudanic). Bender (2000:56) groups it with Nubian, Nyimang, and Tama in his "Ek" branch of Eastern Sudanic (marked by the "*aka*" 1st pers. sg. pronouns, as distinguished from the "En" branch which has "*ani*" forms). He notes, however, that because the "*aka*" pronoun is a Nilo-Saharan retention, this grouping does not necessarily constitute a genetic family. Rilly (2005:6) prefers the term Northern East Sudanic to Bender's "Ek" family and includes Meroitic (↗Meroë) in it. He argues for the close proximity of N. to Nubian. *Ethnologue* (Gordon 2005:112) places N. (with Eastern Jebel, Nubian, and Surmic) under the Eastern branch of Eastern Sudanic.

N. is surrounded by the ↗Cushitic languages ↗Beğa and ↗Bilin (to the north and east, resp.), and the ↗Ethio-Semitic languages ↗Təgre and ↗Təgrəññña (to the north and south, resp.). The only other Nilo-Saharan language spoken in Eritrea, ↗Kunama (to the south), bears little resemblance to N. and is not included in Eastern Sudanic. Bender (1976:475) found only 9 % lexical cognates with Kunama and even these may be due to its geographical proximity.

There are four dialects of N.: two major, Higir and Mogareb, and two smaller ones, Koyta and Santora (which may be their respective sub-varieties). There are considerable differences among the dialects, both grammatical and lexical. So far, only the Higir dialect has been described. Many N. speakers are bilingual in ↗Arabic as well as Təgre, and there are many loanwords from both languages in N. Some, especially Koyta speakers, are bilingual in Kunama. Government statistics from 1993 put the total number of N. speakers at 41,000. A sizable portion of the population is living as refugees in Sudan.

Since 1993, shortly after Eritrean independence, N. has been used as a medium of instruction in elementary schools for grades one to five. A N. Language Panel, set up by the Ministry of Education, is responsible for the training of N. language teachers and the preparation of textbooks. The orthography uses Latin script. Tones are introduced in the new school books only in words with possible misunterstanding, e.g., *bàllà*, 'leg' vs. *bàllá*, 'legs'. The Higir dialect, spoken as a mother tongue by about half the N. population and well understood by the other speakers, has been chosen as the standard variety. There are two half-hour radio programs in N. per week.

N. consonant phonemes are as follows: labials *b*, *f*, *ᵐb*, *m*, *w*; coronals *t*, *d*, *s*, *ⁿd*, *n*, *l*, *r*; palatals *č*, *ǧ*, *š*, *ñ*, *y*; velars *k*, *g*, *ᵑg*, *ŋ*, *kʷ*, *ᵑgʷ*. The vowel system has five vowels: *i*, *e*, *a*, *o*, and *u*. Length is contrastive for vowels (*kito* 'blood' vs. *kiito* 'he arrived'), as well as for all consonants except the prenasalized and labialized stops and *h* (*kale*

'I will eat' vs. *kalle* 'I ate'). N. has two phonemic level tones: high and low. Postvocalic sonorants (glides, liquids, and nasals) may bear an independent tone (e.g. *sùḿ*, 'grass'). High tone occurs only once in the tone melody of a word, but not necessarily in a metrically strong position (for which reason N. is not [yet] a tonal accent language). This constraint also applies in certain head-final syntactic constructions, leading to the dropping of any subsequent high tones after the first. Examples include possessive constructions of the type possessor-possessed (*àbbàá* 'father' + *tòòkú* 'wife' > *àbbàá tòòkkù* 'father's wife') and postpositional phrases (*káàlà* 'porcupine' + *láábí gí* 'near to' > *káàlà lààbì gì* 'near to the porcupine').

There are various morphological classes of plural suffix forms, all of which end in *-a*: e.g. 'eye' *no* (sg.) – *no-ta* (pl.); 'horse' *fara* (sg.) – *fara-tta* (pl.), 'sword' *sayif* (sg.) – *sayif-ka* (pl.). Nouns may be inflected for case: *-nu*, *-n* (subject, but not always used), *-go* and variants (direct object, indirect object, locative, allative), *-gi* and variants (ablative), and *-ga*/*-(a)mma* (genitive). E.g. *da-gi woto*, village-ABL he.came, 'he came from village'. Differential object marking may apply in N., an areal feature also known to exist, e.g., in Tama, Təgrəññña, and Amharic.

Adjectives are formed with the verbal relative suffix *-ku*/*-gu* (sg.): *dub-ku* 'big (sg.)', *murga-gu* 'old (sg.)'. The plural suffix *-ti* precedes it: *murga-ti-gu* 'old (pl.)'. Adjectives follow the noun they modify: *kotaade murgatigu* 'old people'. Postpositions are grammaticalized body parts, e.g. *kofa kela-gi* 'mountain head-from' > 'from top of mountain'.

Verbs are inflected for tense and aspect: e.g. *aye* 'I do/make' (future/habitual), *ayde* 'I am doing/making' (present/continuous), *ayte* 'I did/made' (past). For each of these there is an indicative, interrogative, and subordinate form.

As in the other "Ek" languages, the neutral word order in N. is Subject-Object-Verb (e.g., $agga_1$ $soldi_2$ dag_3 'We_1 $have_3$ $money_2$'), which may be a retention from Nilo-Saharan. There are two types of possessives: 1) possessor followed by the possessed (*hasan horge* 'Hasan's donkey') and 2) possessed preceding the possessor, which is then marked by the genitive suffix *-ga* (*horge hasanga* 'Hasan's donkey'). In coordinate structures, *da* 'and' is repeated after each noun (e.g. *ku da aninda* 'man and woman').

The personal pronouns are:

	subject		object/possessive	
	sg.	pl.	sg.	pl.
1st pers.	*ag*	*agga*	*wo*	*awa*
2nd pers.	*iŋŋa*	*iŋŋa*	*ⁿga*	*ⁿgʷa*
3rd pers.	*tib*/*teb*	*tiba*	*te*	*tee*, *tibo*

The 3rd pers. object/possessive *te*, when used postpositionally, is a definite article: *te wal* 'his house' vs. *wal te* 'the/that house'. Some further pronouns and question words are: *woga* 'independent possessive'; *yi*/*yigu* 'this/these'; *te*/*tegu* 'that/those'; *na*/*naanan* 'who?' (sg.); *nakita* 'who?' (pl.); *hessi* 'when?'.

The ten word list is as follows: 'one': *túŕ* (pre-noun), *dókkù* (post-noun); 'two': *àrí* (pre-noun), *àrígà* (post-noun); 'three': *sàáǹ* (pre-noun), *sàánà* (post-noun); 'fire': *šítì*; 'water': *mbàà*; 'sun'/'day': *kòòs*; 'moon'/'month': *fèètà*; 'blood': *kìtò*; 'tongue': *hàggà*; 'tooth': *nìhì*.

Nara

The N. are one of the most ancient population groups in present-day Eritrea. Their traditional settlement area lies in western Eritrea north of the Mogareb river, between ↗Aqordät and ↗Barentu, north of the ↗Kunama areas in Gaš-Barka province. The N. live in small village communities, mainly practising sedentary agriculture. Local market towns are Mägälo (Mogälo), Biša and Haykota. Today, N. are predominantly Muslim.

The ethnonym "N." (Nere) was recorded by Munzinger as referring to one of the two major N. groups, that of Higir (MunSt 453; cf. also Reinisch 1874:3f., where "Mogoréb" is given as self-name of the second N. group). Grottanelli (1943:11) quotes "Aarà Barà" and "Barà Ocurà" as the self-names of the N. of Higir and Mogareb respectively. Today, the ethnonym "N." embraces both N. groups and some smaller communities. Historically, the name ↗"Barya" was used in Tgr. in reference to the N., and in Tgn. and Amh. in reference to the N. and/or as a broader term for a number of related groups (now considered pejorative and not used any more). In Tgn. and Amh. the term has the general meaning 'slave' (attested in Amh. at least from the 17th cent.; Ludolf 1698:40). The semantics of the term *barya* is complicated, *inter alia*, due to its usage in the texts of the ↗magic literature (cp. ↗*Asmat*).

Historical overview

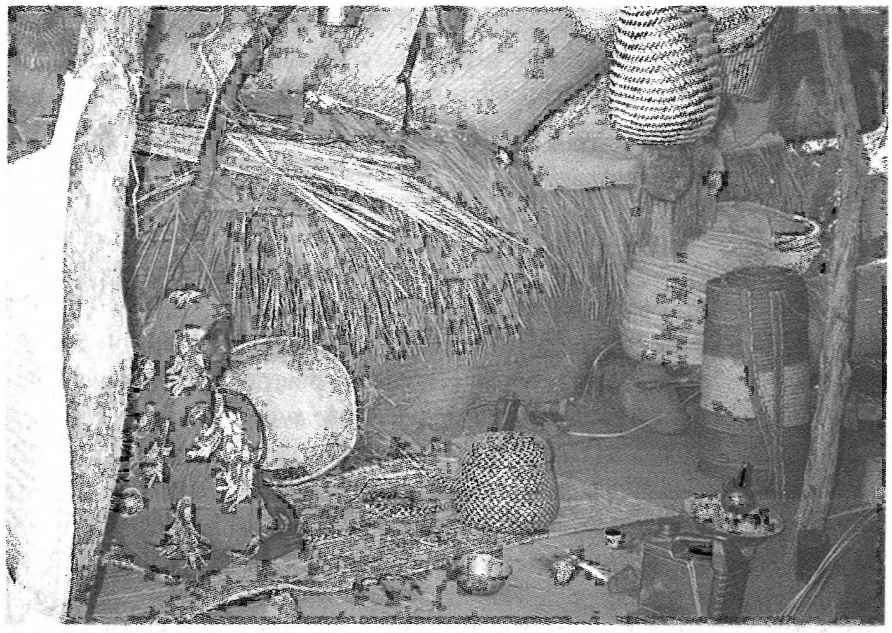
A hypothesis has been offered (s. Dimmendaal 2007; Rilly 2004) suggesting northern Sudanic origin (region of an ancient river known as Wadi Howar, now dried up) for the Eastern Sudanic language group, which includes also the N. language, whose closest relatives are considered Meroitic, Nubian and Tama. The reconstruction implies that after this subgroup separated from the Eastern Sudanic branch (3rd millennium B.C. according to Rilly), the N. migrated eastwards to the Nile, and later went up the Atbara river, eventually arriving in the territory of modern Eritrea. N.'s oral tradition claims the region of Kärän as their former settlement area (Thompson in BendNonSLang 598; cf. also Reinisch 1874:3).

It is assumed that the N. can be identified with the ancient people referred to in historical texts as "Barya", probably mentioned in some Greek sources (CRStor 58f., 72; Conti Rossini 1913:392–99). The "Barya" appear in an inscription of the 4th-cent. King ↗ᶜEzana (RIÉ 189:9; DAE 11:9 [cp. RIÉ 271:24–25]; ca. 330–60 A.D.) as victims of the ↗Noba, who had rebelled against Aksumite claims of dominance (cp. DAE IV, 37), as well as in the late Aksumite inscription of *ḫaśani* ↗Danəʾel (DAE 12:19, but cp. RIÉ 194:19). Of unclear value is the reference to the "Barya of Dəmaḫ" in the *Mäṣḥafä* ↗*Aksum* (CRAxum 18; PankBord 28).

The 10th-cent. Arab geographer ↗Ibn Ḥawqal mentions the "Bāriya(h)" as cattle-raising peasants who pull out their foreteeth and slit their ears (tr. 1964:53). He places them (as well as the "Bazen" [Bāzīn], i.e. Kunama) on the borders of the Christian ᶜAlwa (Alodia) Kingdom in the Nile valley (↗Nubia), near ↗Kassala, about 150 km west of today's Barentu, which supports the idea of a later migration (Murdock 1959:170). "Bāriyā" is mentioned as a non-Muslim region of Abyssinia by al-↗Maqrīzī in the *Ilmām* (MaqIlmam² 2), and by al-Qalqašandī (1915:303). The Italian map ↗*Egyptus Novelo* indicates the area of "Baria silaus" (probably meaning the 'flat-nosed', Lat. *silanus*). In 1523 the inhabitants of the "province of Baria" are described as "blacks with curly hair" (CrawItin 166; s. Pankhurst 1977).

A few Ethiopian medieval sources mention the "Barya". It can not be excluded that the group had occupied a wider territory which was later lost to the ↗Adkämä Məlgaʾ under ↗Wärasinä Ǝgziʾ in the 14th cent. (LusStud 61; Conti Rossini 1942:154, 176; cp. also reference to [↗Däbrä?] Dəmaḥ above). The "[Ḥarb] Barya" under the commander Angotay of the History of *aṣe* ↗ᶜAmdä Ṣəyon I's campaign in 1329 (MarAmdS 114; KrAmdS 34 [text]) can be understood as either an ethnic military unit composed of the "Barya" (i.e. N.), typical for the then military organization of the Emperor's army (MarAmdS 115 [tr.]), or as a "slave corps" (s. KrAmdS 40 [tr.]). The *mədrä Barya*, 'land of Barya', is mentioned in the Acts of the 15th-cent. ↗Filəppos of Däbrä Bizän who sent monks there to search for hon-

ey (Conti Rossini 1901:107). Whilst an edict of *aṣe* ↗Zärʾa Yaᶜəqob from ca. 1455–57 assigns "the land of Barya who are Dubane" to ↗Däbrä Maryam Qʷäḥayn (Conti Rossini 1923; LusStud 92), the Acts of Filəṗṗos describe Dubane as a territory and people separate from (though neighbouring upon) the "Barya" (Conti Rossini 1901:81, 157; LusStud 99). In the next centuries, the N. became formally tributaries of the ↗Funǧ, whose domination ended by 1821, when the Egyptians occupied ↗Sinnār (Pollera 1913:18f.)



Nara woman in her basketry shop at the market of Barentu; photo December 1997, courtesy of Wolbert Smidt

The geopolitical front-line position of the N. in the borderland between the rivalling powers of the region turned them into both victims and assailants. Whilst they suffered from slave raids and claims for tribute, they also exploited regional powers in their own interests, competing for fertile land and livestock with their neighbours in the south, the Kunama, the ↗Beni ᶜAmər pastoralists in the north, the people of Wälqayt in the west and the highlanders.

In 1844–45, ca. 1,000 N. were sold at ↗Massawa after the raids of *däğğazmač* ↗Wəbe Ḫaylä Maryam's officers (DouinIsm III.1, 263; cp. AbPrince 120). In 1856 N. warriors burnt down the Beni ᶜAmər village of ↗Kufit, after the Egyptians had left their garrison nearby. Since then the N. became formal subjects to Ottoman Egypt, but remained unreliable tax payers. Around that time, the inhabitants of Mägälo converted to ↗Islam (Lejean quoted in TrIslam 217; cf. also DouinIsm III.1, 44f., n. 4).

In 1861, Kunama scouts led troops of Wäldä Ṣadəq Märrač, the governor of ↗Adyabo, to Mägälo, which was then destroyed and its population enslaved (DouinIsm III.1, 44). The Egyptian governor-general of Sudan, Ğaᶜfar *bāšā* Maẓhar, fearing an Ethiopian take-over of his governorate of ↗Taka, complained in a letter to *aṣe* ↗Tewodros II. He also urged local *šayḫs* to form a military alliance, which stopped the troops of Wäldä Ṣadəq who was killed in 1866 (Pankhurst in PICES 9, vol. 4). An unsuccessful French settlement project ended in 1864, when Comte de Bisson did not manage to get his troops beyond "Barea", but established a fortified camp there, before being forced back to Kassala by a strong Egyptian force. Tewodros sensed a conspiratorial plot and sent his French advisor Bardel to investigate this project (Hozier 1864:27f.).

After the emergence of ↗Mahdist forces and the fall of Kassala on 30 July 1885, British and Egyptian envoys urged *ras* ↗Alula Ǝngəda, the governor of the ↗Märäb Məllaš, to march against the army of ᶜUṯmān Diqna, awaiting Alula in the N. area. ᶜUṯmān failed to mobilize the local population, probably because pro-Egyptian *šayḫ* ᶜUṯmān al-Mīrġanī had spread rumours among the local Beni ᶜAmər and N. groups about an expected heavily armed Ethiopian force. So the N. *šayḫ* Aray Agaba moved cattle and warriors away, escaping both armies, who finally met at Kufit on 23 September 1885. When the defeat of the Mahdists became imminent, the N. warriors joined the battle pursuing and massacring them (Pollera 1913:47; ErlAlula² 70). Later *šayḫ* Aray managed to repel the raid of *baša* Käbret of Adyabo and the Mahdists who sought revenge. He ordered that cattle be prepared for Alula's troops, but did not meet their expectations, and they devastated the N. country (Pollera 1913:51f.). The famine of 1888 (↗*Kəfu qän*) further diminished the N. They welcomed the Italian colonizers, who recognized their local administration and brought the slave raids to an end (KilHDic 323).

Under the Italians, the N. were administratively grouped with the Kunama, with the capital in Barentu. Their first governor, Alberto ↗Pollera,

named the *residenza* he established within the Barka Commissariat at Aqordät "Gasc e Setit". The administrative unit was later kept, as Gaš-Setit *awraǧǧa*, by the Ethiopian government. The Italian railway, which connected Massawa to Aqordät, was extended to the N. town of Biša in 1932, but the line was terminated by the ↗British Military Administration soon afterwards. A highway has since been built to connect Asmära with Täsänäy via Barentu, Biša and Aqordät.

During the British Administration period 1941–52, the N. together with Beni ᶜAmər were possibly engaged in raids against the Kunama (Lussier 1997). The latter sought protection of the Ethiopian state and army during the periods of federation and annexation, while the N. joined the ↗Eritrean Liberation Front (E.L.F.), after 1961. The father of the first E.L.F. leader, ↗Ḥamid Idris ᶜAwate, was a N. Many N. were then driven into Sudanese refugee camps by the *Därg* and the ↗Eritrean People's Liberation Front (E.P.L.F.). A group of N. E.L.F. fighters around Ibrāhīm Idris Totil, founding member of the Marxist-oriented Eritrean Labour Party, returned as "E.L.F.-SAGEM" (E.L.F.-C.L.) back to the field and finally joined the E.P.L.F. in 1987. A lot of N. successfully integrated into Sudanese society, some of them engaged in Eritrean Islamic Jihad's activities in Mägälo in 1989 and around Sawa in 1991, then backed by the Sudanese government (KilHDic 254, 277). In the new Eritrean administrative division the N. are in Gaš-Barka province (Alexander Naty 2002:569ff.).

The N. take part in the work of the Ministry of Information's Department of Languages in today's independent Eritrea. However, the N. and their culture remain widely unknown in the capital Asmära and marginalized in national politics, administration and resource distribution.

One of the few N.-singers commonly known in today's Eritrea is Adem Fayd Amir.

Ethnographical overview

The first extensive description of the N. is given in the 1860s, by Munzinger, who sees them as only loosely intertwined with the Kunama in the south, while in friendly cohabitation with the ↗Algäden in the west (MunSt 4). He described a village-based agricultural society in transition, characterized by matrilineal descent and acephalous rule of elders, divided into two independent districts, Mogareb in the west and Higir in the east, linked through intermarriage and a paramount war chief. The Higir were practising a village-based jurisdiction placing the individual above family and goods, disregarding wealth or poverty. Five villages, collectively called "Tembáderé", practised a local "Barea-religion". The Islamization of the Mogareb, however, had been already completed, and Muslim marriage and heritage law as well as more conservative gender concepts had been introduced (MunSt 474f.). A local N. rainmaker, *alfai*, used to live outside the village settlements and served the neighbouring Algäden as well (MunSt 474).

In the 1940s, ↗Nadel sketched a clan-based society of patrilinear descent with Islamic conceptions overlaying more traditional features of culture and social structure, with strengthened clans and leaders – the *nāẓir* at paramount level, *mašinge* (Arab. *ᶜumda*) and deputy *nada* (Arab. *wakīl*) at district levels (NadEr 24–27).

The N. population has grown considerably since colonial times: they counted 5,531 in 1905, 9,749 in 1931 and 10,502 in 1939 (Tekeste Negash 1987). They officially count ca. 41,000 in Eritrea, and 63,000 mother tongue N. speakers altogether (Bender 2000). They are known for their local beer production, their ploughing holiday, *Kina Farda*, and their harvest festivals, *Maškela* (cp. ↗*Mäsqäl*) and *Uwa* (Denison – Paice 2002:176; also "*Thijot*" in MunSt 473, *tiyot* in Reinisch 1874:8).

Magnus Treiber

Naretti, Giacomo

N. (b. 29 August 1831, Parella, Ivrea [Torino], d. 8 May 1899, Asmära) was an Italian craftsman who was in the service of *aṣe* ↗Yoḥannəs IV from 1871 till 1886.

N. and his younger brother Giuseppe (b. 4 June 1839, Parella, d. August 1881, Mäqälä) came from a family of peasants and received training as carpenters. In 1856 they both moved to Marseilles and in 1864 to Alexandria, Egypt.

In 1870, N. joined a group of 13 young European craftsmen invited by an envoy of *däğğazmač* Kaśa Mərčə of Təgray. They reached ↗ᶜAdwa on 21 April 1871. The company soon dissolved but N. stayed and won Kaśa's trust and benevolence. For Kaśa, crowned in 1872 as Yoḥannəs IV, N. carried out many important works that revealed his practical skills as well as a certain architectural talent. He completed the construction of the ↗Däbrä Bərhan Śəllase church in ᶜAdwa, built a house for the Emperor at ↗Aksum, the churches of Ḫəruy Giyorgis at ↗Däbrä Tabor and Ǝnda Kidanä Məḥrät in ↗Mäqälä, and the scenic imperial palace at Mäqälä (possibly with the help of Wilhelm [Ǝngədašät] Schimper, the mixed-race son of the German botanist Wilhelm ↗Schimper). N. also produced furniture, such as the splendid imperial "Solomonic" throne for the Emperor, which can still be seen in the Mäqälä palace, now a museum of Yoḥannəs IV. For the completion of the throne, the Emperor awarded N. after the coronation with the Order of Solomon.

In 1876, at Däbrä Tabor, N. married the 14-year-old Teresa Zander, also locally known as Abozzänäčč, a daughter of the German Eduard ↗Zander by his Ethiopian wife. From this time on, Teresa, educated by Swedish missionaries in ↗Ḥamasen, always accompanied her husband.

Apart from a short break (1877–78), N. followed the Emperor in all his movements. His diaries (publ. 2004) give valuable information on Yoḥannəs's campaigns against the ↗Yäğğu Oromo (1874 and 1879), on the victorious battles of the

↗Egyptian-Ethiopian war (↗Gundät and ↗Guraᶜ in 1874–75), on the meeting between the Emperor and ↗Mənilək of Šäwa in December 1879 to April 1880), and on the coronation of *nəguś* ↗Täklä Haymanot of Goğğam in January 1881.

In December 1877, N. returned to Alessandria where he reunited with Giuseppe, who had been supervising carpentry work there. In August 1878, both returned to Ethiopia but had to stop at Massawa for a while, the road to ᶜAdwa being blocked by the armies of the rebellious *ras* ↗Wäldä Mikaʾel. Here they encountered the expedition of Pellegrino ↗Matteucci and took their fellow-countrymen to Däbrä Tabor so that they could receive a travel permit for the rest of the country from the Emperor.

N. was also able to help other explorers (Pietro ↗Antonelli, Sebastiano ↗Martini, Gerhard ↗Rohlfs, Leopoldo ↗Traversi, Giuseppe ↗Vigoni etc.) due to his prominent position at the court. He played a decisive role in ensuring Yoḥannəs's action to liberate Antonio ↗Cecchi when the latter was kept prisoner by the queen of ↗Geeraa Gummiti Gane.

In 1886, following the Italian occupation of Massawa, the relationship between N. and the Emperor deteriorated, and N. received permission to temporarily return to Italy. On arrival, he was received with honours (in Rome by the Minister of foreign affairs and war). Until December 1887, N. stayed in his home Parella.

In early 1888, N. returned to Massawa in the service of the colonial government. His wife, too, was employed by the administration of the Colonia Eritrea as a translator and tutor of local languages. Here their first daughter, Angelina, was born in 1891. After they moved to Asmära, in 1895, the second daughter Margherita followed. About that time Teresa advanced to Oreste ↗Baratieri's personal interpreter. She remained in colonial services long after her husband's sudden death in 1899, up until 1924, and died in Asmära in 1948.

Another Naretti, Luigi, a professional photographer, stayed in Massawa from 1885 till his death in 1922. He contributed a lot to the image of colonial Eritrea (including parts of Təgray) among the Italians (↗Photography).

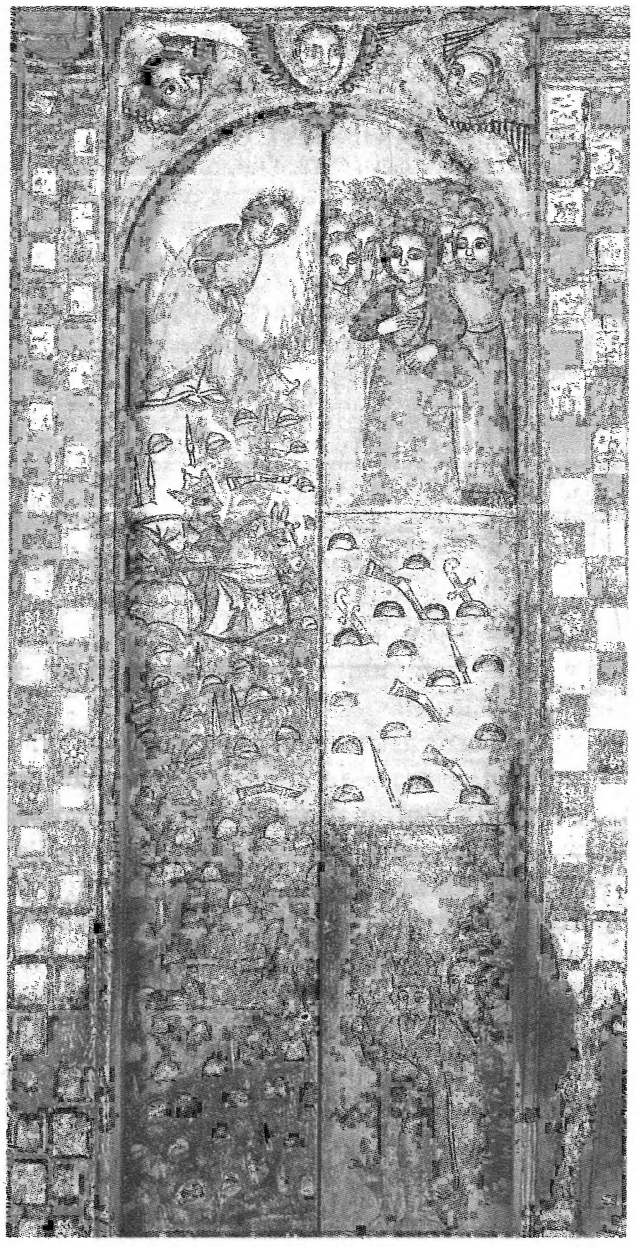
Gino Vernetto

Narga Śəllase

N.Ś. (ናርጋ: ሥላሴ) is the church on the islet of Narga, east of Däq island at the centre of Lake ↗Ṭana (for location s. Mändäbba). It was founded in 1737/38 by *ətege* Məntəwwab (↗Bərhan Mogäsa). The *Zena Narga* describes this event as the organization of the church of N.Ś. Däbrä Ǝsraʾel (Di Salvo et al. 1999:211–18). A *mämhər* was appointed head of this royal foundation and he received the title of *mälʾakä Ǝsraʾel*. The church's incomes were enumerated in the foundation's text and revised on several occasions. These incomes were divided between the clerics who officiated at N.Ś., and the official holders of the land tenures. Members of the *ətege*'s family, her allies and the ↗Ewosṭatean clerics were the main beneficiaries of the repartition. As a tool of political and economic control in the hands of the *ətege*, the lists of these persons have evolved throughout the years (Guidi 1905:253–60; Euringer 1933:307–11; 1935:105–14; Bosc-Tiessé 2001:255–86, 526–50). *Ǝtege* Məntəwwab and her son ↗Iyasu II also richly endowed the church with books (some microfilmed by EMML but not yet catalogued) and liturgical articles (Guidi 1905:242–47; Euringer 1933:294–301; Bosc-Tiessé 2000:260; 2001:319–27, 568–73).

The construction of the whole complex took more than a decade, up until 1750 (Bosc-Tiessé 2001:231–38). A large round centrally-planned church built of stones and lime is located at the centre of the compound (Bosc-Tiessé 2000:256f.; Di Salvo 1999:97–120). Under the supervision of Məntəwwab, the church was adorned with engravings on wood and stone (Bosc-Tiessé 2003), and with murals on the external walls of what was then the main part of the *mäqdäs* (integral reproduction in Di Salvo et al. 1999:146–89). The painters working at N.Ś. took their inspiration from several types of documents: the illuminated manuscripts from the reign of *aṣe* ↗Bäkaffa; the paintings of ↗Qʷəsqʷam; the occidental engravings, especially the copies of the collection book conceived by the Jesuit Nadal; and also the



Wall-paintings on the western door of the *mäqdäs* of Narga Śəllase; photo from Di Salvo et al. 1999:147

Dutch earthenware tiles used in the ornamentation of the Qʷəsqʷam royal church (↗Däbrä Ṣäḥay Qʷəsqʷam) and residence. Certain parts of the church were later repainted, and the church was partially restored under the reign of ↗Ḫaylä Śəllase I during the 1950s (Bosc-Tiessé 2001:329–436, 577, 579–607; 2002; in PICEA 5).

Claire Bosc-Tiessé

Nasi, Guglielmo

N. (b. 21 February 1879, Civitavecchia, d. 20 October 1971, Modena) was an Italian general and governor in Somalia and Ethiopia. In 1896, he joined the military academy in Turin, graduating in 1898 as a second lieutenant of artillery. In 1911 he participated in the war against Turkey and stayed in Libya until 1913. Between 1915 and 1918, he participated in ↗World War I as a Major and later Lieutenant colonel. Afterwards, he served in Tripoli as Head of Staff in Tripolitania until 1925. Promoted to Colonel, he worked in Paris at the Italian embassy. In 1935, as Brigadier General he commanded the Italian troops in Cyrenaica and in Libya. In 1936, he left for Somalia (↗Italian Somaliland) with the "Libia" colonial division and was promoted to Major General.

In Ethiopia, N. was an advocate of reforming the Italian administration, persecuting abuses against the local population and fighting corruption. Nevertheless, in 1936–37, as governor and commander in ↗Harär, he used terror methods to "pacify" the land. He also supported, for political reasons, the policies of Amedeo di ↗Savoia against Rodolfo ↗Graziani. In 1938, he was promoted to Lieutenant General. He was then nominated Vice-Governor of ↗Africa Orientale Italiana and, simultaenously, governor of Šäwa and, starting from 1941, Amhara. In 1941, he was promoted to General and on 27 November the same year, after fierce resistence, surrendered with his troops in Gondär. He spent four years in prison in Kenya and was released on 1946. In 1949, he was named head of the provisory Italian Somali administration, but he was dismissed due

to protests by the Ethiopian government, who accused him of war crimes.

Näsibu Mäsqälo

Afä nəguś N.M. (ነሲቡ፡ መስቀሎ, horse name "Abba Damo"; d. July 1908) was one of the most influential personalities at *aṣe* ↗Mənilək II's court. Born in a simple family in Ankobär, Šäwa, he became the Imperial Chief Justice in 1881 or 1882. During his long service, N.M. was believed to be just but severe. He introduced the habit of burning signs on thieves' foreheads to mark them as a law-breakers, and was in favour of cutting limbs as a form of punishment.

In October 1907 N.M. entered the first Cabinet of Ministers as the Minister of Justice (Amh. *yäfərd ministär*). He was made the chairman of the Council. At that time, of all the ministers, only himself and the Minister of War, *fitawrari* ↗Habtä Giyorgis, were important in their own right. N.M. was also one of the eleven Emperor's closest officials who, as *Maḫbär zämaryam* took part in the monthly celebration of the feast of St. Mary together with Mənilək.

N.M. participated in the battle of ↗ᶜAdwa having, together with his son *däğğazmač* (later *ras*) Däməssäw, 3,000 men of Mənilək under his orders and 2,000 of his own troops.

N.M. died in his house in Addis Abäba, which still stands on a hill overlooking the *Gəbbi*, from poisoning induced by the mercury fumes he was using as a treatment for syphilis. He was buried in the Qəddəst Śəllase Cathedral and was succeeded as the Minister of Justice by his assistant ↗Ǝsṭifanos.

N.M.'s wife, *wäyzäro* Dästa, was of Gurage origin and one of the most respected women of this period. After her husband's death she retired to ↗Dayr as-Sulṭān in Jerusalem.

N.M.'s son Däməssäw Näsibu was governor of Leeqaa and Wälläga. He participated in the coup d'état against Mənilək's spouse, *ətege* ↗Ṭaytu, in 1910. He died in 1918.

Näsibu Zäʾamanuʾel

Däğğazmač N.Z. (ነሲቡ፡ ዘአማኑኤል; b. 1893, d. 16 October 1936, Davos, Switzerland) was an important government official of the first half of the 20th cent. He was the son of *azzaž* Zäʾamanuʾel, a senior palace official of the end of ↗Mənilək II's reign. He was educated at Addis Abäba's ↗Mənilək II School, where he learned French; he later became proficient in Italian. Throughout his career, he received several senior level appointments, including consul in Asmära (1918), mayor of Addis Abäba (1921), governor of Gurage and Soddo, director general in the Ministry of Defense, and Governor of Bale (1932). In 1931 he received the title of *däğğazmač*.

Many old-guard court officials disliked N.Z. and accused him of being "un-Ethiopian" because of his missionary education, his habit of wearing western clothes, and, most importantly, his determination to reform the monarchy.

Despite this opposition, N.Z. quickly established himself as a valuable confidant of *ras* Täfäri (later *aṣe* ↗Ḫaylä Śəllase I). On 18 February 1928, 2,300 policemen, commanded by N.Z., surrounded *däğğazmač* ↗Balča's camp outside Addis Abäba. As leader of the Young Ethiopians, N.Z. organized the 1928 palace revolution that marginalized Empress ↗Zäwditu who, on 22 September 1928, re-confirmed *ras* Täfäri as "heir to the throne and Regent Plenipotentiary", thus paving the way for his eventual emergence as Emperor. As governor of Bale, N.Z. established security, supported the construction of clinics, markets, roads, and schools, and helped the Belgian mission to train the ↗Imperial Bodyguard.

After the outbreak of the ↗Italian war (1935–36) on 3 October 1935, N.Z. assumed command of the Ogaden Army. The Imperial Army suffered from a lack of arms and ammunition, good communications, and adequate food supplies. Despite these difficulties, N.Z. slowed the Italian offensive in the ↗Ogaden. Credit for this achievement also must be shared with N.Z.'s three foreign military advisors, Wehib *paša* who had fought at Gallipoli in 1915; Ṭāriq *bey*, a Sudanese who had fought the Italians in Libya; and Major Fārūq *bey* who had served in Athens as Turkey's military attaché. All three gave him sound military advice.

Däğğazmač Näsibu Zäʾamanuʾel; photo from Ministry of Information 1963:6

N.Z.'s troops camped near Harär and ↗Ğiğiga while his advanced columns were in the Wälwäl-Gerlogubi-Qorrahe region. In November 1935, using chemical weapons, Italian forces captured Qorrahe but heavy rains interrupted their progress. Nevertheless, General Rodolfo ↗Graziani sought to continue the offensive by deploying motorized columns against the Ethiopians. However, N.Z.'s troops successfully attacked Italian forces south of Sassabaneh. On 11 November 1935, the Emperor arrived in Ğiğiga and then visited Dägah Bur, where he conferred with N.Z. about the campaign against the Italians. Among other things, N.Z. complained about numerous desertions and told the Emperor that he had ordered the execution of three officers for cowardice. However, the Emperor countermanded N.Z.'s order and instead ordered them to be flogged. Despite such problems, nearly all Italian advances on the northern and southern fronts had ground to a halt by early 1936, a development that proved to be short-lived.

Preparations for the final battle of the Ogaden began on 14 April 1936, after Wehib *paša* had established a defensive line between Sassabaneh and Dägah Bur and had threatened Italian forces with a static warfare with a high number of casualties. His warning proved to be an empty threat. Wehib had organized the construction of 15 miles of trenches to block the Ğiğiga road, but they lacked parapets and fire steps. Moreover, Ethiopian troops in the trenches had less than 60 cartridges apiece. On 16 April 1936, hostilities began but after three hours of fighting Ethiopian troops broke and fled, leaving some 5,000 of their compatriots dead on the battlefield. N.Z.'s departure to Djibouti, from where he travelled to Europe in exile, enabled remnants of his army to sack Harär for three days.

After arriving in Europe, N.Z. became head of the Ethiopian delegation at the ↗League of Nations. Among other things, he informed the member states that the Emperor had renounced none of his rights and that he claimed to continue exercising them. N.Z. also forwarded two resolutions to the Secretary-General. The first urged the League of Nations to refuse to lift sanctions against Italy. However, the member states voted 44 "yes", one "no", and four abstentions. The second resolution sought the League of Nations' approval for a £10,000,000 loan to help Ethiopia continue its war against Italy. Sadly for N.Z., the final tally showed 23 nations had voted "no", with one "yes" vote, and 25 abstentions. These failures marked the end of a great career. N.Z. died in the same year, while undergoing treatment for tuberculosis at a clinic in Davos, Switzerland.

Thomas P. Ofcansky

Naṣīr b. ʿUṯmān b. Badlāy

N. (نصير بن عثمان بن بدلاى; r. 1571–73, d. 1573) became the *sulṭān* of ↗Harär after the deposition of the *sulṭān* ↗Ṭalḥa b. ʿAbbās on 2 May 1571. With N., rule again switched over from the family of ↗Aḥmad b. Ibrāhīm al-Ġāzī to that of ↗Nūr b. Muğāhid's Ethiopian slave – ↗ʿUṯmān b. Badlāy, N.'s father.

N. died after two years of rule. He was succeeded by his son ↗Muḥammad b. Naṣīr b. ʿUṯmān.

Ewald Wagner

Nasisee Liiban

N.L. (or Haḍa Gammaččʉ; b. ca. 1900, d. ca. 1986), an Oromo from ↗Naǧǧoo in Central ↗Wälläga, became known as matron of the ↗Swedish Evangelical Mission boarding school in her home town. For boys, for whom there was no room in the boarding house and who lived too far away to attend school as daypupils, she provided lodging in her own house. N.L. attended a confirmation course and was confirmed on 7 March 1936 by the Protestant pastor Martin Nordfeldt.

After the Italians occupied Naǧǧoo, the boarding school and the Evangelical church were closed down. N.L. opened a small "trattoria" (restaurant) in town. She became a fervent evangelist and the spokeswoman of the Evangelical movement in the area. An Italian resident at Naǧǧoo, Lieutenant Mario, nicknamed her *capo protestanti.*

Every rainy season N.L., who suffered from asthma, spent some weeks at Čalliya Eka in the house of her relative *balambaras* Gamada Urgessa. There she taught some women and children to read, and in the evenings she instructed the members of the household and neighbours in the Christian faith.

N.L. was active, among others, in founding the Čalliya Eka congregation. She spoke openly against the traditional religion practiced in the area and its priests (↗*Qaalluu*), among them the influential Abbaa Magaal, whose son Olanaa later was converted to Christianity. She also went to Teegii were Ašanaa Naggaadee had started preaching. After a while five *qaalluu*-priests converted to Christianity.

After the Swedish missionaries left the country during the Italian occupation, N.L. invited the German missionaries from Aʾira to preach and administer the sacraments at Boǧi and Naǧǧoo. Concerned that the German missionaries might also have to leave the country, N.L. asked pastor Wassmann to ordain ↗Dafaa Ǧammoo for the ministry. Thus ordained on 17 April 1941, Dafaa Ǧammoo became the pastor for the then four congregations with confirmed members, namely for Boǧi, Naǧǧoo, Aʾira, and Teegii.

N.L. later moved to Addis Abäba where her daughter had married a colonel. They were all active members of the ↗Ethiopian Evangelical Church Mekane Yesus in Addis Abäba.

Lit.: ArEvang.

Johannes Launhardt

Naṣraddīn b. Aḥmad

N. (نصر الدين بن احمد; d. 1542), ↗*gärad* of ↗Däwaro, was the second of the three sons of *imām* ↗Aḥmad b. Ibrāhīm al-Ġāzī ("Grañ"). He should not be confused with the *gärad* of ↗Gänäzo called Naṣraddīn by the Ethiopian "short chronicles" (BassÉt, BégCron, DombrChr), whose actual name appears to be Samraddīn (KrLebD 22, n. 105 [tr.]).

N. was, according to the chronicle of *aṣe* ↗Gälawdewos, the governor of Däwaro in the Emperor's first year of reign (1540). Considering his father's alleged birth year (ca. 1506), N. must then have been younger than 20 years. He was attacked by the likewise young Gälawdewos with a rather insignificant troop, but was able to achieve an overwhelming victory and Gälawdewos had to flee. Soon after, N. had to deal with high losses after fighting renegades, who had fled to the highlands after the Ethiopian Church of ↗Ifat succeeded in its missionary work.

Two years later, in September 1542, N. attacked the Ethiopians, but they received help from Gälawdewos, and defeated N.

Among the thousands of dead Muslims there were also high-ranking officers. N. himself died suddenly after the battle through poison, or as it is also reported through the consequences of a mental illness.

National Archives and Library of Ethiopia

National Library of Ethiopia

The first N.L. of Ethiopia ([ብሄራዊ፡] ቤተ፡ መጻሕፍት፡ ወመዘክር, [*bəherawi*] *betä mäṣaḥəft wämäzäkkər*) opened on 5 May 1944, in a building located near Black Lion Hospital in ↗Addis Abäba and constructed by the Italians during

the occupation of Ethiopia (1936–41). The first books and the first 200 manuscripts were granted by *aṣe* ↗Ḫaylä Śəllase I; the majority of the first 15,000 volumes were inherited from the Italian Government Library which operated in Addis Abäba during the occupation. The first librarian was Śäräqä Bərhan Gäbrä'əgzer, an Eritrean church scholar who had studied in ↗Greece. The first keeper of the manuscripts was *abba* ↗Jérôme Gäbrä Muse (until 1964). The N.L. was then directly answerable to the Ministry of Education. It was managed by state clerks and sometimes advised by foreign experts (Hans Wilhelm ↗Lockot, Stephen ↗Wright, Rita Pankhurst).

The collection of books published in European languages steadily increased, particularly thanks to donations from embassies and, occasionally, such institutions as the British Council. Apart from current issues of magazines published in Ethiopia and Eritrea, the N.L. received some foreign periodicals. During the 1950s, the very active policy of the director ↗Käbbädä Mika'el greatly contributed to N.L. expansion. In 1952, the Institut Éthiopien d'Études et de Recherche, dedicated mainly to archaeological researches and run by French scholars, was created and attached to the N.L.

In 1967, the Department of National Library and Archives of Ethiopia was created under the Ministry of Culture and Sports. The N.L. has since been the initiator and co-ordinator of public library service throughout the country. The N.L. itself functioned additionally as a public library. The reading hall, first named after ↗Ḫəruy Wäldä Śəllase and in 1958 renamed "Public Division", collected books for school students and for the growing modern-educated public. The part of the N.L. devoted to the collection, cataloguing and preservation of *Ethiopica* was named "Research Division". The *Därg* (↗Provisional military administrative council) left the N.L. under the Ministry of Culture and Sports, recognizing the Public Division's role in the Public Library system. In 1976 a Legal Deposit Proclamation (No. 50) gave the N.L. the right to three copies of all materials published in the country. By the beginning of the 21st cent. ca. 26,000 books, as well as newspapers, audio-visual and computer materials, had been acquired through legal deposit. A national bibliography was first produced in mimeographed form in 1980 under the title *Ethiopian Publications* and continues to appear annually – since the 1990s as a digital printout. It is distributed to government and international agencies and associations.

In 1999, the Ethiopian National Archives and Library Proclamation (no. 179) grouped together, under a single Agency, the old N.L. and the newly formed National Archives, each with its own Director responsible to the same Director-General of the Ministry of Information and Culture. In anticipation of their further development and as an acknowledgment of the differences between their respective tasks, types of materials and required professional skills, it was declared that "where found necessary the National Archives and the National Library may be established separately and have their respective autonomous body". According to the proclamation, the National Archives and Library of Ethiopia (NALE, **ብሄራዊ፡ ቤተመዛግብትና፡ ቤተመጻሕፍት፡ ድርጅት**, *bəherawi betämäzagəbtənna betämäṣaḥəft dərəǧǧət*) has the objective of "collecting, systematically organizing, preserving, and making the information resources of the country accessible for study and research activities".

The public reading room has about 23,000 reference works, of which over 7,000 are in ↗Amharic. Four manual card catalogues are in use: catalogue of reference books; of the main reading room; of the World Bank, UNESCO and Food and Agriculture Organization of UN deposits; and of Amharic books. Currently the Library also serves as a national registry of ISBN and ISSN numbers.

The Ethiopian Studies section, among other things, can boast one of the most complete collection of travellers' accounts. The Manuscripts section contains ↗incunabula and ancient books printed in Europe and Ethiopia (e.g., ↗Potken's 1513 Psalter; the first edition of *Ṭobya* / ↗*Ləbb wälläd tarik*), the first Ethiopian newspaper ↗*A'əmərо*, and 835 ↗Gə'əz, Amharic and ↗Arabic mss. 617 mss. are briefly described in a card catalogue, 272 of them were catalogued in the 1970s by Mängəśtu Abägaz. Among the valuable ancient mss. are the illuminated Gospel of Täsfanä Krəstos from ↗Ḫayq (no. 28; 14th–15th cent.); the ↗*Rətu'a Haymanot* (15th cent.); the Pauline ↗Epistles (no. 27; 15th cent.). Eight manuscripts have been in the UNESCO World register since 1997, together with four letters from Ethiopian emperors. Modern Amharic mss., including many historical texts, form a large part of the collection.

The microfilm collection of almost 10,000 items is mainly inherited from the former ↗EMML project. NALE possesses the only complete set of EMML microfilms, as numbers 7454 to 9238

were not duplicated and transferred to Collegeville, USA and the ↗Institute of Ethiopian Studies (IES), as was the case for the 7,500 first copies. In October 2005, a technical team from Collegeville digitized part of this missing part and deposited the digitized copies in NALE and IES. The Microfilm section of NALE possesses also microfilms from the ↗British Library and 111 microfilms of Ethiopian mss. preserved in Jerusalem and Tel-Aviv.

National Archives of Ethiopia

In 1908 *aṣe* ↗Mənilək II created a modern ministerial system of administration, laying down detailed regulations about the archives, kept in each ministry in sections called "Archives", under the control of the Ministry of Pen. Later ministries continued the same tradition, registering incoming and outgoing papers and keeping files in a centralized way. National Archives (N.A.), however, were not properly launched until much later. The need for having institutionalized and accessible archives was especially recognized during the 1960s, in part due to the concern of historians and experts of ↗Addis Ababa University, the IES and the Ethiopian Management Institute. In 1979, a separate Division of Archives (called N.A.) was established within the Department of National Library and Archives of Ethiopia. It was initially accommodated in the N.L. building and charged with collecting archives from the former Imperial ↗government. Space and qualified staff were lacking. Surveys conducted between 1975 and 1995, some with the participation of UNESCO and the International Council of Archives, were aimed at the nationalization of N.A. activities. Among the results were the creation of the NALE and the Proclamation no. 179/1999.

The N.A. are in charge of the current record management. Dead files, extracted and stored separately, have been protected by two directives issued after the 1974 and 1991 changes of government prohibiting the destruction of the former administration's documents.

The N.A. historical collections include: documents from the Grand Palace, mainly originated from the Ministry of Pen (↗*Ṣähafe təʾəzaz*); documents from the Residence of the Crown Prince ↗Asfa Wäsän Ḫaylä Śəllase; private documents of *däğğazmač* Zäwde Gäbrä Śəllase, one of the Imperial Government authorities. Among important new acquisitions are (I) private papers of prominent personalities of the Imperial period such as *däğğazmač* ↗Käbbädä Täsämma, *aläqa* ↗Tayyä Gäbrä Maryam, *blattengeta* ↗Märsəᶜe Ḫazän; (II) documents from the *Därg* Department of Censorship; (III) archives concerning the community in ↗Jerusalem (↗Dayr as-Sulṭān).

The archive collections also include letters, chronicles, historical documents and photographs, articles and research papers, maps, and materials concerning law and judiciary, as well as transcripts and recordings of ↗oral literature, such as poems, hymns or proverbs.

A new building in the same compound has recently been constructed to house the collections, offices and various reading rooms of NALE.

Navy

The Ethiopian N. was only developed following the ↗United Nations decision of 11 August 1952 to federate ↗Eritrea as an internally self-governing entity with Ethiopia, which gave Ethiopia a 544-mile long coastline. On 25 September 1953, *aṣe* ↗Ḫaylä Śəllase I approved Proclamation 136 that established the Imperial Ethiopian Coast Guard as part of the Department of Marine within the Ministry of National Defence. Under the Proclamation, the Emperor appointed the Commanding Officer while the Minister for National Defense appointed all other officers, warrant officers, petty officers, cadets and coast guards.

In January 1954, a Norwegian Admiral became the Imperial Ethiopian Coast Guard's commanding officer. In October 1954, the American military attaché reported that the Emperor had sent a contingent of potential Ethiopian instructors for the Marine Academy to naval schools in Yugoslavia, ↗Germany, and the ↗United States of America. In November 1954, the Emperor visited Norway to secure aid to help facilitate the establishment of the Ethiopian Imperial N. Commodore Leif Lund served as the principal adviser to Prince ↗Ǝskəndər Dästa, a grandson of Ḫaylä Śəllase and a graduate of the Royal Naval College at Dartmouth.

In September 1955, the first 47 cadets started training to become officers in the newly established Imperial Ethiopian N. The N.'s training wing eventually included the Imperial Naval College at ↗Massawa, which offered courses in the executive, administrative and engineering branches of seamanship, frogman/diving, and marine commando training. The Petty Officer's School, which was located in Ǝmbatkala near ↗Näfasit, operated a five-year basic training course. There was also a Ratings School that taught basic seamanship to boys who had at least six years of elementary education. Norwegian officers operated these facilities.

On 1 January 1956, the Emperor authorized the creation of the Haile Selassie I Naval Base and Naval College near Massawa port. A month later, a Dutch destroyer, *Kortenaer*, called at Massawa and took a group of Naval College cadets on a cruise. In late 1956, Yugoslavia donated a yacht and subsequently two torpedo boats (1960) to the N. On 31 January 1957, Ḫaylä Śəllase inaugurated the Petty Officers' School. In June 1957, the U.S. Navy transferred its French-built Submarine Chaser PC-1616 to the Imperial Ethiopian N. under its Military Assistance Program.

During the 1958–74 period, *commodore* Ǝskəndər Dästa served as Commander of the Imperial Ethiopian N. In 1958, the N. became an autonomous branch of the armed forces while 45 Norwegian naval officers and 90 Ethiopian civilians worked at the Naval Base and the Naval School. British, French and Israeli military personnel also helped to train Ethiopian naval personnel. Additionally, the Navy Section of the U.S. Military Advisory Assistance Group provides training in the use of U.S. equipment.

On 22 January 1959, the first group of naval officers graduated from the Imperial Naval College. Six ↗Imperial Bodyguard officers provided military instruction to naval recruits. Captain D.T. Halvorsen served as the principal officer for the Naval Base and Naval School. Commander E.I.A. Biarne was his first assistant. By 1960, some 300 personnel were enrolled in the Imperial Naval College as cadets, apprentice petty officers and ordinary seamen. On 26 January 1961, 50 non-commissioned officers graduated from the Petty Officers School after five years of study. The Imperial Ethiopian N.'s inventory included two Yugoslav torpedo boats, five American coastal patrol boats, and a American seaplane tender called the USS Orca but renamed HMS Ethiopia after the US Navy spent some US-$ 3 million in February 1962 to convert the ship into a state vessel for the Emperor. The principal naval bases were at ↗ᶜAsäb and Massawa. On 8 September 1967, the *Chicago Tribune* reported that US Congressman Otto Passman complained that Washington was paying US-$ 80,000 a year to keep Ḫaylä Śəllase's

"fancy" seaplane tender operational. However, U.S. Rear Admiral L.C. Heinz maintained that the vessel was "a training ship for the Ethiopian N.".

In early September 1971, Israeli chief of Staff General Haim Bar-Lev proposed to provide the Ethiopian Imperial N. with patrol boats, missile launchers, and a radar system for use along the ↗Red Sea coast. Addis Abäba denied that any such offer had been made but never disputed the Bar-Lev visit.

By 1974, the Imperial Ethiopian N. included some 1,700 men, about 190 officers, and 125 marines, nearly all of whom were stationed at Massawa. During the waning months of the monarchy, the armed forces became increasingly restive. On 26 February 1974, ↗Army and ↗Air Force personnel seized control of Asmära. The rebels pledged their loyalty to the Emperor but they made 24 economic demands, including a 50% pay raise. The mutinous troops imprisoned Eritrea's Governor General, Lieutenant General Däbbäbä Ḫaylä Maryam. The following day, enlisted naval personnel joined the revolt at Massawa naval base.

On 28 February 1974, Deputy Commander Ǝskəndər Dästa fled to sea in an Ethiopian mine sweeper but the vessel ran out of fuel. A French minesweeper rescued him and transported him to the French Territory of "Afars et Issas" (↗Djibouti), supposedly "on a personal visit". A group calling itself the "Command Force" subsequently met with a military delegation, headed by Ethiopia's Chief of Staff General Asäffa Däməsse and including four generals, a colonel, two majors, and seven enlisted men. However, the two sides failed to resolve the dispute. As a result, the "Command Force" detained General Asäffa Däməsse and ordered the rest of the delegation to return to Addis Abäba. Ḫaylä Śəllase accused the rebels of supporting the "enemies of Ethiopia" but agreed to a pay raise of 25% rather than the 50 % the mutineers had demanded.

On 3 March 1974, Ḫaylä Śəllase bowed to demands by naval personnel and sacked Ǝskəndər Dästa who subsequently returned safely to Addis Abäba. On the same day, the Emperor appointed Commodore Ṭasäw Dästa as Commander of the Ethiopian Imperial N. The Emperor also accepted the resignations of several cabinet ministers while the mutineers freed Däbbäbä Ḫaylä Maryam.

The downfall of the monarchy ended an important chapter in country's naval history. Despite extensive foreign support, the Ethiopian Imperial N. remained the least developed of the military services.

After Eritrea's independence in 1991, the Ethiopian N. was dissolved. Some of the ships were shold for scrap in Djibouti. Eritrea kept one of the Osa-class missile boats. In September 1996, Asmära announced that it would not purchase any additional former Ethiopian ships as it would excerbate relations with Yemen.

Nay Erətra Sämunawi Gazeṭa ↗Eritrean Weekly News

Nayi

Nayi language

The N. (also Nayʾi; previously known as Naʾo, Nao) language is the mother tongue for only 3,636 people (1994 Census). Another 1,873 stated that they use N. as a second language. From all N. mother tongue speakers, 1,137 claim to be monolinguals. The area which they mainly inhabit is the Deča *wäräda* in the ↗Käfa region. Only a few N. live scattered in other parts of that region. The nearest town to the N. language area is ↗Bonga (for location s. Maale). The ↗Käfa language serves as a trade language for the older N. people, whereas the younger N. speak only Käfa. Thus, N. is on the brink of language death; only in remote N. villages like Guši and Goda the language might survive (s. Aklilu Yilma – Ralph Siebert 1995).

The linguistic affiliation of N. is ↗Afro-Asiatic, ↗Omotic, ↗Dizoid. N.'s close linguistic relationship to ↗Dizi and ↗Šeko, the other two languages in the Dizoid family, is undisputed.

The linguistic data presented below are drawn from the grammatical sketch by Aklilu Yilma (1994). The sound system has 29 consonant phonemes and 6 vowels. The six places of consonant articulation are labial, alveolar, palatal, retroflex, velar and glottal. The consonant phonemes are as follows: stops *b*, *d*, *g*, *t*, *k*, *ʾ*; ejective stops *p̓*, *t̓*, *q̓*; fricatives *f*, *z*, *ʒ*, *ž*, *s*, *ʂ*, *š*, *h*; affricates *ʦ*, *ʂ*, *ʧ*, *č*, *ʧ̓*, *č̓*; nasals *m*, *n*; lateral *l*; trill *r*; semivowels *w*, *y*. The phonemes *l*, *č*, and *č̓* are not found word-initially.

Unlike Dizi and Šeko, N. has phonemic gemination, e.g. *wəla* 'dove' vs. *wəlla* 'blind'. The N. vowels *i*, *e*, *a*, *o*, *u* can be both short or long, but the mid-central vowel *ə* appears to be only short. The status of this vowel, however, "needs further checking and investigations" (Aklilu Yilma 1994). All vowels in N. are retroflexed before or after retroflex consonants. Phonological processes of palatalization (before the front vowels) and labialization (before the back vowels) of consonants are attested (s. Aklilu Yilma in PNCES 1). N. has three phonemic tones: high (´), mid (unmarked), and low (`). Syllabic *m̩* and *n̩* occur.

Some of the N. noun morphology features are the plural marker *-kis* (e.g., 'boy' *dòdù* [sg.] – *dòdùkis* [pl.]); the gender marking suffixes *-u* (masc.; e.g., *áku* 'grandfather') and *-i* (fem.; e.g., *égì* 'grandmother'); the definite markers *-s* (masc.; e.g., *ʾi:* 'house' – *ʾi:s* 'the house') and *-n* (fem.; e.g., *ba:yì* 'mother' – *ba:yn̩* 'the mother'). The case markers are nominative *-i*, accusative *-a*/*-na*, genitive *-kn*, dative *-iš*/*-ič*, locative *-qa*, directional *-ta* and vocative *-e*/*-yo*. Agent nouns can be derived from nouns by suffixing the morphemes *kəba* (masc.)/*kəbe* (fem.).

Pronouns distinguish gender in 3rd pers.: *isi* 'he', *iši* 'she'. N. has vocative pronouns *neá* (masc.) and *ne* (fem.), and the honorific pronouns *itì* (2nd pers.) and *ʾuši* (3rd pers.). The demonstrative pronouns of proximity are 'this/these' *ha:s* (masc.) and *ha:yìn* (fem.) respectively, while the pronouns denoting distance are 'that/those' *neás* (masc.) and *neyìn* (fem.). N. reflexive pronouns are formed by prefixing the pronominal morphemes and suffixing the dative case marker *-iš* to the word *mò:t* 'head', e.g. *n̩-mò:t-iš* 'myself'.

The verb in N. has three tenses (past, marked by *-a*; present, marked by *-am*; and present-progressive, marked by *-ki*), and six aspect-like distinctions (pluperfect, present perfect, future perfect, past progressive, future progressive, and immediate). Apart from indicative, two moods – imperative and jussive – are distinguished. The copula *téna* (present) / *tokn̩* (past), which does not inflect for person, number, or gender, can be used to form different types of verbal aspects.

The basic word order in N. is Subject-Object-Verb: e.g, *bà:yàs*$_1$ *keónùsa*$_2$ *wuššа*$_3$ 'the lion$_1$ killed$_3$ the dog$_2$'.

The ten-word list for N. is: 'one' *yisn̩*, 'two' *ta:gn*, 'three' *kəddu*, 'fire' *ta:mu*, 'water' *a:ì*, 'sun' *šaž*, 'moon' *ʾátsn̩*, 'blood' *yarbn̩*, 'tongue' *iyalbu*, 'tooth' *ʾáču*.

Nayi ethnography

The N. (or Nayʾi; previously known as Naʾo or Nao) are a small group of Omotic (Dizoid)-speaking people, living in about twelve villages south of ↗Bonga town in the region of Čiri and Deča, in the former ↗Käfa region of Southern Ethiopia. The 1994 Ethiopian census counts 4,005 "Nao" (CSA 1998:66), but this is probably an underestimate, because in the 1984 census they were still 12,177. Probably, many N. identified themselves as "Käfa/Käfiččo", and ethnolinguistic borders are blurring due to migration and intermarriage.

The N. oral tradition states they were settled in the area before the Käfa, resented these newcomers and fought them. Historically and culturally the N. are related to the ↗Dizi, ↗Šeko, and ↗Čara, but have remained a little known group. Apart from Lange (1975), hardly any research has been done on their ethno-history and relationship with other peoples. The N. have a historically tense relation with the ↗Meʾen people, living to their south, along the Šorum River, and oral tradition records many armed conflicts between them.

The N. have patrilineal clans and are all farmers. They cultivate *ənsät*, barley, *tef*, maize, wheat, sorghum, spices, coffee and garden crops. They also keep cattle and goats, and practise some apiculture, fishing, and trade.

In the past N. was a society stratified in several layers: ruling clans, high clans, low clans and occupational groups. These distinctions are still remembered, e.g., in descent reckoning and for marriage choice, but their significance is eroding. The land was cultivated by commoner clan farmers. It is not known whether the N. society had slaves, like the neighbouring groups.

Little is known of the traditional religion of the N., although Lange (1975) writes about certain spirit beliefs and community rituals. Since the mid-19th cent., Käfa and N. religious representations have become similar (with a belief in the upper god Yero), and in recent decades Christianity has expanded. In local society the N. were, however, known for their powerful spirit mediums. N. are prominent in the ↗*Gäramanǧo* cult, which may have originated from their area.

The N. had an independent polity until the middle of the 19th cent. Ruling clans among them were the Hammo, and since the mid-19th cent. the endogamous Nao Bušašo clan. Their divine chief or "king" was called the *naʾotato* (or *kyaz*; ↗Kingship, divine; ↗*Tato*), and six of his councillors were from the leading Bušašo clan, with one from the Gayskes clan. The N. king was usually secluded and did not eat in public with others; his food was handed to him while seated behind a curtain. The king led a yearly sacrificial rite (*deza*) to secure the fertility and productivity of land and cattle.

The N. came to be politically dominated by the Käfiččo after the latter's expansion and in the 19th cent. were tributary to the Käfa kings. The Käfa kingdom also took (female) slaves from the N. A strained relationship marked the two peoples. The N. also kept a peculiar relationship to the Käfa court. A new N. king could only be installed after the Käfa king had given his blessing and when a member of the Gaykes clan had invested him with the N. royal insignia (golden ring, bracelet, silver necklace, and black hat with a silver *kallač* [↗*Kallačča*], or phallus-shaped decoration) at the court of the Käfa king in the Käfa capital ↗Andaračа. Lange (1975:63f.) states that the Käfa people symbolically saw the N. as a whole as "their children" (in Käfa *naʾo* means 'children').

After the conquest of Käfa and adjacent areas in 1897 by the Ethiopian imperial troops, the N., like their neighbours, suffered economic and demographic decline due to northern depredations. The reputation of *ləǧ* ↗Iyasu is particularly bad: although the N. king Gulli (or Gäbrä Mädḫən) submitted to Iyasu, the latter perpetrated a massacre among them during his stay in the Käfa region (probably in 1913) and took away many slaves.

At present, assimilation of N. into Käfa society is proceeding. They are bilingual in N. and Käfa, and often also speak Amharic. In recent decades, many have moved away to other parts of Käfa, to Šeko and to towns, for education and work.

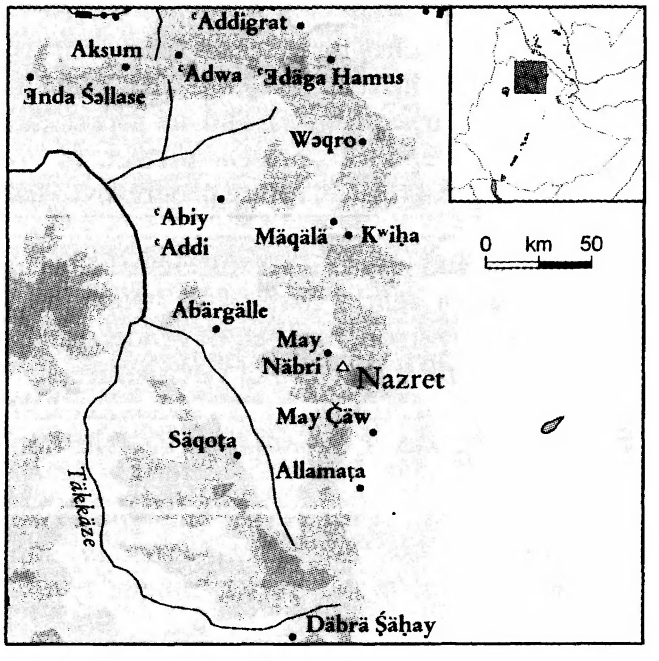
Jon Abbink

Nazret

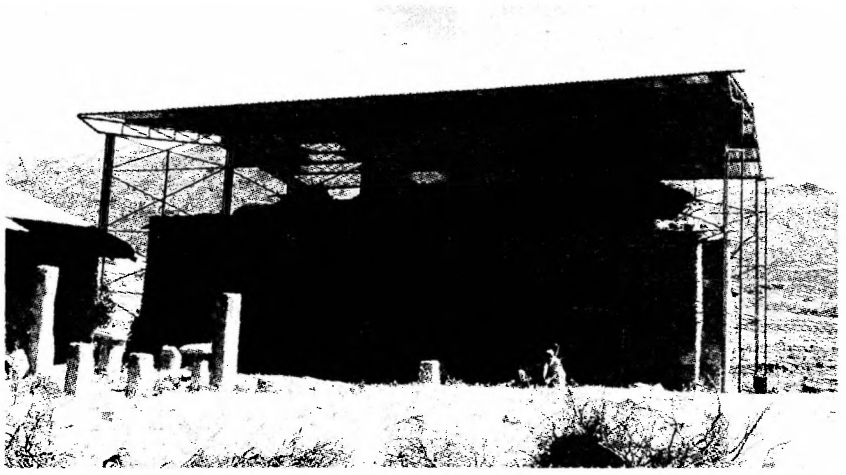
N. (ናዝሬት, or Nazre) is a historical settlement and an archaeological site in ᶜAddi Abbona, southern ↗Ǝndärta, Təgray, 12 km south-east of May Näbri. Its fame is mostly due to the building structure, which until the late 1990s was used as a church dedicated to St. ↗Mary, and therefore known as Maryam Nazre(t). It is sometimes also referred to as ᶜAddi Abona [Abunä] N. or simply N.

The long rectangular building of Maryam N., ca. 29 x 8 m, and 5–6 m high, bears traces of possibly Aksumite ↗architecture. It sits on solid foundations of unmortared stone. There is evidence of other structures bearing features characteristic of the Aksumite period; columns and other cut stones in the vicinity have been partially incorporated into the structure as a result of repeated rebuildings.

The site has been described by Mordini (1946) and Anfray (1970). The former, whose attention to the site was drawn by ↗Conti Rossini, provided a brief description of the site and published a photo of the Maryam N. church and of an unvocalized Gəᶜəz ↗inscription on the stone basin (Mordini 1946:150; figs. 3f.). He also reported finding a few coins of Aksumite kings ↗Ḥataz and ↗Gersem in a trench dug near the build-



ing. He suggested that the site could have served as a patriarchal residence in the late Aksumite and early Zagʷe periods, identifying the name ᶜAddi Abona with "ᶜAddi Abun" mentioned in the lists of metropolitans and in the ↗*Kəbrä nägäśt* (Mordini 1946:150 n. 2). Anfray (1970:36ff.) published a detailed description of the building of Maryam N., arguing that although it retained Aksumite-style features it was of a later date (ca. 15th cent.), whereas the stone basin, the surrounding ruins and, possibly, the foundation were, indeed, Aksumite. Collecting scraps of evidence, Munro-Hay (MHAlex vol. 1, 43f.; vol. 2, 5, 11) supports the local claim already noted by Mordini that N. could have been the residence of some of the earliest Ethiopian metropolitans, and that metropolitans Sinoda, Luqas, Yoḥannəs and Matyas had perhaps been buried there. The name ᶜAddi Abona, which has remained attached to the village, could be evidence of an enduring metropolitan connection (cp. ↗*Pappas*).



The historical building of Maryam Nazret with Aksumite remains in front; photo June 2005, courtesy of Paul Henze

According to local tradition, Maryam N. was an Aksumite palace rebuilt in the 14th cent. by *aṣe* ↗ᶜAmdä Ṣəyon I out of respect for the famous Zagʷe king ↗Lalibäla, who allegedly took refuge here when he was being persecuted by his brother ↗Ḥarbay. It is claimed that, while Lalibäla travelled to ↗Jerusalem, his wife ↗Mäsqäl Kəbra waited at N. Evidence of extensive rebuilding, allegedly under ᶜAmdä Ṣəyon's direction, includes an unusual series of five high cupola-roofed chambers on the east side of the building with distinct Islamic features. There is speculation that builders from Egypt or the Yemen may have been employed.

ᶜAmdä Ṣəyon is believed to have been killed in this region, campaigning against Muslim lowlanders (cp. Anfray 1970:36). In 1954 villagers in ᶜAddi Qäläbäs, 4 km east of May Näbri and 7 km north-west of N., reportedly discovered an intact, sealed stone sarcophagus containing a male body while rebuilding their derelict church. The sarcophagus, it was later claimed, also contained some gold objects which were sent to May Čäw and disappeared. Near the sarcophagus, a plaque inscribed "*aṣe*" was found. Villagers concluded that it was the body of the Emperor and reburied his bones. The place name ᶜAddi Qäläbäs is said to derive from *qäy ləbs* (Amh. for 'red clothes', i.e. 'Village of [those] of Red Clothes'),apparently referring to a group of loyal vassals of ᶜAmdä Ṣəyon "who dressed in red".

Another local tradition claims that the church of St. Mary was used by the Portuguese during the battle of Christovão da ↗Gama against ↗Aḥmad b. Ibrāhīm al-Ġāzī; the tradition seems supported by the report of ↗Bermudez (1875:33) who mentions N. as the battle site.

A protective metal roof has been constructed over Maryam N. by the Tigray Culture and Tourism Commission in anticipation of further professional archaeological investigation. In spring 2007 the Commission arranged to have the purported tomb of ᶜAmdä Ṣəyon in ᶜAddi Qäläbäs identified and the sarcophagus exposed.

Paul B. Henze

Nəbab bet

N.b. (ንባብ፡ ቤት, lit. 'house of reading') is the school of the first level within the traditional ↗education system, in which the student learns to read.

The children can start at the age of ca. seven years. The very first stage, at which the students

learn the *fidäl* syllabary (↗*Abugida* and *hahu*), is also called ቍጥር፡ ትምህርት (*qʷəṭər təmhərt*, lit. 'learning of numbers') because the student is taught to "count" the letters of the syllables by indicating them with a long stalk of grass and naming each of them aloud. The letters are repeated until they are memorized.

The next stage consists in memorizing passages of the ↗Gəᶜəz Bible, even though the students do not understand the language yet. The passages used are taken from the first Epistle of John (↗Epistles: The Catholic Epistles), and therefore this stage is often called ፊደለ፡ ሐዋርያ (*fidälä ḥawarya*, 'the Apostle's alphabet').

Nəbab bet students reading the Pauline Epistles, Ǝnda Abba Ṣəḥma, ᶜAdwa; photo January 2006, courtesy of Evgenia Sokolinskaia

The *fidälä ḥawarya* can be read in four styles or methods of articulation, depending on the level of the students' proficiency: 1) *qʷəṭər*, i.e. letter-by-letter; 2) *gəᶜəz* style, when the student is able to connect letters into words or even short phrases; 3) ወርድ፡ ንባብ (*wərd nəbab*, lit. 'descending reading') or ንኡስ፡ ንባብ (*nəʾus nəbab*, 'minor reading'), when students can read with some confidence; for its sing-song mode of reading this method is also called ዜማ፡ ንባብ፡ ዘውእቱ፡ ወርድ፡ ንባብ (*zema nəbab zäwəʾətu wərd nəbab*, lit. 'chant reading which is descending reading'); 4) ቍም፡ ንባብ (*qʷəm nəbab*, 'reciting reading'), or (ᶜ*abiy nəbab*, ዐቢይ፡ ንባብ, 'major reading'), the stage of fluent reading. At this point the student is able to read during the religious services without making any mistakes in any passage. He can thus read what is called ገበታ፡ ሐዋርያ (*gäbäta ḥawarya*), i.e. selected passages from the Pauline Epistles, Catholic Epistles, as well as from St. John's Gospel, hagiographic and other books during the services.

The booklet used as a textbook throughout the N.b. and containing the *fidäl*, the *Abugida* and the *fidälä ḥawarya* texts is usually called by the epithet ርእሰ፡ መጻሕፍት (*Rəʾəsä mäṣaḥəft*, 'the head of the books'), or, more commonly, simply *Fidäl*.

In N.b. the pupils have to learn certain prayers by heart. This part of schooling is known as ቃል፡ ትምህርት (*qal təmhərt*, 'lesson of the word'), or የማታ፡ ትምህርት (*yämata təmhərt*, 'evening lessons') because they are studied in the evening. The students also have to study such important catechetical books as the ↗*Amməstu aᶜəmadä məśṭir*.

Finally, the students have to master the *Dawit*, i.e. the ↗Psalter, the text which concludes the elementary education. Once the student has memorized the entire Psalter, one refers to him saying "he has repeated the Psalter" (ዳዊት፡ ደገመ, *Dawit däggämä*), or "he has learnt the Psalms of the Psalter" (መዝሙረ፡ ዳዊት፡ ተማረ, '*Mäzmurä Dawit tämarä*'), which means "he became literate". Thereafter, the pupil has the right to continue education at the next stage, the ↗*zema bet*. After the conclusion of the N.b., the family of the student usually organizes a feast to mark the event.

The teacher of N.b. is esteemed for his knowledge of traditional phonology, important for other church disciplines; he is often consulted by teachers of other schools including the ↗*qəne bet*. The pupils of N.b. are welcome at the church where they perform plenty of services: they are sent to ↗ᶜ*əqa bet* to fetch books, distribute passages of ↗*Mälkəʾa Iyasus* or ↗*Mälkəʾa Maryam* around the choir etc.

Historically, N.b. was and to a large extent still is the most accessible form of basic education, available at many churches and monasteries. Today, more and more children go to governmental schools; still, especially in rural areas, N.b. seems to be the only chance to get any access to learning and ↗literacy for many of them. In many areas, the boys go to the governmental schools, but during the rainy season flock to the church school.

N.b. is exclusively for boys. Girls, starting from the age of ca. 12, can follow a similar course in ↗nunneries.

tem", in: *The Church of Ethiopia: a Panorama of History and Spiritual Life*, Addis Ababa 1970, 81–97; HabTent; KAY KAUFMAN SHELEMAY, "The Musician and Transmission of Religious Tradition: The Multiple Roles of the Ethiopian Däbtära", *Journal of Religion in Africa* 22, 3, 1992, 242–60; MICHAEL POWNE, *Ethiopian Music: an Introduction: a Survey of Ecclesiastical and Secular Ethiopian Music*, London – New York – Toronto 1968.

Habtemichael Kidane

Nəburä əd

N.ə. (ንቡረ፡ እድ, also *nəburäᵓəd*, Gəᶜəz lit. 'the one on whom the hands are/have been laid/placed', pl. *nəburanä əd*; Amh., Tgn.: *näbrid*, *näbrəd*) is a traditional Ethiopian ecclesiastic title, usually said to refer to the senior administrator of ↗Aksum (*yaksum aläqa*, i.e. 'the ↗*aläqa* of Aksum', s. KWKDic 621), or "governor of Aksum" (s. GuiVoc 386), in charge of both ecclesiastic and lay matters.

The origin of the office of N.ə., which has no parallel in Canon ↗law, is unknown. According to both the early 16th-cent. version of the Acts of *abunä* ↗Täklä Haymanot and the monastic ↗genealogies, the title was established by the 14th-cent. *abunä* ↗Yaᶜəqob, who sent twelve *mämhəran* (s. ↗*mämhər*), including their head *abunä* ↗Filəppos of Šäwa (cp., e.g., mss. EMML 2852, fol. 56; 2136, fol. 16b) as missionaries to southern Ethiopia, to found new monasteries and evangelize the local population. Since Yaᶜəqob could not consecrate them as bishops (cp. ↗*Eppisqoppos*), he made them N.ə. (AmhChurchD vol. 5, 29f.). These *mämhəran* were blessed for their mission by the Metropolitan – similar to the Apostles blessed by Christ. The "imposition of the hands" (i.e. አንብሮተ፡ እድ, *anbərotä əd*) is a part of the ritual of ↗Ordination, and "the prayer of the imposition/laying of the hands" is usually performed at the end of Mass (↗*Qəddase*). The twelve *mämhəran* were thus dispatched to their missionary task with special prerogatives, through the imposition of the hands and blessing by the head of the Church (which does not include receiving the Holy Orders). The tradition of Däbrä Ḥayq also elaborated the notion of the disciples of *abunä* ↗Iyäsus Moᵓa as N.ə. (cp. ms. EMML 2093, fols. 85v–86r).

The office of N.ə. in Aksum seems to be ancient. The documents from the *Mäṣḥafä* ↗*Aksum* list quite a number of N.ə., as well as their "spokesmen" (*afä nəburä əd*; s. Bausi 2006:132). ↗Alvares reports of two N.ə. in the cathedral of ↗Aksum Ṣəyon, in charge of clerics and monks resp. (BeckHuntAlvar 160). A historical text included in the *Mäṣḥafä Aksum* relates the edict issued by *aṣe* ↗Śärṣä Dəngəl who, on the occasion of his ↗coronation, "revived" the old order of Aksum Ṣəyon established by *aṣe* Zärᵓa Yaᶜəqob, who had "equated" the dignitaries *liqä* [*kahənat* of] *Aksum* (s. ↗*Liq*) and N.ə. of Aksum (both designated N.ə. by Alvares; the former as "nebret of the monks"), putting them, in the court order, "to the right and to the left" (cp. DAE II, 50), and entrusting them with the office of the Hours during day and night, respectively (*gəbrä däbtära zämäᶜalt*; *säᶜatat wägəbrä lelit*, s. CRAxum 73). Bruce reports that the office of N.ə. in Aksum ("high priest", "keepers of the Church of Axum") belongs to the descendats of Azaria, who came to Ethiopia with ↗Mənilək I (BruNile I, 476).

Traditions which date it to the 14th cent. notwithstanding, the office of N.ə. seems to have been an ancient feature of the country's administration, rooted in the practice of the ↗Ethiopian Orthodox (Täwaḥədo) Church, and not limited to Aksum. Under *aṣe* ↗Yəkunno Amlak, the office of N.ə. of Aksum was held by the abbot of ↗Däbrä Libanos of Ham (ᶜ*aqqabe säᶜat zäbetä Mäṭaᶜ* Täkäśtä Bərhan, CRDLib nos. 10, 11), but by 1319 the two offices were held by two different persons (ibid. no. 17). A few major monasteries were administered by a N.ə., who apparently did not belong to the local community and was sent and imposed by the supreme ecclesiastic or/and secular authority (i.e., the metropolitan or the emperor). In the early 15th cent., ↗Ǝnda Abba Gärima was administered by N.ə. Gäbrä Iyäsus, who was not brought up in the monastery and, prior to this appointment, had resided in another place, where he acquired "much gold". He had enough authority to launch an investigation into the theft of the church's sacred possessions, committed by a deacon, and could rely upon the support of the powerful *təgre mäkʷännən* ↗Akḥadom (Bausi 2003, nos. 229–42). The monastery of ↗Däbrä Damo was administered, at least at times, by a N.ə. (cp. CRDLib no. 17); *abba* Giyorgis of Sägla was sent there as N.ə. by *aṣe* ↗Dawit II (Colin 1987:23, cp. 14). The Chronicle of Zärᵓa Yaᶜəqob mentions that the important ecclesiastic *abba* ↗Nob was appointed N.ə. in Däbrä Damo and held the position ca. 1450 (PerrZarY 11f.). In the 14th–15th cent. at least, another N.ə. was resident in the area of Lake Ṭana, probably based in ↗Ṭana Qirqos (for N.ə. Krəstos Mädḫən and Tewodros, s. HamTana I, 87 and n. 189, 90). In the 15th cent. and especial-

ly under *aṣe* Zär'a Ya'əqob, there was a number of N.ə. in Ethiopia who seem to have formed, probably together with ↗*liqä kahənat*, a kind of ecclesiastic administration, the importance of which was emphasized by this emperor (s., e.g., CRRicBerhan). According to the Chronicle of *aṣe* ↗Bä'ədä Maryam, on one occasion the latter honoured *liqä kahənat*s and N.ə. "having appointed each one for his respective country" (PerrZarY 112). Later, according to Barradas, there was a diffusion of the title among the nobility, though only the N.ə. of Aksum enjoyed exceptional privileges (Barradas 1996:124).

As to Aksum, apart from the N.ə. known from different documents, the local tradition lists 63 N.ə. starting approximately from the 15th cent. until 1967 (AmhChurchD vol. 5, 31f.). Some 14 N.ə. lived and were active in the 20th cent. (ibid.). By the late 19th/early 20th cent., a laic dignitary could also be appointed N.ə. of Aksum. After serving a number of years, the N.ə. could resign from office but keep the title. Though the authority of the N.ə. had been somewhat curtailed by the 20th cent., being "the guardian of the Tablets of the Law", he was considered one of the top Church officials, alongside the ↗*əčč̣äge* (GueCopMen 450 no. 7; cp. MahZekr 651). The title could be conferred only by the emperor himself. Among the 20th-cent. N.ə., such remarkable personalities can be mentioned as, e.g., *däğğazmač* ↗Gäbrä Śəllase or *mämhər* ↗Mäk^{w}əriya. Presently, the N.ə. of Aksum deals with a wide range of ecclesiastic and civil affairs. ↗Addis 'Aläm is the only other place in which the head of the church (St. Mary) is N.ə., but this is probably only a honorary title (AmhChurchD vol. 5, 32).

Denis Nosnitsin

Nəgəśt ↗Nəguś

Nəgəśtä Azeb ↗Makədda

Nəguś

N. (ንጉሥ, Gə'əz 'king', but also 'ruler, chief, head, commander', s. DillmLex 687), the traditional title of the Ethiopian monarch, is morphologically a passive participle of the verb *nägśä*, 'become king, ruler' and 'rule, reign', with a regular "nomen agentis" *nägaśi* ('king'), vs. which N. is used as an alternative form (cp. *təguh/tägahi*, 'watcher', etc., Ségéral 2000:269–73). Its plural, *nägäśt* (and *nägäśtat*, redetermined), instead of the expected **nəguśan*, is actually usurped from that of *nägaśi*.

Two major explanations have been put forward to mark the difference between these concurrent titles, as they are found already in the Ethiopic ↗Bible: first, on stylistic grounds, by Dillmann, arguing that *nägaśi* belongs to higher prose, and quoting thereby the Biblical exclamation *ḥəyäw abä nägaśi*, 'Long live the king!' (e.g., 1 Sam 10:24), which suggests that the king of ↗Aksum might have been referred to as *nägaśi* (DillmLex 687f.; cp. Caquot – Drewes 1955:35f., and Vycichl 1957:201 and n. 1).

Within the framework of his reconstruction of Ethiopia's past versus South ↗Arabia's, Conti Rossini (1925:481ff., cp. CRStor 110) assumed instead that *nägaśi* was the name of the envoy(s) or tax gatherer(s) sent by the Sabaean ruler to the colonies on other side of the Red Sea: in the progress of time, one *nägaśi*, prevailing over his fellow *nägäśt*, would have been distinctively called N., and then *nəguśä nägäśt*, 'head of chiefs' or, later, 'king of kings' (s. also Caquot 1957:206f.) – according to Ricci (1988:155), 'the one elected N. from among the *nägäśt*'.

For both *nägaśi* and *nəguś* an original fiscal meaning is definitely suggested by the akin South Arabian root *ngś*, 'impose (tribute)' (Beeston 1982:93), as well as by the cognate Hebrew *nāgaś*, 'exact tribute, drive to work, press' (s. LesCDic 393f.; cp. also, e.g., the *nogesîm* of Ex 5:6, ἐργοδιῶκται, *ergodiôktai*, 'taskmasters', in the Greek ↗Bible, *exactores*, 'overseers', but also 'tax collectors', in the Latin Vulgata). A similar semantic shift from rather a material or practical meaning to a more general one – here, of power and authority – can be equally surmised for the title *ḥaśani*, 'tutor' (↗*Aṣe*), and then 'king', born first by (the monk) ↗Danə'el towards the

end of the 10th cent., and alternating with N. in the time of the ↗Zagʷe dynasty: e.g., for ↗Lalibäla (CRDLib no. 6; s. Marquart 1913:CCCIX, on which Littmann 1915:265; Cerulli 1943:274ff. and 1960:8f.; RicEnbYoh II, 94f., n. 108). Witness to that shift is also the title ↗*ṣäḥafe la(ḥ)m*, 'recorder, registrar of (a monarch's) cattle', later attributed, among others, to the governors of Amhara, Angot, Qəda, and then of Šäwa and Damot, as initially charged with levying the cattle dime for the king (Conti Rossini 1925:482; Cerulli in PICES 1, 8).

A parallel development of the forms *nägaśi* and *nəguś*, to a certain extent interchangeable (as they are, much later, in ↗Giyorgis of Sägla, YaqMist I, 120f., to whom, however, Aksumite sources were still available), has been more recently proposed by Kropp (in EtRicci 136f.; cp. Kropp 2005:136 and n. 82). As a matter of fact, in such ancient unvocalized inscriptions as those of ↗Safra (RIÉ 183.III.2), Ḥənzät (Ricci 1988:146, F.12) or even ᶜAnza (RIÉ 218.1-2), it cannot be distinguished which one is used: there, *ngś* could be understood as either **nägaśi* or **nəguś* (Ricci 1988:147 and 155). In principle, though, the former is likely to have come first; and this might lead back to the hypothesis of Conti Rossini, in terms of a local chief (originally a collector of taxes?) emerging from among and over the others – obviously, with no South Arabian connection.

Both forms are soon rendered in Arabic with ↗*naǧāšī*. Thus, the (posthumous) Greek and, resp., Arabic labels of ΝΙΓΟC, *Nigos* (i.e. N.), and *Naǧāšī* are appended to the Ethiopian king (most probably ↗Ǝllä Ṣäḥam) represented next to the Byzantine and Persian emperors, and the Patriarch of Egypt (*al-Muqawqis*: in the Arabic tradition, the "lord of Alexandria" and "head of the Copts [and Greeks]"), in the first layer of paintings at Quṣayr ᶜAmra (Jordan, before 711/12): a scene that originally referred to a celebrated event of early Islamic history, i.e. the embassies sent by ↗Muḥammad to the six "kings of the earth" in the year 6 H. [= 628 AD] (s. ErlEth 193 n. 30, and Kropp in EtRicci 137 n. 2, but cp. now Di Branco 2007).

The earliest clear attestation of *nägaśi* is found in a Gəᶜəz inscription from ↗ᶜAddi Gälämo, towards the end of the 2nd cent. A.D. (RIÉ 180): ↗GDR(T) is there *ngśy ʾksm*, 'king of Aksum', with *nägaśi* in the construct state, **nägaś(ə)yä* (cp. Kropp 136f. and n. 1). As to N., no safe instances are known prior to King ↗ᶜEzana's vocalized inscriptions, in which it refers either to him (RIÉ 188.2: *nəguśä Aksum*) or to rulers subjected to him (e.g., RIÉ 187.5 and 9-11: *Abäʾalkəᶜo nəguśä Agʷezat*, 'Abäʾalkəᶜo king of the Agʷezat'; RIÉ 186.10-11: *ngśᵐ gbzᵐ sblᵐ*, 'Sbl king of ↗Gäbäz', i-e. ↗Adulis, s. Fiaccadori 2004a:137), or else, possibly, to the 'commanders of [his] troops' (187.13: *nägäśtä särawit*, where *nägäśtä* could also be, however, pl. of *nägaśi*).

In these inscriptions, the expression *nəguśä nägäśt*, lit. 'king of kings', appears for the first time too, always at the end of ᶜEzana's titlary, neither ethnic nor territorial definition being attached to it (cp. Cerulli in PICES 1, 7f.): e.g., RIÉ 189:4; cp. *ngś ngśt* in 185 II.3 and 185bis II[B].3 (replaced by "Pseudo-Sabaic" *mlk mlkn*, with Ethiopicized pl. ending, in RIÉ 185 I.2 and 185bis I.3). In the corresponding Greek version, *nəguśä nägäśt* is exactly matched by βασιλεύς βασιλέων, *basiléus basiléōn*, 'king of kings' (RIÉ 270bis.4), already used for the pharaos as a calque of their Egyptian title *n-sw.t ny-w-sw.t*, which was to be in fact revived under the Ptolemies (Vycichl 1957:196f., 201, 203).

Equally based on a rhetorical (paronomastic) device – the so called superlative genitive as found, e.g., in the Bible: "vanity of vanities", "heaven of heavens", etc. (s. Vycichl 1957:194f. and Alfrink 1964:1f.) – are quite a few expressions akin: Old Persian *xšāyaṯiya xšāyaṯiyanam*, Middle Persian *šāhān šāh*, always rendered with μέγας βασιλεύς, *mégas basiléus*, 'great king', in the Greek sources; Sanskrit *rājatirāja*, Prakrit *rājadirāja*, in turn translating Greek *mégas basiléus* in the 2nd cent. A.D., and showing next to *maharāja* in the Kusāṇā titlary (of Middle Eastern inspiration); Arab. *sulṭān as-salāṭīn*, 'Sultan of Sultans' (s. van den Oudenrijn 1949:38, with further biblical examples; cp. Vycichl 1957:196ff. and de Blois in EI², 190).

Against this background, given the Hellenistic bias of ancient Ethiopian civilization (Fiaccadori 2004a), it could be safely concluded that *nəguśä nägäśt*, if not precisely modelled on the Ptolemaic *basiléus basiléōn*, was likewise aimed at achieving the meaning of 'king among(st) kings', i.e. 'king par excellence', rather than 'king of kings' (cp. HabKön 27f.). Such a superlative predicate is somehow forestalled, at the end of the 2nd/beginning of the 3rd cent. A.D., in the otherwise different inscription of ↗Sembrouthes, βασιλεύς ἐκ βασιλέων ʾΑξωμειτῶν μέγας, *basiléus ek basiléōn Axōmeitôn mégas*, 'great(est) from among the kings of (the) Aksum(ites)', i.e. his predecessors (RIÉ 275.1–3, s. Fiaccadori 2004a:106f.). A pure

title with no technical bearing in terms of imperial sovereignty, *nəguśä nägäśt/basiléus basiléōn* (never found on ↗coinage, where *ngś ʾksm/*βασιλεύς ʾΑξωμιτῶν, *basiléus Axōmitôn*, 'king of [the] Aksum[ites]', occurs instead) could then be symptomatically replaced by such an opposite as the belittling δοῦλος τοῦ Χριστοῦ, *doûlos toû Christoû*, 'servant of Christ', in ʿEzana's Christian inscription (RIÉ 271.10) – betraying a different understanding of his ↗monarchy (s. EAE vol. 5), triggered by the new religion he had just openly embraced, and then followed by his successors (cp. *gbr krsts*, 'servant of Christ', for ↗Kaleb and his son Wʿzb [i.e. ↗Gäbrä Mäsqäl?], RIÉ 191.11 and 192A.7 resp.).

Unlike for India or Iran (with a *šāhān šāh* only distinguished from family members also called *šāh*: namely, his sons, assigned the [honorific] titles of the former rulers of the outlying provinces, s. de Blois in EI², 190), there is indeed evidence of other "kings" (or rulers) within the Ethiopian "empire" in Aksumite times (e.g., the aforesaid Abäʾalkəʿo and Sbl; cp. also the ↗Monumentum Adulitanum) and much later (e.g., the *nägaśi* of ↗Goğğam or ↗Wäläqa, and the *baḥər nägaśi* or ↗*baḥər nägaš*, s. TadTChurch 97 and n. 7, and Fiaccadori 2006:115f., n. 1), as noticed in the chronicles (↗Historiography) since the age of *aṣe* ↗ʿAmdä Ṣəyon I (KrAmdS 3 [text]; MarAmdS 98). Yet, the title *nəguśä nägäśt* would seem to be unrelated to that, with no implications for the Ethiopian monarch to reign over other sub-kings, as more often understood.

In the chronicles, the rulers of provinces or other political entities, including those unfriendly to the Christian state, were also called N. and described as "kings" (cp. also, e.g., *betä nəguś*, lit. 'king palace', but later 'round shaped house', possibly as the local residence of such provincial rulers as the *təgre mäkʷännən*, s. Conti Rossini 1938:406 and n. 4). This is more or less constantly reflected in subsequent Ethiopic sources and foreign writings, by travellers and scholars, on the land of ↗Prester John and its rather peculiar monarchy, holding suzerainty on a variable number of "kings" who represent as many ethnic groups or "nations" (cp. Pollera 1926:49ff.; Vycichl 1957:200f.): 99, seven of them Muslim, e.g., for Ibn Faḍlallāh al-↗ʿUmarī in 1340/41 A.D., speaking of the "king of kings of Abyssinia" (*Taʿrīf*, ed. 1924:30, s. Davis 1969:70ff.).

This provides a *terminus ante quem* to the revival of the ancient title of ʿEzana: possibly by ↗ʿAmdä Ṣəyon himself, in keeping with his leaning for the Aksumite past – also reflected in the title *nəguśä Ityopya*, 'king of Ethiopia', given to him by his chronicler (KrAmdS 1; MarAmdS 50f.).

The idea of the superiority of the Christian kingdom and ↗kingship of Ethiopia was being expressed, then, in the ↗*Kəbrä nägäśt*, with the legend of ↗Mənilək I and ↗Makəda, bound to the monarch's claim for ↗Zion, i.e. the ↗Arch of the Covenant preserved in, and ultimately identified with, ↗Aksum. The head of the Solomonic state became first and foremost *nəguśä Ṣəyon*, as evident, e.g., in the ↗coronation rituals, with all relevant symbolic implications for the Ethiopian monarchy (cp. Smidt 2007 on *nəguś* ↗Mikaʾel).

Accordingly, the title *nəguśä nägäśt* (*zäʾityopya*), 'king of kings (of Ethiopia)', was only occasionally to surface (e.g., for ↗Ləbnä Dəngəl, in ↗Ǝleni's disputed letter to king ↗Manuel of Portugal, ed. Sergew Hable-Selassie in PICES 4, vol. 1, 558, on which s. Fiaccadori 2004b:689 and n. 63) until the "restoration" of the ↗Gondärine kingdom, when it was definitely resumed (by ↗Susənyos, s. PerChron 3 [text]), but kept interchanging with the simpler *nəguśä Ityopya* and, esp. later, ↗*aṣe*. The former occurs also in Amharic garb, *yäḥabäša nəguś*, during the ↗*Zämänä mäsafənt* (s., e.g., RubActa I, 193). Then provincial rulers also bore the title *nəguś* (BeckHuntAlvar 509), while *ras* ↗Mikaʾel Səḥul styled himself as *rəʾəsä rəʾusan*, '↗*ras* of *rases*' (BTafY 81 [123vb]) – a title also known, e.g., for the abbot of ↗Märṭulä Maryam, but here possibly an emulative calque of *nəguśä nägäśt*.

The same interpretation applies, a fortiori, to the comparatively recent, and clearly imitative, title *nəgəśtä nəgəśtat* (*zäʾityopya*), 'queen of queens (of Ethiopia)', that occurs first in Manoel ↗d'Almeida: "Neguesta neguestat, Rainha das Rainhas" (*Hist. Aeth.* I, 1, in BecRASO II, 6), and was only later reinterpreted as *nəgəśtä nägäśtat*, 'queen of kings', which accounts for the use of the redetermined pl. form instead of *nägäśt* (cp. van den Oudenrijn 37, misunderstood by Vycichl 1957:193, 201, with reference to Cleopatra, βασιλίς βασιλίδων, *basilís basilídōn*, 'queen of kings'). As such, this title was last bore by empress ↗Zäwditu (s. her seal in GueCopMen 796), also simply referred to as *nəgəśt* (e.g., GebMolIyas 67), like *ətege* ↗Ṭaytu (s. GueCopMen 344 and n. 3).

In 1879, *aṣe* ↗Yoḥannəs IV – whose retrospective coronation ceremony, as described in his chronicle, included the phrase *aklilä aklilat*, 'crown of crowns' (BTafY 136 [137va]) – conceded the title of N. to be valid for the rulers

of Šäwa and Goğğam, a practice followed by *aṣe* ↗Mənilək II and *ləğ* ↗Iyasu, raising to N. former *ras* Wäldä Giyorgis and, resp., Mikaʾel (Pollera 1926:51f.; Cerulli 1934). As a matter of fact Mənilək called himself *nəguśä nägäśt* (as a claim for sovereignty) already under the reign of Yoḥannəs IV, and only renounced this title when the Emperor recognized him as N. of Šäwa.

Since then, the popular idea spread again that *nəguśä nägäśt* alluded to the relative independence of the several "kings" of the provinces from the "emperor" of the Ethiopian state as a whole – simply N. in his own province (Pollera 1926:54f.). All the more so, as the term N. had already entered such titles of Ethiopian traditional rulers as *ʿafar nugus* (Reinisch 1885:5, with reference to Bilál *nugus*, "König der Buru-Afar", i.e. from the Bôri Peninsula, met by the author in November 1875 at Massawa; cp. MorDicAfar 58, 117: Bilál's lineage was called "Nugusá", indicating the ancient allegiance of the local dynasty of Ankalá, since 1690, to the Christian kingdom), or even applied to a few chiefs of the Gurage clans of Ǝndägañ called *nugs* – and then *azmač*, after the incorporation into the Ethiopian empire by Mənilək II (Bustorf 2005:14).

In 1928, the last N., i.e. Täfäri, the later ↗Ḫaylä Śəllase I, was crowned: breaking tradition, with no association to a particular province, so that he was generally perceived as a "king" immediately under the "empress" of Ethiopia; he himself never appointed any N., but created the new title ↗*ləʿul ras* for those from the lineages of the N. of Goğğam, Təgray, Šäwa.

The title *nəguśä nägäśt* was eventually inserted by him into the 1931 Ethiopian Constitution, where it clearly stands for 'Emperor', exactly in the same way as in the official documents with foreign destination, mostly written in French before 1935, it is always rendered with "Empereur" (van den Oudenrijn 1949:37).

Gianfranco Fiaccadori

Nəguśe Tädla Gʷalu ↗Dästa Tädla Gʷalu

Nəguśe Wäldä Mikaʾel

Däğğazmač N. (ንጉሤ ወልደ ሚካኤል, "horse name" Abba Nəkäs; b. about 1820/25, ↗Səmen, d. January 1861), better known as "Agäw" Nəguśe, was the nephew and political heir of *däğğazmač* ↗Wəbe Ḫaylä Maryam.

N.'s mother was Wəbe's sister. N.'s father "Agäw" Wäldä Mikaʾel belonged to the Agäw of the Səmen and descended from a line of petty nobility: he was a follower of Wəbe and died in his services in 1843 (RubActa I, 58). N.'s older brother *abeto* Däräs was Wəbe's commercial agent. After ↗Tewodros II captured Wəbe in 1855 and crowned himself emperor, N. took over his uncle's claim to the throne of Ethiopia. He and his brother ↗Täsämma Wäldä Mikaʾel organized alliance of most rulers in Təgray and assured that Tewodros's control could not be established in the north.

During 1855–60, N. was the main political leader north of the Täkkäze, claiming the rulership of the kingdom (*mängəśt*) of Təgray, Səmen, Wäggära, Wälqayt, Ṭägäde (Ṣägäde), Dämbəya, Bäläsa, Agäw, Lasta and Säläwwa, "from Massawa to Gondär" (full list in RubActa II, 92f.). He aspired to replace Tewodros as the ruler of entire Ethiopia.

In November 1855 N. captured Gondär and was able to keep it for some time. By 1858 N. controlled the Täkkäzä Məllaš ('this side of the Täkkäzä'); after battles in ᶜAgamä he submitted ↗Akkälä Guzay, burning the border town ↗Dəgsa, and then engaged in a battle with the leader of Ḫamasen, *däggiyat* ↗Ḫaylu Täwäldä Mädḫən, who, however, first inflicted a defeat on N. (cp. KolTrad II, 139f.); only afterwards N. could establish his overlordship (RubActa II, 62f.). In oral tradition in Eritrea the "heroic" battle of "*nəguśä* N." in Akkälä Guzay is still reported as a crucial event.

In his first diplomatic letter of 1856 to Napoléon III, N. still styled himself *däğğazmač*, but in his 1858 letter to Pope Pius IX he featured already as *nəguśä Ityopya* ('king of Ethiopia', RubActa II, 23, 56; ↗*Nəguś*) and *yäʾityopya nəguś* in 1859 (s. RubActa II, 92) and used a royal seal showing a ↗lion. From N.'s perspective Tewodros was a "fanatic savage" (RubActa II, 60). In both letters N. announced his acceptance of the Catholic bishop Justin de ↗Jacobis, in 1858 stressing his willingness to accept the authority of the Pope and adopt ↗Catholicism after having consolidated his power. He sent his two letters of 1858 with a delegation to Rome and France, under the leadership of his cousin *ləğ* Ṭaqaye (son of his mother's sister, shipwrecked 1859 on return journey) and the Catholic convert *abba* ↗Ǝmnätu (seemingly another relative; RubActa II, 89). N. knew that he needed military assistance in order to successfully challenge Tewodros.

N.'s ambitions were encouraged by French government officials and missionaries, who saw in him a great potential for the establishment of the Catholic faith and French interests in Ethiopia and at the coast. Apart from de Jacobis, the French involved were Auguste Chauvin-Beillard (vice-consul of France at Massawa from 1856–59), and Chauvin-Beillard's successor, Théodore Gilbert (vice-consul 1859–61). They tried to create a Franco-Ethiopian alliance through N. that would protect Catholic missionaries, establish a protectorate relationship (at least over Təgray), and possibly cede territory to France, such as "the port of this country". N. also invited France to send a consul to Ethiopia itself (not only to Massawa), to "occupy another, neighbouring country" (Zaylaᶜ?) and acquire "some place near the sea". He wanted the future bishop of Ethiopia be Catholic (for N.'s oral message to Napoléon III through Ǝmnätu, s. Rub Acta II, 83).

The French responded by sending an exploratory mission led by Stanislas Russel, which arrived in Massawa at the end of 1859. N. now offered them ↗Zula at the coast (RubActa II, 89). On 29 December N. ceded the whole plain of Zula below Mount Gädam, together with the islands of Wuda and Däse, and offered the whole coast up to Zaylaᶜ for "protection" by the French. A second treaty of 9 January 1860 provided for the inviolability of a French consulate in his territory, among others (RubActa II, 94–97). In January 1860, however, Tewodros arrived in Təgray with his army. N.'s seat of government was in that time Ḫawzen in Ḫaramat, but he temporarily retreated to Ǝnčätkab in the Səmen mountains to avoid battle (later returning to his capital Ḫawzen). Russel withdrew, bearing the two treaties (RubInd 202–06). Shortly thereafter, Tewodros's enemy and relative, *ləğ* ↗Garäd

Kənfu, appointed by N. as a local governor seated in Armačəho, killed ↗Plowden, Tewodros's British advisor, in a skirmish near Gondär.

In 1859 N. also negotiated, through Capuchin missionaries such as ↗Massaja and Léon des ↗Avanchers, with the kingdom of Sardinia. N.'s aim was the establishment of commercial contacts; he seems to have been ready to cede territory in exchange for military assistance. A treaty of friendship between him and king Vittorio Emanuele of Sardinia, providing for commercial exchange and protection for the Catholic mission, was prepared (RubActa II, 70f.) but never ratified. Counterfactually, however, in Europe it was regarded as a valid treaty between "Ethiopia and Sardinia" (ibid.).

N. also sought alliances with Ethiopian chiefs against Tewodros, such as ↗Tädla Gʷalu of Goğğam, *ras* ↗Ali Alula of Yäğğu (re-emerging briefly from oblivion), *imām* ↗Amäde Bäšir of Wällo and Wärrä Himano (all of them said to be allied to him in 1860, RubActa II 128f.); within his own territory N. appointed governors from local leading families, such as ↗Arägawi Säbagadis for ᶜAgamä (who had first resisted against N.) and his brother Täsämma over Səmen and Wäggära.

A year after his first expedition to Təgray, in January 1861,Tewodros returned to Təgray. This time he captured and executed N. and his brother after a battle in Tämben – a deed which does not seem to have had a lasting impact on Ethio-European relations. It was only then that the north came under full control of Tewodros, who lost it again in about 1867. Later, France claimed Zula from time to time, which it had "got from N.", but without ever establishing a post there; it had to give up this claim in 1887, when Italy made this region its "protettorato" ignoring French protestations.

Neqemte ↗Naqamtee

Nerazzini, Cesare

N. (b. 29 May 1849, Montepulciano, Siena, d. 4 February 1912, Montepulciano) was an Italian officer and diplomat. In 1873, he earned degrees in medicine and surgery from the University of Florence and in 1878 joined the Italian Navy as a medical officer. Being fluent in Arabic, Amharic and Somali, in December 1882 he was engaged by the Ministry of Foreign Affairs and destined to the Bay of ᶜAsäb (↗Colonia di Assab).

Hereafter, N. had an intense diplomatic career in Ethiopia. In February 1884, he was sent on a diplomatic mission to *aṣe* ↗Yoḥannəs IV; in November 1885, with Vincenzo Ferrari, envoy of King ↗Umberto I, he went to reassure Yoḥannəs about Italy's occupation of ↗Massawa. In 1886, he was an envoy to ↗Awsa, then to ↗Harär and Šäwa. With the breach of diplomatic relations between Italy and Ethiopia, he went back to Italy. In November 1887, he was appointed colonial adviser for the expedition of General di ↗San Marzano. In October 1888, he was again sent on a mission to Harär; in November 1889, he was made an Italian political agent. He accompanied *däğğazmač* ↗Mäkʷännən Wäldä Mikaʾel on the latter's visit to Italy.

In October 1891, N. was sent to Təgray to prepare the meeting at the ↗Märäb with local dignitaries, between *ras* ↗Mängäša Yoḥannəs and the governor of ↗Eritrea, General Antonio Gandolfi, resulting in a friendship agreement between Italy and Mängäša. In September 1892, N. was involved in a mission to Harär; between May 1893 and January 1894, he negotiated to smooth the tension caused by the Treaty of Wəčale (↗Italo-Ethiopian Treaty of Friendship and Commerce).

After being promoted to major, in July 1895, in agreement with England, N. was sent on a private mission to ↗Zaylaᶜ to organize an information service for ↗Djibouti, whence *aṣe* ↗Mənilək II was being furnished with weapons, and to exert his influence on Mäkʷännən Wäldä Mikaʾel, while pressing Mənilək with the threat of a possible Italian invasion of Harär. On 9 November 1895, he informed Rome that the army of Mənilək was heading to Təgray to help Mängäša Yoḥannəs.

In June 1896, after the battle of ↗ᶜAdwa, N. signed two conventions in Šäwa with Mənilək concerning peace agreements and the restitution of Italian war prisoners; on 26 October, he signed the peace treaty between the two coun-

tries (↗Treaties). Again in Šäwa, in March 1897, he failed to successfuly end the discussions about the settlement of the border between Eritrea and Ethiopia, and went back to Italy. Having formally joined the Italian Ministry of Foreign Affairs, in 1900 he was appointed Consul General of Italy to Calcutta, in 1901 to Shanghai. In 1906, he became the minister plenipotentiary of Italy in Tanger; in 1910 he was transferred to Bangkok. The same year he returned to Italy, there closing his controversial career.

Gian Carlo Stella

Nesbitt, Ludovico Mariano

N. (b. 1891, Rome, d. 19 July 1935, Switzerland) was an Anglo-Italian mining engineer (born of a British father and an Italian mother) who in 1928 undertook a notable expedition in the ↗ᶜAfar area of Ethiopia.

N. undertook exploration for gold in South Africa in 1912 (s. Nesbitt 1933). Later, in 1927, he investigated platinum deposits in western Ethiopia, after which he proceeded in 1928 to Addis Abäba. Thence in the company of Tullio Pastori and Giuseppe Rosina, he carried out a journey northwards through the ᶜAfar country from the ↗Awaš river to Marsā Faṭma. The expedition was the more memorable in that the three previous ones, by Werner ↗Munzinger in 1875, Giuseppe ↗Giulietti in 1881 and Gustavo ↗Bianchi in 1884 had been annihilated by the local ᶜAfar. In three and a half months N. travelled 600 miles and made compass traverses of 20,000 square miles.

N. duly reported his findings to the Royal Geographical Society's *Geographical Journal* for 1930, and described his journey in a widely reprinted monograph (Italian ed. 1930, repr. 1935, abbreviated but indexed English ed. 1934, American and German ed. 1935).

N., who later worked in Venezuela, died when the aeroplane in which he was flying from Milan to Amsterdam crashed in the Swiss Alps.

Richard Pankhurst

Nestorius

The Syrian priest and monk N. (b. ca. 381, Germanicia, Syria, d. after 451, Panopolis/Aḫmīm, Egypt) was bishop of Constantinople from 428 to 431. His teachings aroused one of the harshest religious controversies of early Christian times, and are still open to scholarly debate as to their Orthodoxy (s., e.g., Anastos 1962 and Jouassard 1979).

He is likely to have been a (mediated?) student of Theodore of Mopsuestia, the head of the Antiochene theological school, who had attacked the Apollinarian Christological formula "one incarnate *phýsis* (Gr. φύσις) of God the Word", and was to be, together with his master Diodore of Tarsus, a constant source of inspiration to N. Yet, a proper understanding of the latter's thought is difficult, for most of his literary works – arguably marked by inadequate theological skill and language – were destroyed as a result of the staunch opposition he met already in his lifetime. Besides the so called *Nestoriana*, i.e. a collection of quotations from sermons and epistles by him found in different sources (assembled in Loof 1905), only a Syriac translation and a few fragments (in the original Greek, etc.) of his apology, the *Bazaar of Herakleides* (last ed. by Driver – Hodgson 1925), are extant.

It appears, nonetheless, that in his opinion the human and divine "natures" (*phýseis*) of Christ, i.e. of the man Jesus and of the divine Logos or Word, are inseparable and unconfused, as they retain their own properties, faculties and operations, the Logos being the Son of God who perfectly indwelt the man after the Incarnation, making him Son of God "by grace" (χάριτι, *cháriti*). God passed through the Virgin as a channel, but was not begotten by her in flesh as her own son; therefore, she is not the "Mother of God" (Θεοτόκος, *Theotókos*, lit. 'Giver of birth to God': cp. Gəʿəz *wäladitä amlak*), an impious title for a mortal woman, but just the "Mother of Christ(-the-man)" (Χριστοτόκος, *Christotókos*, lit. 'Giver of birth to Christ') or even, with the appropriate reservations, the "God-receiving" (Θεοδόχος, *Theodóchos*).

Likewise, in order to designate the relationship between the two natures of Christ not as "united in one substance (ὑπόστασις, *hypóstasis*) and one person (πρόσοπον, *prósopon*)", according to the formula to be definitely established at the Council of ↗Chalcedon in 451, but rather as "two substances (*hypostáseis*)" morally or accidentally "joined in one person", N. preferred the term *synápheia* (συνάφεια, 'conjunction') to the Orthodox *hénōsis* (ἕνωσις, 'union'), thus turning the hypostatic into a prosopic union.

This view, implying a severe threatening to the Atonement, was denounced at the Council of ↗Ephesus in 431, where ↗Cyril of Alexandria – not really interested in Christological issues so characteristic, instead, of the Antiochene tradition – cut the question off by simply resuming the Apollinarian formula above (in which *phýsis*, however, was understood by him as "person", not in the later sense of "nature"), and holding that the Logos was born as a man, while by the Incarnation the perfect union of Jesus's two *phýseis* took place. Condemned with his fellows, N. was deposed and exiled to Antioch, then to Petra in Arabia, and eventually to (the) Oasis (Wāḥat al-Ḫāriğa) in Upper Egypt, where he wrote his apology.

In spite of the more pro-Alexandrian union formula agreed upon in 433 by Cyril and the patriarch of Antioch John I, the conflict that ensued over N.'s underscoring the human principle in ↗Christology, with repeated charges of Judaizing in respect to the denial of Christ's godhead (Fiaccadori 1985a:136 and nn. 11–17), led in time to the so called Nestorian schism, definitely separating the (Assyrian [Apostolic] or Chaldaean) Church of the East – i.e. the Church of Persia (↗Iran), which had already seceded in 424, before the rise of the Nestorian controversy (cp. Jullien 2005:57ff.) – from the Byzantine Church. The reaction to that triggered theological developments bringing about ↗Monophysitism.

The Church of the East, with a central administration under the authority of a bishop called Katholikós (ranking as patriarch since 410), declared the teachings of N. its official doctrine at the Synod of Bêṯ Lapat in 484, received its form and name at the Synod of Seleucia in 486, and had its tenets defined, as incompatible with those of Chalcedonia, at the bishops' assembly gathered in 612 "at gate of the (Persian) Kingdom". Chiefly popular among merchants and traders (like ↗Cosmas Indicopleustes), the Church gained a firm foothold in Persia, where it became a national Church (being granted protection by the Sasanian kings, as later on by the caliphs), and in some regions of Syria, like Mesopotamia, with the famous theological school of Edessa (closed by the Byzantine emperor Zeno in 489, and moved since to the Persian town of Nisibis).

Punishment of Nestorius the "heretic"; mural on canvas (detail), 1940-44, eastern wall of *mäqdäs*, church of St. George at ʿAddi Məsno, Təgray; photo 2002, courtesy of Michael Gervers

It spread also to Arabia and Soqoṭra (in which "Nestorians" stayed well into the 14th and 16th cent., resp.), and then, further east, to India, Central Asia and China (Toepel 2005).

As a result of the Christianization process renewed in the 5th–6th cent. by such missionaries as the ↗Nine Saints, Alexandrian Christology, i.e. ↗Monophysitism, was introduced into the kingdom of ↗Aksum (Fiaccadori 2006:59f., n. 74). The translation from Greek into Ethiopic of several Cyrillian or pro-Cyrillian homilies and treatises, collected under the title of ↗*Qərəllos*, is the best evidence of this new confessional leaning – with a strong anti-Nestorian bias.

On account of that, no appreciative trace of N.'s theological positions can be detected in ↗Gəʿəz literature, where the names Nasṭoryos (ናስጦርዮስ) or Nəsṭəros (ንስጥሮስ) and the relative adjective *nəsṭərosawi* (pl. *nəsṭərosawiyan*) are more often derogatory terms for "heretic(s)". An extensive refutation of N. and his doctrines can be found, conversely, in the *Mäṣḥafä* ↗*məśṭir* by Giyorgis of Sägla, written ca. 1424 (YaqMist 72–104, cp. Colin 1984) and based on ancient, no longer available, Aksumite sources (Bausi in PICES 15, 536 and 2006:50f. and n. 14). Negative hints at N. and the Council of Ephesus are then significantly included in works mirroring discussions with the ↗Jesuits over grounding theological points such as the ↗*Mäzgäbä haymanot*, composed between 1555 and 1559 (ed. Cerulli 1960:8ff.).

Such a clearly anti-Nestorian orientation – as already indirectly attested for the Aksumite age – has been explained either with an overall Monophysite, i.e. anti-Diophysite, original attitude of the Ethiopian Church (Guidi 1924:138f.; GuiSLett 17f.), or, more specifically, with its anti-Arian reaction (↗Arius) triggered by ↗Theophilus the Indian's missionary journey to Aksum and ↗Ḥimyar between 341 and 346 (Rodinson in PICES 1, 387f., 395). This rather "archaic" feature of Ethiopian Christendom could, however, be also due to the imposing presence of Nestorian communities in Yemen since the 5th cent. (Fiaccadori 1985b:196 and nn. 31ff., 204f.), if not to the prejudices arisen during the 6th-cent. Ethiopian war(s) against Ḥimyar (↗Nağrān), when Nestorians had been siding with the Jewish king ↗Yūsuf Asʾar Yaṯʾar (Id. 2006:58f. and n. 70, 61f. and n. 88).

Indeed, Nestorians were also in Egypt (Meinardus 1967:112–22, cp. Marrassini 2005:143f.), as well as in ↗Jerusalem (Meinardus 1967:123–29), where the Ethiopians had their own settlements since the Aksumite times. Therefore, it is not unlikely that Nestorianism from Egypt and/or Palestine, or better from South Arabia, soon reached ↗Aksum via the ↗Red Sea and the port of ↗Adulis. A Nestorian connection has been suggested for the ancient ruins of the so called *Kanīsat al-Furs*, 'Church of the Persians', in ↗Dahlak (al-)Kabīr (Fiaccadori 1992:XI and n. 52); and an early impact of Nestorian elements – a problem to a certain degree interconnected with that of the ↗Syrian influences (s. also Marrassini 1999:333 and n. 31) – should better vindicate the negative traces they left in Ethiopian tradition. In later times, though, a certain idea of Nestorianism may well have been fostered by contacts and relationships within and among the Oriental communities of Jerusalem, as well as of Cyprus, where Nestorians and Ethiopians alike have been established since the 14th cent. at least (Coureas 2001:350–53, 358f., and Fiaccadori 1993:157f., n. 158).

Gianfranco Fiaccadori

Neugebauer, Otto E.

N. (b. 26 May 1899, Innsbruck, d. 19 February 1990, Lawrenceville, NJ) was an important mathematical historian, who is known in ↗Ethiopian studies for his fundamental research on Ethiopian ↗calendar calculations.

After having studied mathematics and physics in Graz, Munich and Göttingen, where he also became engaged in Ancient Egyptian studies, in 1926, N. received his Ph.D. with the dissertation entitled *Die Grundlagen der ägyptischen Bruchrechnung*. In 1932 he was appointed extraordinary Professor. In 1933 N. left Nazi Germany and became Guest Professor at the Mathematical Institute of Copenhagen University. From 1939 till 1969 he held the chair at Brown University in Providence (Rhode Island, USA). After his retirement in 1984 he went to Princeton, New Jersey, and worked there at the Institute for Advanced Study till shortly before his death.

N. founded two mathematical journals that have not lost their leading position till today: the *Zentralblatt für Mathematik* in 1931 (edited by N. until 1938) and the *Mathematical Reviews* in 1940 (edited by N. until 1948).

Early in his scholarly career N. became interested in Oriental mathematical history. He published important monographs and editions on Egyptian and Hellenistic mathematics, astronomy and chronography, such as *Mathematische Keilschrift-Texte* (1935), *Mathematical Cuneiform Texts* (1945 in co-operation with A. Sachs) and *A History of Ancient Mathematical Astronomy* (1975, three volumes).

From the 1960s on, N. focused on Ethiopian studies. He completed works of lasting importance. His *Ethiopic Astronomy and Computus*, a reference book with charts, calculation formulas and examples; *Chronography in Ethiopic Sources*, where different parameters, terms and periods occurring in Ethiopian manuscripts are compared and explained; *Abu Shaker's 'Chronography'*, a 13th-cent. text indirectly relevant to the Ethiopian computus; and the translated and commented *Astronomical Chapters of the Ethiopic Book of Enoch* are among the most prominent examples.

N. still remains one of the few scholars who have dealt with Ethiopian astronomy and computus. He was member of many academies, e.g., the Österreichische Akademie der Wissenschaften (ÖAW), which published some of his important Ethiopia-related works. For his scholarly achievements he received honorary doctorates

from the Universities of St. Andrews, Scotland (1938), Princeton (1955) and Brown (1971) and other awards.

New Testament

Like all parts of the Gəᶜəz ↗Bible, the N.T. (*ሐዲስ፡ ኪዳን, Ḥaddis kidan*) has been transmitted in ↗manuscripts written between the 12th and the 20th cent. Although biblical manuscripts are among the earliest and most diffused, very few dating back to 12th–14th cent. have survived.

The Gəᶜəz text of the N.T. was edited several times (s. ↗Bible: Gəᶜəz Bible editions). The earliest printed edition was prepared by ↗Täsfa Ṣəyon ("Petrus Ethyops") in Rome in 1548 and 1549; the text was copied, with many mistakes, from ms. Vat. Aeth. 51 (s. Zuurmond 1989:224f.). In some early exemplars, the Pauline ↗Epistles are lacking; they were added later (↗Incunabula). The Roman edition was copied in Walton's Polyglot. The most commonly used edition was prepared by Platt for the ↗British and Foreign Bible Society in 1830. The N.T. was also published as part of a complete Bible by Francesco da ↗Bassano and Edoardo Grason in Asmära for the Catholic Mission in 1919. Many more editions, either of the whole N.T. or of parts of it, exist, European as well as Ethiopian.

From a text-critical point of view, the Roman edition was the best, although beset with many mistakes. Platt's and Bassano's editions are eclectic, the text has sometimes been adapted to the Greek or Latin text of the N.T. rendering them useless for textual criticism of the Greek N.T. More recently, text-critical editions of several parts of the N.T. have appeared: Mt, Mk, Jn, Rom, "Prison Epistles" (Eph, Col, Phil, Phlm), Heb, Catholic Epistles, Rev.

Biblical books have traditionally been grouped together, the N.T. in manuscripts of the Four ↗Gospels, the Pauline Epistles (including Hebrews) and the Catholic Epistles, always with one or more introductions. Although various combinations of those groups exist, combinations with the Four Gospels are extremely rare. The *Acts of the ↗Apostles* and the ↗*Revelation* appear either in separate manuscripts or combined with some other group. The complete text of Rev is also found as a part of the Liturgy for the Passion Week (↗*Gəbrä ḥəmamat*). Separate Gospels or Epistles are rare, with one noticeable exception: the market is flooded with manuscripts of the Gospel of John, mostly of the 19th or 20th cent.

Large fragments of Gospels and Epistles can be found in Lectionaries for Festivals (↗Feasts), the Canonical Hours (↗*Säᶜatat*) and ↗Funerals. Most of these lectionaries have been translated from Arabic, and biblical quotations may have been translated together with the bulk of the text. Lectionaries are therefore generally not a reliable source for the early text of the Ethiopic Version of the N.T.

The Canon of biblical books accepted by the Ethiopian Church has never been as strict as the Canon in Western Churches, and a list of canonical books of the N.T. may occasionally contain books like *Clemens Romanus* and the ↗*Senodos*. Apart from the odd addition, the canon of the N.T. is basically identical with the canon of the Western and Eastern Orthodox churches.

A growing consensus among scholars is that the original Gəᶜəz translation (*Versio Antiqua*) was made from manuscripts of the Greek N.T., probably in bits and pieces, somewhere between the 4th and 6th cent. At least from the 13th cent. onward, this text has been in an ongoing process of revision, mainly on the basis of Arabic translations. This accounts for indirect influence from the Coptic as well as the Syriac Bible (↗Bible translation; cp. ↗Old Testament).

Retrieving the original Gəᶜəz Version from a multitude of sometimes wildly varying manuscripts is difficult, not only because very few manuscripts exist that more or less escaped the influence of Arabic revisions, but also because there is a gap of about half a millennium between the "autograph" and the earliest extant manuscripts.

We know practically nothing of the history of the text during that period. The only quotation of some length from the N.T. on an ↗inscription is in the "Ham inscription" dated from the 7th/8th to the 11th/12th cent. Combining Jn 6:54 with 8:52, it is an indication of the use of the N.T. rather than a witness to its textual content.

Consequently, the value of the Ethiopic Version for the purpose of textual criticism of the Greek N.T. is limited, but since recent editions are based on manuscripts earlier than those used in the traditional ones (1584, 1830, 1919), it should no longer be underestimated either (the oldest known mss. are Abba Gärima 1 and 3, originating from the 13th cent. or earlier; cp. also Zuurmond 1989:44–77). The Ethiopic Gospel of John, e.g., omitting the *Pericope Adulterae* (Jn 7:53–8:11), must have been based on a relatively early Greek text.

New Times and Ethiopia News

N.T. was a pro-Ethiopian weekly newspaper published in England between May 1936 and May 1956. Its founder and editor, the ex-British suffragette and anti-Fascist Sylvia ↗Pankhurst, established it to espouse the Ethiopian cause in the context of anti-Fascism and support for the ↗League of Nations. Early issues of the paper contained articles by the then Ethiopian Minister in London, Dr. Charles Martin (↗Wärqənäh Ǝšäte Martin), as well as interviews with *aṣe* ↗Ḫaylä Śəllase I and Empress ↗Mänän, reports on the activities of the Ethiopian Patriots (↗Resistance), and contributions on various subjects by Italian and other anti-Fascist refugees. The paper, which always included articles on Ethiopian history and culture, agitated against the abandonment of League of Nations Sanctions in 1936, drew attention to the ↗Graziani Massacre of 1937, and denounced the British Government's recognition of the Italian "conquest" of Ethiopia in 1938. It also supported the Republicans in the Spanish Civil War and attacked the so-called Appeasement policies of the Western Powers. After the outbreak of the European war in 1939, N.T. continued to denounce Mussolini, thereby causing its export to neutral countries to be prohibited by the British Government. This ban was, however, lifted after Italy's declaration of war on Britain and France in 1940. The paper, which published an Amharic supplement, then urged British support for the Ethiopian Patriots, and full recognition of Ethiopia as an Ally. N.T. subsequently opposed the return of ↗Italy to its former African colonies, and of the continued British occupation of the ↗Ogaden and Reserved Area, and supported as well the "reunion" of Eritrea with Ethiopia. The paper also launched the campaign for the establishment of Ethiopia's first teaching hospital, called after the Emperor's daughter ↗Ṣähay, Princess Tsehai Memorial Hospital.

The first part of the paper's name "New Times" was adopted after Ethiopia's liberation in 1941, as the title of the Amharic newspaper ↗*Addis Zämän*. On the termination of N.T. in 1956 its editor established a sequel, ↗*Ethiopia Observer*,

which was published in Addis Abäba, first as a weekly, and later as a quarterly journal.

Richard Pankhurst

New Year

The Christian N.Y. (Amh. አዲስ፡ ዓመት, *addis ʿamät* or እንቁጣጣሽ, *ənqʷəṭaṭaš*, Tgn. ሓዲሽ፡ ዓመት, *ḥaddiš ʿamät*) in Ethiopia reveals several layers of history and meaning. 1 *Mäskäräm* which falls on 11 or 12 September (in the year of John), is closely linked to the end of the rainy season (*kərämt*). Moreover, a fall N.Y. is also an important feature of the Jewish calendar in which *Rōš haš-šānāh* falls on the first day of the seventh month (*Tišrī*). The Ethiopian N.Y. coincides with the Coptic *Nayrūz* and the ancient Egyptian N.Y., which was fixed in relation to the flood of the Nile and the apparition in the sky of the planet Sirius. In the Ethiopian calendar the day of the commemoration of St. ↗John the Baptist has been fixed on N.Y.'s day, to liturgically express that he prepared the way for the Messiah to be encountered during the new liturgical year. It is closely linked to the celebration of ↗*Mäsqäl*, which takes place on 17 *Mäskäräm*, and shares many symbols and rituals with the N.Y., specifically the custom to light fires (s. ↗*Dämära*).

On the eve of the N.Y., people light a fire in front of their doorways and children run around with torches (cp. ↗Euphorbia). These torches, which symbolize the light that overcomes darkness and, some say, are a sign of purity, welcome in the holiday. In yet another ceremony with connotations of purity, people rise early in the morning and go down to a nearby river to wash. This purification ceremony, in which the model of John the Baptist is invoked, is said to prepare people to greet the coming year because it represents a new chance given by God.

Folk etymology derives the second name for the N.Y. festival, *Ǝnqʷəṭaṭaš*, from the legend that King ↗Solomon presented a jewel to ↗Makəddа with the words *ənqʷ läṭaṭəš* (Amh. 'jewel for your finger'; cp. BezKebr 26 [text], 21f. [tr.]). Another folk tradition relates the feast to the waters of the Flood (Gen 6:8). It claims that the N.Y. was celebrated for the first time when the dove with the olive twig came to Noah to indicate that the diluge had abated. In his gratefulness, Noah is said to have offered aromatic flowers to God. To commemorate this offering, *Ǝnqʷəṭaṭaš* is celebrated yearly after the rainy season. Accordingly, *Ǝnqʷəṭaṭaš* is one of the names given to the yellow flowers (*Delphinium dasycaulon*) which are prominent during this time of the year. Bouquets of these flowers together with the fragrant *əngəčča* grass (*Hemichlaena bulbosa*) are given in exchange for gifts of food, clothing and money. The day is celebrated with festivity and merry-making. The N.Y. marks not only the end of the rainy season, but is heavy with symbolism of fertility including marriage. Many matches are made as a consequence of meetings which take place at this time of year.

N.Y.'s day and especially the eve is of particular importance for spirit possession cults, esp. the *zar*. According to Hyatt (1928:1163), the day is notable for attempts to exorcise the chronically possessed. A sheep or fowl is sacrificed at a crossroad; the animal is abandoned for the *zar*. This secular sacrifice, known as *dänqara*, will not be disturbed by passers-by. Other traditions report that an entire banquet of chicken, sorghum, sesame cakes, *basso* (roasted barley flour to be mixed with water), *arriti* (*Artemisia afora*) and *qiṭṭa* ('bread') is prepared for the *zar* spirits.

The period between N.Y and ↗*Mäsqäl* is largely occupied with preparations for the latter holiday. The spread of Christianity into southern Ethiopia was often accompanied by the imposition of the Christian calendar and the celebration of a N.Y. upon the subjugated people, many of whom did not practice such a holiday previously.

Among the ↗Betä Ǝsraʾel the N.Y. is known as *Bərhan śäräqä* ('the light appeared') and also as *Täzkarä Abrəham* ('the commemoration of Abraham'). Both names appear in the Betä Ǝsraʾel liturgy suggesting that they are of considerable antiquity. The former would appear to associate the holiday with Christian ideas of light and fire during the N.Y. and *Mäsqäl*. Light (*bərhan*) has major Christological connotations in Church literature. The second name evokes Abraham, who figures prominently in the Jewish N.Y., in such themes as the sacrifice of Isaac and the blowing of a ram's horn (Hebrew *šofār*, which was also sounded among the Betä Ǝsraʾel), and is mentioned in their literature. (cf. Leslau 1951:151, n. 202). During the 20th cent. the association with the Jewish N.Y. intensified as a result of contact with outside Jewish groups.

Nəwayä Krəstos ↗Sayfä Arᶜad

Nəwayä Maryam

Aṣe N.M. (**ንዋየ፡ ማርያም**, regnal name Wədəm Asfäre, also Gərma Asfäre, r. 1371–1379/80) was a son and the successor of *aṣe* ↗Säyfä Arᶜad. Some of the "short chronicles" report that he reigned ten years and refer to his reign with the words: **ጠፍ፡ ውእቱ**, *ṭäf wəʾətu*, which seems to indicate that he had no children or direct descendants (Kropp 1981:269f.). This sentence is probably linked with the struggle opposing N.M. to his own brother ↗Dawit (II). According to the *History of the Patriarchs of Alexandria* and the notice on Matewos in the ↗*Sənkəssar*, the patriarch Matewos prophesized that Dawit would reign while N.M. was still emperor. The struggle for power between N.M. and Dawit is also attested by the Vita of *abunä* Abrəham (Däbrä Ṣəyon, Gärᶜalta), where Dawit recalls that, while he was a prisoner, God placed him on the throne of his fathers (Schneider 1983:107). This apparently came true in ca. 1379, when Dawit ascended the throne after deposing his own brother.

Little is known concerning the period of reign of N.M. Local oral tradition credits him with the foundation of the church of Däbrä Täklä Haymanot in Dawənt. The ruins of the church present many similarities with royal churches of the 14th and 15th cent., and references to N.M. are rare enough to attach some value to this tradition.

N.M. died probably shortly after he was deposed by Dawit. The *Liber Axumae* (*Mäṣḥafä* ↗*Aksum*) recorded N.M.'s death in the 32nd year of mercy, i.e. 1379/80.

Nicaea, Council of

N. (Eth. **ኒቅያ**, Niqəya, **ኒቂያ**, Niqiya or **ነቅያ**, Näqəya) is a town in Bithynia in Asia Minor (today: Iznik), where Emperor Constantine (306–37), who had residence in nearby Nicomedia, convoked the First Ecumenical Council in 325.

The Nicene Council was convened to settle the problem of subordinationism, called Arianism (↗Arius), which regarded Christ to be created and thus subordinate to the Father. The formula of the faith agreed upon (the *Symbolum Nicaenum*, Nicene Creed) was reached after protracted and intense discussions, whilst at least two bishops did not approve of it (whereupon they were excommunicated and exiled). The theological key term used in the Creed was *homoousios* – Greek for "consubstantial", "of the same substance", which defines the relation of the Son to the Father in the ↗Trinity. Notwithstanding the N. agreement, the controversy with the followers of Arius continued for over half a century and was finally settled only at the Second Ecumentical Council in 381 at Constantinople. Later in the history of the church, the Council of N. has always been regarded as the touchstone of Orthodoxy.

The Council was attended by 220–250 bishops (an Ethiopic list has been published, Cowley 1973; cp. also Bausi 2006:62, no. 12), but the traditional number by which the council is known, also in Ethiopia, is "the Synod of the 318 Fathers". The latter comes from Gen 14:14, where it is the number of Abraham's servants.

The Council resolved an old controversy concerning the date of the celebration of Easter, to the effect that the whole of Christendom should celebrate it on the same day, namely the Sunday after the Jewish Passover, in accordance with the custom and calculation of Alexandria.

The Council also passed 20 disciplinary canons which have been preserved (contrary to the acts of the council; ed. Tanner 1990:1–19). In Ethiopia they are part of the ↗*Senodos*, e.g., in ms. BritLib Orient. 794 (fols. 132r–51r), together with another, apocryphal, set of 84 canons (ed.,

tr. da Leonessa 1942) and a *Discourse of the 318 Fathers on the Trinity* (ed., tr. Bausi 2004).

The Ethiopic version of the Nicene Creed is extant in both older and newer mss., e.g. in EMML 4493 (of the year 1528) and EMML 4248 (19th cent.). An Amharic translation also exists, e.g., in ms. EMML 3557 (20th cent.), which has it in addition to a Gəᶜəz version. The Creed has been commented upon, and a commentary in Amharic is extant (ed., tr. Appleyard 2003). It is also included in the ↗*Haymanotä abäw*. Some other texts related to the Nicene Council are extant in Gəᶜəz (Bausi 2006:62f., nos. 13–15).

Contrary to the Council of ↗Chalcedon, the Council of N. has no particular theological consequence for the ↗Ethiopian Orthodox Täwaḥədo Church (EOTC), notwithstanding the fact that it is officially accepted (s. EOTC 1996:120–23). However, in its paradigmatic value as the symbol of Orthodoxy, it is discussed in theological literature.

It features already in the ↗*Qerəllos*, although the short fragment "On the 318 Bishops of Nicaea" (Weischer 1969:143f., 153) is concerned only with the number of bishops being really 317, whereas the 318th was the Son of God himself, in the shape of a bishop. Another, much more elaborate account of the Council of N. reached Ethiopia with a translation of the Arabic treatise of ↗Severus of Ašmunayn, *History of the Councils* (composed ca. 950, the earliest Ethiopic text seems to be extant in the ms. EMML 1833, 14th cent.). In the treatise, which in fact concerns only the Nicene Council (the other councils are mentioned when the theological discussion requires argumentation based on their decisions), Severus discusses *inter alia* the date and the number of the bishops: he provides the names, very garbled, of some of the bishops of the Council. After imputing the doctrine of three gods to Arius, of which two were "created" (ed. Leroy 1911:28), Severus reports his excommunication (as well as his infamous way of death), and continues his report on the Arian controversy after the Council of N.

The Nicene Council resurfaces in the 16th cent. when the discussions with the European Catholics made it necessary for the EOTC to review its arguments. Thus, it is dealt with in polemic works, such as the ↗*Mäzgäbä haymanot*, composed 1555–59. Here a refutation of Arius is provided, and the doctrine of the Trinity is affirmed by such arguments that the angels sing the *Trishagion* three times (and not 2 or 4), and that Jesus himself said after his resurrection to the apostles to baptize new disciples "in the name of the Father, and of the Son and of the Holy Spirit" (Mt 28:19).

The *Chronicle* of ↗Giyorgis Wäldäᶜ Amid contains *The History of the Councils of the Church*, as a separate part, e.g., in ms. BritLib Orient. 814, fols. 145r–54r.

There is an ↗Anaphora attributed to the 318 Fathers of N.

The importance of the Nicene Council in Ethiopia is perhaps best seen in the fact that the ↗*Kəbrä nägäśt* is introduced as an "Interpretation and story of 318 Orthodox (Fathers of N.)" (ፍካሬ፡ ወዜና፡ ዘ፫፻፲፰፡ ርቱዓን፡ ሃይማኖት, *Fəkkare wäzena zä-318 rətuᶜanä haymanot*), although the Nicene Council itself is not named (BezKebr 1a).

There are also literary pieces of miraculous character describing how Christ (EMML 788 fol. 157) or the Holy Trinity (EMML 3938, fols. 61v–64r: *Dərsanä ab wäwäld wämänfäs qəddus*) attended the Nicene Council. In the ↗*Sənkəssar*, the Council is commemorated on the 9th of *Ḫədar* (= 15 November, s. ColSyn VIII, 276–79; BudSaint 225f.). It is sometimes depicted in Ethiopian ↗painting.

Witold Witakowski

Niebuhr, Carsten

N. (b. 17 March 1733, Lüdingworth, Land Hadeln, d. 26 April 1815, Meldorf, Dithmarschen) was a Danish-German explorer in Arabia, who also collected data on Ethiopia, then still quite closed to the outside world.

N. had studied mathematics and engineering at Göttingen University, entered into the services of the Danish king in 1760 (as an engineering lieutenant), and in 1761 was nominated as a member of the Danish Royal expedition to Arabia, the first scientific expedition to that region. Its members were – except one servant – a Semitist, a biologist, a medical doctor, a painter and N. as the expedition's cartographer. After a journey through the Sinai and Egypt, where N. drew the first detailed map of the ↗Red Sea, the expedition reached the Yemen in 1763, also cartographed by N. From al-Muḫā N. went to Bombay in 1764, from where he, now the only survivor, returned via Persia and the Ottoman Empire to Denmark.

The expedition had been initiated by the Semitist Johann David Michaelis in Göttingen (grandnephew of the Ethiopianist Johann Heinrich ↗Michaelis), and had the primary aim to collect empirical data to be used for exegesis and critical research on the Bible. N., however, quickly diverted from the original questionnaires and did his own research, especially on local cultures of the Arabs and their current way of living, including commerce. N. had quickly understood the necessity to adapt to local conditions, both to climate and culture, by imitating the locals, entertaining close contacts with those "studied" by him, and learning their languages and dialects.

N. reported on Ethiopian missionary history (e.g., on a failed Protestant Herrnhut mission), on the establishment of a Greek merchant group in Ethiopia, on Ethiopian culture and commerce (e.g., on ↗circumcision, ↗coffee) and on the "*nəguś*" ↗Iyasu II, ↗Iyoʾas and the regent queen ↗Bərhan Mogäsa, with details about court intrigues. N. included information on the coastal regions, dominated by Muslim ↗Təgre and ᶜAfar, whom he described as virtually independent from the Ethiopian ruler, and also on ↗Sawākin, ↗Massawa, ↗Baylūl, ↗Zaylaᶜ, ↗Berbera and the Somalis. N.'s reports on Ethiopia were based on interviews with merchants and Egyptian Copts.

Back in Copenhagen, N. was soon promoted. He assumed a high administrative post and lived most of the years to come in Meldorf, somewhat isolated from scholarly life. Michaelis in Göttingen had not appreciated N.'s research failing to confirm the facts reported in the Bible. However, N.'s works, translated into several languages, greatly animated Orientalist scholarship, due to his exact documentation and observations. They are also of some importance for Ethiopian studies, as they contain data on the Horn of Africa and the Red Sea commerce from a scarcely documented period. His map of the Red Sea, making use of modern scientific measuring methods, enabled British navigation from India to Suez via the Red Sea starting in the 1770s.

Wolbert Smidt

Nile

The N. (Arab. an-Nīl, Gr. Νεῖλος) appears under different names in Ethiopia, depending on the context. The term **ኒል** (Nil) exists, but appears rather rarely, mostly in the context of foreign influence (e.g., Arab., cp. CerMaria 207). It is usually referring to the N. in Egypt but sometimes also used for the Blue N. (e.g., in BTafA 204f.: here the term ↗Abbay designates the whole N., and – contrary to the normal practice – Nil stands for the Blue N. only). The word is not to be confused with Amh./Tgn. *nil* or Arab. *nīl*, 'indigo', a loanword from Sanskrit. The Blue N., the tributary of the N. proper originating in Lake ↗Ṭana, is most frequently referred to as the ᶜAbbay (**ዓባይ/አባይ**, also **አባዊ**, Abbawi, **ዓባይ፡ ጣና** ᶜAbbay Ṭana, **ጥቁር፡ አባይ** Ṭəqur Abbay, 'Black N.'; Tgn. **አባይ** Abbay).

17th-cent. map of the sources of the Nile in Ethiopia; collection of Volker Matthies

The N. is not referred to by name in the Bible. Where the Greek Bible speaks of it as ὕδωρ 'water' or ποταμός 'river' (e.g., Ex 7:15, Is 19:7–8), the Gəᶜəz Bible has the corresponding terms **ማይ** (*may*) and **ተክዜ** (*täkkäze, or täkkäzi*), resp., often combined, however, to **ማይ ተክዜ** (lit. 'water river'; this seems to document a semantic change and can also be interpreted as 'river Täkkäze', the N. now taking *täkkäze* as a name). The ↗*Täʾammərä Maryam*, when using the (Arabic-influenced) designation **ኒል** for the N. in Upper Egypt, explains it for the readers as "meaning the May Täkkäze" (CerMaria 207). The Greek Bible's χειμάρρος Αἰγύπτου, 'the stream/brook of Egypt' (2 Chr 7:8) corresponds to *täkkäze* Gəbṣi in Gəᶜəz (cp. in the same passage, e.g., the *täkkäze* Ṭəgris, 'River Tigris'; s. DillmLex 568).

The earliest mention of the Blue N. in Ethiopian sources is the 4th-cent. inscription of ↗ᶜEzana, reporting on his war against the ↗Noba (RIÉ 189). After having fought with them at the "Täkkäze" (the word could be interpreted as simply "the river", but it seems an early mention of the present-day river Täkkäze, or rather its lower course ↗Setit or the ↗Atbara), ᶜEzana attacked the ↗Kasu at its confluence with the "Sida" (Seda). This, according to the context, means the Blue N. in the Sudanese lowlands (HuntGeogr 57f.).

The name itself of the river Täkkäze reveals that in ancient times it was identified with the N., being, in fact, the most important affluent of the N.-tributary Atbara. In the Greek inscription of the ↗Monumentum Adulitanum the anonymous king is reported to have crossed the Νείλος and then reached mountains covered by snow (i.e., the ↗Səmen), which suggests that this river was the Täkkäze (HuntGeogr 42, 45f.; RIÉ 277). Still in the 15th cent. the Täkkäze was identified with the N. (s. CrawItin 93, 123, 141, 165, ↗Waldəbba and ↗Aksum being situated close to the "N."). Only the later expansion of the Ethiopian kingdom to the Abbay allowed its identification with the N. (cp. already CrawItin 153, 179) The White N., unknown to older Ethiopian historiography and literature, is now commonly called **ነጭ፡ አባይ** (Näčč Abbay, Ambh. 'White Abbay'; cp. BTafA 204f.; KaneDic 1203).

The Nile in history: imagination and exploration

The N. has played a crucial role in the geographical imagination of mediterranean populations since ancient times. This, from their perspective, gave Ethiopia a most important position as the keeper of the sources of the N. From Ethiopia's perspective, the N. river is crucial for her identification with the country ↗Aithiopía mentioned in the Bible. The biblical river "↗Gihon" (Gen 2:13), one of the rivers of Paradise, flows around the land of ↗Kush (i.e. Aithiopía), and was identified by Ethiopians with the Blue N. (as reported, for example, by Alvares; HuntGeogr 119). Through this identification Ethiopia becomes one of the biblical lands. This is reflected by a number of Ethiopian texts, especially those depending on an Arabic Vorlage, such as, e.g., the *Täʾammərä Maryam* or the apocryphal *Apocalypse of ↗Mary* (Six 1999).

An ancient belief, contained both in Ethiopian and Egyptian traditions, states that Ethiopia had the power to divert the course of the N., so that it would flow into the ↗Red Sea instead of crossing the Sudan to Egypt. This was used by Ethiopian rulers throughout history (e.g., *aṣe* ↗Dawit II) to threaten Egypt during their long and difficult history of diplomatic and religious

relations (cp. UllBibl 2,5; Perruchon 1898; Pankhurst 1999; Kaplan 2002:73). Tradition relates that *aṣe* ↗Lalibäla dug a channel at the confluence of the Blue and the White N. at Khartoum to divert the course "towards the Sahara desert, in order to harm the Muslims" (BTafA 204f.; cp. Guidi 1926:360f.). ↗Nä^{3}akk^{w}ətο Lä^{3}ab is even said to have stopped the flow of the N. (Conti Rossini 1943:228; ill. s. CerPal 118f.). The idea was finally taken over by the Portuguese, the Viceroy of India de ↗Albuquerque in the 16th cent. discussing the diversion of the N. as a possible way of bringing drought to the Muslims (Ludolf 1691:12, 598; LudHist L. I. c. 8, 76ff.).

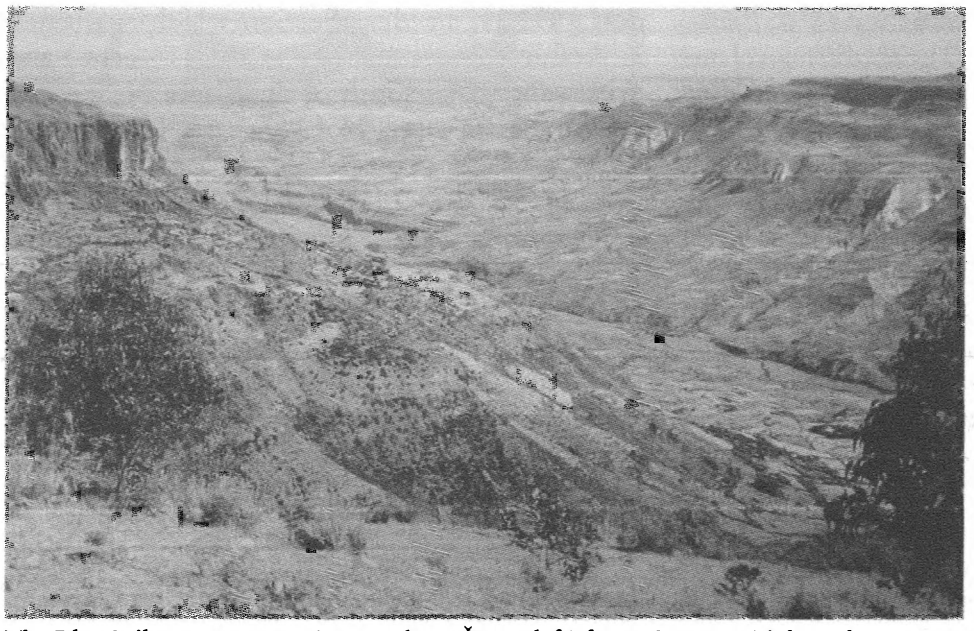
Since early times, Egypt, totally dependent on the yearly N. floods, regarded the countries at the sources of the N. as the grantors of its well-being. Not only were the waters of the N. necessary for the agriculture, it was also the most important trade route – and cultural link – connecting Egypt with Kush, and later with the Nubian kingdoms along the N. (Nobatia, Makuria [↗Dongola], ᶜAlwā/Alodia [↗Soba Noba]).

The Egyptian tradition of the N. as the source for their ancient civilization was transmitted to Europe, through ancient Rome. Reports from ancient Egypt and later from Rome, after it had started to dominate Egypt, mention expeditions southwards, along the N. river, which were supposed to discover the sources of the N. (Pliny, *Nat. hist.* V § 51, ed. Rakham 1947:256f.). The N. was then regarded as the boundary between Africa and "Aithiopía" (i.e. Kush; ibid. § 53, 258f.).

Ancient geographers (↗Ptolemy, s. Fiaccadori 1992:31; s. also al-↗Idrīsī) claimed that the N. originated in the ice-covered Montes Lunae, the 'Mountains of the Moon'. According to this tradition this range of very high mountains lies far south of the "island" of ↗Meroë and beyond a range of very huge lakes. This in fact might really reflect local knowledge, as it roughly corresponds to reality. However, the two main tributaries of the N., the White N., reaching deep into inner Africa, and the Blue N., were represented only very roughly. The third important tributary, the Black N. or Atbara corresponds to Ptolemy's "Astaboras" (or "Astoboras" as in Pliny, *Nat. hist.* V § 53, ed. Rakham 1947:258f., where this name, however, designates another N. tributary). The identity of the "Mountains of the Moon" remained a subject of discussion, some identifying them with the Kilimanjaro (Arab. *Ǧibāl al-Qamar*, 'Mountains of the Moon', Fiaccadori 1992:31, an identification which is attested in Arabic sources as early as the 11th cent.) and other mountains south of the White N., such as the Ruwenzori Range of Uganda – identified as such by the N. explorer Henry Morton Stanley in 1888 (Stanley 1890). Others identified it with the Ethiopian highlands (e.g., Mount Abunä Yosef [4194 m A.S.L.] in the Lasta Massif, from which the Täkkäze drains; Crawford 1949:17ff., CrawItin 88, 197). If the legend is based on real knowledge, an identification with the Səmen Mountains (also feeding the Täkkäze), or possibly even the Guna Massif (from which the Abbay drains) cannot be excluded either.

The Renaissance re-discovered interest in the N. as the "father of Egypt" and reanimated the ancient interest in the unknown sources of the N., which were reported to lie deep inland in Africa or even in "India" (s. ↗"India" as a name for Ethiopia). The first to travel to the sources of the Blue N. were members of the Portuguese community. At least starting from that time the source of the **ግልገል፡ ዓባይ** (Gəlgäl Abbay, also **ትንሽ፡ ዓባይ**, Tənnəš ᶜAbbay, 'Little Abbay', or **ግሽ፡ ዓባይ**, Gəš ᶜAbbay), a river flowing into the Lake Ṭana, was regarded as the true source of the N. (Duchesne-Fournet 1909:106). João ↗Gabriel, captain of the Portuguese military corps in Təgray in around 1600, undertook the first "discovery" expedition to the sources of the N. (Conti Rossini 1941). On 21 April 1618, Pedro ↗Paez visited the source of the Little Abbay near a church in the mountains of Agäw Mədər, long before ↗Bruce's visit on 4 November 1770 (BruNile; Moorehead ²1983:34). There are several reports that this source of the N. was a revered place of cult. The first to give a detailed account of it was James Bruce, who mentioned a local priest called Kəflä Abbay, supposedly the guardian of the source. Still in the 20th cent. the swamps around the source were regarded by the local population as a holy area, the source itself being protected by fences. It is also a place of pilgrimage (Osgood 1928:166, 170). *Nəguś* ↗Täklä Haymanot of Goğğam himself visited the place every year (Duchesne-Fournet 1909:105, ill.).

During the 19th cent., the "century of exploration", the N. was again a great attraction for explorers (↗Expeditions). In 1862 Samuel and Florence Baker crossed the Sudan, following the course of the N., reached the Blue N., exploring the Ethiopian border regions, and then continued to follow the White N. to its sources. Shortly



The Blue Nile gorge separating northern Šäwa (left) from Goǧǧam (right); photo 1995, courtesy of Heinz F. Berger

before, Richard ↗Burton, James Grant and John Speke were the first Europeans to visit the Great Lakes in inner Africa, and describe them as the sources of the White N. (Burton 1860; Speke 1863; Stanley 1878; cp. Garstin 1909:122–27). The course of the Blue N., however, remained largely unknown. Between 1925 and 1934 Cheesman explored for the first time its upper course (s. ChTana).

Already the first of these explorations were undertaken within a framework of political expansion. The upper course of the N. in the Sudan had been annexed by Egypt starting from the 1820s; subsequently, the "discovery" of the sources of the N. had a decisive impact on Egyptian politics – *ḫidīw* ↗Ismāʿīl's expansion aimed at the "unification of all the countries of the N." under his rule, instead of focusing on Arabian countries as his predecessors had done (↗Egyptian–Ethiopian war of 1875–76). After the British had established their control over the Sudan, they inherited the "N. question" and aimed at some sort of control over its waters. The Upper Basin of the Abbay was the subject of the Ethio–British boundary treaty of 1902 (↗Boundaries; ↗Treaties; s. ZerEth 323). In the ↗Tripartite Treaty of 1906 the Abbay Basin was recognized by the powers as belonging to the British "sphere of influence", and consequently even a British consulate was established in Goǧǧam (↗Dangəla). Dam projects have been a subject of diplomatic difficulties since then (McCann 1981; s. also the article on the Abbay). A British enclave existed at ↗Gambella town's port on the ↗Baro, from where regular boat services assured contact between Gambella and the N. at Khartoum via the Sobat (ZerEth 370f.).

Wolbert Smidt

Nile geography

The basin of the River N. extends over the north-western third of Ethiopia and the south of the Eritrean territory. It comes second in area, 198,508 km² (National Atlas) or 178,700 km² (Guida 382), after the basin of the ↗Wabi Šäbälle.

The Little Abbay, its course interrupted by waterfalls, runs 75 km northwards into Lake ↗Ṭana (ca. 1,840 m A.S.L.). From its south-western shore the Blue N. (↗Abbay) leaves the lake to the south-east. After the ↗Ṭis əsat Falls (45 m high) it runs down through a more than 800-km-long canyon from which it flows out into the Ethio–Sudanese lowlands. In the first third of its course, it runs southwards, then it turns westwards to bend to the north-west after its confluence with the perennial ↗Didessa. The Blue N. separates the highlands of Goğğam from the plateaux of Wällo and Šäwa, from where the left-bank tributaries (the Bašällo, the Mugär, the Gudär) take their sources. From the wet heights of Wälläga the ↗Finčaʾa, the Didessa and the Dabbus flow. Right-bank affluents are smaller except the ↗Bäläs river which comes from the mountains west of Lake Ṭana. An important affluent in the east of the N. is the ↗Atbara, by some called the "Black N.", whose affluent is the ↗Setit (in its upper course ↗Täkkäze); in July it brings a large addition to the N. north of Khartoum, at the same time as the Blue N. (and the Sobat to the White N. in the south). In August the Blue N. attains a volume about ten times as great as the volume brought down from the White N., until the Blue N. sinks down again in September (Garstin 1909:141).

At the Däğän bridge, where the high plateaux made lower cenozoic basaltic traps, the Blue N. flows more than 1,000 m deep. Under the lavas, the limestone and sandstone strata (Anṭalo and ᶜAddigrat series) form high cliffs. Limestone is quarried by the Mugär Cement Factory. At the bottom of the canyon the river has eroded the precambrian strata. The course of the N. and its affluents is guided by a north-south and west-east fault grid which is parallel and perpendicular, resp., to the ↗Rift Valley.

Most of the valleys are in the ↗*qʷälla* zone and exposed to malaria. Peasants living on the plateaux (↗Amhara and ↗Oromo) try to avoid these wet and hot gullies. Agro-pastoralists, the Oromo in the middle valley and the ↗Gumuz to the west, keep cattle and practise shifting and slash and burn agriculture. During *kərämt*, the flow of the N. increases from a monthly average of 10 m³/sec (minimum) to 400 m³ (maximum) in Baḥər Dar, resulting in a monthly average of 119 m³ (minimum) to 5,590 m³ (maximum) in Roseires, a town just beyond the Sudanese border.

In Ethiopia the N. is not navigable; only a few sportsmen have sailed down the canyon with inflatable rafts. Until the end of the 1950s crossing the course of the Abbay was only possible by fords, which became very perilous during the rainy season. On the outlet of Lake Ṭana, a now-ruined Portuguese bridge linked the two banks near present-day Baḥər Dar. The people were apprehensive of the consequences of unlocking Goğğam when the Däğän-Goha Ṣəyon bridge was completed. Goğğam rulers benefited from their isolation which helped them keep a strong autonomy against the central authorities.

The region then took advantage of the bridge to export its surpluses of cereal production to the capital. The *Därg* regime (↗Provisional Military Administrative Council) established a new link between Bure and Naqamtee across the valley of the N. While Mängəśtu had not yet unveiled the bridge, the Tigray People's Liberation Front took it to attack Addis Abäba from the west.

Since the 1991 federal reform, the Abbay, in its upper course, has belonged to the Amara *kəllәl*. Its middle course separates the Amara *kəllәl* from Oromiyaa and its lower basin flows through the Beni Šangul – Gumuz *kəllәl*. The hydroelectric resources of the N. are scarcely operated: the Ṭis əsat power plant is planned to be enlarged, following the example of the Finčaʾa equipments which were built 30 years ago to feed the capital. One effect of the power plant is that the impressiveness of the once great Ṭis əsat waterfall has been greatly reduced. Hydroelectric power plants and irrigation are planned on the Täkkäze course in the Təgray *kəllәl*.

Other projects are in place on the N. tributaries. Financed by Libya under *Därg*, the irrigated sugar cane plantation in Finčaʾa was completed in the year 2000. The Ṭana-Bäläs project was planned to

divert a part of the water of the lake westwards by a tunnel through a mountainous range. After electricity is generated, water should irrigate the plateaux and flow into the Bäläs. Planned by the Italian co-operation for the development, this programme was attacked by the fronts fighting against the *Därg*. The fall of the regime, protestations from the side of ecologists and the reluctance of international donors lead to its abandonment. The Ṭana-Bäläs Project is now planned again with a better control of the Lake Ṭana level (2006). Sudanese and Egyptians had shown, as usual, their opposition against any equipment disrupting the flow. The Blue N. contributes more than 85 % to the total flow of the N. in Aswan.

The importance of the Ethiopian arm of the N. for the regular N. floods in Egypt is a major subject in the political relations between Egypt and Ethiopia. Differences have appeared between Egypt and Sudan, downstream, and Ethiopia, upstream, within the Council of the Riverine States of the N. Egypt and Sudan are still afraid that Ethiopia, by building future dams, may try to divert the flow of the Abbay (for details on this s. articles Abbay and ↗Egypt: Modern Egyptian–Ethiopian relations). Currently, Norway helps Ethiopia to implement a huge dam in the middle of Abbay canyon to provide hydro-electricity for Addis Abäba which is in great need. The great Roseires Reservoir lies immediately behind the Ethiopian border in the Sudan.

Alain Gascon

Nilo-Saharan

N.-S., one of the four major phyla on the African continent according to Greenberg (1963), is found in an area covering major parts south-east, east and north of Lake Victoria in East Africa, with a westward extension as far as the Niger Valley in Mali. The easternmost members of N.-S. are situated in the western and northern regions of Ethiopia and Eritrea. The following N.-S. subgroups (in alphabetical order) are represented in these latter countries: 1. ↗Berta; 2. ↗Koman and ↗Gumuz; 3. ↗Kunama; 4. ↗Nara; 5. ↗Nilotic; 6. ↗Surmic.

There is no general agreement amongst scholars on the subclassification of N.-S., but there is consensus on the genetic unity of lower-level groupings such as those mentioned above. Scholars agree that Nilotic and Surmic are closely related members of a N.-S. subgroup called Eastern Sudanic by Greenberg (1963) and Eastern Sahelian by Ehret (2001); similarly, Nara is usually included within this latter N.-S. subgroup. Whether Kunama and Berta are most closely related to the Eastern Sudanic group, or more distantly related members of the N.-S. family, is a matter of dispute. Whereas Greenberg (1963) and Ehret (2001:88) treat the Koman group (with Gumuz as one of its members) as a primary branch of N.-S. only distantly related to Eastern Sudanic, Bender (2000) argues that the Gumuz language forms a separate branch next to the Koman group; moreover, according to the same author, Koman and Gumuz are most closely related to Eastern Sudanic; s. also Bender 1996a for a survey of the various classifications proposed for the N.-S. phylum. Each of the lower-level subgroups of N.-S. represented in Ethiopia or Eritrea is discussed next.

The Nilotic branch is usually divided into Eastern, Western and Southern Nilotic. The majority of Nilotic languages are spoken in southern Sudan, north-eastern Congo (ex-Zaire), Uganda, Kenya and Tanzania. But starting in Ethiopia's south-western corner, we find a number of representatives from this major group (in terms of number of languages): two Eastern Nilotic languages called ↗Ñaŋatom (or Bume) and Turkana, and north of these languages two Western Nilotic languages, ↗Añwaa and ↗Nuer.

Nilotic's closest relatives, the Surmic branch within N.-S., consists of a group of languages spoken in south-western Ethiopia as well as in neighbouring areas across the border in Sudan. The Surmic family consists of South Surmic, which again is divided into a South-western and a South-eastern Surmic branch, and Northern Surmic. Representatives of South-western Surmic in Ethiopia are ↗Baale and ↗Murle. All South-eastern Surmic languages are spoken in Ethio-

pia: ↗Čai-Tirma-Mursi, ↗Kʷegu-Muguği, and ↗Meʾen (the latter consisting of Bodi and Tišena dialects). The Northern Surmic branch consists of one language only, ↗Mağaŋgir. The name ↗Suri (or Surma) does not refer to a Surmic language or language group, but rather is an ethnonym.

The Koman languages ↗Kwama, ↗Komo, ↗Opuuo, and Uduk (↗Ṭwampa) are spoken north of the Surmic group in the border area between Ethiopia and Sudan. In the same area, another N.-S. language, Gumuz, is spoken. According to Bender (s.v. Koman), Gumuz should not be considered a member of the Koman group, but rather as an independent member of the N.-S. phylum most closely related to the Koman group and the Eastern Sudanic branch.

Berta is also situated in western Ethiopia, more specifically between Gumuz and the Koman languages, with an extension into eastern Sudan.

Kunama is a cluster of dialects spoken in western and northern Eritrea as well as around Barentu in Ethiopia. It consists of a number of closely related lects, Aimasa, Barka, Marda and Tika, and the more distantly related dialects Bitaama and Ilit (s. ↗Ilit and Sokodas).

Nara (also known as Nera or "Barya") is spoken in an area adjacent to the Kunama cluster mainly in western Eritrea, and adjoins the Kunama area to the south.

Whereas speakers of the various languages and language groups listed above are known to have had their home base in western Ethiopia for several generations, the civil war in Sudan during the second part of the 20th cent. may have resulted in an influx of speakers of other N.-S. languages from this neighbouring country. More specifically, there may now be speakers in Ethiopia of Burun (Nilotic language group), and of languages like Gaam, which belongs to the Eastern Jebel group within Eastern Sudanic. The number of speakers of Koman languages like Komo and Uduk in Ethiopia may also have increased.

The Ethiopian highlands appear to have functioned as a refugium for humans during drier periods over the past millennia, when survival in the arid savannah areas became more hazardous. This may be one reason for the linguistic diversity in this region. In addition to the N.-S. languages listed above, there are two languages which may belong to this phylum or to Afro-Asiatic: Birale (also known as ↗Ongota), whose speakers live along the Wäyto river among the Cushitic ↗Ṣamakko, and ↗Šabo (or Mekeyer), spoken by a small ethnic group among the Surmic Mağaŋgir and the Omotic Moča (↗Šakačo); alternatively, these two languages may each constitute a linguistic isolate.

The brilliant intuitions of Greenberg (1963), leading to the identification of the phylum now known as N.-S., were based on a judicious evaluation of lexical and, more importantly, grammatical properties which are widespread across the approximately 130 languages belonging to this genetic grouping. Amongst the set of grammatical properties involving (presumably) cognate morphemes are a verbal causative (transitivizer) prefix *ɪ-/i-*, a set of bound pronominal forms *(k)a-* for first person singular, *(y)i* for second person singular; a [logophoric] third person marker *ɛ-* occurring in dependent clauses); negation markers reconstructed as **kᵇɔ* and **ɓa* by Ehret (2001:218); nominal number markers (plural in *i*, *in*, and *k*; singulative markers in *i*, and *k*); a noun particularizing prefix *k-* (s. ibid. 181–84); nominal specifiers or referential markers (singular *-t*; plural *-k*). Also, a number of case markers appear to be cognate (accusative in *k*, genitive in *ŋ*); with respect to other widespread grammatical markers, cognate forms may be identified whose morphosyntactic function has been modified in individual language groups over time. Thus, the widespread location marker *ta* is found as an adposition in Nilotic and Surmic, and as a case marker in, e.g., Kunama. Similarly, a form in *-yɛ/-ye* occurs as an enclitic instrumental case marker in noun phrases in the Tama group within N.-S., as an agent marker *-ye* (or *-(y)i*) in the Saharan group within N.-S., and as an ergative case marker on nouns in Nilotic and Surmic. Moreover, the widespread lexical root for 'body' involving initial *r* is found as a verbal reflexive marker in, e.g., Nilotic. A rather remarkable grammatical property which is widespread across N.-S., as pointed out already by Greenberg (1963:131f.), is the recurrence of the word for 'name' as a syntactic plural.

From a typological point of view, northern N.-S. language groups like Kunama and, to a lesser extent, Nara share structural properties with Afro-Asiatic languages in Ethiopia and Eritrea, more specifically with Cushitic and Omotic languages, as well as with N.-S. languages in northern Sudan with an extension into Chad and Nigeria (more specifically with Nubian languages, Nyimang and Dinik, Tama, For and Amdang, Maban, and Saharan). These common typological features include a basic constituent order whereby the verb

occurs in final position, a rather extensive case-marking system, verbal compounding with 'say' or 'do', as well as the use of converbs as dependent verb forms in complex sentences (Azeb Amha – Dimmendaal 2006; s. also Bender 1996a for Kunama; s. also ↗Ethiopian Language Area).

Such common typological features cutting across genetic boundaries (N.-S. and Afro-Asiatic in this case) are usually due to areal diffusion, itself resulting from longterm cultural contacts and corresponding patterns of multilingualism between neighbouring speech communities. The Wadi Howar, also known as the Yellow Nile, a former river sanctuary and tributary to the Nile over 1200 km long which connected the mountainous area in eastern Chad with the Nile Valley between the third and fourth cataract until about 1000 B.C., may have constituted an important geographical condition for this cultural and linguistic diffusion (cf. Keding 2000 for a discussion of the geomorphological and archaeological background). The gradual extinction of this riverine system in northern Sudan consequently may have resulted in the dispersion of speakers of N.-S. languages from the Wadi Howar region in what is now Sudan in an eastern direction (towards Ethiopia and Eritrea), as well as southern and western directions. The presence of the powerful Meroitic Kingdom (↗Meroë) may have resulted in a further displacement of the ancestors of the modern Nara towards the east (cp. Rilly 2003). The current location of N.-S. groups along the Nile and regions west, south and east of this river, suggests a migration and expansion for these linguistic groups, more specifically for the ancestors of Berta, Nilotic and Surmic from the Wadi Howar region into western and southern Ethiopia. From a typological point of view, these latter N.-S. groups also differ from northern N.-S. representatives in Ethiopia and Eritrea such as Kunama or Nara. Instead of a verb-final syntax, as in these latter groups, we find a verb-second or verb-initial structure. Thus, languages like Berta have a basic Topic-verb order; alternatively, S[ubject]-V[erb]-O[bject] or VSO occurs (Andersen 1993, 1995). Moreover, contrary to N.-S. varieties like Kunama further towards the north, languages like Berta or Nilotic languages like Aňwaa or Nuer also use a less extensive case-marking system at the clausal level, instead expressing information on argument structure and semantic roles such as instrument or location on the verb. In addition, these latter languages have so-called "marked Nominative" or (alternatively) Ergative case systems, whereby postverbal subjects are inflected for case, with the corresponding object lacking case inflection, and occurring in the so-called Absolutive form; s. Reh (1996:294ff.) for a detailed description of the Nilotic language Aňwaa in this respect. Similar case-marking systems are found in Surmic languages in Ethiopia as well as southern Sudan; s. Dimmendaal and Last (1998).

One particular morphological feature common to many Eastern Sudanic languages in Ethiopia is shared with various Cushitic, and to some extent, Semitic languages. This typological property involves a tripartite distinction for number marking with nouns between singulatives marking, plural marking, and a system of replacement whereby both the singular and the plural are marked (Dimmendaal 2000). Nouns referring to items usually occurring in pairs or in larger numbers like 'ear' or 'fly', or ethnonyms, tend to be morphologically unmarked in the plural, with the corresponding singular form being marked with a singulative suffix in these languages. Alternatively, nouns may be morphologically unmarked in the singular, as is common in many Indo-European languages, with a corresponding plural marker. Replacement is common with nouns derived from verbs or some other major category and involves a marker for singular as well as a marker for plural number.

Gender distinction occurs in Eastern Nilotic languages. As derivational property, gender marking is used in Western Nilotic languages like Aňwaa and Nuer. In addition, gender distinctions occur in the Koman group. Apart from this property, Koman (and Gumuz) seem to share very few significant morphological features either with N.-S. language groups such as Kunama or Nara, or with N.-S. subgroups further towards the south, such as Berta, Jebel, Nilotic or Surmic, possibly as a result of longterm geographical isolation of the former.

Whereas N.-S. languages of Ethiopia and Eritrea thus vary considerably from a morphological and syntactic point of view, several of them do share specific phonological properties, e.g. prosodic features such as vowel harmony. Since these features are common across Africa south of the Sahara in an area ranging from Ethiopia towards Senegal, they probably constitute ancient instances of areal diffusion. N.-S. languages in Ethiopia and Eritrea all appear to be tonal; s., for instance, Connell – Hayward – John Abraha Ashkaba (2000) for a description of the tonal intricacies of

a Kunama variety. Another areal feature found in a range of languages from Senegal towards Ethiopia is vowel harmony involving the position of the tongue root. In a classic system of this type, all vowels within a word belong to either of two harmony sets; one set involves so-called [-advanced tongue root] (or [-ATR]) vowels *ɪ*, *ɛ*, *a*, *ɔ*, and *ʊ*; alternatively, all vowels within a word belong to the so-called [+advanced tongue root] (or [+ATR]) set, usually involving the vowels *i*, *e*, *ʌ*, *o*, *u*. Vowel harmony of this type is attested apparently in Koman languages such as Opuuo, Nilotic languages such as Ñaŋatom, and Surmic languages such as Baale. Alternatively, one finds more reduced vowel systems without vowel harmony, as in Nara, which has five vowels.

N.-S. languages in Ethiopia tend to be characterized by relatively many consonantal distinctions. A distinction between plosives and implosives is common across N.-S., but Berta, Surmic, and Koman languages in addition have ejective consonants. It remains to be determined to what extent the latter consonant types in these N.-S. groups are the result of areal contact with Afro-Asiatic languages in Ethiopia.

Many N.-S. languages in Ethiopia and Eritrea, in particular the Koman and Surmic languages, are still poorly explored. Although for several of the languages writing systems (either in Latin or in *fidäl* script [s. ↗Script, Ethiopic]) have been developed, published texts in these languages are scanty. As a result of the domination of neighbouring languages and urbanization, a number of N.-S. languages are endangered, e.g., Surmic languages like Kʷegu.

Gerrit J. Dimmendaal

Nilotic

The N. language family is a branch of the ↗Nilo-Saharan phylum. N. languages are spread over southern Sudan and neighbouring zones of north-eastern Congo, Uganda, Kenya plus northern Tanzania, as well as south-western Ethiopia.

N. is usually divided into three branches: Eastern (Bari, Lotuko, Maa [Maasai], Ongamo [Ngasa], Teso-Turkana cluster), Southern (Omotik, Datooga, Kalenjin), and Western (Burun [consisting of Jumjum, Mabaan, Ulu, Mayak], Lwoo cluster, Dinka, ↗Nuer, Atuot).

Only Eastern and Western Nilotic have representatives in Ethiopia. The Eastern Nilotic language ↗Ñaŋatom is spoken in the south-western part of the country, and forms part of the Teso-Turkana dialect continuum stretching westward across southern Sudan, northern Kenya and northern Uganda, and including Toposa, Turkana, Karimojong, Teso. There may also be speakers of Turkana in the same area. Further towards the north in Ethiopia, also along the border with Sudan, the Western Nilotic languages ↗Añwaa and Nuer are found. Añwaa is part of the Lwoo cluster (which includes Shilluk, Jur Luo, Turi, Bor, Acoli, Kumam, Adola, Luo of Kenya [or Kavirondo Luo]). Nuer forms a different subgroup within Western Nilotic to which also Atuot and Dinka belong. There may also be speakers of another Western Nilotic subgroup, Burun, in the border area between Ethiopia and Sudan.

Reconstruction of the Proto-Nilotic consonantal system was proposed in Dimmendaal 1988:7: voiceless *p*, *t̲*, *t*, *č*, *k*; voiced *b*, *d̲*, *d*, (*ǧ*), *g*; implosives *ɓ*, *ɗ*, *'y* (*q*); trill *r*, lateral *l*, fricatives *s*, *ġ*, nasals *m*, *n*, *ñ*, *ŋ*, and glides *y*, *w*. The following vowels can be reconstructed for Proto-Nilotic: *i*, *ɪ*, *e*, *ɛ*, *a*, *ɔ*, *o*, *ʊ*, *u*, and, with a less certainty, *ʌ* (ibid. 12).

The widespread African phenomenon of Advanced-Tongue-Root (ATR) harmony is present in N. (e.g., in Añwaa and Ñaŋatom) and can be reconstructed for Proto-Nilotic (Dimmendaal

1988). In such a system vowels belong to either an unadvanced tongue root or [-ATR] set (usually *ɪ*, *ɛ*, *a*, *ɔ*, and *ʊ*) or a corresponding advanced tongue root or [+ATR] set (usually *i*, *e*, *ʌ*, *o*, and *u*), with vowels within a word usually belonging to one of the two harmony sets. In Ñaŋatom the [+ATR] vowel *ʌ* is lacking from the system. In Nuer, we find a system of seven breathy and seven creaky-voice vowels which appear to have developed out of an earlier 10-vowel system with ATR contrasts.

Tone distinctions existed undoubtedly in Proto-Nilotic. Western Nilotic languages like Añwaa and Nuer appear to distinguish between three tonal registers, high, mid, and low; Eastern Nilotic Ñaŋatom has a two-two system (high vs. low) with downstep and downdrift.

Gender distinctions among masculine, feminine and neuter is a common inflectional property of Eastern Nilotic languages like Ñaŋatom (cp. entry for this language). Gender marking is also manifested in nominal modifiers, e.g. demonstratives. But contrary to neighbouring ↗Afro-Asiatic languages, gender marking is not shown in the pronominal system or verbal morphology. Gender marking occurs as a derivational property for nouns in Western Nilotic languages like Añwaa and Nuer.

Rich number marking systems are characteristic for N. languages (except for southern Lwoo languages, where they are considerably reduced) in general and for Añwaa, Nuer, and Ñaŋatom, in particular (Dimmendaal 2000). Three strategies are used: plural marker; singulative marker (for most nouns referring to items usually occurring in pairs, such as 'ear', or in larger numbers, such as 'egg(s)' as well as for ethnonyms); and replacement (i.e. inflection of the singular as well as the plural; with the nouns derived from verbs or adjectives). The root-internal change (sometimes in combination with suffixation) occurs in Western Nilotic languages, including Nuer and, to a lesser extent, Añwaa. The following example with singulative marking shows how internal change in Nuer may have developed from suffixation, as still found in Añwaa:

	singular	plural	
Añwaa	*tɔ̀ŋ-ɔ̄*	*tɔ̀ŋ*	'egg(s)'
Nuer	*tuò̲ŋ*	*to̲ŋ*	'egg(s)'

Verbs in Añwaa, Nuer and Ñaŋatom tend to have complex internal structures, taking pronominal subject markers (and pronominal object markers in the case of Ñaŋatom), as well as markers for aspect, mood, voice, and also a range of derivational markers. Whereas Eastern Nilotic languages like Ñaŋatom tend to be verb-initial, constituent order in Western Nilotic Añwaa and Nuer is more variable.

All three N. languages share post-verbal subject marking as a morphosyntactic property. In Añwaa, where this order only appears to be possible with transitive clauses, this post-verbal subject is marked by way of a suffix *-ɛ* or *-i*. Again (as with number inflection), case inflection for post-verbal subjects (both of transitive and intransitive predications) is expressed by way of root-internal changes in Nuer (Tucker – Bryan 1966:417). In Ñaŋatom, where postverbal subject marking occurs with both transitive and intransitive verbs, this so-called Nominative is marked by way of tonal inflection of the subject noun (or pronoun, if it occurs). Pre-verbal subjects, objects (regardless of their position within a clause), and predicative nouns (or pronouns) are not inflected for case in these and other N. languages with case, and occur in the so-called Absolutive (case) form, which is also the citation form for nouns (or independent pronouns).

In contrast to Ñaŋatom and Añwaa, which tend to use prepositions to introduce peripheral semantic roles such as location, Nuer uses Locative case marking (Tucker and Bryan 1966:417). This feature is probably an archaism, as extensive case systems are found in the closely related Surmic languages as well as more distantly related Nilo-Saharan groups such as Taman, Nubian, etc.

Some lexemes of the ten-word list have been reconstructed by Dimmendaal (1988): 'two' **aġyɛw*, 'three' **dʌk*, 'fire' **ma(-č)*, 'water' **pi(-ġ)*, 'tooth' **kɛ-la(-č)*, 'tongue' **ŋa-lyɛp*.

The discourse structure of N. languages is still poorly understood, with the exception of Añwaa, for which the pioneering study by Reh (1996) shows that information structure can be manipulated through the combination of a range of strategies, including constituent order, case (or definiteness marking), as well as aspect.

Nimr

Šayḫ al-makk N. (نمر, in European lit. also "Mek Nimmur") was a son of *al-makk* Muḥammad Saᶜd, chief of the Ǧaᶜālīyīn group of "Sudan Arabs" of the Nile. His residence was Šandī, a village under ↗Funǧ influence. Charged by ↗Ismāᶜīl *bāšā* with supplying provisions and camels to the Egyptian army against Sinnār, he attacked the Egyptian camp at night, carried out a massacre and killed Ismāᶜīl in 1822. Passing through the ↗Säbdärat, the Barka and Täsänäy, he took refuge in al-Sofi on the ↗Atbara with the remains of his men. After an attack by the Egyptians he moved towards the high plains where he obtained a territory from *aṣe* Tewodros II to the north of ↗Wälqayt and resisted against assaults from the Sudan.

He was attacked by the Säbdärat, who killed one of his sons in battle, and was driven back into Wälqayt, where he died. His son *al-makk* ᶜUmara *wad* Nimr (ᶜUmar), his successor in function and title, survived him. This ephemeral kingdom of 40 years between father and son was characterized by continuous fighting and raids, and there was no administration of justice in these territories. The remembrances left by N. among the Ǧaᶜālīyīn are in fact those of a warrior. There is an excellent memory of him in Qaftä.

Nimrāb

The N. (lit. 'sons of Nimr', also Awlād Nimr, Beni Nimr) were the outlawed followers of the Šandī king *al-makk* ↗Nimr, who lived in an Ethio–Sudanese border region from the 1820s to 1860s. Ethnically the N. belonged to the Arabophone Ǧaᶜālīyīn subgroup of "Sudan Arabs", a branch of the ancient Nubians of Northern Sudan, having given up their language. After the 1820s they were also joined, in the course of time, by other Sudanese fugitives and outlaws of different ethnic origins.

After the assassination of ↗Ismāᶜīl *bāšā*, the first governor of the Egyptian ↗Sudan, in 1822 by *al-makk* Nimr, the N. had fled from Šandī to an uninhabited border region near the Setit river, which was claimed by both Ethiopia and Egypt, below the ↗Wälqayt highlands. Here they came under Ethiopian protection, and Nimr's son married the daughter of the local Ethiopian chief and was given the rank of ↗*däǧǧazmač*. The N. formed the large settlement of May Gubba, in Wälqayt. Many of them, however, returned to the Sudan, when in 1829 the Governor-General Ḫuršīd *bāšā* issued a pardon for the Ǧaᶜālīyīn, excluding *al-makk* Nimr and his family.

In this period they became protegés of *ras* ↗Wəbe Ḫaylä Maryam of Təgray. Wəbe gave Nimr the governorship of vast border regions up to ↗Sinnār; this strategic support was linked with the idea not only to check Egyptian expansion by the N. but even to prepare Ethiopian expansion into Sinnār even up to Šandī, and weaken the "Turks" wherever possible (as reported by the French envoys Aubert and Dufey, s. Aubert-Roche 1844:172). Nimr's son *al-makk* ᶜUmara *wad* Nimr (ᶜUmar) was his father's successor in 1845 and pursued the raiding of Sudanese border regions energetically. At May Gubba the N. were well placed for raids on the Sudan, successively becoming little more than frontier bandits (Cumming 1937:35, 38). Another son, Abū Bakr Nimr, was the chief of a settlement of "Takruri"

(cp. ↗Tukrīr), situated near May Gubba, which was composed mostly of Muslim pilgrims of western and central African origin (today the ↗Ṣällim Bet; Parkyns 1853:349f.).

Politically the presence of the N. in northern Ethiopia was of far-reaching importance. When in 1850 *al-makk* ʿUmara raided the ↗Kassala region with some Ethiopian followers, he claimed ↗Qadarif (with the settlement Suq Abu Sin) as territory of the *ras* of Təgray. Later, in an exchange of letters with Egypt, the new Emperor of Ethiopia, ↗Tewodros II, even went so far to claim Šandī itself and thus the whole area west of the ↗Atbara river (Ǧazīrat al-Luban), as this was *al-makk* Nimr's original territory.

The N. dominated all the border area east of the Atbara up to Wälqayt. ʿUmar *wad* Nimr now acted as Tewodros's governor of this region, which was a hiding place for outlaws (RubInd 217). *Aṣe* Tewodros's tax records note that ʿUmar (here listed as Wäd Näbər, Amh. *näbər*, 'leopard', as *nimr* in Arab.; from "*wad* Nimr") paid 2,000 thalers toll for his region, which were counted as part of the provincial revenues of Bägemdər (Pankhurst 1979:10).

In order to calm the conflict and settle the border dispute, the ruler of Egypt Saʿīd *bāšā* pardoned all N. in 1857. They, however, attacked the Doka post around the same time, crossing the Atbara between ↗Mätämma and Qadarif, before receiving this message. ʿUmara was again outlawed by the Egyptians and died in 1863 after an Egyptian attack on May Gubba (Cumming 1937:38). After the outbreak of an open conflict between *aṣe* Tewodros and the Egyptian Governor-General of the Sudan, Mūsā *bāšā* Ḥamdī, the latter heavily raided May Gubba in 1862 (Lejean 1865:130). This led to the deportation to Qallābāt (↗Mätämma) of most remaining N. who were finally allowed to return to Šandī after an appeal by Ḥasan Nimr to the Egyptian ruler (Cumming 1937:38).

Wolbert Smidt

Nine Saints

According to tradition, the N.S. are a group of foreign ("Roman") monks who came to the Kingdom of ↗Aksum between the end of the 5th and the beginning of the 6th cent. A.D. This period, in which Christianity starts to spread all over the northern region of Ethiopia, is also known among scholars as "the second Christianization" (the first one having been accomplished by *abba* ↗Sälama Käśate Bərhan), and concerns the coming of a few foreign monks (↗Mäṭaʿ, ↗*Ṣadəqan*), among whom, however, the N.S. play a central role. The tradition underlines their role as missionaries who propagated the faith and imported monasticism into Ethiopia. Though varying according to different sources (mostly, their Vitae), the group of the N.S. is usually considered to be composed of: ↗Alef (commemorated in the ↗*Sənkəssar* on 11 *Mäggabit*), ↗Afṣe (29 *Gənbot*), ↗Zämikaʾel Arägawi (or Arägawi, 14 *Ṭəqəmt*), ↗Gärima (17 *Säne*), ↗Guba (29 *Gənbot*), ↗Liqanos (28 *Ḫədar*), ↗Ṗänṭälewon (6 *Ṭəqəmt*), ↗Ṣəḥma (16 *Ṭərr*) and ↗Yəmʾata (18 *Ṭəqəmt*). A tenth name, ↗Oṣ (4 *Taḫśaś*) is also sometimes attested.

As suggested by scholars, the arrival of the N.S. in Ethiopia in the late 5th/early 6th cent. was connected with the decisions of the Council of ↗Chalcedon, in 451, the condemnation of the Monophysite belief (↗Monophysitism) and the ensuing persecutions; and, in particular, with the monastic reaction to the *Henotikon*, a decree promulgated in 482 by the emperor Zenon in order to reconcile the Chalcedonian and Monophysite positions (Fiaccadori 2006:65 and n. 105).

No contemporary writing could provide reliable evidence as to either the real aims of the coming of the N.S. or their identity (a problem already pointed out in CRStor 161f.). A series of works of ↗hagiography (*gädlat* or *dərsanat*), written in Ethiopic from the 14th cent. onward, i.e. long after the events described therein, provides a much later interpretations of the facts, transmitted through a medieval cultural background. The oldest hagiographies are the *Gädlä (G.) Ṗänṭälewon* (14th cent., Conti Rossini 1904), the *G. Gärima* (15th cent., Conti Rossini 1897),

the *G. Zämikaʾel Arägawi* (16th cent., Guidi 1896; van den Oudenrijn 1939), and perhaps the *G. Afṣe* in the version seen by Conti Rossini in 1937 (now disappeared, and only known from Conti Rossini 1939). The texts of *G. Afṣe*, as available today (Schneider 1985; Sergew Hable Sellasse 1964), *G. Guba* (recently found, closely linked to the *G. Afṣe*), *G. Alef*, *G. Liqanos*, *G. Ṣəḥma*, and *G. Yəmʾata* (unpublished, s. Brita in preparation) belong all to a later period (probably 19th–20th cent.).

Ethiopian saints, including some of the "Nine Saints", detail showing Gärima, Abib, Latṣun, Abunafər, Ṗälamon [Ṗänṭälewon?] / Alef, Ṣəḥma, Afṣe, Zämikaʾel, Yəmʾata, Guba; mural, 17th cent., Däbrä Sina Maryam, Gorgora; photo courtesy of Alberto Vascon

The names of the authors of some Acts are pseudoepigraphical (↗Yared for *G. Arägawi*, *G. Ṣəḥma* and *G. Yəmʾata*; ↗Athanasius for *G. Afṣe* and *G. Guba*); other Acts are attributed to allegedly historical personalities: *Yoḥannəs ṗaṗas zäʾaksum* ('Yoḥannəs, bishop of Aksum'), for *G. Gärima*; ↗Rətuᶜa Haymanot (who "was appointed bishop of Aksum") or ↗Yəsḥaq (not attested in ms. EMML 1479) for *G. Ṗänṭälewon*.

Nearly all N.S. in the oldest Acts are referred to by epithets or descriptive nicknames: Arägawi ('the Elder') for Zämikaʾel; Gärima for Yəsḥaq; *Zäṣomaᶜət* (lit. 'the one from the cave/cell') for Ṗänṭälewon. In the more recent Acts, *Bərhanä ᶜaläm* ('light of the world') is used for Afṣe and Guba; *Kokäbä gädam* ('star of the desert') for Liqanos; *Somson bänuḫatä ṣəgʷəru* ('Samson by the length of his hair') for Ṣəḥma.

The issue of the origin of the N.S. is connected with the more general problem of the origins and nature of early Aksumite ↗Christianity, and has long been a matter of debate. According to their Vitae, the N.S. came from different eastern provinces of the ↗Byzantine Empire: Zämikaʾel Arägawi, Gärima and Ṗänṭälewon from Rom (Rome), Afṣe from Ǝsya, Liqanos from Qʷəsṭənṭəya (Constantinople), Guba from Qilqəya (Cilicia) Ṣəḥma from Anṣokya (Antioch), Alef from Qisarya (Caesarea) and Yəmʾata from Qosyat or Qosya (Qusyā, in Egypt?). It was generally accepted that they came from Syria. This suggestion, mostly based on a number of Syriac loan-words in Gəᶜəz (Conti Rossini 1897:140, 174f., 1939:151–56, CRStor 155f., 161f.; Guidi 1888:33f.; GuiSLett 13ff. and others), seems to be no longer valid (s. Polotsky 1964 and Marrassini 1990, 1999; cp. ↗Syrian influences).

Several Aksumite kings alternate in the historical setting of the Acts of the N.S. Säᶜaldoba appears in some of the Acts as the father of ↗Ǝllä ᶜAmida, during whose reign the N.S. arrived. Ǝllä ᶜAmida was succeeded by ↗Tazena, reigning for a long period (*G. Afṣe*, *G. Guba*), during which the saints decided to separate; after his death ↗Kaleb ascends to the throne. A different version is found in the *G. Gärima*, where the arrival of the N.S. is dated back to the time of mythical snake-king ↗*Arwe* (whose miraculous death at the hand of God is also described by the *G. Afṣe* and *G. Guba*), immediately succeeded by Kaleb. The latter's role within the cycle is strictly tied to the description of his military expeditions to South Arabia (↗Nağrān), blessed by the saints (*G. Afṣe*, *G. Arägawi*, *G. Guba*, *G. Liqanos*, *G. Ṗänṭälewon*), as well as to ↗Bur (*G. Afṣe*, *G. Arägawi*, *G. Guba*). The reign of Kaleb's successor ↗Gäbrä Mäsqäl is described as peaceful and prosperous, and he appears as a great church builder (*G. Afṣe*, *G. Arägawi*, *G. Gärima*). Landgrants made by Gäbrä Mäsqäl are transmitted in the *G. Afṣe*, *G. Arägawi*, *G. Gärima*.

The Acts of the N.S. include a considerable number of episodes possibly drawn from ↗oral tradition, such as, e.g., the story of *Arwe*, killed

thanks to the prayers of the N.S.; the legend of a monk Məlkiyanos plaiting women's hair; Arägawi's ascension the top of the mount on the snake's tail; the governor Abtinasər and his army, hostile to Guba and killed by their own lances; the ↗Soba and Noba reigning over Ethiopia.

The influence of written tradition on the hagiography of the N.S. can be recognized on different levels, i.e. in terms of: a) patterns also peculiar to the Vitae of other (foreign) saints (the *G. Arägawi* is at times inspired by the Vita of St. ↗Alexis; the *G. Liqanos*, by the Vita of St. ↗Anthony); b) the use of quotations, *in primis* from the ↗Bible; c) the inclusion of data extracted from chronological lists (Getatchew Haile 1981:28f.), as well as information on Kaleb's South Arabian campaign(s). The Nağrān episode as narrated in the *G. Ṗänṭälewon* shares certain features with a tradition different from that of the Gəᶜəz version of the *Martyrdom of ↗Arethas* and closer to the latter's older Greek text (Nosnitsin 2004; Fiaccadori 2006:65f. and n. 108; Bausi 2006:5, 106–10, 244–91). The same episode is mentioned, with fewer details, in the *G. Arägawi*, where it is somewhat confused with the expedition to Bur. The events are only hinted at in the *G. Liqanos*.

A large part of the Acts of each of the N.S. is devoted to their miracles (↗*Täʾammər*). The wondrous episodes are usually scattered along the plot, but in the more recent pieces the Vita is usually followed by a collection of (posthumous) miracles. The collection of miracles of Afṣe seems to have circulated as a work on its own. Sometimes the same miracle, narrated with slight variations, occurs in several Acts. Typically, these miracles testify to the sway of the saint over nature (e.g., the wheat or the plant that fulfils its life cycle in a few hours, the power to displace trees and stones, etc.), and describe his healing power, but also present conversions of Muslims (presented as wealthy men and "pagans", as in the *G. Guba*), recovery of stolen gold and punishments of thieves, as well as births of sons to barren couples etc.

An interesting motif is the disappearance of the saint's corpse immediately after his death (*G. Afṣe*, *G. Arägawi*, *G. Gärima*), usually concealing the most general theme of the theft of ↗relics.

The lists of the names of the N.S. are often unstable. E.g., in the *G. Gärima*, Alef and Arägawi replace Mäṭaᶜ and Oṣ. In two recent manuscripts of the *G. Liqanos*, Oṣ replaces Ṣəḥma. The omission of Arägawi in the *G. Gärima* was seen by Conti Rossini as a clue to a likely hostile relationship between ↗Däbrä Damo and the clergy of Däbrä Mädära (↗Ǝnda Abba Gärima, s. Conti Rossini 1897:174, l. 109). The inconsistencies in the name-list indicate the presence of separate traditions merged together in later times.

The expression "N.S." for this group is present only in the more recent Acts. In the *G. Gärima* the expression "nine brothers" occurs on two occasions, but in a general context. In the *G. Arägawi*, "eight saints" and "eight brothers" are mentioned before the coming of Gärima.

Despite its uncertainties, the Ethiopian tradition has indeed a notion of the N.S. (*təsᶜattu qəddusan*; DombrChr 148; Conti Rossini 1917:705), called also "Romans", *Romawəyan* (Conti Rossini 1942:167, 201). While references to their exact number seem to appear later, the 'saints from Rome' (*qəddusanä Rom*) are already mentioned by Giyorgis of ↗Sägla in the *Mäṣḥafä ↗məṣtir*, as holy monks who came during the reign of Allamida (↗Ǝllä ᶜAmida); this work also provides a summary of their miracles (YaqMist I, 122-25).

The hagiographic lore on the N.S. is supported by local traditions on their veneration, usually (but not exclusively) linked to churches claiming foundation from them: Betä (or Ǝnda) Ṗänṭälewon (near Aksum), from Ṗänṭälewon, Däbrä Qʷänaṣəl (also near Aksum), from Liqanos; the church near the ancient Sabaean temple at ↗Yəḥa, from Afṣe; Ǝnda Abba Gärima, from Gärima; Däbrä Damo from Zämikaʾel Arägawi. The church of Guba is near May Čäw, in the area called Taqara; Ǝnda Abba Ṣəḥma is a church on a small mountain near ᶜAdwa; another church dedicated to Ṣəḥma can be found on a in the neighbourhood of ᶜƎdäga Arbi; the foundation of Alef is located on the top of an *amba* near the village of Ahsäʾa.

Antonella Brita

Niqolawos

Ras N. (d. December 1732) was an important figure in the early 18th-cent. ↗Gondärine kingdom of the Qʷaräññä family. The main sources of information about his life are the chronicle of ↗Bäkaffa until January 1727 and the chronicle of ↗Iyasu II. As stated in the Qʷaräññä genealogies placed in the beginning of the latter text, N. was a son of princess Krəstosawit and a brother of Məntəwwab's powerful grandmother Yolyana (GuiIyas 9); he was thus a grand-uncle of ↗Bərhan Mogäsa (Məntəwwab).

N. possibly received his first military title in 1726, when ↗Bäkaffa appointed a person of this name *šaläqa* of Ṭänqäña (GuiIohan 336). N. undoubtedly played a major role in Məntəwwab's maternal family's accession to power. In June 1730, N., already *azzač* by that time, was made *grazmač* by Bäkaffa. According to Iyasu's chronicle, in September 1730, on his death-bed, Bäkaffa revealed to N. that he had chosen his son Iyasu as successor. N. rapidly gathered some dignitaries, most of them from his family, and crowned the young king. After burying Bäkaffa and giving the new king his royal ↗name, N. also crowned his great-niece and Iyasus's mother, Məntəwwab. In October N. was promoted *däğğazmač* of Səmen and Waña ta, in July 1731 he became *ras*, and, finally, in October 1732 *ras bitwäddäd*, a position that make him second in power to the regent queen.

N. died in December 1732, a few months after his sister Yolyana, and was buried in the Gondärine church of Lədäta. Following his death, the anti-Qʷaräññä dignitaries unsuccessfully attempted to challenge the royal mother-and-son couple, and Məntəwwab's brother ↗Wäldä Ləᶜul became *ras bitwäddäd*.

While the chronicle of Iyasu II emphasizes the role of N. and Yolyana in Məntəwwab's rise to power, neither ↗Prutky, present in Gondär in 1752, nor, some 25 years later, ↗Bruce, mention N. or his sister.

Anaïs Wion

Nissel, Johann Georg

N. (b. 1623 or 1624, Pfalz, d. 6 or 16 December 1662, Leiden) was a German Orientalist. Little is known about his life. He started out as a scholar of Syriac around 1646, when he went to Leiden to study theology and Oriental subjects; there he remained until his death. N. became known for developing Ethiopian typographic glyphs and for his publications.

In the 16th and 17th cent., besides N.'s own, six

others typefaces were employed, the best known being those by Johannes ↗Potken, ↗Täsfa Ṣəyon, the London Polyglot (1657) and ↗Hiob Ludolf. N. acquired his letters from the Leidener printer Johannes Elsevier in 1655. The latter had bought them from the Orientalist Thomas Erpenius (d. 1624), who had them cut after those used by Täsfa Ṣəyon for his ↗New Testament. After N.'s death the material went to his friend and colleague Theodor Petraeus (d. 1672), who had travelled to the Orient, coming back with ↗manuscripts. Petraeus's widow sold the letters to Paul Kray from Hamburg. With these same glyphs Christoph ↗Schlichtings's works were printed.

Between 1654 and 1660, N., alone and in collaboration with Petraeus, produced six small Ethiopian versions of ↗Bible texts, extending between 24 and 40 pp.: Jas, 1–3 Jn, Jew, Song, Ruth, Zeph. Sources for the N.T. and O.T. (but the *Song of Songs* [↗Wisdom books] is also printed after Potken) texts were the editions of Potken (1513) and Täsfa Ṣəyon (1548–49) and, resp., the mss. Petraeus brought from the East and from Rome (↗Santo Stefano dei Mori), today at the ↗British Library.

Siegbert Uhlig

Nob

Abba N. (ፍኑ) was a monk from the monastery of Däbrä Bäkʷər who was appointed ↗*nəburä əd* of Däbrä Damo and held office in 1450. According to the Acts of *abba* ↗Yonas "of Bur", when *aṣe* ↗Zärᵓa Yaᶜəqob invited *abba* Yonas and his disciples to a council at ↗Däbrä Məṭmaq to address the question of ↗Sabbath observance, N. added his personal message to this invitation urging these monks to come because the Emperor was favourable to their cause (s. Conti Rossini 1903:180, 199; CerMaria 112).

Conti Rossini (1950:424) identified the *nəburä əd* N. with *abba* N. who, soon after 1450, fell out of favour with the Emperor for reasons that are still not entirely clear. One possibility concerns his associates: in the Chronicle of Zärᵓa Yaᶜəqob, N. is affiliated with *bitwäddäd* ↗ᶜAmdä Mäsqäl, who was suspected of being a heretic plotting against the Emperor; consequently, he was deported to Gʷašaro (PerrZarY 11f.). N.'s association with the *bitwäddäd* may have influenced the Emperor's attitude. Alternatively, N. himself may also have been considered an heretic because he refused to accept the cult of ↗Mary (CerMaria 107–12).

Two more persons bearing the same name appear in sources from the same period. In 1426, the Ethiopic community of ↗Jerusalem was ruled by a *rays* (Arab. *raᵓīs*, 'chief') named *abba* N., as testified by a note in the ms. St. Petersburg Or. 612 (Conti Rossini 1948:195). This N. was probably the same for whom different homilies, particularly the ↗*dərsan* in honour of the archangel Afnin, were copied in the 15th-cent. manuscript originating from ↗Daga Ǝsṭifanos (BN d'Abbadie 94, fols. 57–62; s. Fiaccadori 1997:48).

Another N. is associated with the ↗Rema community. According to the tradition, he was the founder of the monastery and the brother of *aṣe* Yəsḥaq (1414–30). Both facts are supported by the Rema archives recently pointed out (CrumLand 30, 41, 329, 368; mf. Illinois/IES 88.XXXVII n° 22, 17, 16 and 14).

Although all figures by the name N. were active between 1419 and 1450, it is impossible to say with certainty whether they can be identified as one person, two, or more.

Claire Bosc Tiessé – Marie-Laure Derat

Noba

The N. are mentioned in several Aksumite ↗inscriptions between the middle of the 4th and the first half of the 5th cent. The name probably refers to Nubian speakers (s. ↗Nubia in EAE vol. 5) who appeared during this period in the Middle Nile Valley and in central Sudan.

Already mentioned by the Greek geographer Eratosthenes (ca. 200 B.C.), quoted by Strabo, the "people" (*ethnos*) known as the *Nubai* are vaguely situated west of the river, "from ↗Meroë to the bends of the ↗Nile" (FHN 109). He describes them as nomads divided into several political units, but not subjects to the kings of Meroë. This western localization is confirmed about 100 B.C. by a Meroitic inscription (REM 0075). This situation is to be related to the recent linguistic works that confirm the thesis of the linguist Zylharz (1949/50), who identified the homeland of the Nubian languages with the Darfur and Kordofan regions (cp. Thelwall 1982).

Some representations of captives, identified by inscriptions as N., i.e. "Nubians" (Török 1989:204, fig. 311f.), reveal the confrontations between the Meroites and the N., from the end of the 1st cent. B.C. and specially during the 1st cent. A.D. even though they still had not at this time mass migrated towards the Valley.

The settling of these people on the banks of the river really began in the 4th cent. A.D. This process is slightly better documented for Lower Nubia where the Nubians are known, in Greek sources, as the Nobades or Noubades. On the other hand, the interpretation of this transition period for regions situated South of the third cataract is still a matter of debates closely linked to the wider problem of the "end of Meroë" (Lenoble 1999; Török 1999).

The Nubians' migration and the Aksumite campaigns have long been considered as the only causes of the "fall" of Meroë. The actual interpretations, more subtle, continue however to give a decisive importance to these external operations even if the chronology and the respective role of the N. and Aksumites cannot be determined exactly.

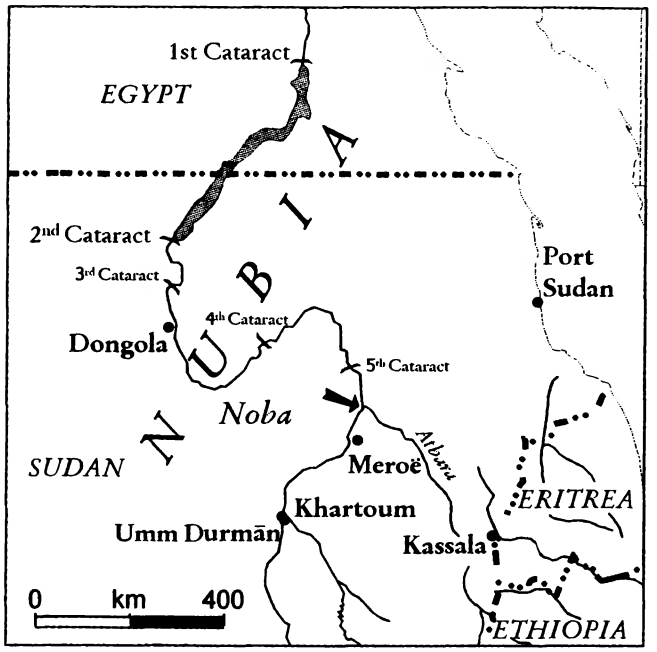
Two Aksumite ↗stelae, one inscribed in Greek (FHN 299 = RIÉ 271) and the other in Gəᶜəz (RIÉ 189 = DAE 11), mention the military activities of King ↗ᶜEzana (mid-4th cent.) against the N. The two versions show, however, considerable differences, to such an extent that according to certain scholars, these documents would refer to two distinct campaigns (Dinkler 1977). In the opening formulae it is stated that the "↗Kasu" (generally identified with Kushites, i.e. Meroites), and the "Bougaites" (identified with the ↗Beğa) were already under Aksumite domination. These titles may nevertheless turn out to be anachronistic, and perhaps express the hegemonic ambition of the kingdom rather than a real subjection.

According to RIÉ 189 = DAE 11, the N. were already settled somewhere around the Nile and ↗Atbara confluence, where they seemed to have taken several Meroitic cities. Yet they did not drive the Kushites away from their heartlands since the inscription states that the Aksumites fought them at the junction of the two rivers. Also mentioned in the document are mysterious "red N." against whom an expedition was carried out. This people seems to be settled further north and may be identical with the "other Nobades" of the triumphal inscription of the Nobade king Silko carved on the wall of the temple of Mandulis in Kalabsha (FHN 317).

The N. figure with the "Kasu" and the "Bougaites" amongst the peoples subjugated to the powerful king ↗Kaleb, around 525 (RIÉ 191). Perhaps this is the sign of the imposition of political control on these populations between the reign of ᶜEzana and the first quarter of the 5th cent. However, this ethnonym does not occur anymore in the title of his son and successor ↗WᶜZB (RIÉ 192) while the Kasu and the Bougaites are still mentioned.

For some archaeologists, these attempts to reconstruct narratives around the "end of Meroë" and the Nubian migrations are based on the outdated model of the "barbarians' invasions". Lenoble (1999) prefers to insist on the continuity of Meroitic culture, in particular in the funerary customs, whilst Edwards (1989) conceives these changes as a slow and complex process of cultural integration. Other specialists even contest the identification of the ethnonyms quoted in the ᶜEzana stelae with the populations of the Middle Nile Valley. According to their readings, the document could actually refer to a more local campaign on the borders of Aksum (Behrens 1986; Bechhaus-Gerst 1991).

The ethnonym N. is also mentioned several centuries later in the 15th-cent. Vita of the famous 13-14th cent. saint ↗Ewosṭatewos. While travelling to Egypt in order to meet the Coptic patriarch Benjamin II (1327–39) he spent some time in the land of the N. where he was, according



to the Vita, received by a king named Säbᵓa Nol. This king, who is said to be at war at the moment of the arrival of Ewostatewos, was helped by the miraculous intervention of the holy man to defeat his infidel enemies.

Although no such name is attested yet for a Nubian ruler, it seems that the land of the N. stands here for one of the two Christian kingdoms still in activity at this time in the Middle Nile Valley, i.e. the kingdom of Makuria (capital in ↗Dongola), or its southern neighbour, the kingdom of Alodia (ᶜAlwa, capital Soba).

Robin Seignobos

Nogueira, Bernardo

N. (b. ca. 1605, Fəremona, d. 1653, Goǧǧam) was a ↗Jesuit missionary. The grandson or great-grandson of Francisco Nogueira, who was a veteran of Christovão da ↗Gama's 1541 expedition, N. grew up in ↗Fəremona, where he attended the seminary organized by the Jesuit missionaries. He was fluent in Amharic and Portuguese and knew Latin. In 1625, the visitor Manoel de ↗Almeida thought him talented and took him to the residence of ↗Gorgora, where N. served as his interpreter and assisted him in his journeys.

After ↗Fasilädäs's Orthodox restoration, when the Jesuit mission was disrupted and most of the fathers left the kingdom, N. was appointed vicar general of the mission by Patriarch Afonso ↗Mendez (BecRASO XIII, 363) and asked to stay in Ethiopia to take care of the Catholics there. In 1635, he was one of only eight Catholic priests left in the country, four of them of Portuguese origin (ibid. 102). Subsequently, he lived near Fəremona

and in "Tacussa" (Teqʷesa), west of Lake Ṭana. He officiated secretly, kept the Jesuits in ↗Goa informed about events in Ethiopia and visited ↗Śəᶜəlä Krəstos on one occasion, then in exile in "Coara" (Kʷara, also Təwodros Kätäma). In 1652 he went to ↗Massawa. There he met a Jesuit envoy from India, Jorge da Crus, who confirmed N. as Jesuit (his admission into the order had been already accepted some ten years earlier by the Superio-General Mutio Vitelleschi) and gave him instructions and funding. Towards the end of 1653, while on his way back to Goǧǧam, he was discovered and the governor of Goǧǧam had him executed.

Andreu Martínez

Nöldeke, Theodor

N. (b. 2 March 1836, Harburg, d. 25 December 1930, Karlsruhe) was a scholar of Oriental studies. Being well grounded in both the classical languages and Hebrew from his school days, N. enrolled in classical philology and Oriental studies at Göttingen in 1853. It was thanks to the eminent Orientalist and theologian Heinrich von ↗Ewald that N. fully committed himself to Oriental studies. He submitted his doctoral dissertation in 1856, written in Latin, on the Qurʾān; an enlarged German version of it was published in 1860. This study, revised and updated by Schwally (²1909–38), has remained a standard work to this day.

Between 1856 and 1860, N. studied Oriental manuscripts in Leipzig, Vienna, Leiden, Gotha and Berlin. After his "Habilitation" in Göttingen in 1861, he obtained a professorship at Kiel University. In 1872, N. accepted a professorship at Strasbourg (Germany at that time), where he taught until he became emeritus in 1906. He chose to reside there until 1920. He spent the remaining years of his life in Karlsruhe.

N. had many students destined to become distinguished scholars, such as ↗Brockelmann and ↗Littmann (who was also his grandson-in-law). Several of N.'s works are still of great value today. His fields of interest were: Arabic poetry (1890), history and grammar, Persian history (1879) and literature, and comparative history of Oriental literature (1890). In Semitic studies his grammars of Neo-Syriac (1868), Mandaic (1875), Arabic (1897), and Classical Syriac (²1898) have remained authoritative. He also published a survey of the ↗Semitic language group (²1899).

N.'s publications on ↗Ethio-Semitic languages predominantly lie in his two volumes of collected essays (1904, 1910), and include a number of important reviews, showing his uninterrupted interest in the field. His comparative observations on subjects such as the names of the letters of the alphabet, certain nominal forms, as well as word formations, are still important works. Similarly, his fundamental study of loan words into and from ↗Gəᶜəz (1910:31–66) has not been superseded.

Nomadic pastoralism ↗Pastoralism

Non-Aligned Movement

The N.A.M. is an international organization of over 100 states which are not formally aligned with or against any major power bloc. The foundations of the N.A.M. were laid by Jawaharlal Nehru, Prime Minister of India, who wished to

separate the two military blocs with an "area of peace" represented by the newly independent countries of Asia and Africa. The Afro-Asian Conference of Bandung (April 1955) approved the guidelines of the N.A.M., encompassing the principles of peaceful coexistence without formally endorsing neutralism since some of the participants were actually members of bilateral or multilateral alliances with one of the superpowers.

The first diplomatic event of the N.A.M. was the meeting in July 1956 on the resort island of Brioni between President Josip Broz Tito of Yugoslavia, President Ǧamāl ʿAbdannāṣir of ↗Egypt and Nehru. In September 1961 Tito convened the first Conference of Non-Aligned Countries in Belgrade. During the Cold War (ca. 1955–90), it preached both active neutrality between East and West and a militant role for accelerating the emancipation of the colonial territories and a reform of the world order. The principles of the N.A.M. were incorporated into the Charter of the ↗Organization of African Unity founded in May 1963 in Addis Abäba.

Ethiopia joined the N.A.M. from the very beginning, in spite of its military collaboration with the ↗United States – hosting a foreign military base was considered antithetic to the principles of N.A.M. Ethiopia participated at the Bandung and successive summits in Belgrade, Cairo (1964), Lusaka (1970), Algiers (1973). Somalia too attended the N.A.M. conferences from 1961 onwards. In the golden age of the movement, *aṣe* ↗Ḫaylä Śəllase I was a sponsor of the N.A.M. in Africa and was able to keep good relations, with the U.S.A., the U.S.S.R. (↗Russia) and ↗China as a guarantee of Ethiopia's autonomy and territorial integrity. After the 1974 Revolution, the *Därg* (↗Provisional Military Administrative Council) regime shifted towards the U.S.S.R. and the Communist bloc.

Giampaolo Calchi Novati

Nonno

The N. (also Nunnu, Wärra Nonno) are part of the Wäräbo branch of the eastern Sibuu section of the ↗Mäčča Oromo. Their territory on the northern and eastern shores of the Limmu ↗Gibe and Lagamara Gibe (also called Nonno Gibe) rivers is surrounded mainly by those of other Oromo groups, like the ↗Čaboo and Amayya in the East, the Šora, ↗Botor and Ḍaḍalle in the south, the ↗Leeqaa Billo in the west and the Čalya in the north. In the administrative structure of ↗Wälläga province, the N. were part of the ↗Ǧimma Leeqaa (later Nunnu Qumba) *wäräda* of Arǧo *awraǧǧa*. Today the N. belong to the Ǧimma zone of Oromiyaa.

Before the migration of Mäčča groups into the region at the end of the 16th cent., the area had been associated with ↗Ǝnnarya. This kingdom became an ally of the Ethiopian empire and was formally Christianized at the end of the 16th cent. Antoine d'Abbadie (quoted in TrIslam 109f., n. 3) found that "the Christians [were] very numerous" in N. country and explained this with early Christian influences. Today the majority of the N. is Muslim.

The pastoralist N. were frequently attacked by the kings of ↗Limmu Ǝnnarya, ↗Abbaa Gomol I and his successor ↗Abbaa Bagiboo I. The N. are described as their "bitterest enemies". Limmu Ǝnnarya mainly raided for slaves and cattle. Under Abbaa Bagiboo I, a large part of the N. territory was annexed to the kingdom as part of the *mogga*, the outermost defence circle. Two conditions influenced Limmu Ǝnnarya's strong interest in controlling N. country: (1) the threat of the Šäwan king Śahlä Śəllase (r. 1807–47), who in the last five years of his reign had begun to expand his influence into the region and (2) the fact that the important trade route between Šäwa and Limmu Ǝnnarya's greatest competitor, the kingdom of ↗Ǧimma Abbaa Ǧifaar, went through N. country (AbPrince 78, n. 3, 81, 90, 92; MHasOr 103, 106, 175; HarAeth vol. 3, 54).

The region of eastern Sibuu was divided mainly among two alliances, one led by the N. and one of the rival Sibuu Amuma. Through their good relation with the Leeqaa, the N. were able to hold a dominant position including the control of the important market of Ṭalo near Sire. Constant raids by the Ǧimma Oromo drove away the N., under their leader Nagawo, from the Ṭalo area. The market then was taken over by Bušan, the leader of the Sibuu Amuma (Berhanu Mulugeta 1984:12, 15).

In the conflict between *nəguś* ↗Mənilək of Šäwa and *nəguś* ↗Täklä Haymanot of Goǧǧam over the hegemony over the south-western Oromo countries, the N., led by *abbaa muudaa* Dambi Giga, joined, together with the Leeqaa,

the pro-Goğğame coalition. Before the decisive battle of ↗Ǝmbabo in 1882, the armies of *ras* ↗Däräso Ṭabo of Goğğam and *ras* ↗Gobäna Daĉi of Šäwa had met in the short battle of Dilalo in N. country (CerFolk 29, 35).

The Sibuu Amuma under Gända Bušan for some time refused to surrender to any of the invaders. After the battle of Ǝmbabo, Gända was taken captive by Mənilək's army. Later he participated in Mənilək's campaign in Wälaytta (Berhanu Mulugeta 1984:15, 34f.; Tessema Ta'a 1980:59, 77).

When Gobäna returned from Limmu Ǝnnarya, which he had taken over from Däräso, the N. tried to block his way back to Šäwa. With the help of *mooti* ↗Moroda Bakaree, who had temporarily turned to the Šäwan party, Gobäna defeated the N. and Dambi Giga was taken prisoner. The N., under *mooti* ↗Fatansa Illuu, joined another coalition with the Leeqaa against Mənilək but they were unable to prevent their forced integration into his empire after the battle of ↗Ǝmbabo (CerFolk 43ff., 58). While Moroda Bakaree could stay in power under Šäwan rule, the N. and the Sibuu region in general were controlled by a *šäläqa* ('commander of thousand [soldiers]'). In the late 1890s the ↗*kätäma* of N., Nonno Migra, was founded. It was administrated by a *fitawrari* (Berhanu Mulugeta 1984:34–38; Tessema Ta'a 1980:72, 77f., 81; PankHist II, 202).

Comparing the N. of his time with their Oromo neighbours, such as the ↗Botor, Haberland (VSAe II, 554) qualifies the N. culture as "still unadulterated Galla-ness". Like other Oromo groups the N. were traditionally divided into two status categories, the privileged "pure" ↗*boorana* and the ↗*gabaro*. Haberland reports that despite a recent Christian Orthodox mission and a fast-growing rate of Muslims the N. were strongly related to the traditional Oromo socio-religious system, observing the feast of ↗*ateetee*, carrying out the ↗*buuna qallaa* sacrifices and following their local form of the ↗*gadaa* system (VSAe II, 15, 554ff.). The N. maintained their *gadaa* system longer than their neighbours, the Leeqaa, who developed a more centralized political system under the rule of a ↗*mooti* (Berhanu Mulugeta 1984:17f.).

Nuer

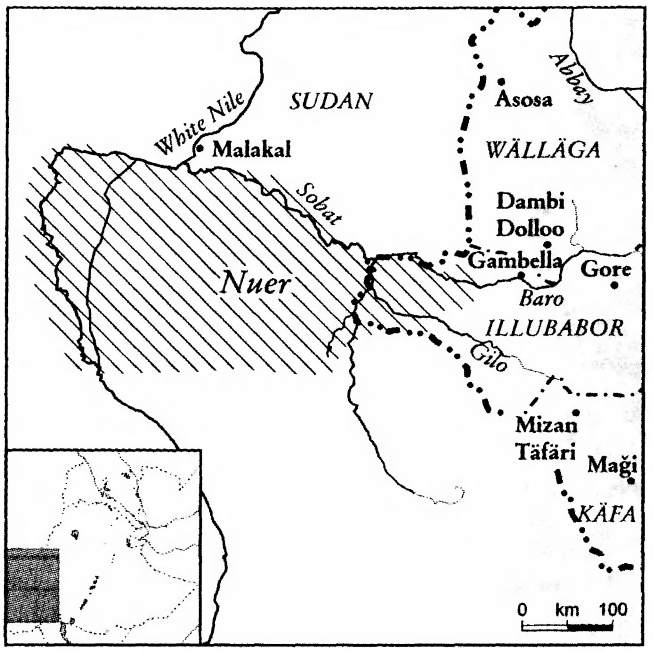
Nuer language

N. (self-name: Naadh), one of the major ↗Nilotic (↗Nilo-Saharan) languages, is spoken by some 850,000 people in southern Sudan, and by approximately 65,000 people in Ethiopia. N. consists of a number of dialects (Dor, Eastern Jikäany, Western Jikäany, Cien, Thognaath, Lou, Nyuong, and Thiang). In Ethiopia predominantly the Jikäany [*Ğikääñ*] dialect (also known as Abigar) is spoken, which is the most deviant dialect of N. The languages N., Atuot, and Dinka together form a genetic unit (Dinka-Nuer) within the Western Nilotic branch of Nilotic. Atuot, a language spoken by some 25,000 people mainly in an enclave among the Dinka some 60 miles west of the White Nile in Sudan, apparently is mutually intelligible with western varieties of N.

Giuseppe Pasquale Crazzolara, a pioneer of African linguistics, published a grammar (1933), which to date remains the main reference work on this language.

As is common with a number of other Western Nilotic languages, there are five points of articulation for stops and nasals at the phonological level in N. The consonants are: labials *p*, *b*, *m*, *w*; dentals *ṯ*, *ḏ*, *ṉ*; alveolars *t*, *d*, *n*, *l*, *r*; palatals *č*, *ǧ*, *ñ*, *y*; velars *k*, *g*, *ŋ*. Crazzolara (1933:6f.) as well as Tucker and Bryan (1966:406) report the presence of a uvular (post-velar) fricative *ɣ* with phonemic status in a few lexical items in Dinka-Nuer. This sound unit presumably corresponds to the glottal *h* reported for Ethiopian N. by Moges Yigezu (1995:159), who further observes that "[t]he glottal consonant *h* is marginal; it is found only in twelve words in a corpus of around six hundred basic words".

N. distinguishes between seven points of articulation in its vowel system. For each of these



positions, a contrast occurs between breathy and creaky voice quality, whereas vowel length is also distinctive, except for the breathy high back vowel, since short breathy *u* is lacking from the system. The vowel system is thus: (short breathy) *i̤*, *e̤*, *ɛ̤*, *a̤*, *ɔ̤*, *o̤*; (short creaky) *ḭ*, *ḛ*, *ɛ̰*, *a̰*, *ɔ̰*, *o̰*, *ṵ*; (long breathy) *i̤i̤*, *e̤e̤*, *ɛ̤ɛ̤*, *a̤a̤*, *ɔ̤ɔ̤*, *o̤o̤*, *ṳṳ*; (long creaky) *ḭḭ*, *ḛḛ*, *ɛ̰ɛ̰*, *a̰a̰*, *ɔ̰ɔ̰*, *o̰o̰*, *ṵṵ*. According to Moges Yigezu (1995:164), there are three additional (centralized) breathy vowels with phonemic status in Ethiopian N.: *ë̤*, *ä̤*, and *ö̤*. Interestingly, the binary distinction between breathy and creaky vowel types in N. corresponds to a distinction between [-Advanced Tongue Root] and [+Advanced Tongue Root] vowels in Western Nilotic languages like Anywa (↗Añwaa). The five original Western Nilotic [-Advanced Tongue Root] vowels *ɪ*, *ɛ*, *a*, *ɔ* and *ʊ* seem to have developed into seven creaky voice vowels, whereas the corresponding five [+Advanced Tongue Root] vowels have developed into seven breathy vowels in N. N. distinguishes between three tone levels, high (◌́), mid (◌̄) and low (◌̀).

The segmental structure of a word in the N. essentially conforms to the formula -C(w)V(V)(C), preceded by (C)V- prefixes or proclitics and followed by -(C)V suffixes or enclitics. Apart from affixation, there is also a considerable degree of word-internal alternation accompanying inflectional or derivational processes in major categories such as the noun or the verb. As is common with other Nilotic languages, the basic form of a noun in N. may either be inherently plural (with marked singular form, as in *le̤i* [sg.], *le̤č* [pl.] 'tooth'), singular (with marked plural, as in *le̤p* [sg.], *le̤ef* [pl.] 'tongue'), or both the singular and the plural may be explicitly marked (as in *ǧwe̤i* [sg.], *ǧṳa̤t* [pl.] 'disease').

The verb (including auxiliary) in N. is inflected for pronominal subject by way of suffixation. Shortened forms of the independent pronouns are used for objects or the complement of the preposition *ke* 'with, against, to, for etc.'. Independent pronouns are used, for example, as predicates in non-verbal sentences, or when a pronominal subject is topicalized. Compare the three realizations for the third person singular: *-e̤* (pronominal subject suffix), *ǧe̤/e̤* (clitical elements called "middle sized forms" in Crazzolara 1933:62), and the "full-sized" independent pronoun *ǧê̤n*. In 1st pers. pl. pronominal suffixes, N. makes a universally rare distinction between 'I and (s)he/they' exclusive *-kɔ̀*, 'I and you (sg.)' dual exclusive *-nè*, and 'we and you (pl.)' plural inclusive *-ne̤* (Crazzolara 1933:62). This distinction between the latter two is neutralized in the corresponding middle-sized and independent pronoun forms. Mood or modality is expressed by way of a combination of verbal inflection and the use of separate particles.

Whereas Crazzolara (1933:143ff.) and Tucker and Bryan (1966:430) describe the particles *či* and *bi* preceding the verb in N. as past and future tense markers, respectively, these possibly should be interpreted as completive and change of state or activity markers, i.e. as aspectual morphemes. Since the same position may be occupied by a number of other inflectional elements, including negation markers, they are simply referred to as "auxiliaries" for the present purpose.

Derived verb forms in N. may express a range of semantic notions, such as movement towards or away from the deictic centre, dative, or pluractionality. A distinction between active, passive, and antipassive (or "qualitative") can also be expressed on the verb.

N. may be characterized as a verb-second language, since the common constituent order is Topic-Verb-X, whereby the topic position can be filled by the subject or any other syntactic constituent, e.g. an object or adverb, and X may be filled by a syntactic subject or object, or by both constituents in that order. Alternatively, the topic position may be empty, thus resulting in a verb-initial structure. If an Aux(iliary) verb occurs, it occupies the place of the main verb, which then appears at the end of the phrase: Topic-Aux-X-Verb.

Post-verbal (but not pre-verbal) subject nouns are inflected for nominative case, a property which N. shares with a range of other Nilotic (and Surmic) languages. Pre-verbal subject nouns, or object nouns regardless of their syntactic position, occur in the absolutive. (Auxiliaries behave like verbs in that they also require a following subject to be in nominative.) In addition, N. nouns have genitive and locative cases. Case is expressed by way of tonal inflection and/or stem-final consonant alternation. Compare:

ǧɛ́n	*à*	*kɛ̀*	*yâŋ*
(s)he.ABS	is	with	cow.LOC

'(s)he has a cow'

yáŋ	*à*	*kɛ̀-ǧɛ̀*
cow.ABS	is	with-him/her.LOC

'the cow is his/hers'

The ten-word list is as follows: 'one' *kɛ̱ɛ̱l*, 'two' *rɛ̱w*, 'three' *dyɔ̱k*, 'fire' *mɑ̱ɑ̱č*, 'water' *p̣i*, 'sun' *čɑ̱ŋ*, 'moon' *pɑ̣i*, 'blood' *ri̱ɛ̱m*, 'tongue' *lɛ̱p*, 'tooth' *l̤ei*.

Gerrit J. Dimmendaal

Nuer ethnography

The N. are agro-pastoralist cattle herders and cultivators, predominantly grow maize and a small variety of vegetables on the fertile soil of the river banks and in the upland savannah. Agricultural products constitute around 60 % and diary products 40 % of their staple diet. During the dry season the N. settle as large groups in dry-season cattle camps (*weč*) along the Baro Gilo rivers and their tributaries while during the rainy season, when the river area is flooded, they move uplands into settlements of nuclear families (*toč*). Fishing and hunting also form important parts of their subsistence economy, though hunting is decreasing as most of the wildlife has been destroyed by the Sudan Peoples Liberation Movement (SPLM).

The overwhelming majority of the N. live in southern Sudan, which by estimating growth figures from the 1956 Census (war-related deaths not considered) might have reached 1,2 Mio today. According to the 1994 Census, the number of N. living in the Gambella regional state of Ethiopia is estimated at 64,473.

The main N. tribes in Ethiopia are the Eastern Ǧikañ, particularly Gaǧaak, followed by the Gaǧiok sections Kuek and Lang as well as Gaagwang. Neighbouring the N. to the West live the Dinka and to the East the ↗Añwaa. To the South, they are bordering the ↗Murle and to the North the two small ethnic groups, Maban and ↗Komo.

The N. started to expand from the area north of the Baḥr al-Ġazal river which by then was under control of the Anglo–Egyptian Condominium towards imperial Ethiopia at the end of the 19th cent. With the signing of the boundary agreement in 1902 between colonial Sudan and imperial Ethiopia, some sections of the Eastern Ǧikañ officially became part of Ethiopia. Some N. leaders entered the state scene as imperial agents in the 1930s and during the *Därg* era, were further integrated into the Ethiopian state system with their assumption of two of the key administrative and political posts. Although the first generation of N. already graduated from schools in Gambella in the 1960s, education became an issue for larger sections of the society in the 1980s when the refugee camps which were opened in the area offered access to schools. With the introduction of ethnic federalism by the EPRDF regime and the establishment of the Gambella regional state in the 1990s a substantial part of the first generation of educated N. have been further incorporated into the Ethiopian state as administrators.

In academic circles the N. are known for their segmentary lineage system which consists of lineages that nest into larger tribes. Their political system was admired for the maintenance of order despite a lack of centralized leadership. It was thereby assumed that external threat produced by the feud created a balanced opposition based on an "internal logic" of alliances between segmentary lineage segments. Today we know that the significance of leadership was underestimated as well as that processes of alliance formation are not only shaped by kinship structures. They are also induced by individual actors who apply strategies of inclusion and exclusion related to competition over resources. The globalising forces of colonialism, missionary activities and the civil war in Sudan have dramatically changed the N. political and cultural

Nuer refugees from Bentiu during a clan festival in the Funyido Refugee Camp, south-western Ethiopia; photo 2002, courtesy of the author

system. During the *Därg* they suffered under the presence of the government supported SPLA in Itang. In addition to the negative effects Gagaak N. experienced due to large population movements and marauding soldiers in their areas, the SPLA launched a devastating war against them (1985 – 1988). Deteriorating their fighting restraining ethics by basically changing the concept of pollution (*nueer*) the war caused an escalation of violence in the Ethiopian N. areas, resulting in the flight of many of them into the refugee camps that were established in the region. These refugee camps became urban centres where the N. gained access to education and converted to Christianity as a coping strategy against war and violence. Here, they also established their first modern institution in Ethiopia – the Western Bethel Mekane Yesus church.

After the fall of the *Därg* in 1991 the N. were highly fragmented by the divide and rule policy by the SPLA and their formerly flexible lineage system had rigidified. The outbreak of intertribal war and suppressed feuds immediately followed the SPLA's departure also involved their neighbours the Anywaa and Murle. This armed struggles over resources was further enforced by an overflow of the area with guns that were partly left behind by the SPLA and partly flowing in from the civil war in Sudan. While most refugees had returned to Sudan, in 1992 the young generation of Ethiopian N. returned to the Ethiopian and newly opened Kenyan refugee camps from where they were resettled to North America, Australia and European countries. From those countries the N. started forming a transnational lineage network connecting churches and political groups with those in the homeland and other receiving countries facilitating a transnational flow of remittances, ideas and people. This network affected the N. in Gambella by increasing the number of churches, bridewealth rates and raising the level of education. Currently, as Christianity flourishes all over their areas, young N. are at the forefront of churches, embodying the expectations and promises of Western capitalist ideals.

Christiane Falge

Nug

N. (*Guizotia abyssinica*, nook, nuk, niger seed; Amh. ኑግ, *nug*, Tgn. ኒሁግ, *nihug*; Orom. *nuga*, *nuugii*) is cultivated as an oil seed crop in the north-central highlands of Ethiopia, especially in Goğğam, Bägemdər, Səmen and western Təgray. It remains doubtful whether it was ever found outside agricultural fields (Asmamaw Haile Michael 1973:3). It has been grown as an important oil crop for generations, as, e.g., references by Bruce indicate (s. Murray 1808:461f.). Today, Ethiopia has the largest production and exportation of N. seed in the world. Over the years, the amount produced has always been higher than that of safflower, sesame, groundnut, and linseed (Chiovenda 1911:128; 1923:49).

N. is a herbaceous annual that within Ethiopia displays a large phenotypic variation between regions of cultivation, and thus differences in branching, size and form of leaves and stem pigmentation (Buzi 1938:211). Usually, the flower is yellow and the plant has three branches. A single plant bears 20–40 heads, a good head producing about 30 ripe seeds. It tolerates disease, drought, grazing, insects, poor soil and slope, and stores for a year or more without deterioration (Baldrati 1950:403; Seegeler 1983:125). N. is grown at altitudes between 1,700 m and 2,500 m A.S.L., where the average daily temperature ranges between 16°C and 20° C during the rainy season. It is often cultivated on hilly slopes where fertility is low due to erosion. It is adapted to tropical and temperate regions where the highest seed yields are obtained with moderate rainfall (Baldrati 1950:410; Seegeler 1983:124). Even if N. is adapted to a wide range of soils, the best are the moderately light but deep soils. It is more salt tolerant than linseed or sesame.

Sowing season is between May and July at a rate of 5 kg per ha (Buzi 1938:221; Asmamaw Haile Michael 1973:14). Many Ethiopian N. cultivators do not manure the land. Thinning of seedlings, weeding and soil cultivation are not traditionally practiced (Chiovenda 1923:67). N. sometimes is used for rotation with ↗maize or wheat. In some areas it is also planted with pulses and spices (Baldrati 1950:407). N. is mostly harvested 4–5 months after planting. It is allowed to stand until flowers have withered. Further delay causes heavy loss of seed through shedding (Seegeler 1983:129). When harvested by hand, the crop is cut with sickles, tied into bundles and dried in the sun for around a week. The whole plant is cut near the base and then heaped for final drying. For threshing, the dried stalks are beaten on a threshing floor. In commercial farms, harvesting and threshing are done mechanically (Asmamaw Haile Michael 1973:23).

N. is cultivated in both family farms and state or cooperative farms. Yields of seed vary from 300 to 1,500 kg per ha depending on the diversity of habitats. Traditionally, the N. oil (trade names: niger seed-oil, ramtil oil) is prepared from roasted seed, which is pounded or ground. The soft mass is placed in hot water and squeezed. By this process, the oil is liberated and begins floating. It is then skimmed off the water and is ready for cooking (Seegeler 1983:129). Traditional processing yields a very low amount of oil. By some estimates, seeds containing about 300 g per kg only yield 180–200 g per kg, while commercial mill extraction would give close to 300 g (Asmamaw Haile Michael 1973:27). Today, Ethiopia produces 100,000–200,000 tons of N. oil annually (CSA).

N. oil is mainly used for cooking: the seed is, like most other oil seeds, mixed with pulses and used to prepare vegetarian stews (*wät*). Slightly roasted seeds may be salted to prepare *lətlət*, which is sometimes given to children with voracious appetites, to keep them from eating too much (Chiovenda 1923:64). Such kinds of seeds may also be boiled in water, which imbibes its flavour. People drink it particularly during Lent (Buzi 1938:212). It is also used for anointing the body, for adulterating more valuable oils, and medicinally for treating diseases such as rheumatism and arthritis, and for the treatment of some sexually transmitted diseases (Griaule 1930:56).

Numbers, numerals, numeric systems

N. represent quantitative classificatory systems, based on mnemonic devices that link basic cognitive digits to higher units. From the perspective of comparative anthropology and ethno-mathematics, the use of numbers/numeric systems gives access to deep cognitive structures of societies. A cognitive linkage is assumed between numeric systems and patterned art, games and chance, music, dance, poetry, measurement, time and money (Zaslawsky 1973; Crump 1990; Gerdes 2005).

The written Ethiopic system of N. was documented as early as the 4th cent. A.D. (DAE IV

nos. 7, 10, 11). It developed under the influence of Greek merchants and traders from the Eastern Mediterranian and derives from the classical Greek system of expressing figures with letters: numerical signs for 1–10 () and the units 20–100 () mostly derive from the first 19 letters of the Greek alphabet (Dillmann 1907:33, n. 1). A symbol for zero was unknown. While the Greeks, in their turn influenced by such Semitic language systems as Hebrew and Arabic, also used their alphabet to represent the 200–900 units, the Ethiopian system developed from 200 onwards into a "hybrid" system of multiplicatory and additive representations (Ifrah 1987:380f., 402). Thus 199 is  (100 + 90 + 9), whereas 211 is  (2 x 100 + 10 + 1). Units from 1,000 appear as multiplications of 10 x 100, and units from 10,000 onwards appear as multiplications of 100 x 100, i.e. 20,000 would be 2 x 100 x 100.

The decimal system dominates the numeric systems currently used in Ethiopia. However, philological and anthropological studies since the second part of the 19th cent. have found traces of binary, quinary and vigesimal codes. Mnenomic devices often use body parts to express higher units. A quinary code uses five fingers or "one hand", a vigesimal code recalls a full person with two hands and two feets, i.e. 20 "fingers". Binary codes operate with additions to primary oppositions like 1 and 2. For speakers of Cushitic languages quinary codes, with basic digits 1–4, and 5 as a primary summarizing unit, are assumed (Prätorius 1870; Paulitschke 1896:91; Plazikowsky-Brauner 1963; Dombrowski 1992). Quinary and vigesimal codes also appear in the Ethio-Sudanese borderlands towards the Nile-Sudan, among Nilo-Saharan and Omotic speakers. A quinary code was found for the ↗Berta of Bela Šangul (↗Beni Šangul; Cerulli 1947:162f.). The ↗Kwama combine features of a quinary and vigesimal code with borrowings from Oromo. The Kwama have single numerical names for the digits 1–5, but digits 6–9 are expressed as compounds of the verb "take/lend/bring" (*kuba*) extended by the numbers 1–4. 10 is expressed as "fingers" (*qunya*). To express 20, the idea of "one body" or "pair of limbs" is used. From 30 onwards, either loans from the Oromo decimal system are used, or a vigesemal code is possible. 30 could be expressed as *saddoma*, derived from Oromo, or "one person and fingers", 40 as *afurtama* or as "two persons" (Zelealem Leyew 2005:22f.). Similar systems are found, e.g., in ↗Komo and ↗Mao of Bambasi. An original binary code is assumed for the Beğa. Likewise, a historical transition from binary to quinary codes is assumed for some speakers of Cushitic languages (Dombrowski 1992:101). For the southern Sudan a fully functioning binary system that links ownership in cattle to kinship classification, has been analyzed for the Didinga and Longarim (Kronenberg 1972). Its possible relation to ancient Egyptian mathematics (ibid. 31f.) might also be relevant for a comparative mathematical perspective on ancient Ethiopian numeric systems.

The symbolic, metaphorical and cosmological use of numbers is widespread. Sometimes expressions are fully idiomatic, i.e. the quantitative value of a number has no relation to the contents of the expression. Thus the juridical clause in Amharic "he let his 80 down" means "he divorced his wife" (Bairu Tafla 1987:74). Within the Ethiopian Orthodox tradition such N. as 1 (God, an angel sent by God, a saint, a demon), 2 (the archangels Michael and Gabriel, Saint Susənyos and the demon Wərzəlya), 3 (the ↗Trinity), 4 (the four directions; the four ↗Evangelists; the four church walls; the Four Living Beings, the four elements, the four nails of the cross), 7 (days of the week) and 12 (angels sent by God to protect Eve; ↗Apostles; stars of the zodiac) are highly valued or feared (Bairu Tafla 1987:76f.; Mercier 1979:78; 1992:155). Within the Oromo tradition a gendered dualism of 3 (male) and 4 (female) is widespread (VSAe II, 121, 326, 376, 401). Among the Arsi-Oromo 5 and 4 indicate a related opposition (VSAe II, 482). Structurally related gendered dualisms expressed in N. were also found among the ↗Maale, ↗Sidaama and Därasa (↗Gideʾo; VSAe I, 285f.). The Boorana-Oromo age- and generation grading ↗*gadaa* system links social order with a strong sense of serial numbering and temporality (VSAe II, 170ff.). Different Oromo calendary systems link N. and fortune (ibid. 586–89). Among the Boorana, N. appear as mnemonic devices to memorize oral ↗law (ibid. 477).

Within the church tradition, the institution of the ↗*däbtära* contains a linkage between different cognitive fields (art, music) linked to numbers. As an expert for ↗oracles and the art of divination, the *däbtära* provides his clients information from magic scrolls or talismans through arithmetical calculations of ↗names, dates and directions which receive numerical values (Shele-

may 1992:154). A talisman (↗*Ṭälsäm*) always has multiple readings and interpretations, linked to a multi-interpretative commemorative oral poetry (Mercier 1992:154). The Christian practice is based on graphic adaptions from Islamic-Arabic sources, notably the Šams al-Maᶜārif (Sun of Recognition) of al-Būnī (early 13th cent.). What appeared in the Islamic tradition as quadruples, as N., as the name of god, the angels, the seal, become transformed into a wickerwork of lines, letters, faces and eyes that indicate a sense of looking behind the surface of the visible. This abstract cognitive pattern is deliberately produced to indicate a superiority of Christian protection and healing over the Islamic symbols (Mercier 1979:11f., 27; Kropp 1992:125).

On the idiomatic level of secular traditions several higher N., such as 40 or 44 in northern Ethiopia, are synonymous for "many" and for "wholeness" (Bairu Tafla 1987:78ff). Among the western Oromo the number 90 has a related function to indicate magnitude (VSAe II, 130; Bairu Tafla 1987:88f.). Among the Boorana-Oromo the idea of a thousand head of cattle indicated the highest degree of growth and wealth. This was strongly linked with a strict refusal of exact counting of cattle (VSAe II, 59, 96). The use of 1,000 (*əlf*) as a symbol for an indefinite N. is also attested for northern Ethiopia (Bairu Tafla 1987:90f.). Thinking in terms of "thousand" also appeared as a boundary among the ᶜAfar and the Somali (Paulitschke 1896:222f.). But mathematical notions such as the sum of series, infinity and limits are found to be contained in folk-tales (Jama Musse Jama 1999:94). Widespread games, based on the dropping of pebbles into holes (Amh. ገበጣ, ↗*gäbäṭa*; ᶜAfar, Orom. *saddeeqa*), unite strategies based on N. to logical patterns (Townshend 1979:294; Pankhurst 1980–81). Also practised with pebbles and holes is "Ethiopian multiplication" (also known as "Egyptian", "Russian" or "peasant" multiplication), which reduces multiplier and multiplicand to sets of opposed binary series of algorithms, classified as "good" and "evil houses", whereby a serial summary of the "good houses" forms the arithmetic result (Currie 1985:50ff.).

Thomas Zitelmann

Numismatics

The discipline of N. deals with monetary history in its broadest sense and is an auxiliary branch of historical research. The main aspects vary between ancient and modern times, so that the evidence of the Aksumite coinage is obviously to be seen on another level than that of the modern coinages (↗Coinage; ↗Currency).

Aksumite numismatics

The coins of the Aksumite period (struck ca. 290–ca. 640?) are of primary source value. They became known to Western historians only in the 1830s (↗Rüppell, Eduard) and caused fanciful interpretations amongst contemporary scholars such as Friedrich v. Kenner, Antoine d'↗Abbadie and Adrien de Longperier. Aksumite coins were also brought from Ethiopia by Theodor v. ↗Heuglin, and by the ↗Napier expedition of 1868. Francis William Prideaux, one of the captives held by *aṣe* Tewodros II and later a British agent in Aden, collected Aksumite coins too. But the systematic study began as late as 1926 with a first attempt of estalishing a corpus made by the Italian amateur Arturo Anzani (1879–1946?; for his letters see West 2007) who had to withstand the malevolent critique of Carlo Conti Rossini. Since then a considerable body has been assembled in the course of excavations and casual surface finds, most of the latter flowing into the coin trade. Numismatic literature has substantially developed since ca. 1980 when the British archaeologist Stuart ↗Munro-Hay started writing his numerous contributions on the subject.

International numismatic research is interested in Aksumite coins for two reasons: they are authentic documents struck by one of the empires of late antiquity, and they had a certain amount of international circulation. For a full understanding and exhaustive interpretation of the coinage, co-operation with neighbouring disciplines (↗archaeology, epigraphics, philology, metallurgy and others) is indispensable.

The numismatic material, most of which emerges in trade, is kept in public and private collections. Of the larger collections only a few are published in full (cp. Hahn in AfrHorn). The main locations are:

a) in Ethiopia: the collections of the National Museum Addis Abäba (consisting mainly of the coins excavated by the French Archaeological Mission of 1954–72; a catalogue is included in the unpublished thesis of Eric Godet, Paris 2003), the Institute of Ethiopian Studies Addis Abäba (acquisitions from the local market), the Museum of Aksum (coins from later, mainly British, excavations);

b) outside Ethiopia: the collections of the ↗British Museum London (published by Munro-Hay 1999), and the collections in Cambridge (Fitzwilliam Museum, published by West 2003), Oxford (published by West 2002), Paris (↗Bibliothèque Nationale), Berlin (Bodemuseum), Vienna (Kunsthistorisches Museum), and New York (the American Numismatic Society). The museums in Italy have but modest holdings (the Museo Africano in Rome having been robbed); nothing is known regarding the Asmära Museum.

Some private collections have been catalogued (i.e. by Walburg 1983; Munro-Hay 1986; Pedroni 2000).

A comprehensive documentation of the Aksumite coins, especially those observed circulating on the coin market (British, German, Swiss and US sale catalogues and internet auctions), is currently being undertaken at Vienna University, Department for N. The registration of modern forgeries (which began to be manufactured from the 1950s, either copying known types or even inventing new ones) – some of which threaten to undermine the collections and confuse collectors and even scholars – is also a desideratum in N. (Metlich 2006). If documented before dispersal, the analysis of mixed collections is also of key importance for reconstructing the chronology of the issues. The only one registered from an excavation is the Adulis collection of 1907.

The compilation of as much material as possible has to meet the requirements of N. meth-

odology. The main types are well attested, but the optimum would be a corpus of all specimens together with the identification of the different dies involved in their striking. This can be achieved, with approximation, for the gold and silver coins, but not for the far too numerous and, to a large extent, badly preserved copper coins. Counting the number of dies allows the application of statistical formulas by which the volume of output may be estimated. Compared to other coin-striking empires of the time, Rome and Persia, this was, of course, on a much lower scale. The investigation of the coins' metrology and metallurgy yields insights into the highly developed mint techniques applied in Aksum, but also discloses their subjection to Roman standards.

A major contribution to the political and religious history of Aksum can be made by analysing the typological concept underlying the appearance of the coins. The genuineness and reliable chronology of the names of kings as attested on coins contrast the sometimes fanciful "king lists" (s. EAE vol. 5) compiled in medieval times (cp. ↗Chronography). Ethiopian N. is a source that has stimulated onomastic studies regarding the choice and significance of certain regnal ↗names (Hahn 2001; cp. Bausi 2003). The information one can gain from the titulary, partly expressed in the coin legends and partly by pictorial symbols, can be compared with the palaeographic evidence one finds in monumental inscriptions, e.g. the occurrence of vocalization (Hahn 1987). Religious mottoes found on some issues are of special interest for the history of Christianity in Ethiopia (Hahn 1999; Bausi 2006).

The representation of the king accompanied by religious symbols which were used on the coins before and after conversion to Christianity is of special subtlety and can be elucidated in the larger context of artefacts produced in Aksum or imported from the surrounding world (Hahn 1999). As a contribution to economic history the spread of Aksumite coins can be registered and interpreted as follows: finds in ↗India show the direction of trade, whilst those in ↗Yemen can be connected with trade or military presence and those in Palestine with ↗pilgrimage (Hahn 1999; Metlich 2006; cp. ↗Jerusalem).

Numismatic research on Islamic minting

The coins struck in Mogadishu between the 14th and the 17th cent., and in ↗Harär between 1782 and 1887 represent tiny branches of the Islamic minting tradition. As they only have the character of small change (*maḥallaq*) limited to the local market, they have not attracted the attention of international research and are more or less left to regional interest (Freeman-Grenville 1963; Ahmed Zekaria 1991). N. could not yet develop a method to date the Mogadishu coins because the names of the *sulṭān*s are only known from the coins themselves. In Harär, the year of issue was written on the mostly anonymous coins, but documentation may still be incomplete.

Numismatic research on modern coinage

N. preoccupation with modern coinage in the Horn of Africa started only recently. The modern coinage of Ethiopia was initiated under Mənilək II in 1893/94 as a vehicle of his imperialistic ambitions. Starting with the first issues ordered from the Paris mint, they have attracted the interest of collectors and are all very well known (Gill 1991), but not all mintage figures have survived, especially not those of the Addis Abäba mint which was sporadically active between 1904 and 1936 (Hahn 2001/02). More of the financial background still has to be elucidated by written material in the relevant archives of Paris, Vienna, Rome and, especially for later time, those in Addis Abäba which have not been exhaustively studied (cp. Hahn 2006). The Addis Abäba mint also needs photographic documentation. The coins of this period as well as the banknotes mainly serve to illustrate the monetary policy of the government which is, of course, largely known from written documents (Pankhurst 1964).

Numismatics and foreign currencies

In the past N. research focused rather on "original" coinage and not so much on the occurrence of "imported" coins, but this has now also been discovered as a research field important for the historical study of international connections. Collecting reports of foreign coins locally found in excavations and of chance finds is becoming one of the methods for tracing long-distance trade routes. Money from abroad has circulated in Eastern Africa as a means of accumulating wealth (Pankhurst 1964) from time immemorial. The observation of crucial stray finds (floating into the antiquities market) is, however, difficult and for their exact identification the expertise of several specialists is necessary due to the diversity of coins in both time and origin; there are South Arabian and Roman coins from late antiq-

uity (Hahn 2006), Yemenite issues of the middle ages, Venetian ducats, Spanish pesos (↗Spain), Austrian talers (↗Maria Theresa thaler) and Indian rupees (Pankhurst 1964).

Colonial currencies in numismatics

The background of both special coins and banknotes produced in Italy for her East African colonies, as well as the mintage figures are well documented (Pankhurst 1964; Gill 1991); the same applies to the British East Africa shillings introduced into Ethiopia in 1941 (Pankhurst 1970). The exact distribution of colonial coins and their effects on local attitudes to money is, however, not yet a focus of the study of N.

Wolfgang Hahn

Nunneries

Female ↗monasticism in Ethiopia finds direct inspiration in the ↗Gospels (36 women followers of Christ accompanying the Apostles and disciples, cp. Mt 27:55–56, Mark 15:40–41, Acts 1:12–15). Ethiopian tradition claims that from the early period of ↗Christianity in Ethiopia there were flourishing women's communities. However, the sources only occasionally refer to N. only during the medieval period (for an early references, s., e.g., CRDLib 186, no. 6), mostly associating them with male monastic leaders and their ↗monasteries. In these sources, the N. appears as a developed phenomenon.

In the Ethiopian context, the use of the term N. is somewhat misleading, because it implies a complete separation between men and women or gendered *clausura* as in the Latin tradition. There are monasteries where entry is strictly forbidden to women. However, there are no female communities forbidden to men. This is because the presence of deacons and priests is required for liturgical functions, and men were often involved in administration and some other duties. Most historical N. became mixed communities, as men in adjoining houses, or in a nearby areas took over administrative authority. The (re-)emergence of vigorous nuns' communities administered by an እመ፡ ምኔት (*əmmä mənet*, 'abbess') is a relatively recent phenomenon.

Ethiopian sources described monasteries as a mimesis of the Garden of Eden before the fall. Monks and nuns together constitute a "holy gender" in which biological sex is ultimately of little importance. Ethiopian Orthodox monks and nuns follow the same ideals and practices, divesting secular gender roles. The common word for monk and nun in Amharic are *mänäkosawit*

and *mänäkosayit*, resp. (only distinguished by the gender ending), although there is another (Gəᶜəz) term for nuns, *mäbällät(at)*, lit. 'widow'. Normally the same word was used for men and women's communities, i.e. ↗*gädam*, although N. could be distinguished using such expressions as *betä dänagəl*, 'house of virgins'.

It seems that one of the early form of organization was indeed the coexistence of nuns with monks in the premises of one monastic community. Different versions of the Vita of *abunä* ↗Täklä Haimanot tell of monastic men and women living together platonically, "without sin" (cp. GuiSyn I, 378–83; cp. Nosnitsin 2007:165 and n. 65). Reportedly, it was only after the death of Täklä Haymanot that the monks and nuns became susceptible to sexual temptation and began to live in separate communities (Wright 2002:27). Elsewhere, the separation of monks and nuns in ↗Däbrä Libanos of Šäwa is said to have been carried out by *abunä* ↗Anorewos, who established two separate communities bringing the organization of the monastery closer to the requirements of the Canon ↗law and such sources as the *Rules of* ↗*Pachomius*. However, the practice of the mixed communities was not completely rooted out. The liturgical and sacramental aspects of the religious life of nuns were determined by the establishment of special rites connected with nuns, such as a special ritual of taking the monastic vow (cp. ↗*Śərᶜatä mənkʷəsənna*) or funeral rite as described in *Mäṣḥafä* ↗*gənzät*.

Church administrators have traditionally paid less attention to women than men, and a higher percentage of nuns live under the idiorhythmic (*qʷərit*) system whereby they are obliged to provide for their own livelihood. Thus, in Däbrä Libanos of Šäwa only a small community of mainly elderly women lives according to the common (*andənnät*) rule, whereas the majority of younger nuns follow the *qʷərit* system. At ↗Amba Gəšän there are approximately 200 nuns whose main income comes from providing hospitality to thousands of pilgrims who attend ceremonies on the cross-shaped mountain. At ↗Zəqʷala there is a historical separate women's community practising common life and inhabiting a clearly delineated part of the holy mountain.

The movement of the ↗Ewoṣṭateans in northern Ethiopia once had numerous N. In the mid-15th cent., ↗Däbrä Bizän is reported to have administered three N., and ↗Däbrä Maryam

Nuns producing textiles at Asir Mätira, Wəmbärta, Təgray, photo 2006, courtesy of Joachim Persoon

(Qʷäḥayn), 23 N. (CRRicBerhan II, 150), with a total of 1,146 nuns. In today's Eritrea, a remarkable female convent is Däbrä Abunä Bəṣuᶜa Amlak (↗Kodadu).

Within the Orthodox theology, the female body is identified as being the most impure and demanding alteration. Under an endocentric theology, nuns seem to move towards masculinity (like the early Syrian Church mothers), beyond a gendered body, into that neutral space where holiness is found. The concept of a transformation of self in early Christianity allowed women to cross boundaries and radically change their identity. The order of widows permitted a group of women to suspend their ↗sexuality and transcend the domestic sphere. This pattern of women adopting asceticism later in life was common in Ethiopia, as exemplified by such female saints as ↗Krəstos Śämra. In a patriarchal society where women were married at an early age, the choice of vocation was often only possible later in life. Periods of national emergency were particularly conductive to women overcoming restrictions: during the attempted imposition of ↗Catholicism under *aṣe* Susənyos, ↗Wälättä Ṗeṭros preached fearlessly in defence of the Orthodox faith.

Women's communities flourished when they had clear social and religious functions and government support. Links with ruling elites (as in the cases of Krəstos Śämra and Wälättä Ṗeṭros)

enabled women's monasteries to become centres of power and influence. However, after an initial period of flourishing, there was a gradual decline of female monasticism. During times of political instability such as the *Zämänä mäsafənt*, women's monastic communities were very vulnerable. Locals claimed their fertile lands; young women were customarily abducted for ↗marriage. According to the local tradition, young nun (reputedly of royal lineage) from Däbrä Qʷäyäṣa of *abunä* Samuʾel (Šire) was taken as wife by one of the commanders of ↗Aḥmad b. Ibrāhīm al-Ġāzī. She became one of the ancestors of the local Muslim community (the place being known to this day as ᶜAddi Aytay, the name explained as 'the village of the nun', Tgn. *itay*).

When the instability gave way to the government of *aṣe* ↗Mənəlik II, women's communities such as Gašola Qəddus Giyorgis (in West Goğğam, established by *abunä* Täṭämqä Mädhən in the second half of the 18th cent.) were re-founded. The new political stability saw an increase in female influence from the end of the 19th cent. due to the ↗education of women, and nuns getting a more active social role to play.

The idea of an active socially constructive lifestyle for nuns, more common in other Orthodox countries, had an impact upon Ethiopia. When Empress ↗Mänän decided to give a royal palace to a women's community she stipulated that incumbent nuns be trained in socially useful activities. The N. now known as Säbbäta Betä Dänagəl struggled to survive the *Därg* period and has now become a model institution, with a school-orphanage, and production from handicrafts and modernized agriculture. It has recently opened a branch in ↗Dərre Dawa. Likewise, the nuns of Mäkanä Qəddusan (also known as Abunä Gärima), established at ↗Baḥər Dar, adopted a socialist work ethic after the ↗Revolution and even plough the agricultural land.

Traditionally, nuns have two functions: they devote themselves to a life of prayer, and they do social work attending to the aged, invalids and orphans. They help the weak and poor, and engage in physical labour. Nuns traditionally live in church compounds and ground the grain for the communion bread (before the introduction of grinding mills, by hand). They fetch water, wash clothes and prepare food. Elderly nuns living with local communities have special social functions such as reconciling disputes and extending hospitality, and are entitled to collect alms. The exigencies of the post-1974 period swept aside previous restrictions. Women, including nuns, were enabled to take on activities beyond their traditional roles. In the newly created parish councils (*Säbäka guba'e*) they became responsible for administering certain churches, creating means of income, and act as secretaries collecting money.

In Ethiopia, the number of nuns has recently increased, esp. in Təgray, where they have adopted the saffron robes (yellow habit) of the Waldəbba nuns. There is an ongoing project to establish a communal women's community in Aksum (under the auspices of *abba* Śäräqä Bərhan of the Patriarchate Youth Catechetical Department). Most of them live in small scattered communities, without their own *əmmä mənet*. They constitute the majority of ca. 60 members of the newly re-established monastery of Asir Mätira near Aṣbi, today one of the most flourishing communities in Təgray. Meanwhile, the once numerous order of ↗Betä Ǝsraʾel nuns has disappeared.

Nuns are now qualified as teachers of various branches of traditional ↗education (cp. the famous *qəne* teacher *əmmahoy* ↗Gälanäš Ḥaddis). They are inspired by the ascetic ideal and they distinguish themselves by greater dedication and willingness to sacrifice than men. Whereas many monks entered monasteries aspiring an ecclesiastical career, and consequently disappeared to towns, nuns display more stability, and so do their communities, which are becoming an increasingly important economic and religious factor gradually taking over former male establishments.

Both asceticism in widowhood and virginal monasticism thrive in Ethiopia. The Ethiopian Orthodox Church Development and Interchurch Aid Commission (EOC/DICAC) has a special division for "gender and development" (since 1989) which works to support women's communities.

Marina Fluche – Joachim Persoon

Nūr b. Ibrāhīm

Kōšim gärad N. (نور بن ابراهيم, fl. 1st half of 16th cent.) received the title of *wazīr* after he participated in ↗Aḥmad b. Ibrāhīm al-Ġāzī's ("Grañ") conquests. He is first mentioned in the ↗*Futūḥ al-Ḥabaša* before the campaign against ↗Ifat in 1529, when Aḥmad Grañ honoured N. with a white banner and the command of 100 cavalrymen. Aḥmad Grañ placed the right wing corps of the army under N.'s command while the left wing side was commanded by the *wazīr* ᶜAddalī (Addole in Christian sources) and the central one by Grañ himself. The three corps invaded Ifat through different routes and met in ↗Anṣokiya. N.'s corps arrived with much booty.

Before the battle of ↗Šəmbəra Kʷäre N. received a red-and-yellow flag and the command over the troops from ↗Šäwa and Hargāya (100 cavalrymen and 2,000 infantry soldiers). During the different skirmishes which were connected with that battle, N. distinguished himself with bravery. In the ensuing invasion of ↗Däwaro, N. commanded one of the armies while Aḥmad Grañ led the other.

When Aḥmad Grañ and the ↗Walašmaᶜ *sulṭān* ↗ᶜUmardīn b. Muḥammad b. Aẓharaddīn quarrelled over the distribution of the taxes in 1530, N. sided with the *sulṭān*. This implies that he must have been a member of the old nobility of ↗Harär who did not want to give up their privileges in favour of the ↗*ǧihād*.

After the reconciliation between Aḥmad Grañ and the *sulṭān*, N. again played an important role in Grañ's army. He participated in the battle of Anṣokiya (23 February 1531), and pillaged ↗Šarḫa together with the *wazīr* ᶜAddalī. After the attack on Wāṣil (27 October 1531), which opened up the way into Amhara, N. was ordered to plunder the church of ↗Atronsä Maryam. He killed the monks because they refused to bring out their treasures. After the Muslims found a house full of gold and other treasures, they took as much as they could carry and burnt the rest together with the church.

In later battles N. usually was left behind to watch the camp.

Nūr b. Muǧāhid

N.M. (نور بن مجاهد; d. 6. September 1567) was the ruler of ↗Harär from 1551 to 1567. He was the son of *wazīr* Muǧāhid b. ᶜAlī Sūḫa b. ᶜAbdallāh, one of the most influential generals of ↗Aḥmad b. Ibrāhīm al-Ġāzī (Grañ).

N.M. started his career when, after Grañ's death, some generals tried to save at least parts of the dissolving Muslim empire. The *wazīr* ᶜAbbās b. Abūñ b. Ibrāhīm took control over ↗Bale, ↗Fäṭägar and ↗Däwaro, but already in October 1544 he was defeated and killed by *aṣe* ↗Gälawdewos. Grañ's widow, ↗Bati Dəl Wämbära, undertook the next attempt to assume the power with the help of her new husband, N.M. According to the "short chronicles", N.M. had to promise her to avenge Grañ's death before he could marry her. The Arabic *History of N.M.* contains another legend of how N.M. became the ruler of Harär: the son of the *sulṭān* of Harär (possibly Muḥammad b. Abī Bakr b. ↗Muḥammad b. Aẓhar[addīn]) once accidentally killed a child of an old woman who refused to accept the blood money and demanded death of the *sulṭān*'s son instead. N.M., who at that time was leading a God-desired life in a cave near Harär, agreed to help her and killed the *sulṭān* and, later, his son. The inhabitants of Harär asked him then to become their new ruler, and he accepted provided they would follow him in the ↗*ǧihād* against the Christians. This legend is indicative of the antagonism between the secular rulers of the ↗Walašmaᶜ dynasty on the one hand and religious leaders (such as *imām* ↗Maḥfūẓ b. Muḥammad and Aḥmad Grañ) propagating the holy war on the other.

According to the Chronicle of *aṣe* ↗Gälawdewos, one year after the Ethiopian general ↗Fanuʾel plundered Harär (March 1550), the Emperor himself marched against Barr Saᶜdaddīn, to Harär and its surroundings, deposed the *sulṭān* and made N.M. leave his lands. The *sulṭān* may have been the Walašmaᶜ ruler ↗ᶜUmardīn b. Muḥammad b. Aẓharaddīn, installed by Aḥmad Grañ back in 1527. The defeats of the Muslims could have been among the reasons for N.M. to arise as ruler of Harär in 1551–52, whether through marriage to Bati Dəl Wämbära or through killing the rul-

ing *sulṭān* and his son. Both traditions may in fact be true if one presumes that, leaving Harär, Gälawdewos installed there a new *sulṭān*, possibly Muḥammad b. Abī Bakr, later killed by N.M. who then married Bati Dəl Wämbära. According to a marginal note in a copy of the Walašmaᶜ chronicle made known by Cerulli, ᶜAlī b. ᶜUmardīn b. Muḥammad became *sulṭān* of Harär on 24 December 1552. This seems to imply that N.M. installed a new puppet *sulṭān*.

N.M. had to fight not only Christian Ethiopians but also the ↗Oromo who after Grañ's death expanded into Ethiopia and by mid-16th cent. had reached the Harär area. At the very beginning of his rule N.M. had to campaign against the Nole (a part of Afran Qallu Oromo, s. ↗Qottu) who today inhabit the region north-west of Harär, and at that time probably lived further south. Though N.M. defeated many Nole and destroyed their villages, the Oromo undertook more raids into the area.

In March 1559 N.M., with his army reportedly consisting of ca. 1,800 ↗cavalry, ca. 500 musketeers and thousands traditionally armed soldiers (↗Infantry), left Harär for a campaign in Fäṭägar. Gälawdewos with his considerably weaker armed troops met his adversary at Näč Śar, on the border of Wällo, on 23 March 1559. The Muslims were victorious; N.M. is said to have exhibited the defeated Christian emperor's head in Harär for three more years.

In the meanwhile another Ethiopian army, headed by *ras* ↗Ḥamälmal, used the opportunity of Harär being left without troops and attacked the town, plundering it and killing *sulṭān* Ḥabīb b. ᶜUmardīn. On his way to rescue his city, N.M. was stopped by the Oromo at the foot of Mount ↗Azälo near Awaš. In the bloody battle that followed, the Oromo had more casualties than in any raid before; N.M. lost many soldiers and won at a narrow margin. Back in Harär he found the city devastated. Afraid of further attacks, he ordered the erection of the famous city wall. It seems that shortly after *aṣe* ↗Minas ascended to the throne, Ḥamälmal undertook another attempt to attack N.M.; the outcome of this campaign is not known. Possibly as a result of the wars and Oromo raids, the country had to face a severe ↗famine. Prices rose high and the population was close to starvation with reported cases of cannibalism. N.M. tried to relieve the situation: with his help the prices started to fall. After another attack of the Oromo, who devastated Šäwa, Nogob, ↗Gidāya, ↗Dakar and Hargāyā, however, the famine returned, followed by a plague ↗epidemic that took N.M.'s life. He was succeeded by the renegade ↗ᶜUṯmān b. Badlāy.

Though N.M. was not always successful during the period of his reign he became very popular in Harär, mostly thanks to his victory over Gälawdewos and the construction of the city wall. Following Grañ, he was nicknamed *ṣāḥib al-fatḥ aṯ-ṯānī* ('the lord of the second conquest') and achieved the status of a national saint; his ↗grave in Harär is venerated (↗Pilgrimages; ↗*zāwiya*). He is also celebrated in religious songs (↗*Manẓūma*).

Nuro ↗Añwaa

Nuzaze: Mäṣḥafä nuzaze

The M.n. (መጽሐፈ ኑዛዜ, 'Book of Confession') is an Ethiopian printed penitential, ultimately depending, perhaps, upon similar documents from Coptic tradition. It is found under other names

too, notably መጽሐፈ: ንስሐ (*Mäṣḥafä nəssəḥa*, 'Book of Penitence', cp. ms. Paris, BN éth. 206 [ChMonV no. 20], fols. 60–74), the title of which can lead to confusion with the *Mäṣḥafä* ↗*qedər*, also sometimes called *Mäṣḥafä nəssəḥa*.

The M.n. is a manual for the penitent, meant to help him to confess. It clearly states that, if the penitent is a priest, he will read it himself; if he is a lay person, the priest will read it for him, apparently because a lay person was deemed to be unable to manage it. In this it is distinct from the ↗*Anqäṣä nəssəḥa*. Just like this work, the M.n. is presented as taken from the Bible ("the 81 books"), from which the list of sins was extracted. After each sin (whenever relevant) the penitent admits saying ገበርኩ (*gäbärku*, 'I did [it]'). At the end, the penitent asks for a penance to be imposed on him by the priest (usually his regular confessor; cp. ↗*näfs abbat*) according to the penitential canons, but also taking into account the particular circumstances. Having finished his penance, the penitent returns to his confessor to receive the absolution, administered to him by pronouncing the *Prayer of the Absolution of the Son* (↗*Fəṭḥat zäwäld*). It seems, however, that the priest may use other formulae, in particular the *Prayer of the Absolution of the Father* (ፍትሐት: ዘአብ, *Fəṭḥat zäʾab*), and that he has the possibility of immediately granting absolution without waiting for the penance completion.

The M.n. evidently draws from such canonical and legal texts as the ↗*Senodos* (including penitential canons published by Guerrier 1918–19), the ↗*Fəṭḥa nägäśt*, the ↗*Qälemənṭos* and the *Mäṣḥafä* ↗*ḥawi*.

The M.n. is quite frequently attested in manuscripts and seems to circulate in a variety of recensions. Some manuscripts only have a list of sins, some combine it with the absolution prayer. The former type represents the more ancient layer of the text. The oldest known witness is probably ms. BritLib Add. 16215, fols. 81a–98a; it only contains the list of sins and, like several other mss., does not bear the title M.n. Other old manuscripts are the 15th-cent. BritLib Add. 16222, fols. 28–35 (this copy including both the prayer and the title), the 16th-cent. mss. BritLib Add. 16198, fols. 93b–95b, 118–20, Vat. aeth. 18 and Vat. Borg. aeth. 22, fols. 2a–8b (all these with the absolution prayer following the list of sins). The 19th-cent. ms. Vat. aeth. 238, fols.1–4, contains the list of sins, without the prayer or the title, in Amharic.

An Amharic translation of one of the versions is found as the first part of a booklet published in 1981, under the general title of *Anqäṣä nəssəḥa məslä śərʿatä qännona*. The Roman edition of 1975, entitled *Śərʿatä məśṭirä nəssəḥa* (*nuzaze*), contains on pages 91–95 only an adaptation of "the rite of the sacrament of penance". The only work which critically deals with M.n. is the thesis of the late *abba* Gäbrä Maryam Eman (1964).
